Born From a Single Idea...

MedFire Innovations Inc. was born with a single idea, and it was through the creation of our first product, we found the true value in developing key relationships and strategic resources. On June 22, 2016, MedFire Innovations, was formed as a corporation in the State of California. Since this time, MedFire has developed, manufactured, and brought to market our own innovative ideas, in the form of additional products and services. Realizing the value of our key relationships and resources, we expanded our services to include helping others create products through our custom collaborative process.

Our company is rapidly building assets and intellectual property for ourselves and for our clients. Since our inception, MedFire, an FDA Registered company, has obtained ten (10) United States Patents and two (2) Registered Trademarks. Additionally, we have multiple products in development, and multiple patents pending.

Moving forward, we envision a future where those with great ideas turn to us to develop these ideas into realities. MedFire is where Doctors, Nurses, Scientists, Public Safety Professionals, Veterinarians, and the like, come to move their ideas from the drafting table to the operating table, and from scratch paper to the field. A future that is only limited to one's imagination. This is MedFire Innovations.

Creating a Culture of Innovation

MedFire has developed a network of creative and innovative experts to help your ideas become reality. We have created a Culture of Innovation by sharing ideas and concepts within this network of biomedical, mechanical, and electrical engineers, to manufacturers, packaging experts, technical and regulatory specialists, and finally sales and marketing professionals, all with one goal in mind – *To Bring Innovation To Life.*

MedFire Innovations helps transform ideas into safe, profitable, and innovative medical products through a rapid and systematic design process. We can provide a broad range of services to support medical device development, which includes Class I, Class II, and Class III devices. From design, to engineering and integration, to testing and transfer, we will work with you at any phase of the design process. Whether you are seeking to improve an existing device or to develop a completely new medical device, we are prepared for the challenge.

Serving Those Who Protect Us

MedFire has developed three distinct divisions to provide an array of services to those individuals and organization dedicated to protecting those in need. Providing services to help develop products, devices, and services. Providing a dedicated platform for employers and job seeks to connect. Providing a Marketplace for Exponential Brand Growth. **MedFire Helps Those Who Are In The Business of Protecting Others.**

The MedFire Companies

MedFire Innovations is our primary division, as well as the name of our Company. This division focuses on the development of our Company products, devices, and services. This division provides services to outside individuals and entities seeking various services our company provides for the development of original ideas for the medical, science, and public safety industries. Some of these services include assistance with the design and development of a device, feasibility studies, concept development, design for manufacturing, small batch prototype production, verification and validation, FDA clearance and approval, intellectual property and branding, marketing and sales, and distribution and fulfillment.

WHO we help

WHAT we do

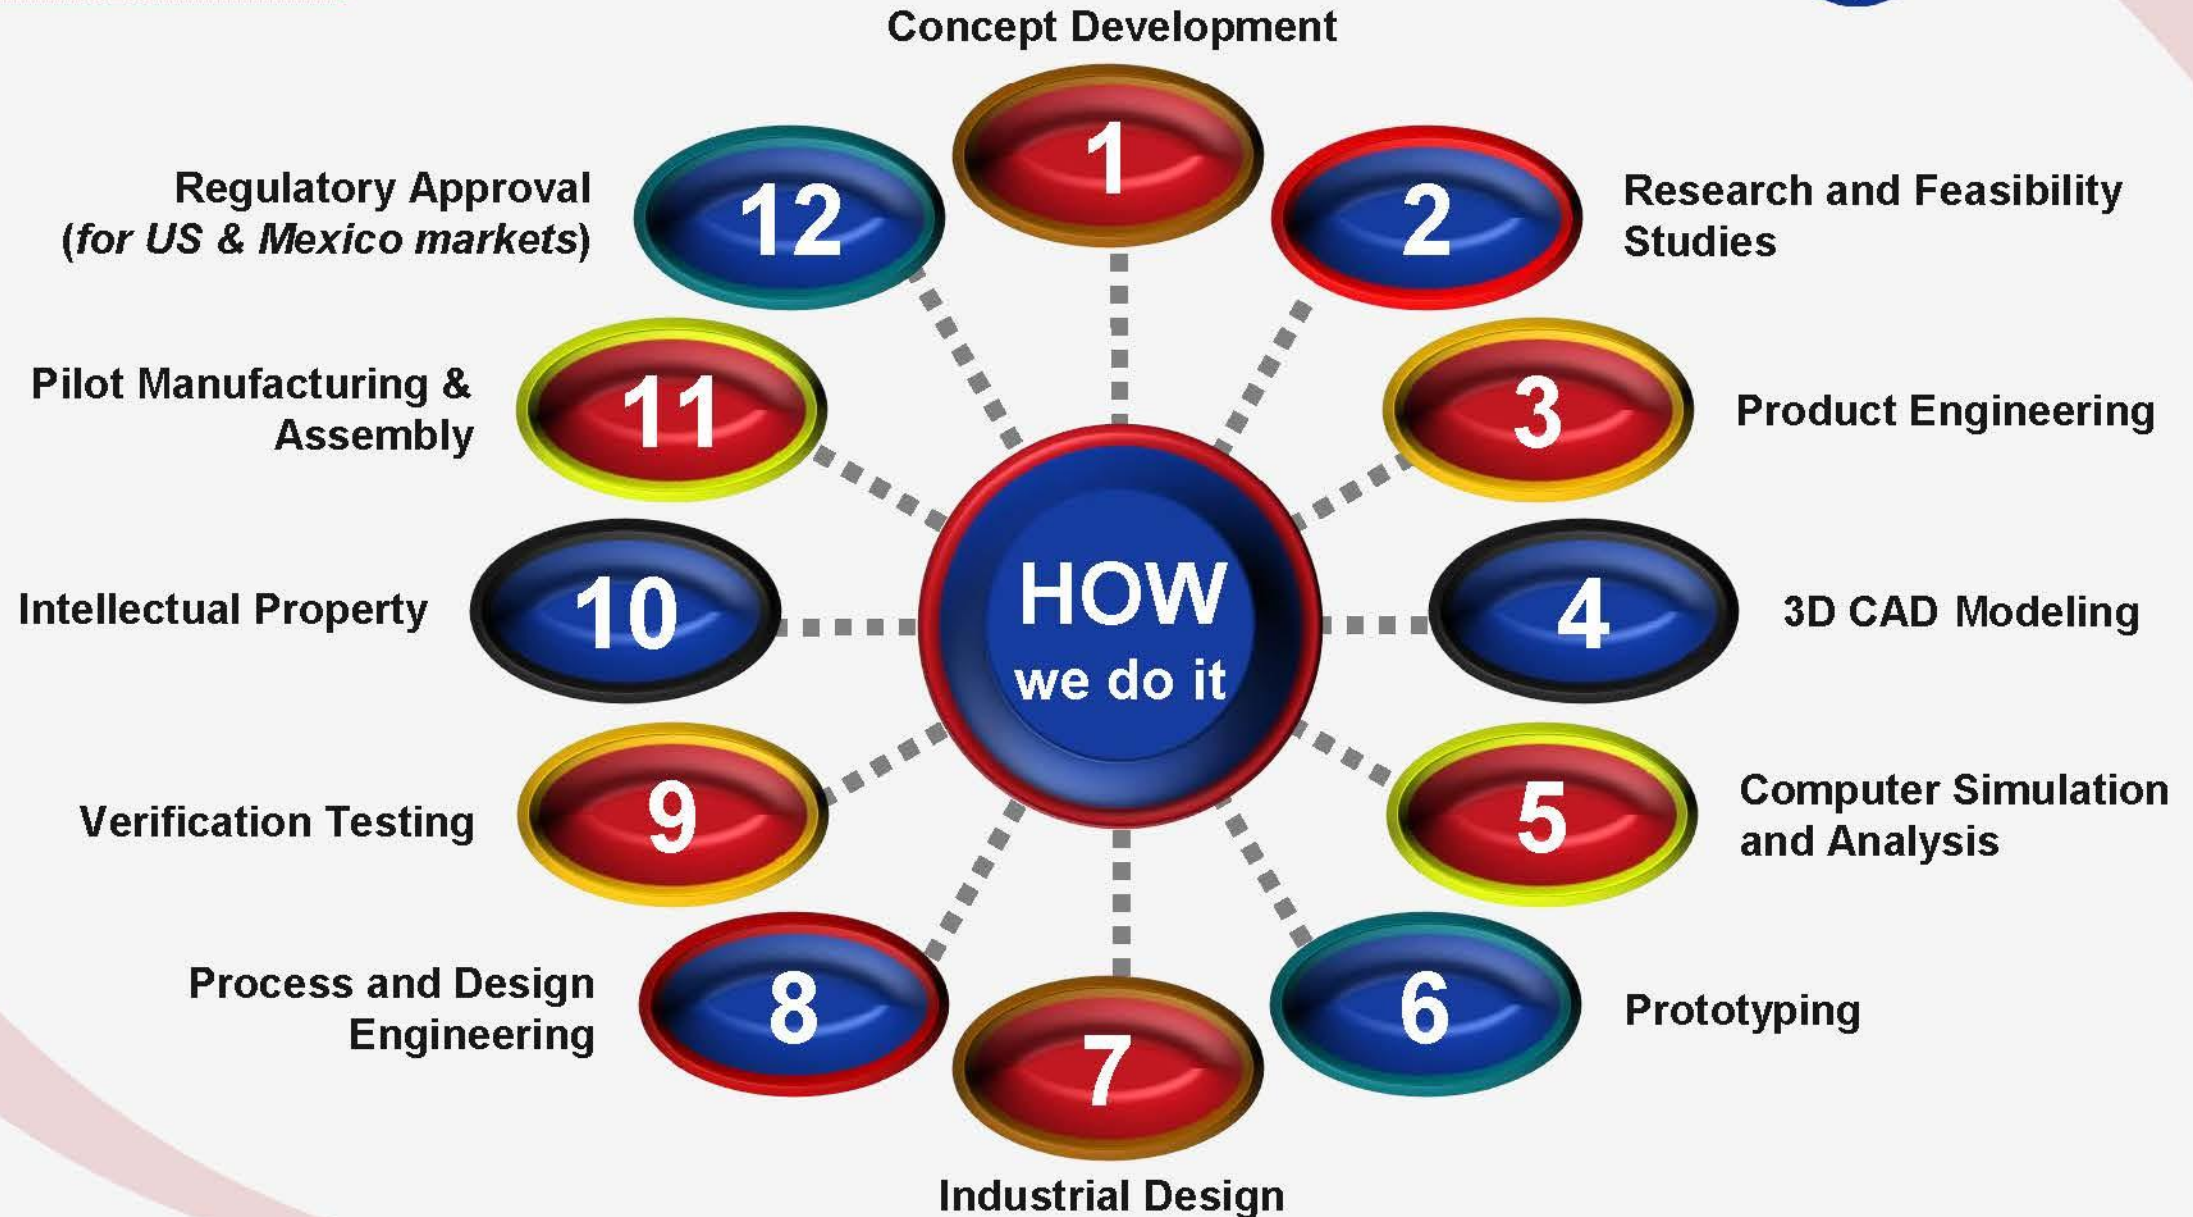

MedFire Innovations, Incorporated was founded because one person wanted to help those who help others, and it is on this statement ***“Protecting Those Who Are In The Business Of Protecting Others”*** our company stands. Since our beginning, we have made it our mission to help bring to market the ideas that will help make our world a better and safer place. To develop ideas that protect patients and patient care providers, and those working on the front lines of public safety. We can do this because we have assembled a team of partners that are dedicated to helping make ideas become reality.

We help make Ideas become reality by using a user-oriented industrial design process based on the Design Thinking methodology. We provide a broad range of services to support medical device development, including Class I, Class II, and Class III devices - to devices used by those working on the frontlines in public safety. From initial concept, to design, to engineering and integration, to testing and transfer, we will work with you at any phase of the design process. Whether you are seeking to improve an existing device, or design and develop a completely new and innovative device, we are prepared for the challenge.

HOW we do it

Guiding businesses at any stage to become the success stories they deserve
