Asset Management

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as investment adviser (the ''Investment Adviser'') to four asset allocation portfolios: the Balanced Strategy Portfolio, Growth and Income Strategy Portfolio, Growth Strategy Portfolio and Aggressive Growth Strategy Portfolio (referred to as the ''Portfolios'' or the ''Funds'' interchangeably herein). The Portfolios are intended for investors who prefer to have their asset allocation decisions made by professional money managers. Each Portfolio seeks to achieve its objective by investing in a combination of underlying funds for which GSAM now or in the future acts as investment adviser or principal underwriter (the ''Underlying Funds''). Some of these Underlying Funds invest primarily in fixed-income or money market securities (the ''Underlying Fixed-Income Funds'') and other Underlying Funds invest primarily in equity securities (the ''Underlying Equity Funds''). An investor may choose to invest in one or more of the Portfolios based on individual investment goals, risk tolerance, and financial circumstances.

GSAM's Asset Allocation Investment Philosophy:

The Investment Adviser's Quantitative Strategies Group uses a disciplined, rigorous and quantitative approach to global tactical asset allocation. The Global Tactical Asset Allocation (''GTAA'') strategy attempts to add value by actively managing exposure to global stock, bond and currency markets. In contrast to stock and bond selection strategies which focus on individual stocks and bonds, GTAA focuses on broad asset classes. Our GTAA models use financial and economic factors that are designed to capture intuitive fundamental relationships across markets. While the GTAA process is rigorous and quantitative, there is economic reasoning behind each position.

Each Portfolio starts with a strategic allocation among the various asset classes. The Investment Adviser then tactically deviates from the strategic allocations based on forecasts provided by the models. The tactical process seeks to add value by overweighting attractive markets and underweighting unattractive markets. Greater deviations from the strategic allocation of a given Portfolio result in higher risk that the tactical allocation will underperform the strategic allocation. However, the Investment Adviser's risk control process balances the amount any asset class can

The Asset Allocation Investment Process involves investing a Portfolio's assets in other Goldman Sachs Funds within specified equity and fixed-income percentage ranges.

be overweighted in seeking to achieve higher expected returns against the amount of risk imposed by that deviation from the strategic allocation. The Investment Adviser employs GSAM's proprietary Black-Litterman asset allocation technique in an effort to optimally balance these two goals.

References in this Prospectus to a Portfolio's benchmarks are for informational purposes only, and unless otherwise noted are not an indication of how a particular Portfolio is managed.

Portfolio Investment Objectives and Strategies

Goldman Sachs Balanced Strategy Portfolio

PORTFOLIO FACTS

Objective:	Current income and long-term capital appreciation
Benchmarks:	S&P 500® Index Two-Year U.S. Treasury Note Index Lehman Brothers U.S. Corporate High Yield Bond Index
Investment Focus:	Domestic fixed-income funds (approximately 60%), with the remaining balance in domestic and international stock funds and an allocation to a global bond fund
Investment Style:	Asset Allocation
Symbols:	Class A: GIPAX, Class B: GIPBX, Class C: GIPCX

INVESTMENT OBJECTIVE

The Portfolio seeks current income and long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 60% of the Portfolio's total assets will be allocated among Underlying Fixed-Income Funds. Allocation to Underlying Equity Funds is intended to add diversification and enhance returns, but will also add some volatility. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE℠ Large Cap Growth, CORE Large Cap Value and CORE℠ International Equity Funds and may invest a relatively significant percentage of its assets in the Global Income Fund. It is expected that the Portfolio will invest more than 25% of its assets in the Short Duration Government Fund.

Goldman Sachs
Growth and Income Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation and current income
Benchmarks:	S&P 500® Index MSCI® Europe, Australasia, Far East (EAFE®) Index (unhedged) Lehman Brothers Aggregate Bond Index Lehman Brothers U.S. Corporate High Yield Bond Index
Investment Focus:	Domestic and international fixed-income and stock funds
Investment Style:	Asset Allocation
Symbols:	Class A: GOIAX, Class B: GOIBX, Class C: GOICX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation and current income.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 60% of the Portfolio's total assets will be allocated among Underlying Equity Funds, which are intended to provide the capital appreciation component. Allocation to Underlying Fixed-Income Funds is intended to provide the income component. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds and will invest a relatively significant percentage of its assets in the Core Fixed Income and Global Income Funds.

Goldman Sachs Growth Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation and secondarily current income
Benchmarks:	S&P 500® Index MSCI® EAFE® Index (unhedged) Russell 2000® Index MSCI® Emerging Markets Free (EMF) Index
Investment Focus:	Primarily a blend of domestic large cap, small cap and international stock funds (approximately 80%), with the balance in domestic fixed-income funds and a global bond fund
Investment Style:	Asset Allocation
Symbols:	Class A: GGSAX, Class B: GGSBX, Class C: GGSCX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation and secondarily current income.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 80% of the Portfolio's total assets will be allocated among Underlying Equity Funds, with a blend of domestic large cap, small cap and international exposure to seek capital appreciation. Allocation to Underlying Fixed-Income Funds is intended to provide diversification. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds.

Goldman Sachs
Aggressive Growth Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation
Benchmarks:	S&P 500® Index MSCI® EAFE® Index (unhedged) Russell 2000® Index MSCI® EMF Index
Investment Focus:	Equity funds, with a greater focus on international and small cap investments
Investment Style:	Asset Allocation
Symbols:	Class A: GAPAX Class B: GAPBX, Class C: GAXCX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, substantially all of the Portfolio's total assets will be allocated among Underlying Equity Funds, with a greater focus on small cap and international investments relative to the other Portfolios. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its assets in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds.

Principal Investment Strategies

Each Portfolio seeks to achieve its investment objective by investing within specified equity and fixed-income ranges among Underlying Funds. The table below illustrates the current Underlying Equity/Fixed-Income Fund allocation targets and ranges for each Portfolio:

Equity/Fixed-Income Range (Percentage of Each Portfolio's Total Assets)

Portfolio	Target	Range
Balanced Strategy		
Equity	**40%**	20%-60%
Fixed-Income	**60%**	40%-80%
Growth and Income Strategy		
Equity	**60%**	40%-80%
Fixed-Income	**40%**	20%-60%
Growth Strategy		
Equity	**80%**	60%-100%
Fixed-Income	**20%**	0%-40%
Aggressive Growth Strategy		
Equity	**100%**	75%-100%
Fixed-Income	**0%**	0%-25%

A Portfolio will invest in particular Underlying Funds based on various criteria. Among other things, the Investment Adviser will analyze the Underlying Funds' respective investment objectives, policies and investment strategies in order to determine which Underlying Funds, in combination with other Underlying Funds, are appropriate in light of a Portfolio's investment objective.

A Portfolio may purchase or sell securities to: (a) accommodate purchases and sales of its shares; (b) change the percentages of its assets invested in each of the Underlying Funds in response to economic or market conditions; and (c) maintain or modify the allocation of its assets among the Underlying Funds within the percentage ranges described above.

While each Portfolio can invest in any or all of the Underlying Funds, it is expected that each Portfolio will normally invest in only some of the Underlying Funds at any particular time. Each Portfolio's investment in any of the Underlying Funds may, and in some cases is expected to, exceed 25% of such Portfolio's total assets.

THE PARTICULAR UNDERLYING FUNDS IN WHICH EACH PORTFOLIO MAY INVEST, THE EQUITY/FIXED-INCOME TARGETS AND RANGES AND THE INVESTMENTS IN EACH UNDERLYING FUND MAY BE CHANGED FROM TIME TO TIME WITHOUT SHAREHOLDER APPROVAL.

In addition, each Portfolio's investment objective and all policies not specifically designated as fundamental in this Prospectus or the Statement of Additional Information (the ''Additional Statement'') are non-fundamental and may be changed without shareholder approval. If there is a change in a Portfolio's investment objective, you should consider whether that Portfolio remains an appropriate investment in light of your then current financial position and needs.

Principal Risks of the Portfolios

Loss of money is a risk of investing in each Portfolio. An investment in a Portfolio is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. While the Portfolios offer a greater level of diversification than many other types of mutual funds, a single Portfolio may not provide a complete investment program for an investor. The following summarizes important risks that apply to the Portfolios and may result in a loss of your investment. There can be no assurance that a Portfolio will achieve its investment objective.

- ***Investing in the Underlying Funds***—The investments of each Portfolio are concentrated in the Underlying Funds, and each Portfolio's investment performance is directly related to the investment performance of the Underlying Funds held by it. The ability of each Portfolio to meet its investment objective is directly related to the ability of the Underlying Funds to meet their objectives as well as the allocation among those Underlying Funds by the Investment Adviser. The value of the Underlying Funds' investments, and the net asset values (''NAV'') of the shares of both the Portfolios and the Underlying Funds, will fluctuate in response to various market and economic factors related to the equity and fixed-income markets, as well as the financial condition and prospects of issuers in which the Underlying Funds invest. There can be no assurance that the investment objective of any Portfolio or any Underlying Fund will be achieved.
- ***Investments of the Underlying Funds***—Because the Portfolios invest in the Underlying Funds, the Portfolios' shareholders will be affected by the investment policies of the Underlying Funds in direct proportion to the amount of assets the Portfolios allocate to those Funds. Each Portfolio may invest in Underlying Funds that in turn invest in small capitalization companies and foreign issuers and thus are subject to additional risks, including changes in foreign currency exchange rates and political risk. Foreign investments may include securities of issuers located in emerging countries in Asia, Latin America, Eastern Europe and Africa. Each Portfolio may also invest in Underlying Funds that in turn invest in non-investment grade fixed-income securities (''junk bonds''), which are considered speculative by traditional standards. In addition, the Underlying Funds may purchase derivative securities; enter into forward currency transactions; lend their portfolio securities; enter into futures contracts and options transactions; purchase zero coupon bonds and payment-in-kind bonds; purchase securities issued by real estate investment trusts (''REITs'') and other issuers in the real estate industry; purchase restricted and illiquid securities; purchase securities on a when-issued or delayed delivery basis; enter into repurchase agreements; borrow money; and engage in various other

investment practices. The risks presented by these investment practices are discussed in Appendix A to this Prospectus and the Additional Statement.

- ***Affiliated Persons***—In managing the Portfolios, the Investment Adviser will have the authority to select and substitute Underlying Funds. The Investment Adviser is subject to conflicts of interest in allocating Portfolio assets among the various Underlying Funds both because the fees payable to it and/or its affiliates by some Underlying Funds are higher than the fees payable by other Underlying Funds and because the Investment Adviser and its affiliates are also responsible for managing the Underlying Funds. The Trustees and officers of the Goldman Sachs Trust may also have conflicting interests in fulfilling their fiduciary duties to both the Portfolios and the Underlying Funds.
- ***Expenses***—You may invest in the Underlying Funds directly. By investing in the Underlying Funds indirectly through a Portfolio, you will incur not only a proportionate share of the expenses of the Underlying Funds held by the Portfolio (including operating costs and investment management fees), but also expenses of the Portfolio.
- ***Temporary Investments***—Although the Portfolios normally seek to remain substantially invested in the Underlying Funds, each Portfolio may invest a portion of its assets in high-quality, short-term debt obligations (including commercial paper, certificates of deposit, bankers' acceptances, repurchase agreements, debt obligations backed by the full faith and credit of the U.S. government and demand and time deposits of domestic and foreign banks and savings and loan associations) to maintain liquidity, to meet shareholder redemptions and for other short-term cash needs. Also, there may be times when, in the opinion of the Investment Adviser, abnormal market or economic conditions warrant that, for temporary defensive purposes, a Portfolio may invest without limitation in short-term obligations. When a Portfolio's assets are invested in such investments, the Portfolio may not be achieving its investment objective.

Description of the Underlying Funds

DESCRIPTION OF THE UNDERLYING FUNDS

The following is a concise description of the investment objectives and practices for each of the Underlying Funds that are available for investment by the Portfolios as of the date of this Prospectus. A Portfolio may also invest in other Underlying Funds not listed below that may become available for investment in the future at the discretion of the Investment Adviser without shareholder approval. Additional information regarding the investment practices of the Underlying Funds is provided in Appendix A to this Prospectus and the Additional Statement. No offer is made in this Prospectus of any of the Underlying Funds.

Underlying Fund	Investment Objectives	Investment Criteria
CORE Large Cap Value	Long-term growth of capital and dividend income.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in large-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 1000® Value Index.
CORE Large Cap Growth	Long-term growth of capital. Dividend income is a secondary consideration.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in large-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 1000® Growth Index.
CORE℠ Small Cap Equity	Long-term growth of capital.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in small-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 2000® Index.

Underlying Fund	Investment Objectives	Investment Criteria
Real Estate Securities	Total return comprised of long-term growth of capital and dividend income.	Substantially all, and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in issuers that are primarily engaged in or related to the real estate industry. The Fund expects that a substantial portion of its total assets will be invested in REITS and real estate industry companies.
CORE International Equity	Long-term growth of capital.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in companies organized outside the United States or whose securities are principally traded outside the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the unhedged MSCI® EAFE® Index. The Fund may employ certain currency management techniques.
International Growth Opportunities	Long-term capital appreciation.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in companies with public stock market capitalizations within $100 million and $4 billion at the time of investment that are organized outside the United States or whose securities are principally traded outside the United States. The Fund may employ certain currency management techniques.
Emerging Markets Equity	Long-term capital appreciation.	Substantially all, and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in emerging country issuers. The Fund may employ certain currency management techniques.

Underlying Fund	Investment Objectives	Duration or Maturity	Expected Approximate Interest Rate Sensitivity
Financial Square Prime Obligations	Maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity.	Maximum Maturity of Individual Investments = 13 months at time of purchase. Maximum Dollar-Weighted Average Portfolio Maturity = 90 days	3-month Treasury bill
Short Duration Government	A high level of current income and secondarily, in seeking current income, may also consider the potential for capital appreciation.	Target Duration = Two-Year U.S. Treasury Note Index plus or minus 0.5 years Maximum Duration*= 3 years	2-year U.S. Treasury note
Core Fixed Income	Total return consisting of capital appreciation and income that exceeds the total return of the Lehman Brothers Aggregate Bond Index.	Target Duration = Lehman Brothers Aggregate Bond Index plus or minus one year Maximum Duration*= 6 years	5-year U.S. Treasury note
Global Income	A high total return, emphasizing current income, and, to a lesser extent, providing opportunities for capital appreciation.	Target Duration = J.P. Morgan Global Government Bond Index (hedged) plus or minus 2.5 years Maximum Duration*= 7.5 years	6-year government bond
High Yield	A high level of current income and may also consider the potential for capital appreciation.	Target Duration = Lehman Brothers U.S. Corporate High Yield Bond Index plus or minus 2.5 years Maximum Duration* = 7.5 years	6-year U.S. Treasury note

* *Under normal interest rate conditions.*

Investment Sector	Credit Quality	Other Investments
Money market instruments including securities issued or guaranteed by the U.S. government, its agencies, instrumentalities or sponsored enterprises (''U.S. Government Securities''); U.S. bank obligations, commercial paper and other short-term obligations of U.S. corporations, governmental and other entities; asset-backed and receivables-backed securities; and related repurchase agreements.	High Quality (short-term ratings of A-1, P-1 or comparable quality).	N/A
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in U.S. Government Securities and repurchase agreements collateralized by such securities.	U.S. Government Securities	Mortgage pass-through securities and other securities representing an interest in or collateralized by mortgage loans.
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in fixed-income securities, including U.S. Government Securities, corporate debt securities, privately issued mortgage-backed and asset-backed securities.	Minimum = BBB/Baa (at time of purchase) Minimum for non-U.S. dollar securities = AA/Aa	Foreign fixed-income, municipal and convertible securities, foreign currencies and repurchase agreements collateralized by U.S. Government Securities.
Fixed-Income Securities of U.S. and foreign governments and corporations.	Minimum = BBB/Baa (at time of purchase) At least 50% = AAA/Aaa	Mortgage-backed and asset-backed securities, foreign currencies and repurchase agreements collateralized by U.S. Government Securities or certain foreign government securities.
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in high-yield, fixed-income securities rated below investment grade, including U.S. and non-U.S. dollar corporate debt, foreign government securities, convertible securities and preferred stock.	At least 80% = BB/Ba or below (at time of purchase)	Mortgage-backed and asset-backed securities, U.S. Government Securities, investment grade corporate fixed-income securities, structured securities, foreign currencies and repurchase agreements.

Principal Risks of the Underlying Funds

Loss of money is a risk of investing in each Underlying Fund. An investment in an Underlying Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The following summarizes important risks that apply to the Underlying Funds and may result in a loss of your investment in a Portfolio. There can be no assurance that an Underlying Fund will achieve its investment objective.

Risks That Apply To All Underlying Funds:

- ***NAV Risk***—The risk that the net asset value (''NAV'') of the Underlying Fund and the value of your investment will fluctuate.
- ***Interest Rate Risk***—The risk that when interest rates increase, fixed-income securities held by an Underlying Fund will decline in value. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of fixed-income securities held by an Underlying Fund may default on its obligation to pay interest and repay principal.
- ***Market Risk***—The risk that the value of the securities in which an Underlying Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors and/or general economic conditions. Price changes may be temporary or last for extended periods. An Underlying Fund's investments may be overweighted from time to time in one or more industry sectors, which will increase the Underlying Fund's exposure to risk of loss from adverse developments affecting those sectors.
- ***Derivatives Risk***—The risk that loss may result from an Underlying Fund's investments in options, futures, swaps, options on swaps, structured securities and other derivative instruments. These instruments may be leveraged so that small changes may produce disproportionate losses to an Underlying Fund.
- ***Management Risk***—The risk that a strategy used by an investment adviser to the Underlying Funds may fail to produce the intended results.
- ***Liquidity Risk***—The risk that an Underlying Fund will not be able to pay redemption proceeds within the time period stated in the Underlying Fund's Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Underlying Funds that invest in non-investment grade fixed-income securities, small capitalization stocks, REITs and emerging country issuers will be especially subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities within

particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions whether or not accurate.

Risks That Apply Primarily To The Underlying Fixed-Income Funds:

- ***Call Risk***—The risk that an issuer will exercise its right to pay principal on an obligation held by an Underlying Fund (such as a Mortgage-Backed Security) earlier than expected. This may happen when there is a decline in interest rates. Under these circumstances, an Underlying Fund may be unable to recoup all of its initial investment and will also suffer from having to reinvest in lower yielding securities.
- ***Extension Risk***—The risk that an issuer will exercise its right to pay principal on an obligation held by an Underlying Fund (such as a Mortgage-Backed Security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and an Underlying Fund will also suffer from the inability to invest in higher yielding securities.
- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Underlying Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by an Underlying Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risk That Applies Primarily To The Underlying Equity Funds:

- ***Stock Risk***—The risk that stock prices have historically risen and fallen in periodic cycles. Recently, U.S. and foreign stock markets have experienced substantial price volatility.

Risks That Are Particularly Important For Specific Underlying Funds:

- ***Geographic Risk***—The Global Income Fund is non-diversified meaning that it is permitted to invest more of its assets in fewer issuers than ''diversified'' mutual funds. Thus, it may be more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments. In addition, the Global Income Fund may invest more than 25% of its total assets in the securities of corporate and governmental issuers located in each of Canada, Germany, Japan, and the United Kingdom, as well as in the securities of U.S. issuers. Concentration of the investments of this or

other Underlying Funds in issuers located in a particular country or region will subject an Underlying Fund, to a greater extent than if investments were less concentrated, to losses arising from adverse developments affecting those issuers or countries.

- ***Foreign Risk***—The risk that when an Underlying Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions. The Underlying Funds will also be subject to the risk of negative foreign currency rate fluctuations. Foreign risks will normally be greatest when an Underlying Fund invests in issuers located in emerging countries.
- ***Emerging Countries Risk***—Certain Underlying Funds may invest in emerging country securities. The securities markets of Asian, Latin and South American, Eastern European, African and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in certain emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- ***Mid Cap and Small Cap Risk***—Certain Underlying Funds may invest in small cap and mid cap stocks. The securities of small capitalization and mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable an Underlying Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Initial Public Offering (''IPO'') Risk***—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When an Underlying Fund's asset base is small, a significant portion of the Underlying Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Underlying Fund. As the Underlying Fund's assets grow, the effect of the Underlying Fund's investments in IPOs on the Underlying Fund's performance will probably decline, which could reduce the Underlying Fund's performance.

- ***''Junk Bond'' Risk***—Certain Underlying Funds may invest in non-investment grade fixed-income securities (commonly known as ''junk bonds'') that are considered predominantly speculative by traditional investment standards. Non-investment grade fixed-income securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

More information about the portfolio securities and investment techniques of the Underlying Funds, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Portfolio Performance

HOW THE PORTFOLIOS HAVE PERFORMED

The bar chart and table provide an indication of the risks of investing in a Portfolio by showing: (a) changes in the performance of a Portfolio's Class A Shares from year to year; and (b) how the average annual total returns of a Portfolio's Class A, B and C Shares compare to those of broad-based securities market indices. The bar chart and table assume reinvestment of dividends and distributions. A Portfolio's past performance, before and after taxes, is not necessarily an indication of how the Portfolio will perform in the future.

The average annual total return calculation reflects a maximum initial sales charge of 5.5% for Class A Shares; the assumed contingent deferred sales charge (''CDSC'') for Class B Shares (5% maximum declining to 0% after six years); and the assumed CDSC for Class C Shares (1% if redeemed within 12 months of purchase). The bar chart does not reflect the sales loads applicable to Class A Shares. If the sales loads were reflected, returns would be less. Performance reflects expense limitations in effect. If expense limitations were not in place, a Portfolio's performance would have been reduced.

INFORMATION ON AFTER-TAX RETURNS

These definitions apply to the after-tax returns.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on a Portfolio's Class A Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on a Portfolio's Class A Shares (i.e., dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Class A Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Shares. These returns reflect taxes paid on distributions on a Portfolio's Class A Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions (as of the date of this Prospectus, 38.6% for ordinary income dividends and 20% for long-term capital gains distributions) and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Portfolio Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

Portfolio Fees and Expenses continued

[1] The maximum sales charge is a percentage of the offering price. A CDSC of 1% is imposed on certain redemptions (within 18 months of purchase) of Class A Shares sold without an initial sales charge as part of an investment of $1 million or more.

[2] The maximum CDSC is a percentage of the lesser of the NAV at the time of the redemption or the NAV when the shares were originally purchased.

[3] A CDSC is imposed upon Class B Shares redeemed within six years of purchase at a rate of 5% in the first year, declining to 1% in the sixth year, and eliminated thereafter.

[4] A CDSC of 1% is imposed on Class C Shares redeemed within 12 months of purchase.

[5] A transaction fee of $7.50 may be charged for redemption proceeds paid by wire.

[6] The Portfolios' annual operating expenses are based on actual expenses.

[7] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee on the Portfolios equal to 0.20% of the Portfolios' average daily net assets. ***As a result of fee waivers, current management fees of the Portfolios are 0.15% of each Portfolio's average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[8] ''Other Expenses'' include transfer agency fees and expenses equal on an annualized basis to 0.19% of the average daily net assets of each Portfolio's Class A, B and C Shares, plus all other ordinary expenses not detailed above. The Investment Adviser has voluntarily agreed to reduce or limit ''Other Expenses'' (excluding management fees, distribution and service fees, transfer agency fees and expenses, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.00% of each Portfolio's average daily net assets.

[9] ''Underlying Fund Expenses'' for each Portfolio are based upon the strategic allocation of each Portfolio's investment in the Underlying Funds and upon the actual total operating expenses of the Underlying Funds (including any current waivers and expense limitations of the Underlying Funds). Actual Underlying Fund Expenses incurred by each Portfolio may vary with changes in the allocation of each Portfolio's assets among the Underlying Funds and with other events that directly affect the expenses of the Underlying Funds.

Example

The following Example is intended to help you compare the cost of investing in a Portfolio (without waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Class A, B or C Shares of a Portfolio for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Portfolio's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Portfolio	1 Year	3 Years	5 Years	10 Years
Balanced Strategy				
Class A Shares	$730	$1,108	$1,510	$2,630
Class B Shares				
– Assuming complete redemption at end of period	$766	$1,117	$1,595	$2,782
– Assuming no redemption	$266	$ 817	$1,395	$2,782
Class C Shares				
– Assuming complete redemption at end of period	$366	$ 817	$1,395	$2,964
– Assuming no redemption	$266	$ 817	$1,395	$2,964
Growth and Income Strategy				
Class A Shares	$724	$1,088	$1,476	$2,560
Class B Shares				
– Assuming complete redemption at end of period	$759	$1,096	$1,560	$2,712
– Assuming no redemption	$259	$ 796	$1,360	$2,712
Class C Shares				
– Assuming complete redemption at end of period	$359	$ 796	$1,360	$2,895
– Assuming no redemption	$259	$ 796	$1,360	$2,895
Growth Strategy				
Class A Shares	$732	$1,114	$1,520	$2,650
Class B Shares				
– Assuming complete redemption at end of period	$768	$1,123	$1,605	$2,802
– Assuming no redemption	$268	$ 823	$1,405	$2,802
Class C Shares				
– Assuming complete redemption at end of period	$368	$ 823	$1,405	$2,983
– Assuming no redemption	$268	$ 823	$1,405	$2,983

Portfolio Fees and Expenses continued

Portfolio	1 Year	3 Years	5 Years	10 Years
Aggressive Growth Strategy				
Class A Shares	$757	$1,189	$1,646	$2,906
Class B Shares				
– Assuming complete redemption at end of period	$794	$1,201	$1,733	$3,056
– Assuming no redemption	$294	$ 901	$1,533	$3,056
Class C Shares				
– Assuming complete redemption at end of period	$394	$ 901	$1,533	$3,233
– Assuming no redemption	$294	$ 901	$1,533	$3,233

The hypothetical example assumes that a CDSC will not apply to redemptions of Class A Shares within the first 18 months. Class B Shares convert to Class A Shares eight years after purchase; therefore, Class A expenses are used in the hypothetical example after year eight.

Certain institutions that sell Portfolio shares and/or their salespersons may receive other compensation in connection with the sale and distribution of Class A, Class B and Class C Shares or for services to their customers' accounts and/or the Portfolios. For additional information regarding such compensation, see ''What Should I Know When I Purchase Shares Through An Authorized Dealer?''.

Service Providers

INVESTMENT ADVISERS

Investment Adviser	Portfolio
Goldman Sachs Asset Management, L.P. (''GSAM'') 32 Old Slip New York, New York 10005	Balanced Strategy Growth and Income Strategy Growth Strategy Aggressive Growth Strategy

Except as noted below, GSAM also serves as investment adviser to each Underlying Fund.

Goldman Sachs Asset Management International (''GSAMI'') Christchurch Court 10-15 Newgate Street London, England EC1A 7HD	International Growth Opportunities Emerging Markets Equity Global Income

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman, Sachs & Co. (''Goldman Sachs'') served as the Portfolios' investment adviser. On or about April 26, 2003, GSAM assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Portfolios. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission (the ''SEC'') since 1990 and is an affiliate of Goldman Sachs. GSAMI, a member of the Investment Management Regulatory Organization Limited since 1990 and a registered investment adviser since 1991, is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM and GSAMI, along with other units of IMD, had assets under management of $329.6 billion.

Under an Asset Allocation Management Agreement with each Portfolio, the Investment Adviser, subject to the general supervision of the Trustees, provides advice as to each Portfolio's investment transactions, including determinations concerning changes to (a) the Underlying Funds in which the Portfolios may invest; and (b) the percentage range of assets of any Portfolio that may be invested in the Underlying Equity Funds and the Underlying Fixed-Income Funds as separate groups.

The Investment Adviser also performs the following additional services for the Portfolios:

- Supervises all non-advisory operations of the Portfolios
- Provides personnel to perform necessary executive, administrative and clerical services to the Portfolios
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities
- Maintains the records of each Portfolio
- Provides office space and all necessary office equipment and services

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Portfolio's average daily net assets):

Portfolio	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Balanced Strategy	0.35%	0.15%
Growth and Income Strategy	0.35%	0.15%
Growth Strategy	0.35%	0.15%
Aggressive Growth Strategy	0.35%	0.15%

The difference, if any, between the stated fees and the actual fees paid by the Portfolios reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

In addition, each Portfolio, as a shareholder in the Underlying Funds, will indirectly bear a proportionate share of any investment management fees and other expenses paid by the Underlying Funds. The following chart shows the total net operating expense ratios (management fee plus other operating expenses) of Institutional Shares of each Underlying Fund in which the Portfolios may invest after applicable fee waivers and expense limitations, as of the end of each Underlying Fund's most recent fiscal year. In addition, the following chart shows the contractual investment management fees payable to the Investment Adviser or its affiliates by the Underlying Funds (in each case as an annualized percentage of a Fund's average net assets). Absent voluntary fee waivers and/or expense reimbursements, which may be discontinued at any time, the total operating expense ratios of certain Underlying Funds would be higher.

Underlying Fund	Contractual Management Fee	Total Net Operating Expense Ratio
Financial Square Prime Obligations	0.205%	0.18%
Short Duration Government	0.50%	0.54%
Core Fixed Income	0.40%	0.50%
Global Income	0.90%	0.69%
High Yield	0.70%	0.76%
CORE Large Cap Growth	0.75%	0.76%
CORE Large Cap Value	0.60%	0.70%
CORE Small Cap Equity	0.85%	0.93%
CORE International Equity	0.85%	1.01%
International Growth Opportunities	1.20%	1.38%
Emerging Markets Equity	1.20%	1.59%
Real Estate Securities	1.00%	1.04%

PORTFOLIO MANAGERS

Robert B. Litterman, Ph.D., a Managing Director of Goldman Sachs, is the co-developer, along with the late Fischer Black, of the Black-Litterman Global Asset Allocation Model, a key tool in IMD's asset allocation process. As Director of Quantitative Resources, Dr. Litterman oversees Quantitative Equities, the Quantitative Strategies Group, the Global Investment Strategies Group, and the Portfolio Analysis and Construction Environment (PACE) Group. In total, these groups include over 90 professionals. Prior to moving to IMD, Dr. Litterman was the head of the Firmwide Risk department since becoming a Partner in 1994. Preceding his time in the Operations, Technology & Finance Division, Dr. Litterman spent eight years in the Fixed Income Division's research department where he was co-director of the research and model development group.

Quantitative Strategies Group

- The 41-person Quantitative Strategies Group includes nine Ph.Ds, with extensive academic and practitioner experience
- Disciplined, quantitative models are used to determine the relative attractiveness of the world's stock, bond and currency markets
- Theory and economic intuition guide the investment process

Quantitative Strategies Group

Name and Title	Years Primarily Responsible	Five Year Employment History
Mark M. Carhart, Ph.D., CFA Managing Director, Co-Head Quantitative Strategies and Senior Portfolio Manager	Since 1998	Dr. Carhart joined the Investment Adviser as a member of the Quantitative Strategies team in 1997. From August 1995 to September 1997, he was Assistant Professor of Finance at the Marshall School of Business at USC and a Senior Fellow of the Wharton Financial Institutions Center.

Silverio Foresi, Ph.D. Vice President and Portfolio Manager	Since 2000	Dr. Foresi joined the Investment Adviser in 1999. From 1997 to 1999, he was head of Research in Emerging Markets Fixed Income Derivatives Trading at Salomon Brothers. From 1990 to 1997, Dr. Foresi was an Assistant Professor of Finance at New York University.
Guang-Liang He, Ph.D. Vice President and Portfolio Manager	Since 1998	Dr. He joined the Investment Adviser in 1998. In 1997, he worked in the Firmwide Risk Group of Goldman Sachs. From 1992 to 1997, he worked at Quantitative Financial Strategies, Inc. where he was responsible for the research and development of proprietary trading models.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Portfolio's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois, 60606-6372, also serves as each Portfolio's transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Underlying Funds or Portfolios. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to an Underlying Fund or limit an Underlying Fund's investment activities. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Underlying Funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Underlying Funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Underlying Funds. The results of an Underlying Fund's investment activities, therefore, may differ from those of Goldman Sachs and its affiliates, and it is possible that an Underlying Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Underlying Funds may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. An Underlying Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions.

Under a securities lending program approved by the Underlying Funds' Board of Trustees, the Underlying Funds have retained an affiliate of the Investment Adviser to serve as the securities lending agent for each Underlying Fund to the extent that the Underlying Fund engages in the securities lending program. For these services, the lending agent may receive a fee from the Underlying Funds, including a fee based on the returns earned on the Underlying Funds' investment of the cash received as collateral for the loaned securities. In addition, the Underlying Funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Underlying Funds' portfolio investment transactions.

Dividends

Each Portfolio pays dividends from its investment company taxable income and distributions from net realized capital gains. You may choose to have dividends and distributions paid in:

- Cash
- Additional shares of the same class of the same Portfolio
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply for certain ILA Portfolios. See the Additional Statement.

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time before the record date for a particular dividend or distribution. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Portfolio.

The election to reinvest dividends and distributions in additional shares will not affect the tax treatment of such dividends and distributions, which will be treated as received by you and then used to purchase the shares.

Dividends from investment company taxable income and distributions from net realized capital gains are declared and paid as follows:

Portfolio	Investment Income Dividends	Capital Gains Distributions
Balanced Strategy	Quarterly	Annually
Growth and Income Strategy	Quarterly	Annually
Growth Strategy	Annually	Annually
Aggressive Growth Strategy	Annually	Annually

From time to time a portion of a Portfolio's dividends may constitute a return of capital.

When you purchase shares of a Portfolio, part of the NAV per share may be represented by undistributed income or undistributed realized gains that have previously been earned by the Portfolio. Therefore, subsequent distributions on such shares from such income or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' shares.

HOW TO BUY SHARES

How Can I Purchase Class A, Class B And Class C Shares Of The Funds?

You may purchase shares of the Funds through:

- Goldman Sachs;
- Authorized Dealers; or
- Directly from Goldman Sachs Trust (the ''Trust'').

In order to make an initial investment in a Fund, you must furnish to the Fund, Goldman Sachs or your Authorized Dealer the information in the Account Application attached to this Prospectus. An order will be processed upon receipt of payment.

To Open an Account:

- Complete the enclosed Account Application
- Mail your payment and Account Application to:

  Your Authorized Dealer

  – Purchases by check or Federal Reserve draft should be made payable to your Authorized Dealer
  – Your Authorized Dealer is responsible for forwarding payment promptly (within three business days) to the Fund

  or

  Goldman Sachs Funds c/o National Financial Data Services, Inc.
  (''NFDS''), P.O. Box 219711, Kansas City, MO 64121-9711

  – Purchases by check or Federal Reserve draft should be made payable to Goldman Sachs Funds – (Name of Fund ***and*** Class of Shares)
  – NFDS will not accept checks drawn on foreign banks, third-party checks, cashier's checks or official checks, temporary checks, electronic checks, cash, money orders, travelers cheques or credit card checks
  – Federal funds wire, Automated Clearing House Network (''ACH'') transfer or bank wires should be sent to State Street Bank and Trust Company (''State Street'') (each Fund's custodian). Please call the Funds at 1-800-526-7384 to get detailed instructions on how to wire your money.

What Is My Minimum Investment In The Funds?

	Initial	Additional
Regular Accounts	$1,000	$50
Tax-Sheltered Retirement Plans (excluding SIMPLE IRAs and Education IRAs)	$250	$50
Uniform Gift to Minors Act Accounts/Uniform Transfer to Minors Act Accounts	$250	$50
403(b) Plan Accounts	$200	$50
SIMPLE IRAs and Education IRAs	$50	$50
Automatic Investment Plan Accounts	$50	$50

What Alternative Sales Arrangements Are Available?

The Funds offer three classes of shares through this Prospectus.

Maximum Amount You Can Buy In The Aggregate Across Funds	Class A	No limit
	Class B	$250,000
	Class C	$1,000,000
Initial Sales Charge	Class A	Applies to purchases of less than $1 million—varies by size of investment with a maximum of 5.5%
	Class B	None
	Class C	None
CDSC	Class A	1.00% on certain investments of $1 million or more ***if*** you sell within 18 months
	Class B	6 year declining CDSC with a maximum of 5%
	Class C	1% if shares are redeemed within 12 months of purchase
Conversion Feature	Class A	None
	Class B	Class B Shares convert to Class A Shares after 8 years
	Class C	None

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Refuse to open an account if you fail to (i) provide a social security number or other taxpayer identification number; or (ii) certify that such number is correct (if required to do so under applicable law).
- Reject or restrict any purchase or exchange order by a particular purchaser (or group of related purchasers) for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a

particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of shares of a Fund is evident, or if purchases, sales or exchanges are, or a subsequent abrupt redemption might be, of a size that would disrupt the management of a Fund.
- Close a Fund to new investors from time to time and reopen a Fund whenever it is deemed appropriate by a Fund's Investment Adviser.
- Modify or waive the minimum investment amounts.
- Modify the manner in which shares are offered.
- Modify the sales charge rates applicable to future purchases of shares.

The Funds may allow you to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange shares is the Fund's next determined NAV and share class. Each class calculates its NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

The Funds' investments are valued based on market quotations or if accurate quotations are not readily available, the fair value of the Fund's investments may be determined in good faith under procedures established by the Trustees.

- NAV per share of each share class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- When you buy shares, you pay the NAV next calculated *after* the Funds receive your order in proper form, plus any applicable sales charge.
- When you sell shares, you receive the NAV next calculated *after* the Funds receive your order in proper form, less any applicable CDSC.

- The Trust reserves the right to reprocess purchase, redemption and exchange transactions that were processed at an NAV other than a Fund's official closing NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open a Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-526-7384.

Foreign securities may trade in their local markets on days a Fund is closed. As a result, the NAV of a Fund that holds foreign securities may be impacted on days when investors may not purchase or redeem Fund shares.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

COMMON QUESTIONS ABOUT THE PURCHASE OF CLASS A SHARES

What Is The Offering Price Of Class A Shares?

The offering price of Class A Shares of each Fund is the next determined NAV per share plus an initial sales charge paid to Goldman Sachs at the time of purchase of shares. The sales charge varies depending upon the amount you purchase. In some cases, described below, the initial sales charge may be

eliminated altogether, and the offering price will be the NAV per share. The current sales charges and commissions paid to Authorized Dealers are as follows:

Amount of Purchase (including sales charge, if any)	Sales Charge as Percentage of Offering Price	Sales Charge as Percentage of Net Amount Invested	Maximum Dealer Allowance as Percentage of Offering Price*
Less than $50,000	5.50%	5.82%	5.00%
$50,000 up to (but less than) $100,000	4.75	4.99	4.00
$100,000 up to (but less than) $250,000	3.75	3.90	3.00
$250,000 up to (but less than) $500,000	2.75	2.83	2.25
$500,000 up to (but less than) $1 million	2.00	2.04	1.75
$1 million or more	0.00**	0.00**	***

** Dealer's allowance may be changed periodically. During special promotions, the entire sales charge may be allowed to Authorized Dealers. Authorized Dealers to whom substantially the entire sales charge is allowed may be deemed to be ''underwriters'' under the Securities Act of 1933.*

*** No sales charge is payable at the time of purchase of Class A Shares of $1 million or more, but a CDSC of 1% may be imposed in the event of certain redemptions within 18 months of purchase.*

**** The Distributor may pay a one-time commission to Authorized Dealers who initiate or are responsible for purchases of $1 million or more of shares of the Funds equal to 1.00% of the amount under $3 million, 0.50% of the next $2 million, and 0.25% thereafter. The Distributor may also pay, with respect to all or a portion of the amount purchased, a commission in accordance with the foregoing schedule to Authorized Dealers who initiate or are responsible for purchases of $500,000 or more by certain Section 401(k), profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, or other employee benefit plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations investing in the Funds which satisfy the criteria set forth below in ''When Are Class A Shares Not Subject To A Sales Load?'' or $1 million or more by certain ''wrap'' accounts. Purchases by such plans will be made at NAV with no initial sales charge, but if shares are redeemed within 18 months after the end of the calendar month in which such purchase was made, a CDSC of 1% may be imposed upon the plan, the plan sponsor or the third-party administrator. In addition, Authorized Dealers will remit to the Distributor such payments received in connection with ''wrap'' accounts in the event that shares are redeemed within 18 months after the end of the calendar month in which the purchase was made.*

What Else Do I Need To Know About Class A Shares' CDSC?

Purchases of $1 million or more of Class A Shares will be made at NAV with no initial sales charge. However, if you redeem shares within 18 months after the end of the calendar month in which the purchase was made, excluding any period of time in which the shares were exchanged into and remained invested in an equivalent class of an ILA Portfolio, a CDSC of 1% may be imposed. The CDSC may not be imposed if your Authorized Dealer enters into an agreement with the Distributor to return all or an applicable prorated portion of its commission to the Distributor. The CDSC is waived on redemptions in certain circumstances. See ''In What Situations May The CDSC On Class A, B Or C Shares Be Waived Or Reduced?'' below.

When Are Class A Shares Not Subject To A Sales Load?

Class A Shares of the Funds may be sold at NAV without payment of any sales charge to the following individuals and entities:

- Goldman Sachs, its affiliates or their respective officers, partners, directors or employees (including retired employees and former partners), any partnership of

which Goldman Sachs is a general partner, any Trustee or officer of the Trust and designated family members of any of these individuals;

- Qualified retirement plans of Goldman Sachs;
- Trustees or directors of investment companies for which Goldman Sachs or an affiliate acts as sponsor;
- Any employee or registered representative of any Authorized Dealer or their respective spouses, children and parents;
- Banks, trust companies or other types of depository institutions investing for their own account or investing for discretionary or non-discretionary accounts;
- Any state, county or city, or any instrumentality, department, authority or agency thereof, which is prohibited by applicable investment laws from paying a sales charge or commission in connection with the purchase of shares of a Fund;
- Section 401(k), profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, or other employee benefit plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations (''Retirement Plans'') that:
  - Buy shares of Goldman Sachs Funds worth $500,000 or more; or
  - Have 100 or more eligible employees at the time of purchase; or
  - Certify that they expect to have annual plan purchases of shares of Goldman Sachs Funds of $200,000 or more; or
  - Are provided administrative services by certain third-party administrators that have entered into a special service arrangement with Goldman Sachs relating to such plans; or
  - Have at the time of purchase aggregate assets of at least $2,000,000;
- ''Wrap'' accounts for the benefit of clients of broker-dealers, financial institutions or financial planners, provided they have entered into an agreement with GSAM specifying aggregate minimums and certain operating policies and standards;
- Registered investment advisers investing for accounts for which they receive asset-based fees;
- Accounts over which GSAM or its advisory affiliates have investment discretion;
- Shareholders receiving distributions from a qualified retirement plan invested in the Goldman Sachs Funds and reinvesting such proceeds in a Goldman Sachs IRA;
- Shareholders who roll over distributions from any tax-qualified retirement plan or tax-sheltered annuity to an IRA which invests in the Goldman Sachs Funds if the tax-qualified retirement plan or tax-sheltered annuity receives administrative services provided by certain third-party administrators that have entered into a special service arrangement with Goldman Sachs relating to such plan or annuity; or

- Investors who qualify under other exemptions that are stated from time to time in the Additional Statement.

You must certify eligibility for any of the above exemptions on your Account Application and notify the Fund if you no longer are eligible for the exemption. The Fund will grant you an exemption subject to confirmation of your entitlement. You may be charged a fee if you effect your transactions through a broker or agent.

How Can The Sales Charge On Class A Shares Be Reduced?

- ***Right of Accumulation:*** When buying Class A Shares in Goldman Sachs Funds, your current aggregate investment determines the initial sales load you pay. You may qualify for reduced sales charges when the current market value of holdings, plus new purchases, reaches $50,000 or more. Class A Shares of any of the Goldman Sachs Funds may be combined under the Right of Accumulation. To qualify for a reduced sales load, you or your Authorized Dealer must notify the Funds' Transfer Agent at the time of investment that a quantity discount is applicable. Use of this service is subject to a check of appropriate records. The Additional Statement has more information about the Right of Accumulation.
- ***Statement of Intention:*** You may obtain a reduced sales charge by means of a written Statement of Intention which expresses your non-binding commitment to invest in the aggregate $50,000 or more (not counting reinvestments of dividends and distributions) within a period of 13 months in Class A Shares of one or more of the Goldman Sachs Funds. Any investments you make during the period will receive the discounted sales load based on the full amount of your investment commitment. If the investment commitment of the Statement of Intention is not met prior to the expiration of the 13-month period, the entire amount will be subject to the higher applicable sales charge. By signing the Statement of Intention, you authorize the Transfer Agent to escrow and redeem Class A Shares in your account to pay this additional charge. The Additional Statement has more information about the Statement of Intention, which you should read carefully.

COMMON QUESTIONS ABOUT THE PURCHASE OF CLASS B SHARES

What Is The Offering Price Of Class B Shares?

You may purchase Class B Shares of the Funds at the next determined NAV without an initial sales charge. However, Class B Shares redeemed within six years of purchase will be subject to a CDSC at the rates shown in the table below based on how long you held your shares.

The CDSC schedule is as follows:

Year Since Purchase	CDSC as a Percentage of Dollar Amount Subject to CDSC
First	5%
Second	4%
Third	3%
Fourth	3%
Fifth	2%
Sixth	1%
Seventh and thereafter	None

Proceeds from the CDSC are payable to the Distributor and may be used in whole or in part to defray the Distributor's expenses related to providing distribution-related services to the Funds in connection with the sale of Class B Shares, including the payment of compensation to Authorized Dealers. A commission equal to 4% of the amount invested is paid to Authorized Dealers.

What Should I Know About The Automatic Conversion Of Class B Shares?

Class B Shares of a Fund will automatically convert into Class A Shares of the same Fund at the end of the calendar quarter that is eight years after the purchase date.

If you acquire Class B Shares of a Fund by exchange from Class B Shares of another Goldman Sachs Fund, your Class B Shares will convert into Class A Shares of such Fund based on the date of the initial purchase and the CDSC schedule of that purchase.

If you acquire Class B Shares through reinvestment of distributions, your Class B Shares will convert into Class A Shares based on the date of the initial purchase of the shares on which the distribution was paid.

The conversion of Class B Shares to Class A Shares will not occur at any time the Funds are advised that such conversions may constitute taxable events for federal tax purposes, which the Funds believe is unlikely. If conversions do not occur as a result of possible taxability, Class B Shares would continue to be subject to higher expenses than Class A Shares for an indeterminate period.

A COMMON QUESTION ABOUT THE PURCHASE OF CLASS C SHARES

What Is The Offering Price Of Class C Shares?

You may purchase Class C Shares of the Funds at the next determined NAV without paying an initial sales charge. However, if you redeem Class C Shares within 12 months of purchase, a CDSC of 1% will normally be deducted from the redemption proceeds; provided that in connection with purchases by Retirement Plans, where Class C Shares are redeemed within 12 months of purchase, a CDSC of 1% may be imposed upon the plan sponsor or third-party administrator.

Proceeds from the CDSC are payable to the Distributor and may be used in whole or in part to defray the Distributor's expenses related to providing distribution-related services to the Funds in connection with the sale of Class C Shares, including the payment of compensation to Authorized Dealers. An amount equal to 1% of the amount invested is normally paid by the Distributor to Authorized Dealers.

COMMON QUESTIONS APPLICABLE TO THE PURCHASE OF CLASS A, B AND C SHARES

What Else Do I Need To Know About The CDSC On Class A, B Or C Shares?

- The CDSC is based on the lesser of the NAV of the shares at the time of redemption or the original offering price (which is the original NAV).
  - No CDSC is charged on shares acquired from reinvested dividends or capital gains distributions.
  - No CDSC is charged on the per share appreciation of your account over the initial purchase price.
  - When counting the number of months since a purchase of Class B or Class C Shares was made, all payments made during a month will be combined and considered to have been made on the first day of that month.
- To keep your CDSC as low as possible, each time you place a request to sell shares, the Funds will first sell any shares in your account that do not carry a CDSC and then the shares in your account that have been held the longest.

In What Situations May The CDSC On Class A, B Or C Shares Be Waived Or Reduced?

The CDSC on Class A, Class B and Class C Shares that are subject to a CDSC may be waived or reduced if the redemption relates to:

- Retirement distributions or loans to participants or beneficiaries from Retirement Plans;

- The death or disability (as defined in Section 72(m)(7) of the Internal Revenue Code of 1986, as amended (the ''Code'')) of a participant or beneficiary in a Retirement Plan;
- Hardship withdrawals by a participant or beneficiary in a Retirement Plan;
- Satisfying the minimum distribution requirements of the Code;
- Establishing ''substantially equal periodic payments'' as described under Section 72(t)(2) of the Code;
- The separation from service by a participant or beneficiary in a Retirement Plan;
- The death or disability (as defined in Section 72(m)(7) of the Code) of a shareholder if the redemption is made within one year of the event;
- Excess contributions distributed from a Retirement Plan;
- Distributions from a qualified Retirement Plan invested in the Goldman Sachs Funds which are being rolled over to a Goldman Sachs IRA; or
- Redemption proceeds which are to be reinvested in accounts or non-registered products over which GSAM or its advisory affiliates have investment discretion.

In addition, Class A, B and C Shares subject to a systematic withdrawal plan may be redeemed without a CDSC. The Funds reserve the right to limit such redemptions, on an annual basis, to 12% each of the value of your Class B and C Shares and 10% of the value of your Class A Shares.

How Do I Decide Whether To Buy Class A, B Or C Shares?

The decision as to which Class to purchase depends on the amount you invest, the intended length of the investment and your personal situation.

- ***Class A Shares.*** If you are making an investment of $50,000 or more that qualifies for a reduced sales charge, you should consider purchasing Class A Shares.
- ***Class B Shares.*** If you plan to hold your investment for at least six years and would prefer not to pay an initial sales charge, you might consider purchasing Class B Shares. By not paying a front-end sales charge, your entire investment in Class B Shares is available to work for you from the time you make your initial investment. However, the distribution and service fee paid by Class B Shares will cause your Class B Shares (until conversion to Class A Shares) to have a higher expense ratio, and thus lower performance and lower dividend payments (to the extent dividends are paid) than Class A Shares. A maximum purchase limitation of $250,000 in the aggregate normally applies to Class B Shares. Individual purchases exceeding $250,000 will be rejected.
- ***Class C Shares.*** If you are unsure of the length of your investment or plan to hold your investment for less than six years and would prefer not to pay an initial sales charge, you may prefer Class C Shares. By not paying a front-end sales charge, your entire investment in Class C Shares is available to work for you from the time you make your initial investment. However, the distribution

and service fee paid by Class C Shares will cause your Class C Shares to have a higher expense ratio, and thus lower performance and lower dividend payments (to the extent dividends are paid) than Class A Shares (or Class B Shares after conversion to Class A Shares).

Although Class C Shares are subject to a CDSC for only 12 months, Class C Shares do not have the automatic eight year conversion feature applicable to Class B Shares and your investment may pay higher distribution fees indefinitely.

A maximum purchase limitation of $1,000,000 in the aggregate normally applies to purchases of Class C Shares. Individual purchases exceeding $1,000,000 will be rejected.

Note: Authorized Dealers may receive different compensation for selling Class A, Class B or Class C Shares.

In addition to Class A, Class B and Class C Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), have different minimum investment requirements and are entitled to different services. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

HOW TO SELL SHARES

How Can I Sell Class A, Class B And Class C Shares Of The Funds?

You may arrange to take money out of your account by selling (redeeming) some or all of your shares. **Each Fund will redeem its shares upon request on any business day at the NAV next determined after receipt of such request in proper form, subject to any applicable CDSC.** You may request that redemption proceeds be sent to you by check or by wire (if the wire instructions are on record). Redemptions may be requested in writing or by telephone.

Instructions For Redemptions:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund name and Class of Shares ■ The dollar amount you want to sell ■ How and where to send the proceeds ■ Obtain a signature guarantee (see details below) ■ Mail your request to: Goldman Sachs Funds c/o NFDS P.O. Box 219711 Kansas City, MO 64121-9711 or for overnight delivery: Goldman Sachs Funds c/o NFDS 330 West 9th Street Poindexter Bldg., 1st Floor Kansas City, MO 64105
By Telephone:	If you have not declined the telephone redemption privilege on your Account Application: ■ 1-800-526-7384 (8:00 a.m. to 4:00 p.m. New York time) ■ You may redeem up to $50,000 of your shares within any 7 calendar day period ■ Proceeds which are sent directly to a Goldman Sachs brokerage account are not subject to the $50,000 limit

When Do I Need A Signature Guarantee To Redeem Shares?

A signature guarantee is required if:

- You are requesting in writing to redeem shares in an amount over $50,000;
- You would like the redemption proceeds sent to an address that is not your address of record; or
- You would like to change the bank designated on your Account Application.

A signature guarantee must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee. Additional documentation may be required for executors, trustees or corporations or when deemed appropriate by the Transfer Agent.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. The Trust

may accept telephone redemption instructions from any person identifying himself or herself as the owner of an account or the owner's registered representative where the owner has not declined in writing to use this service. Thus, you risk possible losses if a telephone redemption is not authorized by you.

In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs and NFDS each employ reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Proceeds of telephone redemption requests will be sent only to your address of record or authorized bank account designated in the Account Application (unless you provide written instructions and a signature guarantee, indicating another address or account) and exchanges of shares normally will be made only to an identically registered account.
- Telephone redemptions will not be accepted during the 30-day period following any change in your address of record.
- The telephone redemption option does not apply to shares held in a ''street name'' account. ''Street name'' accounts are accounts maintained and serviced by your Authorized Dealer. If your account is held in ''street name,'' you should contact your registered representative of record, who may make telephone redemptions on your behalf.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: You may arrange for your redemption proceeds to be wired as federal funds to the bank account designated in your Account Application. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be wired on the next business day in federal funds (for a total of one business day delay), but may be paid up to three business days following receipt of a properly executed wire transfer redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.

- A transaction fee of $7.50 may be charged for payments of redemption proceeds by domestic wire. Your bank may also charge wiring fees. You should contact your bank directly to learn whether it charges such fees.
- To change the bank designated on your Account Application, you must send written instructions (with your signature guaranteed) to the Transfer Agent.
- Neither the Trust, Goldman Sachs nor any Authorized Dealer assumes any responsibility for the performance of your bank or any intermediaries in the transfer process. If a problem with such performance arises, you should deal directly with your bank or any such intermediaries.

By Check: You may elect to receive your redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within three business days of a properly executed redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.

The Trust reserves the right to:

- Redeem your shares if your account balance is less than $50 as a result of a redemption. The Funds will not redeem your shares on this basis if the value of your account falls below the minimum account balance solely as a result of market conditions. The Funds will give you 60 days' prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interests of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. The Fund may, in its discretion, pay redemption proceeds in-kind at any time or if requested by a shareholder. The Fund anticipates that it will normally grant shareholder requests for an in-kind distribution so long as the distribution is in the best interests of the Fund and its other shareholders.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to the Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at

NAV in additional shares of the same class of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Reinvest Redemption Proceeds In The Same Or Another Goldman Sachs Fund?

You may redeem shares of a Fund and reinvest a portion or all of the redemption proceeds (plus any additional amounts needed to round off purchases to the nearest full share) at NAV. To be eligible for this privilege, you must hold the shares you want to redeem for at least 30 days and you must reinvest the share proceeds within 90 days after you redeem. You may reinvest as follows:

- Class A or B Shares—Class A Shares of the same Fund or another Goldman Sachs Fund
- Class C Shares—Class C Shares of the same Fund or another Goldman Sachs Fund
- You should obtain and read the applicable prospectuses before investing in any other Funds.
- If you pay a CDSC upon redemption of Class A or Class C Shares and then reinvest in Class A or Class C Shares as described above, your account will be credited with the amount of the CDSC you paid. The reinvested shares will, however, continue to be subject to a CDSC. The holding period of the shares acquired through reinvestment will include the holding period of the redeemed shares for purposes of computing the CDSC payable upon a subsequent redemption. For Class B Shares, you may reinvest the redemption proceeds in Class A Shares at NAV but the amount of the CDSC paid upon redemption of the Class B Shares will not be credited to your account.
- The reinvestment privilege may be exercised at any time in connection with transactions in which the proceeds are reinvested at NAV in a tax-sheltered retirement plan. In other cases, the reinvestment privilege may be exercised once per year upon receipt of a written request.
- You may be subject to tax as a result of a redemption. You should consult your tax adviser concerning the tax consequences of a redemption and reinvestment.

Can I Exchange My Investment From One Fund To Another?

You may exchange shares of a Fund at NAV without the imposition of an initial sales charge or CDSC at the time of exchange for shares of the same class or an equivalent class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice to you.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund names and Class of Shares ■ The dollar amount you want to exchange ■ Obtain a signature guarantee (see details above) ■ Mail the request to: Goldman Sachs Funds c/o NFDS P.O. Box 219711 Kansas City, MO 64121-9711 or for overnight delivery - Goldman Sachs Funds c/o NFDS 330 West 9th St. Poindexter Bldg., 1st Floor Kansas City, MO 64105
By Telephone:	If you have not declined the telephone exchange privilege on your Account Application: ■ 1-800-526-7384 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- Currently, there is no charge for exchanges, although the Funds may impose a charge in the future.
- The exchanged shares may later be exchanged for shares of the same class (or an equivalent class) of the original Fund at the next determined NAV without the imposition of an initial sales charge or CDSC if the amount in the Fund resulting from such exchanges is less than the largest amount on which you have previously paid the applicable sales charge.
- When you exchange shares subject to a CDSC, no CDSC will be charged at that time. The exchanged shares will be subject to the CDSC of the shares originally held. For purposes of determining the amount of the applicable CDSC, the length of time you have owned the shares will be measured from the date you acquired the original shares subject to a CDSC and will not be affected by a subsequent exchange.
- Eligible investors may exchange certain classes of shares for another class of shares of the same Fund. For further information, call Goldman Sachs Funds at 1-800-526-7384 and see the Additional Statement.

- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs and NFDS may use reasonable procedures described under ''What Do I Need to Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Telephone exchanges normally will be made only to an identically registered account. Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and accompanied by a signature guarantee.
- Exchanges into Funds that are closed to new investors may be restricted.
- A signature guarantee may be required (see details above).

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

SHAREHOLDER SERVICES

Can I Arrange To Have Automatic Investments Made On A Regular Basis?

You may be able to make systematic cash investments through your bank via ACH transfer or your checking account via bank draft each month. Forms for this option are available from Goldman Sachs, and your Authorized Dealer, or you may check the appropriate box on the Account Application.

Can My Dividends And Distributions From A Fund Be Invested In Other Funds?

You may elect to cross-reinvest dividends and capital gain distributions paid by a Fund in shares of the same class or an equivalent class of other Goldman Sachs Funds.

- Shares will be purchased at NAV.
- No initial sales charge or CDSC will be imposed.
- You may elect cross-reinvestment into an identically registered account or an account registered in a different name or with a different address, social security number or taxpayer identification number provided that the account has been properly established, appropriate signature guarantees obtained and the minimum initial investment has been satisfied.

Can I Arrange To Have Automatic Exchanges Made On A Regular Basis?

You may elect to exchange automatically a specified dollar amount of shares of a Fund for shares of the same class or an equivalent class of other Goldman Sachs Funds.

- Shares will be purchased at NAV.
- No initial sales charge is imposed.
- Shares subject to a CDSC acquired under this program may be subject to a CDSC at the time of redemption from the Fund into which the exchange is made depending upon the date and value of your original purchase.
- Automatic exchanges are made monthly on the 15th day of each month or the first business day thereafter.
- Minimum dollar amount: $50 per month.

What Else Should I Know About Cross-Reinvestments And Automatic Exchanges?

Cross-reinvestments and automatic exchanges are subject to the following conditions:

- You must hold $5,000 or more in the Fund which is paying the dividend or from which the exchange is being made.
- You must invest an amount in the Fund into which cross-reinvestments or automatic exchanges are being made that is equal to that Fund's minimum initial investment or continue to cross-reinvest or to make automatic exchanges until such minimum initial investment is met.
- You should obtain and read the prospectus of the Fund into which dividends are invested or automatic exchanges are made.

Can I Have Automatic Withdrawals Made On A Regular Basis?

You may draw on your account systematically via check or ACH transfer in any amount of $50 or more.

- It is normally undesirable to maintain a systematic withdrawal plan at the same time that you are purchasing additional Class A, Class B or Class C Shares because of the sales charge imposed on your purchases of Class A Shares or the imposition of a CDSC on your redemptions of Class A, Class B or Class C Shares.
- You must have a minimum balance of $5,000 in a Fund.
- Checks are mailed the next business day after your selected systematic withdrawal date.
- Each systematic withdrawal is a redemption and therefore a taxable transaction.
- The CDSC applicable to Class A, Class B or Class C Shares redeemed under the systematic withdrawal plan may be waived.

What Types of Reports Will I Be Sent Regarding My Investment?

You will be provided with a printed confirmation of each transaction in your account and an individual quarterly account statement. A year-to-date statement for your account will be provided upon request made to Goldman Sachs. If your account is held in ''street name'' you may receive your statements and confirmations on a different schedule.

You will also receive an annual shareholder report containing audited financial statements and a semi-annual shareholder report. If you have consented to the delivery of a single copy of shareholder reports, prospectuses and other information to all shareholders who share the same mailing address with your account, you may revoke your consent at any time by contacting Goldman Sachs Funds by phone at 1-800-526-7384 or by mail at Goldman Sachs Funds, 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will begin sending individual copies to you within 30 days after receipt of your revocation.

The Funds do not generally provide sub-accounting services.

What Should I Know When I Purchase Shares Through An Authorized Dealer?

Authorized Dealers and other financial intermediaries may provide varying arrangements for their clients to purchase and redeem Fund shares. They may charge additional fees not described in this Prospectus to their customers for such services.

If shares of a Fund are held in a ''street name'' account with an Authorized Dealer, all recordkeeping, transaction processing and payments of distributions relating to your account will be performed by the Authorized Dealer, and not by the Fund and its Transfer Agent. Since the Funds will have no record of your transactions, you should contact the Authorized Dealer to purchase, redeem or exchange shares, to make changes in or give instructions concerning the account or to obtain information about your account. The transfer of shares in a ''street name'' account to an account with another dealer or to an account directly with the Fund involves special procedures and will require you to obtain historical purchase information about the shares in the account from the Authorized Dealer.

Authorized Dealers and other financial intermediaries may be authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and if approved by the Trust, to designate other intermediaries to accept such orders. In these cases:

- A Fund will be deemed to have received an order that is in proper form when the order is accepted by an Authorized Dealer or intermediary on a business

day, and the order will be priced at the Fund's NAV per share (adjusted for any applicable sales charge) next determined after such acceptance.
- Authorized Dealers and intermediaries are responsible for transmitting accepted orders to the Funds within the time period agreed upon by them.

You should contact your Authorized Dealer or intermediary to learn whether it is authorized to accept orders for the Trust.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Authorized Dealers and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds. Additional compensation based on sales may, but is normally not expected to, exceed 0.50% (annualized) of the amount invested.

DISTRIBUTION SERVICES AND FEES

What Are The Different Distribution And Service Fees Paid By Class A, B and C Shares?

The Trust has adopted distribution and service plans (each a ''Plan'') under which Class A, Class B and Class C Shares bear distribution and service fees paid to Authorized Dealers and Goldman Sachs. If the fees received by Goldman Sachs pursuant to the Plans exceed its expenses, Goldman Sachs may realize a profit from these arrangements. Goldman Sachs generally pays the distribution and service fees on a quarterly basis.

Under the Plans, Goldman Sachs is entitled to a monthly fee from each Fund for distribution services equal, on an annual basis, to 0.25%, 0.75% and 0.75%, respectively, of a Fund's average daily net assets attributed to Class A, Class B and Class C Shares. Because these fees are paid out of the Fund's assets on an ongoing basis, over time, these fees will increase the cost of your investment and may cost you more than paying other types of such charges.

The distribution fees are subject to the requirements of Rule 12b-1 under the Investment Company Act of 1940, and may be used (among other things) for:
- Compensation paid to and expenses incurred by Authorized Dealers, Goldman Sachs and their respective officers, employees and sales representatives;
- Commissions paid to Authorized Dealers;
- Allocable overhead;
- Telephone and travel expenses;
- Interest and other costs associated with the financing of such compensation and expenses;

- Printing of prospectuses for prospective shareholders;
- Preparation and distribution of sales literature or advertising of any type; and
- All other expenses incurred in connection with activities primarily intended to result in the sale of Class A, Class B and Class C Shares.

In connection with the sale of Class C Shares, Goldman Sachs normally begins paying the 0.75% distribution fee as an ongoing commission to Authorized Dealers after the shares have been held for one year.

PERSONAL ACCOUNT MAINTENANCE SERVICES AND FEES

Under the Plans, Goldman Sachs is also entitled to receive a separate fee equal on an annual basis to 0.25% of each Fund's average daily net assets attributed to Class B or Class C Shares. This fee is for personal and account maintenance services, and may be used to make payments to Goldman Sachs, Authorized Dealers and their officers, sales representatives and employees for responding to inquiries of, and furnishing assistance to, shareholders regarding ownership of their shares or their accounts or similar services not otherwise provided on behalf of the Funds. If the fees received by Goldman Sachs pursuant to the Plans exceed its expenses, Goldman Sachs may realize a profit from this arrangement.

In connection with the sale of Class C Shares, Goldman Sachs normally begins paying the 0.25% ongoing service fee to Authorized Dealers after the shares have been held for one year.

RESTRICTIONS ON EXCESSIVE TRADING PRACTICES

The Trust does not permit market-timing or other excessive trading practices. Purchases and exchanges should be made for long-term investment purposes only. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. Excessive, short-term (market-timing) trading practices may disrupt portfolio management strategies, harm Fund performance and negatively impact long-term shareholders. The Trust and Goldman Sachs will not be held liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust (or Goldman Sachs) and its shareholders, the Trust (or Goldman Sachs) will exercise these rights if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to a Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together.

Taxation

As with any investment, you should consider how your investment in the Portfolios will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Portfolios.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Portfolio distributions and the sale of your Portfolio shares.

DISTRIBUTIONS

Each Portfolio contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Portfolios are generally subject to federal income tax, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Portfolio shares or receive them in cash. For federal tax purposes, the Portfolios' income dividend distributions and short-term capital gain distributions are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Portfolio shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. A percentage of the Portfolios' dividends paid to corporate shareholders may be eligible for the corporate dividends-received deduction. The Portfolios will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

The REIT investments of the underlying Real Estate Securities Fund often do not provide complete tax information to the Fund until after the calendar year-end. Consequently, because of the delay, it may be necessary for the Portfolios to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31.

Each Portfolio may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Portfolios may deduct these taxes in computing their taxable income.

If you buy shares of a Portfolio before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as ‘‘buying a dividend.’’

SALES AND EXCHANGES

Your sale of Portfolio shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Portfolio shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this gain or loss will be long-term or short-term depending on whether your holding period for the shares exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of a Portfolio may be disallowed under ‘‘wash sale’’ rules to the extent the shares disposed of are replaced with other shares of that Portfolio within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Portfolio. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Portfolio must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Portfolio to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on the Underlying Funds

This Appendix provides further information on certain types of investments and techniques that may be used by the Underlying Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request, and in the prospectuses of the Underlying Funds.

The Underlying Equity Funds invest primarily in common stocks and other equity investments, including preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments that have economic characteristics similar to equity securities (''equity investments''). The Underlying Fixed-Income Funds invest primarily in fixed-income securities, including senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), convertible and non-convertible corporate debt obligations, loan participations and preferred stock.

The Short-Duration Government Fund invests in U.S. Government Securities and related repurchase agreements, and does not make foreign investments. The investments of the Financial Square Prime Obligations Fund are limited by SEC regulations applicable to money market funds as described in its prospectus, and do not include many of the types of investments discussed below that are permitted for the other Underlying Funds. With these exceptions, and the further exceptions noted below, the following description applies generally to the Underlying Funds.

A. General Risks of the Underlying Funds

The Underlying Equity Funds will be subject to the risks associated with common stocks and other equity investments. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of the equity investments that an Underlying Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. Recently, stock markets have experienced substantial price volatility.

The Underlying Fixed-Income Funds will be subject to the risks associated with fixed-income securities. These risks include interest rate risk, credit risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed-income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed-income securities tends to decline. Credit risk involves the risk that an issuer or guarantor could default on its obligations, and an Underlying Fund will not recover its investment. Call risk and extension risk are normally present in adjustable rate mortgage loans (''ARMs''), mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities, such as securities backed by car loans.

The Financial Square Prime Obligations Fund attempts to maintain a stable NAV of $1.00 per share and values its assets using the amortized cost method in accordance with SEC regulations. There is no assurance, however, that the Financial Square Prime Obligations Fund will be successful in maintaining its per share value at $1.00 on a continuous basis. The per share NAVs of the other Underlying Funds are expected to fluctuate on a daily basis.

The portfolio turnover rates of the Underlying Funds have ranged from 36% to 437% during their most recent fiscal years. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by an Underlying Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of an Underlying Fund's portfolio securities, excluding securities having a maturity at the date of purchase of one year or less.

B. Other Risks of the Underlying Funds

Risks of Investing in Small Capitalization and Mid-Capitalization Companies. Certain Underlying Funds may, to the extent consistent with its investment policies,

invest in small and mid-capitalization companies. Investments in small and mid-capitalization companies involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Among the reasons for the greater price volatility of these investments are the less certain growth prospects of smaller firms and the lower degree of liquidity in the markets for such securities. Small and mid-capitalization companies may be thinly traded and may have to be sold at a discount from current market prices or in small lots over an extended period of time. In addition, these securities are subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities in particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic or market conditions, or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, an Underlying Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Small and mid-capitalization companies include ''unseasoned'' issuers that do not have an established financial history; often have limited product lines, markets or financial resources; may depend on or use a few key personnel for management; and may be susceptible to losses and risks of bankruptcy. Small and mid-capitalization companies may be operating at a loss or have significant variations in operating results; may be engaged in a rapidly changing business with products subject to a substantial risk of obsolescence; may require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition. In addition, these companies may face intense competition, including competition from companies with greater financial resources, more extensive development, manufacturing, marketing, and other capabilities, and a larger number of qualified managerial and technical personnel. Transaction costs for these investments are often higher than those for larger capitalization companies. Investments in small and mid-capitalization companies may be more difficult to price precisely than other types of securities because of their characteristics and lower trading volumes.

Risks of Foreign Investments. Certain of the Underlying Funds may make foreign investments. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which an Underlying Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to

shareholders or converted to U.S. dollars, the Underlying Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States, and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of an Underlying Fund's assets in one or a few countries and currencies will subject a Fund to greater risks than if an Underlying Fund's assets were not geographically concentrated.

Investment in sovereign debt obligations by a certain Underlying Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or pay interest when due in accordance with the terms of such debt, and an Underlying Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn an Underlying Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign

exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts (''ADRs'') and Global Depositary Receipts (''GDRs''). Certain Underlying Funds may also invest in European Depositary Receipts (''EDRs'') or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Euro. On January 1, 1999, the European Economic and Monetary Union (EMU) introduced a new single currency called the euro. The euro has replaced the national currencies of the following member countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

The new European Central Bank has control over each country's monetary policies. Therefore, the member countries no longer control their own monetary policies by directing independent interest rates for their currencies. The national governments of the participating countries, however, have retained the authority to set tax and spending policies and public debt levels.

The change to the euro as a single currency is relatively new and untested. The elimination of currency risk among EMU countries has affected the economic environment and behavior of investors, particularly in European markets, but the long-term impact of those changes on currency values or on the business or financial condition of European countries and issuers cannot be fully assessed at this time. In addition, the introduction of the euro presents other unique uncertainties, including the fluctuation of the euro relative to non-euro currencies; whether the interest rate, tax and labor regimes of European countries participating in the euro will converge over time; and whether the conversion of the currencies of other countries that now are or may in the future become members of the European Union (''EU'') will have an impact on the euro. Also, it is possible that the euro could be abandoned in the future by countries that have already adopted its use. These or other events, including political and economic developments, could cause market disruptions, and could adversely affect the value of securities held by the Underlying Funds. Because of the number of countries using this single

currency, a significant portion of the assets held by certain Underlying Funds may be denominated in the euro.

Risks of Emerging Countries. Certain Underlying Funds may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, Eastern Europe, Latin and South America and Africa. An Underlying Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of an Underlying Fund, the investment adviser, its affiliates and their respective clients and other service providers. An Underlying Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by an Underlying Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), an Underlying Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other

protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

An Underlying Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return from an investment in such countries to the Underlying Fund.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve an Underlying Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for an Underlying Fund to value its portfolio securities and could cause the Underlying Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Underlying Fund has delivered or the Underlying Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by an Underlying Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Underlying Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make an Underlying Fund's investments in such countries less liquid and more

volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). An Underlying Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions, or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, an Underlying Fund may incur losses because it will be required to effect sales at a disadvantageous time and then only at a substantial drop in price. Investments in emerging countries may be more difficult to price precisely because of the characteristics discussed above and lower trading volumes.

An Underlying Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, their investment advisers do not currently anticipate that a significant portion of the Underlying Funds' currency exposure in emerging countries, if any, will be covered by such instruments.

Risks of Derivative Investments. An Underlying Fund's transactions, if any, in options, futures, options on futures, swaps, options on swaps, interest rate caps, floors and collars, structured securities, inverse floating-rate securities, stripped mortgage-backed securities and foreign currency transactions involve additional risk of loss. Loss can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the investment adviser is incorrect in its expectation of fluctuations in securities prices, interest rates or currency prices. Certain Underlying Funds may also invest in derivative investments for non-hedging purposes (that is, to seek to increase total return). Investing for non-hedging purposes is considered a speculative practice and presents even greater risk of loss.

Derivative Mortgage-Backed Securities (such as principal-only (''POs''), interest-only (''IOs'') or inverse floating rate securities) are particularly exposed to call and extension risks. Small changes in mortgage prepayments can significantly impact the cash flow and the market value of these securities. In general, the risk of faster than anticipated prepayments adversely affects IOs, super floaters and premium priced mortgage-backed securities. The risk of slower than anticipated prepayments generally adversely affects POs, floating-rate securities subject to interest rate caps, support tranches and discount priced mortgage-backed securities. In addition,

particular derivative securities may be leveraged such that their exposure (*i.e.*, price sensitivity) to interest rate and/or prepayment risk is magnified.

Some floating-rate derivative debt securities can present more complex types of derivative and interest rate risks. For example, range floaters are subject to the risk that the coupon will be reduced below market rates if a designated interest rate floats outside of a specified interest rate band or collar. Dual index or yield curve floaters are subject to lower prices in the event of an unfavorable change in the spread between two designated interest rates.

Risks of Illiquid Securities. The Underlying Funds may invest up to 15% (10% in the case of the Financial Square Prime Obligations Fund) of their net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and all swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 (‘‘144A Securities’’).

Investing in 144A Securities may decrease the liquidity of an Underlying Fund’s portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be significant, from the market price of comparable securities for which a liquid market exists.

Credit/Default Risks. Debt securities purchased by the Underlying Funds may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign governments, domestic and foreign corporations, banks and other issuers. Some of these fixed-income securities are described in the next section below. Further information is provided in the Additional Statement.

Debt securities rated BBB or higher by Standard & Poor’s Ratings Group (‘‘Standard & Poor’s’’) or Baa or higher by Moody’s Investors Service, Inc.

(‘‘Moody’s’’) or having a comparable rating by another NRSRO are considered ‘‘investment grade.’’ Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers’ capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the investment adviser to be of comparable credit quality. If a security satisfies an Underlying Fund’s minimum rating requirement at the time of purchase and is subsequently downgraded below such rating, the Underlying Fund will not be required to dispose of the security. If a downgrade occurs, the Underlying Fund’s investment adviser will consider what action, including the sale of the security, is in the best interest of the Underlying Fund and its shareholders.

Certain Underlying Funds may invest in fixed-income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as ‘‘junk bonds.’’ Junk bonds are considered predominantly speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in an Underlying Fund’s portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Risks of Initial Public Offerings. Certain Underlying Funds may invest in IPOs. An IPO is a company’s first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When an Underlying Fund’s asset base is small, a significant portion of the Underlying Fund’s performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Underlying Fund. As the Underlying Fund’s assets grow, the effect of the Underlying Fund’s investments in IPOs on the Underlying Fund’s performance probably will decline, which could reduce the Underlying Fund’s performance. Because of the price volatility of IPO shares, an Underlying Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of

the Underlying Fund's portfolio and may lead to increased expenses to the Underlying Fund, such as commissions and transaction costs. By selling IPO shares, the Underlying Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that an Underlying Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for an Underlying Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Non-Diversification and Geographic Risks. The Global Income Fund is registered as a ''non-diversified'' fund under the Investment Company Act of 1940 (the ''Act'') and is, therefore, more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments. In addition, the Global Income Fund, and certain other Underlying Funds, may invest more than 25% of their total assets in the securities of corporate and governmental issuers located in a particular foreign country or region. Concentration of the investments of these or other Underlying Funds in issuers located in a particular country or region will subject the Underlying Fund, to a greater extent than if investments were less concentrated, to losses arising from adverse developments affecting those issuers or countries.

Temporary Investment Risks. The Underlying Funds may invest a substantial portion, and in some cases all, of their total assets, in cash equivalents for temporary periods. When an Underlying Fund's assets are invested in such instruments, the Underlying Fund may not be achieving its investment objective.

C. Investment Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Underlying Funds, including their associated risks.

An Underlying Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Underlying Fund's investment objective and policies. Further information is provided in the Additional Statement, which is available upon request.

U.S. Government Securities. Each Underlying Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (a) the full faith and credit of the U.S. Treasury; (b) the right of the issuer to borrow from the U.S. Treasury; (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components of stripped U.S. Government Securities are traded independently.

Custodial Receipts and Trust Certificates. Each Underlying Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities, Municipal Securities or other types of securities in which an Underlying Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes the Underlying Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Underlying Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, an Underlying Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Underlying Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. The Underlying Funds (other than CORE Large Cap Growth, CORE Large Cap Value, CORE Small Cap Equity and CORE International Equity Funds (the ‘‘CORE Equity Funds’’)) may invest in securities that represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property (‘‘Mortgage-Backed Securities’’). Mortgage-Backed Securities can be backed by either fixed rate mortgage loans or adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. Privately issued Mortgage-Backed Securities are normally structured with one or more types of ‘‘credit enhancement.’’ However, these Mortgage-Backed Securities typically do not have the same credit standing as U.S. government guaranteed Mortgage-Backed Securities.

Mortgage-Backed Securities may include multiple class securities, including collateralized mortgage obligations (''CMOs''), and real estate mortgage investment conduit (''REMIC'') pass-through or participation certificates. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other Mortgage-Backed Securities. CMOs are issued in multiple classes. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. A REMIC is a CMO that qualifies for special tax treatment under Subchapter M of the Internal Revenue Code of 1986, as amended (the ''Code'') and invests in certain mortgages principally secured by interests in real property and other permitted investments.

Mortgage-Backed Securities also include stripped Mortgage-Backed Securities (''SMBS''), which are derivative multiple class Mortgage-Backed Securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other Mortgage-Backed Securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped.

Asset-Backed Securities. The Underlying Funds (other than the CORE Equity Funds) may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, an Underlying Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by Mortgage-Backed Securities. This is because asset-backed securities generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, the Underlying Fund will be unable to possess and sell the underlying collateral and that the Underlying Fund's

recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, an Underlying Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Municipal Securities. Certain Underlying Funds may invest in securities and instruments issued by state and local governmental issuers. Municipal securities in which an Underlying Fund may invest consist of bonds, notes, commercial paper and other instruments (including participation interests in such securities) issued by or on behalf of states, territories and possessions of the United States (including the District of Columbia) and their political subdivisions, agencies or instrumentalities. Municipal securities include both ''general'' and ''revenue'' bonds and may be issued to obtain funds for various public purposes. General obligations are secured by the issuer's pledge of its full faith, credit and taxing power. Revenue obligations are payable only from the revenues derived from a particular facility or class of facilities. Such securities may pay fixed, variable or floating rates of interest. Municipal securities are often issued to obtain funds for various public purposes, including the construction of a wide range of public facilities such as bridges, highways, housing, hospitals, mass transportation, schools, streets and water and sewer works. Other public purposes for which municipal securities may be issued include refunding outstanding obligations, obtaining funds for general operating expenses, and obtaining funds to lend to other public institutions and facilities. Municipal securities in which the Underlying Funds may invest include private activity bonds, pre-refunded municipal securities and auction rate securities.

The obligations of the issuer to pay the principal of and interest on a municipal security are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Act, and laws, if any, that may be enacted by Congress or state legislatures extending the time for payment of principal or interest or imposing other constraints upon the enforcement of such obligations. There is also the possibility that, as a result of litigation or other conditions, the power or ability of the issuer to pay when due the principal of or interest on a municipal security may be materially affected.

In addition, municipal securities include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment purchase agreements. Moral obligation bonds are supported by a moral commitment, but not a legal obligation, of a state or local government. Municipal leases, certificates of participation and moral obligation bonds frequently involve special risks not normally associated with general obligation or revenue bonds. In particular, these instruments permit governmental issuers to acquire property and

equipment without meeting constitutional and statutory requirements for the issuance of debt. If, however, the governmental issuer does not periodically appropriate money to enable it to meet its payment obligations under these instruments, it cannot be legally compelled to do so. If a default occurs, it is likely that an Underlying Fund would be unable to obtain another acceptable source of payment. Some municipal leases, certificates of participation and moral obligation bonds may be illiquid.

Municipal securities may also be in the form of a tender option bond, which is a municipal security (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued with the agreement of a third party, such as a bank, broker-dealer or other financial institution, which grants the security holders the option, at periodic intervals, to tender their securities to the institution. After payment of a fee to the financial institution that provides this option, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution may not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and an Underlying Fund's average portfolio maturity. There is risk that an Underlying Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender option bonds may be illiquid.

Municipal securities may be backed by letters of credit or other forms of credit enhancement issued by domestic or foreign banks or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss to an Underlying Fund that invests in municipal securities. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and are generally not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

Corporate and Bank Obligations; Trust Preferred Securities; Convertible Securities. Certain Underlying Funds may invest in corporate debt obligations, trust preferred securities and convertible securities. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of U.S. or foreign

corporations to pay interest and repay principal. In addition, certain Underlying Funds may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits, bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by governmental regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry. A trust preferred security is a long dated bond (for example, 30 years) with preferred features. The preferred features are that payment of interest can be deferred for a specified period without initiating a default event. The securities are generally senior in claim to standard preferred stock but junior to other bondholders. Certain Underlying Funds may also invest in other short-term obligations issued or guaranteed by U.S. corporations, non-U.S. corporations or other entities.

Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than nonconvertible securities of similar quality. Convertible securities in which an Underlying Fund invests are subject to the same rating criteria as its other investments in fixed-income securities. Convertible securities have both equity and fixed-income risk characteristics. Like all fixed-income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed-income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Zero Coupon, Deferred Interest, Pay-In-Kind and Capital Appreciation Bonds. Certain Underlying Funds may invest in zero coupon, deferred interest, pay-in-kind and capital appreciation bonds. These bonds are issued at a discount from their face value because interest payments are typically postponed until maturity. Pay-in-kind securities are securities that have interest payable by the delivery of additional

securities. The market prices of these securities generally are more volatile than the market prices of interest-bearing securities and are likely to respond to a greater degree to changes in interest rates than interest-bearing securities having similar maturities and credit quality.

Rating Criteria. Except as noted below, the Underlying Equity Funds (other than the CORE Equity Funds, which may only invest in debt instruments that are cash equivalents) may invest in debt securities rated at least investment grade at the time of investment. Investment grade debt securities are securities rated BBB or higher by Standard & Poor's or Baa or higher by Moody's. The International Growth Opportunities and the Emerging Markets Equity Funds may invest up to 20% of their net assets plus any borrowings for investment purposes (measured at time of purchase) and the Real Estate Securities Fund may invest up to 20% of its total assets not including securities lending collateral (measured at time of purchase) in debt securities which are rated in the lowest rating categories by Standard & Poor's or Moody's (i.e., BB or lower by Standard & Poor's or Ba or lower by Moody's), including securities rated D by Moody's or Standard & Poor's. Fixed-income securities rated BB or Ba or below (or comparable unrated securities) are commonly referred to as ''junk bonds,'' are considered predominately speculative and may be questionable as to principal and interest payments as described above.

Structured Securities and Inverse Floaters. Certain Underlying Funds may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, interest rates, commodities, indices or other financial indicators (the ''Reference'') or the relative change in two or more References. The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, structured securities may present a greater degree of market risk than many types of securities, and may be more volatile, less liquid and more difficult to price accurately than less complex securities.

Structured securities include, but are not limited to, inverse floating rate debt securities (''inverse floaters''). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which the inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Floating and Variable Rate Obligations. Certain Underlying Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable both of which may be issued by domestic banks or foreign banks. An Underlying Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

Foreign Currency Transactions. Certain Underlying Funds may, to the extent consistent with their investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. Certain Underlying Funds may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. In addition, certain Underlying Funds may enter into foreign currency transactions to seek a closer correlation between the Underlying Fund's overall currency exposures and the currency exposures of the Underlying Fund's performance benchmark. Certain Underlying Funds may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

Certain Underlying Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. An Underlying Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the investment adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (e.g., the investment adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, an Underlying Fund's NAV to fluctuate. Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the

counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive an Underlying Fund of unrealized profits, transaction costs, or the benefits of a currency hedge, or could force the Underlying Fund to cover its purchase or sale commitments, if any, at the current market price.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. Each Underlying Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Underlying Fund may invest or on any securities index consisting of securities in which it may invest. Certain Underlying Funds may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of an investment adviser to manage future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If an investment adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in an Underlying Fund's investment portfolio, the Underlying Fund may incur losses that it would not otherwise incur. The use of options can also increase an Underlying Fund's transaction costs. Options written or purchased by the Underlying Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Yield Curve Options. Certain Underlying Funds may enter into options on the yield ''spread'' or differential between two securities. Such transactions are referred to as ''yield curve'' options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities rather than the prices of the individual securities, and is settled through cash payments. Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, however, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. Certain Underlying Funds may engage in futures transactions on U.S. and (in the case of certain Underlying Funds) foreign exchanges.

Certain Underlying Funds may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or to the extent an Underlying Fund invests in foreign securities, currency exchange rates, or to otherwise manage its term structure, sector selection and duration in accordance with its investment objective and policies. An Underlying Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. An Underlying Fund will engage in futures and related options transactions for bona fide hedging purposes as defined in regulations of the Commodity Futures Trading Commission (the ''CFTC'') or to seek to increase total return to the extent permitted by such regulations. Except as otherwise permitted by the CFTC, an Underlying Fund may not purchase or sell futures contracts or purchase or sell related options to seek to increase total return, if immediately thereafter the sum of the amount of initial margin deposits and premiums paid on the Underlying Fund's outstanding positions in futures and related options entered into for the purpose of seeking to increase total return would exceed 5% of the market value of the Underlying Fund's net assets. Alternative limitations on the use of futures contracts and related options may be stated from time to time in the Additional Statement.

Futures contracts and related options present the following risks:

- While an Underlying Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in a poorer overall performance than if the Underlying Fund had not entered into any futures contracts or options transactions.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection

may not be obtained and an Underlying Fund may be exposed to additional risk of loss.

- The loss incurred by an Underlying Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of an Underlying Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to an Underlying Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Preferred Stock, Warrants and Rights. Certain Underlying Funds may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Loan Participations. Certain Underlying Funds may invest in loan participations. A loan participation is an interest in a loan to a U.S. or foreign company or other borrower which is administered and sold by a financial intermediary. Loan participation interests may take the form of a direct or co-lending relationship with the corporate borrower, an assignment of an interest in the loan by a co-lender or another participant, or a participation in the seller's share of the loan. When the Underlying Fund acts as co-lender in connection with a participation interest or when it acquires certain participation interests, the Underlying Fund will have direct recourse against the borrower if the borrower fails to pay scheduled principal and interest. In cases where the Underlying Fund lacks direct recourse, it will look to an agent for the lenders (the ''agent lender'') to enforce appropriate credit remedies against the borrower. In these cases, the Underlying Fund may be subject to delays, expenses and risks that are greater than those that would have been involved if the Underlying Fund had purchased a direct obligation (such as

commercial paper) of such borrower. Moreover, under the terms of the loan participation, the Underlying Fund may be regarded as a creditor of the agent lender (rather than of the underlying corporate borrower), so that the Underlying Fund may also be subject to the risk that the agent lender may become insolvent.

REITs. The Real Estate Securities Fund expects to invest a substantial portion of its total assets in REITs, which are pooled investment vehicles that invest primarily in either real estate or real estate related loans. In addition, other Underlying Equity Funds may invest in REITs from time to time. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable federal income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. Each Underlying Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Other Investment Companies. Certain Underlying Funds may invest in securities of other investment companies (including exchange-traded funds such as SPDRs and iShares[SM], as defined below) subject to statutory limitations prescribed by the Investment Company Act of 1940. These limitations include a prohibition on any Underlying Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of an Underlying Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. An Underlying Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Although the Underlying Funds do not expect to do so in the foreseeable future, each Underlying Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Underlying Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which an Underlying Fund may invest include money market funds which the Investment Adviser or any of its affiliates serve as investment adviser, administrator or distributor.

Exchange-traded funds such as SPDRs and iShares℠ are shares of unaffiliated investment companies which are traded like traditional equity securities on a national securities exchange or the NASDAQ® National Market System.

- ***Standard and Poor's Depositary Receipts™.*** The Underlying Equity Funds may, consistent with their investment policies, purchase Standard & Poor's Depositary Receipts™ (''SPDRs''). SPDRs are securities traded on the American Stock Exchange (the ''AMEX'') that represent ownership in the SPDR Trust, a trust which has been established to accumulate and hold a portfolio of common stocks that is intended to track the price performance and dividend yield of the S&P 500®. The SPDR Trust is sponsored by a subsidiary of the AMEX. SPDRs may be used for several reasons, including, but not limited to, facilitating the handling of cash flows or trading, or reducing transaction costs. The price movement of SPDRs may not perfectly parallel the price action of the S&P 500.
- ***iShares℠.*** iShares are shares of an investment company that invests substantially all of its assets in securities included in specified indices, including the MSCI indices for various countries and regions. iShares are listed on the AMEX and were initially offered to the public in 1996. The market prices of iShares are expected to fluctuate in accordance with both changes in the NAVs of their underlying indices and supply and demand of iShares on the AMEX. However, iShares have a limited operating history and information is lacking regarding the actual performance and trading liquidity of iShares for extended periods or over complete market cycles. In addition, there is no assurance that the requirements of the AMEX necessary to maintain the listing of iShares will continue to be met or will remain unchanged. In the event substantial market or other disruptions affecting iShares should occur in the future, the liquidity and value of an Underlying Equity Fund's shares could also be substantially and adversely affected. If such disruptions were to occur, an Underlying Equity Fund could be required to reconsider the use of iShares as part of its investment strategy.

Unseasoned Companies. Certain Underlying Funds may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Non-Investment Grade Fixed-Income Securities. Non-investment grade fixed-income securities and unrated securities of comparable credit quality (commonly known as ''junk bonds'') are considered predominantly speculative by traditional investment standards. In some cases, these obligations may be highly speculative and have poor prospects for reaching investment grade standing. Non-investment

grade fixed-income securities are subject to the increased risk of an issuer's inability to meet principal and interest obligations. These securities, also referred to as high yield securities, may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

Non-investment grade fixed-income securities are generally unsecured and are often subordinated to the rights of other creditors of the issuers of such securities. Investment by an Underlying Fund in defaulted securities poses additional risk of loss should nonpayment of principal and interest continue in respect of such securities. Even if such securities are held to maturity, recovery by an Underlying Fund of its initial investment and any anticipated income or appreciation is uncertain.

Equity Swaps. Each Underlying Equity Fund may invest up to 15% of its net assets in equity swaps. Equity swaps allow the parties to a swap agreement to exchange dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment.

An equity swap may be used by an Underlying Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous. Equity swaps are derivatives and their value can be very volatile. To the extent that an investment adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, an Underlying Fund may suffer a loss, which may be substantial. The value of some components of an equity swap (such as the dividends on a common stock) may also be sensitive to changes in interest rates. Furthermore, an Underlying Fund may suffer a loss if the counterparty defaults. Because equity swaps are normally illiquid, an Underlying Fund may be unable to terminate its obligations when desired.

When-Issued Securities and Forward Commitments. Each Underlying Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price or yield to the Underlying Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although an Underlying Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, an Underlying Fund may dispose of when-issued securities or forward commitments prior to settlement if its investment adviser deems it appropriate.

Repurchase Agreements. Certain Underlying Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by an Underlying Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, an Underlying Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Underlying Fund are less than the repurchase price and the Underlying Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, an Underlying Fund could suffer additional losses if the collateral held by the Underlying Fund is subject to a court ''stay'' that prevents the Underlying Fund from promptly selling the collateral. If this occurs, the Underlying Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, an Underlying Fund could experience a loss if a court determines that the Underlying Fund's interest in the collateral is not enforceable.

Certain Underlying Funds, together with other registered investment companies having advisory agreements with the investment adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. Each Underlying Fund may engage in securities lending. Securities lending involves the lending of securities owned by an Underlying Fund to financial institutions such as certain broker-dealers, including, as permitted by the SEC, Goldman Sachs. The borrowers are required to secure their loans continuously with cash, cash equivalents, U.S. Government Securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash

collateral may be invested by an Underlying Fund in short-term investments, including unregistered investment pools managed by the Investment Adviser or its affiliates. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and an Underlying Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If an investment adviser determines to make securities loans, the value of the securities loaned may not exceed 33⅓% of the value of the total assets of an Underlying Fund (including the loan collateral). Loan collateral (including any investment of the collateral) is not subject to the percentage limitations described elsewhere in this Prospectus regarding investments in fixed-income securities and cash equivalents.

An Underlying Fund may lend its securities to increase its income. An Underlying Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Underlying Fund or becomes insolvent.

Short Sales Against-the-Box. Certain Underlying Funds may make short sales against-the-box. A short sale against-the-box means that at all times when a short position is open the Underlying Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without the payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Mortgage Dollar Rolls. Certain Underlying Funds may enter into ''mortgage dollar rolls.'' In mortgage dollar rolls, an Underlying Fund sells securities for delivery in the current month and simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Underlying Fund loses the right to receive principal and interest paid on the securities sold. However, the Underlying Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish the Underlying Fund's performance.

Successful use of mortgage dollar rolls depends upon an investment adviser's ability to predict correctly interest rates and mortgage prepayments. If the investment adviser is incorrect in its prediction, an Underlying Fund may experience a loss. The Underlying Funds do not currently intend to enter into mortgage dollar rolls for financing and do not treat them as borrowings.

Borrowings and Reverse Repurchase Agreements. Each Underlying Fund can borrow money from banks and other financial institutions, and certain Underlying Funds may enter into reverse repurchase agreements in amounts not exceeding one-third of its total assets. An Underlying Fund may not make additional investments if borrowings exceed 5% of its total assets. Reverse repurchase agreements involve the sale of securities held by an Underlying Fund subject to the Underlying Fund's agreement to repurchase them at a mutually agreed upon date and price (including interest). These transactions may be entered into as a temporary measure for emergency purposes or to meet redemption requests. Reverse repurchase agreements may also be entered into when the investment adviser expects that the interest income to be earned from the investment of the transaction proceeds will be greater than the related interest expense. Borrowings and reverse repurchase agreements involve leveraging. If the securities held by an Underlying Fund decline in value while these transactions are outstanding, the NAV of the Underlying Fund's outstanding shares will decline in value by proportionately more than the decline in value of the securities. In addition, reverse repurchase agreements involve the risk that the investment return earned by an Underlying Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by an Underlying Fund will decline below the price the Underlying Fund is obligated to pay to repurchase the securities, and that the securities may not be returned to the Underlying Fund.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps, Options on Swaps and Interest Rate Caps, Floors and Collars. To the extent consistent with their investment policies, certain Underlying Funds may enter into interest rate swaps, mortgage swaps, credit swaps, currency swaps, total return swaps, options on swaps and interest rate caps, floors and collars. Interest rate swaps involve the exchange by an Underlying Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security. Credit swaps give one party to a transaction the right to dispose of or acquire an asset (or group of assets), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give an Underlying Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the

underlying asset in a total return swap declines in value over the term of the swap, the Underlying Fund may also be required to pay the dollar value of that decline to the counterparty. The Underlying Funds may also purchase and write (sell) options contracts on swaps, commonly referred to as swaptions. A swaption is an option to enter into a swap agreement. Like other types of options, the buyer of a swaption pays a non-refundable premium for the option and obtains the right, but not the obligation, to enter into an underlying swap on agreed-upon terms. The seller of a swaption, in exchange for the premium, becomes obligated (if the option is exercised) to enter into an underlying swap on agreed-upon terms. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

Certain Underlying Funds may enter into swap transactions for hedging purposes or to seek to increase total return. The use of interest rate, mortgage, credit, currency and total return swaps, options on swaps, and interest rate caps, floors and collars, is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If an investment adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, the investment performance of an Underlying Fund would be less favorable than it would have been if these investment techniques were not used.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Portfolio's financial performance for the past five years (or less if the Portfolio has been in operation for less than five years). Certain information reflects financial results for a single Portfolio share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Portfolio (assuming reinvestment of all dividends and distributions). The information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report, along with the Portfolios' financial statements, is included in the Portfolios' annual report (available upon request). The information for all periods prior to the period ended December 31, 2000 has been audited by the Portfolios' previous independent accountants.

(a) Assumes investment at the net asset value at the beginning of the period, reinvestment of all dividends and distributions, a complete redemption of the investment at the net asset value at the end of the period and no sales or redemption charges. Total return would be reduced if sales or redemption charges were taken into account. Total returns for periods less than one full year are not annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on Portfolio distributions or the redemption of Portfolio shares.

(b) Annualized.

(c) Class A, Class B, Class C, Institutional and Service Share activity commenced on January 2, 1998.

(d) Calculated based on the average shares outstanding methodology.

(e) Expense ratios exclude expenses of the Underlying Funds.

Goldman Sachs

Asset Management

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as investment adviser (the ''Investment Adviser'') to four asset allocation portfolios: the Balanced Strategy Portfolio, Growth and Income Strategy Portfolio, Growth Strategy Portfolio and Aggressive Growth Strategy Portfolio (referred to as the ''Portfolios'' or the ''Funds'' interchangeably herein). The Portfolios are intended for investors who prefer to have their asset allocation decisions made by professional money managers. Each Portfolio seeks to achieve its objective by investing in a combination of underlying funds for which GSAM now or in the future acts as investment adviser or principal underwriter (the ''Underlying Funds''). Some of these Underlying Funds invest primarily in fixed-income or money market securities (the ''Underlying Fixed-Income Funds'') and other Underlying Funds invest primarily in equity securities (the ''Underlying Equity Funds''). An investor may choose to invest in one or more of the Portfolios based on individual investment goals, risk tolerance, and financial circumstances.

GSAM's Asset Allocation Investment Philosophy:

The Investment Adviser's Quantitative Strategies Group uses a disciplined, rigorous and quantitative approach to global tactical asset allocation. The Global Tactical Asset Allocation (''GTAA'') strategy attempts to add value by actively managing exposure to global stock, bond and currency markets. In contrast to stock and bond selection strategies which focus on individual stocks and bonds, GTAA focuses on broad asset classes. Our GTAA models use financial and economic factors that are designed to capture intuitive fundamental relationships across markets. While the GTAA process is rigorous and quantitative, there is economic reasoning behind each position.

Each Portfolio starts with a strategic allocation among the various asset classes. The Investment Adviser then tactically deviates from the strategic allocations based on forecasts provided by the models. The tactical process seeks to add value by overweighting attractive markets and underweighting unattractive markets. Greater deviations from the strategic allocation of a given Portfolio result in higher risk that the tactical allocation will underperform the strategic allocation. However, the Investment Adviser's risk control process balances the amount any asset class can

The Asset Allocation Investment Process involves investing a Portfolio's assets in other Goldman Sachs Funds within specified equity and fixed-income percentage ranges.

be overweighted in seeking to achieve higher expected returns against the amount of risk imposed by that deviation from the strategic allocation. The Investment Adviser employs GSAM's proprietary Black-Litterman asset allocation technique in an effort to optimally balance these two goals.

References in this Prospectus to a Portfolio's benchmarks are for informational purposes only, and unless otherwise noted are not an indication of how a particular Portfolio is managed.

Portfolio Investment Objectives and Strategies

Goldman Sachs Balanced Strategy Portfolio

PORTFOLIO FACTS

Objective:	Current income and long-term capital appreciation
Benchmarks:	S&P 500® Index Two-Year U.S. Treasury Note Index Lehman Brothers U.S. Corporate High Yield Bond Index
Investment Focus:	Domestic fixed-income funds (approximately 60%), with the remaining balance in domestic and international stock funds and an allocation to a global bond fund
Investment Style:	Asset Allocation
Symbol:	GIPIX

INVESTMENT OBJECTIVE

The Portfolio seeks current income and long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 60% of the Portfolio's total assets will be allocated among Underlying Fixed-Income Funds. Allocation to Underlying Equity Funds is intended to add diversification and enhance returns, but will also add some volatility. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE℠ Large Cap Growth, CORE Large Cap Value and CORE℠ International Equity Funds and may invest a relatively significant percentage of its assets in the Global Income Fund. It is expected that the Portfolio will invest more than 25% of its assets in the Short Duration Government Fund.

Goldman Sachs
Growth and Income Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation and current income
Benchmarks:	S&P 500® Index MSCI® Europe, Australasia, Far East (EAFE®) Index (unhedged) Lehman Brothers Aggregate Bond Index Lehman Brothers U.S. Corporate High Yield Bond Index
Investment Focus:	Domestic and international fixed-income and stock funds
Investment Style:	Asset Allocation
Symbol:	GOIIX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation and current income.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 60% of the Portfolio's total assets will be allocated among Underlying Equity Funds, which are intended to provide the capital appreciation component. Allocation to Underlying Fixed-Income Funds is intended to provide the income component. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds and will invest a relatively significant percentage of its assets in the Core Fixed Income and Global Income Funds.

Goldman Sachs Growth Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation and secondarily current income
Benchmarks:	S&P 500® Index MSCI® EAFE® Index (unhedged) Russell 2000® Index MSCI® Emerging Markets Free (EMF) Index
Investment Focus:	Primarily a blend of domestic large cap, small cap and international stock funds (approximately 80%), with the balance in domestic fixed-income funds and a global bond fund
Investment Style:	Asset Allocation
Symbol:	GGSIX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation and secondarily current income.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 80% of the Portfolio's total assets will be allocated among Underlying Equity Funds, with a blend of domestic large cap, small cap and international exposure to seek capital appreciation. Allocation to Underlying Fixed-Income Funds is intended to provide diversification. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds.

Goldman Sachs
Aggressive Growth Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation
Benchmarks:	S&P 500® Index MSCI® EAFE® Index (unhedged) Russell 2000® Index MSCI® EMF Index
Investment Focus:	Equity funds, with a greater focus on international and small cap investments
Investment Style:	Asset Allocation
Symbol:	GAPIX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, substantially all of the Portfolio's total assets will be allocated among Underlying Equity Funds, with a greater focus on small cap and international investments relative to the other Portfolios. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its assets in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds.

Principal Investment Strategies

Each Portfolio seeks to achieve its investment objective by investing within specified equity and fixed-income ranges among Underlying Funds. The table below illustrates the current Underlying Equity/Fixed-Income Fund allocation targets and ranges for each Portfolio:

Equity/Fixed-Income Range (Percentage of Each Portfolio's Total Assets)

Portfolio	Target	Range
Balanced Strategy		
Equity	**40%**	20%-60%
Fixed-Income	**60%**	40%-80%
Growth and Income Strategy		
Equity	**60%**	40%-80%
Fixed-Income	**40%**	20%-60%
Growth Strategy		
Equity	**80%**	60%-100%
Fixed-Income	**20%**	0%-40%
Aggressive Growth Strategy		
Equity	**100%**	75%-100%
Fixed-Income	**0%**	0%-25%

A Portfolio will invest in particular Underlying Funds based on various criteria. Among other things, the Investment Adviser will analyze the Underlying Funds' respective investment objectives, policies and investment strategies in order to determine which Underlying Funds, in combination with other Underlying Funds, are appropriate in light of a Portfolio's investment objective.

A Portfolio may purchase or sell securities to: (a) accommodate purchases and sales of its shares; (b) change the percentages of its assets invested in each of the Underlying Funds in response to economic or market conditions; and (c) maintain or modify the allocation of its assets among the Underlying Funds within the percentage ranges described above.

While each Portfolio can invest in any or all of the Underlying Funds, it is expected that each Portfolio will normally invest in only some of the Underlying Funds at any particular time. Each Portfolio's investment in any of the Underlying Funds may, and in some cases is expected to, exceed 25% of such Portfolio's total assets.

THE PARTICULAR UNDERLYING FUNDS IN WHICH EACH PORTFOLIO MAY INVEST, THE EQUITY/FIXED-INCOME TARGETS AND RANGES AND THE INVESTMENTS IN EACH UNDERLYING FUND MAY BE CHANGED FROM TIME TO TIME WITHOUT SHAREHOLDER APPROVAL.

In addition, each Portfolio's investment objective and all policies not specifically designated as fundamental in this Prospectus or the Statement of Additional Information (the ''Additional Statement'') are non-fundamental and may be changed without shareholder approval. If there is a change in a Portfolio's investment objective, you should consider whether that Portfolio remains an appropriate investment in light of your then current financial position and needs.

Principal Risks of the Portfolios

Loss of money is a risk of investing in each Portfolio. An investment in a Portfolio is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. While the Portfolios offer a greater level of diversification than many other types of mutual funds, a single Portfolio may not provide a complete investment program for an investor. The following summarizes important risks that apply to the Portfolios and may result in a loss of your investment. There can be no assurance that a Portfolio will achieve its investment objective.

- ***Investing in the Underlying Funds***—The investments of each Portfolio are concentrated in the Underlying Funds, and each Portfolio's investment performance is directly related to the investment performance of the Underlying Funds held by it. The ability of each Portfolio to meet its investment objective is directly related to the ability of the Underlying Funds to meet their objectives as well as the allocation among those Underlying Funds by the Investment Adviser. The value of the Underlying Funds' investments, and the net asset values (''NAV'') of the shares of both the Portfolios and the Underlying Funds, will fluctuate in response to various market and economic factors related to the equity and fixed-income markets, as well as the financial condition and prospects of issuers in which the Underlying Funds invest. There can be no assurance that the investment objective of any Portfolio or any Underlying Fund will be achieved.
- ***Investments of the Underlying Funds***—Because the Portfolios invest in the Underlying Funds, the Portfolios' shareholders will be affected by the investment policies of the Underlying Funds in direct proportion to the amount of assets the Portfolios allocate to those Funds. Each Portfolio may invest in Underlying Funds that in turn invest in small capitalization companies and foreign issuers and thus are subject to additional risks, including changes in foreign currency exchange rates and political risk. Foreign investments may include securities of issuers located in emerging countries in Asia, Latin America, Eastern Europe and Africa. Each Portfolio may also invest in Underlying Funds that in turn invest in non-investment grade fixed-income securities (''junk bonds''), which are considered speculative by traditional standards. In addition, the Underlying Funds may purchase derivative securities; enter into forward currency transactions; lend their portfolio securities; enter into futures contracts and options transactions; purchase zero coupon bonds and payment-in-kind bonds; purchase securities issued by real estate investment trusts (''REITs'') and other issuers in the real estate industry; purchase restricted and illiquid securities; purchase securities on a when-issued or delayed delivery basis; enter into repurchase agreements; borrow money; and engage in various other

investment practices. The risks presented by these investment practices are discussed in Appendix A to this Prospectus and the Additional Statement.

- ***Affiliated Persons***—In managing the Portfolios, the Investment Adviser will have the authority to select and substitute Underlying Funds. The Investment Adviser is subject to conflicts of interest in allocating Portfolio assets among the various Underlying Funds both because the fees payable to it and/or its affiliates by some Underlying Funds are higher than the fees payable by other Underlying Funds and because the Investment Adviser and its affiliates are also responsible for managing the Underlying Funds. The Trustees and officers of the Goldman Sachs Trust may also have conflicting interests in fulfilling their fiduciary duties to both the Portfolios and the Underlying Funds.
- ***Expenses***—You may invest in the Underlying Funds directly. By investing in the Underlying Funds indirectly through a Portfolio, you will incur not only a proportionate share of the expenses of the Underlying Funds held by the Portfolio (including operating costs and investment management fees), but also expenses of the Portfolio.
- ***Temporary Investments***—Although the Portfolios normally seek to remain substantially invested in the Underlying Funds, each Portfolio may invest a portion of its assets in high-quality, short-term debt obligations (including commercial paper, certificates of deposit, bankers' acceptances, repurchase agreements, debt obligations backed by the full faith and credit of the U.S. government and demand and time deposits of domestic and foreign banks and savings and loan associations) to maintain liquidity, to meet shareholder redemptions and for other short-term cash needs. Also, there may be times when, in the opinion of the Investment Adviser, abnormal market or economic conditions warrant that, for temporary defensive purposes, a Portfolio may invest without limitation in short-term obligations. When a Portfolio's assets are invested in such investments, the Portfolio may not be achieving its investment objective.

Description of the Underlying Funds

DESCRIPTION OF THE UNDERLYING FUNDS

The following is a concise description of the investment objectives and practices for each of the Underlying Funds that are available for investment by the Portfolios as of the date of this Prospectus. A Portfolio may also invest in other Underlying Funds not listed below that may become available for investment in the future at the discretion of the Investment Adviser without shareholder approval. Additional information regarding the investment practices of the Underlying Funds is provided in Appendix A to this Prospectus and the Additional Statement. No offer is made in this Prospectus of any of the Underlying Funds.

Underlying Fund	Investment Objectives	Investment Criteria
CORE Large Cap Value	Long-term growth of capital and dividend income.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in large-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 1000® Value Index.
CORE Large Cap Growth	Long-term growth of capital. Dividend income is a secondary consideration.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in large-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 1000® Growth Index.
CORE℠ Small Cap Equity	Long-term growth of capital.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in small-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 2000® Index.

Underlying Fund	Investment Objectives	Investment Criteria
Real Estate Securities	Total return comprised of long-term growth of capital and dividend income.	Substantially all, and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in issuers that are primarily engaged in or related to the real estate industry. The Fund expects that a substantial portion of its total assets will be invested in REITS and real estate industry companies.
CORE International Equity	Long-term growth of capital.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in companies organized outside the United States or whose securities are principally traded outside the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the unhedged MSCI® EAFE® Index. The Fund may employ certain currency management techniques.
International Growth Opportunities	Long-term capital appreciation.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in companies with public stock market capitalizations within $100 million and $4 billion at the time of investment that are organized outside the United States or whose securities are principally traded outside the United States. The Fund may employ certain currency management techniques.
Emerging Markets Equity	Long-term capital appreciation.	Substantially all, and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in emerging country issuers. The Fund may employ certain currency management techniques.

Underlying Fund	Investment Objectives	Duration or Maturity	Expected Approximate Interest Rate Sensitivity
Financial Square Prime Obligations	Maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity.	Maximum Maturity of Individual Investments = 13 months at time of purchase. Maximum Dollar-Weighted Average Portfolio Maturity = 90 days	3-month Treasury bill
Short Duration Government	A high level of current income and secondarily, in seeking current income, may also consider the potential for capital appreciation.	Target Duration = Two-Year U.S. Treasury Note Index plus or minus 0.5 years Maximum Duration*= 3 years	2-year U.S. Treasury note
Core Fixed Income	Total return consisting of capital appreciation and income that exceeds the total return of the Lehman Brothers Aggregate Bond Index.	Target Duration = Lehman Brothers Aggregate Bond Index plus or minus one year Maximum Duration*= 6 years	5-year U.S. Treasury note
Global Income	A high total return, emphasizing current income, and, to a lesser extent, providing opportunities for capital appreciation.	Target Duration = J.P. Morgan Global Government Bond Index (hedged) plus or minus 2.5 years Maximum Duration*= 7.5 years	6-year government bond
High Yield	A high level of current income and may also consider the potential for capital appreciation.	Target Duration = Lehman Brothers U.S. Corporate High Yield Bond Index plus or minus 2.5 years Maximum Duration* = 7.5 years	6-year U.S. Treasury note

* *Under normal interest rate conditions.*

Investment Sector	Credit Quality	Other Investments
Money market instruments including securities issued or guaranteed by the U.S. government, its agencies, instrumentalities or sponsored enterprises (''U.S. Government Securities''); U.S. bank obligations, commercial paper and other short-term obligations of U.S. corporations, governmental and other entities; asset-backed and receivables-backed securities; and related repurchase agreements.	High Quality (short-term ratings of A-1, P-1 or comparable quality).	N/A
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in U.S. Government Securities and repurchase agreements collateralized by such securities.	U.S. Government Securities	Mortgage pass-through securities and other securities representing an interest in or collateralized by mortgage loans.
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in fixed-income securities, including U.S. Government Securities, corporate debt securities, privately issued mortgage-backed and asset-backed securities.	Minimum = BBB/Baa (at time of purchase) Minimum for non-U.S. dollar securities = AA/Aa	Foreign fixed-income, municipal and convertible securities, foreign currencies and repurchase agreements collateralized by U.S. Government Securities.
Fixed-Income Securities of U.S. and foreign governments and corporations.	Minimum = BBB/Baa (at time of purchase) At least 50% = AAA/Aaa	Mortgage-backed and asset-backed securities, foreign currencies and repurchase agreements collateralized by U.S. Government Securities or certain foreign government securities.
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in high-yield, fixed-income securities rated below investment grade, including U.S. and non-U.S. dollar corporate debt, foreign government securities, convertible securities and preferred stock.	At least 80% = BB/Ba or below (at time of purchase)	Mortgage-backed and asset-backed securities, U.S. Government Securities, investment grade corporate fixed-income securities, structured securities, foreign currencies and repurchase agreements.

Principal Risks of the Underlying Funds

Loss of money is a risk of investing in each Underlying Fund. An investment in an Underlying Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The following summarizes important risks that apply to the Underlying Funds and may result in a loss of your investment in a Portfolio. There can be no assurance that an Underlying Fund will achieve its investment objective.

Risks That Apply To All Underlying Funds:

- ***NAV Risk***—The risk that the net asset value (''NAV'') of the Underlying Fund and the value of your investment will fluctuate.
- ***Interest Rate Risk***—The risk that when interest rates increase, fixed-income securities held by an Underlying Fund will decline in value. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of fixed-income securities held by an Underlying Fund may default on its obligation to pay interest and repay principal.
- ***Market Risk***—The risk that the value of the securities in which an Underlying Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors and/or general economic conditions. Price changes may be temporary or last for extended periods. An Underlying Fund's investments may be overweighted from time to time in one or more industry sectors, which will increase the Underlying Fund's exposure to risk of loss from adverse developments affecting those sectors.
- ***Derivatives Risk***—The risk that loss may result from an Underlying Fund's investments in options, futures, swaps, options on swaps, structured securities and other derivative instruments. These instruments may be leveraged so that small changes may produce disproportionate losses to an Underlying Fund.
- ***Management Risk***—The risk that a strategy used by an investment adviser to the Underlying Funds may fail to produce the intended results.
- ***Liquidity Risk***—The risk that an Underlying Fund will not be able to pay redemption proceeds within the time period stated in the Underlying Fund's Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Underlying Funds that invest in non-investment grade fixed-income securities, small capitalization stocks, REITs and emerging country issuers will be especially subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities within

particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions whether or not accurate.

Risks That Apply Primarily To The Underlying Fixed-Income Funds:

- ***Call Risk***—The risk that an issuer will exercise its right to pay principal on an obligation held by an Underlying Fund (such as a Mortgage-Backed Security) earlier than expected. This may happen when there is a decline in interest rates. Under these circumstances, an Underlying Fund may be unable to recoup all of its initial investment and will also suffer from having to reinvest in lower yielding securities.
- ***Extension Risk***—The risk that an issuer will exercise its right to pay principal on an obligation held by an Underlying Fund (such as a Mortgage-Backed Security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and an Underlying Fund will also suffer from the inability to invest in higher yielding securities.
- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Underlying Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by an Underlying Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risk That Applies Primarily To The Underlying Equity Funds:

- ***Stock Risk***—The risk that stock prices have historically risen and fallen in periodic cycles. Recently, U.S. and foreign stock markets have experienced substantial price volatility.

Risks That Are Particularly Important For Specific Underlying Funds:

- ***Geographic Risk***—The Global Income Fund is non-diversified meaning that it is permitted to invest more of its assets in fewer issuers than ''diversified'' mutual funds. Thus, it may be more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments. In addition, the Global Income Fund may invest more than 25% of its total assets in the securities of corporate and governmental issuers located in each of Canada, Germany, Japan, and the United Kingdom, as well as in the securities of U.S. issuers. Concentration of the investments of this or

other Underlying Funds in issuers located in a particular country or region will subject an Underlying Fund, to a greater extent than if investments were less concentrated, to losses arising from adverse developments affecting those issuers or countries.

- ***Foreign Risk***—The risk that when an Underlying Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions. The Underlying Funds will also be subject to the risk of negative foreign currency rate fluctuations. Foreign risks will normally be greatest when an Underlying Fund invests in issuers located in emerging countries.
- ***Emerging Countries Risk***—Certain Underlying Funds may invest in emerging country securities. The securities markets of Asian, Latin and South American, Eastern European, African and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in certain emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- ***Mid Cap and Small Cap Risk***—Certain Underlying Funds may invest in small cap and mid cap stocks. The securities of small capitalization and mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable an Underlying Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Initial Public Offering (''IPO'') Risk***—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When an Underlying Fund's asset base is small, a significant portion of the Underlying Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Underlying Fund. As the Underlying Fund's assets grow, the effect of the Underlying Fund's investments in IPOs on the Underlying Fund's performance will probably decline, which could reduce the Underlying Fund's performance.

- ***''Junk Bond'' Risk***—Certain Underlying Funds may invest in non-investment grade fixed-income securities (commonly known as ''junk bonds'') that are considered predominantly speculative by traditional investment standards. Non-investment grade fixed-income securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

More information about the portfolio securities and investment techniques of the Underlying Funds, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Portfolio Performance

HOW THE PORTFOLIOS HAVE PERFORMED

The bar chart and table provide an indication of the risks of investing in a Portfolio by showing: (a) changes in the performance of a Portfolio's Institutional Shares from year to year; and (b) how the average annual total returns of a Portfolio's Institutional Shares compare to those of broad-based securities market indices. The bar chart and table assume reinvestment of dividends and distributions. A Portfolio's past performance, before and after taxes is not necessarily an indication of how the Portfolio will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Portfolio's performance would have been reduced.

INFORMATION ON AFTER-TAX RETURNS

These definitions apply to the after-tax returns.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on a Portfolio's Institutional Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on a Portfolio's Institutional Shares (i.e., dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Institutional Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Shares. These returns reflect taxes paid on distributions on a Portfolio's Institutional Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions (as of the date of this Prospectus, 38.6% for ordinary income dividends and 20% for long-term capital gains distributions) and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Portfolio Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

Portfolio Fees and Expenses continued

[1] The Portfolios' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee on the Portfolios equal to 0.20% of the Portfolios' average daily net assets. ***As a result of fee waivers, current management fees of the Portfolios are 0.15% of each Portfolio's average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] ''Other Expenses'' include transfer agency fees and expenses equal on an annualized basis to 0.04% of the average daily net assets of each Portfolio's Institutional Shares plus all other ordinary expenses not detailed above. The Investment Adviser has voluntarily agreed to reduce or limit ''Other Expenses'' (excluding management fees, transfer agency fees and expenses, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.00% of each Portfolio's average daily net assets.

[4] ''Underlying Fund Expenses'' for each Portfolio are based upon the strategic allocation of each Portfolio's investment in the Underlying Funds and upon the actual total operating expenses of the Underlying Funds (including any current waivers and expense limitations of the Underlying Funds). Actual Underlying Fund expenses incurred by each Portfolio may vary with changes in the allocation of each Portfolio's assets among the Underlying Funds and with other events that directly affect the expenses of the Underlying Funds.

Example

The following Example is intended to help you compare the cost of investing in a Portfolio (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Institutional Shares of a Portfolio for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Portfolio's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Portfolio	1 Year	3 Years	5 Years	10 Years
Balanced Strategy	$151	$468	$808	$1,768
Growth and Income Strategy	$138	$431	$745	$1,635
Growth Strategy	$148	$459	$792	$1,735
Aggressive Growth Strategy	$170	$526	$907	$1,976

Institutions that invest in Institutional Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your institution for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain institutions that invest in Institutional Shares may receive other compensation in connection with the sale and distribution of Institutional Shares or for services to their customers' accounts and/or the Portfolios. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Investment Adviser	Portfolio
Goldman Sachs Asset Management, L.P. (''GSAM'') 32 Old Slip New York, New York 10005	Balanced Strategy Growth and Income Strategy Growth Strategy Aggressive Growth Strategy

Except as noted below, GSAM also serves as investment adviser to each Underlying Fund.

Goldman Sachs Asset Management International (''GSAMI'') Christchurch Court 10-15 Newgate Street London, England EC1A 7HD	International Growth Opportunities Emerging Markets Equity Global Income

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman, Sachs & Co. (''Goldman Sachs'') served as the Portfolios' investment adviser. On or about April 26, 2003, GSAM assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Portfolios. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission (the ''SEC'') since 1990 and is an affiliate of Goldman Sachs. GSAMI, a member of the Investment Management Regulatory Organization Limited since 1990 and a registered investment adviser since 1991, is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM and GSAMI, along with other units of IMD, had assets under management of $329.6 billion.

Under an Asset Allocation Management Agreement with each Portfolio, the Investment Adviser, subject to the general supervision of the Trustees, provides advice as to each Portfolio's investment transactions, including determinations concerning changes to (a) the Underlying Funds in which the Portfolios may invest; and (b) the percentage range of assets of any Portfolio that may be invested in the Underlying Equity Funds and the Underlying Fixed-Income Funds as separate groups.

The Investment Adviser also performs the following additional services for the Portfolios:

- Supervises all non-advisory operations of the Portfolios
- Provides personnel to perform necessary executive, administrative and clerical services to the Portfolios
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities
- Maintains the records of each Portfolio
- Provides office space and all necessary office equipment and services

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Portfolio's average daily net assets):

Portfolio	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Balanced Strategy	0.35%	0.15%
Growth and Income Strategy	0.35%	0.15%
Growth Strategy	0.35%	0.15%
Aggressive Growth Strategy	0.35%	0.15%

The difference, if any, between the stated fees and the actual fees paid by the Portfolios reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

In addition, each Portfolio, as a shareholder in the Underlying Funds, will indirectly bear a proportionate share of any investment management fees and other expenses paid by the Underlying Funds. The following chart shows the total net operating expense ratios (management fee plus other operating expenses) of Institutional Shares of each Underlying Fund in which the Portfolios may invest after applicable fee waivers and expense limitations, as of the end of each Underlying Fund's most recent fiscal year. In addition, the following chart shows the contractual investment management fees payable to the Investment Adviser or its affiliates by the Underlying Funds (in each case as an annualized percentage of a Fund's average net assets). Absent voluntary fee waivers and/or expense reimbursements, which may be discontinued at any time, the total operating expense ratios of certain Underlying Funds would be higher.

Underlying Fund	Contractual Management Fee	Total Net Operating Expense Ratio
Financial Square Prime Obligations	0.205%	0.18%
Short Duration Government	0.50%	0.54%
Core Fixed Income	0.40%	0.50%
Global Income	0.90%	0.69%
High Yield	0.70%	0.76%
CORE Large Cap Growth	0.75%	0.76%
CORE Large Cap Value	0.60%	0.70%
CORE Small Cap Equity	0.85%	0.93%
CORE International Equity	0.85%	1.01%
International Growth Opportunities	1.20%	1.38%
Emerging Markets Equity	1.20%	1.59%
Real Estate Securities	1.00%	1.04%

PORTFOLIO MANAGERS

Robert B. Litterman, Ph.D., a Managing Director of Goldman Sachs, is the co-developer, along with the late Fischer Black, of the Black-Litterman Global Asset Allocation Model, a key tool in IMD's asset allocation process. As Director of Quantitative Resources, Dr. Litterman oversees Quantitative Equities, the Quantitative Strategies Group, the Global Investment Strategies Group, and the Portfolio Analysis and Construction Environment (PACE) Group. In total, these groups include over 90 professionals. Prior to moving to IMD, Dr. Litterman was the head of the Firmwide Risk department since becoming a Partner in 1994. Preceding his time in the Operations, Technology & Finance Division, Dr. Litterman spent eight years in the Fixed Income Division's research department where he was co-director of the research and model development group.

Quantitative Strategies Group

- The 41-person Quantitative Strategies Group includes nine Ph.Ds, with extensive academic and practitioner experience
- Disciplined, quantitative models are used to determine the relative attractiveness of the world's stock, bond and currency markets
- Theory and economic intuition guide the investment process

Quantitative Strategies Group

Name and Title	Years Primarily Responsible	Five Year Employment History
Mark M. Carhart, Ph.D., CFA Managing Director, Co-Head Quantitative Strategies and Senior Portfolio Manager	Since 1998	Dr. Carhart joined the Investment Adviser as a member of the Quantitative Strategies team in 1997. From August 1995 to September 1997, he was Assistant Professor of Finance at the Marshall School of Business at USC and a Senior Fellow of the Wharton Financial Institutions Center.
Raymond J. Iwanowski Managing Director, Co-Head Quantitative Strategies and Senior Portfolio Manager	Since 1998	Mr. Iwanowski joined the Investment Adviser as an associate and portfolio manager in 1997. From 1993 to 1997, he was a Vice President and head of the Fixed Derivatives Client Research group at Salomon Brothers.
Giorgio De Santis, Ph.D. Managing Director and Portfolio Manager	Since 1998	Dr. DeSantis joined the Investment Adviser in 1998. From 1992 to 1998, he was Assistant Professor of Finance and Business Economics at the Marshall School of Business at USC.
Joseph DeLuca Vice President, Portfolio and Product Manager	Since 2001	Mr. DeLuca joined the Investment Adviser in 2001. From 1997 to 2001, he worked in the Risk Management group of Goldman Sachs. From 1992 to 1997, he worked in the Structured Finance Services and Management Consulting groups at Chase Manhattan Bank.

Quantitative Strategies Group

Name and Title	Years Primarily Responsible	Five Year Employment History
Katinka Domotorffy, CFA Vice President and Portfolio Manager	Since 2001	Ms. Domotorffy joined the Investment Adviser as a member of the Quantitative Strategies Group in 1998. Prior to joining Goldman Sachs, she received her M.S. in Finance from the London School of Economics in 1998, and her B.S. from the University of Pennsylvania in 1997.
William J. Fallon, Ph.D. Vice President and Portfolio Manager	Since 1998	Dr. Fallon joined the Investment Adviser in 1998. From 1996 to 1998, he worked in the Firmwide Risk Group of Goldman Sachs. From 1991 to 1996, he attended Columbia University, where he earned a Ph.D. in Finance.
Silverio Foresi, Ph.D. Vice President and Portfolio Manager	Since 2000	Dr. Foresi joined the Investment Adviser in 1999. From 1997 to 1999, he was head of Research in Emerging Markets Fixed Income Derivatives Trading at Salomon Brothers. From 1990 to 1997, Dr. Foresi was an Assistant Professor of Finance at New York University.
Guang-Liang He, Ph.D. Vice President and Portfolio Manager	Since 1998	Dr. He joined the Investment Adviser in 1998. In 1997, he worked in the Firmwide Risk Group of Goldman Sachs. From 1992 to 1997, he worked at Quantitative Financial Strategies, Inc. where he was responsible for the research and development of proprietary trading models.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Portfolio's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois, 60606-6372, also serves as each Portfolio's transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Underlying Funds or Portfolios. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to an Underlying Fund or limit an Underlying Fund's investment activities. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Underlying Funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Underlying Funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Underlying Funds. The results of an Underlying Fund's investment activities, therefore, may differ from those of Goldman Sachs and its affiliates, and it is possible that an Underlying Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Underlying Funds may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. An Underlying Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions.

Under a securities lending program approved by the Underlying Funds' Board of Trustees, the Underlying Funds have retained an affiliate of the Investment Adviser to serve as the securities lending agent for each Underlying Fund to the extent that the Underlying Fund engages in the securities lending program. For these services, the lending agent may receive a fee from the Underlying Funds, including a fee based on the returns earned on the Underlying Funds' investment of the cash received as collateral for the loaned securities. In addition, the Underlying Funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Underlying Funds' portfolio investment transactions.

Dividends

Each Portfolio pays dividends from its investment company taxable income and distributions from net realized capital gains. You may choose to have dividends and distributions paid in:

- Cash
- Additional shares of the same class of the same Portfolio
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply for certain ILA Portfolios. See the Additional Statement.

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time before the record date for a particular dividend or distribution. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Portfolio.

The election to reinvest dividends and distributions in additional shares will not affect the tax treatment of such dividends and distributions, which will be treated as received by you and then used to purchase the shares.

Dividends from investment company taxable income and distributions from net realized capital gains are declared and paid as follows:

Portfolio	Investment Income Dividends	Capital Gains Distributions
Balanced Strategy	Quarterly	Annually
Growth and Income Strategy	Quarterly	Annually
Growth Strategy	Annually	Annually
Aggressive Growth Strategy	Annually	Annually

From time to time a portion of a Portfolio's dividends may constitute a return of capital.

When you purchase shares of a Portfolio, part of the NAV per share may be represented by undistributed income or undistributed realized gains that have previously been earned by the Portfolio. Therefore, subsequent distributions on such shares from such income or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Institutional Shares.

HOW TO BUY SHARES

How Can I Purchase Institutional Shares Of The Funds?

You may purchase Institutional Shares on any business day at their NAV next determined after receipt of an order. No sales load is charged. You should place an order with Goldman Sachs at 1-800-621-2550 and either:

- Wire federal funds to The Northern Trust Company (''Northern''), as subcustodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian) on the next business day; ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

In order to make an initial investment in a Fund, you must furnish to the Fund or Goldman Sachs the Account Application. Purchases of Institutional Shares must be settled within three business days of receipt of a complete purchase order.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

How Do I Purchase Shares Through A Financial Institution?

Certain institutions (including banks, trust companies, brokers and investment advisers) that provide recordkeeping, reporting and processing services to their customers may be authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized institution or intermediary on a business day, and

the order will be priced at the Fund's NAV next determined after such acceptance.

- Authorized institutions and intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your institution or intermediary to learn whether it is authorized to accept orders for the Trust.

These institutions may receive payments from the Funds or Goldman Sachs for the services provided by them with respect to the Funds' Institutional Shares. These payments may be in addition to other payments borne by the Funds.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to certain institutions and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds. Additional compensation based on sales may, but is normally not expected to, exceed 0.50% (annualized) of the amount invested.

In addition to Institutional Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), have different minimum investment requirements and are entitled to different services than Institutional Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Type of Investor	Minimum Investment
■ Banks, trust companies or other depository institutions investing for their own account or on behalf of clients ■ Section 401(k), profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, or other employee benefit plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations ■ State, county, city or any instrumentality, department, authority or agency thereof ■ Corporations with at least $100 million in assets or in outstanding publicly traded securities ■ ''Wrap'' account sponsors (provided they have an agreement covering the arrangement with GSAM) ■ Registered investment advisers investing for accounts for which they receive asset-based fees	$1,000,000 in Institutional Shares of a Fund alone or in combination with other assets under the management of GSAM and its affiliates
■ Individual investors ■ Qualified non-profit organizations, charitable trusts, foundations and endowments ■ Accounts over which GSAM or its advisory affiliates have investment discretion	$10,000,000

The minimum investment requirement may be waived for current and former officers, partners, directors or employees of Goldman Sachs or any of its affiliates or for other investors at the discretion of the Trust's officers. No minimum amount is required for subsequent investments.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment amounts.
- Reject or restrict any purchase or exchange order for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of Institutional Shares of a Fund is evident, or if purchases, sales or exchanges are,

or a subsequent abrupt redemption might be, of a size that would disrupt the management of a Fund.

- Close a Fund to new investors from time to time and reopen a Fund whenever it is deemed appropriate by a Fund's Investment Adviser.

The Funds may allow you to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Institutional Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\begin{array}{c}\text{(Value of Assets of the Class)} \\ - \text{ (Liabilities of the Class)}\end{array}}{\text{Number of Outstanding Shares of the Class}}$$

The Funds' investments are valued based on market quotations or, if accurate quotations are not readily available, the fair value of the Fund's investments may be determined in good faith under procedures established by the Trustees.

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- When you buy shares, you pay the NAV next calculated *after* the Funds receive your order in proper form.
- When you sell shares, you receive the NAV next calculated *after* the Funds receive your order in proper form.
- The Trust reserves the right to reprocess purchase, redemption and exchange transactions that were processed at an NAV other than a Fund's official closing NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open a Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

Foreign securities may trade in their local markets on days a Fund is closed. As a result, the NAV of a Fund that holds foreign securities may be impacted on days when investors may not purchase or redeem Fund shares.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Institutional Shares Of The Funds?

You may arrange to take money out of your account by selling (redeeming) some or all of your shares. **Generally, each Fund will redeem its Institutional Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** You may request that redemption proceeds be sent to you by check or by wire (if the wire instructions are on record). Redemptions may be requested in writing or by telephone.

Instructions For Redemptions:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund name and Class of Shares ■ The dollar amount you want to sell ■ How and where to send the proceeds ■ Mail your request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain institutions and intermediaries are authorized to accept redemption requests on behalf of the Funds as described under ‘‘How Do I Purchase Shares Through A Financial Institution?’’

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: You may arrange for your redemption proceeds to be wired as federal funds to the bank account designated in your Account Application. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be wired on the next business day in federal funds (for a total of one business day delay), but may be paid up to three business days following receipt of a properly executed wire transfer redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- To change the bank designated on your Account Application, you must send written instructions signed by an authorized person designated on the account application to the Transfer Agent.
- Neither the Trust, Goldman Sachs nor any other institution assumes any responsibility for the performance of your bank or any intermediaries in the

transfer process. If a problem with such performance arises, you should deal directly with your bank or any such intermediaries.

By Check: You may elect in writing to receive your redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within three business days of a properly executed redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Institutions (including banks, trust companies, brokers and investment advisers) are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, these institutions may set times by which they must receive redemption requests. These institutions may also require additional documentation from you.

The Trust reserves the right to:

- Redeem your shares if your account balance falls below $50 as a result of earlier redemptions. The Funds will not redeem your shares on this basis if the value of your account falls below the minimum account balance solely as a result of market conditions. The Fund will give you 60 days' prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. The Fund may, in its discretion, pay redemption proceeds in-kind at any time or if requested by a shareholder. The Fund anticipates that it will normally grant shareholder requests for an in-kind distribution so long as the distribution is in the best interests of the Fund and its other shareholders.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Institutional Shares of the Fund that pays the distributions. No

interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

You may exchange Institutional Shares of a Fund at NAV for Institutional Shares of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice to you.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

Restrictions on Excessive Trading Practices. The Trust does not permit market-timing or other excessive trading practices. Purchases and exchanges should be made for long-term investment purposes only. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. Excessive, short-term (market-timing) trading practices may disrupt portfolio management strategies, harm Fund performance and negatively impact long-term shareholders. The Trust and Goldman Sachs will not be held liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust (or Goldman Sachs) and its shareholders, the Trust (or Goldman Sachs) will exercise these rights if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to a Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together.

What Types of Reports Will I Be Sent Regarding Investments In Institutional Shares?

You will receive an annual report containing audited financial statements and a semi-annual report. To eliminate unnecessary duplication, only one copy of such reports will be sent to shareholders with the same mailing address. If you would like a duplicate copy to be mailed to you, please contact Goldman Sachs Funds at 1-800-621-2550. You will also be provided with a printed confirmation for each transaction in your account and a monthly account statement. The Funds do not generally provide sub-accounting services.

Taxation

As with any investment, you should consider how your investment in the Portfolios will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Portfolios.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Portfolio distributions and the sale of your Portfolio shares.

DISTRIBUTIONS

Each Portfolio contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Portfolios are generally subject to federal income tax, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Portfolio shares or receive them in cash. For federal tax purposes, the Portfolios' income dividend distributions and short-term capital gain distributions are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Portfolio shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. A percentage of the Portfolios' dividends paid to corporate shareholders may be eligible for the corporate dividends-received deduction. The Portfolios will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

The REIT investments of the underlying Real Estate Securities Fund often do not provide complete tax information to the Fund until after the calendar year-end. Consequently, because of the delay, it may be necessary for the Portfolios to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31.

Each Portfolio may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Portfolios may deduct these taxes in computing their taxable income.

If you buy shares of a Portfolio before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as ‘‘buying a dividend.’’

SALES AND EXCHANGES

Your sale of Portfolio shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Portfolio shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this gain or loss will be long-term or short-term depending on whether your holding period for the shares exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of a Portfolio may be disallowed under ‘‘wash sale’’ rules to the extent the shares disposed of are replaced with other shares of that Portfolio within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Portfolio. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Portfolio must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Portfolio to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on the Underlying Funds

This Appendix provides further information on certain types of investments and techniques that may be used by the Underlying Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request, and in the prospectuses of the Underlying Funds.

The Underlying Equity Funds invest primarily in common stocks and other equity investments, including preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments that have economic characteristics similar to equity securities (''equity investments''). The Underlying Fixed-Income Funds invest primarily in fixed-income securities, including senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), convertible and non-convertible corporate debt obligations, loan participations and preferred stock.

The Short-Duration Government Fund invests in U.S. Government Securities and related repurchase agreements, and does not make foreign investments. The investments of the Financial Square Prime Obligations Fund are limited by SEC regulations applicable to money market funds as described in its prospectus, and do not include many of the types of investments discussed below that are permitted for the other Underlying Funds. With these exceptions, and the further exceptions noted below, the following description applies generally to the Underlying Funds.

A. General Risks of the Underlying Funds

The Underlying Equity Funds will be subject to the risks associated with common stocks and other equity investments. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of the equity investments that an Underlying Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. Recently, stock markets have experienced substantial price volatility.

The Underlying Fixed-Income Funds will be subject to the risks associated with fixed-income securities. These risks include interest rate risk, credit risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed-income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed-income securities tends to decline. Credit risk involves the risk that an issuer or guarantor could default on its obligations, and an Underlying Fund will not recover its investment. Call risk and extension risk are normally present in adjustable rate mortgage loans (''ARMs''), mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities, such as securities backed by car loans.

The Financial Square Prime Obligations Fund attempts to maintain a stable NAV of $1.00 per share and values its assets using the amortized cost method in accordance with SEC regulations. There is no assurance, however, that the Financial Square Prime Obligations Fund will be successful in maintaining its per share value at $1.00 on a continuous basis. The per share NAVs of the other Underlying Funds are expected to fluctuate on a daily basis.

The portfolio turnover rates of the Underlying Funds have ranged from 36% to 437% during their most recent fiscal years. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by an Underlying Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of an Underlying Fund's portfolio securities, excluding securities having a maturity at the date of purchase of one year or less.

B. Other Risks of the Underlying Funds

Risks of Investing in Small Capitalization and Mid-Capitalization Companies. Certain Underlying Funds may, to the extent consistent with its investment policies,

invest in small and mid-capitalization companies. Investments in small and mid-capitalization companies involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Among the reasons for the greater price volatility of these investments are the less certain growth prospects of smaller firms and the lower degree of liquidity in the markets for such securities. Small and mid-capitalization companies may be thinly traded and may have to be sold at a discount from current market prices or in small lots over an extended period of time. In addition, these securities are subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities in particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic or market conditions, or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, an Underlying Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Small and mid-capitalization companies include ''unseasoned'' issuers that do not have an established financial history; often have limited product lines, markets or financial resources; may depend on or use a few key personnel for management; and may be susceptible to losses and risks of bankruptcy. Small and mid-capitalization companies may be operating at a loss or have significant variations in operating results; may be engaged in a rapidly changing business with products subject to a substantial risk of obsolescence; may require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition. In addition, these companies may face intense competition, including competition from companies with greater financial resources, more extensive development, manufacturing, marketing, and other capabilities, and a larger number of qualified managerial and technical personnel. Transaction costs for these investments are often higher than those for larger capitalization companies. Investments in small and mid-capitalization companies may be more difficult to price precisely than other types of securities because of their characteristics and lower trading volumes.

Risks of Foreign Investments. Certain of the Underlying Funds may make foreign investments. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which an Underlying Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to

shareholders or converted to U.S. dollars, the Underlying Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States, and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of an Underlying Fund's assets in one or a few countries and currencies will subject a Fund to greater risks than if an Underlying Fund's assets were not geographically concentrated.

Investment in sovereign debt obligations by a certain Underlying Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or pay interest when due in accordance with the terms of such debt, and an Underlying Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn an Underlying Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign

exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts (''ADRs'') and Global Depositary Receipts (''GDRs''). Certain Underlying Funds may also invest in European Depositary Receipts (''EDRs'') or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Euro. On January 1, 1999, the European Economic and Monetary Union (EMU) introduced a new single currency called the euro. The euro has replaced the national currencies of the following member countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

The new European Central Bank has control over each country's monetary policies. Therefore, the member countries no longer control their own monetary policies by directing independent interest rates for their currencies. The national governments of the participating countries, however, have retained the authority to set tax and spending policies and public debt levels.

The change to the euro as a single currency is relatively new and untested. The elimination of currency risk among EMU countries has affected the economic environment and behavior of investors, particularly in European markets, but the long-term impact of those changes on currency values or on the business or financial condition of European countries and issuers cannot be fully assessed at this time. In addition, the introduction of the euro presents other unique uncertainties, including the fluctuation of the euro relative to non-euro currencies; whether the interest rate, tax and labor regimes of European countries participating in the euro will converge over time; and whether the conversion of the currencies of other countries that now are or may in the future become members of the European Union (''EU'') will have an impact on the euro. Also, it is possible that the euro could be abandoned in the future by countries that have already adopted its use. These or other events, including political and economic developments, could cause market disruptions, and could adversely affect the value of securities held by the Underlying Funds. Because of the number of countries using this single

currency, a significant portion of the assets held by certain Underlying Funds may be denominated in the euro.

Risks of Emerging Countries. Certain Underlying Funds may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, Eastern Europe, Latin and South America and Africa. An Underlying Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of an Underlying Fund, the investment adviser, its affiliates and their respective clients and other service providers. An Underlying Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by an Underlying Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), an Underlying Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other

protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

An Underlying Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return from an investment in such countries to the Underlying Fund.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve an Underlying Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for an Underlying Fund to value its portfolio securities and could cause the Underlying Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Underlying Fund has delivered or the Underlying Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by an Underlying Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Underlying Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make an Underlying Fund's investments in such countries less liquid and more

volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). An Underlying Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions, or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, an Underlying Fund may incur losses because it will be required to effect sales at a disadvantageous time and then only at a substantial drop in price. Investments in emerging countries may be more difficult to price precisely because of the characteristics discussed above and lower trading volumes.

An Underlying Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, their investment advisers do not currently anticipate that a significant portion of the Underlying Funds' currency exposure in emerging countries, if any, will be covered by such instruments.

Risks of Derivative Investments. An Underlying Fund's transactions, if any, in options, futures, options on futures, swaps, options on swaps, interest rate caps, floors and collars, structured securities, inverse floating-rate securities, stripped mortgage-backed securities and foreign currency transactions involve additional risk of loss. Loss can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the investment adviser is incorrect in its expectation of fluctuations in securities prices, interest rates or currency prices. Certain Underlying Funds may also invest in derivative investments for non-hedging purposes (that is, to seek to increase total return). Investing for non-hedging purposes is considered a speculative practice and presents even greater risk of loss.

Derivative Mortgage-Backed Securities (such as principal-only (''POs''), interest-only (''IOs'') or inverse floating rate securities) are particularly exposed to call and extension risks. Small changes in mortgage prepayments can significantly impact the cash flow and the market value of these securities. In general, the risk of faster than anticipated prepayments adversely affects IOs, super floaters and premium priced mortgage-backed securities. The risk of slower than anticipated prepayments generally adversely affects POs, floating-rate securities subject to interest rate caps, support tranches and discount priced mortgage-backed securities. In addition,

particular derivative securities may be leveraged such that their exposure (*i.e.*, price sensitivity) to interest rate and/or prepayment risk is magnified.

Some floating-rate derivative debt securities can present more complex types of derivative and interest rate risks. For example, range floaters are subject to the risk that the coupon will be reduced below market rates if a designated interest rate floats outside of a specified interest rate band or collar. Dual index or yield curve floaters are subject to lower prices in the event of an unfavorable change in the spread between two designated interest rates.

Risks of Illiquid Securities. The Underlying Funds may invest up to 15% (10% in the case of the Financial Square Prime Obligations Fund) of their net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and all swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ''4(2) commercial paper'' or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 (''144A Securities'').

Investing in 144A Securities may decrease the liquidity of an Underlying Fund's portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be significant, from the market price of comparable securities for which a liquid market exists.

Credit/Default Risks. Debt securities purchased by the Underlying Funds may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign governments, domestic and foreign corporations, banks and other issuers. Some of these fixed-income securities are described in the next section below. Further information is provided in the Additional Statement.

Debt securities rated BBB or higher by Standard & Poor's Ratings Group (''Standard & Poor's'') or Baa or higher by Moody's Investors Service, Inc.

(‘‘Moody’s’’) or having a comparable rating by another NRSRO are considered ‘‘investment grade.’’ Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers’ capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the investment adviser to be of comparable credit quality. If a security satisfies an Underlying Fund’s minimum rating requirement at the time of purchase and is subsequently downgraded below such rating, the Underlying Fund will not be required to dispose of the security. If a downgrade occurs, the Underlying Fund’s investment adviser will consider what action, including the sale of the security, is in the best interest of the Underlying Fund and its shareholders.

Certain Underlying Funds may invest in fixed-income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as ‘‘junk bonds.’’ Junk bonds are considered predominantly speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in an Underlying Fund’s portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Risks of Initial Public Offerings. Certain Underlying Funds may invest in IPOs. An IPO is a company’s first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When an Underlying Fund’s asset base is small, a significant portion of the Underlying Fund’s performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Underlying Fund. As the Underlying Fund’s assets grow, the effect of the Underlying Fund’s investments in IPOs on the Underlying Fund’s performance probably will decline, which could reduce the Underlying Fund’s performance. Because of the price volatility of IPO shares, an Underlying Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of

the Underlying Fund's portfolio and may lead to increased expenses to the Underlying Fund, such as commissions and transaction costs. By selling IPO shares, the Underlying Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that an Underlying Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for an Underlying Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Non-Diversification and Geographic Risks. The Global Income Fund is registered as a ''non-diversified'' fund under the Investment Company Act of 1940 (the ''Act'') and is, therefore, more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments. In addition, the Global Income Fund, and certain other Underlying Funds, may invest more than 25% of their total assets in the securities of corporate and governmental issuers located in a particular foreign country or region. Concentration of the investments of these or other Underlying Funds in issuers located in a particular country or region will subject the Underlying Fund, to a greater extent than if investments were less concentrated, to losses arising from adverse developments affecting those issuers or countries.

Temporary Investment Risks. The Underlying Funds may invest a substantial portion, and in some cases all, of their total assets, in cash equivalents for temporary periods. When an Underlying Fund's assets are invested in such instruments, the Underlying Fund may not be achieving its investment objective.

C. Investment Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Underlying Funds, including their associated risks.

An Underlying Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Underlying Fund's investment objective and policies. Further information is provided in the Additional Statement, which is available upon request.

U.S. Government Securities. Each Underlying Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (a) the full faith and credit of the U.S. Treasury; (b) the right of the issuer to borrow from the U.S. Treasury; (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components of stripped U.S. Government Securities are traded independently.

Custodial Receipts and Trust Certificates. Each Underlying Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities, Municipal Securities or other types of securities in which an Underlying Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes the Underlying Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Underlying Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, an Underlying Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Underlying Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. The Underlying Funds (other than CORE Large Cap Growth, CORE Large Cap Value, CORE Small Cap Equity and CORE International Equity Funds (the ‘‘CORE Equity Funds’’)) may invest in securities that represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property (‘‘Mortgage-Backed Securities’’). Mortgage-Backed Securities can be backed by either fixed rate mortgage loans or adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. Privately issued Mortgage-Backed Securities are normally structured with one or more types of ‘‘credit enhancement.’’ However, these Mortgage-Backed Securities typically do not have the same credit standing as U.S. government guaranteed Mortgage-Backed Securities.

Mortgage-Backed Securities may include multiple class securities, including collateralized mortgage obligations (''CMOs''), and real estate mortgage investment conduit (''REMIC'') pass-through or participation certificates. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other Mortgage-Backed Securities. CMOs are issued in multiple classes. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. A REMIC is a CMO that qualifies for special tax treatment under Subchapter M of the Internal Revenue Code of 1986, as amended (the ''Code'') and invests in certain mortgages principally secured by interests in real property and other permitted investments.

Mortgage-Backed Securities also include stripped Mortgage-Backed Securities (''SMBS''), which are derivative multiple class Mortgage-Backed Securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other Mortgage-Backed Securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped.

Asset-Backed Securities. The Underlying Funds (other than the CORE Equity Funds) may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, an Underlying Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by Mortgage-Backed Securities. This is because asset-backed securities generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, the Underlying Fund will be unable to possess and sell the underlying collateral and that the Underlying Fund's

recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, an Underlying Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Municipal Securities. Certain Underlying Funds may invest in securities and instruments issued by state and local governmental issuers. Municipal securities in which an Underlying Fund may invest consist of bonds, notes, commercial paper and other instruments (including participation interests in such securities) issued by or on behalf of states, territories and possessions of the United States (including the District of Columbia) and their political subdivisions, agencies or instrumentalities. Municipal securities include both ''general'' and ''revenue'' bonds and may be issued to obtain funds for various public purposes. General obligations are secured by the issuer's pledge of its full faith, credit and taxing power. Revenue obligations are payable only from the revenues derived from a particular facility or class of facilities. Such securities may pay fixed, variable or floating rates of interest. Municipal securities are often issued to obtain funds for various public purposes, including the construction of a wide range of public facilities such as bridges, highways, housing, hospitals, mass transportation, schools, streets and water and sewer works. Other public purposes for which municipal securities may be issued include refunding outstanding obligations, obtaining funds for general operating expenses, and obtaining funds to lend to other public institutions and facilities. Municipal securities in which the Underlying Funds may invest include private activity bonds, pre-refunded municipal securities and auction rate securities.

The obligations of the issuer to pay the principal of and interest on a municipal security are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Act, and laws, if any, that may be enacted by Congress or state legislatures extending the time for payment of principal or interest or imposing other constraints upon the enforcement of such obligations. There is also the possibility that, as a result of litigation or other conditions, the power or ability of the issuer to pay when due the principal of or interest on a municipal security may be materially affected.

In addition, municipal securities include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment purchase agreements. Moral obligation bonds are supported by a moral commitment, but not a legal obligation, of a state or local government. Municipal leases, certificates of participation and moral obligation bonds frequently involve special risks not normally associated with general obligation or revenue bonds. In particular, these instruments permit governmental issuers to acquire property and

equipment without meeting constitutional and statutory requirements for the issuance of debt. If, however, the governmental issuer does not periodically appropriate money to enable it to meet its payment obligations under these instruments, it cannot be legally compelled to do so. If a default occurs, it is likely that an Underlying Fund would be unable to obtain another acceptable source of payment. Some municipal leases, certificates of participation and moral obligation bonds may be illiquid.

Municipal securities may also be in the form of a tender option bond, which is a municipal security (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued with the agreement of a third party, such as a bank, broker-dealer or other financial institution, which grants the security holders the option, at periodic intervals, to tender their securities to the institution. After payment of a fee to the financial institution that provides this option, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution may not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and an Underlying Fund's average portfolio maturity. There is risk that an Underlying Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender option bonds may be illiquid.

Municipal securities may be backed by letters of credit or other forms of credit enhancement issued by domestic or foreign banks or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss to an Underlying Fund that invests in municipal securities. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and are generally not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

Corporate and Bank Obligations; Trust Preferred Securities; Convertible Securities. Certain Underlying Funds may invest in corporate debt obligations, trust preferred securities and convertible securities. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of U.S. or foreign

corporations to pay interest and repay principal. In addition, certain Underlying Funds may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits, bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by governmental regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry. A trust preferred security is a long dated bond (for example, 30 years) with preferred features. The preferred features are that payment of interest can be deferred for a specified period without initiating a default event. The securities are generally senior in claim to standard preferred stock but junior to other bondholders. Certain Underlying Funds may also invest in other short-term obligations issued or guaranteed by U.S. corporations, non-U.S. corporations or other entities.

Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than nonconvertible securities of similar quality. Convertible securities in which an Underlying Fund invests are subject to the same rating criteria as its other investments in fixed-income securities. Convertible securities have both equity and fixed-income risk characteristics. Like all fixed-income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed-income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Zero Coupon, Deferred Interest, Pay-In-Kind and Capital Appreciation Bonds. Certain Underlying Funds may invest in zero coupon, deferred interest, pay-in-kind and capital appreciation bonds. These bonds are issued at a discount from their face value because interest payments are typically postponed until maturity. Pay-in-kind securities are securities that have interest payable by the delivery of additional

securities. The market prices of these securities generally are more volatile than the market prices of interest-bearing securities and are likely to respond to a greater degree to changes in interest rates than interest-bearing securities having similar maturities and credit quality.

Rating Criteria. Except as noted below, the Underlying Equity Funds (other than the CORE Equity Funds, which may only invest in debt instruments that are cash equivalents) may invest in debt securities rated at least investment grade at the time of investment. Investment grade debt securities are securities rated BBB or higher by Standard & Poor's or Baa or higher by Moody's. The International Growth Opportunities and the Emerging Markets Equity Funds may invest up to 20% of their net assets plus any borrowings for investment purposes (measured at time of purchase) and the Real Estate Securities Fund may invest up to 20% of its total assets not including securities lending collateral (measured at time of purchase) in debt securities which are rated in the lowest rating categories by Standard & Poor's or Moody's (i.e., BB or lower by Standard & Poor's or Ba or lower by Moody's), including securities rated D by Moody's or Standard & Poor's. Fixed-income securities rated BB or Ba or below (or comparable unrated securities) are commonly referred to as ''junk bonds,'' are considered predominately speculative and may be questionable as to principal and interest payments as described above.

Structured Securities and Inverse Floaters. Certain Underlying Funds may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, interest rates, commodities, indices or other financial indicators (the ''Reference'') or the relative change in two or more References. The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, structured securities may present a greater degree of market risk than many types of securities, and may be more volatile, less liquid and more difficult to price accurately than less complex securities.

Structured securities include, but are not limited to, inverse floating rate debt securities (''inverse floaters''). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which the inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Floating and Variable Rate Obligations. Certain Underlying Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable both of which may be issued by domestic banks or foreign banks. An Underlying Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

Foreign Currency Transactions. Certain Underlying Funds may, to the extent consistent with their investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. Certain Underlying Funds may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. In addition, certain Underlying Funds may enter into foreign currency transactions to seek a closer correlation between the Underlying Fund's overall currency exposures and the currency exposures of the Underlying Fund's performance benchmark. Certain Underlying Funds may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

Certain Underlying Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. An Underlying Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the investment adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (e.g., the investment adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, an Underlying Fund's NAV to fluctuate. Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the

counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive an Underlying Fund of unrealized profits, transaction costs, or the benefits of a currency hedge, or could force the Underlying Fund to cover its purchase or sale commitments, if any, at the current market price.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. Each Underlying Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Underlying Fund may invest or on any securities index consisting of securities in which it may invest. Certain Underlying Funds may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of an investment adviser to manage future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If an investment adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in an Underlying Fund's investment portfolio, the Underlying Fund may incur losses that it would not otherwise incur. The use of options can also increase an Underlying Fund's transaction costs. Options written or purchased by the Underlying Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Yield Curve Options. Certain Underlying Funds may enter into options on the yield ''spread'' or differential between two securities. Such transactions are referred to as ''yield curve'' options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities rather than the prices of the individual securities, and is settled through cash payments. Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, however, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. Certain Underlying Funds may engage in futures transactions on U.S. and (in the case of certain Underlying Funds) foreign exchanges.

Certain Underlying Funds may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or to the extent an Underlying Fund invests in foreign securities, currency exchange rates, or to otherwise manage its term structure, sector selection and duration in accordance with its investment objective and policies. An Underlying Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. An Underlying Fund will engage in futures and related options transactions for bona fide hedging purposes as defined in regulations of the Commodity Futures Trading Commission (the ''CFTC'') or to seek to increase total return to the extent permitted by such regulations. Except as otherwise permitted by the CFTC, an Underlying Fund may not purchase or sell futures contracts or purchase or sell related options to seek to increase total return, if immediately thereafter the sum of the amount of initial margin deposits and premiums paid on the Underlying Fund's outstanding positions in futures and related options entered into for the purpose of seeking to increase total return would exceed 5% of the market value of the Underlying Fund's net assets. Alternative limitations on the use of futures contracts and related options may be stated from time to time in the Additional Statement.

Futures contracts and related options present the following risks:

- While an Underlying Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in a poorer overall performance than if the Underlying Fund had not entered into any futures contracts or options transactions.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection

may not be obtained and an Underlying Fund may be exposed to additional risk of loss.

- The loss incurred by an Underlying Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of an Underlying Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to an Underlying Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Preferred Stock, Warrants and Rights. Certain Underlying Funds may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Loan Participations. Certain Underlying Funds may invest in loan participations. A loan participation is an interest in a loan to a U.S. or foreign company or other borrower which is administered and sold by a financial intermediary. Loan participation interests may take the form of a direct or co-lending relationship with the corporate borrower, an assignment of an interest in the loan by a co-lender or another participant, or a participation in the seller's share of the loan. When the Underlying Fund acts as co-lender in connection with a participation interest or when it acquires certain participation interests, the Underlying Fund will have direct recourse against the borrower if the borrower fails to pay scheduled principal and interest. In cases where the Underlying Fund lacks direct recourse, it will look to an agent for the lenders (the ''agent lender'') to enforce appropriate credit remedies against the borrower. In these cases, the Underlying Fund may be subject to delays, expenses and risks that are greater than those that would have been involved if the Underlying Fund had purchased a direct obligation (such as

commercial paper) of such borrower. Moreover, under the terms of the loan participation, the Underlying Fund may be regarded as a creditor of the agent lender (rather than of the underlying corporate borrower), so that the Underlying Fund may also be subject to the risk that the agent lender may become insolvent.

REITs. The Real Estate Securities Fund expects to invest a substantial portion of its total assets in REITs, which are pooled investment vehicles that invest primarily in either real estate or real estate related loans. In addition, other Underlying Equity Funds may invest in REITs from time to time. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable federal income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. Each Underlying Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Other Investment Companies. Certain Underlying Funds may invest in securities of other investment companies (including exchange-traded funds such as SPDRs and iShares[SM], as defined below) subject to statutory limitations prescribed by the Investment Company Act of 1940. These limitations include a prohibition on any Underlying Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of an Underlying Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. An Underlying Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Although the Underlying Funds do not expect to do so in the foreseeable future, each Underlying Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Underlying Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which an Underlying Fund may invest include money market funds which the Investment Adviser or any of its affiliates serve as investment adviser, administrator or distributor.

Exchange-traded funds such as SPDRs and iShares℠ are shares of unaffiliated investment companies which are traded like traditional equity securities on a national securities exchange or the NASDAQ® National Market System.

- ***Standard and Poor's Depositary Receipts™.*** The Underlying Equity Funds may, consistent with their investment policies, purchase Standard & Poor's Depositary Receipts™ (''SPDRs''). SPDRs are securities traded on the American Stock Exchange (the ''AMEX'') that represent ownership in the SPDR Trust, a trust which has been established to accumulate and hold a portfolio of common stocks that is intended to track the price performance and dividend yield of the S&P 500®. The SPDR Trust is sponsored by a subsidiary of the AMEX. SPDRs may be used for several reasons, including, but not limited to, facilitating the handling of cash flows or trading, or reducing transaction costs. The price movement of SPDRs may not perfectly parallel the price action of the S&P 500.
- ***iShares℠.*** iShares are shares of an investment company that invests substantially all of its assets in securities included in specified indices, including the MSCI indices for various countries and regions. iShares are listed on the AMEX and were initially offered to the public in 1996. The market prices of iShares are expected to fluctuate in accordance with both changes in the NAVs of their underlying indices and supply and demand of iShares on the AMEX. However, iShares have a limited operating history and information is lacking regarding the actual performance and trading liquidity of iShares for extended periods or over complete market cycles. In addition, there is no assurance that the requirements of the AMEX necessary to maintain the listing of iShares will continue to be met or will remain unchanged. In the event substantial market or other disruptions affecting iShares should occur in the future, the liquidity and value of an Underlying Equity Fund's shares could also be substantially and adversely affected. If such disruptions were to occur, an Underlying Equity Fund could be required to reconsider the use of iShares as part of its investment strategy.

Unseasoned Companies. Certain Underlying Funds may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Non-Investment Grade Fixed-Income Securities. Non-investment grade fixed-income securities and unrated securities of comparable credit quality (commonly known as ''junk bonds'') are considered predominantly speculative by traditional investment standards. In some cases, these obligations may be highly speculative and have poor prospects for reaching investment grade standing. Non-investment

grade fixed-income securities are subject to the increased risk of an issuer's inability to meet principal and interest obligations. These securities, also referred to as high yield securities, may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

Non-investment grade fixed-income securities are generally unsecured and are often subordinated to the rights of other creditors of the issuers of such securities. Investment by an Underlying Fund in defaulted securities poses additional risk of loss should nonpayment of principal and interest continue in respect of such securities. Even if such securities are held to maturity, recovery by an Underlying Fund of its initial investment and any anticipated income or appreciation is uncertain.

Equity Swaps. Each Underlying Equity Fund may invest up to 15% of its net assets in equity swaps. Equity swaps allow the parties to a swap agreement to exchange dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment.

An equity swap may be used by an Underlying Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous. Equity swaps are derivatives and their value can be very volatile. To the extent that an investment adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, an Underlying Fund may suffer a loss, which may be substantial. The value of some components of an equity swap (such as the dividends on a common stock) may also be sensitive to changes in interest rates. Furthermore, an Underlying Fund may suffer a loss if the counterparty defaults. Because equity swaps are normally illiquid, an Underlying Fund may be unable to terminate its obligations when desired.

When-Issued Securities and Forward Commitments. Each Underlying Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price or yield to the Underlying Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although an Underlying Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, an Underlying Fund may dispose of when-issued securities or forward commitments prior to settlement if its investment adviser deems it appropriate.

Repurchase Agreements. Certain Underlying Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by an Underlying Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, an Underlying Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Underlying Fund are less than the repurchase price and the Underlying Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, an Underlying Fund could suffer additional losses if the collateral held by the Underlying Fund is subject to a court ''stay'' that prevents the Underlying Fund from promptly selling the collateral. If this occurs, the Underlying Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, an Underlying Fund could experience a loss if a court determines that the Underlying Fund's interest in the collateral is not enforceable.

Certain Underlying Funds, together with other registered investment companies having advisory agreements with the investment adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. Each Underlying Fund may engage in securities lending. Securities lending involves the lending of securities owned by an Underlying Fund to financial institutions such as certain broker-dealers, including, as permitted by the SEC, Goldman Sachs. The borrowers are required to secure their loans continuously with cash, cash equivalents, U.S. Government Securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash

collateral may be invested by an Underlying Fund in short-term investments, including unregistered investment pools managed by the Investment Adviser or its affiliates. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and an Underlying Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If an investment adviser determines to make securities loans, the value of the securities loaned may not exceed 33⅓% of the value of the total assets of an Underlying Fund (including the loan collateral). Loan collateral (including any investment of the collateral) is not subject to the percentage limitations described elsewhere in this Prospectus regarding investments in fixed-income securities and cash equivalents.

An Underlying Fund may lend its securities to increase its income. An Underlying Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Underlying Fund or becomes insolvent.

Short Sales Against-the-Box. Certain Underlying Funds may make short sales against-the-box. A short sale against-the-box means that at all times when a short position is open the Underlying Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without the payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Mortgage Dollar Rolls. Certain Underlying Funds may enter into ''mortgage dollar rolls.'' In mortgage dollar rolls, an Underlying Fund sells securities for delivery in the current month and simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Underlying Fund loses the right to receive principal and interest paid on the securities sold. However, the Underlying Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish the Underlying Fund's performance.

Successful use of mortgage dollar rolls depends upon an investment adviser's ability to predict correctly interest rates and mortgage prepayments. If the investment adviser is incorrect in its prediction, an Underlying Fund may experience a loss. The Underlying Funds do not currently intend to enter into mortgage dollar rolls for financing and do not treat them as borrowings.

Borrowings and Reverse Repurchase Agreements. Each Underlying Fund can borrow money from banks and other financial institutions, and certain Underlying Funds may enter into reverse repurchase agreements in amounts not exceeding one-third of its total assets. An Underlying Fund may not make additional investments if borrowings exceed 5% of its total assets. Reverse repurchase agreements involve the sale of securities held by an Underlying Fund subject to the Underlying Fund's agreement to repurchase them at a mutually agreed upon date and price (including interest). These transactions may be entered into as a temporary measure for emergency purposes or to meet redemption requests. Reverse repurchase agreements may also be entered into when the investment adviser expects that the interest income to be earned from the investment of the transaction proceeds will be greater than the related interest expense. Borrowings and reverse repurchase agreements involve leveraging. If the securities held by an Underlying Fund decline in value while these transactions are outstanding, the NAV of the Underlying Fund's outstanding shares will decline in value by proportionately more than the decline in value of the securities. In addition, reverse repurchase agreements involve the risk that the investment return earned by an Underlying Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by an Underlying Fund will decline below the price the Underlying Fund is obligated to pay to repurchase the securities, and that the securities may not be returned to the Underlying Fund.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps, Options on Swaps and Interest Rate Caps, Floors and Collars. To the extent consistent with their investment policies, certain Underlying Funds may enter into interest rate swaps, mortgage swaps, credit swaps, currency swaps, total return swaps, options on swaps and interest rate caps, floors and collars. Interest rate swaps involve the exchange by an Underlying Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security. Credit swaps give one party to a transaction the right to dispose of or acquire an asset (or group of assets), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give an Underlying Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the

underlying asset in a total return swap declines in value over the term of the swap, the Underlying Fund may also be required to pay the dollar value of that decline to the counterparty. The Underlying Funds may also purchase and write (sell) options contracts on swaps, commonly referred to as swaptions. A swaption is an option to enter into a swap agreement. Like other types of options, the buyer of a swaption pays a non-refundable premium for the option and obtains the right, but not the obligation, to enter into an underlying swap on agreed-upon terms. The seller of a swaption, in exchange for the premium, becomes obligated (if the option is exercised) to enter into an underlying swap on agreed-upon terms. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

Certain Underlying Funds may enter into swap transactions for hedging purposes or to seek to increase total return. The use of interest rate, mortgage, credit, currency and total return swaps, options on swaps, and interest rate caps, floors and collars, is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If an investment adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, the investment performance of an Underlying Fund would be less favorable than it would have been if these investment techniques were not used.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Portfolio's financial performance for the past five years (or less if the Portfolio has been in operation for less than five years). Certain information reflects financial results for a single Portfolio share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Portfolio (assuming reinvestment of all dividends and distributions). The information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report, along with the Portfolios' financial statements, is included in the Portfolios' annual report (available upon request). The information for all periods prior to the period ended December 31, 2000 has been audited by the Portfolios' previous independent accountants.

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as investment adviser (the ''Investment Adviser'') to four asset allocation portfolios: the Balanced Strategy Portfolio, Growth and Income Strategy Portfolio, Growth Strategy Portfolio and Aggressive Growth Strategy Portfolio (referred to as the ''Portfolios'' or the ''Funds'' interchangeably herein). The Portfolios are intended for investors who prefer to have their asset allocation decisions made by professional money managers. Each Portfolio seeks to achieve its objective by investing in a combination of underlying funds for which GSAM now or in the future acts as investment adviser or principal underwriter (the ''Underlying Funds''). Some of these Underlying Funds invest primarily in fixed-income or money market securities (the ''Underlying Fixed-Income Funds'') and other Underlying Funds invest primarily in equity securities (the ''Underlying Equity Funds''). An investor may choose to invest in one or more of the Portfolios based on individual investment goals, risk tolerance, and financial circumstances.

GSAM's Asset Allocation Investment Philosophy:

The Investment Adviser's Quantitative Strategies Group uses a disciplined, rigorous and quantitative approach to global tactical asset allocation. The Global Tactical Asset Allocation (''GTAA'') strategy attempts to add value by actively managing exposure to global stock, bond and currency markets. In contrast to stock and bond selection strategies which focus on individual stocks and bonds, GTAA focuses on broad asset classes. Our GTAA models use financial and economic factors that are designed to capture intuitive fundamental relationships across markets. While the GTAA process is rigorous and quantitative, there is economic reasoning behind each position.

Each Portfolio starts with a strategic allocation among the various asset classes. The Investment Adviser then tactically deviates from the strategic allocations based on forecasts provided by the models. The tactical process seeks to add value by overweighting attractive markets and underweighting unattractive markets. Greater deviations from the strategic allocation of a given Portfolio result in higher risk that the tactical allocation will underperform the strategic allocation. However, the Investment Adviser's risk control process balances the amount any asset class can

The Asset Allocation Investment Process involves investing a Portfolio's assets in other Goldman Sachs Funds within specified equity and fixed-income percentage ranges.

be overweighted in seeking to achieve higher expected returns against the amount of risk imposed by that deviation from the strategic allocation. The Investment Adviser employs GSAM's proprietary Black-Litterman asset allocation technique in an effort to optimally balance these two goals.

References in this Prospectus to a Portfolio's benchmarks are for informational purposes only, and unless otherwise noted are not an indication of how a particular Portfolio is managed.

Portfolio Investment Objectives and Strategies

Goldman Sachs Balanced Strategy Portfolio

PORTFOLIO FACTS

Objective:	Current income and long-term capital appreciation
Benchmarks:	S&P 500® Index Two-Year U.S. Treasury Note Index Lehman Brothers U.S. Corporate High Yield Bond Index
Investment Focus:	Domestic fixed-income funds (approximately 60%), with the remaining balance in domestic and international stock funds and an allocation to a global bond fund
Investment Style:	Asset Allocation
Symbol:	GIPSX

INVESTMENT OBJECTIVE

The Portfolio seeks current income and long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 60% of the Portfolio's total assets will be allocated among Underlying Fixed-Income Funds. Allocation to Underlying Equity Funds is intended to add diversification and enhance returns, but will also add some volatility. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE℠ Large Cap Growth, CORE Large Cap Value and CORE℠ International Equity Funds and may invest a relatively significant percentage of its assets in the Global Income Fund. It is expected that the Portfolio will invest more than 25% of its assets in the Short Duration Government Fund.

Goldman Sachs
Growth and Income Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation and current income
Benchmarks:	S&P 500® Index MSCI® Europe, Australasia, Far East (EAFE®) Index (unhedged) Lehman Brothers Aggregate Bond Index Lehman Brothers U.S. Corporate High Yield Bond Index
Investment Focus:	Domestic and international fixed-income and stock funds
Investment Style:	Asset Allocation
Symbol:	GOISX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation and current income.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 60% of the Portfolio's total assets will be allocated among Underlying Equity Funds, which are intended to provide the capital appreciation component. Allocation to Underlying Fixed-Income Funds is intended to provide the income component. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds and will invest a relatively significant percentage of its assets in the Core Fixed Income and Global Income Funds.

Goldman Sachs Growth Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation and secondarily current income
Benchmarks:	S&P 500® Index MSCI® EAFE® Index (unhedged) Russell 2000® Index MSCI® Emerging Markets Free (EMF) Index
Investment Focus:	Primarily a blend of domestic large cap, small cap and international stock funds (approximately 80%), with the balance in domestic fixed-income funds and a global bond fund
Investment Style:	Asset Allocation
Symbol:	GGSSX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation and secondarily current income.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, approximately 80% of the Portfolio's total assets will be allocated among Underlying Equity Funds, with a blend of domestic large cap, small cap and international exposure to seek capital appreciation. Allocation to Underlying Fixed-Income Funds is intended to provide diversification. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its equity allocation in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds.

Goldman Sachs
Aggressive Growth Strategy Portfolio

PORTFOLIO FACTS

Objective:	Long-term capital appreciation
Benchmarks:	S&P 500® Index MSCI® EAFE® Index (unhedged) Russell 2000® Index MSCI® EMF Index
Investment Focus:	Equity funds, with a greater focus on international and small cap investments
Investment Style:	Asset Allocation
Symbol:	GAPSX

INVESTMENT OBJECTIVE

The Portfolio seeks long-term capital appreciation.

PRINCIPAL INVESTMENT STRATEGY

Under normal conditions, substantially all of the Portfolio's total assets will be allocated among Underlying Equity Funds, with a greater focus on small cap and international investments relative to the other Portfolios. The Investment Adviser expects that the Portfolio will invest a relatively significant percentage of its assets in the CORE Large Cap Growth, CORE Large Cap Value and CORE International Equity Funds.

Principal Investment Strategies

Each Portfolio seeks to achieve its investment objective by investing within specified equity and fixed-income ranges among Underlying Funds. The table below illustrates the current Underlying Equity/Fixed-Income Fund allocation targets and ranges for each Portfolio:

Equity/Fixed-Income Range (Percentage of Each Portfolio's Total Assets)

Portfolio	Target	Range
Balanced Strategy		
Equity	**40%**	20%-60%
Fixed-Income	**60%**	40%-80%
Growth and Income Strategy		
Equity	**60%**	40%-80%
Fixed-Income	**40%**	20%-60%
Growth Strategy		
Equity	**80%**	60%-100%
Fixed-Income	**20%**	0%-40%
Aggressive Growth Strategy		
Equity	**100%**	75%-100%
Fixed-Income	**0%**	0%-25%

A Portfolio will invest in particular Underlying Funds based on various criteria. Among other things, the Investment Adviser will analyze the Underlying Funds' respective investment objectives, policies and investment strategies in order to determine which Underlying Funds, in combination with other Underlying Funds, are appropriate in light of a Portfolio's investment objective.

A Portfolio may purchase or sell securities to: (a) accommodate purchases and sales of its shares; (b) change the percentages of its assets invested in each of the Underlying Funds in response to economic or market conditions; and (c) maintain or modify the allocation of its assets among the Underlying Funds within the percentage ranges described above.

While each Portfolio can invest in any or all of the Underlying Funds, it is expected that each Portfolio will normally invest in only some of the Underlying Funds at any particular time. Each Portfolio's investment in any of the Underlying Funds may, and in some cases is expected to, exceed 25% of such Portfolio's total assets.

THE PARTICULAR UNDERLYING FUNDS IN WHICH EACH PORTFOLIO MAY INVEST, THE EQUITY/FIXED-INCOME TARGETS AND RANGES AND THE INVESTMENTS IN EACH UNDERLYING FUND MAY BE CHANGED FROM TIME TO TIME WITHOUT SHAREHOLDER APPROVAL.

In addition, each Portfolio's investment objective and all policies not specifically designated as fundamental in this Prospectus or the Statement of Additional Information (the ''Additional Statement'') are non-fundamental and may be changed without shareholder approval. If there is a change in a Portfolio's investment objective, you should consider whether that Portfolio remains an appropriate investment in light of your then current financial position and needs.

Principal Risks of the Portfolios

Loss of money is a risk of investing in each Portfolio. An investment in a Portfolio is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. While the Portfolios offer a greater level of diversification than many other types of mutual funds, a single Portfolio may not provide a complete investment program for an investor. The following summarizes important risks that apply to the Portfolios and may result in a loss of your investment. There can be no assurance that a Portfolio will achieve its investment objective.

- ***Investing in the Underlying Funds***—The investments of each Portfolio are concentrated in the Underlying Funds, and each Portfolio's investment performance is directly related to the investment performance of the Underlying Funds held by it. The ability of each Portfolio to meet its investment objective is directly related to the ability of the Underlying Funds to meet their objectives as well as the allocation among those Underlying Funds by the Investment Adviser. The value of the Underlying Funds' investments, and the net asset values (''NAV'') of the shares of both the Portfolios and the Underlying Funds, will fluctuate in response to various market and economic factors related to the equity and fixed-income markets, as well as the financial condition and prospects of issuers in which the Underlying Funds invest. There can be no assurance that the investment objective of any Portfolio or any Underlying Fund will be achieved.
- ***Investments of the Underlying Funds***—Because the Portfolios invest in the Underlying Funds, the Portfolios' shareholders will be affected by the investment policies of the Underlying Funds in direct proportion to the amount of assets the Portfolios allocate to those Funds. Each Portfolio may invest in Underlying Funds that in turn invest in small capitalization companies and foreign issuers and thus are subject to additional risks, including changes in foreign currency exchange rates and political risk. Foreign investments may include securities of issuers located in emerging countries in Asia, Latin America, Eastern Europe and Africa. Each Portfolio may also invest in Underlying Funds that in turn invest in non-investment grade fixed-income securities (''junk bonds''), which are considered speculative by traditional standards. In addition, the Underlying Funds may purchase derivative securities; enter into forward currency transactions; lend their portfolio securities; enter into futures contracts and options transactions; purchase zero coupon bonds and payment-in-kind bonds; purchase securities issued by real estate investment trusts (''REITs'') and other issuers in the real estate industry; purchase restricted and illiquid securities; purchase securities on a when-issued or delayed delivery basis; enter into repurchase agreements; borrow money; and engage in various other

investment practices. The risks presented by these investment practices are discussed in Appendix A to this Prospectus and the Additional Statement.

- ***Affiliated Persons***—In managing the Portfolios, the Investment Adviser will have the authority to select and substitute Underlying Funds. The Investment Adviser is subject to conflicts of interest in allocating Portfolio assets among the various Underlying Funds both because the fees payable to it and/or its affiliates by some Underlying Funds are higher than the fees payable by other Underlying Funds and because the Investment Adviser and its affiliates are also responsible for managing the Underlying Funds. The Trustees and officers of the Goldman Sachs Trust may also have conflicting interests in fulfilling their fiduciary duties to both the Portfolios and the Underlying Funds.
- ***Expenses***—You may invest in the Underlying Funds directly. By investing in the Underlying Funds indirectly through a Portfolio, you will incur not only a proportionate share of the expenses of the Underlying Funds held by the Portfolio (including operating costs and investment management fees), but also expenses of the Portfolio.
- ***Temporary Investments***—Although the Portfolios normally seek to remain substantially invested in the Underlying Funds, each Portfolio may invest a portion of its assets in high-quality, short-term debt obligations (including commercial paper, certificates of deposit, bankers' acceptances, repurchase agreements, debt obligations backed by the full faith and credit of the U.S. government and demand and time deposits of domestic and foreign banks and savings and loan associations) to maintain liquidity, to meet shareholder redemptions and for other short-term cash needs. Also, there may be times when, in the opinion of the Investment Adviser, abnormal market or economic conditions warrant that, for temporary defensive purposes, a Portfolio may invest without limitation in short-term obligations. When a Portfolio's assets are invested in such investments, the Portfolio may not be achieving its investment objective.

Description of the Underlying Funds

DESCRIPTION OF THE UNDERLYING FUNDS

The following is a concise description of the investment objectives and practices for each of the Underlying Funds that are available for investment by the Portfolios as of the date of this Prospectus. A Portfolio may also invest in other Underlying Funds not listed below that may become available for investment in the future at the discretion of the Investment Adviser without shareholder approval. Additional information regarding the investment practices of the Underlying Funds is provided in Appendix A to this Prospectus and the Additional Statement. No offer is made in this Prospectus of any of the Underlying Funds.

Underlying Fund	Investment Objectives	Investment Criteria
CORE Large Cap Value	Long-term growth of capital and dividend income.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in large-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 1000® Value Index.
CORE Large Cap Growth	Long-term growth of capital. Dividend income is a secondary consideration.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in large-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 1000® Growth Index.
CORE℠ Small Cap Equity	Long-term growth of capital.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in small-cap U.S. issuers, including foreign issuers traded in the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the Russell 2000® Index.

Underlying Fund	Investment Objectives	Investment Criteria
Real Estate Securities	Total return comprised of long-term growth of capital and dividend income.	Substantially all, and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in issuers that are primarily engaged in or related to the real estate industry. The Fund expects that a substantial portion of its total assets will be invested in REITS and real estate industry companies.
CORE International Equity	Long-term growth of capital.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a broadly diversified portfolio of equity investments in companies organized outside the United States or whose securities are principally traded outside the United States. The Fund's investments are selected using both a variety of quantitative techniques and fundamental research in seeking to maximize the Fund's expected return, while maintaining risk, style, capitalization and industry characteristics similar to the unhedged MSCI® EAFE® Index. The Fund may employ certain currency management techniques.
International Growth Opportunities	Long-term capital appreciation.	At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in companies with public stock market capitalizations within $100 million and $4 billion at the time of investment that are organized outside the United States or whose securities are principally traded outside the United States. The Fund may employ certain currency management techniques.
Emerging Markets Equity	Long-term capital appreciation.	Substantially all, and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in a diversified portfolio of equity investments in emerging country issuers. The Fund may employ certain currency management techniques.

Underlying Fund	Investment Objectives	Duration or Maturity	Expected Approximate Interest Rate Sensitivity
Financial Square Prime Obligations	Maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity.	Maximum Maturity of Individual Investments = 13 months at time of purchase. Maximum Dollar-Weighted Average Portfolio Maturity = 90 days	3-month Treasury bill
Short Duration Government	A high level of current income and secondarily, in seeking current income, may also consider the potential for capital appreciation.	Target Duration = Two-Year U.S. Treasury Note Index plus or minus 0.5 years Maximum Duration*= 3 years	2-year U.S. Treasury note
Core Fixed Income	Total return consisting of capital appreciation and income that exceeds the total return of the Lehman Brothers Aggregate Bond Index.	Target Duration = Lehman Brothers Aggregate Bond Index plus or minus one year Maximum Duration*= 6 years	5-year U.S. Treasury note
Global Income	A high total return, emphasizing current income, and, to a lesser extent, providing opportunities for capital appreciation.	Target Duration = J.P. Morgan Global Government Bond Index (hedged) plus or minus 2.5 years Maximum Duration*= 7.5 years	6-year government bond
High Yield	A high level of current income and may also consider the potential for capital appreciation.	Target Duration = Lehman Brothers U.S. Corporate High Yield Bond Index plus or minus 2.5 years Maximum Duration* = 7.5 years	6-year U.S. Treasury note

* *Under normal interest rate conditions.*

Investment Sector	Credit Quality	Other Investments
Money market instruments including securities issued or guaranteed by the U.S. government, its agencies, instrumentalities or sponsored enterprises (''U.S. Government Securities''); U.S. bank obligations, commercial paper and other short-term obligations of U.S. corporations, governmental and other entities; asset-backed and receivables-backed securities; and related repurchase agreements.	High Quality (short-term ratings of A-1, P-1 or comparable quality).	N/A
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in U.S. Government Securities and repurchase agreements collateralized by such securities.	U.S. Government Securities	Mortgage pass-through securities and other securities representing an interest in or collateralized by mortgage loans.
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in fixed-income securities, including U.S. Government Securities, corporate debt securities, privately issued mortgage-backed and asset-backed securities.	Minimum = BBB/Baa (at time of purchase) Minimum for non-U.S. dollar securities = AA/Aa	Foreign fixed-income, municipal and convertible securities, foreign currencies and repurchase agreements collateralized by U.S. Government Securities.
Fixed-Income Securities of U.S. and foreign governments and corporations.	Minimum = BBB/Baa (at time of purchase) At least 50% = AAA/Aaa	Mortgage-backed and asset-backed securities, foreign currencies and repurchase agreements collateralized by U.S. Government Securities or certain foreign government securities.
At least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) in high-yield, fixed-income securities rated below investment grade, including U.S. and non-U.S. dollar corporate debt, foreign government securities, convertible securities and preferred stock.	At least 80% = BB/Ba or below (at time of purchase)	Mortgage-backed and asset-backed securities, U.S. Government Securities, investment grade corporate fixed-income securities, structured securities, foreign currencies and repurchase agreements.

Principal Risks of the Underlying Funds

Loss of money is a risk of investing in each Underlying Fund. An investment in an Underlying Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The following summarizes important risks that apply to the Underlying Funds and may result in a loss of your investment in a Portfolio. There can be no assurance that an Underlying Fund will achieve its investment objective.

Risks That Apply To All Underlying Funds:

- ***NAV Risk***—The risk that the net asset value (''NAV'') of the Underlying Fund and the value of your investment will fluctuate.
- ***Interest Rate Risk***—The risk that when interest rates increase, fixed-income securities held by an Underlying Fund will decline in value. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of fixed-income securities held by an Underlying Fund may default on its obligation to pay interest and repay principal.
- ***Market Risk***—The risk that the value of the securities in which an Underlying Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors and/or general economic conditions. Price changes may be temporary or last for extended periods. An Underlying Fund's investments may be overweighted from time to time in one or more industry sectors, which will increase the Underlying Fund's exposure to risk of loss from adverse developments affecting those sectors.
- ***Derivatives Risk***—The risk that loss may result from an Underlying Fund's investments in options, futures, swaps, options on swaps, structured securities and other derivative instruments. These instruments may be leveraged so that small changes may produce disproportionate losses to an Underlying Fund.
- ***Management Risk***—The risk that a strategy used by an investment adviser to the Underlying Funds may fail to produce the intended results.
- ***Liquidity Risk***—The risk that an Underlying Fund will not be able to pay redemption proceeds within the time period stated in the Underlying Fund's Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Underlying Funds that invest in non-investment grade fixed-income securities, small capitalization stocks, REITs and emerging country issuers will be especially subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities within

particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions whether or not accurate.

Risks That Apply Primarily To The Underlying Fixed-Income Funds:

- ***Call Risk***—The risk that an issuer will exercise its right to pay principal on an obligation held by an Underlying Fund (such as a Mortgage-Backed Security) earlier than expected. This may happen when there is a decline in interest rates. Under these circumstances, an Underlying Fund may be unable to recoup all of its initial investment and will also suffer from having to reinvest in lower yielding securities.
- ***Extension Risk***—The risk that an issuer will exercise its right to pay principal on an obligation held by an Underlying Fund (such as a Mortgage-Backed Security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and an Underlying Fund will also suffer from the inability to invest in higher yielding securities.
- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Underlying Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by an Underlying Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risk That Applies Primarily To The Underlying Equity Funds:

- ***Stock Risk***—The risk that stock prices have historically risen and fallen in periodic cycles. Recently, U.S. and foreign stock markets have experienced substantial price volatility.

Risks That Are Particularly Important For Specific Underlying Funds:

- ***Geographic Risk***—The Global Income Fund is non-diversified meaning that it is permitted to invest more of its assets in fewer issuers than ''diversified'' mutual funds. Thus, it may be more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments. In addition, the Global Income Fund may invest more than 25% of its total assets in the securities of corporate and governmental issuers located in each of Canada, Germany, Japan, and the United Kingdom, as well as in the securities of U.S. issuers. Concentration of the investments of this or

other Underlying Funds in issuers located in a particular country or region will subject an Underlying Fund, to a greater extent than if investments were less concentrated, to losses arising from adverse developments affecting those issuers or countries.

- ***Foreign Risk***—The risk that when an Underlying Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions. The Underlying Funds will also be subject to the risk of negative foreign currency rate fluctuations. Foreign risks will normally be greatest when an Underlying Fund invests in issuers located in emerging countries.
- ***Emerging Countries Risk***—Certain Underlying Funds may invest in emerging country securities. The securities markets of Asian, Latin and South American, Eastern European, African and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in certain emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- ***Mid Cap and Small Cap Risk***—Certain Underlying Funds may invest in small cap and mid cap stocks. The securities of small capitalization and mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable an Underlying Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Initial Public Offering (''IPO'') Risk***—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When an Underlying Fund's asset base is small, a significant portion of the Underlying Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Underlying Fund. As the Underlying Fund's assets grow, the effect of the Underlying Fund's investments in IPOs on the Underlying Fund's performance will probably decline, which could reduce the Underlying Fund's performance.

- ***''Junk Bond'' Risk***—Certain Underlying Funds may invest in non-investment grade fixed-income securities (commonly known as ''junk bonds'') that are considered predominantly speculative by traditional investment standards. Non-investment grade fixed-income securities and unrated securities of comparable credit quality are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. These securities may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

More information about the portfolio securities and investment techniques of the Underlying Funds, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Portfolio Performance

HOW THE PORTFOLIOS HAVE PERFORMED

The bar chart and table provide an indication of the risks of investing in a Portfolio by showing: (a) changes in the performance of a Portfolio's Service Shares from year to year; and (b) how the average annual total returns of a Portfolio's Service Shares compare to those of broad-based securities market indices. The bar chart and table assume reinvestment of dividends and distributions. A Portfolio's past performance, before and after taxes, is not necessarily an indication of how the Portfolio will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Portfolio's performance would have been reduced.

INFORMATION ON AFTER-TAX RETURNS

These definitions apply to the after-tax returns.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on a Portfolio's Service Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on a Portfolio's Service Shares (i.e., dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Service Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Shares. These returns reflect taxes paid on distributions on a Portfolio's Service Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions (as of the date of this Prospectus, 38.6% for ordinary income dividends and 20% for long-term capital gains distributions) and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Portfolio Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

Portfolio Fees and Expenses continued

[1] The Portfolios' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee on the Portfolios equal to 0.20% of the Portfolios' average daily net assets. ***As a result of fee waivers, current management fees of the Portfolios are 0.15% of each Portfolio's average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees to their customers who are beneficial owners of Service Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] ''All Other Expenses'' include transfer agency fees and expenses equal on an annualized basis to 0.04% of the average daily net assets of each Portfolio's Service Shares plus all other ordinary expenses not detailed above. The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' (excluding management fees, transfer agency fees and expenses, service fees, shareholder administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.00% of each Portfolio's average daily net assets.

[5] ''Underlying Fund Expenses'' for each Portfolio are based upon the strategic allocation of each Portfolio's investment in the Underlying Funds and upon the actual total operating expenses of the Underlying Funds (including any current waivers and expense limitations of the Underlying Funds). Actual Underlying Fund Expenses incurred by each Portfolio may vary with changes in the allocation of each Portfolio's assets among the Underlying Funds and with other events that directly affect the expenses of the Underlying Funds.

Example

The following Example is intended to help you compare the cost of investing in a Portfolio (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Service Shares of a Portfolio for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Portfolio's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Portfolio	1 Year	3 Years	5 Years	10 Years
Balanced Strategy	$201	$621	$1,068	$2,306
Growth and Income Strategy	$194	$600	$1,032	$2,233
Growth Strategy	$203	$627	$1,078	$2,327
Aggressive Growth Strategy	$229	$706	$1,210	$2,595

Service Organizations that invest in Service Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Service Shares may receive other compensation in connection with the sale and distribution of Service Shares or for services to their customers' accounts and/or the Portfolios. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Investment Adviser	Portfolio
Goldman Sachs Asset Management, L.P. (''GSAM'') 32 Old Slip New York, New York 10005	Balanced Strategy Growth and Income Strategy Growth Strategy Aggressive Growth Strategy

Except as noted below, GSAM also serves as investment adviser to each Underlying Fund.

Goldman Sachs Asset Management International (''GSAMI'') Christchurch Court 10-15 Newgate Street London, England EC1A 7HD	International Growth Opportunities Emerging Markets Equity Global Income

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman, Sachs & Co. (''Goldman Sachs'') served as the Portfolios' investment adviser. On or about April 26, 2003, GSAM assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Portfolios. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission (the ''SEC'') since 1990 and is an affiliate of Goldman Sachs. GSAMI, a member of the Investment Management Regulatory Organization Limited since 1990 and a registered investment adviser since 1991, is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM and GSAMI, along with other units of IMD, had assets under management of $329.6 billion.

Under an Asset Allocation Management Agreement with each Portfolio, the Investment Adviser, subject to the general supervision of the Trustees, provides advice as to each Portfolio's investment transactions, including determinations concerning changes to (a) the Underlying Funds in which the Portfolios may invest; and (b) the percentage range of assets of any Portfolio that may be invested in the Underlying Equity Funds and the Underlying Fixed-Income Funds as separate groups.

The Investment Adviser also performs the following additional services for the Portfolios:

- Supervises all non-advisory operations of the Portfolios
- Provides personnel to perform necessary executive, administrative and clerical services to the Portfolios
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities
- Maintains the records of each Portfolio
- Provides office space and all necessary office equipment and services

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Portfolio's average daily net assets):

Portfolio	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Balanced Strategy	0.35%	0.15%
Growth and Income Strategy	0.35%	0.15%
Growth Strategy	0.35%	0.15%
Aggressive Growth Strategy	0.35%	0.15%

The difference, if any, between the stated fees and the actual fees paid by the Portfolios reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

In addition, each Portfolio, as a shareholder in the Underlying Funds, will indirectly bear a proportionate share of any investment management fees and other expenses paid by the Underlying Funds. The following chart shows the total net operating expense ratios (management fee plus other operating expenses) of Institutional Shares of each Underlying Fund in which the Portfolios may invest after applicable fee waivers and expense limitations, as of the end of each Underlying Fund's most recent fiscal year. In addition, the following chart shows the contractual investment management fees payable to the Investment Adviser or its affiliates by the Underlying Funds (in each case as an annualized percentage of a Fund's average net assets). Absent voluntary fee waivers and/or expense reimbursements, which may be discontinued at any time, the total operating expense ratios of certain Underlying Funds would be higher.

Underlying Fund	Contractual Management Fee	Total Net Operating Expense Ratio
Financial Square Prime Obligations	0.205%	0.18%
Short Duration Government	0.50%	0.54%
Core Fixed Income	0.40%	0.50%
Global Income	0.90%	0.69%
High Yield	0.70%	0.76%
CORE Large Cap Growth	0.75%	0.76%
CORE Large Cap Value	0.60%	0.70%
CORE Small Cap Equity	0.85%	0.93%
CORE International Equity	0.85%	1.01%
International Growth Opportunities	1.20%	1.38%
Emerging Markets Equity	1.20%	1.59%
Real Estate Securities	1.00%	1.04%

PORTFOLIO MANAGERS

Robert B. Litterman, Ph.D., a Managing Director of Goldman Sachs, is the co-developer, along with the late Fischer Black, of the Black-Litterman Global Asset Allocation Model, a key tool in IMD's asset allocation process. As Director of Quantitative Resources, Dr. Litterman oversees Quantitative Equities, the Quantitative Strategies Group, the Global Investment Strategies Group, and the Portfolio Analysis and Construction Environment (PACE) Group. In total, these groups include over 90 professionals. Prior to moving to IMD, Dr. Litterman was the head of the Firmwide Risk department since becoming a Partner in 1994. Preceding his time in the Operations, Technology & Finance Division, Dr. Litterman spent eight years in the Fixed Income Division's research department where he was co-director of the research and model development group.

Quantitative Strategies Group

- The 41-person Quantitative Strategies Group includes nine Ph.Ds, with extensive academic and practitioner experience
- Disciplined, quantitative models are used to determine the relative attractiveness of the world's stock, bond and currency markets
- Theory and economic intuition guide the investment process

Quantitative Strategies Group

Name and Title	Years Primarily Responsible	Five Year Employment History
Mark M. Carhart, Ph.D., CFA Managing Director, Co-Head Quantitative Strategies and Senior Portfolio Manager	Since 1998	Dr. Carhart joined the Investment Adviser as a member of the Quantitative Strategies team in 1997. From August 1995 to September 1997, he was Assistant Professor of Finance at the Marshall School of Business at USC and a Senior Fellow of the Wharton Financial Institutions Center.
Raymond J. Iwanowski Managing Director, Co-Head Quantitative Strategies and Senior Portfolio Manager	Since 1998	Mr. Iwanowski joined the Investment Adviser as an associate and portfolio manager in 1997. From 1993 to 1997, he was a Vice President and head of the Fixed Derivatives Client Research group at Salomon Brothers.
Giorgio De Santis, Ph.D. Managing Director and Portfolio Manager	Since 1998	Dr. DeSantis joined the Investment Adviser in 1998. From 1992 to 1998, he was Assistant Professor of Finance and Business Economics at the Marshall School of Business at USC.
Joseph DeLuca Vice President, Portfolio and Product Manager	Since 2001	Mr. DeLuca joined the Investment Adviser in 2001. From 1997 to 2001, he worked in the Risk Management group of Goldman Sachs. From 1992 to 1997, he worked in the Structured Finance Services and Management Consulting groups at Chase Manhattan Bank.

Quantitative Strategies Group

Name and Title	Years Primarily Responsible	Five Year Employment History
Katinka Domotorffy, CFA Vice President and Portfolio Manager	Since 2001	Ms. Domotorffy joined the Investment Adviser as a member of the Quantitative Strategies Group in 1998. Prior to joining Goldman Sachs, she received her M.S. in Finance from the London School of Economics in 1998, and her B.S. from the University of Pennsylvania in 1997.
William J. Fallon, Ph.D. Vice President and Portfolio Manager	Since 1998	Dr. Fallon joined the Investment Adviser in 1998. From 1996 to 1998, he worked in the Firmwide Risk Group of Goldman Sachs. From 1991 to 1996, he attended Columbia University, where he earned a Ph.D. in Finance.
Silverio Foresi, Ph.D. Vice President and Portfolio Manager	Since 2000	Dr. Foresi joined the Investment Adviser in 1999. From 1997 to 1999, he was head of Research in Emerging Markets Fixed Income Derivatives Trading at Salomon Brothers. From 1990 to 1997, Dr. Foresi was an Assistant Professor of Finance at New York University.
Guang-Liang He, Ph.D. Vice President and Portfolio Manager	Since 1998	Dr. He joined the Investment Adviser in 1998. In 1997, he worked in the Firmwide Risk Group of Goldman Sachs. From 1992 to 1997, he worked at Quantitative Financial Strategies, Inc. where he was responsible for the research and development of proprietary trading models.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Portfolio's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois, 60606-6372, also serves as each Portfolio's transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Underlying Funds or Portfolios. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to an Underlying Fund or limit an Underlying Fund's investment activities. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Underlying Funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Underlying Funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Underlying Funds. The results of an Underlying Fund's investment activities, therefore, may differ from those of Goldman Sachs and its affiliates, and it is possible that an Underlying Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Underlying Funds may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. An Underlying Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions.

Under a securities lending program approved by the Underlying Funds' Board of Trustees, the Underlying Funds have retained an affiliate of the Investment Adviser to serve as the securities lending agent for each Underlying Fund to the extent that the Underlying Fund engages in the securities lending program. For these services, the lending agent may receive a fee from the Underlying Funds, including a fee based on the returns earned on the Underlying Funds' investment of the cash received as collateral for the loaned securities. In addition, the Underlying Funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Underlying Funds' portfolio investment transactions.

Dividends

Each Portfolio pays dividends from its investment company taxable income and distributions from net realized capital gains. You may choose to have dividends and distributions paid in:

- Cash
- Additional shares of the same class of the same Portfolio
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply for certain ILA Portfolios. See the Additional Statement.

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time before the record date for a particular dividend or distribution. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Portfolio.

The election to reinvest dividends and distributions in additional shares will not affect the tax treatment of such dividends and distributions, which will be treated as received by you and then used to purchase the shares.

Dividends from investment company taxable income and distributions from net realized capital gains are declared and paid as follows:

Portfolio	Investment Income Dividends	Capital Gains Distributions
Balanced Strategy	Quarterly	Annually
Growth and Income Strategy	Quarterly	Annually
Growth Strategy	Annually	Annually
Aggressive Growth Strategy	Annually	Annually

From time to time a portion of a Portfolio's dividends may constitute a return of capital.

When you purchase shares of a Portfolio, part of the NAV per share may be represented by undistributed income or undistributed realized gains that have previously been earned by the Portfolio. Therefore, subsequent distributions on such shares from such income or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Service Shares.

HOW TO BUY SHARES

How Can I Purchase Service Shares Of The Funds?

Generally, Service Shares may be purchased only through institutions that have agreed to provide shareholder administration and personal and account maintenance services to their customers who are the beneficial owners of Service Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Service Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. No sales load is charged. Purchases of Service Shares must be settled within three business days of receipt of a complete purchase order.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place an order with Goldman Sachs at 1-800-621-2550 and either:

- Wire federal funds to The Northern Trust Company (''Northern''), as subcustodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian) on the next business day; ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Service Shares:

- Personal and account maintenance services; and
- Shareholder administration services.

Personal and account maintenance services include:

- Providing facilities to answer inquiries and responding to correspondence with the Service Organization's customers
- Acting as liaison between the Service Organization's customers and the Trust
- Assisting customers in completing application forms, selecting dividend and other options, and similar services

Shareholder administration services include:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem and exchange shares for customers
- Processing payments for customers

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a service plan and a separate shareholder administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payments for their services from the Trust. These payments are equal to 0.25% (annualized) for personal and account maintenance services plus an additional 0.25% (annualized) for shareholder administration services of the average daily net assets of the Service Shares of the Funds that are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge

to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds. Additional compensation based on sales may, but is normally not expected to, exceed 0.50% (annualized) of the amount invested.

In addition to Service Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), have different minimum investment requirements and are entitled to different services than Service Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

The Funds do not have any minimum purchase or account requirements with respect to Service Shares. A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Service Shares, and may establish other requirements such as a minimum account balance. A Service Organization may redeem Service Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Reject or restrict any purchase or exchange order for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of Service Shares of a Fund is evident, or if purchases, sales or exchanges are, or a subsequent abrupt redemption might be, of a size that would disrupt the management of a Fund.
- Close a Fund to new investors from time to time and reopen a Fund whenever it is deemed appropriate by a Fund's Investment Adviser.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Service Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

The Funds' investments are valued based on market quotations or, if accurate quotations are not readily available, the fair value of the Fund's investments may be determined in good faith under procedures established by the Trustees.

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- When you buy shares, you pay the NAV next calculated *after* the Funds receive your order in proper form.
- When you sell shares, you receive the NAV next calculated *after* the Funds receive your order in proper form.
- The Trust reserves the right to reprocess purchase, redemption and exchange transactions that were processed at an NAV other than a Fund's official closing NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open a Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

Foreign securities may trade in their local markets on days a Fund is closed. As a result, the NAV of a Fund that holds foreign securities may be impacted on days when investors may not purchase or redeem Fund shares.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion

and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Service Shares Of The Funds?

Generally, Service Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Service Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** Redemption proceeds may be sent to recordholders by check or by wire (if the wire instructions are on record).

A Service Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: The Funds will arrange for redemption proceeds to be wired as federal funds to the bank account designated in the recordholder's Account Application. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be wired on the next business day in federal funds (for a total of one business day delay), but may be paid up to three business days following receipt of a properly executed wire transfer redemption request. If the shares to be sold were recently paid for by check, the Fund will pay the redemption proceeds when the check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- To change the bank designated on your Account Application, you must send written instructions signed by an authorized person designated on the Account Application to the Service Organization.
- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organization.

By Check: A recordholder may elect in writing to receive redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within three business days of receipt of a properly executed redemption request. If the shares to be sold were recently paid for by check, the Fund will pay the redemption proceeds when the check has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Service Shares of any Service Organization whose account balance falls below $50 as a result of a redemption. The Funds will not redeem Service

Shares on this basis if the value of the account falls below the minimum account balance solely as a result of market conditions. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption.

- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. The Fund may, in its discretion, pay redemption proceeds in-kind at any time if requested by a shareholder. The Fund anticipates that it will normally grant shareholder requests for an in-kind distribution so long as the distribution is in the best interests of the Fund and its other shareholders.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Service Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Service Shares of a Fund at NAV for Service Shares of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirement of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

Restrictions on Excessive Trading Practices. The Trust does not permit market-timing or other excessive trading practices. Purchases and exchanges should be made for long-term investment purposes only. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. Excessive, short-term (market-timing) trading practices may disrupt portfolio management strategies, harm Fund performance and negatively impact long-term shareholders. The Trust and Goldman Sachs will not be held liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust (or Goldman Sachs) and its shareholders, the Trust (or Goldman Sachs) will exercise these rights if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to a Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together.

What Types Of Reports Will Be Sent Regarding Investments In Service Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Service Organizations will also be provided with a printed confirmation for each transaction in their account and a monthly account statement. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Service Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Portfolios will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Portfolios.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Portfolio distributions and the sale of your Portfolio shares.

DISTRIBUTIONS

Each Portfolio contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Portfolios are generally subject to federal income tax, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Portfolio shares or receive them in cash. For federal tax purposes, the Portfolios' income dividend distributions and short-term capital gain distributions are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Portfolio shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. A percentage of the Portfolios' dividends paid to corporate shareholders may be eligible for the corporate dividends-received deduction. The Portfolios will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

The REIT investments of the underlying Real Estate Securities Fund often do not provide complete tax information to the Fund until after the calendar year-end. Consequently, because of the delay, it may be necessary for the Portfolios to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31.

Each Portfolio may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Portfolios may deduct these taxes in computing their taxable income.

If you buy shares of a Portfolio before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as ‘‘buying a dividend.’’

SALES AND EXCHANGES

Your sale of Portfolio shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Portfolio shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this gain or loss will be long-term or short-term depending on whether your holding period for the shares exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of a Portfolio may be disallowed under ‘‘wash sale’’ rules to the extent the shares disposed of are replaced with other shares of that Portfolio within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Portfolio. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Portfolio must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Portfolio to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on the Underlying Funds

This Appendix provides further information on certain types of investments and techniques that may be used by the Underlying Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request, and in the prospectuses of the Underlying Funds.

The Underlying Equity Funds invest primarily in common stocks and other equity investments, including preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments that have economic characteristics similar to equity securities (''equity investments''). The Underlying Fixed-Income Funds invest primarily in fixed-income securities, including senior and subordinated corporate debt obligations (such as bonds, debentures, notes and commercial paper), convertible and non-convertible corporate debt obligations, loan participations and preferred stock.

The Short-Duration Government Fund invests in U.S. Government Securities and related repurchase agreements, and does not make foreign investments. The investments of the Financial Square Prime Obligations Fund are limited by SEC regulations applicable to money market funds as described in its prospectus, and do not include many of the types of investments discussed below that are permitted for the other Underlying Funds. With these exceptions, and the further exceptions noted below, the following description applies generally to the Underlying Funds.

A. General Risks of the Underlying Funds

The Underlying Equity Funds will be subject to the risks associated with common stocks and other equity investments. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of the equity investments that an Underlying Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. Recently, stock markets have experienced substantial price volatility.

The Underlying Fixed-Income Funds will be subject to the risks associated with fixed-income securities. These risks include interest rate risk, credit risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed-income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed-income securities tends to decline. Credit risk involves the risk that an issuer or guarantor could default on its obligations, and an Underlying Fund will not recover its investment. Call risk and extension risk are normally present in adjustable rate mortgage loans (''ARMs''), mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities, such as securities backed by car loans.

The Financial Square Prime Obligations Fund attempts to maintain a stable NAV of $1.00 per share and values its assets using the amortized cost method in accordance with SEC regulations. There is no assurance, however, that the Financial Square Prime Obligations Fund will be successful in maintaining its per share value at $1.00 on a continuous basis. The per share NAVs of the other Underlying Funds are expected to fluctuate on a daily basis.

The portfolio turnover rates of the Underlying Funds have ranged from 36% to 437% during their most recent fiscal years. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by an Underlying Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of an Underlying Fund's portfolio securities, excluding securities having a maturity at the date of purchase of one year or less.

B. Other Risks of the Underlying Funds

Risks of Investing in Small Capitalization and Mid-Capitalization Companies. Certain Underlying Funds may, to the extent consistent with its investment policies,

invest in small and mid-capitalization companies. Investments in small and mid-capitalization companies involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Among the reasons for the greater price volatility of these investments are the less certain growth prospects of smaller firms and the lower degree of liquidity in the markets for such securities. Small and mid-capitalization companies may be thinly traded and may have to be sold at a discount from current market prices or in small lots over an extended period of time. In addition, these securities are subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities in particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic or market conditions, or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, an Underlying Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Small and mid-capitalization companies include ''unseasoned'' issuers that do not have an established financial history; often have limited product lines, markets or financial resources; may depend on or use a few key personnel for management; and may be susceptible to losses and risks of bankruptcy. Small and mid-capitalization companies may be operating at a loss or have significant variations in operating results; may be engaged in a rapidly changing business with products subject to a substantial risk of obsolescence; may require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition. In addition, these companies may face intense competition, including competition from companies with greater financial resources, more extensive development, manufacturing, marketing, and other capabilities, and a larger number of qualified managerial and technical personnel. Transaction costs for these investments are often higher than those for larger capitalization companies. Investments in small and mid-capitalization companies may be more difficult to price precisely than other types of securities because of their characteristics and lower trading volumes.

Risks of Foreign Investments. Certain of the Underlying Funds may make foreign investments. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which an Underlying Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to

shareholders or converted to U.S. dollars, the Underlying Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States, and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of an Underlying Fund's assets in one or a few countries and currencies will subject a Fund to greater risks than if an Underlying Fund's assets were not geographically concentrated.

Investment in sovereign debt obligations by a certain Underlying Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or pay interest when due in accordance with the terms of such debt, and an Underlying Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn an Underlying Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign

exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts (''ADRs'') and Global Depositary Receipts (''GDRs''). Certain Underlying Funds may also invest in European Depositary Receipts (''EDRs'') or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Euro. On January 1, 1999, the European Economic and Monetary Union (EMU) introduced a new single currency called the euro. The euro has replaced the national currencies of the following member countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

The new European Central Bank has control over each country's monetary policies. Therefore, the member countries no longer control their own monetary policies by directing independent interest rates for their currencies. The national governments of the participating countries, however, have retained the authority to set tax and spending policies and public debt levels.

The change to the euro as a single currency is relatively new and untested. The elimination of currency risk among EMU countries has affected the economic environment and behavior of investors, particularly in European markets, but the long-term impact of those changes on currency values or on the business or financial condition of European countries and issuers cannot be fully assessed at this time. In addition, the introduction of the euro presents other unique uncertainties, including the fluctuation of the euro relative to non-euro currencies; whether the interest rate, tax and labor regimes of European countries participating in the euro will converge over time; and whether the conversion of the currencies of other countries that now are or may in the future become members of the European Union (''EU'') will have an impact on the euro. Also, it is possible that the euro could be abandoned in the future by countries that have already adopted its use. These or other events, including political and economic developments, could cause market disruptions, and could adversely affect the value of securities held by the Underlying Funds. Because of the number of countries using this single

currency, a significant portion of the assets held by certain Underlying Funds may be denominated in the euro.

Risks of Emerging Countries. Certain Underlying Funds may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, Eastern Europe, Latin and South America and Africa. An Underlying Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of an Underlying Fund, the investment adviser, its affiliates and their respective clients and other service providers. An Underlying Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by an Underlying Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), an Underlying Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other

protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

An Underlying Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return from an investment in such countries to the Underlying Fund.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve an Underlying Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for an Underlying Fund to value its portfolio securities and could cause the Underlying Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Underlying Fund has delivered or the Underlying Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by an Underlying Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Underlying Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make an Underlying Fund's investments in such countries less liquid and more

volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). An Underlying Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions, or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, an Underlying Fund may incur losses because it will be required to effect sales at a disadvantageous time and then only at a substantial drop in price. Investments in emerging countries may be more difficult to price precisely because of the characteristics discussed above and lower trading volumes.

An Underlying Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, their investment advisers do not currently anticipate that a significant portion of the Underlying Funds' currency exposure in emerging countries, if any, will be covered by such instruments.

Risks of Derivative Investments. An Underlying Fund's transactions, if any, in options, futures, options on futures, swaps, options on swaps, interest rate caps, floors and collars, structured securities, inverse floating-rate securities, stripped mortgage-backed securities and foreign currency transactions involve additional risk of loss. Loss can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the investment adviser is incorrect in its expectation of fluctuations in securities prices, interest rates or currency prices. Certain Underlying Funds may also invest in derivative investments for non-hedging purposes (that is, to seek to increase total return). Investing for non-hedging purposes is considered a speculative practice and presents even greater risk of loss.

Derivative Mortgage-Backed Securities (such as principal-only (''POs''), interest-only (''IOs'') or inverse floating rate securities) are particularly exposed to call and extension risks. Small changes in mortgage prepayments can significantly impact the cash flow and the market value of these securities. In general, the risk of faster than anticipated prepayments adversely affects IOs, super floaters and premium priced mortgage-backed securities. The risk of slower than anticipated prepayments generally adversely affects POs, floating-rate securities subject to interest rate caps, support tranches and discount priced mortgage-backed securities. In addition,

particular derivative securities may be leveraged such that their exposure (*i.e.*, price sensitivity) to interest rate and/or prepayment risk is magnified.

Some floating-rate derivative debt securities can present more complex types of derivative and interest rate risks. For example, range floaters are subject to the risk that the coupon will be reduced below market rates if a designated interest rate floats outside of a specified interest rate band or collar. Dual index or yield curve floaters are subject to lower prices in the event of an unfavorable change in the spread between two designated interest rates.

Risks of Illiquid Securities. The Underlying Funds may invest up to 15% (10% in the case of the Financial Square Prime Obligations Fund) of their net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and all swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ''4(2) commercial paper'' or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 (''144A Securities'').

Investing in 144A Securities may decrease the liquidity of an Underlying Fund's portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be significant, from the market price of comparable securities for which a liquid market exists.

Credit/Default Risks. Debt securities purchased by the Underlying Funds may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign governments, domestic and foreign corporations, banks and other issuers. Some of these fixed-income securities are described in the next section below. Further information is provided in the Additional Statement.

Debt securities rated BBB or higher by Standard & Poor's Ratings Group (''Standard & Poor's'') or Baa or higher by Moody's Investors Service, Inc.

(‘‘Moody’s’’) or having a comparable rating by another NRSRO are considered ‘‘investment grade.’’ Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers’ capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the investment adviser to be of comparable credit quality. If a security satisfies an Underlying Fund’s minimum rating requirement at the time of purchase and is subsequently downgraded below such rating, the Underlying Fund will not be required to dispose of the security. If a downgrade occurs, the Underlying Fund’s investment adviser will consider what action, including the sale of the security, is in the best interest of the Underlying Fund and its shareholders.

Certain Underlying Funds may invest in fixed-income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as ‘‘junk bonds.’’ Junk bonds are considered predominantly speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in an Underlying Fund’s portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Risks of Initial Public Offerings. Certain Underlying Funds may invest in IPOs. An IPO is a company’s first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When an Underlying Fund’s asset base is small, a significant portion of the Underlying Fund’s performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Underlying Fund. As the Underlying Fund’s assets grow, the effect of the Underlying Fund’s investments in IPOs on the Underlying Fund’s performance probably will decline, which could reduce the Underlying Fund’s performance. Because of the price volatility of IPO shares, an Underlying Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of

the Underlying Fund's portfolio and may lead to increased expenses to the Underlying Fund, such as commissions and transaction costs. By selling IPO shares, the Underlying Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that an Underlying Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for an Underlying Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Non-Diversification and Geographic Risks. The Global Income Fund is registered as a ''non-diversified'' fund under the Investment Company Act of 1940 (the ''Act'') and is, therefore, more susceptible to adverse developments affecting any single issuer held in its portfolio, and may be more susceptible to greater losses because of these developments. In addition, the Global Income Fund, and certain other Underlying Funds, may invest more than 25% of their total assets in the securities of corporate and governmental issuers located in a particular foreign country or region. Concentration of the investments of these or other Underlying Funds in issuers located in a particular country or region will subject the Underlying Fund, to a greater extent than if investments were less concentrated, to losses arising from adverse developments affecting those issuers or countries.

Temporary Investment Risks. The Underlying Funds may invest a substantial portion, and in some cases all, of their total assets, in cash equivalents for temporary periods. When an Underlying Fund's assets are invested in such instruments, the Underlying Fund may not be achieving its investment objective.

C. Investment Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Underlying Funds, including their associated risks.

An Underlying Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Underlying Fund's investment objective and policies. Further information is provided in the Additional Statement, which is available upon request.

U.S. Government Securities. Each Underlying Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (a) the full faith and credit of the U.S. Treasury; (b) the right of the issuer to borrow from the U.S. Treasury; (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components of stripped U.S. Government Securities are traded independently.

Custodial Receipts and Trust Certificates. Each Underlying Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities, Municipal Securities or other types of securities in which an Underlying Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes the Underlying Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Underlying Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, an Underlying Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Underlying Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. The Underlying Funds (other than CORE Large Cap Growth, CORE Large Cap Value, CORE Small Cap Equity and CORE International Equity Funds (the ‘‘CORE Equity Funds’’)) may invest in securities that represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property (‘‘Mortgage-Backed Securities’’). Mortgage-Backed Securities can be backed by either fixed rate mortgage loans or adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. Privately issued Mortgage-Backed Securities are normally structured with one or more types of ‘‘credit enhancement.’’ However, these Mortgage-Backed Securities typically do not have the same credit standing as U.S. government guaranteed Mortgage-Backed Securities.

Mortgage-Backed Securities may include multiple class securities, including collateralized mortgage obligations (''CMOs''), and real estate mortgage investment conduit (''REMIC'') pass-through or participation certificates. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other Mortgage-Backed Securities. CMOs are issued in multiple classes. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. A REMIC is a CMO that qualifies for special tax treatment under Subchapter M of the Internal Revenue Code of 1986, as amended (the ''Code'') and invests in certain mortgages principally secured by interests in real property and other permitted investments.

Mortgage-Backed Securities also include stripped Mortgage-Backed Securities (''SMBS''), which are derivative multiple class Mortgage-Backed Securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other Mortgage-Backed Securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped.

Asset-Backed Securities. The Underlying Funds (other than the CORE Equity Funds) may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, an Underlying Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by Mortgage-Backed Securities. This is because asset-backed securities generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, the Underlying Fund will be unable to possess and sell the underlying collateral and that the Underlying Fund's

recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, an Underlying Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Municipal Securities. Certain Underlying Funds may invest in securities and instruments issued by state and local governmental issuers. Municipal securities in which an Underlying Fund may invest consist of bonds, notes, commercial paper and other instruments (including participation interests in such securities) issued by or on behalf of states, territories and possessions of the United States (including the District of Columbia) and their political subdivisions, agencies or instrumentalities. Municipal securities include both ''general'' and ''revenue'' bonds and may be issued to obtain funds for various public purposes. General obligations are secured by the issuer's pledge of its full faith, credit and taxing power. Revenue obligations are payable only from the revenues derived from a particular facility or class of facilities. Such securities may pay fixed, variable or floating rates of interest. Municipal securities are often issued to obtain funds for various public purposes, including the construction of a wide range of public facilities such as bridges, highways, housing, hospitals, mass transportation, schools, streets and water and sewer works. Other public purposes for which municipal securities may be issued include refunding outstanding obligations, obtaining funds for general operating expenses, and obtaining funds to lend to other public institutions and facilities. Municipal securities in which the Underlying Funds may invest include private activity bonds, pre-refunded municipal securities and auction rate securities.

The obligations of the issuer to pay the principal of and interest on a municipal security are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the Federal Bankruptcy Act, and laws, if any, that may be enacted by Congress or state legislatures extending the time for payment of principal or interest or imposing other constraints upon the enforcement of such obligations. There is also the possibility that, as a result of litigation or other conditions, the power or ability of the issuer to pay when due the principal of or interest on a municipal security may be materially affected.

In addition, municipal securities include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment purchase agreements. Moral obligation bonds are supported by a moral commitment, but not a legal obligation, of a state or local government. Municipal leases, certificates of participation and moral obligation bonds frequently involve special risks not normally associated with general obligation or revenue bonds. In

particular, these instruments permit governmental issuers to acquire property and equipment without meeting constitutional and statutory requirements for the issuance of debt. If, however, the governmental issuer does not periodically appropriate money to enable it to meet its payment obligations under these instruments, it cannot be legally compelled to do so. If a default occurs, it is likely that an Underlying Fund would be unable to obtain another acceptable source of payment. Some municipal leases, certificates of participation and moral obligation bonds may be illiquid.

Municipal securities may also be in the form of a tender option bond, which is a municipal security (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued with the agreement of a third party, such as a bank, broker-dealer or other financial institution, which grants the security holders the option, at periodic intervals, to tender their securities to the institution. After payment of a fee to the financial institution that provides this option, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution may not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and an Underlying Fund's average portfolio maturity. There is risk that an Underlying Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender option bonds may be illiquid.

Municipal securities may be backed by letters of credit or other forms of credit enhancement issued by domestic or foreign banks or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss to an Underlying Fund that invests in municipal securities. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and are generally not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

Corporate and Bank Obligations; Trust Preferred Securities; Convertible Securities. Certain Underlying Funds may invest in corporate debt obligations, trust preferred securities and convertible securities. Corporate debt obligations

include bonds, notes, debentures, commercial paper and other obligations of U.S. or foreign corporations to pay interest and repay principal. In addition, certain Underlying Funds may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits, bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by governmental regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry. A trust preferred security is a long dated bond (for example, 30 years) with preferred features. The preferred features are that payment of interest can be deferred for a specified period without initiating a default event. The securities are generally senior in claim to standard preferred stock but junior to other bondholders. Certain Underlying Funds may also invest in other short-term obligations issued or guaranteed by U.S. corporations, non-U.S. corporations or other entities.

Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than nonconvertible securities of similar quality. Convertible securities in which an Underlying Fund invests are subject to the same rating criteria as its other investments in fixed-income securities. Convertible securities have both equity and fixed-income risk characteristics. Like all fixed-income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed-income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Zero Coupon, Deferred Interest, Pay-In-Kind and Capital Appreciation Bonds. Certain Underlying Funds may invest in zero coupon, deferred interest, pay-in-kind and capital appreciation bonds. These bonds are issued at a discount from their face value because interest payments are typically postponed until maturity. Pay-in-

kind securities are securities that have interest payable by the delivery of additional securities. The market prices of these securities generally are more volatile than the market prices of interest-bearing securities and are likely to respond to a greater degree to changes in interest rates than interest-bearing securities having similar maturities and credit quality.

Rating Criteria. Except as noted below, the Underlying Equity Funds (other than the CORE Equity Funds, which may only invest in debt instruments that are cash equivalents) may invest in debt securities rated at least investment grade at the time of investment. Investment grade debt securities are securities rated BBB or higher by Standard & Poor's or Baa or higher by Moody's. The International Growth Opportunities and the Emerging Markets Equity Funds may invest up to 20% of their net assets plus any borrowings for investment purposes (measured at time of purchase) and the Real Estate Securities Fund may invest up to 20% of its total assets not including securities lending collateral (measured at time of purchase) in debt securities which are rated in the lowest rating categories by Standard & Poor's or Moody's (i.e., BB or lower by Standard & Poor's or Ba or lower by Moody's), including securities rated D by Moody's or Standard & Poor's. Fixed-income securities rated BB or Ba or below (or comparable unrated securities) are commonly referred to as ''junk bonds,'' are considered predominately speculative and may be questionable as to principal and interest payments as described above.

Structured Securities and Inverse Floaters. Certain Underlying Funds may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, interest rates, commodities, indices or other financial indicators (the ''Reference'') or the relative change in two or more References. The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, structured securities may present a greater degree of market risk than many types of securities, and may be more volatile, less liquid and more difficult to price accurately than less complex securities.

Structured securities include, but are not limited to, inverse floating rate debt securities (''inverse floaters''). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which the inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the

index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Floating and Variable Rate Obligations. Certain Underlying Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable both of which may be issued by domestic banks or foreign banks. An Underlying Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

Foreign Currency Transactions. Certain Underlying Funds may, to the extent consistent with their investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. Certain Underlying Funds may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. In addition, certain Underlying Funds may enter into foreign currency transactions to seek a closer correlation between the Underlying Fund's overall currency exposures and the currency exposures of the Underlying Fund's performance benchmark. Certain Underlying Funds may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

Certain Underlying Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. An Underlying Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the investment adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (e.g., the investment adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, an Underlying Fund's NAV to fluctuate. Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive an Underlying Fund of unrealized profits, transaction costs, or the benefits of a currency hedge, or could force the Underlying Fund to cover its purchase or sale commitments, if any, at the current market price.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period. A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. Each Underlying Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Underlying Fund may invest or on any securities index consisting of securities in which it may invest. Certain Underlying Funds may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of an investment adviser to manage future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If an investment adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in an Underlying Fund's investment portfolio, the Underlying Fund may incur losses that it would not otherwise incur. The use of options can also increase an Underlying Fund's transaction costs. Options written or purchased by the Underlying Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Yield Curve Options. Certain Underlying Funds may enter into options on the yield ''spread'' or differential between two securities. Such transactions are referred to as ''yield curve'' options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities rather than the prices of the individual securities, and is settled through cash payments.

Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, however, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. Certain Underlying Funds may engage in futures transactions on U.S. and (in the case of certain Underlying Funds) foreign exchanges.

Certain Underlying Funds may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or to the extent an Underlying Fund invests in foreign securities, currency exchange rates, or to otherwise manage its term structure, sector selection and duration in accordance with its investment objective and policies. An Underlying Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. An Underlying Fund will engage in futures and related options transactions for bona fide hedging purposes as defined in regulations of the Commodity Futures Trading Commission (the ‘‘CFTC’’) or to seek to increase total return to the extent permitted by such regulations. Except as otherwise permitted by the CFTC, an Underlying Fund may not purchase or sell futures contracts or purchase or sell related options to seek to increase total return, if immediately thereafter the sum of the amount of initial margin deposits and premiums paid on the Underlying Fund’s outstanding positions in futures and related options entered into for the purpose of seeking to increase total return would exceed 5% of the market value of the Underlying Fund’s net assets. Alternative limitations on the use of futures contracts and related options may be stated from time to time in the Additional Statement.

Futures contracts and related options present the following risks:

- While an Underlying Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency

exchange rates may result in a poorer overall performance than if the Underlying Fund had not entered into any futures contracts or options transactions.

- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection may not be obtained and an Underlying Fund may be exposed to additional risk of loss.
- The loss incurred by an Underlying Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of an Underlying Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to an Underlying Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Preferred Stock, Warrants and Rights. Certain Underlying Funds may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Loan Participations. Certain Underlying Funds may invest in loan participations. A loan participation is an interest in a loan to a U.S. or foreign company or other borrower which is administered and sold by a financial intermediary. Loan participation interests may take the form of a direct or co-lending relationship with the corporate borrower, an assignment of an interest in the loan by a co-lender or another participant, or a participation in the seller's share of the loan. When the Underlying Fund acts as co-lender in connection with a participation interest or when it acquires certain participation interests, the Underlying Fund will have direct recourse against the borrower if the borrower fails to pay scheduled principal and interest. In cases where the Underlying Fund lacks direct recourse, it will look

to an agent for the lenders (the ‘‘agent lender’’) to enforce appropriate credit remedies against the borrower. In these cases, the Underlying Fund may be subject to delays, expenses and risks that are greater than those that would have been involved if the Underlying Fund had purchased a direct obligation (such as commercial paper) of such borrower. Moreover, under the terms of the loan participation, the Underlying Fund may be regarded as a creditor of the agent lender (rather than of the underlying corporate borrower), so that the Underlying Fund may also be subject to the risk that the agent lender may become insolvent.

REITs. The Real Estate Securities Fund expects to invest a substantial portion of its total assets in REITs, which are pooled investment vehicles that invest primarily in either real estate or real estate related loans. In addition, other Underlying Equity Funds may invest in REITs from time to time. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable federal income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. Each Underlying Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Other Investment Companies. Certain Underlying Funds may invest in securities of other investment companies (including exchange-traded funds such as SPDRs and iShares[SM], as defined below) subject to statutory limitations prescribed by the Investment Company Act of 1940. These limitations include a prohibition on any Underlying Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of an Underlying Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. An Underlying Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Although the Underlying Funds do not expect to do so in the foreseeable future, each Underlying Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Underlying Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which an Underlying Fund may invest include money market funds which the Investment

Adviser or any of its affiliates serve as investment adviser, administrator or distributor.

Exchange-traded funds such as SPDRs and iShares℠ are shares of unaffiliated investment companies which are traded like traditional equity securities on a national securities exchange or the NASDAQ® National Market System.

- ***Standard and Poor's Depositary Receipts™.*** The Underlying Equity Funds may, consistent with their investment policies, purchase Standard & Poor's Depositary Receipts™ (''SPDRs''). SPDRs are securities traded on the American Stock Exchange (the ''AMEX'') that represent ownership in the SPDR Trust, a trust which has been established to accumulate and hold a portfolio of common stocks that is intended to track the price performance and dividend yield of the S&P 500®. The SPDR Trust is sponsored by a subsidiary of the AMEX. SPDRs may be used for several reasons, including, but not limited to, facilitating the handling of cash flows or trading, or reducing transaction costs. The price movement of SPDRs may not perfectly parallel the price action of the S&P 500.
- ***iShares℠.*** iShares are shares of an investment company that invests substantially all of its assets in securities included in specified indices, including the MSCI indices for various countries and regions. iShares are listed on the AMEX and were initially offered to the public in 1996. The market prices of iShares are expected to fluctuate in accordance with both changes in the NAVs of their underlying indices and supply and demand of iShares on the AMEX. However, iShares have a limited operating history and information is lacking regarding the actual performance and trading liquidity of iShares for extended periods or over complete market cycles. In addition, there is no assurance that the requirements of the AMEX necessary to maintain the listing of iShares will continue to be met or will remain unchanged. In the event substantial market or other disruptions affecting iShares should occur in the future, the liquidity and value of an Underlying Equity Fund's shares could also be substantially and adversely affected. If such disruptions were to occur, an Underlying Equity Fund could be required to reconsider the use of iShares as part of its investment strategy.

Unseasoned Companies. Certain Underlying Funds may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Non-Investment Grade Fixed-Income Securities. Non-investment grade fixed-income securities and unrated securities of comparable credit quality (commonly known as ''junk bonds'') are considered predominantly speculative by traditional investment standards. In some cases, these obligations may be highly speculative and have poor prospects for reaching investment grade standing. Non-investment grade fixed-income securities are subject to the increased risk of an issuer's inability to meet principal and interest obligations. These securities, also referred to as high yield securities, may be subject to greater price volatility due to such factors as specific corporate developments, interest rate sensitivity, negative perceptions of the junk bond markets generally and less secondary market liquidity.

Non-investment grade fixed-income securities are generally unsecured and are often subordinated to the rights of other creditors of the issuers of such securities. Investment by an Underlying Fund in defaulted securities poses additional risk of loss should nonpayment of principal and interest continue in respect of such securities. Even if such securities are held to maturity, recovery by an Underlying Fund of its initial investment and any anticipated income or appreciation is uncertain.

Equity Swaps. Each Underlying Equity Fund may invest up to 15% of its net assets in equity swaps. Equity swaps allow the parties to a swap agreement to exchange dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment.

An equity swap may be used by an Underlying Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous. Equity swaps are derivatives and their value can be very volatile. To the extent that an investment adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, an Underlying Fund may suffer a loss, which may be substantial. The value of some components of an equity swap (such as the dividends on a common stock) may also be sensitive to changes in interest rates. Furthermore, an Underlying Fund may suffer a loss if the counterparty defaults. Because equity swaps are normally illiquid, an Underlying Fund may be unable to terminate its obligations when desired.

When-Issued Securities and Forward Commitments. Each Underlying Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an

advantageous price or yield to the Underlying Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although an Underlying Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, an Underlying Fund may dispose of when-issued securities or forward commitments prior to settlement if its investment adviser deems it appropriate.

Repurchase Agreements. Certain Underlying Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by an Underlying Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, an Underlying Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Underlying Fund are less than the repurchase price and the Underlying Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, an Underlying Fund could suffer additional losses if the collateral held by the Underlying Fund is subject to a court ''stay'' that prevents the Underlying Fund from promptly selling the collateral. If this occurs, the Underlying Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, an Underlying Fund could experience a loss if a court determines that the Underlying Fund's interest in the collateral is not enforceable.

Certain Underlying Funds, together with other registered investment companies having advisory agreements with the investment adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. Each Underlying Fund may engage in securities lending. Securities lending involves the lending of securities owned by an Underlying Fund to financial institutions such as certain broker-dealers, including, as permitted by the SEC, Goldman Sachs. The borrowers are required to secure their loans continuously with cash, cash equivalents, U.S. Government Securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash collateral may be invested by an Underlying Fund in short-term investments, including unregistered investment pools managed by the Investment Adviser or its affiliates. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and an Underlying Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If an investment adviser determines to make securities loans, the value of the securities loaned may not exceed 33⅓% of the value of the total assets of an Underlying Fund (including the loan collateral). Loan collateral (including any investment of the collateral) is not subject to the percentage limitations described elsewhere in this Prospectus regarding investments in fixed-income securities and cash equivalents.

An Underlying Fund may lend its securities to increase its income. An Underlying Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Underlying Fund or becomes insolvent.

Short Sales Against-the-Box. Certain Underlying Funds may make short sales against-the-box. A short sale against-the-box means that at all times when a short position is open the Underlying Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without the payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Mortgage Dollar Rolls. Certain Underlying Funds may enter into ''mortgage dollar rolls.'' In mortgage dollar rolls, an Underlying Fund sells securities for delivery in the current month and simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Underlying Fund loses the right to receive principal and interest paid on the securities sold. However, the Underlying Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have

been realized on the securities sold as part of the roll, the use of this technique will diminish the Underlying Fund's performance.

Successful use of mortgage dollar rolls depends upon an investment adviser's ability to predict correctly interest rates and mortgage prepayments. If the investment adviser is incorrect in its prediction, an Underlying Fund may experience a loss. The Underlying Funds do not currently intend to enter into mortgage dollar rolls for financing and do not treat them as borrowings.

Borrowings and Reverse Repurchase Agreements. Each Underlying Fund can borrow money from banks and other financial institutions, and certain Underlying Funds may enter into reverse repurchase agreements in amounts not exceeding one-third of its total assets. An Underlying Fund may not make additional investments if borrowings exceed 5% of its total assets. Reverse repurchase agreements involve the sale of securities held by an Underlying Fund subject to the Underlying Fund's agreement to repurchase them at a mutually agreed upon date and price (including interest). These transactions may be entered into as a temporary measure for emergency purposes or to meet redemption requests. Reverse repurchase agreements may also be entered into when the investment adviser expects that the interest income to be earned from the investment of the transaction proceeds will be greater than the related interest expense. Borrowings and reverse repurchase agreements involve leveraging. If the securities held by an Underlying Fund decline in value while these transactions are outstanding, the NAV of the Underlying Fund's outstanding shares will decline in value by proportionately more than the decline in value of the securities. In addition, reverse repurchase agreements involve the risk that the investment return earned by an Underlying Fund (from the investment of the proceeds) will be less than the interest expense of the transaction, that the market value of the securities sold by an Underlying Fund will decline below the price the Underlying Fund is obligated to pay to repurchase the securities, and that the securities may not be returned to the Underlying Fund.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps, Options on Swaps and Interest Rate Caps, Floors and Collars. To the extent consistent with their investment policies, certain Underlying Funds may enter into interest rate swaps, mortgage swaps, credit swaps, currency swaps, total return swaps, options on swaps and interest rate caps, floors and collars. Interest rate swaps involve the exchange by an Underlying Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps involve the receipt of floating or fixed rate payments in

exchange for assuming potential credit losses on an underlying security. Credit swaps give one party to a transaction the right to dispose of or acquire an asset (or group of assets), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give an Underlying Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the Underlying Fund may also be required to pay the dollar value of that decline to the counterparty. The Underlying Funds may also purchase and write (sell) options contracts on swaps, commonly referred to as swaptions. A swaption is an option to enter into a swap agreement. Like other types of options, the buyer of a swaption pays a non-refundable premium for the option and obtains the right, but not the obligation, to enter into an underlying swap on agreed-upon terms. The seller of a swaption, in exchange for the premium, becomes obligated (if the option is exercised) to enter into an underlying swap on agreed-upon terms. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

Certain Underlying Funds may enter into swap transactions for hedging purposes or to seek to increase total return. The use of interest rate, mortgage, credit, currency and total return swaps, options on swaps, and interest rate caps, floors and collars, is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If an investment adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, the investment performance of an Underlying Fund would be less favorable than it would have been if these investment techniques were not used.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Portfolio's financial performance for the past five years (or less if the Portfolio has been in operation for less than five years). Certain information reflects financial results for a single Portfolio share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Portfolio (assuming reinvestment of all dividends and distributions). The information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report, along with the Portfolios' financial statements, is included in the Portfolios' annual report (available upon request). The information for all periods prior to the period ended December 31, 2000 has been audited by the Portfolios' previous independent accountants.

General Investment Management Approach

Goldman Sachs Asset Management, L.P., (''GSAM®''), serves as investment adviser to the Internet Tollkeeper, Real Estate Securities and CORE Tax-Managed Equity Funds. CORE is an acronym for ''Computer-Optimized, Research Enhanced,'' which reflects the CORE Tax-Managed Equity Fund's investment process. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

GROWTH STYLE FUNDS—INTERNET TOLLKEEPER FUND

THIS FUND INVESTS IN ''INTERNET TOLLKEEPER'' COMPANIES, AND ITS NET ASSET VALUE (NAV) MAY FLUCTUATE SUBSTANTIALLY OVER TIME. BECAUSE THE FUND CONCENTRATES ITS INVESTMENTS IN INTERNET TOLLKEEPER COMPANIES, THE FUND'S PERFORMANCE MAY BE SUBSTANTIALLY DIFFERENT FROM THE RETURNS OF THE BROADER STOCK MARKET AND OF ''PURE'' INTERNET FUNDS. PAST PERFORMANCE IS NOT AN INDICATION OF FUTURE RETURNS AND, DEPENDING ON THE TIMING OF YOUR INVESTMENT, YOU MAY LOSE MONEY EVEN IF THE FUND'S PAST RETURNS HAVE OUTPERFORMED ONE OR MORE OF THE FUND'S BENCHMARKS DURING SPECIFIED PERIODS OF TIME. THE FUND'S PARTICIPATION IN THE INITIAL PUBLIC OFFERING (IPO) MARKET DURING ITS INITIAL START-UP PHASE MAY HAVE HAD A MAGNIFIED IMPACT ON THE FUND'S PERFORMANCE BECAUSE OF ITS RELATIVELY SMALL ASSET BASE. IT IS PROBABLE THAT THE EFFECT OF IPO INVESTMENTS ON THE FUND'S FUTURE PERFORMANCE WILL NOT BE AS SIGNIFICANT.

Goldman Sachs' Growth Investment Philosophy:

1. Invest as if buying the company/business, not simply trading its stock:

- Understand the business, management, products and competition.
- Perform intensive, hands-on fundamental research.
- Seek businesses with strategic competitive advantages.

- Over the long-term, expect each company's stock price ultimately to track the growth in the value of the business.

2. ***Buy high-quality growth businesses that possess strong business franchises, favorable long-term prospects and excellent management.***
3. ***Purchase superior long-term growth companies at a favorable price—seek to purchase at a fair valuation, giving the investor the potential to fully capture returns from above-average growth rates.***

Growth companies have earnings expectations that exceed those of the stock market as a whole.

REAL ESTATE SECURITIES FUND

Goldman Sachs' Real Estate Securities Investment Philosophy:

When choosing the Fund's securities, the Investment Adviser:

- Selects stocks based on quality of assets, experienced management and a sustainable competitive advantage.
- Seeks to buy securities at a discount to the intrinsic value of the business (assets and management).
- Seeks a team approach to decision making.

Over time, REITs (which stands for Real Estate Investment Trusts) have offered investors important diversification and competitive total returns versus the broad equity market.

QUANTITATIVE (''CORE'') STYLE FUND

Goldman Sachs' CORE Tax-Managed Investment Philosophy:

Goldman Sachs' quantitative style of funds—CORE—emphasizes the two building blocks of active management: **stock selection** and **portfolio construction**.

I. CORE Stock Selection

The CORE Funds use the Goldman Sachs' proprietary multifactor model (''Multifactor Model''), a rigorous computerized rating system, to forecast the returns of securities held in the Fund's portfolio. The Multifactor Model incorporates common variables covering measures of:

- ***Research*** (What do fundamental analysts think about the company and its prospects?)

- ***Value*** (How is the company priced relative to fundamental accounting measures?)
- ***Momentum*** (What are medium-term price trends? How has the price responded to new information?)
- ***Profitability*** (What is the company's margin on sales? How efficient are its operations?)
- ***Earnings Quality*** (Were earnings derived from sustainable (cash-based) sources?)

All of the above factors are carefully evaluated within the Multifactor Model since each has demonstrated a significant impact on the performance of the securities and markets they were designed to forecast. Stock selection in this process combines both our quantitative and qualitative analysis.

II. CORE Portfolio Construction

A proprietary risk model, which is intended to identify and measure risk as accurately as possible, includes all the above factors used in the return model to select stocks, as well as several other factors associated with risk but not return. In this process, the Investment Adviser manages risk by attempting to limit deviations from the benchmark, and by attempting to run a size and sector neutral portfolio. All investment decisions consider expected after-tax returns including realizing capital losses to offset realized gains, creating loss carry-forwards, and identifying securities for in-kind distribution. A **computer optimizer** evaluates many different security combinations (considering many possible weightings) in an effort **to construct the most efficient risk/return portfolio** given the Fund's benchmark.

Goldman Sachs CORE Tax-Managed Equity Fund is a fully invested portfolio that offers broad access to a well-defined stock universe, seeks to outperform its benchmark on an after-tax basis through consistent, disciplined stock selection, and is intended to be an effective tool for implementing a tax-managed strategy within an overall investment portfolio.

References in this Prospectus to a Fund's benchmark or benchmarks are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

Fund Investment Objectives and Strategies

Goldman Sachs Internet Tollkeeper Fund

FUND FACTS	
Objective:	Long-term growth of capital
Benchmarks:	S&P 500® Index NASDAQ Composite Index Goldman Sachs Internet Index
Investment Focus:	U.S. equity investments that offer long-term capital appreciation with a primary focus on the media, telecommunications, technology and Internet sectors
Investment Style:	Growth
Symbol:	Class A: GITAX, Class B: GITBX, Class C: GITCX

INVESTMENT OBJECTIVE

The Fund seeks long-term growth of capital.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in equity investments in ''Internet Tollkeeper'' companies (as described below), which are companies in the media, telecommunications, technology and Internet sectors which provide or permit Internet companies or Internet users access to content, services or infrastructure. The Fund seeks to achieve its investment objective by investing in equity investments in companies that the Investment Adviser believes will benefit from the growth of the Internet by investing in growth businesses that, in the Investment Adviser's view, are strategically positioned to capitalize on the proliferation of the Internet. The Fund may also invest up to 20% of its total assets in other companies

whose rapid adoption of an Internet strategy is expected to improve their cost structure, revenue opportunities or competitive advantage and that the Investment Adviser believes exhibit a sustainable business model. Although the Fund invests primarily in publicly traded U.S. securities, it may invest up to 25% of its total assets in foreign securities, including securities of issuers in emerging markets or countries (''emerging countries'') and securities quoted in foreign currencies.

The Internet. The Internet is a global collection of connected computers that allows commercial and professional organizations, educational institutions, government agencies, and individuals to communicate electronically, access and share information, and conduct business.

The Internet has had, and is expected to continue to have, a significant impact on the global economy, as it changes the way many companies operate. Benefits of the Internet for businesses may include global scalability, acquisition of new clients, new revenue sources and increased efficiencies.

Internet Tollkeepers. The Fund intends to invest a substantial portion of its assets in companies the Investment Adviser describes as Internet Tollkeepers. In general, the Investment Adviser defines a tollkeeper as a company with predictable, sustainable or recurring revenue streams. Like a toll collector for a highway or bridge, these tollkeeper companies may grow revenue by increasing ''traffic,'' or customers and sales, and raising ''tolls,'' or prices. The Investment Adviser believes that the characteristics of many of these tollkeepers, including dominant market share and strong brand name, should enable them to consistently grow their business. An Internet Tollkeeper is a company that has developed or is seeking to develop predictable, sustainable or recurring revenue streams by applying the above characteristics to the growth of the Internet. The Investment Adviser does not define companies that merely have an Internet site or sell some products over the Internet as Internet Tollkeepers (although the Investment Adviser may invest in such companies as part of the Fund's 20% basket of securities which are not or may not be Internet Tollkeepers).

Internet Tollkeepers are media, telecommunications, technology and Internet-related companies which provide access, infrastructure, content and services to Internet companies and Internet users. The following represent examples of each of these

Goldman Sachs Internet Tollkeeper Fund continued

types of companies, but should not be construed to exclude other types of Internet Tollkeepers:

- Access providers enable individuals and businesses to connect to the Internet through, for example, cable systems.
- Infrastructure companies provide items such as servers, routers, software and storage necessary for companies to participate in the Internet.
- Media content providers own copyrights, distribution networks and/or programming. Copyright owners utilize the Internet as an additional distribution channel to sell their content.
- Service providers may facilitate transactions, communications, security, computer programming and back-office functions for Internet businesses. For example, Internet companies may contract out advertising sales or credit card clearing to service providers.

The Investment Adviser believes that an attractive way to invest in the Internet sector is to invest in businesses participating in the growth of the Internet that potentially have long-lasting strategic advantages. Characteristics of these companies may include: dominant market share, strong brand names, recurring revenue streams, cost advantages, economies of scale, financial strength, technological advantages and strong, experienced management teams.

Beneficiaries of the Internet that may meet the above criteria include those companies (Internet Tollkeepers) providing access, infrastructure, content, and services to Internet companies and Internet users. Companies whose rapid adoption of an Internet strategy is expected to improve their cost structure or competitive advantage and that the Investment Adviser believes exhibit a sustainable business model may also be candidates for purchase by the Fund. The Investment Adviser pays careful attention to the stock prices of these companies, seeking to purchase them at a discount to their intrinsic value.

Because of its narrow industry focus, the Fund's investment performance will be closely tied to many factors which affect the Internet and Internet-related industries. These factors include intense competition, consumer preferences, problems with product compatibility and government regulation. Internet and Internet-related securities may experience significant price movements caused by disproportionate investor optimism or pessimism with little or no basis in fundamental economic conditions. As a result, the Fund's NAV is more likely to have greater fluctuations than that of a Fund which invests in other industries.

Goldman Sachs CORE Tax-Managed Equity Fund

FUND FACTS	
Objective:	Long-term after-tax growth of capital
Benchmark:	Russell 3000 Index
Investment Focus:	A total market, broadly diversified portfolio of U.S. equity investments
Investment Style:	Tax-managed quantitative focus
Symbol:	Class A: GCTAX, Class B: GCTBX, Class C: GCTCX

INVESTMENT OBJECTIVE

The Fund seeks to provide long-term after-tax growth of capital through tax-sensitive participation in a broadly diversified portfolio of U.S. equity securities.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in equity investments in U.S. issuers, including foreign issuers that are traded in the United States.

The Fund uses both a variety of quantitative techniques and fundamental research when selecting investments which have the potential to maximize the Fund's after-tax return, and minimize capital gains and income distributions. The Fund will seek to maintain risk, style, capitalization and industry characteristics similar to the Russell 3000 Index.

Tax-Managed Investing. In managing the Fund, the Investment Adviser balances investment considerations and tax considerations. The Fund seeks to achieve returns primarily in the form of price appreciation (which is not subject to current tax), and may use different strategies in seeking tax-efficiency. These strategies include:

- Offsetting long-term and short-term capital gains with long-term and short-term capital losses and creating loss carry-forward positions
- Limiting portfolio turnover that may result in taxable gains
- Selling tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower basis

Goldman Sachs
CORE Tax-Managed Equity Fund continued

In situations where the Fund would otherwise be required to sell portfolio securities to meet shareholder redemption requests (and possibly realizing taxable gains), the Fund may borrow money to make the necessary redemption payments. In addition, Goldman Sachs may, but would not in any instance be required to, make contemporaneous purchases of Fund shares for its own account that would provide the Fund with cash to meet its redemption payment obligations.

When the Fund borrows money, the Investment Adviser intends to hedge the excess market exposure created by borrowing. There is no guarantee such hedging will be completely effective.

The Fund may not achieve its investment objective of providing ''after-tax'' growth of capital for various reasons. Implementation of tax-managed investment strategies may not materially reduce the amount of taxable income and capital gains distributed by the Fund to shareholders.

Other. The Fund's investments in fixed-income securities are limited to securities that are considered cash equivalents.

The Fund is not a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal income tax consequences of their investments.

Goldman Sachs Real Estate Securities Fund

FUND FACTS	
Objective:	Total return comprised of long-term growth of capital and dividend income
Benchmark:	Wilshire Real Estate Securities Index
Investment Focus:	REITs and real estate industry companies
Investment Style:	Growth at a discount
Symbol:	Class A: GREAX, Class B: GREBX, Class C: GRECX

INVESTMENT OBJECTIVE

The Fund seeks total return comprised of long-term growth of capital and dividend income.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, substantially all and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in a diversified portfolio of equity investments in issuers that are primarily engaged in or related to the real estate industry. The Fund expects that a substantial portion of its assets will be invested in REITs and real estate industry companies.

A ''real estate industry company'' is a company that derives at least 50% of its gross revenues or net profits from the ownership, development, construction, financing, management or sale of commercial, industrial or residential real estate or interests therein.

The Fund's investment strategy is based on the premise that property market fundamentals are the primary determinant of growth, underlying the success of companies in the real estate industry. The Investment Adviser focuses on companies that can achieve sustainable growth in cash flow and dividend paying capability. The Investment Adviser attempts to purchase securities so that its underlying portfolio will be diversified geographically and by property type. Although the Fund will invest primarily in publicly traded U.S. securities, it may

Goldman Sachs
Real Estate Securities Fund continued

invest up to 15% of its total assets in foreign securities, including securities of issuers in emerging countries and securities quoted in foreign currencies.

Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs. Mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skill, may not be diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation. REITs are also subject to the possibilities of failing to qualify for tax free pass-through of income and failing to maintain their exemptions from investment company registration. REITs whose underlying properties are concentrated in a particular industry or geographic region are also subject to risks affecting such industries and regions.

REITs (especially mortgage REITs) are also subject to interest rate risks. When interest rates decline, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. In contrast, as interest rates on adjustable rate mortgage loans are reset periodically, yields on a REIT's investment in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations.

The REIT investments of the Real Estate Securities Fund often do not provide complete tax information to the Fund until after the calendar year-end. Consequently, because of the delay, it may be necessary for the Fund to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31.

Other. The Fund may invest up to 20% of its total assets in fixed-income investments, such as government, corporate debt and bank obligations, that offer the potential to further the Fund's investment objective.

Other Investment Practices and Securities

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences between the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information about these and other investment practices and securities see Appendix A.

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

General Risks:

- ***Credit/Default Risk***—The risk that an issuer or guarantor of fixed-income securities held by a Fund may default on its obligation to pay interest and repay principal.
- ***Foreign Risk***—The risk that when a Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions. A Fund will also be subject to the risk of negative foreign currency rate fluctuations.

Foreign risks will normally be greatest when a Fund invests in issuers located in emerging countries.

- ***Emerging Countries Risk***—The securities markets of Asian, Latin and South American, Eastern European, African and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in certain emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- ***Industry Concentration Risk***—The risk that a Fund concentrates its investments in specific industry sectors that have historically experienced substantial price volatility. A Fund is subject to greater risk of loss as a result of adverse economic, business or other developments than if its investments were diversified across different industry sectors. Securities of issuers held by a Fund may lack sufficient market liquidity to enable a Fund to sell the securities at an advantageous time or without a substantial drop in price.
- ***Stock Risk***—The risk that stock prices have historically risen and fallen in periodic cycles. Recently, U.S. and foreign stock markets have experienced substantial price volatility.
- ***Derivatives Risk***—The risk that loss may result from a Fund's investments in options, futures, swaps, structured securities and other derivative instruments. These instruments may be leveraged so that small changes may produce disproportionate losses to a Fund.
- ***Interest Rate Risk***—The risk that when interest rates increase, fixed-income securities held by a Fund will decline in value. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities.
- ***IPO Risk***—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When a Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance.
- ***Management Risk***—The risk that a strategy used by the Investment Adviser may fail to produce the intended results.

- ***Market Risk***—The risk that the value of the securities in which a Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors and/or general economic conditions. Price changes may be temporary or last for extended periods.
- ***Liquidity Risk***—The risk that a Fund will not be able to pay redemption proceeds within the time period stated in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Funds that invest in non-investment grade fixed-income securities, small and mid-capitalization stocks, REITs or emerging country issuers will be especially subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities within particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions whether or not accurate. The Goldman Sachs Asset Allocation Portfolios (the ''Asset Allocation Portfolios'') expect to invest a significant percentage of their assets in the Real Estate Securities Fund and other funds for which GSAM or Goldman Sachs now or in the future acts as investment adviser or underwriter. Redemptions by an Asset Allocation Portfolio of its position in a Fund may further increase liquidity risk and may impact a Fund's NAV.
- ***REIT Risk***—Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. REITs whose underlying properties are concentrated in a particular industry or geographic region are also subject to risks affecting such industries and regions. The securities of REITs involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Mid Cap and Small Cap Risk***—The securities of small capitalization and mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Investment Style Risk***—Different investment styles tend to shift in and out of favor depending upon market and economic conditions as well as investor sentiment. A Fund may outperform or underperform other funds that employ a different investment style. Examples of different investment styles include growth and value investing. Growth stocks may be more volatile than other stocks because they are more sensitive to investor perceptions of the issuing company's growth of earnings potential. Also, since growth companies usually invest a high portion of earnings in their business, growth stocks may lack the dividends of some value stocks that can

cushion stock prices in a falling market. Growth oriented funds will typically underperform when value investing is in favor. Value stocks are those that are undervalued in comparison to their peers due to adverse business developments or other factors.

Other Specific Risks:

- ***Internet Risk***—The risk that the stock prices of Internet and Internet-related companies and therefore the value of the Internet Tollkeeper Fund will experience significant price movements as a result of intense market volatility, worldwide competition, consumer preferences, product compatibility, product obsolescence, government regulation, excessive investor optimism or pessimism, or other factors.
- ***Tax-Managed Investment Risk***—Because the Investment Adviser balances investment considerations and tax considerations, the pre-tax performance of the CORE Tax-Managed Equity Fund may be lower than the performance of a similar CORE Fund that is not tax-managed. This is because the Investment Adviser may choose not to make certain investments that may result in taxable distributions. Even though tax-managed strategies are being used, they may not reduce the amount of taxable income and capital gains distributed by the Fund to shareholders. A high percentage of the Fund's net asset value (''NAV'') may consist of unrealized capital gains, which represent a potential future tax liability to shareholders. The Fund is not a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal income tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Class A Shares from year to year; and (b) how the average annual total returns of a Fund's Class A, B and C Shares compare to those of broad-based securities market indices. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future.

The average annual total return calculation reflects a maximum initial sales charge of 5.5% for Class A Shares, the assumed contingent deferred sales charge (''CDSC'') for Class B Shares (5% maximum declining to 0% after six years), and the assumed CDSC for Class C Shares (1% if redeemed within 12 months of purchase). The bar chart does not reflect the sales loads applicable to Class A Shares. If the sales loads were reflected, returns would be less. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced.

INFORMATION ON AFTER-TAX RETURNS

These definitions apply to the after-tax returns.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on a Fund's Class A Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on a Fund's Class A Shares (*i.e.*, dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Class A Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Shares. These returns reflect taxes paid on distributions on a Fund's Class A Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions (as of the date of this Prospectus, 38.6% for ordinary income dividends and 20% for long-term capital gains distributions) and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Fund Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

[1] *The maximum sales charge is a percentage of the offering price. A contingent deferred sales charge (''CDSC'') of 1% is imposed on certain redemptions (within 18 months of purchase) of Class A Shares sold without an initial sales charge as part of an investment of $1 million or more.*

[2] *The maximum CDSC is a percentage of the lesser of the NAV at the time of the redemption or the NAV when the shares were originally purchased.*

[3] *A CDSC is imposed upon Class B Shares redeemed within six years of purchase at a rate of 5% in the first year, declining to 1% in the sixth year, and eliminated thereafter.*

[4] *A CDSC of 1% is imposed on Class C Shares redeemed within 12 months of purchase.*

[5] *A transaction fee of $7.50 may be charged for redemption proceeds paid by wire.*

[6] *The Funds' annual operating expenses are based on actual expenses.*

[7] *The Distributor has voluntarily agreed not to impose a portion of the distribution and service fee on Class A Shares of the Real Estate Securities Fund equal to 0.25% of the Fund's Class A average daily net assets. The waiver may be terminated at any time at the option of the Distributor.*

[8] *''Other Expenses'' include transfer agency fees and expenses equal on an annualized basis to 0.19% of the average daily net assets of each Fund's Class A, B and C Shares, plus all other ordinary expenses not detailed above. The Investment Adviser has voluntarily agreed to reduce or limit ''Other Expenses'' (excluding management fees, distribution and service fees, transfer agency fees and expenses, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to the following percentages of each Fund's average daily net assets, respectively:*

Fund	Other Expenses
Internet Tollkeeper	*0.06%*
CORE Tax-Managed Equity	*0.05%*
Real Estate Securities	*0.00%*

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Class A, B or C Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Internet Tollkeeper				
Class A Shares	$700	$1,016	$1,353	$2,304
Class B Shares				
– Assuming complete redemption at end of period	$734	$1,021	$1,435	$2,458
– Assuming no redemption	$234	$ 721	$1,235	$2,458
Class C Shares				
– Assuming complete redemption at end of period	$334	$ 721	$1,235	$2,646
– Assuming no redemption	$234	$ 721	$1,235	$2,646
CORE Tax-Managed Equity				
Class A Shares	$692	$ 992	$1,313	$2,221
Class B Shares				
– Assuming complete redemption at end of period	$726	$ 997	$1,395	$2,376
– Assuming no redemption	$226	$ 697	$1,195	$2,376
Class C Shares				
– Assuming complete redemption at end of period	$326	$ 697	$1,195	$2,565
– Assuming no redemption	$226	$ 697	$1,195	$2,565
Real Estate Securities				
Class A Shares	$727	$1,097	$1,491	$2,590
Class B Shares				
– Assuming complete redemption at end of period	$737	$1,030	$1,450	$2,552
– Assuming no redemption	$237	$ 730	$1,250	$2,552
Class C Shares				
– Assuming complete redemption at end of period	$337	$ 730	$1,250	$2,676
– Assuming no redemption	$237	$ 730	$1,250	$2,676

The hypothetical example assumes that a CDSC will not apply to redemptions of Class A Shares within the first 18 months. Class B Shares convert to Class A Shares eight years after purchase; therefore, Class A expenses are used in the hypothetical example for the Real Estate Securities Fund, the CORE Tax-Managed Equity Fund and the Internet Tollkeeper Fund after year eight.

Certain institutions that sell Fund shares and/or their salespersons may receive other compensation in connection with the sale and distribution of Class A, Class B and Class C Shares for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''What Should I Know When I Purchase Shares Through An Authorized Dealer?'' in the Prospectus and ''Other Information'' in the Statement of Additional Information (''Additional Statement'').

Service Providers

INVESTMENT ADVISER

Investment Adviser

Goldman Sachs Asset Management, L.P. (''GSAM'')
32 Old Slip
New York, New York 10005

Prior to the end of April, 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman, Sachs & Co. (''Goldman Sachs'') served as the Funds' investment adviser. On or about April 26, 2003, GSAM assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Funds. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission (the ''SEC'') since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser makes the investment decisions for the Funds and places purchase and sale orders for the Funds' portfolio transactions in U.S. and foreign markets. As permitted by applicable law, these orders may be directed to any brokers, including Goldman Sachs and its affiliates. While the Investment Adviser is ultimately responsible for the management of the Funds, it is able to draw upon the research and expertise of its asset management affiliates for portfolio decisions and management with respect to certain portfolio securities. In addition, the Investment Adviser has access to the research and certain proprietary technical models developed by Goldman Sachs, and will apply quantitative and qualitative analysis in determining the appropriate allocations among categories of issuers and types of securities.

The Investment Adviser also performs the following additional services for the Funds:

- Supervises all non-advisory operations of the Funds
- Provides personnel to perform necessary executive, administrative and clerical services to the Funds
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities

- Maintains the records of each Fund
- Provides office space and all necessary office equipment and services

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Internet Tollkeeper	1.00%	1.00%
CORE Tax-Managed Equity	0.75%	0.75%
Real Estate Securities	1.00%	1.00%

The difference, if any, between the stated fees and the actual fees paid by the Fund reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

FUND MANAGERS

Growth Investment Team

- 21-year consistent investment style applied through diverse and complete market cycles
- More than $18 billion in equities currently under management
- More than 300 client account relationships
- A portfolio management and analytical team with more than 250 years combined investment experience

Growth Investment Team

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Steven M. Barry Managing Director Co-Chief Investment Officer	Senior Portfolio Manager—Internet Tollkeeper	Since 1999	Mr. Barry joined the Investment Adviser as a portfolio manager in 1999. From 1988 to 1999, he was a portfolio manager at Alliance Capital Management.

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Kenneth T. Berents Managing Director Co-Chairman of Investment Committee	Senior Portfolio Manager—Internet Tollkeeper	Since 2000	Mr. Berents joined the Investment Adviser as a portfolio manager in 2000. From 1992 to 1999, he was Director of Research and head of the Investment Committee at Wheat First Union.
Herbert E. Ehlers Managing Director Chief Investment Officer	Senior Portfolio Manager—Internet Tollkeeper	Since 1999	Mr. Ehlers joined the Investment Adviser as a senior portfolio manager and Chief Investment Officer of the Growth team in 1997. From 1981 to 1997, he was the Chief Investment Officer and Chairman of Liberty Investment Management Inc. (''Liberty'') and its predecessor firm, Eagle Asset Management (''Eagle'').
Gregory H. Ekizian, CFA Managing Director Co-Chief Investment Officer	Senior Portfolio Manager—Internet Tollkeeper	Since 1999	Mr. Ekizian joined the Investment Adviser as a portfolio manager and Co-Chair of the Growth Investment Committee in 1997. From 1990 to 1997, he was a portfolio manager at Liberty and its predecessor firm, Eagle.
Scott Kolar, CFA Vice President	Portfolio Manager—Internet Tollkeeper	Since 1999	Mr. Kolar joined the Investment Adviser as an equity analyst in 1997 and became a portfolio manager in 1999. From 1994 to 1997, he was an equity analyst and information systems specialist at Liberty.
Wilson K. Magee, Jr., Vice-President	Portfolio Manager—Internet Tollkeeper	Since 2003	Mr. Magee joined the Investment Adviser as a portfolio manager in 2003. From 1997 to 2002, he was a portfolio manager for Grantham Mayo Van Otterloo & Co.
Andrew F. Pyne Managing Director	Senior Portfolio Manager—Internet Tollkeeper	Since 2001	Mr. Pyne joined the investment adviser as a product manager in 1997. He became a portfolio manager in August 2001. From 1992 to 1997 he was a product manager at Van Kampen Investments.

Ehlers Managing Director Chief Investment Officer	Senior Portfolio Manager—Real Estate Securities	Since 1998	Mr. Ehlers joined the Investment Adviser as a senior portfolio manager and Chief Investment Officer of the Growth team in 1997. From 1981 to 1997, he was the Chief Investment Officer and Chairman of Liberty and its predecessor firm, Eagle.
Mark Howard-Johnson, CFA Vice President	Senior Portfolio Manager—Real Estate Securities	Since 1998	Mr. Howard-Johnson joined the Investment Adviser as a portfolio manager in 1998. His previous experience includes 15 years in the real estate finance business.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to a Fund or limit a Fund's investment activities. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Funds. The results of a Fund's investment activities, therefore, may differ from those of Goldman Sachs and its affiliates, and it is possible that a Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Funds may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. A Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions.

Under a securities lending program approved by the Funds' Board of Trustees, the Funds have retained an affiliate of the Investment Adviser, to serve as the securities lending agent for each Fund to the extent that the Funds engage in the securities lending program. For these services, the lending agent may receive a fee from the Funds, including a fee based on the returns earned on the Funds' investment of the cash received as collateral for the loaned securities. In addition, the Funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Funds' portfolio investment transactions.

Dividends

Each Fund pays dividends from its investment company taxable income and distributions from net realized capital gains (although the CORE Tax-Managed Fund attempts to minimize capital gains and income distributions in seeking its investment objective). You may choose to have dividends and distributions paid in:

- Cash
- Additional shares of the same class of the same Fund
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply for certain Goldman Sachs Institutional Liquid Assets Portfolios (''ILA Portfolios''). See the statement of additional information (the ''Additional Statement'').

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time before the record date for a particular dividend or distribution. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

The election to reinvest dividends and distributions in additional shares will not affect the tax treatment of such dividends and distributions, which will be treated as received by you and then used to purchase the shares.

Dividends from investment company taxable income and distributions from net realized capital gains are declared and paid as follows:

Fund	Investment Income Dividends	Capital Gains Distributions
Internet Tollkeeper	Annually	Annually
CORE Tax-Managed Equity	Annually	Annually
Real Estate Securities	Quarterly	Annually

From time to time a portion of a Fund's dividends may constitute a return of capital.

When you purchase shares of a Fund, part of the NAV per share may be represented by undistributed income or undistributed realized gains that have previously been earned by the Fund. Therefore, subsequent distributions on such shares from such income or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' shares.

HOW TO BUY SHARES

How Can I Purchase Class A, Class B And Class C Shares Of The Funds?

You may purchase shares of the Funds through:

- Goldman Sachs;
- Authorized Dealers; or
- Directly from Goldman Sachs Trust (the ''Trust'').

In order to make an initial investment in a Fund, you must furnish to the Fund, Goldman Sachs or your Authorized Dealer the information in the Account Application attached to this Prospectus. An order will be processed upon receipt of payment.

To Open an Account:

- Complete the enclosed Account Application
- Mail your payment and Account Application to:

  Your Authorized Dealer

  – Purchases by check or Federal Reserve draft should be made payable to your Authorized Dealer
  – Your Authorized Dealer is responsible for forwarding payment promptly (within three business days) to the Fund

  or

  Goldman Sachs Funds c/o National Financial Data Services, Inc.
  (''NFDS''), P.O. Box 219711, Kansas City, MO 64121-9711

  – Purchases by check or Federal Reserve draft should be made payable to Goldman Sachs Funds – (Name of Fund ***and*** Class of Shares)
  – NFDS will not accept checks drawn on foreign banks, third-party checks, cashier's checks or official checks, temporary checks, electronic checks, cash, money orders, travelers cheques or credit card checks
  – Federal funds wire, Automated Clearing House Network (''ACH'') transfer or bank wires should be sent to State Street Bank and Trust Company (''State Street'') (each Fund's custodian). Please call the Funds at 1-800-526-7384 to get detailed instructions on how to wire your money.

What Is My Minimum Investment In The Funds?

	Initial	Additional
Regular Accounts	$1,000	$50
Tax-Sheltered Retirement Plans (excluding SIMPLE IRAs and Education IRAs)	$250	$50
Uniform Gift to Minors Act Accounts/Uniform Transfer to Minors Act Accounts	$250	$50
403(b) Plan Accounts	$200	$50
SIMPLE IRAs and Education IRAs	$50	$50
Automatic Investment Plan Accounts	$50	$50

What Alternative Sales Arrangements Are Available?

The Funds offer three classes of shares through this Prospectus.

Maximum Amount You Can Buy In The Aggregate Across Funds	Class A	No limit
	Class B	$250,000
	Class C	$1,000,000
Initial Sales Charge	Class A	Applies to purchases of less than $1 million—varies by size of investment with a maximum of 5.5%
	Class B	None
	Class C	None
CDSC	Class A	1.00% on certain investments of $1 million or more ***if*** you sell within 18 months
	Class B	6 year declining CDSC with a maximum of 5%
	Class C	1% if shares are redeemed within 12 months of purchase
Conversion Feature	Class A	None
	Class B	Class B Shares convert to Class A Shares after 8 years
	Class C	None

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Refuse to open an account if you fail to (i) provide a social security number or other taxpayer identification number; or (ii) certify that such number is correct (if required to do so under applicable law).
- Reject or restrict any purchase or exchange order by a particular purchaser (or group of related purchasers) for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a

particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of shares of a Fund is evident, or if purchases, sales or exchanges are, or a subsequent abrupt redemption might be, of a size that would disrupt the management of a Fund.

- Close a Fund to new investors from time to time and reopen a Fund whenever it is deemed appropriate by a Fund's Investment Adviser.
- Modify or waive the minimum investment amounts.
- Modify the manner in which shares are offered.
- Modify the sales charge rates applicable to future purchases of shares.

The Funds may allow you to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investors opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange shares is the Fund's next determined NAV and share class. Each class calculates its NAV as follows:

$$\text{NAV} = \frac{\begin{array}{c}\text{(Value of Assets of the Class)} \\ -\ \text{(Liabilities of the Class)}\end{array}}{\text{Number of Outstanding Shares of the Class}}$$

The Funds' investments are valued based on market quotations or if accurate quotations are not readily available, the fair value of the Fund's investments may be determined in good faith under procedures established by the Trustees.

- NAV per share of each share class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- When you buy shares, you pay the NAV next calculated *after* the Funds receive your order in proper form, plus any applicable sales charge.
- When you sell shares, you receive the NAV next calculated *after* the Funds receive your order in proper form, less any applicable CDSC.
- The Trust reserves the right to reprocess purchase, redemption and exchange transactions that were processed at an NAV other than a Fund's official closing

NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV.

- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open a Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-526-7384.

Foreign securities may trade in their local markets on days a Fund is closed. As a result, the NAV of a Fund that holds foreign securities may be impacted on days when investors may not purchase or redeem Fund shares.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

COMMON QUESTIONS ABOUT THE PURCHASE OF CLASS A SHARES

What Is The Offering Price Of Class A Shares?

The offering price of Class A Shares of each Fund is the next determined NAV per share plus an initial sales charge paid to Goldman Sachs at the time of purchase of shares. The sales charge varies depending upon the amount you purchase. In some cases, described below, the initial sales charge may be eliminated altogether, and the offering price will be the NAV per share. The current sales charges and commissions paid to Authorized Dealers are as follows:

Amount of Purchase (including sales charge, if any)	Sales Charge as Percentage of Offering Price	Sales Charge as Percentage of Net Amount Invested	Maximum Dealer Allowance as Percentage of Offering Price*
Less than $50,000	5.50%	5.82%	5.00%
$50,000 up to (but less than) $100,000	4.75	4.99	4.00
$100,000 up to (but less than) $250,000	3.75	3.90	3.00
$250,000 up to (but less than) $500,000	2.75	2.83	2.25
$500,000 up to (but less than) $1 million	2.00	2.04	1.75
$1 million or more	0.00**	0.00**	***

** Dealer's allowance may be changed periodically. During special promotions, the entire sales charge may be allowed to Authorized Dealers. Authorized Dealers to whom substantially the entire sales charge is allowed may be deemed to be ''underwriters'' under the Securities Act of 1933.*

*** No sales charge is payable at the time of purchase of Class A Shares of $1 million or more, but a CDSC of 1% may be imposed in the event of certain redemptions within 18 months of purchase.*

**** The Distributor may pay a one-time commission to Authorized Dealers who initiate or are responsible for purchases of $1 million or more of shares of the Funds equal to 1.00% of the amount under $3 million, 0.50% of the next $2 million, and 0.25% thereafter. The Distributor may also pay, with respect to all or a portion of the amount purchased, a commission in accordance with the foregoing schedule to Authorized Dealers who initiate or are responsible for purchases of $500,000 or more by certain Section 401(k), profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, or other employee benefit plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations investing in the Funds which satisfy the criteria set forth below in ''When Are Class A Shares Not Subject To A Sales Load?'' or $1 million or more by certain ''wrap'' accounts. Purchases by such plans will be made at NAV with no initial sales charge, but if shares are redeemed within 18 months after the end of the calendar month in which such purchase was made, a CDSC of 1% may be imposed upon the plan, the plan sponsor or the third-party administrator. In addition, Authorized Dealers will remit to the Distributor such payments received in connection with ''wrap'' accounts in the event that shares are redeemed within 18 months after the end of the calendar month in which the purchase was made.*

What Else Do I Need To Know About Class A Shares' CDSC?

Purchases of $1 million or more of Class A Shares will be made at NAV with no initial sales charge. However, if you redeem shares within 18 months after the end of the calendar month in which the purchase was made, excluding any period of time in which the shares were exchanged into and remained invested in an equivalent class of an ILA Portfolio, a CDSC of 1% may be imposed. The CDSC may not be imposed if your Authorized Dealer enters into an agreement with the Distributor to return all or an applicable prorated portion of its commission to the Distributor. The CDSC is waived on redemptions in certain circumstances. See ''In What Situations May The CDSC On Class A, B Or C Shares Be Waived Or Reduced?'' below.

When Are Class A Shares Not Subject To A Sales Load?

Class A Shares of the Funds may be sold at NAV without payment of any sales charge to the following individuals and entities:

- Goldman Sachs, its affiliates or their respective officers, partners, directors or employees (including retired employees and former partners), any partnership of which Goldman Sachs is a general partner, any Trustee or officer of the Trust and designated family members of any of these individuals;
- Qualified retirement plans of Goldman Sachs;
- Trustees or directors of investment companies for which Goldman Sachs or an affiliate acts as sponsor;
- Any employee or registered representative of any Authorized Dealer or their respective spouses, children and parents;
- Banks, trust companies or other types of depository institutions investing for their own account or investing for discretionary or non-discretionary accounts;

- Any state, county or city, or any instrumentality, department, authority or agency thereof, which is prohibited by applicable investment laws from paying a sales charge or commission in connection with the purchase of shares of a Fund;
- Section 401(k), profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, or other employee benefit plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations (''Retirement Plans'') that:
  - Buy shares of Goldman Sachs Funds worth $500,000 or more; or
  - Have 100 or more eligible employees at the time of purchase; or
  - Certify that they expect to have annual plan purchases of shares of Goldman Sachs Funds of $200,000 or more; or
  - Are provided administrative services by certain third-party administrators that have entered into a special service arrangement with Goldman Sachs relating to such plans; or
  - Have at the time of purchase aggregate assets of at least $2,000,000;
- ''Wrap'' accounts for the benefit of clients of broker-dealers, financial institutions or financial planners, provided they have entered into an agreement with GSAM specifying aggregate minimums and certain operating policies and standards;
- Registered investment advisers investing for accounts for which they receive asset-based fees;
- Accounts over which GSAM or its advisory affiliates have investment discretion;
- Shareholders receiving distributions from a qualified retirement plan invested in the Goldman Sachs Funds and reinvesting such proceeds in a Goldman Sachs IRA;
- Shareholders who roll over distributions from any tax-qualified retirement plan or tax-sheltered annuity to an IRA which invests in the Goldman Sachs Funds if the tax-qualified retirement plan or tax-sheltered annuity receives administrative services provided by certain third-party administrators that have entered into a special service arrangement with Goldman Sachs relating to such plan or annuity; or
- Investors who qualify under other exemptions that are stated from time to time in the Additional Statement.

You must certify eligibility for any of the above exemptions on your Account Application and notify the Fund if you no longer are eligible for the exemption. The Fund will grant you an exemption subject to confirmation of your entitlement. You may be charged a fee if you effect your transactions through a broker or agent.

How Can The Sales Charge On Class A Shares Be Reduced?

- ***Right of Accumulation:*** When buying Class A Shares in Goldman Sachs Funds, your current aggregate investment determines the initial sales load you pay. You may qualify for reduced sales charges when the current market value of holdings, plus new purchases, reaches $50,000 or more. Class A Shares of any of the Goldman Sachs Funds may be combined under the Right of Accumulation. To qualify for a reduced sales load, you or your Authorized Dealer must notify the Funds' Transfer Agent at the time of investment that a quantity discount is applicable. Use of this service is subject to a check of appropriate records. The Additional Statement has more information about the Right of Accumulation.
- ***Statement of Intention:*** You may obtain a reduced sales charge by means of a written Statement of Intention which expresses your non-binding commitment to invest in the aggregate $50,000 or more (not counting reinvestments of dividends and distributions) within a period of 13 months in Class A Shares of one or more of the Goldman Sachs Funds. Any investments you make during the period will receive the discounted sales load based on the full amount of your investment commitment. If the investment commitment of the Statement of Intention is not met prior to the expiration of the 13-month period, the entire amount will be subject to the higher applicable sales charge. By signing the Statement of Intention, you authorize the Transfer Agent to escrow and redeem Class A Shares in your account to pay this additional charge. The Additional Statement has more information about the Statement of Intention, which you should read carefully.

COMMON QUESTIONS ABOUT THE PURCHASE OF CLASS B SHARES

What Is The Offering Price Of Class B Shares?

You may purchase Class B Shares of the Funds at the next determined NAV without an initial sales charge. However, Class B Shares redeemed within six years of purchase will be subject to a CDSC at the rates shown in the table below based on how long you held your shares.

The CDSC schedule is as follows:

Year Since Purchase	CDSC as a Percentage of Dollar Amount Subject to CDSC
First	5%
Second	4%
Third	3%
Fourth	3%
Fifth	2%
Sixth	1%
Seventh and thereafter	None

Proceeds from the CDSC are payable to the Distributor and may be used in whole or in part to defray the Distributor's expenses related to providing distribution-related services to the Funds in connection with the sale of Class B Shares, including the payment of compensation to Authorized Dealers. A commission equal to 4% of the amount invested is paid to Authorized Dealers.

What Should I Know About The Automatic Conversion Of Class B Shares?

Class B Shares of a Fund will automatically convert into Class A Shares of the same Fund at the end of the calendar quarter that is eight years after the purchase date.

If you acquire Class B Shares of a Fund by exchange from Class B Shares of another Goldman Sachs Fund, your Class B Shares will convert into Class A Shares of such Fund based on the date of the initial purchase and the CDSC schedule of that purchase.

If you acquire Class B Shares through reinvestment of distributions, your Class B Shares will convert into Class A Shares based on the date of the initial purchase of the shares on which the distribution was paid.

The conversion of Class B Shares to Class A Shares will not occur at any time the Funds are advised that such conversions may constitute taxable events for federal tax purposes, which the Funds believe is unlikely. If conversions do not occur as a result of possible taxability, Class B Shares would continue to be subject to higher expenses than Class A Shares for an indeterminate period.

A COMMON QUESTION ABOUT THE PURCHASE OF CLASS C SHARES

What Is The Offering Price Of Class C Shares?

You may purchase Class C Shares of the Funds at the next determined NAV without paying an initial sales charge. However, if you redeem Class C Shares within 12 months of purchase, a CDSC of 1% will normally be deducted from the redemption proceeds; provided that in connection with purchases by Retirement Plans, where Class C Shares are redeemed within 12 months of purchase, a CDSC of 1% may be imposed upon the plan sponsor or third-party administrator.

Proceeds from the CDSC are payable to the Distributor and may be used in whole or in part to defray the Distributor's expenses related to providing distribution-related services to the Funds in connection with the sale of Class C Shares, including the payment of compensation to Authorized Dealers. An amount equal to 1% of the amount invested is normally paid by the Distributor to Authorized Dealers.

COMMON QUESTIONS APPLICABLE TO THE PURCHASE OF CLASS A, B AND C SHARES

What Else Do I Need To Know About The CDSC On Class A, B Or C Shares?

- The CDSC is based on the lesser of the NAV of the shares at the time of redemption or the original offering price (which is the original NAV).
  - No CDSC is charged on shares acquired from reinvested dividends or capital gains distributions.
  - No CDSC is charged on the per share appreciation of your account over the initial purchase price.
  - When counting the number of months since a purchase of Class B or Class C Shares was made, all payments made during a month will be combined and considered to have been made on the first day of that month.
- To keep your CDSC as low as possible, each time you place a request to sell shares, the Funds will first sell any shares in your account that do not carry a CDSC and then the shares in your account that have been held the longest.

In What Situations May The CDSC On Class A, B Or C Shares Be Waived Or Reduced?

The CDSC on Class A, Class B and Class C Shares that are subject to a CDSC may be waived or reduced if the redemption relates to:

- Retirement distributions or loans to participants or beneficiaries from Retirement Plans;

- The death or disability (as defined in Section 72(m)(7) of the Internal Revenue Code of 1986, as amended (the ''Code'')) of a participant or beneficiary in a Retirement Plan;
- Hardship withdrawals by a participant or beneficiary in a Retirement Plan;
- Satisfying the minimum distribution requirements of the Code;
- Establishing ''substantially equal periodic payments'' as described under Section 72(t)(2) of the Code;
- The separation from service by a participant or beneficiary in a Retirement Plan;
- The death or disability (as defined in Section 72(m)(7) of the Code) of a shareholder if the redemption is made within one year of the event;
- Excess contributions distributed from a Retirement Plan;
- Distributions from a qualified Retirement Plan invested in the Goldman Sachs Funds which are being rolled over to a Goldman Sachs IRA; or
- Redemption proceeds which are to be reinvested in accounts or non-registered products over which GSAM or its advisory affiliates have investment discretion.

In addition, Class A, B and C Shares subject to a systematic withdrawal plan may be redeemed without a CDSC. The Funds reserve the right to limit such redemptions, on an annual basis, to 12% each of the value of your Class B and C Shares and 10% of the value of your Class A Shares.

How Do I Decide Whether To Buy Class A, B Or C Shares?

The decision as to which Class to purchase depends on the amount you invest, the intended length of the investment and your personal situation.

- ***Class A Shares.*** If you are making an investment of $50,000 or more that qualifies for a reduced sales charge, you should consider purchasing Class A Shares.
- ***Class B Shares.*** If you plan to hold your investment for at least six years and would prefer not to pay an initial sales charge, you might consider purchasing Class B Shares. By not paying a front-end sales charge, your entire investment in Class B Shares is available to work for you from the time you make your initial investment. However, the distribution and service fee paid by Class B Shares will cause your Class B Shares (until conversion to Class A Shares) to have a higher expense ratio, and thus lower performance and lower dividend payments (to the extent dividends are paid) than Class A Shares. A maximum purchase limitation of $250,000 in the aggregate normally applies to Class B Shares. Individual purchases exceeding $250,000 will be rejected.
- ***Class C Shares.*** If you are unsure of the length of your investment or plan to hold your investment for less than six years and would prefer not to pay an initial sales charge, you may prefer Class C Shares. By not paying a front-end sales charge, your entire investment in Class C Shares is available to work for you from the time you make your initial investment. However, the distribution

and service fee paid by Class C Shares will cause your Class C Shares to have a higher expense ratio, and thus lower performance and lower dividend payments (to the extent dividends are paid) than Class A Shares (or Class B Shares after conversion to Class A Shares).

Although Class C Shares are subject to a CDSC for only 12 months, Class C Shares do not have the automatic eight year conversion feature applicable to Class B Shares and your investment may pay higher distribution fees indefinitely.

A maximum purchase limitation of $1,000,000 in the aggregate normally applies to purchases of Class C Shares. Individual purchases exceeding $1,000,000 will be rejected.

Note: Authorized Dealers may receive different compensation for selling Class A, Class B or Class C Shares.

In addition to Class A, Class B and Class C Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), have different minimum investment requirements and are entitled to different services. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

HOW TO SELL SHARES

How Can I Sell Class A, Class B And Class C Shares Of The Funds?

You may arrange to take money out of your account by selling (redeeming) some or all of your shares. **Each Fund will redeem its shares upon request on any business day at the NAV next determined after receipt of such request in proper form, subject to any applicable CDSC.** You may request that redemption proceeds be sent to you by check or by wire (if the wire instructions are on record). Redemptions may be requested in writing or by telephone.

Instructions For Redemptions:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund name and Class of Shares ■ The dollar amount you want to sell ■ How and where to send the proceeds ■ Obtain a signature guarantee (see details below) ■ Mail your request to: Goldman Sachs Funds c/o NFDS P.O. Box 219711 Kansas City, MO 64121-9711 or for overnight delivery: Goldman Sachs Funds c/o NFDS 330 West 9th Street Poindexter Bldg., 1st Floor Kansas City, MO 64105
By Telephone:	If you have not declined the telephone redemption privilege on your Account Application: ■ 1-800-526-7384 (8:00 a.m. to 4:00 p.m. New York time) ■ You may redeem up to $50,000 of your shares within any 7 calendar day period ■ Proceeds which are sent directly to a Goldman Sachs brokerage account are not subject to the $50,000 limit

When Do I Need A Signature Guarantee To Redeem Shares?

A signature guarantee is required if:

- You are requesting in writing to redeem shares in an amount over $50,000;
- You would like the redemption proceeds sent to an address that is not your address of record; or
- You would like to change the bank designated on your Account Application.

A signature guarantee must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee. Additional documentation may be required for executors, trustees or corporations or when deemed appropriate by the Transfer Agent.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. The Trust

may accept telephone redemption instructions from any person identifying himself or herself as the owner of an account or the owner's registered representative where the owner has not declined in writing to use this service. Thus, you risk possible losses if a telephone redemption is not authorized by you.

In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs and NFDS each employ reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Proceeds of telephone redemption requests will be sent only to your address of record or authorized bank account designated in the Account Application (unless you provide written instructions and a signature guarantee, indicating another address or account) and exchanges of shares normally will be made only to an identically registered account.
- Telephone redemptions will not be accepted during the 30-day period following any change in your address of record.
- The telephone redemption option does not apply to shares held in a ''street name'' account. ''Street name'' accounts are accounts maintained and serviced by your Authorized Dealer. If your account is held in ''street name,'' you should contact your registered representative of record, who may make telephone redemptions on your behalf.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: You may arrange for your redemption proceeds to be wired as federal funds to the bank account designated in your Account Application. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be wired on the next business day in federal funds (for a total of one business day delay), but may be paid up to three business days following receipt of a properly executed wire transfer redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.

- A transaction fee of $7.50 may be charged for payments of redemption proceeds by domestic wire. Your bank may also charge wiring fees. You should contact your bank directly to learn whether it charges such fees.
- To change the bank designated on your Account Application, you must send written instructions (with your signature guaranteed) to the Transfer Agent.
- Neither the Trust, Goldman Sachs nor any Authorized Dealer assumes any responsibility for the performance of your bank or any intermediaries in the transfer process. If a problem with such performance arises, you should deal directly with your bank or any such intermediaries.

By Check: You may elect to receive your redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within three business days of a properly executed redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.

The Trust reserves the right to:

- Redeem your shares if your account balance is less than $50 as a result of a redemption. The Funds will not redeem your shares on this basis if the value of your account falls below the minimum account balance solely as a result of market conditions. The Funds will give you 60 days' prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interests of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. The Fund may, in its discretion, pay redemption proceeds in-kind at any time or if requested by a shareholder. The Fund anticipates that it will normally grant shareholder requests for an in-kind distribution so long as the distribution is in the best interests of the Fund and its other shareholders.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to the Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at

NAV in additional shares of the same class of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Reinvest Redemption Proceeds In The Same Or Another Goldman Sachs Fund?

You may redeem shares of a Fund and reinvest a portion or all of the redemption proceeds (plus any additional amounts needed to round off purchases to the nearest full share) at NAV. To be eligible for this privilege, you must hold the shares you want to redeem for at least 30 days and you must reinvest the share proceeds within 90 days after you redeem. You may reinvest as follows:

- Class A or B Shares—Class A Shares of the same Fund or another Goldman Sachs Fund
- Class C Shares—Class C Shares of the same Fund or another Goldman Sachs Fund
- You should obtain and read the applicable prospectuses before investing in any other Funds.
- If you pay a CDSC upon redemption of Class A or Class C Shares and then reinvest in Class A or Class C Shares as described above, your account will be credited with the amount of the CDSC you paid. The reinvested shares will, however, continue to be subject to a CDSC. The holding period of the shares acquired through reinvestment will include the holding period of the redeemed shares for purposes of computing the CDSC payable upon a subsequent redemption. For Class B Shares, you may reinvest the redemption proceeds in Class A Shares at NAV but the amount of the CDSC paid upon redemption of the Class B Shares will not be credited to your account.
- The reinvestment privilege may be exercised at any time in connection with transactions in which the proceeds are reinvested at NAV in a tax-sheltered retirement plan. In other cases, the reinvestment privilege may be exercised once per year upon receipt of a written request.
- You may be subject to tax as a result of a redemption. You should consult your tax adviser concerning the tax consequences of a redemption and reinvestment.

Can I Exchange My Investment From One Fund To Another?

You may exchange shares of a Fund at NAV without the imposition of an initial sales charge or CDSC at the time of exchange for shares of the same class or an equivalent class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice to you.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund names and Class of Shares ■ The dollar amount you want to exchange ■ Obtain a signature guarantee (see details above) ■ Mail the request to: Goldman Sachs Funds c/o NFDS P.O. Box 219711 Kansas City, MO 64121-9711 or for overnight delivery - Goldman Sachs Funds c/o NFDS 330 West 9th St. Poindexter Bldg., 1st Floor Kansas City, MO 64105
By Telephone:	If you have not declined the telephone exchange privilege on your Account Application: ■ 1-800-526-7384 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- Currently, there is no charge for exchanges, although the Funds may impose a charge in the future.
- The exchanged shares may later be exchanged for shares of the same class (or an equivalent class) of the original Fund at the next determined NAV without the imposition of an initial sales charge or CDSC if the amount in the Fund resulting from such exchanges is less than the largest amount on which you have previously paid the applicable sales charge.
- When you exchange shares subject to a CDSC, no CDSC will be charged at that time. The exchanged shares will be subject to the CDSC of the shares originally held. For purposes of determining the amount of the applicable CDSC, the length of time you have owned the shares will be measured from the date you acquired the original shares subject to a CDSC and will not be affected by a subsequent exchange.
- Eligible investors may exchange certain classes of shares for another class of shares of the same Fund. For further information, call Goldman Sachs Funds at 1-800-526-7384 and see the Additional Statement.

- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs and NFDS may use reasonable procedures described under ''What Do I Need to Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Telephone exchanges normally will be made only to an identically registered account. Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and accompanied by a signature guarantee.
- Exchanges into Funds that are closed to new investors may be restricted.
- A signature guarantee may be required (see details above).

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

SHAREHOLDER SERVICES

Can I Arrange To Have Automatic Investments Made On A Regular Basis?

You may be able to make systematic cash investments through your bank via ACH transfer or your checking account via bank draft each month. Forms for this option are available from Goldman Sachs, and your Authorized Dealer, or you may check the appropriate box on the Account Application.

Can My Dividends And Distributions From A Fund Be Invested In Other Funds?

You may elect to cross-reinvest dividends and capital gain distributions paid by a Fund in shares of the same class or an equivalent class of other Goldman Sachs Funds.

- Shares will be purchased at NAV.
- No initial sales charge or CDSC will be imposed.
- You may elect cross-reinvestment into an identically registered account or an account registered in a different name or with a different address, social security number or taxpayer identification number provided that the account has been properly established, appropriate signature guarantees obtained and the minimum initial investment has been satisfied.

Can I Arrange To Have Automatic Exchanges Made On A Regular Basis?

You may elect to exchange automatically a specified dollar amount of shares of a Fund for shares of the same class or an equivalent class of other Goldman Sachs Funds.

- Shares will be purchased at NAV.
- No initial sales charge is imposed.
- Shares subject to a CDSC acquired under this program may be subject to a CDSC at the time of redemption from the Fund into which the exchange is made depending upon the date and value of your original purchase.
- Automatic exchanges are made monthly on the 15th day of each month or the first business day thereafter.
- Minimum dollar amount: $50 per month.

What Else Should I Know About Cross-Reinvestments And Automatic Exchanges?

Cross-reinvestments and automatic exchanges are subject to the following conditions:

- You must hold $5,000 or more in the Fund which is paying the dividend or from which the exchange is being made.
- You must invest an amount in the Fund into which cross-reinvestments or automatic exchanges are being made that is equal to that Fund's minimum initial investment or continue to cross-reinvest or to make automatic exchanges until such minimum initial investment is met.
- You should obtain and read the prospectus of the Fund into which dividends are invested or automatic exchanges are made.

Can I Have Automatic Withdrawals Made On A Regular Basis?

You may draw on your account systematically via check or ACH transfer in any amount of $50 or more.

- It is normally undesirable to maintain a systematic withdrawal plan at the same time that you are purchasing additional Class A, Class B or Class C Shares because of the sales charge imposed on your purchases of Class A Shares or the imposition of a CDSC on your redemptions of Class A, Class B or Class C Shares.
- You must have a minimum balance of $5,000 in a Fund.
- Checks are mailed the next business day after your selected systematic withdrawal date.
- Each systematic withdrawal is a redemption and therefore a taxable transaction.
- The CDSC applicable to Class A, Class B or Class C Shares redeemed under the systematic withdrawal plan may be waived.

What Types of Reports Will I Be Sent Regarding My Investment?

You will be provided with a printed confirmation of each transaction in your account and an individual quarterly account statement. A year-to-date statement for your account will be provided upon request made to Goldman Sachs. If your account is held in ''street name'' you may receive your statements and confirmations on a different schedule.

You will also receive an annual shareholder report containing audited financial statements and a semi-annual shareholder report. If you have consented to the delivery of a single copy of shareholder reports, prospectuses and other information to all shareholders who share the same mailing address with your account, you may revoke your consent at any time by contacting Goldman Sachs Funds by phone at 1-800-526-7384 or by mail at Goldman Sachs Funds, 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will begin sending individual copies to you within 30 days after receipt of your revocation.

The Funds do not generally provide sub-accounting services.

What Should I Know When I Purchase Shares Through An Authorized Dealer?

Authorized Dealers and other financial intermediaries may provide varying arrangements for their clients to purchase and redeem Fund shares. They may charge additional fees not described in this Prospectus to their customers for such services.

If shares of a Fund are held in a ''street name'' account with an Authorized Dealer, all recordkeeping, transaction processing and payments of distributions relating to your account will be performed by the Authorized Dealer, and not by the Fund and its Transfer Agent. Since the Funds will have no record of your transactions, you should contact the Authorized Dealer to purchase, redeem or exchange shares, to make changes in or give instructions concerning the account or to obtain information about your account. The transfer of shares in a ''street name'' account to an account with another dealer or to an account directly with the Fund involves special procedures and will require you to obtain historical purchase information about the shares in the account from the Authorized Dealer.

Authorized Dealers and other financial intermediaries may be authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and if approved by the Trust, to designate other intermediaries to accept such orders. In these cases:

- A Fund will be deemed to have received an order that is in proper form when the order is accepted by an Authorized Dealer or intermediary on a business

day, and the order will be priced at the Fund's NAV per share (adjusted for any applicable sales charge) next determined after such acceptance.
- Authorized Dealers and intermediaries are responsible for transmitting accepted orders to the Funds within the time period agreed upon by them.

You should contact your Authorized Dealer or intermediary to learn whether it is authorized to accept orders for the Trust.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Authorized Dealers and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds. Additional compensation based on sales may, but is normally not expected to, exceed 0.50% (annualized) of the amount invested.

DISTRIBUTION SERVICES AND FEES

What Are The Different Distribution And Service Fees Paid By Class A, B and C Shares?

The Trust has adopted distribution and service plans (each a ''Plan'') under which Class A, Class B and Class C Shares bear distribution and service fees paid to Authorized Dealers and Goldman Sachs. If the fees received by Goldman Sachs pursuant to the Plans exceed its expenses, Goldman Sachs may realize a profit from these arrangements. Goldman Sachs generally pays the distribution and service fees on a quarterly basis.

Under the Plans, Goldman Sachs is entitled to a monthly fee from each Fund for distribution services equal, on an annual basis, to 0.25%, 0.75% and 0.75%, respectively, of a Fund's average daily net assets attributed to Class A, Class B and Class C Shares. Because these fees are paid out of the Fund's assets on an ongoing basis, over time, these fees will increase the cost of your investment and may cost you more than paying other types of such charges.

The distribution fees are subject to the requirements of Rule 12b-1 under the Investment Company Act of 1940, and may be used (among other things) for:
- Compensation paid to and expenses incurred by Authorized Dealers, Goldman Sachs and their respective officers, employees and sales representatives;
- Commissions paid to Authorized Dealers;
- Allocable overhead;
- Telephone and travel expenses;
- Interest and other costs associated with the financing of such compensation and expenses;

- Printing of prospectuses for prospective shareholders;
- Preparation and distribution of sales literature or advertising of any type; and
- All other expenses incurred in connection with activities primarily intended to result in the sale of Class A, Class B and Class C Shares.

In connection with the sale of Class C Shares, Goldman Sachs normally begins paying the 0.75% distribution fee as an ongoing commission to Authorized Dealers after the shares have been held for one year.

PERSONAL ACCOUNT MAINTENANCE SERVICES AND FEES

Under the Plans, Goldman Sachs is also entitled to receive a separate fee equal on an annual basis to 0.25% of each Fund's average daily net assets attributed to Class A (Real Estate Securities Fund only), Class B or Class C Shares. This fee is for personal and account maintenance services, and may be used to make payments to Goldman Sachs, Authorized Dealers and their officers, sales representatives and employees for responding to inquiries of, and furnishing assistance to, shareholders regarding ownership of their shares or their accounts or similar services not otherwise provided on behalf of the Funds. If the fees received by Goldman Sachs pursuant to the Plans exceed its expenses, Goldman Sachs may realize a profit from this arrangement.

In connection with the sale of Class C Shares, Goldman Sachs normally begins paying the 0.25% ongoing service fee to Authorized Dealers after the shares have been held for one year.

RESTRICTIONS ON EXCESSIVE TRADING PRACTICES

The Trust does not permit market-timing or other excessive trading practices. Purchases and exchanges should be made for long-term investment purposes only. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. Excessive, short-term (market-timing) trading practices may disrupt portfolio management strategies, harm Fund performance and negatively impact long-term shareholders. The Trust and Goldman Sachs will not be held liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust (or Goldman Sachs) and its shareholders, the Trust (or Goldman Sachs) will exercise these rights if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to a Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions and the sale of your Fund shares.

DISTRIBUTIONS

Each Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Funds are generally subject to federal income tax, and may also be subject to state or local taxes (although the CORE Tax-Managed Equity Fund attempts to minimize capital gains and income distributions in seeking its investment objective). This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. For federal tax purposes, the Funds' income dividend distributions and short-term capital gain distributions are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. A percentage of the Funds' dividends paid to corporate shareholders may be eligible for the corporate dividends-received deduction. This percentage may, however, be reduced as a result of a Fund's securities lending activities. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

Each Fund may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Funds may deduct these taxes in computing their taxable income.

If you buy shares of a Fund before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as ''buying a dividend.''

SALES AND EXCHANGES

Your sale of Fund shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Fund shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this gain or loss is long-term or short-term depending on whether your holding period exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of a Fund may be disallowed under ''wash sale'' rules to the extent the shares disposed of are replaced with other shares of that Fund within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Fund. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Investments in the CORE Tax-Managed Fund are subject to the tax risks described previously under ''Principal Risks of the Funds.''

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

A. General Portfolio Risks

The Funds will be subject to the risks associated with equity investments. ‘‘Equity investments’’ may include common stocks, preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments that have economic characteristics similar to equity securities. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of equity investments that a Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. This volatility means that the value of your investment in the Funds may increase or decrease. Recently, certain stock markets have experienced substantial price volatility.

To the extent that a Fund invests in fixed-income securities, that Fund will also be subject to the risks associated with its fixed-income securities. These risks include interest rate risk, credit risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed-income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed-income securities tends to decline. Credit risk involves the risk that an issuer or guarantor could default on its obligations, and a Fund will not recover its investment. Call risk and extension risk are normally present in mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities such as securities backed by car loans.

The Investment Adviser will not consider the portfolio turnover rate a limiting factor in making investment decisions for a Fund. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by a Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of a Fund's portfolio securities, excluding securities having a maturity at the date of purchase of one year or less. See ''Financial Highlights'' in Appendix B for a statement of the Funds' historical portfolio turnover rates.

The following sections provide further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment objectives, and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs.

B. Other Portfolio Risks

Risks of Investing in Internet and Internet-Related Companies. The Internet Tollkeeper Fund may invest in Internet and Internet-related companies. Internet and Internet-related companies are generally subject to a rate of change in technology which is higher than other industries and often requires extensive and sustained investment in research and development. As a result, Internet and Internet-related companies are exposed to the risk of rapid product obsolescence. Changes in governmental policies, such as telephone and cable regulations and anti-trust enforcement, and the need for regulatory approvals may have an adverse effect on the products, services and securities of Internet and Internet-related companies. Internet and Internet-related companies may also produce or use products or services that prove commercially unsuccessful. In addition, intense worldwide competitive pressures and changing demand, evolving industry standards, challenges in achieving product capability, loss of patent protection or proprietary rights, reduction or interruption in the supply of key components, changes in strategic alliances, frequent mergers or acquisitions or other factors can have a significant effect on the financial conditions of companies in these industries. Competitive pressures in the Internet and Internet-related industries may affect

negatively the financial condition of Internet and Internet-related companies. Internet and Internet-related companies are also subject to the risk of service disruptions and the risk of losses arising out of litigation related to these disruptions. In certain instances, Internet and Internet-related securities may experience significant price movements caused by disproportionate investor optimism or pessimism with little or no basis in fundamental economic conditions. As a result of these and other reasons, investments in the Internet and Internet-related industry can experience sudden and rapid appreciation and depreciation.

Risks of Initial Public Offerings. The Internet Tollkeeper and Real Estate Securities Funds may invest in IPOs. An IPO is a company's first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When a Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance. Because of the price volatility of IPO shares, a Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of the Fund's portfolio and may lead to increased expenses to the Fund, such as commissions and transaction costs. By selling IPO shares, the Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that a Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for a Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Risks of Investing in Small Capitalization and Mid-Capitalization Companies and REITs. Each Fund may, to the extent consistent with its investment policies, invest in small and mid-capitalization companies and REITs. Investments in small and mid-capitalization companies and REITs involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Among the reasons for the greater price volatility of these investments are the less certain growth prospects of smaller firms and the lower degree of liquidity in the markets for such securities. Small and mid-capitalization companies and REITs may be thinly traded

and may have to be sold at a discount from current market prices or in small lots over an extended period of time. In addition, these securities are subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities in particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic or market conditions, or adverse investor perceptions whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Small and mid-capitalization companies and REITs include ''unseasoned'' issuers that do not have an established financial history; often have limited product lines, markets or financial resources; may depend on or use a few key personnel for management; and may be susceptible to losses and risks of bankruptcy. Small and mid-capitalization companies may be operating at a loss or have significant variations in operating results; may be engaged in a rapidly changing business with products subject to a substantial risk of obsolescence; may require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition. In addition, these companies may face intense competition, including competition from companies with greater financial resources, more extensive development, manufacturing, marketing, and other capabilities, and a larger number of qualified managerial and technical personnel. Transaction costs for these investments are often higher than those of larger capitalization companies. Investments in small and mid-capitalization companies and REITs may be more difficult to price precisely than other types of securities because of their characteristics and lower trading volumes.

Risks of Foreign Investments. Each Fund may make foreign investments, although the CORE Tax-Managed Fund may only invest in foreign issuers that are traded in the United States. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which a Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to shareholders or converted to U.S. dollars, the Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of a Fund's assets in one or a few countries and currencies will subject a Fund to greater risks than if a Fund's assets were not geographically concentrated.

Investment in sovereign debt obligations by a Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due in accordance with the terms of such debt, and a Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn a Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts (''ADRs'') and Global Depositary Receipts (''GDRs''). Certain Funds may also invest in European Depositary Receipts (''EDRs'') or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are receipts evidencing an arrangement with a non-U.S. bank. EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Euro. On January 1, 1999, the European Economic and Monetary Union (EMU) introduced a new single currency called the euro. The euro has replaced the national currencies of the following member countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

The new European Central Bank has control over each country's monetary policies. Therefore, the member countries no longer control their own monetary policies by directing independent interest rates for their currencies. The national governments of the participating countries, however, have retained the authority to set tax and spending policies and public debt levels.

The change to the euro as a single currency is relatively new and untested. The elimination of currency risk among EMU countries has affected the economic environment and behavior of investors, particularly in European markets, but the long term impact of those changes on currency values or on the business or financial condition of European countries and issuers cannot be fully assessed at this time. In addition, the introduction of the euro presents other unique uncertainties, including the fluctuation of the euro relative to non-euro currencies; whether the interest rate, tax and labor regimes of European countries participating in the euro will converge over time; and whether the conversion of the currencies of other countries that now are or may in the future become members of the European Union (''EU'') will have an impact on the euro. Also, it is possible that the euro could be abandoned in the future by countries that have already adopted its use. These or other events, including political and economic developments, could cause market disruptions, and could adversely affect the value of securities held by the Funds. Because of the number of countries using this single currency, a significant portion of the assets held by the Funds may be denominated in the euro.

Risks of Emerging Countries. Certain Funds may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when

the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, Eastern Europe, Latin and South America and Africa. A Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of a Fund, the Investment Adviser, its affiliates and their respective clients and other service providers. A Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by a Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), a Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while

governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past, some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

A Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return from an investment in such countries to the Fund.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve a Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for a Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by a Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make a Fund's investments in such countries less liquid and more volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). A Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial

drop in price. Investments in emerging countries may be more difficult to price precisely because of the characteristics discussed above and lower trading volumes.

A Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, the Investment Adviser does not currently anticipate that a significant portion of the Funds' currency exposure in emerging countries, if any, will be covered by such instruments.

Risks of Derivative Investments. A Fund's transactions, if any, in options, futures, options on futures, swaps, interest rate caps, floors and collars, structured securities and foreign currency transactions involve additional risk of loss. Loss can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the Investment Adviser is incorrect in its expectation of fluctuations in securities prices, interest rates or currency prices. Each Fund may also invest in derivative investments for non-hedging purposes (that is, to seek to increase total return). Investing for non-hedging purposes is considered a speculative practice and presents even greater risk of loss.

Risks of Illiquid Securities. Each Fund may invest up to 15% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and all swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ''4(2) commercial paper'' or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 (''144A Securities'').

Investing in 144A Securities may decrease the liquidity of a Fund's portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be

significant, from the market price of comparable securities for which a liquid market exists.

Credit/Default Risks. Debt securities purchased by the Funds may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign government, domestic and foreign corporations, banks and other issuers. Some of these fixed-income securities are described in the next section below. Further information is provided in the Additional Statement.

Debt securities rated BBB or higher by Standard & Poor's Rating Group (''Standard & Poor's''), or Baa or higher by Moody's Investors Service, Inc. (''Moody's'') or having a comparable rating by another NRSRO are considered ''investment grade.'' Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers' capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the Investment Adviser to be of comparable credit quality. If a security satisfies a Fund's minimum rating requirement at the time of purchase and is subsequently downgraded below that rating, the Fund will not be required to dispose of the security. If a downgrade occurs, the Investment Adviser will consider which action, including the sale of the security, is in the best interest of a Fund and its shareholders.

Certain Funds may invest in fixed-income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as ''junk bonds.'' Junk bonds are considered predominantly speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in a Fund's portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Temporary Investment Risks. Each Fund may, for temporary defensive purposes, invest a certain percentage of its total assets in:

- U.S. government securities
- Commercial paper rated at least A-2 by Standard & Poor's; P-2 by Moody's or having a comparable rating by another NRSRO
- Certificates of deposit
- Bankers' acceptances
- Repurchase agreements
- Non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year

When a Fund's assets are invested in such instruments, the Fund may not be achieving its investment objective.

C. Portfolio Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks.

The Funds may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies. Further information is provided in the Additional Statement, which is available upon request.

Convertible Securities. Each Fund may invest in convertible securities. Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. Convertible securities in which a Fund invests are subject to the same rating criteria as its other investments in fixed-income securities. Convertible securities have both equity and fixed-income risk characteristics. Like all fixed-income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed-income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Foreign Currency Transactions. Certain Funds may, to the extent consistent with its investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. A Fund may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. Certain Funds may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

Some Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. A Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the Investment Adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (*e.g.* the Investment Adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, a Fund's NAV to fluctuate (when the Fund's NAV fluctuates, the value of your shares may go up or down). Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive a Fund of unrealized profits, transaction costs or the benefits of a currency hedge or could force the Fund to cover its purchase or sale commitments, if any, at the current market price.

Structured Securities. Each Fund may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, interest rates, commodities, indices or other financial indicators (the ''Reference'') or the relative change in two or more References.

The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value

of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, structured securities may present a greater degree of market risk than many types of securities and may be more volatile, less liquid and more difficult to price accurately than less complex securities.

REITs. Each Fund may invest in REITs. REITs are pooled investment vehicles that invest primarily in either real estate or real estate related loans. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. A Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period.

A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. Each Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Fund may invest or on any securities index consisting of securities in which it may invest. Certain Funds may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of the Investment Adviser to manage future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If the Investment Adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in a Fund's investment portfolio, the Fund may incur losses that it would not otherwise incur. The use of options can also increase a Fund's transaction costs. Options written or purchased

by the Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. The Funds may engage in futures transactions on both U.S. and foreign exchanges (except that the CORE Tax-Managed Fund may only engage in futures transactions with respect to U.S. equity indices).

Each Fund may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or, to the extent a Fund invests in foreign securities, currency exchange rates, or to otherwise manage its term structure, sector selections and duration in accordance with its investment objective and policies. Each Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. A Fund will engage in futures and related options transactions for bona fide hedging purposes as defined in regulations of the Commodity Futures Trading Commission (the ''CFTC'') or to seek to increase total return to the extent permitted by such regulations. Except as otherwise permitted by the CFTC, a Fund may not purchase or sell futures contracts or purchase or sell related options to seek to increase total return if immediately thereafter the sum of the amount of initial margin deposits and premiums paid on the Fund's outstanding positions in futures and related options entered into for the purpose of seeking to increase total return would exceed 5% of the market value of the Fund's net assets. Alternative limitations on the use of futures contracts and related options may be stated from time to time in the Additional Statement.

Futures contracts and related options present the following risks:

- While a Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in poorer overall performance than if the Fund had not entered into any futures contracts or options transactions.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection may not be obtained and a Fund may be exposed to additional risk of loss.

- The loss incurred by a Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of a Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to a Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Equity Swaps. Each Fund may invest in equity swaps. Equity swaps allow the parties to a swap agreement to exchange the dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment.

An equity swap may be used by a Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous. Equity swaps are derivatives and their value can be very volatile. To the extent that the Investment Adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, a Fund may suffer a loss, which may be substantial. The value of some components of an equity swap (such as the dividends on a common stock) may also be sensitive to changes in interest rates. Furthermore, a Fund may suffer a loss if the counterparty defaults. Because equity swaps are normally illiquid, a Fund may be unable to terminate its obligations when desired.

When-Issued Securities and Forward Commitments. Each Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to the Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-

issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Repurchase Agreements. Repurchase agreements involve the purchase of securities subject to the seller's agreement to repurchase them at a mutually agreed upon date and price. Each Fund may enter into repurchase agreements with securities dealers and banks which furnish collateral at least equal in value or market price to the amount of their repurchase obligation.

If the other party or ''seller'' defaults, a Fund might suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's costs associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy of the seller, a Fund could suffer additional losses if a court determines that the Fund's interest in the collateral is not enforceable.

Certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. Each Fund may engage in securities lending. Securities lending involves the lending of securities owned by a Fund to financial institutions such as certain broker-dealers including, as permitted by SEC, Goldman Sachs. The borrowers are required to secure their loan continuously with cash, cash equivalents, U.S. government securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash collateral may be invested by a Fund in short-term investments, including unregistered investment pools managed by the Investment Adviser or its affiliates. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and a Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If the Investment Adviser determines to make securities loans, the value of the securities loaned may not exceed 33$^{1}/_{3}$% of the value of the total assets of a Fund (including the loan collateral). Loan collateral (including any investment of the collateral) is not subject to the percentage limitations described elsewhere in this Prospectus regarding investments in fixed-income securities and cash equivalents.

A Fund may lend its securities to increase its income. A Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Fund or becomes insolvent.

Short Sales Against-the-Box. Certain Funds may make short sales against-the-box. A short sale against-the- box means that at all times when a short position is open the Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Preferred Stock, Warrants and Rights. Each Fund may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Other Investment Companies. Each Fund may invest in securities of other investment companies (including exchange-traded funds such as SPDRs and iShares™, as defined below) subject to statutory limitations prescribed by the Investment Company Act of 1940. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Exchange-traded funds such as SPDRs and iShares™ are shares of unaffiliated investment companies which are traded like traditional equity securities on a national securities exchange or the NASDAQ® National Market System.

- ***Standard & Poor's Depositary Receipts™.*** The Funds may, consistent with their investment policies, purchase Standard & Poor's Depositary Receipts™

(‘‘SPDRs’’). SPDRs are securities traded on the American Stock Exchange (‘‘AMEX’’) that represent ownership in the SPDR Trust, a trust which has been established to accumulate and hold a portfolio of common stocks that is intended to track the price performance and dividend yield of the S&P 500®. The SPDR Trust is sponsored by a subsidiary of the AMEX. SPDRs may be used for several reasons, including, but not limited to, facilitating the handling of cash flows or trading, or reducing transaction costs. The price movement of SPDRs may not perfectly parallel the price action of the S&P 500®.

- ***iShares℠.*** iShares are shares of an investment company that invests substantially all of its assets in securities included in specified indices, including the MSCI indices for various countries and regions. iShares are listed on the AMEX and were initially offered to the public in 1996. The market prices of iShares are expected to fluctuate in accordance with both changes in the NAVs of their underlying indices and supply and demand of iShares on the AMEX. However, iShares have a limited operating history and information is lacking regarding the actual performance and trading liquidity of iShares for extended periods or over complete market cycles. In addition, there is no assurance that the requirements of the AMEX necessary to maintain the listing of iShares will continue to be met or will remain unchanged. In the event substantial market or other disruptions affecting iShares should occur in the future, the liquidity and value of a Fund’s shares could also be substantially and adversely affected. If such disruptions were to occur, a Fund could be required to reconsider the use of iShares as part of its investment strategy.

Unseasoned Companies. Each Fund may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Corporate Debt Obligations. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of corporations to pay interest and repay principal. Each Fund may invest in corporate debt obligations issued by U.S. and certain non-U.S. issuers which issue securities denominated in the U.S. dollar (including Yankee and Euro obligations). In addition to obligations of corporations, corporate debt obligations include securities issued by banks and other financial institutions and supranational entities (*i.e.*, the World Bank, the International Monetary Fund, etc.).

Bank Obligations. Each Fund may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits,

bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry.

U.S. Government Securities. Each Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (a) the full faith and credit of the U.S. Treasury; (b) the right of the issuer to borrow from the U.S. Treasury; (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components of stripped U.S. Government Securities are traded independently.

Custodial Receipts and Trust Certificates. Each Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities or other types of securities in which a Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. Certain Funds may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. Mortgage-backed securities can be backed by either fixed rate mortgage loans or

adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. Privately issued mortgage-backed securities are normally structured with one or more types of ''credit enhancement.'' However, these mortgage-backed securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities.

Mortgage-backed securities may include multiple class securities, including collateralized mortgage obligations (''CMOs'') and Real Estate Mortgage Investment Conduit (''REMIC'') pass-through or participation certificates. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other mortgage-backed securities. CMOs are issued in multiple classes. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. A REMIC is a CMO that qualifies for special tax treatment under the Code and invests in certain mortgages principally secured by interests in real property and other permitted investments.

Mortgaged-backed securities also include stripped mortgage-backed securities (''SMBS''), which are derivative multiple class mortgage-backed securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other mortgage-backed securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped.

Asset-Backed Securities. Certain Funds may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by mortgage-backed securities. This is because asset-backed securities generally do

not have the benefit of a security interest in collateral that is comparable to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Borrowings. Each Fund can borrow money from banks and other financial institutions in amounts not exceeding one-third of its total assets for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its total assets.

Mortgage Dollar Rolls. The Real Estate Securities Fund may enter into mortgage dollar rolls. A mortgage dollar roll involves the sale by a Fund of securities for delivery in the current month. The Fund simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Fund loses the right to receive principal and interest paid on the securities sold. However, the Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish the Fund's performance.

Successful use of mortgage dollar rolls depends upon the Investment Adviser's ability to predict correctly interest rates and mortgage prepayments. If the Investment Adviser is incorrect in its prediction, a Fund may experience a loss. The Fund does not currently intend to enter into mortgage dollar rolls for financing and does not treat them as borrowings.

Yield Curve Options. The Real Estate Securities Fund may enter into options on the yield ''spread'' or differential between two securities. Such transactions are referred to as ''yield curve'' options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities, rather than the prices of the individual securities, and is settled through cash payments. Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps and Interest Rate Caps, Floors and Collars. Interest rate swaps involve the exchange by a Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security. Credit swaps give one party to a transaction the right to dispose of or acquire an asset (or group of assets), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give a Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the Fund may also be required to pay the dollar value of that decline to the counterparty. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

The Real Estate Securities Fund may enter into the transactions described above for hedging purposes or to seek to increase total return. The use of interest rate, mortgage, credit, currency and total return swaps, and interest rate caps, floors and collars is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If the Investment Adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, the investment performance of the Fund would be less favorable than it would have been if these investment techniques were not used.

Inverse Floaters. The Real Estate Securities Fund may invest in inverse floating rate debt securities (''inverse floaters''). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which an inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). The information for the periods ended December 31, 2000 and thereafter has been audited by Ernst & Young LLP, whose report, along with a Fund's financial statements, is included in the Funds' annual report (available upon request without charge). The information for all periods prior to the period ended December 31, 2000 has been audited by the Funds' previous independent auditors.

General Investment Management Approach

Goldman Sachs Asset Management, L.P., (''GSAM®''), serves as investment adviser to the Internet Tollkeeper, Real Estate Securities and CORE Tax-Managed Equity Funds. CORE is an acronym for ''Computer-Optimized, Research Enhanced,'' which reflects the CORE Tax-Managed Equity Fund's investment process. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

GROWTH STYLE FUNDS—INTERNET TOLLKEEPER FUND

THIS FUND INVESTS IN ''INTERNET TOLLKEEPER'' COMPANIES, AND ITS NET ASSET VALUE (NAV) MAY FLUCTUATE SUBSTANTIALLY OVER TIME. BECAUSE THE FUND CONCENTRATES ITS INVESTMENTS IN INTERNET TOLLKEEPER COMPANIES, THE FUND'S PERFORMANCE MAY BE SUBSTANTIALLY DIFFERENT FROM THE RETURNS OF THE BROADER STOCK MARKET AND OF ''PURE'' INTERNET FUNDS. PAST PERFORMANCE IS NOT AN INDICATION OF FUTURE RETURNS AND, DEPENDING ON THE TIMING OF YOUR INVESTMENT, YOU MAY LOSE MONEY EVEN IF THE FUND'S PAST RETURNS HAVE OUTPERFORMED ONE OR MORE OF THE FUND'S BENCHMARKS DURING SPECIFIED PERIODS OF TIME. THE FUND'S PARTICIPATION IN THE INITIAL PUBLIC OFFERING (IPO) MARKET DURING ITS INITIAL START-UP PHASE MAY HAVE HAD A MAGNIFIED IMPACT ON THE FUND'S PERFORMANCE BECAUSE OF ITS RELATIVELY SMALL ASSET BASE. IT IS PROBABLE THAT THE EFFECT OF IPO INVESTMENTS ON THE FUND'S FUTURE PERFORMANCE WILL NOT BE AS SIGNIFICANT.

Goldman Sachs' Growth Investment Philosophy:

1. Invest as if buying the company/business, not simply trading its stock:

- Understand the business, management, products and competition.
- Perform intensive, hands-on fundamental research.
- Seek businesses with strategic competitive advantages.

- Over the long-term, expect each company's stock price ultimately to track the growth in the value of the business.

2. ***Buy high-quality growth businesses that possess strong business franchises, favorable long-term prospects and excellent management.***
3. ***Purchase superior long-term growth companies at a favorable price—seek to purchase at a fair valuation, giving the investor the potential to fully capture returns from above-average growth rates.***

Growth companies have earnings expectations that exceed those of the stock market as a whole.

REAL ESTATE SECURITIES FUND

Goldman Sachs' Real Estate Securities Investment Philosophy:

When choosing the Fund's securities, the Investment Adviser:

- Selects stocks based on quality of assets, experienced management and a sustainable competitive advantage.
- Seeks to buy securities at a discount to the intrinsic value of the business (assets and management).
- Seeks a team approach to decision making.

Over time, REITs (which stands for Real Estate Investment Trusts) have offered investors important diversification and competitive total returns versus the broad equity market.

QUANTITATIVE (''CORE'') STYLE FUND

Goldman Sachs' CORE Tax-Managed Investment Philosophy:

Goldman Sachs' quantitative style of funds—CORE—emphasizes the two building blocks of active management: **stock selection** and **portfolio construction**.

I. CORE Stock Selection

The CORE Funds use the Goldman Sachs' proprietary multifactor model (''Multifactor Model''), a rigorous computerized rating system, to forecast the returns of securities held in the Fund's portfolio. The Multifactor Model incorporates common variables covering measures of:

- ***Research*** (What do fundamental analysts think about the company and its prospects?)

- ***Value*** (How is the company priced relative to fundamental accounting measures?)
- ***Momentum*** (What are medium-term price trends? How has the price responded to new information?)
- ***Profitability*** (What is the company's margin on sales? How efficient are its operations?)
- ***Earnings Quality*** (Were earnings derived from sustainable (cash-based) sources?)

All of the above factors are carefully evaluated within the Multifactor Model since each has demonstrated a significant impact on the performance of the securities and markets they were designed to forecast. Stock selection in this process combines both our quantitative and qualitative analysis.

II. CORE Portfolio Construction

A proprietary risk model, which is intended to identify and measure risk as accurately as possible, includes all the above factors used in the return model to select stocks, as well as several other factors associated with risk but not return. In this process, the Investment Adviser manages risk by attempting to limit deviations from the benchmark, and by attempting to run a size and sector neutral portfolio. All investment decisions consider expected after-tax returns including realizing capital losses to offset realized gains, creating loss carry-forwards, and identifying securities for in-kind distribution. A **computer optimizer** evaluates many different security combinations (considering many possible weightings) in an effort **to construct the most efficient risk/return portfolio** given the Fund's benchmark.

Goldman Sachs CORE Tax-Managed Equity Fund is a fully invested portfolio that offers broad access to a well-defined stock universe, seeks to outperform its benchmark on an after-tax basis through consistent, disciplined stock selection, and is intended to be an effective tool for implementing a tax-managed strategy within an overall investment portfolio.

References in this Prospectus to a Fund's benchmark or benchmarks are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

Fund Investment Objectives and Strategies

Goldman Sachs Internet Tollkeeper Fund

FUND FACTS	
Objective:	Long-term growth of capital
Benchmarks:	S&P 500® Index NASDAQ Composite Index Goldman Sachs Internet Index
Investment Focus:	U.S. equity investments that offer long-term capital appreciation with a primary focus on the media, telecommunications, technology and Internet sectors
Investment Style:	Growth
Symbol:	GITIX

INVESTMENT OBJECTIVE

The Fund seeks long-term growth of capital.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in equity investments in ''Internet Tollkeeper'' companies (as described below), which are companies in the media, telecommunications, technology and Internet sectors which provide or permit Internet companies or Internet users access to content, services or infrastructure. The Fund seeks to achieve its investment objective by investing in equity investments in companies that the Investment Adviser believes will benefit from the growth of the Internet by investing in growth businesses that, in the Adviser's view, are strategically positioned to capitalize on the proliferation of the Internet. The Fund may also invest up to 20% of its total assets in other companies whose rapid

adoption of an Internet strategy is expected to improve their cost structure, revenue opportunities or competitive advantage and that the Investment Adviser believes exhibit a sustainable business model. Although the Fund invests primarily in publicly traded U.S. securities, it may invest up to 25% of its total assets in foreign securities, including securities of issuers in emerging markets or countries (''emerging countries'') and securities quoted in foreign currencies.

The Internet. The Internet is a global collection of connected computers that allows commercial and professional organizations, educational institutions, government agencies, and individuals to communicate electronically, access and share information, and conduct business.

The Internet has had, and is expected to continue to have, a significant impact on the global economy, as it changes the way many companies operate. Benefits of the Internet for businesses may include global scalability, acquisition of new clients, new revenue sources and increased efficiencies.

Internet Tollkeepers. The Fund intends to invest a substantial portion of its assets in companies the Investment Adviser describes as Internet Tollkeepers. In general, the Investment Adviser defines a tollkeeper as a company with predictable, sustainable or recurring revenue streams. Like a toll collector for a highway or bridge, these tollkeeper companies may grow revenue by increasing ''traffic,'' or customers and sales, and raising ''tolls,'' or prices. The Investment Adviser believes that the characteristics of many of these tollkeepers, including dominant market share and strong brand name, should enable them to consistently grow their business. An Internet Tollkeeper is a company that has developed or is seeking to develop predictable, sustainable or recurring revenue streams by applying the above characteristics to the growth of the Internet. The Investment Adviser does not define companies that merely have an Internet site or sell some products over the Internet as Internet Tollkeepers (although the Investment Adviser may invest in such companies as part of the Fund's 20% basket of securities which are not or may not be Internet Tollkeepers).

Internet Tollkeepers are media, telecommunications, technology and Internet-related companies which provide access, infrastructure, content and services to Internet companies and Internet users. The following represent examples of each of these

Goldman Sachs Internet Tollkeeper Fund continued

types of companies, but should not be construed to exclude other types of Internet Tollkeepers:

- Access providers enable individuals and businesses to connect to the Internet through, for example, cable systems.
- Infrastructure companies provide items such as servers, routers, software and storage necessary for companies to participate in the Internet.
- Media content providers own copyrights, distribution networks and/or programming. Copyright owners utilize the Internet as an additional distribution channel to sell their content.
- Service providers may facilitate transactions, communications, security, computer programming and back-office functions for Internet businesses. For example, Internet companies may contract out advertising sales or credit card clearing to service providers.

The Investment Adviser believes that an attractive way to invest in the Internet sector is to invest in businesses participating in the growth of the Internet that potentially have long-lasting strategic advantages. Characteristics of these companies may include: dominant market share, strong brand names, recurring revenue streams, cost advantages, economies of scale, financial strength, technological advantages and strong, experienced management teams.

Beneficiaries of the Internet that may meet the above criteria include those companies (Internet Tollkeepers) providing access, infrastructure, content, and services to Internet companies and Internet users. Companies whose rapid adoption of an Internet strategy is expected to improve their cost structure or competitive advantage and that the Investment Adviser believes exhibit a sustainable business model may also be candidates for purchase by the Fund. The Investment Adviser pays careful attention to the stock prices of these companies, seeking to purchase them at a discount to their intrinsic value.

Because of its narrow industry focus, the Fund's investment performance will be closely tied to many factors which affect the Internet and Internet-related industries. These factors include intense competition, consumer preferences, problems with product compatibility and government regulation. Internet and Internet-related securities may experience significant price movements caused by disproportionate investor optimism or pessimism with little or no basis in fundamental economic conditions. As a result, the Fund's NAV is more likely to have greater fluctuations than that of a Fund which invests in other industries.

Goldman Sachs CORE Tax-Managed Equity Fund

FUND FACTS	
Objective:	Long-term after-tax growth of capital
Benchmark:	Russell 3000 Index
Investment Focus:	A total market, broadly diversified portfolio of U.S. equity investments
Investment Style:	Tax-managed quantitative focus
Symbol:	GCTIX

INVESTMENT OBJECTIVE

The Fund seeks to provide long-term after-tax growth of capital through tax-sensitive participation in a broadly diversified portfolio of U.S. equity securities.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in equity investments in U.S. issuers, including foreign issuers that are traded in the United States.

The Fund uses both a variety of quantitative techniques and fundamental research when selecting investments which have the potential to maximize the Fund's after-tax return, and minimize capital gains and income distributions. The Fund will seek to maintain risk, style, capitalization and industry characteristics similar to the Russell 3000 Index.

Tax-Managed Investing. In managing the Fund, the Investment Adviser balances investment considerations and tax considerations. The Fund seeks to achieve returns primarily in the form of price appreciation (which is not subject to current tax), and may use different strategies in seeking tax-efficiency. These strategies include:

- Offsetting long-term and short-term capital gains with long-term and short-term capital losses and creating loss carry-forward positions
- Limiting portfolio turnover that may result in taxable gains
- Selling tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower basis

Goldman Sachs
CORE Tax-Managed Equity Fund continued

In situations where the Fund would otherwise be required to sell portfolio securities to meet shareholder redemption requests (and possibly realizing taxable gains), the Fund may borrow money to make the necessary redemption payments. In addition, Goldman Sachs may, but would not in any instance be required to, make contemporaneous purchases of Fund shares for its own account that would provide the Fund with cash to meet its redemption payment obligations.

When the Fund borrows money, the Investment Adviser intends to hedge the excess market exposure created by borrowing. There is no guarantee such hedging will be completely effective.

The Fund may not achieve its investment objective of providing ''after-tax'' growth of capital for various reasons. Implementation of tax-managed investment strategies may not materially reduce the amount of taxable income and capital gains distributed by the Fund to shareholders.

Other. The Fund's investments in fixed-income securities are limited to securities that are considered cash equivalents.

The Fund is not a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal income tax consequences of their investments.

Goldman Sachs Real Estate Securities Fund

FUND FACTS	
Objective:	Total return comprised of long-term growth of capital and dividend income
Benchmark:	Wilshire Real Estate Securities Index
Investment Focus:	REITs and real estate industry companies
Investment Style:	Growth at a discount
Symbol:	GREIX

INVESTMENT OBJECTIVE

The Fund seeks total return comprised of long-term growth of capital and dividend income.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, substantially all and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in a diversified portfolio of equity investments in issuers that are primarily engaged in or related to the real estate industry. The Fund expects that a substantial portion of its assets will be invested in REITs and real estate industry companies.

A ''real estate industry company'' is a company that derives at least 50% of its gross revenues or net profits from the ownership, development, construction, financing, management or sale of commercial, industrial or residential real estate or interests therein.

The Fund's investment strategy is based on the premise that property market fundamentals are the primary determinant of growth, underlying the success of companies in the real estate industry. The Investment Adviser focuses on companies that can achieve sustainable growth in cash flow and dividend paying capability. The Investment Adviser attempts to purchase securities so that its underlying portfolio will be diversified geographically and by property type. Although the Fund will invest primarily in publicly traded U.S. securities, it may

Goldman Sachs
Real Estate Securities Fund continued

invest up to 15% of its total assets in foreign securities, including securities of issuers in emerging countries and securities quoted in foreign currencies.

Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs. Mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skill, may not be diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation. REITs are also subject to the possibilities of failing to qualify for tax free pass-through of income and failing to maintain their exemptions from investment company registration. REITs whose underlying properties are concentrated in a particular industry or geographic region are also subject to risks affecting such industries and regions.

REITs (especially mortgage REITs) are also subject to interest rate risks. When interest rates decline, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. In contrast, as interest rates on adjustable rate mortgage loans are reset periodically, yields on a REIT's investment in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations.

The REIT investments of the Real Estate Securities Fund often do not provide complete tax information to the Fund until after the calendar year-end. Consequently, because of the delay, it may be necessary for the Fund to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31.

Other. The Fund may invest up to 20% of its total assets in fixed-income investments, such as government, corporate debt and bank obligations, that offer the potential to further the Fund's investment objective.

Other Investment Practices and Securities

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences between the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information about these and other investment practices and securities see Appendix A.

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

General Risks:

- ***Credit/Default Risk***—The risk that an issuer or guarantor of fixed-income securities held by a Fund may default on its obligation to pay interest and repay principal.
- ***Foreign Risk***—The risk that when a Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions. A Fund will also be subject to the risk of negative foreign currency rate fluctuations.

Foreign risks will normally be greatest when a Fund invests in issuers located in emerging countries.

- ***Emerging Countries Risk***—The securities markets of Asian, Latin and South American, Eastern European, African and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in certain emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- ***Industry Concentration Risk***—The risk that a Fund concentrates its investments in specific industry sectors that have historically experienced substantial price volatility. A Fund is subject to greater risk of loss as a result of adverse economic, business or other developments than if its investments were diversified across different industry sectors. Securities of issuers held by a Fund may lack sufficient market liquidity to enable a Fund to sell the securities at an advantageous time or without a substantial drop in price.
- ***Stock Risk***—The risk that stock prices have historically risen and fallen in periodic cycles. Recently, U.S. and foreign stock markets have experienced substantial price volatility.
- ***Derivatives Risk***—The risk that loss may result from a Fund's investments in options, futures, swaps, structured securities and other derivative instruments. These instruments may be leveraged so that small changes may produce disproportionate losses to a Fund.
- ***Interest Rate Risk***—The risk that when interest rates increase, fixed-income securities held by a Fund will decline in value. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities.
- ***IPO Risk***—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When a Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance.
- ***Management Risk***—The risk that a strategy used by the Investment Adviser may fail to produce the intended results.

- ***Market Risk***—The risk that the value of the securities in which a Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors and/or general economic conditions. Price changes may be temporary or last for extended periods.
- ***Liquidity Risk***—The risk that a Fund will not be able to pay redemption proceeds within the time period stated in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Funds that invest in non-investment grade fixed-income securities, small and mid-capitalization stocks, REITs or emerging country issuers will be especially subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities within particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions whether or not accurate. The Goldman Sachs Asset Allocation Portfolios (the ''Asset Allocation Portfolios'') expect to invest a significant percentage of their assets in the Real Estate Securities Fund and other funds for which GSAM or Goldman Sachs now or in the future acts as investment adviser or underwriter. Redemptions by an Asset Allocation Portfolio of its position in a Fund may further increase liquidity risk and may impact a Fund's NAV.
- ***REIT Risk***—Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. REITs whose underlying properties are concentrated in a particular industry or geographic region are also subject to risks affecting such industries and regions. The securities of REITs involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Mid Cap and Small Cap Risk***—The securities of small capitalization and mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Investment Style Risk***—Different investment styles tend to shift in and out of favor depending upon market and economic conditions as well as investor sentiment. A Fund may outperform or underperform other funds that employ a different investment style. Examples of different investment styles include growth and value investing. Growth stocks may be more volatile than other stocks because they are more sensitive to investor perceptions of the issuing company's growth of earnings

potential. Also, since growth companies usually invest a high portion of earnings in their business, growth stocks may lack the dividends of some value stocks that can cushion stock prices in a falling market. Growth oriented funds will typically underperform when value investing is in favor. Value stocks are those that are undervalued in comparison to their peers due to adverse business developments or other factors.

Other Specific Risks:

- ***Internet Risk***—The risk that the stock prices of Internet and Internet-related companies and therefore the value of the Internet Tollkeeper Fund will experience significant price movements as a result of intense market volatility, worldwide competition, consumer preferences, product compatibility, product obsolescence, government regulation, excessive investor optimism or pessimism, or other factors.
- ***Tax-Managed Investment Risk***—Because the Investment Adviser balances investment considerations and tax considerations, the pre-tax performance of the CORE Tax-Managed Equity Fund may be lower than the performance of a similar CORE Fund that is not tax-managed. This is because the Investment Adviser may choose not to make certain investments that may result in taxable distributions. Even though tax-managed strategies are being used, they may not reduce the amount of taxable income and capital gains distributed by the Fund to shareholders. A high percentage of the Fund's net asset value (''NAV'') may consist of unrealized capital gains, which represent a potential future tax liability to shareholders. The Fund is not a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal income tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Institutional Shares from year to year; and (b) how the average annual total returns of a Fund's Institutional Shares compare to those of broad-based securities market indices. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced.

INFORMATION ON AFTER-TAX RETURNS

These definitions apply to the after-tax returns.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on a Fund's Institutional Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on a Fund's Institutional Shares (*i.e.*, dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Institutional Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Shares. These returns reflect taxes paid on distributions on a Fund's Institutional Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions (as of the date of this Prospectus, 38.6% for ordinary income dividends and 20% for long-term capital gains distributions) and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Fund Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

Fund Fees and Expenses (Institutional Shares)

This table describes the fees and expenses that you would pay if you buy and hold Institutional Shares of a Fund.

	Internet Tollkeeper Fund	CORE Tax-Managed Equity Fund	Real Estate Securities Fund
Shareholder Fees (fees paid directly from your investment):			
Maximum Sales Charge (Load) Imposed on Purchases	None	None	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends	None	None	None
Redemption Fees	None	None	None
Exchange Fees	None	None	None
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]			
Management Fees	1.00%	0.75%	1.00%
Distribution and Service (12b-1) Fees	None	None	None
Other Expenses[2]	0.16%	0.33%	0.19%
Total Fund Operating Expenses*	1.16%	1.08%	1.19%

See page 22 for all other footnotes.

* As a result of current expense limitations, ''Other Expenses'' and ''Total Fund Operating Expenses'' of the Funds which are actually incurred as of the date of this Prospectus are as set forth below. The expense limitations may be terminated at any time at the option of the Investment Adviser. If this occurs, ''Other Expenses'' and ''Total Fund Operating Expenses'' may increase without shareholder approval.

	Internet Tollkeeper Fund	CORE Tax-Managed Equity Fund	Real Estate Securities Fund
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]			
Management Fees	*1.00%*	*0.75%*	*1.00%*
Distribution and Service (12b-1) Fees	*None*	*None*	*None*
Other Expenses[2]	*0.10%*	*0.09%*	*0.04%*
Total Fund Operating Expenses (after current expense limitations)	*1.10%*	*0.84%*	*1.04%*

Fund Fees and Expenses continued

[1] *The Funds' annual operating expenses are based on actual expenses.*

[2] *''Other Expenses'' include transfer agency fees and expenses equal on an annualized basis to 0.04% of the average daily net assets of each Fund's Institutional Shares plus all other ordinary expenses not detailed above. The Investment Adviser has voluntarily agreed to reduce or limit ''Other Expenses'' (excluding management fees, transfer agency fees and expenses, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to the following percentages of each Fund's average daily net assets:*

Fund	Other Expenses
Internet Tollkeeper	*0.06%*
CORE Tax-Managed	*0.05%*
Real Estate Securities	*0.00%*

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Institutional Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Internet Tollkeeper	$118	$368	$638	$1,409
Real Estate Securities	$121	$378	$654	$1,443
CORE Tax-Managed Equity	$110	$343	$595	$1,317

Institutions that invest in Institutional Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your institution for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain institutions that invest in Institutional Shares on behalf of their customers may receive other compensation in connection with the sale and distribution of Institutional Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Statement of Additional Information (''Additional Statement'').

Service Providers

INVESTMENT ADVISER

Investment Adviser

Goldman Sachs Asset Management, L.P. (''GSAM'')
32 Old Slip
New York, New York 10005

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman, Sachs & Co. (''Goldman Sachs''), served as the Funds' investment adviser. On or about April 26, 2003, GSAM assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Funds. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission (the ''SEC'') since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser makes the investment decisions for the Funds and places purchase and sale orders for the Funds' portfolio transactions in U.S. and foreign markets. As permitted by applicable law, these orders may be directed to any brokers, including Goldman Sachs and its affiliates. While the Investment Adviser is ultimately responsible for the management of the Funds, it is able to draw upon the research and expertise of its asset management affiliates for portfolio decisions and management with respect to certain portfolio securities. In addition, the Investment Adviser has access to the research and certain proprietary technical models developed by Goldman Sachs, and will apply quantitative and qualitative analysis in determining the appropriate allocations among categories of issuers and types of securities.

The Investment Adviser also performs the following additional services for the Funds:

- Supervises all non-advisory operations of the Funds
- Provides personnel to perform necessary executive, administrative and clerical services to the Funds
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities

- Maintains the records of each Fund
- Provides office space and all necessary office equipment and services

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Internet Tollkeeper	1.00%	1.00%
CORE Tax-Managed Equity	0.75%	0.75%
Real Estate Securities	1.00%	1.00%

The difference, if any, between the stated fees and the actual fees paid by the Fund reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

FUND MANAGERS

Growth Investment Team

- 21-year consistent investment style applied through diverse and complete market cycles
- More than $18 billion in equities currently under management
- More than 300 client account relationships
- A portfolio management and analytical team with more than 250 years combined investment experience

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Melissa Brown, CFA Managing Director Product Manager for Quantitative Equities	Senior Portfolio Manager—CORE Tax-Managed Equity	Since 2000	Ms. Brown joined the Investment Adviser as a portfolio manager in 1998. From 1984 to 1998, she was the director of Quantitative Equity Research and served on the Investment Policy Committee at Prudential Securities.
Gary Chropuvka Vice President	Portfolio Manager—CORE Tax-Managed Equity	Since 1999	Mr. Chropuvka joined the Investment Adviser in March 1998. From 1993 to 1997 he spent four years with Morgan Stanley's Correspondent Clearing Group.
Robert C. Jones, CFA Managing Director Head of Quantitative Equities	Senior Portfolio Manager—CORE Tax-Managed Equity	Since 2000	Mr. Jones joined the Investment Adviser as a portfolio manager in 1989.
Wilson K. Magee, Jr., Vice-President	Portfolio Manager—CORE Tax-Managed Equity	Since 2003	Mr. Magee joined the Investment Adviser as a portfolio manager in 2003. From 1997 to 2002, he was a portfolio manager for Grantham Mayo Van Otterloo & Co.
Don Mulvihill Managing Director	Senior Portfolio Manager—CORE Tax-Managed Equity	Since 1999	Mr. Mulvihill joined the Investment Adviser in 1985 as a portfolio manager. In 1991 he joined the Fixed Income team in London as a portfolio manager, and in 1992 he became President of Goldman Sachs Asset Management, Japan. Mr. Mulvihill joined the CORE team in 1999.

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Victor H. Pinter Vice President Head of Portfolio Construction	Senior Portfolio Manager—CORE Tax-Managed Equity	Since 2000	Mr. Pinter joined the Investment Adviser as a research analyst in 1989. He became a portfolio manager in 1992.

Real Estate Securities Team

The Real Estate Securities portfolio management team includes individuals with backgrounds in:

- Fundamental real estate acquisition, development and operations
- Real estate capital markets
- Mergers and acquisitions
- Asset management

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Herbert E. Ehlers Managing Director Chief Investment Officer	Senior Portfolio Manager—Real Estate Securities	Since 1998	Mr. Ehlers joined the Investment Adviser as a senior portfolio manager and Chief Investment Officer of the Growth team in 1997. From 1981 to 1997, he was the Chief Investment Officer and Chairman of Liberty and its predecessor firm, Eagle.
Mark Howard-Johnson, CFA Vice President	Senior Portfolio Manager—Real Estate Securities	Since 1998	Mr. Howard-Johnson joined the Investment Adviser as a portfolio manager in 1998. His previous experience includes 15 years in the real estate finance business.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to a Fund or limit a Fund's investment activities. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Funds. The results of a Fund's investment activities, therefore, may differ from those of Goldman Sachs and its affiliates, and it is possible that a Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Funds may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. A Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions.

Under a securities lending program approved by the Funds' Board of Trustees, the Funds have retained an affiliate of the Investment Adviser, to serve as the securities lending agent for each Fund to the extent that the Funds engage in the securities lending program. For these services, the lending agent may receive a fee from the Funds, including a fee based on the returns earned on the Funds' investment of the cash received as collateral for the loaned securities. In addition, the Funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Funds' portfolio investment transactions.

Dividends

Each Fund pays dividends from its investment company taxable income and distributions from net realized capital gains (although the CORE Tax-Managed Fund attempts to minimize capital gains and income distributions in seeking its investment objective). You may choose to have dividends and distributions paid in:

- Cash
- Additional shares of the same class of the same Fund
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply for certain Goldman Sachs Institutional Liquid Assets Portfolios (''ILA Portfolios''). See the statement of additional information (the ''Additional Statement'').

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time before the record date for a particular dividend or distribution. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

The election to reinvest dividends and distributions in additional shares will not affect the tax treatment of such dividends and distributions, which will be treated as received by you and then used to purchase the shares.

Dividends from investment company taxable income and distributions from net realized capital gains are declared and paid as follows:

Fund	Investment Income Dividends	Capital Gains Distributions
Internet Tollkeeper	Annually	Annually
CORE Tax-Managed Equity	Annually	Annually
Real Estate Securities	Quarterly	Annually

From time to time a portion of a Fund's dividends may constitute a return of capital.

When you purchase shares of a Fund, part of the NAV per share may be represented by undistributed income or undistributed realized gains that have previously been earned by the Fund. Therefore, subsequent distributions on such shares from such income or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Institutional Shares.

HOW TO BUY SHARES

How Can I Purchase Institutional Shares Of The Funds?

You may purchase Institutional Shares on any business day at their NAV next determined after receipt of an order. No sales load is charged. You should place an order with Goldman Sachs at 1-800-621-2550 and either:

- Wire federal funds to The Northern Trust Company (''Northern''), as subcustodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian) on the next business day; ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

In order to make an initial investment in a Fund, you must furnish to the Fund or Goldman Sachs the Account Application. Purchases of Institutional Shares must be settled within three business days of receipt of a complete purchase order.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

How Do I Purchase Shares Through A Financial Institution?

Certain institutions (including banks, trust companies, brokers and investment advisers) that provide recordkeeping, reporting and processing services to their customers may be authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized institution or intermediary on a business day, and

the order will be priced at the Fund's NAV next determined after such acceptance.

- Authorized institutions and intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your institution or intermediary to learn whether it is authorized to accept orders for the Trust.

These institutions may receive payments from the Funds or Goldman Sachs for the services provided by them with respect to the Funds' Institutional Shares. These payments may be in addition to other payments borne by the Funds.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to certain institutions and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds. Additional compensation based on sales may, but is normally not expected to, exceed 0.50% (annualized) of the amount invested.

In addition to Institutional Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), have different minimum investment requirements and are entitled to different services than Institutional Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Type of Investor	Minimum Investment
■ Banks, trust companies or other depository institutions investing for their own account or on behalf of clients ■ Section 401(k), profit sharing, money purchase pension, tax-sheltered annuity, defined benefit pension, or other employee benefit plans that are sponsored by one or more employers (including governmental or church employers) or employee organizations ■ State, county, city or any instrumentality, department, authority or agency thereof ■ Corporations with at least $100 million in assets or in outstanding publicly traded securities ■ ''Wrap'' account sponsors (provided they have an agreement covering the arrangement with GSAM) ■ Registered investment advisers investing for accounts for which they receive asset-based fees	$1,000,000 in Institutional Shares of a Fund alone or in combination with other assets under the management of GSAM and its affiliates
■ Individual investors ■ Qualified non-profit organizations, charitable trusts, foundations and endowments ■ Accounts over which GSAM or its advisory affiliates have investment discretion	$10,000,000

The minimum investment requirement may be waived for current and former officers, partners, directors or employees of Goldman Sachs or any of its affiliates or for other investors at the discretion of the Trust's officers. No minimum amount is required for subsequent investments.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment amounts.
- Reject or restrict any purchase or exchange order for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of Institutional Shares of a Fund is evident, or if purchases, sales or exchanges are,

or a subsequent abrupt redemption might be, of a size that would disrupt the management of a Fund.

- Close a Fund to new investors from time to time and reopen a Fund whenever it is deemed appropriate by a Fund's Investment Adviser.

The Funds may allow you to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Institutional Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\begin{array}{c}\text{(Value of Assets of the Class)} \\ - \text{ (Liabilities of the Class)}\end{array}}{\text{Number of Outstanding Shares of the Class}}$$

The Funds' investments are valued based on market quotations or, if accurate quotations are not readily available, the fair value of the Fund's investments may be determined in good faith under procedures established by the Trustees.

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- When you buy shares, you pay the NAV next calculated *after* the Funds receive your order in proper form.
- When you sell shares, you receive the NAV next calculated *after* the Funds receive your order in proper form.
- The Trust reserves the right to reprocess purchase, redemption and exchange transactions that were processed at an NAV other than a Fund's official closing NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open a Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

Foreign securities may trade in their local markets on days a Fund is closed. As a result, the NAV of a Fund that holds foreign securities may be impacted on days when investors may not purchase or redeem Fund shares.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Institutional Shares Of The Funds?

You may arrange to take money out of your account by selling (redeeming) some or all of your shares. **Generally, each Fund will redeem its Institutional Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** You may request that redemption proceeds be sent to you by check or by wire (if the wire instructions are on record). Redemptions may be requested in writing or by telephone.

Instructions For Redemptions:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund name and Class of Shares ■ The dollar amount you want to sell ■ How and where to send the proceeds ■ Mail your request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain institutions and intermediaries are authorized to accept redemption requests on behalf of the Funds as described under ‘‘How Do I Purchase Shares Through A Financial Institution?’’

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: You may arrange for your redemption proceeds to be wired as federal funds to the bank account designated in your Account Application. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be wired on the next business day in federal funds (for a total of one business day delay), but may be paid up to three business days following receipt of a properly executed wire transfer redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- To change the bank designated on your Account Application, you must send written instructions signed by an authorized person designated on the account application to the Transfer Agent.
- Neither the Trust, Goldman Sachs nor any other institution assumes any responsibility for the performance of your bank or any intermediaries in the

transfer process. If a problem with such performance arises, you should deal directly with your bank or any such intermediaries.

By Check: You may elect in writing to receive your redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within three business days of a properly executed redemption request. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Institutions (including banks, trust companies, brokers and investment advisers) are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, these institutions may set times by which they must receive redemption requests. These institutions may also require additional documentation from you.

The Trust reserves the right to:

- Redeem your shares if your account balance falls below $50 as a result of earlier redemptions. The Funds will not redeem your shares on this basis if the value of your account falls below the minimum account balance solely as a result of market conditions. The Fund will give you 60 days' prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. The Fund may, in its discretion, pay redemption proceeds in-kind at any time or if requested by a shareholder. The Fund anticipates that it will normally grant shareholder requests for an in-kind distribution so long as the distribution is in the best interests of the Fund and its other shareholders.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Institutional Shares of the Fund that pays the distributions. No

interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

You may exchange Institutional Shares of a Fund at NAV for Institutional Shares of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice to you.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

Restrictions on Excessive Trading Practices. The Trust does not permit market-timing or other excessive trading practices. Purchases and exchanges should be made for long-term investment purposes only. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. Excessive, short-term (market-timing) trading practices may disrupt portfolio management strategies, harm Fund performance and negatively impact long-term shareholders. The Trust and Goldman Sachs will not be held liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust (or Goldman Sachs) and its shareholders, the Trust (or Goldman Sachs) will exercise these rights if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to a Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together.

What Types of Reports Will I Be Sent Regarding Investments In Institutional Shares?

You will receive an annual report containing audited financial statements and a semi-annual report. To eliminate unnecessary duplication, only one copy of such reports will be sent to shareholders with the same mailing address. If you would like a duplicate copy to be mailed to you, please contact Goldman Sachs Funds at 1-800-621-2550. You will also be provided with a printed confirmation for each transaction in your account and a monthly account statement. The Funds do not generally provide sub-accounting services.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions and the sale of your Fund shares.

DISTRIBUTIONS

Each Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Funds are generally subject to federal income tax, and may also be subject to state or local taxes (although the CORE Tax-Managed Equity Fund attempts to minimize capital gains and income distributions in seeking its investment objective). This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. For federal tax purposes, the Funds' income dividend distributions and short-term capital gain distributions are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. A percentage of the Funds' dividends paid to corporate shareholders may be eligible for the corporate dividends-received deduction. This percentage may, however, be reduced as a result of a Fund's securities lending activities. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

Each Fund may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Funds may deduct these taxes in computing their taxable income.

If you buy shares of a Fund before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as ''buying a dividend.''

SALES AND EXCHANGES

Your sale of Fund shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Fund shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this gain or loss is long-term or short-term depending on whether your holding period exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of a Fund may be disallowed under ''wash sale'' rules to the extent the shares disposed of are replaced with other shares of that Fund within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Fund. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Investments in the CORE Tax-Managed Fund are subject to the tax risks described previously under ''Principal Risks of the Funds.''

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

A. General Portfolio Risks

The Funds will be subject to the risks associated with equity investments. ‘‘Equity investments’’ may include common stocks, preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments that have economic characteristics similar to equity securities. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of equity investments that a Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. This volatility means that the value of your investment in the Funds may increase or decrease. Recently, certain stock markets have experienced substantial price volatility.

To the extent that a Fund invests in fixed-income securities, that Fund will also be subject to the risks associated with its fixed-income securities. These risks include interest rate risk, credit risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed-income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed-income securities tends to decline. Credit risk involves the risk that an issuer or guarantor could default on its obligations, and a Fund will not recover its investment. Call risk and extension risk are normally present in mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities such as securities backed by car loans.

The Investment Adviser will not consider the portfolio turnover rate a limiting factor in making investment decisions for a Fund. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by a Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of a Fund's portfolio securities, excluding securities having a maturity at the date of purchase of one year or less. See ''Financial Highlights'' in Appendix B for a statement of the Funds' historical portfolio turnover rates.

The following sections provide further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment objectives, and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs.

B. Other Portfolio Risks

Risks of Investing in Internet and Internet-Related Companies. The Internet Tollkeeper Fund may invest in Internet and Internet-related companies. Internet and Internet-related companies are generally subject to a rate of change in technology which is higher than other industries and often requires extensive and sustained investment in research and development. As a result, Internet and Internet-related companies are exposed to the risk of rapid product obsolescence. Changes in governmental policies, such as telephone and cable regulations and anti-trust enforcement, and the need for regulatory approvals may have an adverse effect on the products, services and securities of Internet and Internet-related companies. Internet and Internet-related companies may also produce or use products or services that prove commercially unsuccessful. In addition, intense worldwide competitive pressures and changing demand, evolving industry standards, challenges in achieving product capability, loss of patent protection or proprietary rights, reduction or interruption in the supply of key components, changes in strategic alliances, frequent mergers or acquisitions or other factors can have a significant effect on the financial conditions of companies in these industries. Competitive pressures in the Internet and Internet-related industries may affect

negatively the financial condition of Internet and Internet-related companies. Internet and Internet-related companies are also subject to the risk of service disruptions and the risk of losses arising out of litigation related to these disruptions. In certain instances, Internet and Internet-related securities may experience significant price movements caused by disproportionate investor optimism or pessimism with little or no basis in fundamental economic conditions. As a result of these and other reasons, investments in the Internet and Internet-related industry can experience sudden and rapid appreciation and depreciation.

Risks of Initial Public Offerings. The Internet Tollkeeper and Real Estate Securities Funds may invest in IPOs. An IPO is a company's first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When a Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance. Because of the price volatility of IPO shares, a Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of the Fund's portfolio and may lead to increased expenses to the Fund, such as commissions and transaction costs. By selling IPO shares, the Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that a Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for a Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Risks of Investing in Small Capitalization and Mid-Capitalization Companies and REITs. Each Fund may, to the extent consistent with its investment policies, invest in small and mid-capitalization companies and REITs. Investments in small and mid-capitalization companies and REITs involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Among the reasons for the greater price volatility of these investments are the less certain growth prospects of smaller firms and the lower degree of liquidity in the markets for such securities. Small and mid-capitalization companies and REITs may be thinly traded

and may have to be sold at a discount from current market prices or in small lots over an extended period of time. In addition, these securities are subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities in particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic or market conditions, or adverse investor perceptions whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Small and mid-capitalization companies and REITs include ''unseasoned'' issuers that do not have an established financial history; often have limited product lines, markets or financial resources; may depend on or use a few key personnel for management; and may be susceptible to losses and risks of bankruptcy. Small and mid-capitalization companies may be operating at a loss or have significant variations in operating results; may be engaged in a rapidly changing business with products subject to a substantial risk of obsolescence; may require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition. In addition, these companies may face intense competition, including competition from companies with greater financial resources, more extensive development, manufacturing, marketing, and other capabilities, and a larger number of qualified managerial and technical personnel. Transaction costs for these investments are often higher than those of larger capitalization companies. Investments in small and mid-capitalization companies and REITs may be more difficult to price precisely than other types of securities because of their characteristics and lower trading volumes.

Risks of Foreign Investments. Each Fund may make foreign investments, although the CORE Tax-Managed Fund may only invest in foreign issuers that are traded in the United States. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which a Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to shareholders or converted to U.S. dollars, the Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of a Fund's assets in one or a few countries and currencies will subject a Fund to greater risks than if a Fund's assets were not geographically concentrated.

Investment in sovereign debt obligations by a Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due in accordance with the terms of such debt, and a Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn a Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts (''ADRs'') and Global Depositary Receipts (''GDRs''). Certain Funds may also invest in European Depositary Receipts (''EDRs'') or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are receipts evidencing an arrangement with a non-U.S. bank. EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Euro. On January 1, 1999, the European Economic and Monetary Union (EMU) introduced a new single currency called the euro. The euro has replaced the national currencies of the following member countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

The new European Central Bank has control over each country's monetary policies. Therefore, the member countries no longer control their own monetary policies by directing independent interest rates for their currencies. The national governments of the participating countries, however, have retained the authority to set tax and spending policies and public debt levels.

The change to the euro as a single currency is relatively new and untested. The elimination of currency risk among EMU countries has affected the economic environment and behavior of investors, particularly in European markets, but the long term impact of those changes on currency values or on the business or financial condition of European countries and issuers cannot be fully assessed at this time. In addition, the introduction of the euro presents other unique uncertainties, including the fluctuation of the euro relative to non-euro currencies; whether the interest rate, tax and labor regimes of European countries participating in the euro will converge over time; and whether the conversion of the currencies of other countries that now are or may in the future become members of the European Union (''EU'') will have an impact on the euro. Also, it is possible that the euro could be abandoned in the future by countries that have already adopted its use. These or other events, including political and economic developments, could cause market disruptions, and could adversely affect the value of securities held by the Funds. Because of the number of countries using this single currency, a significant portion of the assets held by the Funds may be denominated in the euro.

Risks of Emerging Countries. Certain Funds may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when

the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, Eastern Europe, Latin and South America and Africa. A Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of a Fund, the Investment Adviser, its affiliates and their respective clients and other service providers. A Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by a Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), a Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while

governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past, some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

A Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return from an investment in such countries to the Fund.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve a Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for a Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by a Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make a Fund's investments in such countries less liquid and more volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). A Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial

drop in price. Investments in emerging countries may be more difficult to price precisely because of the characteristics discussed above and lower trading volumes.

A Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, the Investment Adviser does not currently anticipate that a significant portion of the Funds' currency exposure in emerging countries, if any, will be covered by such instruments.

Risks of Derivative Investments. A Fund's transactions, if any, in options, futures, options on futures, swaps, interest rate caps, floors and collars, structured securities and foreign currency transactions involve additional risk of loss. Loss can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the Investment Adviser is incorrect in its expectation of fluctuations in securities prices, interest rates or currency prices. Each Fund may also invest in derivative investments for non-hedging purposes (that is, to seek to increase total return). Investing for non-hedging purposes is considered a speculative practice and presents even greater risk of loss.

Risks of Illiquid Securities. Each Fund may invest up to 15% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and all swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ''4(2) commercial paper'' or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 (''144A Securities'').

Investing in 144A Securities may decrease the liquidity of a Fund's portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be

significant, from the market price of comparable securities for which a liquid market exists.

Credit/Default Risks. Debt securities purchased by the Funds may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign government, domestic and foreign corporations, banks and other issuers. Some of these fixed-income securities are described in the next section below. Further information is provided in the Additional Statement.

Debt securities rated BBB or higher by Standard & Poor's Rating Group (''Standard & Poor's''), or Baa or higher by Moody's Investors Service, Inc. (''Moody's'') or having a comparable rating by another NRSRO are considered ''investment grade.'' Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers' capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the Investment Adviser to be of comparable credit quality. If a security satisfies a Fund's minimum rating requirement at the time of purchase and is subsequently downgraded below that rating, the Fund will not be required to dispose of the security. If a downgrade occurs, the Investment Adviser will consider which action, including the sale of the security, is in the best interest of a Fund and its shareholders.

Certain Funds may invest in fixed-income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as ''junk bonds.'' Junk bonds are considered predominantly speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in a Fund's portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Temporary Investment Risks. Each Fund may, for temporary defensive purposes, invest a certain percentage of its total assets in:

- U.S. government securities
- Commercial paper rated at least A-2 by Standard & Poor's; P-2 by Moody's or having a comparable rating by another NRSRO
- Certificates of deposit
- Bankers' acceptances
- Repurchase agreements
- Non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year

When a Fund's assets are invested in such instruments, the Fund may not be achieving its investment objective.

C. Portfolio Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks.

The Funds may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies. Further information is provided in the Additional Statement, which is available upon request.

Convertible Securities. Each Fund may invest in convertible securities. Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. Convertible securities in which a Fund invests are subject to the same rating criteria as its other investments in fixed-income securities. Convertible securities have both equity and fixed-income risk characteristics. Like all fixed-income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed-income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Foreign Currency Transactions. Certain Funds may, to the extent consistent with its investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. A Fund may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. Certain Funds may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

Some Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. A Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the Investment Adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (*e.g.* the Investment Adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, a Fund's NAV to fluctuate (when the Fund's NAV fluctuates, the value of your shares may go up or down). Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive a Fund of unrealized profits, transaction costs or the benefits of a currency hedge or could force the Fund to cover its purchase or sale commitments, if any, at the current market price.

Structured Securities. Each Fund may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, interest rates, commodities, indices or other financial indicators (the ''Reference'') or the relative change in two or more References.

The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value

of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, structured securities may present a greater degree of market risk than many types of securities and may be more volatile, less liquid and more difficult to price accurately than less complex securities.

REITs. Each Fund may invest in REITs. REITs are pooled investment vehicles that invest primarily in either real estate or real estate related loans. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. A Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period.

A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. Each Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Fund may invest or on any securities index consisting of securities in which it may invest. Certain Funds may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of the Investment Adviser to manage future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If the Investment Adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in a Fund's investment portfolio, the Fund may incur losses that it would not otherwise incur. The use of options can also increase a Fund's transaction costs. Options written or purchased

by the Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. The Funds may engage in futures transactions on both U.S. and foreign exchanges (except that the CORE Tax-Managed Fund may only engage in futures transactions with respect to U.S. equity indices).

Each Fund may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or, to the extent a Fund invests in foreign securities, currency exchange rates, or to otherwise manage its term structure, sector selections and duration in accordance with its investment objective and policies. Each Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. A Fund will engage in futures and related options transactions for bona fide hedging purposes as defined in regulations of the Commodity Futures Trading Commission (the ''CFTC'') or to seek to increase total return to the extent permitted by such regulations. Except as otherwise permitted by the CFTC, a Fund may not purchase or sell futures contracts or purchase or sell related options to seek to increase total return if immediately thereafter the sum of the amount of initial margin deposits and premiums paid on the Fund's outstanding positions in futures and related options entered into for the purpose of seeking to increase total return would exceed 5% of the market value of the Fund's net assets. Alternative limitations on the use of futures contracts and related options may be stated from time to time in the Additional Statement.

Futures contracts and related options present the following risks:

- While a Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in poorer overall performance than if the Fund had not entered into any futures contracts or options transactions.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection may not be obtained and a Fund may be exposed to additional risk of loss.

- The loss incurred by a Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of a Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to a Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Equity Swaps. Each Fund may invest in equity swaps. Equity swaps allow the parties to a swap agreement to exchange the dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment.

An equity swap may be used by a Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous. Equity swaps are derivatives and their value can be very volatile. To the extent that the Investment Adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, a Fund may suffer a loss, which may be substantial. The value of some components of an equity swap (such as the dividends on a common stock) may also be sensitive to changes in interest rates. Furthermore, a Fund may suffer a loss if the counterparty defaults. Because equity swaps are normally illiquid, a Fund may be unable to terminate its obligations when desired.

When-Issued Securities and Forward Commitments. Each Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to the Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-

issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Repurchase Agreements. Repurchase agreements involve the purchase of securities subject to the seller's agreement to repurchase them at a mutually agreed upon date and price. Each Fund may enter into repurchase agreements with securities dealers and banks which furnish collateral at least equal in value or market price to the amount of their repurchase obligation.

If the other party or ''seller'' defaults, a Fund might suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's costs associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy of the seller, a Fund could suffer additional losses if a court determines that the Fund's interest in the collateral is not enforceable.

Certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. Each Fund may engage in securities lending. Securities lending involves the lending of securities owned by a Fund to financial institutions such as certain broker-dealers including, as permitted by SEC, Goldman Sachs. The borrowers are required to secure their loan continuously with cash, cash equivalents, U.S. government securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash collateral may be invested by a Fund in short-term investments, including unregistered investment pools managed by the Investment Adviser or its affiliates. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and a Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If the Investment Adviser determines to make securities loans, the value of the securities loaned may not exceed 33$^{1}/_{3}$% of the value of the total assets of a Fund (including the loan collateral). Loan collateral (including any investment of the collateral) is not subject to the percentage limitations described elsewhere in this Prospectus regarding investments in fixed-income securities and cash equivalents.

A Fund may lend its securities to increase its income. A Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Fund or becomes insolvent.

Short Sales Against-the-Box. Certain Funds may make short sales against-the-box. A short sale against-the- box means that at all times when a short position is open the Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Preferred Stock, Warrants and Rights. Each Fund may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Other Investment Companies. Each Fund may invest in securities of other investment companies (including exchange-traded funds such as SPDRs and iShares™, as defined below) subject to statutory limitations prescribed by the Investment Company Act of 1940. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Exchange-traded funds such as SPDRs and iShares™ are shares of unaffiliated investment companies which are traded like traditional equity securities on a national securities exchange or the NASDAQ® National Market System.

- ***Standard & Poor's Depositary Receipts™.*** The Funds may, consistent with their investment policies, purchase Standard & Poor's Depositary Receipts™

(‘‘SPDRs’’). SPDRs are securities traded on the American Stock Exchange (‘‘AMEX’’) that represent ownership in the SPDR Trust, a trust which has been established to accumulate and hold a portfolio of common stocks that is intended to track the price performance and dividend yield of the S&P 500®. The SPDR Trust is sponsored by a subsidiary of the AMEX. SPDRs may be used for several reasons, including, but not limited to, facilitating the handling of cash flows or trading, or reducing transaction costs. The price movement of SPDRs may not perfectly parallel the price action of the S&P 500®.

- ***iShares℠.*** iShares are shares of an investment company that invests substantially all of its assets in securities included in specified indices, including the MSCI indices for various countries and regions. iShares are listed on the AMEX and were initially offered to the public in 1996. The market prices of iShares are expected to fluctuate in accordance with both changes in the NAVs of their underlying indices and supply and demand of iShares on the AMEX. However, iShares have a limited operating history and information is lacking regarding the actual performance and trading liquidity of iShares for extended periods or over complete market cycles. In addition, there is no assurance that the requirements of the AMEX necessary to maintain the listing of iShares will continue to be met or will remain unchanged. In the event substantial market or other disruptions affecting iShares should occur in the future, the liquidity and value of a Fund’s shares could also be substantially and adversely affected. If such disruptions were to occur, a Fund could be required to reconsider the use of iShares as part of its investment strategy.

Unseasoned Companies. Each Fund may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Corporate Debt Obligations. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of corporations to pay interest and repay principal. Each Fund may invest in corporate debt obligations issued by U.S. and certain non-U.S. issuers which issue securities denominated in the U.S. dollar (including Yankee and Euro obligations). In addition to obligations of corporations, corporate debt obligations include securities issued by banks and other financial institutions and supranational entities (*i.e.*, the World Bank, the International Monetary Fund, etc.).

Bank Obligations. Each Fund may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits,

bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry.

U.S. Government Securities. Each Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (a) the full faith and credit of the U.S. Treasury; (b) the right of the issuer to borrow from the U.S. Treasury; (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components of stripped U.S. Government Securities are traded independently.

Custodial Receipts and Trust Certificates. Each Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities or other types of securities in which a Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. Certain Funds may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. Mortgage-backed securities can be backed by either fixed rate mortgage loans or

adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. Privately issued mortgage-backed securities are normally structured with one or more types of ''credit enhancement.'' However, these mortgage-backed securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities.

Mortgage-backed securities may include multiple class securities, including collateralized mortgage obligations (''CMOs'') and Real Estate Mortgage Investment Conduit (''REMIC'') pass-through or participation certificates. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other mortgage-backed securities. CMOs are issued in multiple classes. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. A REMIC is a CMO that qualifies for special tax treatment under the Code and invests in certain mortgages principally secured by interests in real property and other permitted investments.

Mortgaged-backed securities also include stripped mortgage-backed securities (''SMBS''), which are derivative multiple class mortgage-backed securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other mortgage-backed securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped.

Asset-Backed Securities. Certain Funds may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by mortgage-backed securities. This is because asset-backed securities generally do

not have the benefit of a security interest in collateral that is comparable to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Borrowings. Each Fund can borrow money from banks and other financial institutions in amounts not exceeding one-third of its total assets for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its total assets.

Mortgage Dollar Rolls. The Real Estate Securities Fund may enter into mortgage dollar rolls. A mortgage dollar roll involves the sale by a Fund of securities for delivery in the current month. The Fund simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Fund loses the right to receive principal and interest paid on the securities sold. However, the Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish the Fund's performance.

Successful use of mortgage dollar rolls depends upon the Investment Adviser's ability to predict correctly interest rates and mortgage prepayments. If the Investment Adviser is incorrect in its prediction, a Fund may experience a loss. The Fund does not currently intend to enter into mortgage dollar rolls for financing and does not treat them as borrowings.

Yield Curve Options. The Real Estate Securities Fund may enter into options on the yield ''spread'' or differential between two securities. Such transactions are referred to as ''yield curve'' options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities, rather than the prices of the individual securities, and is settled through cash payments. Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps and Interest Rate Caps, Floors and Collars. Interest rate swaps involve the exchange by a Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security. Credit swaps give one party to a transaction the right to dispose of or acquire an asset (or group of assets), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give a Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the Fund may also be required to pay the dollar value of that decline to the counterparty. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

The Real Estate Securities Fund may enter into the transactions described above for hedging purposes or to seek to increase total return. The use of interest rate, mortgage, credit, currency and total return swaps, and interest rate caps, floors and collars is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If the Investment Adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, the investment performance of the Fund would be less favorable than it would have been if these investment techniques were not used.

Inverse Floaters. The Real Estate Securities Fund may invest in inverse floating rate debt securities (''inverse floaters''). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which an inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). The information for the periods ended December 31, 2000 and thereafter has been audited by Ernst & Young LLP, whose report, along with a Fund's financial statements, is included in the Funds' annual report (available upon request without charge). The information for all periods prior to the period ended December 31, 2000 has been audited by the Funds' previous independent auditors.

a Assumes investment at the net asset value at the beginning of the period, reinvestment of all dividends and distributions, a complete redemption of the investment at the net asset value at the end of the period and no sales or redemption charges. Total return would be reduced if a sales or redemption charge were taken into account. Total returns for periods less than one full year are not annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund shares.

b Annualized.

c Calculated based on the average shares outstanding methodology.

d Less than $0.005 per share.

General Investment Management Approach

Goldman Sachs Asset Management, L.P., (''GSAM®''), serves as investment adviser to the Internet Tollkeeper, Real Estate Securities and CORE Tax-Managed Equity Funds. CORE is an acronym for ''Computer-Optimized, Research Enhanced,'' which reflects the CORE Tax-Managed Equity Fund's investment process. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

GROWTH STYLE FUNDS—INTERNET TOLLKEEPER FUND

THIS FUND INVESTS IN ''INTERNET TOLLKEEPER'' COMPANIES, AND ITS NET ASSET VALUE (NAV) MAY FLUCTUATE SUBSTANTIALLY OVER TIME. BECAUSE THE FUND CONCENTRATES ITS INVESTMENTS IN INTERNET TOLLKEEPER COMPANIES, THE FUND'S PERFORMANCE MAY BE SUBSTANTIALLY DIFFERENT FROM THE RETURNS OF THE BROADER STOCK MARKET AND OF ''PURE'' INTERNET FUNDS. PAST PERFORMANCE IS NOT AN INDICATION OF FUTURE RETURNS AND, DEPENDING ON THE TIMING OF YOUR INVESTMENT, YOU MAY LOSE MONEY EVEN IF THE FUND'S PAST RETURNS HAVE OUTPERFORMED ONE OR MORE OF THE FUND'S BENCHMARKS DURING SPECIFIED PERIODS OF TIME. THE FUND'S PARTICIPATION IN THE INITIAL PUBLIC OFFERING (IPO) MARKET DURING ITS INITIAL START-UP PHASE MAY HAVE HAD A MAGNIFIED IMPACT ON THE FUND'S PERFORMANCE BECAUSE OF ITS RELATIVELY SMALL ASSET BASE. IT IS PROBABLE THAT THE EFFECT OF IPO INVESTMENTS ON THE FUND'S FUTURE PERFORMANCE WILL NOT BE AS SIGNIFICANT.

Goldman Sachs' Growth Investment Philosophy:

1. Invest as if buying the company/business, not simply trading its stock:

- Understand the business, management, products and competition.
- Perform intensive, hands-on fundamental research.
- Seek businesses with strategic competitive advantages.

- Over the long-term, expect each company's stock price ultimately to track the growth in the value of the business.

2. ***Buy high-quality growth businesses that possess strong business franchises, favorable long-term prospects and excellent management.***
3. ***Purchase superior long-term growth companies at a favorable price—seek to purchase at a fair valuation, giving the investor the potential to fully capture returns from above-average growth rates.***

Growth companies have earnings expectations that exceed those of the stock market as a whole.

REAL ESTATE SECURITIES FUND

Goldman Sachs' Real Estate Securities Investment Philosophy:

When choosing the Fund's securities, the Investment Adviser:

- Selects stocks based on quality of assets, experienced management and a sustainable competitive advantage.
- Seeks to buy securities at a discount to the intrinsic value of the business (assets and management).
- Seeks a team approach to decision making.

Over time, REITs (which stands for Real Estate Investment Trusts) have offered investors important diversification and competitive total returns versus the broad equity market.

QUANTITATIVE (''CORE'') STYLE FUND

Goldman Sachs' CORE Tax-Managed Investment Philosophy:

Goldman Sachs' quantitative style of funds—CORE—emphasizes the two building blocks of active management: **stock selection** and **portfolio construction**.

I. CORE Stock Selection

The CORE Funds use the Goldman Sachs' proprietary multifactor model (''Multifactor Model''), a rigorous computerized rating system, to forecast the returns of securities held in the Fund's portfolio. The Multifactor Model incorporates common variables covering measures of:

- ***Research*** (What do fundamental analysts think about the company and its prospects?)

- ***Value*** (How is the company priced relative to fundamental accounting measures?)
- ***Momentum*** (What are medium-term price trends? How has the price responded to new information?)
- ***Profitability*** (What is the company's margin on sales? How efficient are its operations?)
- ***Earnings Quality*** (Were earnings derived from sustainable (cash-based) sources?)

All of the above factors are carefully evaluated within the Multifactor Model since each has demonstrated a significant impact on the performance of the securities and markets they were designed to forecast. Stock selection in this process combines both our quantitative and qualitative analysis.

II. CORE Portfolio Construction

A proprietary risk model, which is intended to identify and measure risk as accurately as possible, includes all the above factors used in the return model to select stocks, as well as several other factors associated with risk but not return. In this process, the Investment Adviser manages risk by attempting to limit deviations from the benchmark, and by attempting to run a size and sector neutral portfolio. All investment decisions consider expected after-tax returns including realizing capital losses to offset realized gains, creating loss carry-forwards, and identifying securities for in-kind distribution. A **computer optimizer** evaluates many different security combinations (considering many possible weightings) in an effort **to construct the most efficient risk/return portfolio** given the Fund's benchmark.

Goldman Sachs CORE Tax-Managed Equity Fund is a fully invested portfolio that offers broad access to a well-defined stock universe, seeks to outperform its benchmark on an after-tax basis through consistent, disciplined stock selection, and is intended to be an effective tool for implementing a tax-managed strategy within an overall investment portfolio.

References in this Prospectus to a Fund's benchmark or benchmarks are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

Fund Investment Objectives and Strategies

Goldman Sachs Internet Tollkeeper Fund

FUND FACTS	
Objective:	Long-term growth of capital
Benchmarks:	S&P 500® Index NASDAQ Composite Index Goldman Sachs Internet Index
Investment Focus:	U.S. equity investments that offer long-term capital appreciation with a primary focus on the media, telecommunications, technology and Internet sectors
Investment Style:	Growth
Symbol:	GITSX

INVESTMENT OBJECTIVE

The Fund seeks long-term growth of capital.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in equity investments in ''Internet Tollkeeper'' companies (as described below), which are companies in the media, telecommunications, technology and Internet sectors which provide or permit Internet companies or Internet users access to content, services or infrastructure. The Fund seeks to achieve its investment objective by investing in equity investments in companies that the Investment Adviser believes will benefit from the growth of the Internet by investing in growth businesses that, in the Investment Adviser's view, are strategically positioned to capitalize on the proliferation of the Internet. The Fund may also invest up to 20% of its total assets in other companies

whose rapid adoption of an Internet strategy is expected to improve their cost structure, revenue opportunities or competitive advantage and that the Investment Adviser believes exhibit a sustainable business model. Although the Fund invests primarily in publicly traded U.S. securities, it may invest up to 25% of its total assets in foreign securities, including securities of issuers in emerging markets or countries (''emerging countries'') and securities quoted in foreign currencies.

The Internet. The Internet is a global collection of connected computers that allows commercial and professional organizations, educational institutions, government agencies, and individuals to communicate electronically, access and share information, and conduct business.

The Internet has had, and is expected to continue to have, a significant impact on the global economy, as it changes the way many companies operate. Benefits of the Internet for businesses may include global scalability, acquisition of new clients, new revenue sources and increased efficiencies.

Internet Tollkeepers. The Fund intends to invest a substantial portion of its assets in companies the Investment Adviser describes as Internet Tollkeepers. In general, the Investment Adviser defines a tollkeeper as a company with predictable, sustainable or recurring revenue streams. Like a toll collector for a highway or bridge, these tollkeeper companies may grow revenue by increasing ''traffic,'' or customers and sales, and raising ''tolls,'' or prices. The Investment Adviser believes that the characteristics of many of these tollkeepers, including dominant market share and strong brand name, should enable them to consistently grow their business. An Internet Tollkeeper is a company that has developed or is seeking to develop predictable, sustainable or recurring revenue streams by applying the above characteristics to the growth of the Internet. The Investment Adviser does not define companies that merely have an Internet site or sell some products over the Internet as Internet Tollkeepers (although the Investment Adviser may invest in such companies as part of the Fund's 20% basket of securities which are not or may not be Internet Tollkeepers).

Internet Tollkeepers are media, telecommunications, technology and Internet-related companies which provide access, infrastructure, content and services to Internet companies and Internet users. The following represent examples of each of these

Goldman Sachs Internet Tollkeeper Fund continued

types of companies, but should not be construed to exclude other types of Internet Tollkeepers:

- Access providers enable individuals and businesses to connect to the Internet through, for example, cable systems.
- Infrastructure companies provide items such as servers, routers, software and storage necessary for companies to participate in the Internet.
- Media content providers own copyrights, distribution networks and/or programming. Copyright owners utilize the Internet as an additional distribution channel to sell their content.
- Service providers may facilitate transactions, communications, security, computer programming and back-office functions for Internet businesses. For example, Internet companies may contract out advertising sales or credit card clearing to service providers.

The Investment Adviser believes that an attractive way to invest in the Internet sector is to invest in businesses participating in the growth of the Internet that potentially have long-lasting strategic advantages. Characteristics of these companies may include: dominant market share, strong brand names, recurring revenue streams, cost advantages, economies of scale, financial strength, technological advantages and strong, experienced management teams.

Beneficiaries of the Internet that may meet the above criteria include those companies (Internet Tollkeepers) providing access, infrastructure, content, and services to Internet companies and Internet users. Companies whose rapid adoption of an Internet strategy is expected to improve their cost structure or competitive advantage and that the Investment Adviser believes exhibit a sustainable business model may also be candidates for purchase by the Fund. The Investment Adviser pays careful attention to the stock prices of these companies, seeking to purchase them at a discount to their intrinsic value.

Because of its narrow industry focus, the Fund's investment performance will be closely tied to many factors which affect the Internet and Internet-related industries. These factors include intense competition, consumer preferences, problems with product compatibility and government regulation. Internet and Internet-related securities may experience significant price movements caused by disproportionate investor optimism or pessimism with little or no basis in fundamental economic conditions. As a result, the Fund's NAV is more likely to have greater fluctuations than that of a Fund which invests in other industries.

Goldman Sachs CORE Tax-Managed Equity Fund

FUND FACTS	
Objective:	Long-term after-tax growth of capital
Benchmark:	Russell 3000 Index
Investment Focus:	A total market, broadly diversified portfolio of U.S. equity investments
Investment Style:	Tax-managed quantitative focus
Symbol:	GCTSX

INVESTMENT OBJECTIVE

The Fund seeks to provide long-term after-tax growth of capital through tax-sensitive participation in a broadly diversified portfolio of U.S. equity securities.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in equity investments in U.S. issuers, including foreign issuers that are traded in the United States.

The Fund uses both a variety of quantitative techniques and fundamental research when selecting investments which have the potential to maximize the Fund's after-tax return, and minimize capital gains and income distributions. The Fund will seek to maintain risk, style, capitalization and industry characteristics similar to the Russell 3000 Index.

Tax-Managed Investing. In managing the Fund, the Investment Adviser balances investment considerations and tax considerations. The Fund seeks to achieve returns primarily in the form of price appreciation (which is not subject to current tax), and may use different strategies in seeking tax-efficiency. These strategies include:

- Offsetting long-term and short-term capital gains with long-term and short-term capital losses and creating loss carry-forward positions
- Limiting portfolio turnover that may result in taxable gains
- Selling tax lots of securities that have a higher tax basis before selling tax lots of securities that have a lower basis

Goldman Sachs
CORE Tax-Managed Equity Fund continued

In situations where the Fund would otherwise be required to sell portfolio securities to meet shareholder redemption requests (and possibly realizing taxable gains), the Fund may borrow money to make the necessary redemption payments. In addition, Goldman Sachs may, but would not in any instance be required to, make contemporaneous purchases of Fund shares for its own account that would provide the Fund with cash to meet its redemption payment obligations.

When the Fund borrows money, the Investment Adviser intends to hedge the excess market exposure created by borrowing. There is no guarantee such hedging will be completely effective.

The Fund may not achieve its investment objective of providing ''after-tax'' growth of capital for various reasons. Implementation of tax-managed investment strategies may not materially reduce the amount of taxable income and capital gains distributed by the Fund to shareholders.

Other. The Fund's investments in fixed-income securities are limited to securities that are considered cash equivalents.

The Fund is not a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal income tax consequences of their investments.

Goldman Sachs Real Estate Securities Fund

FUND FACTS	
Objective:	Total return comprised of long-term growth of capital and dividend income
Benchmark:	Wilshire Real Estate Securities Index
Investment Focus:	REITs and real estate industry companies
Investment Style:	Growth at a discount
Symbol:	GRESX

INVESTMENT OBJECTIVE

The Fund seeks total return comprised of long-term growth of capital and dividend income.

PRINCIPAL INVESTMENT STRATEGIES

Equity Investments. The Fund invests, under normal circumstances, substantially all and at least 80% of its net assets plus any borrowings for investment purposes (measured at time of purchase) (''Net Assets'') in a diversified portfolio of equity investments in issuers that are primarily engaged in or related to the real estate industry. The Fund expects that a substantial portion of its assets will be invested in REITs and real estate industry companies.

A ''real estate industry company'' is a company that derives at least 50% of its gross revenues or net profits from the ownership, development, construction, financing, management or sale of commercial, industrial or residential real estate or interests therein.

The Fund's investment strategy is based on the premise that property market fundamentals are the primary determinant of growth, underlying the success of companies in the real estate industry. The Investment Adviser focuses on companies that can achieve sustainable growth in cash flow and dividend paying capability. The Investment Adviser attempts to purchase securities so that its underlying portfolio will be diversified geographically and by property type. Although the Fund will invest primarily in publicly traded U.S. securities, it may

Goldman Sachs
Real Estate Securities Fund continued

invest up to 15% of its total assets in foreign securities, including securities of issuers in emerging countries and securities quoted in foreign currencies.

Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs. Mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skill, may not be diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation. REITs are also subject to the possibilities of failing to qualify for tax free pass-through of income and failing to maintain their exemptions from investment company registration. REITs whose underlying properties are concentrated in a particular industry or geographic region are also subject to risks affecting such industries and regions.

REITs (especially mortgage REITs) are also subject to interest rate risks. When interest rates decline, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. In contrast, as interest rates on adjustable rate mortgage loans are reset periodically, yields on a REIT's investment in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations.

The REIT investments of the Real Estate Securities Fund often do not provide complete tax information to the Fund until after the calendar year-end. Consequently, because of the delay, it may be necessary for the Fund to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31.

Other. The Fund may invest up to 20% of its total assets in fixed-income investments, such as government, corporate debt and bank obligations, that offer the potential to further the Fund's investment objective.

Other Investment Practices and Securities

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences between the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information about these and other investment practices and securities see Appendix A.

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

General Risks:

- ***Credit/Default Risk***—The risk that an issuer or guarantor of fixed-income securities held by a Fund may default on its obligation to pay interest and repay principal.
- ***Foreign Risk***—The risk that when a Fund invests in foreign securities, it will be subject to risk of loss not typically associated with domestic issuers. Loss may result because of less foreign government regulation, less public information and less economic, political and social stability. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions. A Fund will also be subject to the risk of negative foreign currency rate fluctuations.

Foreign risks will normally be greatest when a Fund invests in issuers located in emerging countries.

- ***Emerging Countries Risk***—The securities markets of Asian, Latin and South American, Eastern European, African and other emerging countries are less liquid, are especially subject to greater price volatility, have smaller market capitalizations, have less government regulation and are not subject to as extensive and frequent accounting, financial and other reporting requirements as the securities markets of more developed countries. Further, investment in equity securities of issuers located in certain emerging countries involves risk of loss resulting from problems in share registration and custody and substantial economic and political disruptions. These risks are not normally associated with investments in more developed countries.
- ***Industry Concentration Risk***—The risk that a Fund concentrates its investments in specific industry sectors that have historically experienced substantial price volatility. A Fund is subject to greater risk of loss as a result of adverse economic, business or other developments than if its investments were diversified across different industry sectors. Securities of issuers held by a Fund may lack sufficient market liquidity to enable a Fund to sell the securities at an advantageous time or without a substantial drop in price.
- ***Stock Risk***—The risk that stock prices have historically risen and fallen in periodic cycles. Recently, U.S. and foreign stock markets have experienced substantial price volatility.
- ***Derivatives Risk***—The risk that loss may result from a Fund's investments in options, futures, swaps, structured securities and other derivative instruments. These instruments may be leveraged so that small changes may produce disproportionate losses to a Fund.
- ***Interest Rate Risk***—The risk that when interest rates increase, fixed-income securities held by a Fund will decline in value. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities.
- ***IPO Risk***—The risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When a Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance.
- ***Management Risk***—The risk that a strategy used by the Investment Adviser may fail to produce the intended results.

- ***Market Risk***—The risk that the value of the securities in which a Fund invests may go up or down in response to the prospects of individual companies, particular industry sectors and/or general economic conditions. Price changes may be temporary or last for extended periods.
- ***Liquidity Risk***—The risk that a Fund will not be able to pay redemption proceeds within the time period stated in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. Funds that invest in non-investment grade fixed-income securities, small and mid-capitalization stocks, REITs or emerging country issuers will be especially subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities within particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic, market or political events, or adverse investor perceptions whether or not accurate. The Goldman Sachs Asset Allocation Portfolios (the ''Asset Allocation Portfolios'') expect to invest a significant percentage of their assets in the Real Estate Securities Fund and other funds for which GSAM or Goldman Sachs now or in the future acts as investment adviser or underwriter. Redemptions by an Asset Allocation Portfolio of its position in a Fund may further increase liquidity risk and may impact a Fund's NAV.
- ***REIT Risk***—Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. REITs whose underlying properties are concentrated in a particular industry or geographic region are also subject to risks affecting such industries and regions. The securities of REITs involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Mid Cap and Small Cap Risk***—The securities of small capitalization and mid-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price.
- ***Investment Style Risk***—Different investment styles tend to shift in and out of favor depending upon market and economic conditions as well as investor sentiment. A Fund may outperform or underperform other funds that employ a different investment style. Examples of different investment styles include growth and value investing. Growth stocks may be more volatile than other stocks because they are more sensitive to investor perceptions of the issuing company's growth of earnings

potential. Also, since growth companies usually invest a high portion of earnings in their business, growth stocks may lack the dividends of some value stocks that can cushion stock prices in a falling market. Growth oriented funds will typically underperform when value investing is in favor. Value stocks are those that are undervalued in comparison to their peers due to adverse business developments or other factors.

Other Specific Risks:

- ***Internet Risk***—The risk that the stock prices of Internet and Internet-related companies and therefore the value of the Internet Tollkeeper Fund will experience significant price movements as a result of intense market volatility, worldwide competition, consumer preferences, product compatibility, product obsolescence, government regulation, excessive investor optimism or pessimism, or other factors.
- ***Tax-Managed Investment Risk***—Because the Investment Adviser balances investment considerations and tax considerations, the pre-tax performance of the CORE Tax-Managed Equity Fund may be lower than the performance of a similar CORE Fund that is not tax-managed. This is because the Investment Adviser may choose not to make certain investments that may result in taxable distributions. Even though tax-managed strategies are being used, they may not reduce the amount of taxable income and capital gains distributed by the Fund to shareholders. A high percentage of the Fund's net asset value (''NAV'') may consist of unrealized capital gains, which represent a potential future tax liability to shareholders. The Fund is not a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal income tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Service Shares from year to year; and (b) how the average annual total returns of a Fund's Service Shares compare to those of broad-based securities market indices. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced.

INFORMATION ON AFTER-TAX RETURNS

These definitions apply to the after-tax returns.

Average Annual Total Returns Before Taxes. These returns do not reflect taxes on distributions on a Fund's Service Shares nor do they show how performance can be impacted by taxes when shares are redeemed (sold) by you.

Average Annual Total Returns After Taxes on Distributions. These returns assume that taxes are paid on distributions on a Fund's Service Shares (i.e., dividends and capital gains) but do not reflect taxes that may be incurred upon redemption (sale) of the Service Shares at the end of the performance period.

Average Annual Total Returns After Taxes on Distributions and Sale of Shares. These returns reflect taxes paid on distributions on a Fund's Service Shares and taxes applicable when the shares are redeemed (sold).

Note on Tax Rates. The after-tax performance figures are calculated using the historically highest individual federal marginal income tax rates at the time of the distributions (as of the date of this Prospectus, 38.6% for ordinary income dividends and long-term 20% for capital gains distributions) and do not reflect state and local taxes. In calculating the federal income taxes due on redemptions, capital gains taxes resulting from a redemption are subtracted from the redemption proceeds and the tax benefits from capital losses resulting from the redemption are added to the redemption proceeds. Under certain circumstances, the addition of the tax benefits from capital losses resulting from redemptions may cause the Returns After Taxes on Distributions and Sale of Fund Shares to be greater than the Returns After Taxes on Distributions or even the Returns Before Taxes.

Fund Fees and Expenses (Service Shares)

This table describes the fees and expenses that you would pay if you buy and hold Service Shares of a Fund.

	Internet Tollkeeper Fund	CORE Tax-Managed Equity Fund	Real Estate Securities Fund
Shareholder Fees (fees paid directly from your investment):			
Maximum Sales Charge (Load) Imposed on Purchases	None	None	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends	None	None	None
Redemption Fees	None	None	None
Exchange Fees	None	None	None
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]			
Management Fees	1.00%	0.75%	1.00%
Other Expenses	0.66%	0.83%	0.69%
Service Fees[2]	0.25%	0.25%	0.25%
Shareholder Administration Fees	0.25%	0.25%	0.25%
All Other Expenses[3]	0.16%	0.33%	0.19%
Total Fund Operating Expenses*	1.66%	1.58%	1.69%

See page 22 for all other footnotes.

* As a result of current expense limitations, ''Other Expenses'' and ''Total Fund Operating Expenses'' of the Funds which are actually incurred as of the date of this Prospectus are as set forth below. The expense limitations may be terminated at any time at the option of the Investment Adviser. If this occurs, ''Other Expenses'' and ''Total Fund Operating Expenses'' may increase without shareholder approval.

	Internet Tollkeeper Fund	CORE Tax-Managed Equity Fund	Real Estate Securities Fund
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]			
Management Fees	*1.00%*	*0.75%*	*1.00%*
Other Expenses	*0.60%*	*0.59%*	*0.54%*
Service Fees[2]	*0.25%*	*0.25%*	*0.25%*
Shareholder Administration Fees	*0.25%*	*0.25%*	*0.25%*
All Other Expenses[3]	*0.10%*	*0.09%*	*0.04%*
Total Fund Operating Expenses (after current expense limitations)	*1.60%*	*1.34%*	*1.54%*

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on actual expenses.
[2] Service Organizations may charge other fees to their customers who are beneficial owners of Service Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.
[3] ''All Other Expenses'' include transfer agency fees and expenses equal on an annualized basis to 0.04% of the average daily net assets of each Fund's Service Shares, plus all other ordinary expenses not detailed above. The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' (excluding management fees, transfer agency fees and expenses, service fees, shareholder administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to the following percentages of each Fund's average daily net assets:

Fund	Other Expenses
Internet Tollkeeper	*0.06%*
CORE Tax-Managed Equity	*0.05%*
Real Estate Securities	*0.00%*

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Service Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Internet Tollkeeper	$169	$523	$902	$1,965
CORE Tax-Managed Equity	$161	$499	$860	$1,878
Real Estate Securities	$172	$533	$918	$1,998

Service Organizations that invest in Service Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Service Shares may receive other compensation in connection with the sale and distribution of Service Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Statement of Additional Information (''Additional Statement'').

Service Providers

INVESTMENT ADVISER

Investment Adviser

Goldman Sachs Asset Management, L.P. (''GSAM'')
32 Old Slip
New York, New York 10005

Prior to the end of April, 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman, Sachs & Co. (''Goldman Sachs'') served as the Funds' investment adviser. On or about April 26, 2003, GSAM assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Funds. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission (the ''SEC'') since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser makes the investment decisions for the Funds and places purchase and sale orders for the Funds' portfolio transactions in U.S. and foreign markets. As permitted by applicable law, these orders may be directed to any brokers, including Goldman Sachs and its affiliates. While the Investment Adviser is ultimately responsible for the management of the Funds, it is able to draw upon the research and expertise of its asset management affiliates for portfolio decisions and management with respect to certain portfolio securities. In addition, the Investment Adviser has access to the research and certain proprietary technical models developed by Goldman Sachs, and will apply quantitative and qualitative analysis in determining the appropriate allocations among categories of issuers and types of securities.

The Investment Adviser also performs the following additional services for the Funds:

- Supervises all non-advisory operations of the Funds
- Provides personnel to perform necessary executive, administrative and clerical services to the Funds
- Arranges for the preparation of all required tax returns, reports to shareholders, prospectuses and statements of additional information and other reports filed with the SEC and other regulatory authorities

- Maintains the records of each Fund
- Provides office space and all necessary office equipment and services

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Internet Tollkeeper	1.00%	1.00%
CORE Tax-Managed Equity	0.75%	0.75%
Real Estate Securities	1.00%	1.00%

The difference, if any, between the stated fees and the actual fees paid by the Fund reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

FUND MANAGERS

Growth Investment Team

- 21-year consistent investment style applied through diverse and complete market cycles
- More than $18 billion in equities currently under management
- More than 300 client account relationships
- A portfolio management and analytical team with more than 250 years combined investment experience

- Asset management

Name and Title	Fund Responsibility	Years Primarily Responsible	Five Year Employment History
Herbert E. Ehlers Managing Director Chief Investment Officer	Senior Portfolio Manager—Real Estate Securities	Since 1998	Mr. Ehlers joined the Investment Adviser as a senior portfolio manager and Chief Investment Officer of the Growth team in 1997. From 1981 to 1997, he was the Chief Investment Officer and Chairman of Liberty and its predecessor firm, Eagle.
Mark Howard-Johnson, CFA Vice President	Senior Portfolio Manager—Real Estate Securities	Since 1998	Mr. Howard-Johnson joined the Investment Adviser as a portfolio manager in 1998. His previous experience includes 15 years in the real estate finance business.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

ACTIVITIES OF GOLDMAN SACHS AND ITS AFFILIATES AND OTHER ACCOUNTS MANAGED BY GOLDMAN SACHS

The involvement of the Investment Adviser, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to a Fund or limit a Fund's investment activities. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the Funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the Funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Funds. The results of a Fund's investment activities, therefore, may differ from those of Goldman Sachs and its affiliates, and it is possible that a Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Funds may, from time to time, enter into transactions in which Goldman Sachs or its other clients have an adverse interest. A Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions.

Under a securities lending program approved by the Funds' Board of Trustees, the Funds have retained an affiliate of the Investment Adviser, to serve as the securities lending agent for each Fund to the extent that the Funds engage in the securities lending program. For these services, the lending agent may receive a fee from the Funds, including a fee based on the returns earned on the Funds' investment of the cash received as collateral for the loaned securities. In addition, the Funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Funds' portfolio investment transactions.

Dividends

Each Fund pays dividends from its investment company taxable income and distributions from net realized capital gains (although the CORE Tax-Managed Fund attempts to minimize capital gains and income distributions in seeking its investment objective). You may choose to have dividends and distributions paid in:

- Cash
- Additional shares of the same class of the same Fund
- Shares of the same or an equivalent class of another Goldman Sachs Fund. Special restrictions may apply for certain Goldman Sachs Institutional Liquid Assets Portfolios (''ILA Portfolios''). See the statement of additional information (the ''Additional Statement'').

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time before the record date for a particular dividend or distribution. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

The election to reinvest dividends and distributions in additional shares will not affect the tax treatment of such dividends and distributions, which will be treated as received by you and then used to purchase the shares.

Dividends from investment company taxable income and distributions from net realized capital gains are declared and paid as follows:

Fund	Investment Income Dividends	Capital Gains Distributions
Internet Tollkeeper	Annually	Annually
CORE Tax-Managed Equity	Annually	Annually
Real Estate Securities	Quarterly	Annually

From time to time a portion of a Fund's dividends may constitute a return of capital.

When you purchase shares of a Fund, part of the NAV per share may be represented by undistributed income or undistributed realized gains that have previously been earned by the Fund. Therefore, subsequent distributions on such shares from such income or realized gains may be taxable to you even if the NAV of the shares is, as a result of the distributions, reduced below the cost of such shares and the distributions (or portions thereof) represent a return of a portion of the purchase price.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Service Shares.

HOW TO BUY SHARES

How Can I Purchase Service Shares Of The Funds?

Generally, Service Shares may be purchased only through institutions that have agreed to provide shareholder administration and personal and account maintenance services to their customers who are the beneficial owners of Service Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Service Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. No sales load is charged. Purchases of Service Shares must be settled within three business days of receipt of a complete purchase order.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place an order with Goldman Sachs at 1-800-621-2550 and either:

- Wire federal funds to The Northern Trust Company (''Northern''), as subcustodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian) on the next business day; ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Service Shares:

- Personal and account maintenance services; and
- Shareholder administration services.

Personal and account maintenance services include:

- Providing facilities to answer inquiries and responding to correspondence with the Service Organization's customers
- Acting as liaison between the Service Organization's customers and the Trust
- Assisting customers in completing application forms, selecting dividend and other options, and similar services

Shareholder administration services include:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem and exchange shares for customers
- Processing payments for customers

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a service plan and a separate shareholder administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payments for their services from the Trust. These payments are equal to 0.25% (annualized) for personal and account maintenance services plus an additional 0.25% (annualized) for shareholder administration services of the average daily net assets of the Service Shares of the Funds that are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge

to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds. Additional compensation based on sales may, but is normally not expected to, exceed 0.50% (annualized) of the amount invested.

In addition to Service Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), have different minimum investment requirements and are entitled to different services than Service Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

The Funds do not have any minimum purchase or account requirements with respect to Service Shares. A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Service Shares, and may establish other requirements such as a minimum account balance. A Service Organization may redeem Service Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Reject or restrict any purchase or exchange order for any reason in its discretion. Without limiting the foregoing, the Trust may reject or restrict purchase and exchange orders by a particular purchaser (or group of related purchasers) when a pattern of frequent purchases, sales or exchanges of Service Shares of a Fund is evident, or if purchases, sales or exchanges are, or a subsequent abrupt redemption might be, of a size that would disrupt the management of a Fund.
- Close a Fund to new investors from time to time and reopen a Fund whenever it is deemed appropriate by a Fund's Investment Adviser.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Service Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

The Funds' investments are valued based on market quotations or, if accurate quotations are not readily available, the fair value of the Fund's investments may be determined in good faith under procedures established by the Trustees.

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will generally not be priced on any day the New York Stock Exchange is closed.
- When you buy shares, you pay the NAV next calculated *after* the Funds receive your order in proper form.
- When you sell shares, you receive the NAV next calculated *after* the Funds receive your order in proper form.
- The Trust reserves the right to reprocess purchase, redemption and exchange transactions that were processed at an NAV other than a Fund's official closing NAV that is subsequently adjusted, and to recover amounts from (or distribute amounts to) shareholders accordingly based on the official closing NAV.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open a Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

Foreign securities may trade in their local markets on days a Fund is closed. As a result, the NAV of a Fund that holds foreign securities may be impacted on days when investors may not purchase or redeem Fund shares.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before

the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Service Shares Of The Funds?

Generally, Service Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Service Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** Redemption proceeds may be sent to recordholders by check or by wire (if the wire instructions are on record).

A Service Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

How Are Redemption Proceeds Paid?

By Wire: The Funds will arrange for redemption proceeds to be wired as federal funds to the bank account designated in the recordholder's Account Application. The following general policies govern wiring redemption proceeds:

- Redemption proceeds will normally be wired on the next business day in federal funds (for a total of one business day delay), but may be paid up to three business days following receipt of a properly executed wire transfer redemption request. If the shares to be sold were recently paid for by check, the Fund will pay the redemption proceeds when the check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day that the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- To change the bank designated on your Account Application, you must send written instructions signed by an authorized person designated on the Account Application to the Service Organization.
- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organization.

By Check: A recordholder may elect in writing to receive redemption proceeds by check. Redemption proceeds paid by check will normally be mailed to the address of record within three business days of receipt of a properly executed redemption request. If the shares to be sold were recently paid for by check, the Fund will pay the redemption proceeds when the check has cleared, which may take up to 15 days.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Service Shares of any Service Organization whose account balance falls below $50 as a result of a redemption. The Funds will not redeem Service Shares on this basis if the value of the account falls below the minimum account balance solely as a result of market conditions. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities. The Fund may, in its discretion, pay redemption proceeds in-kind at any time or if requested by a shareholder. The Fund anticipates that it will normally grant shareholder requests for an in-kind distribution so long as the distribution is in the best interests of the Fund and its other shareholders.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Service Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Service Shares of a Fund at NAV for Service Shares of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirement of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

Restrictions on Excessive Trading Practices. The Trust does not permit market-timing or other excessive trading practices. Purchases and exchanges should be made for long-term investment purposes only. The Trust and Goldman Sachs reserve the right to reject or restrict purchase or exchange requests from any investor. Excessive, short-term (market-timing) trading practices may disrupt portfolio management strategies, harm Fund performance and negatively impact long-term shareholders. The Trust and Goldman Sachs will not be held liable for any loss resulting from rejected purchase or exchange orders. To minimize harm to the Trust (or Goldman Sachs) and its shareholders, the Trust (or Goldman Sachs) will exercise these rights if, in the Trust's (or Goldman Sachs') judgment, an investor has a history of excessive trading or if an investor's trading, in the judgment of the Trust (or Goldman Sachs), has been or may be disruptive to a Fund. In making this judgment, trades executed in multiple accounts under common ownership or control may be considered together.

What Types Of Reports Will Be Sent Regarding Investments In Service Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Service Organizations will also be provided with a printed confirmation for each transaction in their account and a monthly account statement. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Service Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions and the sale of your Fund shares.

DISTRIBUTIONS

Each Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from the Funds are generally subject to federal income tax, and may also be subject to state or local taxes (although the CORE Tax-Managed Equity Fund attempts to minimize capital gains and income distributions in seeking its investment objective). This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. For federal tax purposes, the Funds' income dividend distributions and short-term capital gain distributions are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. A percentage of the Funds' dividends paid to corporate shareholders may be eligible for the corporate dividends-received deduction. This percentage may, however, be reduced as a result of a Fund's securities lending activities. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

Each Fund may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Funds may deduct these taxes in computing their taxable income.

If you buy shares of a Fund before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as ''buying a dividend.''

SALES AND EXCHANGES

Your sale of Fund shares is a taxable transaction for federal income tax purposes, and may also be subject to state and local taxes. For tax purposes, the exchange of your Fund shares for shares of a different Goldman Sachs Fund is the same as a sale. When you sell your shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the shares and the amount received. Generally, this gain or loss is long-term or short-term depending on whether your holding period exceeds twelve months, except that any loss realized on shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the shares. Additionally, any loss realized on a sale, exchange or redemption of shares of a Fund may be disallowed under ''wash sale'' rules to the extent the shares disposed of are replaced with other shares of that Fund within a period of 61 days beginning 30 days before and ending 30 days after the shares are disposed of, such as pursuant to a dividend reinvestment in shares of that Fund. If disallowed, the loss will be reflected in an adjustment to the basis of the shares acquired.

OTHER INFORMATION

When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Investments in the CORE Tax-Managed Fund are subject to the tax risks described previously under ''Principal Risks of the Funds.''

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

A. General Portfolio Risks

The Funds will be subject to the risks associated with equity investments. ‘‘Equity investments’’ may include common stocks, preferred stocks, interests in real estate investment trusts, convertible debt obligations, convertible preferred stocks, equity interests in trusts, partnerships, joint ventures, limited liability companies and similar enterprises, warrants, stock purchase rights and synthetic and derivative instruments that have economic characteristics similar to equity securities. In general, the values of equity investments fluctuate in response to the activities of individual companies and in response to general market and economic conditions. Accordingly, the values of equity investments that a Fund holds may decline over short or extended periods. The stock markets tend to be cyclical, with periods when stock prices generally rise and periods when prices generally decline. This volatility means that the value of your investment in the Funds may increase or decrease. Recently, certain stock markets have experienced substantial price volatility.

To the extent that a Fund invests in fixed-income securities, that Fund will also be subject to the risks associated with its fixed-income securities. These risks include interest rate risk, credit risk and call/extension risk. In general, interest rate risk involves the risk that when interest rates decline, the market value of fixed-income securities tends to increase (although many mortgage-related securities will have less potential than other debt securities for capital appreciation during periods of declining rates). Conversely, when interest rates increase, the market value of fixed-income securities tends to decline. Credit risk involves the risk that an issuer or guarantor could default on its obligations, and a Fund will not recover its investment. Call risk and extension risk are normally present in mortgage-backed securities and asset-backed securities. For example, homeowners have the option to prepay their mortgages. Therefore, the duration of a security backed by home mortgages can either shorten (call risk) or lengthen (extension risk). In general, if interest rates on new mortgage loans fall sufficiently below the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to increase. Conversely, if mortgage loan interest rates rise above the interest rates on existing outstanding mortgage loans, the rate of prepayment would be expected to decrease. In either case, a change in the prepayment rate can result in losses to investors. The same would be true of asset-backed securities such as securities backed by car loans.

The Investment Adviser will not consider the portfolio turnover rate a limiting factor in making investment decisions for a Fund. A high rate of portfolio turnover (100% or more) involves correspondingly greater expenses which must be borne by a Fund and its shareholders, and is also likely to result in higher short-term capital gains taxable to shareholders. The portfolio turnover rate is calculated by dividing the lesser of the dollar amount of sales or purchases of portfolio securities by the average monthly value of a Fund's portfolio securities, excluding securities having a maturity at the date of purchase of one year or less. See ''Financial Highlights'' in Appendix B for a statement of the Funds' historical portfolio turnover rates.

The following sections provide further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment objectives, and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs.

B. Other Portfolio Risks

Risks of Investing in Internet and Internet-Related Companies. The Internet Tollkeeper Fund may invest in Internet and Internet-related companies. Internet and Internet-related companies are generally subject to a rate of change in technology which is higher than other industries and often requires extensive and sustained investment in research and development. As a result, Internet and Internet-related companies are exposed to the risk of rapid product obsolescence. Changes in governmental policies, such as telephone and cable regulations and anti-trust enforcement, and the need for regulatory approvals may have an adverse effect on the products, services and securities of Internet and Internet-related companies. Internet and Internet-related companies may also produce or use products or services that prove commercially unsuccessful. In addition, intense worldwide competitive pressures and changing demand, evolving industry standards, challenges in achieving product capability, loss of patent protection or proprietary rights, reduction or interruption in the supply of key components, changes in strategic alliances, frequent mergers or acquisitions or other factors can have a significant effect on the financial conditions of companies in these industries. Competitive pressures in the Internet and Internet-related industries may affect

negatively the financial condition of Internet and Internet-related companies. Internet and Internet-related companies are also subject to the risk of service disruptions and the risk of losses arising out of litigation related to these disruptions. In certain instances, Internet and Internet-related securities may experience significant price movements caused by disproportionate investor optimism or pessimism with little or no basis in fundamental economic conditions. As a result of these and other reasons, investments in the Internet and Internet-related industry can experience sudden and rapid appreciation and depreciation.

Risks of Initial Public Offerings. The Internet Tollkeeper and Real Estate Securities Funds may invest in IPOs. An IPO is a company's first offering of stock to the public. IPO risk is the risk that the market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. When a Fund's asset base is small, a significant portion of the Fund's performance could be attributable to investments in IPOs, because such investments would have a magnified impact on the Fund. As the Fund's assets grow, the effect of the Fund's investments in IPOs on the Fund's performance probably will decline, which could reduce the Fund's performance. Because of the price volatility of IPO shares, a Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of the Fund's portfolio and may lead to increased expenses to the Fund, such as commissions and transaction costs. By selling IPO shares, the Fund may realize taxable gains it will subsequently distribute to shareholders. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. There is no assurance that a Fund will be able to obtain allocable portions of IPO shares. The limited number of shares available for trading in some IPOs may make it more difficult for a Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares, by sales of additional shares and by concentration of control in existing management and principal shareholders.

Risks of Investing in Small Capitalization and Mid-Capitalization Companies and REITs. Each Fund may, to the extent consistent with its investment policies, invest in small and mid-capitalization companies and REITs. Investments in small and mid-capitalization companies and REITs involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Among the reasons for the greater price volatility of these investments are the less certain growth prospects of smaller firms and the lower degree of liquidity in the markets for such securities. Small and mid-capitalization companies and REITs may be thinly traded

and may have to be sold at a discount from current market prices or in small lots over an extended period of time. In addition, these securities are subject to the risk that during certain periods the liquidity of particular issuers or industries, or all securities in particular investment categories, will shrink or disappear suddenly and without warning as a result of adverse economic or market conditions, or adverse investor perceptions whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial drop in price. Small and mid-capitalization companies and REITs include ''unseasoned'' issuers that do not have an established financial history; often have limited product lines, markets or financial resources; may depend on or use a few key personnel for management; and may be susceptible to losses and risks of bankruptcy. Small and mid-capitalization companies may be operating at a loss or have significant variations in operating results; may be engaged in a rapidly changing business with products subject to a substantial risk of obsolescence; may require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition. In addition, these companies may face intense competition, including competition from companies with greater financial resources, more extensive development, manufacturing, marketing, and other capabilities, and a larger number of qualified managerial and technical personnel. Transaction costs for these investments are often higher than those of larger capitalization companies. Investments in small and mid-capitalization companies and REITs may be more difficult to price precisely than other types of securities because of their characteristics and lower trading volumes.

Risks of Foreign Investments. Each Fund may make foreign investments, although the CORE Tax-Managed Fund may only invest in foreign issuers that are traded in the United States. Foreign investments involve special risks that are not typically associated with U.S. dollar denominated or quoted securities of U.S. issuers. Foreign investments may be affected by changes in currency rates, changes in foreign or U.S. laws or restrictions applicable to such investments and changes in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. In addition, if the currency in which a Fund receives dividends, interest or other payments declines in value against the U.S. dollar before such income is distributed as dividends to shareholders or converted to U.S. dollars, the Fund may have to sell portfolio securities to obtain sufficient cash to pay such dividends.

Brokerage commissions, custodial services and other costs relating to investment in international securities markets generally are more expensive than in the United States. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign issuers are not generally subject to uniform accounting, auditing and financial reporting standards comparable to those applicable to U.S. issuers. There may be less publicly available information about a foreign issuer than about a U.S. issuer. In addition, there is generally less government regulation of foreign markets, companies and securities dealers than in the United States and the legal remedies for investors may be more limited than the remedies available in the United States. Foreign securities markets may have substantially less volume than U.S. securities markets and securities of many foreign issuers are less liquid and more volatile than securities of comparable domestic issuers. Furthermore, with respect to certain foreign countries, there is a possibility of nationalization, expropriation or confiscatory taxation, imposition of withholding or other taxes on dividend or interest payments (or, in some cases, capital gains distributions), limitations on the removal of funds or other assets from such countries, and risks of political or social instability or diplomatic developments which could adversely affect investments in those countries.

Concentration of a Fund's assets in one or a few countries and currencies will subject a Fund to greater risks than if a Fund's assets were not geographically concentrated.

Investment in sovereign debt obligations by a Fund involves risks not present in debt obligations of corporate issuers. The issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due in accordance with the terms of such debt, and a Fund may have limited recourse to compel payment in the event of a default. Periods of economic uncertainty may result in the volatility of market prices of sovereign debt, and in turn a Fund's NAV, to a greater extent than the volatility inherent in debt obligations of U.S. issuers.

A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

Investments in foreign securities may take the form of sponsored and unsponsored American Depositary Receipts (''ADRs'') and Global Depositary Receipts (''GDRs''). Certain Funds may also invest in European Depositary Receipts (''EDRs'') or other similar instruments representing securities of foreign issuers. ADRs, GDRs and EDRs represent the right to receive securities of foreign issuers deposited in a bank or other depository. ADRs and certain GDRs are traded in the United States. GDRs may be traded in either the United States or in foreign markets. EDRs are traded primarily outside the United States. Prices of ADRs are quoted in U.S. dollars. Similarly, EDRs and GDRs are receipts evidencing an arrangement with a non-U.S. bank. EDRs and GDRs are not necessarily quoted in the same currency as the underlying security.

Risks of Euro. On January 1, 1999, the European Economic and Monetary Union (EMU) introduced a new single currency called the euro. The euro has replaced the national currencies of the following member countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

The new European Central Bank has control over each country's monetary policies. Therefore, the member countries no longer control their own monetary policies by directing independent interest rates for their currencies. The national governments of the participating countries, however, have retained the authority to set tax and spending policies and public debt levels.

The change to the euro as a single currency is relatively new and untested. The elimination of currency risk among EMU countries has affected the economic environment and behavior of investors, particularly in European markets, but the long term impact of those changes on currency values or on the business or financial condition of European countries and issuers cannot be fully assessed at this time. In addition, the introduction of the euro presents other unique uncertainties, including the fluctuation of the euro relative to non-euro currencies; whether the interest rate, tax and labor regimes of European countries participating in the euro will converge over time; and whether the conversion of the currencies of other countries that now are or may in the future become members of the European Union (''EU'') will have an impact on the euro. Also, it is possible that the euro could be abandoned in the future by countries that have already adopted its use. These or other events, including political and economic developments, could cause market disruptions, and could adversely affect the value of securities held by the Funds. Because of the number of countries using this single currency, a significant portion of the assets held by the Funds may be denominated in the euro.

Risks of Emerging Countries. Certain Funds may invest in securities of issuers located in emerging countries. The risks of foreign investment are heightened when

the issuer is located in an emerging country. Emerging countries are generally located in the Asia and Pacific regions, Eastern Europe, Latin and South America and Africa. A Fund's purchase and sale of portfolio securities in certain emerging countries may be constrained by limitations relating to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. Such limitations may be computed based on the aggregate trading volume by or holdings of a Fund, the Investment Adviser, its affiliates and their respective clients and other service providers. A Fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Foreign investment in the securities markets of certain emerging countries is restricted or controlled to varying degrees which may limit investment in such countries or increase the administrative costs of such investments. For example, certain Asian countries require governmental approval prior to investments by foreign persons or limit investment by foreign persons to only a specified percentage of an issuer's outstanding securities or a specific class of securities which may have less advantageous terms (including price) than securities of the issuer available for purchase by nationals. In addition, certain countries may restrict or prohibit investment opportunities in issuers or industries deemed important to national interests. Such restrictions may affect the market price, liquidity and rights of securities that may be purchased by a Fund. The repatriation of both investment income and capital from certain emerging countries is subject to restrictions such as the need for governmental consents. In situations where a country restricts direct investment in securities (which may occur in certain Asian and other countries), a Fund may invest in such countries through other investment funds in such countries.

Many emerging countries have recently experienced currency devaluations and substantial (and, in some cases, extremely high) rates of inflation. Other emerging countries have experienced economic recessions. These circumstances have had a negative effect on the economies and securities markets of such emerging countries. Economies in emerging countries generally are dependent heavily upon commodity prices and international trade and, accordingly, have been and may continue to be affected adversely by the economies of their trading partners, trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade.

Many emerging countries are subject to a substantial degree of economic, political and social instability. Governments of some emerging countries are authoritarian in nature or have been installed or removed as a result of military coups, while

governments in other emerging countries have periodically used force to suppress civil dissent. Disparities of wealth, the pace and success of democratization, and ethnic, religious and racial disaffection, among other factors, have also led to social unrest, violence and/or labor unrest in some emerging countries. Unanticipated political or social developments may result in sudden and significant investment losses. Investing in emerging countries involves greater risk of loss due to expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. As an example, in the past, some Eastern European governments have expropriated substantial amounts of private property, and many claims of the property owners have never been fully settled. There is no assurance that similar expropriations will not recur in Eastern European or other countries.

A Fund's investment in emerging countries may also be subject to withholding or other taxes, which may be significant and may reduce the return from an investment in such countries to the Fund.

Settlement procedures in emerging countries are frequently less developed and reliable than those in the United States and may involve a Fund's delivery of securities before receipt of payment for their sale. In addition, significant delays may occur in certain markets in registering the transfer of securities. Settlement or registration problems may make it more difficult for a Fund to value its portfolio securities and could cause the Fund to miss attractive investment opportunities, to have a portion of its assets uninvested or to incur losses due to the failure of a counterparty to pay for securities the Fund has delivered or the Fund's inability to complete its contractual obligations because of theft or other reasons.

The creditworthiness of the local securities firms used by a Fund in emerging countries may not be as sound as the creditworthiness of firms used in more developed countries. As a result, the Fund may be subject to a greater risk of loss if a securities firm defaults in the performance of its responsibilities.

The small size and inexperience of the securities markets in certain emerging countries and the limited volume of trading in securities in those countries may make a Fund's investments in such countries less liquid and more volatile than investments in countries with more developed securities markets (such as the United States, Japan and most Western European countries). A Fund's investments in emerging countries are subject to the risk that the liquidity of a particular investment, or investments generally, in such countries will shrink or disappear suddenly and without warning as a result of adverse economic, market or political conditions or adverse investor perceptions, whether or not accurate. Because of the lack of sufficient market liquidity, a Fund may incur losses because it will be required to effect sales at a disadvantageous time and only then at a substantial

drop in price. Investments in emerging countries may be more difficult to price precisely because of the characteristics discussed above and lower trading volumes.

A Fund's use of foreign currency management techniques in emerging countries may be limited. Due to the limited market for these instruments in emerging countries, the Investment Adviser does not currently anticipate that a significant portion of the Funds' currency exposure in emerging countries, if any, will be covered by such instruments.

Risks of Derivative Investments. A Fund's transactions, if any, in options, futures, options on futures, swaps, interest rate caps, floors and collars, structured securities and foreign currency transactions involve additional risk of loss. Loss can result from a lack of correlation between changes in the value of derivative instruments and the portfolio assets (if any) being hedged, the potential illiquidity of the markets for derivative instruments, or the risks arising from margin requirements and related leverage factors associated with such transactions. The use of these management techniques also involves the risk of loss if the Investment Adviser is incorrect in its expectation of fluctuations in securities prices, interest rates or currency prices. Each Fund may also invest in derivative investments for non-hedging purposes (that is, to seek to increase total return). Investing for non-hedging purposes is considered a speculative practice and presents even greater risk of loss.

Risks of Illiquid Securities. Each Fund may invest up to 15% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain over-the-counter options
- Certain structured securities and all swap transactions
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ''4(2) commercial paper'' or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933 (''144A Securities'').

Investing in 144A Securities may decrease the liquidity of a Fund's portfolio to the extent that qualified institutional buyers become for a time uninterested in purchasing these restricted securities. The purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be

significant, from the market price of comparable securities for which a liquid market exists.

Credit/Default Risks. Debt securities purchased by the Funds may include securities (including zero coupon bonds) issued by the U.S. government (and its agencies, instrumentalities and sponsored enterprises), foreign government, domestic and foreign corporations, banks and other issuers. Some of these fixed-income securities are described in the next section below. Further information is provided in the Additional Statement.

Debt securities rated BBB or higher by Standard & Poor's Rating Group (''Standard & Poor's''), or Baa or higher by Moody's Investors Service, Inc. (''Moody's'') or having a comparable rating by another NRSRO are considered ''investment grade.'' Securities rated BBB or Baa are considered medium-grade obligations with speculative characteristics, and adverse economic conditions or changing circumstances may weaken their issuers' capacity to pay interest and repay principal. A security will be deemed to have met a rating requirement if it receives the minimum required rating from at least one such rating organization even though it has been rated below the minimum rating by one or more other rating organizations, or if unrated by such rating organizations, the security is determined by the Investment Adviser to be of comparable credit quality. If a security satisfies a Fund's minimum rating requirement at the time of purchase and is subsequently downgraded below that rating, the Fund will not be required to dispose of the security. If a downgrade occurs, the Investment Adviser will consider which action, including the sale of the security, is in the best interest of a Fund and its shareholders.

Certain Funds may invest in fixed-income securities rated BB or Ba or below (or comparable unrated securities) which are commonly referred to as ''junk bonds.'' Junk bonds are considered predominantly speculative and may be questionable as to principal and interest payments.

In some cases, junk bonds may be highly speculative, have poor prospects for reaching investment grade standing and be in default. As a result, investment in such bonds will present greater speculative risks than those associated with investment in investment grade bonds. Also, to the extent that the rating assigned to a security in a Fund's portfolio is downgraded by a rating organization, the market price and liquidity of such security may be adversely affected.

Temporary Investment Risks. Each Fund may, for temporary defensive purposes, invest a certain percentage of its total assets in:

- U.S. government securities
- Commercial paper rated at least A-2 by Standard & Poor's; P-2 by Moody's or having a comparable rating by another NRSRO
- Certificates of deposit
- Bankers' acceptances
- Repurchase agreements
- Non-convertible preferred stocks and non-convertible corporate bonds with a remaining maturity of less than one year

When a Fund's assets are invested in such instruments, the Fund may not be achieving its investment objective.

C. Portfolio Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks.

The Funds may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies. Further information is provided in the Additional Statement, which is available upon request.

Convertible Securities. Each Fund may invest in convertible securities. Convertible securities are preferred stock or debt obligations that are convertible into common stock. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. Convertible securities in which a Fund invests are subject to the same rating criteria as its other investments in fixed-income securities. Convertible securities have both equity and fixed-income risk characteristics. Like all fixed-income securities, the value of convertible securities is susceptible to the risk of market losses attributable to changes in interest rates. Generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. However, when the market price of the common stock underlying a convertible security exceeds the conversion price of the convertible security, the convertible security tends to reflect the market price of the underlying common stock. As the market price of the underlying common stock declines, the convertible security, like a fixed-income security, tends to trade increasingly on a yield basis, and thus may not decline in price to the same extent as the underlying common stock.

Foreign Currency Transactions. Certain Funds may, to the extent consistent with its investment policies, purchase or sell foreign currencies on a cash basis or through forward contracts. A forward contract involves an obligation to purchase or sell a specific currency at a future date at a price set at the time of the contract. A Fund may engage in foreign currency transactions for hedging purposes and to seek to protect against anticipated changes in future foreign currency exchange rates. Certain Funds may also enter into such transactions to seek to increase total return, which is considered a speculative practice.

Some Funds may also engage in cross-hedging by using forward contracts in a currency different from that in which the hedged security is denominated or quoted. A Fund may hold foreign currency received in connection with investments in foreign securities when, in the judgment of the Investment Adviser, it would be beneficial to convert such currency into U.S. dollars at a later date (*e.g.* the Investment Adviser may anticipate the foreign currency to appreciate against the U.S. dollar).

Currency exchange rates may fluctuate significantly over short periods of time, causing, along with other factors, a Fund's NAV to fluctuate (when the Fund's NAV fluctuates, the value of your shares may go up or down). Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad.

The market in forward foreign currency exchange contracts, currency swaps and other privately negotiated currency instruments offers less protection against defaults by the other party to such instruments than is available for currency instruments traded on an exchange. Such contracts are subject to the risk that the counterparty to the contract will default on its obligations. Since these contracts are not guaranteed by an exchange or clearinghouse, a default on a contract would deprive a Fund of unrealized profits, transaction costs or the benefits of a currency hedge or could force the Fund to cover its purchase or sale commitments, if any, at the current market price.

Structured Securities. Each Fund may invest in structured securities. Structured securities are securities whose value is determined by reference to changes in the value of specific currencies, interest rates, commodities, indices or other financial indicators (the ''Reference'') or the relative change in two or more References.

The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased depending upon changes in the applicable Reference. Structured securities may be positively or negatively indexed, so that appreciation of the Reference may produce an increase or decrease in the interest rate or value

of the security at maturity. In addition, changes in the interest rates or the value of the security at maturity may be a multiple of changes in the value of the Reference. Consequently, structured securities may present a greater degree of market risk than many types of securities and may be more volatile, less liquid and more difficult to price accurately than less complex securities.

REITs. Each Fund may invest in REITs. REITs are pooled investment vehicles that invest primarily in either real estate or real estate related loans. The value of a REIT is affected by changes in the value of the properties owned by the REIT or securing mortgage loans held by the REIT. REITs are dependent upon the ability of the REITs' managers, and are subject to heavy cash flow dependency, default by borrowers and the qualification of the REITs under applicable regulatory requirements for favorable income tax treatment. REITs are also subject to risks generally associated with investments in real estate including possible declines in the value of real estate, general and local economic conditions, environmental problems and changes in interest rates. To the extent that assets underlying a REIT are concentrated geographically, by property type or in certain other respects, these risks may be heightened. A Fund will indirectly bear its proportionate share of any expenses, including management fees, paid by a REIT in which it invests.

Options on Securities, Securities Indices and Foreign Currencies. A put option gives the purchaser of the option the right to sell, and the writer (seller) of the option the obligation to buy, the underlying instrument during the option period.

A call option gives the purchaser of the option the right to buy, and the writer (seller) of the option the obligation to sell, the underlying instrument during the option period. Each Fund may write (sell) covered call and put options and purchase put and call options on any securities in which the Fund may invest or on any securities index consisting of securities in which it may invest. Certain Funds may also, to the extent consistent with their investment policies, purchase and sell (write) put and call options on foreign currencies.

The writing and purchase of options is a highly specialized activity which involves special investment risks. Options may be used for either hedging or cross-hedging purposes, or to seek to increase total return (which is considered a speculative activity). The successful use of options depends in part on the ability of the Investment Adviser to manage future price fluctuations and the degree of correlation between the options and securities (or currency) markets. If the Investment Adviser is incorrect in its expectation of changes in market prices or determination of the correlation between the instruments or indices on which options are written and purchased and the instruments in a Fund's investment portfolio, the Fund may incur losses that it would not otherwise incur. The use of options can also increase a Fund's transaction costs. Options written or purchased

by the Funds may be traded on either U.S. or foreign exchanges or over-the-counter. Foreign and over-the-counter options will present greater possibility of loss because of their greater illiquidity and credit risks.

Futures Contracts and Options on Futures Contracts. Futures contracts are standardized, exchange-traded contracts that provide for the sale or purchase of a specified financial instrument or currency at a future time at a specified price. An option on a futures contract gives the purchaser the right (and the writer of the option the obligation) to assume a position in a futures contract at a specified exercise price within a specified period of time. A futures contract may be based on particular securities, foreign currencies, securities indices and other financial instruments and indices. The Funds may engage in futures transactions on both U.S. and foreign exchanges (except that the CORE Tax-Managed Fund may only engage in futures transactions with respect to U.S. equity indices).

Each Fund may purchase and sell futures contracts, and purchase and write call and put options on futures contracts, in order to seek to increase total return or to hedge against changes in interest rates, securities prices or, to the extent a Fund invests in foreign securities, currency exchange rates, or to otherwise manage its term structure, sector selections and duration in accordance with its investment objective and policies. Each Fund may also enter into closing purchase and sale transactions with respect to such contracts and options. A Fund will engage in futures and related options transactions for bona fide hedging purposes as defined in regulations of the Commodity Futures Trading Commission (the ''CFTC'') or to seek to increase total return to the extent permitted by such regulations. Except as otherwise permitted by the CFTC, a Fund may not purchase or sell futures contracts or purchase or sell related options to seek to increase total return if immediately thereafter the sum of the amount of initial margin deposits and premiums paid on the Fund's outstanding positions in futures and related options entered into for the purpose of seeking to increase total return would exceed 5% of the market value of the Fund's net assets. Alternative limitations on the use of futures contracts and related options may be stated from time to time in the Additional Statement.

Futures contracts and related options present the following risks:

- While a Fund may benefit from the use of futures and options on futures, unanticipated changes in interest rates, securities prices or currency exchange rates may result in poorer overall performance than if the Fund had not entered into any futures contracts or options transactions.
- Because perfect correlation between a futures position and a portfolio position that is intended to be protected is impossible to achieve, the desired protection may not be obtained and a Fund may be exposed to additional risk of loss.

- The loss incurred by a Fund in entering into futures contracts and in writing call options on futures is potentially unlimited and may exceed the amount of the premium received.
- Futures markets are highly volatile and the use of futures may increase the volatility of a Fund's NAV.
- As a result of the low margin deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to a Fund.
- Futures contracts and options on futures may be illiquid, and exchanges may limit fluctuations in futures contract prices during a single day.
- Foreign exchanges may not provide the same protection as U.S. exchanges.

Equity Swaps. Each Fund may invest in equity swaps. Equity swaps allow the parties to a swap agreement to exchange the dividend income or other components of return on an equity investment (for example, a group of equity securities or an index) for a component of return on another non-equity or equity investment.

An equity swap may be used by a Fund to invest in a market without owning or taking physical custody of securities in circumstances in which direct investment may be restricted for legal reasons or is otherwise deemed impractical or disadvantageous. Equity swaps are derivatives and their value can be very volatile. To the extent that the Investment Adviser does not accurately analyze and predict the potential relative fluctuation of the components swapped with another party, a Fund may suffer a loss, which may be substantial. The value of some components of an equity swap (such as the dividends on a common stock) may also be sensitive to changes in interest rates. Furthermore, a Fund may suffer a loss if the counterparty defaults. Because equity swaps are normally illiquid, a Fund may be unable to terminate its obligations when desired.

When-Issued Securities and Forward Commitments. Each Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to the Fund at the time of entering into the transaction. A forward commitment involves the entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-

issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Repurchase Agreements. Repurchase agreements involve the purchase of securities subject to the seller's agreement to repurchase them at a mutually agreed upon date and price. Each Fund may enter into repurchase agreements with securities dealers and banks which furnish collateral at least equal in value or market price to the amount of their repurchase obligation.

If the other party or ''seller'' defaults, a Fund might suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's costs associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy of the seller, a Fund could suffer additional losses if a court determines that the Fund's interest in the collateral is not enforceable.

Certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Lending of Portfolio Securities. Each Fund may engage in securities lending. Securities lending involves the lending of securities owned by a Fund to financial institutions such as certain broker-dealers including, as permitted by SEC, Goldman Sachs. The borrowers are required to secure their loan continuously with cash, cash equivalents, U.S. government securities or letters of credit in an amount at least equal to the market value of the securities loaned. Cash collateral may be invested by a Fund in short-term investments, including unregistered investment pools managed by the Investment Adviser or its affiliates. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and a Fund will be responsible for any loss that might result from its investment of the borrowers' collateral. If the Investment Adviser determines to make securities loans, the value of the securities loaned may not exceed 33$^{1}/_{3}$% of the value of the total assets of a Fund (including the loan collateral). Loan collateral (including any investment of the collateral) is not subject to the percentage limitations described elsewhere in this Prospectus regarding investments in fixed-income securities and cash equivalents.

A Fund may lend its securities to increase its income. A Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Fund or becomes insolvent.

Short Sales Against-the-Box. Certain Funds may make short sales against-the-box. A short sale against-the- box means that at all times when a short position is open the Fund will own an equal amount of securities sold short, or securities convertible into or exchangeable for, without payment of any further consideration, an equal amount of the securities of the same issuer as the securities sold short.

Preferred Stock, Warrants and Rights. Each Fund may invest in preferred stock, warrants and rights. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuer's earnings and assets before common stock owners but after bond owners. Unlike debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, may not typically be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

Warrants and other rights are options to buy a stated number of shares of common stock at a specified price at any time during the life of the warrant or right. The holders of warrants and rights have no voting rights, receive no dividends and have no rights with respect to the assets of the issuer.

Other Investment Companies. Each Fund may invest in securities of other investment companies (including exchange-traded funds such as SPDRs and iShares™, as defined below) subject to statutory limitations prescribed by the Investment Company Act of 1940. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Exchange-traded funds such as SPDRs and iShares™ are shares of unaffiliated investment companies which are traded like traditional equity securities on a national securities exchange or the NASDAQ® National Market System.

- ***Standard & Poor's Depositary Receipts™.*** The Funds may, consistent with their investment policies, purchase Standard & Poor's Depositary Receipts™

(‘‘SPDRs’’). SPDRs are securities traded on the American Stock Exchange (‘‘AMEX’’) that represent ownership in the SPDR Trust, a trust which has been established to accumulate and hold a portfolio of common stocks that is intended to track the price performance and dividend yield of the S&P 500®. The SPDR Trust is sponsored by a subsidiary of the AMEX. SPDRs may be used for several reasons, including, but not limited to, facilitating the handling of cash flows or trading, or reducing transaction costs. The price movement of SPDRs may not perfectly parallel the price action of the S&P 500®.

- ***iShares℠.*** iShares are shares of an investment company that invests substantially all of its assets in securities included in specified indices, including the MSCI indices for various countries and regions. iShares are listed on the AMEX and were initially offered to the public in 1996. The market prices of iShares are expected to fluctuate in accordance with both changes in the NAVs of their underlying indices and supply and demand of iShares on the AMEX. However, iShares have a limited operating history and information is lacking regarding the actual performance and trading liquidity of iShares for extended periods or over complete market cycles. In addition, there is no assurance that the requirements of the AMEX necessary to maintain the listing of iShares will continue to be met or will remain unchanged. In the event substantial market or other disruptions affecting iShares should occur in the future, the liquidity and value of a Fund’s shares could also be substantially and adversely affected. If such disruptions were to occur, a Fund could be required to reconsider the use of iShares as part of its investment strategy.

Unseasoned Companies. Each Fund may invest in companies which (together with their predecessors) have operated less than three years. The securities of such companies may have limited liquidity, which can result in their being priced higher or lower than might otherwise be the case. In addition, investments in unseasoned companies are more speculative and entail greater risk than do investments in companies with an established operating record.

Corporate Debt Obligations. Corporate debt obligations include bonds, notes, debentures, commercial paper and other obligations of corporations to pay interest and repay principal. Each Fund may invest in corporate debt obligations issued by U.S. and certain non-U.S. issuers which issue securities denominated in the U.S. dollar (including Yankee and Euro obligations). In addition to obligations of corporations, corporate debt obligations include securities issued by banks and other financial institutions and supranational entities (*i.e.*, the World Bank, the International Monetary Fund, etc.).

Bank Obligations. Each Fund may invest in obligations issued or guaranteed by U.S. or foreign banks. Bank obligations, including without limitation, time deposits,

bankers' acceptances and certificates of deposit, may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulations. Banks are subject to extensive but different governmental regulations which may limit both the amount and types of loans which may be made and interest rates which may be charged. In addition, the profitability of the banking industry is largely dependent upon the availability and cost of funds for the purpose of financing lending operations under prevailing money market conditions. General economic conditions as well as exposure to credit losses arising from possible financial difficulties of borrowers play an important part in the operation of this industry.

U.S. Government Securities. Each Fund may invest in U.S. Government Securities. U.S. Government Securities include U.S. Treasury obligations and obligations issued or guaranteed by U.S. government agencies, instrumentalities or sponsored enterprises. U.S. Government Securities may be supported by (a) the full faith and credit of the U.S. Treasury; (b) the right of the issuer to borrow from the U.S. Treasury; (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer. U.S. Government Securities also include Treasury receipts, zero coupon bonds and other stripped U.S. Government Securities, where the interest and principal components of stripped U.S. Government Securities are traded independently.

Custodial Receipts and Trust Certificates. Each Fund may invest in custodial receipts and trust certificates representing interests in securities held by a custodian or trustee. The securities so held may include U.S. Government Securities or other types of securities in which a Fund may invest. The custodial receipts or trust certificates may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes, custodial receipts and trust certificates may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. If for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial or trust account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts and trust certificates, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account or trust. Each Fund may also invest in separately issued interests in custodial receipts and trust certificates.

Mortgage-Backed Securities. Certain Funds may invest in mortgage-backed securities. Mortgage-backed securities represent direct or indirect participations in, or are collateralized by and payable from, mortgage loans secured by real property. Mortgage-backed securities can be backed by either fixed rate mortgage loans or

adjustable rate mortgage loans, and may be issued by either a governmental or non-governmental entity. Privately issued mortgage-backed securities are normally structured with one or more types of ''credit enhancement.'' However, these mortgage-backed securities typically do not have the same credit standing as U.S. government guaranteed mortgage-backed securities.

Mortgage-backed securities may include multiple class securities, including collateralized mortgage obligations (''CMOs'') and Real Estate Mortgage Investment Conduit (''REMIC'') pass-through or participation certificates. CMOs provide an investor with a specified interest in the cash flow from a pool of underlying mortgages or of other mortgage-backed securities. CMOs are issued in multiple classes. In many cases, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. A REMIC is a CMO that qualifies for special tax treatment under the Code and invests in certain mortgages principally secured by interests in real property and other permitted investments.

Mortgaged-backed securities also include stripped mortgage-backed securities (''SMBS''), which are derivative multiple class mortgage-backed securities. SMBS are usually structured with two different classes: one that receives substantially all of the interest payments and the other that receives substantially all of the principal payments from a pool of mortgage loans. The market value of SMBS consisting entirely of principal payments generally is unusually volatile in response to changes in interest rates. The yields on SMBS that receive all or most of the interest from mortgage loans are generally higher than prevailing market yields on other mortgage-backed securities because their cash flow patterns are more volatile and there is a greater risk that the initial investment will not be fully recouped.

Asset-Backed Securities. Certain Funds may invest in asset-backed securities. Asset-backed securities are securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, installment contracts and personal property. Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. Asset-backed securities present credit risks that are not presented by mortgage-backed securities. This is because asset-backed securities generally do

not have the benefit of a security interest in collateral that is comparable to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligations, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Borrowings. Each Fund can borrow money from banks and other financial institutions in amounts not exceeding one-third of its total assets for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its total assets.

Mortgage Dollar Rolls. The Real Estate Securities Fund may enter into mortgage dollar rolls. A mortgage dollar roll involves the sale by a Fund of securities for delivery in the current month. The Fund simultaneously contracts with the same counterparty to repurchase substantially similar (same type, coupon and maturity) but not identical securities on a specified future date. During the roll period, the Fund loses the right to receive principal and interest paid on the securities sold. However, the Fund benefits to the extent of any difference between (a) the price received for the securities sold and (b) the lower forward price for the future purchase and/or fee income plus the interest earned on the cash proceeds of the securities sold. Unless the benefits of a mortgage dollar roll exceed the income, capital appreciation and gain or loss due to mortgage prepayments that would have been realized on the securities sold as part of the roll, the use of this technique will diminish the Fund's performance.

Successful use of mortgage dollar rolls depends upon the Investment Adviser's ability to predict correctly interest rates and mortgage prepayments. If the Investment Adviser is incorrect in its prediction, a Fund may experience a loss. The Fund does not currently intend to enter into mortgage dollar rolls for financing and does not treat them as borrowings.

Yield Curve Options. The Real Estate Securities Fund may enter into options on the yield ''spread'' or differential between two securities. Such transactions are referred to as ''yield curve'' options. In contrast to other types of options, a yield curve option is based on the difference between the yields of designated securities, rather than the prices of the individual securities, and is settled through cash payments. Accordingly, a yield curve option is profitable to the holder if this differential widens (in the case of a call) or narrows (in the case of a put), regardless of whether the yields of the underlying securities increase or decrease.

The trading of yield curve options is subject to all of the risks associated with the trading of other types of options. In addition, such options present a risk of loss even if the yield of one of the underlying securities remains constant, or if the spread moves in a direction or to an extent which was not anticipated.

Interest Rate Swaps, Mortgage Swaps, Credit Swaps, Currency Swaps, Total Return Swaps and Interest Rate Caps, Floors and Collars. Interest rate swaps involve the exchange by a Fund with another party of their respective commitments to pay or receive interest, such as an exchange of fixed-rate payments for floating rate payments. Mortgage swaps are similar to interest rate swaps in that they represent commitments to pay and receive interest. The notional principal amount, however, is tied to a reference pool or pools of mortgages. Credit swaps involve the receipt of floating or fixed rate payments in exchange for assuming potential credit losses on an underlying security. Credit swaps give one party to a transaction the right to dispose of or acquire an asset (or group of assets), or the right to receive a payment from the other party, upon the occurrence of specified credit events. Currency swaps involve the exchange of the parties' respective rights to make or receive payments in specified currencies. Total return swaps give a Fund the right to receive the appreciation in the value of a specified security, index or other instrument in return for a fee paid to the counterparty, which will typically be an agreed upon interest rate. If the underlying asset in a total return swap declines in value over the term of the swap, the Fund may also be required to pay the dollar value of that decline to the counterparty. The purchase of an interest rate cap entitles the purchaser, to the extent that a specified index exceeds a predetermined interest rate, to receive payment of interest on a notional principal amount from the party selling such interest rate cap. The purchase of an interest rate floor entitles the purchaser, to the extent that a specified index falls below a predetermined interest rate, to receive payments of interest on a notional principal amount from the party selling the interest rate floor. An interest rate collar is the combination of a cap and a floor that preserves a certain return within a predetermined range of interest rates.

The Real Estate Securities Fund may enter into the transactions described above for hedging purposes or to seek to increase total return. The use of interest rate, mortgage, credit, currency and total return swaps, and interest rate caps, floors and collars is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. If the Investment Adviser is incorrect in its forecasts of market values, interest rates and currency exchange rates, the investment performance of the Fund would be less favorable than it would have been if these investment techniques were not used.

Inverse Floaters. The Real Estate Securities Fund may invest in inverse floating rate debt securities (''inverse floaters''). The interest rate on inverse floaters resets in the opposite direction from the market rate of interest to which an inverse floater is indexed. An inverse floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher the degree of leverage of an inverse floater, the greater the volatility of its market value.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). The information for the periods ended December 31, 2000 and thereafter has been audited by Ernst & Young LLP, whose report, along with a Fund's financial statements, is included in the Funds' annual report (available upon request without charge). The information for all periods prior to the period ended December 31, 2000 has been audited by the Funds' previous independent auditors.

a Assumes investment at the net asset value at the beginning of the period, reinvestment of all dividends and distributions, a complete redemption of the investment at the net asset value at the end of the period and no sales or redemption charges. Total return would be reduced if a sales or redemption charge were taken into account. Total returns for periods less than one full year are not annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund distributions or the redemption of Fund shares.

b Annualized.

c Calculated based on the average shares outstanding methodology.

d Less than $0.005 per share.

FOR MORE INFORMATION

Annual/Semi-annual Report

Additional information about the Funds' investments is available in the Funds' annual and semi-annual reports to shareholders. In the Funds' annual reports, you will find a discussion of the market conditions and investment strategies that significantly affected the Funds' performance during the last fiscal year.

Statement of Additional Information

Additional information about the Funds and their policies is also available in the Funds' Additional Statement. The Additional Statement is incorporated by reference into this Prospectus (is legally considered part of this Prospectus).

The Funds' annual and semi-annual reports, and the Additional Statement, are available free upon request by calling Goldman Sachs at 1-800-621-2550.

To obtain other information and for shareholder inquiries:

- By telephone: 1-800-621-2550
- By mail: Goldman Sachs Funds, 4900 Sears Tower, Chicago, IL 60606-6372
- By e-mail: gs-funds@gs.com
- On the Internet (text-only versions): SEC EDGAR database – http://www.sec.gov

You may review and obtain copies of Fund documents by visiting the SEC's public reference room in Washington, D.C. You may also obtain copies of Fund documents, after paying a duplicating fee, by writing to the SEC's Public Reference Section, Washington, D.C. 20549-0102 or by electronic request to: publicinfo@sec.gov. Information on the operation of the public reference room may be obtained by calling the SEC at (202) 942-8090.

The Funds' investment company registration number is 811-5349.

Goldman Sachs

Asset Management

NOT FDIC-Insured	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Funds. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Money Market Funds are managed to seek preservation of capital, daily liquidity and maximum current income. With each Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Funds. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target***—WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure***—Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and each Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities***—The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- Each Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

Benchmarks for the Money Market Funds are the **iMoneyNet, Inc. Indices.** Each Fund uses the iMoneyNet Index which best corresponds to the Fund's eligible investments.

References in this Prospectus to a Fund's benchmark are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

- ***The Funds:*** Each Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, each Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').
  - ***Taxable Funds:*** Prime Obligations, Money Market, Treasury Obligations and Government Funds.
  - ***Tax-Advantaged Funds:*** Treasury Instruments and Federal Funds.
  - ***Tax-Exempt Fund:*** Tax-Free Money Market Fund.
- ***The Investors:*** The Funds are designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges. The Funds are particularly suitable for banks, corporations and other financial institutions that seek investment of short-term funds for their own accounts or for the accounts of their customers. Shares of the Government Fund are intended to qualify as eligible investments for federally chartered credit unions pursuant to Sections 107(7), 107(8) and 107(15) of the Federal Credit Union Act, Part 703 of the National Credit Union Administration (''NCUA'') Rules and Regulations and NCUA Letter Number 155. The Fund intends to review changes in the applicable laws, rules and regulations governing eligible investments for federally chartered credit unions, and to take such action as may be necessary so that the investments of the Fund qualify as eligible investments under the Federal Credit Union Act and the regulations thereunder. Shares of the Government Fund, however, may or may not qualify as eligible investments for particular state-chartered credit unions. A state-chartered credit union should consult qualified legal counsel to determine whether the Government Fund is a permissible investment under the law applicable to it.
- ***NAV:*** Each Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.
- ***Maximum Remaining Maturity of Portfolio Investments:*** 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.
- ***Dollar-Weighted Average Portfolio Maturity (''WAM''):*** Not more than 90 days (as required by Rule 2a-7).

- ***Investment Restrictions:*** Each Fund is subject to certain investment restrictions that are described in detail under ‘‘Investment Restrictions’’ in the Additional Statement. Fundamental investment restrictions of a Fund cannot be changed without approval of a majority of the outstanding shares of that Fund. The Treasury Obligations Fund’s policy of limiting its investments to U.S. Treasury Obligations (as defined in Appendix A) and related repurchase agreements is also fundamental. All investment objectives and policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.
- ***Diversification:*** Diversification can help a Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ‘‘SEC’’), each Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, a Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees and securities that are not ‘‘First Tier Securities’’ as defined by the SEC are subject to different diversification requirements as described in the Additional Statement.

Fund Investment Objectives and Strategies

INVESTMENT OBJECTIVES

The Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government, Federal and Tax-Free Money Market Funds seek to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

Taxable and Tax-Advantaged Funds: The Prime Obligations and Money Market Funds pursue their investment objectives by investing in U.S. Government Securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Money Market Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments. The Treasury Obligations Fund pursues its investment objective by investing only in securities issued by the U.S. Treasury and repurchase agreements relating to such securities. The Government Fund pursues its investment objective by investing, directly or indirectly, only in U.S. Government Securities and repurchase agreements relating to such securities. The Treasury Instruments and Federal Funds pursue their investment objectives by limiting their investments only to certain U.S. Treasury Obligations and U.S. Government Securities, respectively, the interest from which is generally exempt from state income taxation. You should consult your tax adviser to determine whether distributions from the Treasury Instruments and Federal Funds (and any other Fund that may hold such obligations) derived from interest on such obligations are exempt from state income taxation in your own state.

In order to obtain a rating from a rating organization, the Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government and Federal Funds will observe special investment restrictions.

Tax-Exempt Fund: The Tax-Free Money Market Fund pursues its investment objective by investing in securities issued by or on behalf of states, territories, and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia, the interest from which, if any, is in the opinion of bond counsel excluded from gross income for federal income tax purposes, and not an item of tax preference under the federal alternative minimum tax (‘‘AMT’’).

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences among the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information see Appendix A.

Investment Policies Matrix

Fund	U.S. Treasury Obligations	U.S. Government Securities	Bank Obligations	Commercial Paper
Prime Obligations	■[1]	■	■ U.S. banks only[2]	■
Money Market	■[1]	■	■ Over 25% of total assets must be invested in U.S. and foreign (US$) banks[3]	■ U.S. and foreign (US$) commercial paper
Treasury Obligations	■[4]			
Treasury Instruments	■[4]			
Government	■[1]	■		
Federal	■[1]	■		
Tax-Free Money Market				■ Tax-exempt only

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*
[2] *Including foreign branches of U.S. banks.*
[3] *If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*
[4] *Issued by the U.S. Treasury.*
[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*
[6] *The Money Market Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

Short-Term Obligations of Corporations and Other Entities	Repurchase Agreements	Asset-Backed and Receivables-Backed Securities[5]	Foreign Government Obligations (US$)
■ U.S. entities only	■	■	
■ U.S. and foreign (US$) entities	■	■	■[6]
	■		
	■		
	■ (Does not intend to invest)		

Investment Policies Matrix continued

Fund	Municipals	Custodial Receipts	Unrated Securities[9]	Investment Companies
Prime Obligations	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Money Market	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Treasury Obligations				
Treasury Instruments				
Government				■ Up to 10% of total assets in other investment companies
Federal				
Tax-Free Money Market	■ At least 80% of net assets in tax-exempt municipal obligations (except in extraordinary circumstances)[8]	■	■	■ Up to 10% of total assets in other investment companies

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *Ordinarily expect that 100% of the Fund's assets will be invested in municipal obligations, but the Fund may, for temporary defensive purposes, hold cash or invest in short-term taxable securities.*

[9] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities, or to the extent that a Fund may purchase Second Tier Securities, comparable in quality to Second Tier Securities. In addition, a Fund holding a security supported by a guarantee or demand feature may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

Private Activity Bonds	Credit Quality[9]	Summary of Taxation for Distributions[14]	Miscellaneous
■	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
■	First Tier[12]	Taxable federal and state[15]	May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Under extraordinary circumstances, may hold cash, U.S. Government Securities subject to state taxation or cash equivalents. Reverse repurchase agreements not permitted
■ Does not intend to invest if subject to AMT[10,11]	First[12] or Second Tier[13]	Tax-exempt federal and taxable state[16]	May (but does not currently intend to) invest up to 20% of net assets in securities subject to AMT and may temporarily invest in the taxable money market instruments described herein. Reverse repurchase agreements not permitted

[10] *If such policy should change, private activity bonds subject to AMT would not exceed 20% of the Fund's net assets under normal market conditions.*

[11] *No more than 25% of the value of the Fund's total assets may be invested in industrial development bonds or similar obligations where the non-governmental entities supplying the revenues from which such bonds or obligations are to be paid are in the same industry.*

[12] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[13] *Second Tier Securities are (a) rated in the top two short-term rating categories by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings.*

[14] *See ''Taxation'' for an explanation of the tax consequences summarized in the table above.*

[15] *Taxable in many states except for distributions from U.S. Treasury Obligation interest income and certain U.S. Government Securities interest income.*

[16] *Taxable except for distributions from interest on obligations of an investor's state of residence in certain states.*

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

• Applicable — Not applicable	Prime Obligations Fund	Money Market Fund	Treasury Obligations Fund	Treasury Instruments Fund	Government Fund	Federal Fund	Tax-Free Money Market Fund
NAV	•	•	•	•	•	•	•
Interest Rate	•	•	•	•	•	•	•
Credit/Default	•	•	•	•	•	•	•
Liquidity	•	•	•	•	•	•	•
U.S. Government Securities	•	•	—	—	•	•	—
Concentration	—	—	—	—	—	—	•
Foreign	—	•	—	—	—	—	—
Banking Industry	—	•	—	—	—	—	—
Tax	—	—	—	—	—	—	•

Risks that apply to all Funds:

- ***NAV Risk***—The risk that a Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, a Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, a Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations. In addition, with respect to the Tax-Free Money Market Fund, this risk includes the risk of default on foreign letters of credit or guarantees that back municipal securities.
- ***Liquidity Risk***—The risk that a Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.

Risk that applies to the Prime Obligations, Money Market, Government and Federal Funds:

- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by a Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risks that apply to the Money Market Fund:

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Money Market Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Money Market Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

Risks that apply to the Tax-Free Money Market Fund:

- ***Concentration Risk***—The risk that if the Fund invests more than 25% of its total assets in issuers within the same state, industry or economic sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if its investments were not so concentrated.
- ***Tax Risk***—The risk that future legislative or administrative changes or court decisions may materially affect the value of the Fund's portfolio and/or the ability of the Fund to pay federal tax-exempt dividends. This Fund would not be a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal, state or local tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

Capital Shares of the Funds are new and as of the date of this prospectus, have less than one calendar year's performance history. For this reason, the performance information shown below is for another class of shares (Administration Shares) that is not offered in this Prospectus but would have similar annual returns because both classes of shares will be invested in the same portfolio of securities. Annual returns will differ only to the extent that the classes do not have the same expenses. In reviewing this performance information, however, you should be aware that Administration Shares are subject to a shareholder administration fee of .25 of 1% while Capital Shares are subject to a lower shareholder administration fee of .15 of 1%.

The bar chart and table below provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Administration Shares from year to year for up to the last ten years; and (b) the average annual total returns of a Fund's Administration Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced. You may obtain a Fund's current yield by calling 1-800-621-2550.

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on estimated amounts for the current fiscal year.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee equal to 0.015% of the Treasury Obligations, Treasury Instruments and Federal Funds' average daily net assets and equal to 0.035% of all other Funds' average daily net assets. ***As a result of fee waivers, the current management fees of the Treasury Obligations Fund, Treasury Instruments Fund, Federal Fund and all other Funds are 0.19%, 0.19%, 0.19% and 0.17%, respectively, of such Funds' average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees directly to their customers who are beneficial owners of Capital Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of each Fund (excluding management fees, capital administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of each Fund's average daily net assets.

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Capital Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Prime Obligations	$38	$119	$208	$468
Money Market	$38	$119	$208	$468
Treasury Obligations	$38	$119	$208	$468
Treasury Instruments	$41	$128	$224	$505
Government	$38	$119	$208	$468
Federal	$38	$119	$208	$468
Tax-Free Money Market	$38	$119	$208	$468

Service Organizations that invest in Capital Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Capital Shares may receive other compensation in connection with the sale and distribution of Capital Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs, served as the Funds' investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management, L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser also performs the following services for the Funds:

- Continually manages each Fund, including the purchase, retention and disposition of securities and other assets
- Administers each Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, certain Funds may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

Fund	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Prime Obligations	0.205%	0.17%
Money Market	0.205%	0.17%
Treasury Obligations	0.205%	0.19%
Treasury Instruments	0.205%	0.19%
Government	0.205%	0.17%
Federal	0.205%	0.19%
Tax-Free Money Market	0.205%	0.17%

The difference, if any, between the stated fees and the actual fees paid by the Funds reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

Dividends will be distributed monthly. You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

All or substantially all of each Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of the following times:

Fund	Dividend Declaration Time (New York Time)
Prime Obligations	5:00 p.m.
Money Market	5:00 p.m.
Treasury Obligations	5:00 p.m.
Treasury Instruments	4:00 p.m.
Government	5:00 p.m.
Federal	4:00 p.m.
Tax-Free Money Market	4:00 p.m.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in a Fund's daily distributions.

Each Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

The income declared as a dividend for the Prime Obligations, Money Market, Treasury Obligations and Government Funds is based on estimates of net investment income for each Fund. Actual income may differ from estimates, and differences, if any, will be included in the calculation of subsequent dividends.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Capital Shares.

HOW TO BUY SHARES

How Can I Purchase Capital Shares Of The Funds?

Generally, Capital Shares may be purchased only through institutions that have agreed to provide shareholder administration services to their customers who are the beneficial owners of Capital Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Capital Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs the Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee

Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds - (Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Treasury Instruments and Federal Funds:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day
Prime Obligations, Money Market, Treasury Obligations and Government Funds:	
■ By 5:00 p.m. New York time	Same business day
■ After 5:00 p.m. New York time	Next business day
Tax-Free Money Market Fund:	
■ By 2:00 p.m. New York time	Same business day
■ After 2:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Capital Shares:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem or exchange shares for customers
- Processing confirmation statements for customers
- Facilitating the inclusion of the Funds in customer accounts, products or services

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their

customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a capital administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payment for their services from the Trust of up to 0.15% (on an annualized basis) of the average daily net assets of the Capital Shares of the Funds, which are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds.

In addition to Capital Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance) than Capital Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Minimum initial investment	$10 million (may be allocated among the Funds)
Minimum account balance	$10 million
Minimum subsequent investments	None

A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Capital Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem Capital

Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement.
- Reject any purchase order for any reason.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Capital Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

Fund	NAV Calculated
Treasury Instruments, Federal and Tax-Free Money Market	As of the close of regular trading of the New York Stock Exchange (normally 4:00 p.m. New York time or such later time as the New York Stock Exchange or the NASDAQ market may officially close) on each business day
Prime Obligations, Money Market, Treasury Obligations and Government	As of 5:00 p.m. New York time on each business day

- NAV per share of each class is generally calculated by the accounting agent on each business day. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.

- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, each Fund reserves the right to close at or prior to the BMA recommended closing time. If a Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open one or more Funds for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help each Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Capital Shares Of The Funds?

Generally, Capital Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Capital Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service Organization

may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Funds as described under ''What Do I Need To Know About Service Organizations?'' A redemption may also be made with respect to certain Funds by means of the check redemption privilege described in the Additional Statement.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Treasury Instruments and Federal Funds:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received
Prime Obligations, Money Market, Treasury Obligations and Government Funds:		
■ By 5:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 5:00 p.m. New York time	Wired next business day	Earned on day request is received
Tax-Free Money Market Fund:		
■ By 1:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 1:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request (or up to three business days later with respect to the Tax-Free Money Market Fund) and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by a Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Capital Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Capital Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Capital Shares of a Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Capital Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Funds are also reflected in regular statements issued by the Funds to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Capital Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions: Each Fund contemplates declaring as dividends each year all or substantially all of its net investment income. Except for the Tax-Exempt Funds, distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations or interest on obligations of your state of residence or its municipalities or authorities, they will in most cases be exempt from state and local income taxes. Distributions from the Tax-Exempt Funds that are designated as ''exempt interest dividends'' are generally not subject to federal income tax. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

You should note that a portion of the exempt-interest dividends paid by the Tax-Exempt Funds may be a preference item when determining your federal alternative minimum tax liability. Exempt-interest dividends are also taken into account in determining the taxable portion of social security or railroad retirement benefits. Any interest on indebtedness incurred by you to purchase or carry shares in the Tax-Exempt Funds generally will not be deductible for federal income tax purposes.

Other Information: When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs. A Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

Some Funds invest in U.S. Treasury Obligations and certain U.S. Government Securities the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. government, including the Federal Home Loan Banks, Federal Farm Credit Banks, Tennessee Valley Authority and Student Loan Marketing Association.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. Certain Funds may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, certain Funds may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

If a Fund invests more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. A Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by a Fund consists of direct U.S. dollar-

denominated obligations of domestic or, in the case of certain Funds, foreign issuers. Asset-backed commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. A Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by a Fund may be regarded as illiquid.

Repurchase Agreements. Certain Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by a Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, a Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, a Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, a Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to a Fund's shareholders. In addition, certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. Certain Funds may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. Certain Funds may invest in foreign government obligations. Foreign government obligations that the Funds invest in are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by a Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. The legal remedies for investors may be more limited than the remedies available in the United States. In addition, changes in the exchange rate of a foreign currency relative to the U.S. dollar (e.g., weakening of the currency against the U.S. dollar) may adversely affect the ability of a foreign issuer to pay interest and repay principal on an obligation.

Municipal Obligations. Certain Funds may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which a Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Municipal Notes and Bonds. Municipal notes include tax anticipation notes (''TANs''), revenue anticipation notes (''RANs''), bond anticipation notes (''BANs''), tax and revenue anticipation notes (''TRANs'') and construction loan notes. Municipal bonds include general obligation bonds and revenue bonds. General obligation bonds are backed by the taxing power of the issuing municipality and are considered the safest type of municipal obligation. Revenue bonds are backed by the revenues of a project or facility such as the tolls from a toll bridge. Revenue bonds also include lease rental revenue bonds which are issued by a state or local authority for capital projects and are secured by annual lease payments from the state or locality sufficient to cover debt service on the authority's obligations. Industrial development bonds (''private activity bonds'') are a specific type of revenue bond backed by the credit and security of a private user and, therefore, have more potential risk. Municipal bonds may be issued in a variety of forms, including commercial paper, tender option bonds and variable and floating rate securities.

Tender Option Bonds. A tender option bond is a municipal obligation (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued in conjunction with the agreement of a third party, such as a bank, broker-dealer or other financial institution, pursuant to which the institution grants the security holder the option, at periodic intervals, to tender its securities to the institution. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution will normally not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund's average portfolio maturity. There is a risk that a Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender

option bonds may be illiquid or may become illiquid as a result of a credit rating downgrade, a payment default or a disqualification from tax-exempt status.

Revenue Anticipation Warrants. Revenue Anticipation Warrants (''RAWs'') are issued in anticipation of the issuer's receipt of revenues and present the risk that such revenues will be insufficient to satisfy the issuer's payment obligations. The entire amount of principal and interest on RAWs is due at maturity. RAWs, including those with a maturity of more than 397 days, may also be repackaged as instruments which include a demand feature that permits the holder to sell the RAWs to a bank or other financial institution at a purchase price equal to par plus accrued interest on each interest rate reset date.

Industrial Development Bonds. Certain Funds may invest in industrial development bonds (private activity bonds). Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user, the interest from which would be an item of tax preference when distributed by a Fund as ''exempt-interest dividends'' to shareholders under the AMT.

Other Municipal Obligation Policies. Certain Funds may invest 25% or more of the value of their respective total assets in municipal obligations which are related in such a way that an economic, business or political development or change affecting one municipal obligation would also affect the other municipal obligation. For example, a Fund may invest all of its assets in (a) municipal obligations the interest of which is paid solely from revenues from similar projects such as hospitals, electric utility systems, multi-family housing, nursing homes, commercial facilities (including hotels), steel companies or life care facilities; (b) municipal obligations whose issuers are in the same state; or (c) industrial development obligations. Concentration of a Fund's investments in these municipal obligations will subject the Fund, to a greater extent than if such investment was not so concentrated, to the risks of adverse economic, business or political developments affecting the particular state, industry or other area of concentration.

Municipal obligations may also include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment contracts. Moral obligation bonds are supported by the moral commitment but not the legal obligation of a state or municipality. Municipal leases, certificates of participation and moral obligation bonds present the risk that the state or municipality involved will not appropriate the monies to meet scheduled payments under these instruments.

Municipal obligations may be backed by letters of credit or other forms of credit enhancement issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss

to a Fund that invests in municipal obligations. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

In order to enhance the liquidity, stability or quality of a municipal obligation, a Fund may acquire the right to sell the obligation to another party at a guaranteed price and date.

Custodial Receipts. Certain Funds may invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. A Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the acquiring Fund and will be subject to substantially the same risks. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, a Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Funds may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. Each Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities

- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of a Fund’s portfolio.

Borrowings. Each Fund may borrow up to 33⅓% of its total assets from banks for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report along with a Funds' financial statements, is included in the Fund's annual report (available upon request without charge). The information for all other periods prior to the period ended December 31, 2000 has been audited by the Fund's previous independent accountants.

Footnotes:

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions. Returns for periods less than a full year are not annualized.

(c) Annualized.

(d) Less than $.005 per share.

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Funds. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Money Market Funds are managed to seek preservation of capital, daily liquidity and maximum current income. With each Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Funds. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target***—WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure***—Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and each Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities***—The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- Each Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

Benchmarks for the Money Market Funds are the **iMoneyNet, Inc. Indices.** Each Fund uses the iMoneyNet Index which best corresponds to the Fund's eligible investments.

References in this Prospectus to a Fund's benchmark are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

- ***The Funds:*** Each Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, each Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').
  - ***Taxable Funds:*** Prime Obligations, Money Market, Treasury Obligations and Government Funds.
  - ***Tax-Advantaged Funds:*** Treasury Instruments and Federal Funds.
  - ***Tax-Exempt Fund:*** Tax-Free Money Market Fund.
- ***The Investors:*** The Funds are designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges. The Funds are particularly suitable for banks, corporations and other financial institutions that seek investment of short-term funds for their own accounts or for the accounts of their customers. Shares of the Government Fund are intended to qualify as eligible investments for federally chartered credit unions pursuant to Sections 107(7), 107(8) and 107(15) of the Federal Credit Union Act, Part 703 of the National Credit Union Administration (''NCUA'') Rules and Regulations and NCUA Letter Number 155. The Fund intends to review changes in the applicable laws, rules and regulations governing eligible investments for federally chartered credit unions, and to take such action as may be necessary so that the investments of the Fund qualify as eligible investments under the Federal Credit Union Act and the regulations thereunder. Shares of the Government Fund, however, may or may not qualify as eligible investments for particular state-chartered credit unions. A state-chartered credit union should consult qualified legal counsel to determine whether the Government Fund is a permissible investment under the law applicable to it.
- ***NAV:*** Each Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.
- ***Maximum Remaining Maturity of Portfolio Investments:*** 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.
- ***Dollar-Weighted Average Portfolio Maturity (''WAM''):*** Not more than 90 days (as required by Rule 2a-7).

- ***Investment Restrictions:*** Each Fund is subject to certain investment restrictions that are described in detail under ‘‘Investment Restrictions’’ in the Additional Statement. Fundamental investment restrictions of a Fund cannot be changed without approval of a majority of the outstanding shares of that Fund. The Treasury Obligations Fund’s policy of limiting its investments to U.S. Treasury Obligations (as defined in Appendix A) and related repurchase agreements is also fundamental. All investment objectives and policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.
- ***Diversification:*** Diversification can help a Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ‘‘SEC’’), each Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, a Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees and securities that are not ‘‘First Tier Securities’’ as defined by the SEC are subject to different diversification requirements as described in the Additional Statement.

Fund Investment Objectives and Strategies

INVESTMENT OBJECTIVES

The Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government, Federal and Tax-Free Money Market Funds seek to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

Taxable and Tax-Advantaged Funds: The Prime Obligations and Money Market Funds pursue their investment objectives by investing in U.S. Government Securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Money Market Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments. The Treasury Obligations Fund pursues its investment objective by investing only in securities issued by the U.S. Treasury and repurchase agreements relating to such securities. The Government Fund pursues its investment objective by investing, directly or indirectly, only in U.S. Government Securities and repurchase agreements relating to such securities. The Treasury Instruments and Federal Funds pursue their investment objectives by limiting their investments only to certain U.S. Treasury Obligations and U.S. Government Securities, respectively, the interest from which is generally exempt from state income taxation. You should consult your tax adviser to determine whether distributions from the Treasury Instruments and Federal Funds (and any other Fund that may hold such obligations) derived from interest on such obligations are exempt from state income taxation in your own state.

In order to obtain a rating from a rating organization, the Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government and Federal Funds will observe special investment restrictions.

Tax-Exempt Fund: The Tax-Free Money Market Fund pursues its investment objective by investing in securities issued by or on behalf of states, territories, and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia, the interest from which, if any, is in the opinion of bond counsel excluded from gross income for federal income tax purposes, and not an item of tax preference under the federal alternative minimum tax (‘‘AMT’’).

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences among the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information see Appendix A.

Investment Policies Matrix

Fund	U.S. Treasury Obligations	U.S. Government Securities	Bank Obligations	Commercial Paper
Prime Obligations	■[1]	■	■ U.S. banks only[2]	■
Money Market	■[1]	■	■ Over 25% of total assets must be invested in U.S. and foreign (US$) banks[3]	■ U.S. and foreign (US$) commercial paper
Treasury Obligations	■[4]			
Treasury Instruments	■[4]			
Government	■[1]	■		
Federal	■[1]	■		
Tax-Free Money Market				■ Tax-exempt only

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*
[2] *Including foreign branches of U.S. banks.*
[3] *If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*
[4] *Issued by the U.S. Treasury.*
[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*
[6] *The Money Market Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

Short-Term Obligations of Corporations and Other Entities	Repurchase Agreements	Asset-Backed and Receivables-Backed Securities[5]	Foreign Government Obligations (US$)
■ U.S. entities only	■	■	
■ U.S. and foreign (US$) entities	■	■	■[6]
	■		
	■		
	■ (Does not intend to invest)		

Investment Policies Matrix continued

Fund	Municipals	Custodial Receipts	Unrated Securities[9]	Investment Companies
Prime Obligations	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Money Market	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Treasury Obligations				
Treasury Instruments				
Government				■ Up to 10% of total assets in other investment companies
Federal				
Tax-Free Money Market	■ At least 80% of net assets in tax-exempt municipal obligations (except in extraordinary circumstances)[8]	■	■	■ Up to 10% of total assets in other investment companies

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *Ordinarily expect that 100% of the Fund's assets will be invested in municipal obligations, but the Fund may, for temporary defensive purposes, hold cash or invest in short-term taxable securities.*

[9] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities, or to the extent that a Fund may purchase Second Tier Securities, comparable in quality to Second Tier Securities. In addition, a Fund holding a security supported by a guarantee or demand feature may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

Private Activity Bonds	Credit Quality[9]	Summary of Taxation for Distributions[14]	Miscellaneous
■	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
■	First Tier[12]	Taxable federal and state[15]	May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Under extraordinary circumstances, may hold cash, U.S. Government Securities subject to state taxation or cash equivalents. Reverse repurchase agreements not permitted
■ Does not intend to invest if subject to AMT[10,11]	First[12] or Second Tier[13]	Tax-exempt federal and taxable state[16]	May (but does not currently intend to) invest up to 20% of net assets in securities subject to AMT and may temporarily invest in the taxable money market instruments described herein. Reverse repurchase agreements not permitted

[10] *If such policy should change, private activity bonds subject to AMT would not exceed 20% of the Fund's net assets under normal market conditions.*

[11] *No more than 25% of the value of the Fund's total assets may be invested in industrial development bonds or similar obligations where the non-governmental entities supplying the revenues from which such bonds or obligations are to be paid are in the same industry.*

[12] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[13] *Second Tier Securities are (a) rated in the top two short-term rating categories by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings.*

[14] *See ''Taxation'' for an explanation of the tax consequences summarized in the table above.*

[15] *Taxable in many states except for distributions from U.S. Treasury Obligation interest income and certain U.S. Government Securities interest income.*

[16] *Taxable except for distributions from interest on obligations of an investor's state of residence in certain states.*

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

• Applicable — Not applicable	Prime Obligations Fund	Money Market Fund	Treasury Obligations Fund	Treasury Instruments Fund	Government Fund	Federal Fund	Tax-Free Money Market Fund
NAV	•	•	•	•	•	•	•
Interest Rate	•	•	•	•	•	•	•
Credit/Default	•	•	•	•	•	•	•
Liquidity	•	•	•	•	•	•	•
U.S. Government Securities	•	•	—	—	•	•	—
Concentration	—	—	—	—	—	—	•
Foreign	—	•	—	—	—	—	—
Banking Industry	—	•	—	—	—	—	—
Tax	—	—	—	—	—	—	•

Risks that apply to all Funds:

- ***NAV Risk***—The risk that a Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, a Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, a Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations. In addition, with respect to the Tax-Free Money Market Fund, this risk includes the risk of default on foreign letters of credit or guarantees that back municipal securities.
- ***Liquidity Risk***—The risk that a Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.

Risk that applies to the Prime Obligations, Money Market, Government and Federal Funds:

- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by a Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risks that apply to the Money Market Fund:

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Money Market Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Money Market Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

Risks that apply to the Tax-Free Money Market Fund:

- ***Concentration Risk***—The risk that if the Fund invests more than 25% of its total assets in issuers within the same state, industry or economic sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if its investments were not so concentrated.
- ***Tax Risk***—The risk that future legislative or administrative changes or court decisions may materially affect the value of the Fund's portfolio and/or the ability of the Fund to pay federal tax-exempt dividends. This Fund would not be a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal, state or local tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table below provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Administration Shares from year to year for up to the last ten years; and (b) the average annual total returns of a Fund's Administration Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced. You may obtain a Fund's current yield by calling 1-800-621-2550.

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee equal to 0.015% of the Treasury Obligations, Treasury Instruments and Federal Funds' average daily net assets and equal to 0.035% of all other Funds' average daily net assets. ***As a result of fee waivers, the current management fees of the Treasury Obligations Fund, Treasury Instruments Fund, Federal Fund and all other Funds are 0.19%, 0.19%, 0.19% and 0.17%, respectively, of such Funds' average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees directly to their customers who are beneficial owners of Administration Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of each Fund (excluding management fees, administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of each Fund's average daily net assets.

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Administration Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Prime Obligations	$48	$151	$263	$591
Money Market	$48	$151	$263	$591
Treasury Obligations	$48	$151	$263	$591
Treasury Instruments	$51	$160	$280	$628
Government	$48	$151	$263	$591
Federal	$48	$151	$263	$591
Tax-Free Money Market	$48	$151	$263	$591

Service Organizations that invest in Administration Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Administration Shares may receive other compensation in connection with the sale and distribution of Administration Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs, served as the Funds' investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management, L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser also performs the following services for the Funds:

- Continually manages each Fund, including the purchase, retention and disposition of securities and other assets
- Administers each Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, certain Funds may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

Fund	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Prime Obligations	0.205%	0.17%
Money Market	0.205%	0.17%
Treasury Obligations	0.205%	0.19%
Treasury Instruments	0.205%	0.19%
Government	0.205%	0.17%
Federal	0.205%	0.19%
Tax-Free Money Market	0.205%	0.17%

The difference, if any, between the stated fees and the actual fees paid by the Funds reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

Dividends will be distributed monthly. You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

All or substantially all of each Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of the following times:

Fund	Dividend Declaration Time (New York Time)
Prime Obligations	5:00 p.m.
Money Market	5:00 p.m.
Treasury Obligations	5:00 p.m.
Treasury Instruments	4:00 p.m.
Government	5:00 p.m.
Federal	4:00 p.m.
Tax-Free Money Market	4:00 p.m.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in a Fund's daily distributions.

Each Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

The income declared as a dividend for the Prime Obligations, Money Market, Treasury Obligations and Government Funds is based on estimates of net investment income for each Fund. Actual income may differ from estimates, and differences, if any, will be included in the calculation of subsequent dividends.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Administration Shares.

HOW TO BUY SHARES

How Can I Purchase Administration Shares Of The Funds?

Generally, Administration Shares may be purchased only through institutions that have agreed to provide shareholder administration services to their customers who are the beneficial owners of Administration Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Administration Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs the Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee

Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds - (Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Treasury Instruments and Federal Funds:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day
Prime Obligations, Money Market, Treasury Obligations and Government Funds:	
■ By 5:00 p.m. New York time	Same business day
■ After 5:00 p.m. New York time	Next business day
Tax-Free Money Market Fund:	
■ By 2:00 p.m. New York time	Same business day
■ After 2:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Administration Shares:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem or exchange shares for customers
- Processing confirmation statements and payments for customers
- Facilitating the inclusion of the Funds in customer accounts, products or services

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their

customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to an administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payment for their services from the Trust of up to 0.25% (on an annualized basis) of the average daily net assets of the Administration Shares of the Funds, which are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds.

In addition to Administration Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Administration Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Minimum initial investment	$10 million (may be allocated among the Funds)
Minimum account balance	$10 million
Minimum subsequent investments	None

A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Administration Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem

Administration Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement.
- Reject any purchase order for any reason.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Administration Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

Fund	NAV Calculated
Treasury Instruments, Federal and Tax-Free Money Market	As of the close of regular trading of the New York Stock Exchange (normally 4:00 p.m. New York time or such later time as the New York Stock Exchange or the NASDAQ market may officially close) on each business day
Prime Obligations, Money Market, Treasury Obligations and Government	As of 5:00 p.m. New York time on each business day

- NAV per share of each class is generally calculated by the accounting agent on each business day. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.

- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, each Fund reserves the right to close at or prior to the BMA recommended closing time. If a Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open one or more Funds for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help each Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Administration Shares Of The Funds?

Generally, Administration Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Administration Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service

Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Funds as described under ''What Do I Need To Know About Service Organizations?'' A redemption may also be made with respect to certain Funds by means of the check redemption privilege described in the Additional Statement.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Treasury Instruments and Federal Funds:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received
Prime Obligations, Money Market, Treasury Obligations and Government Funds:		
■ By 5:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 5:00 p.m. New York time	Wired next business day	Earned on day request is received
Tax-Free Money Market Fund:		
■ By 1:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 1:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request (or up to three business days later with respect to the Tax-Free Money Market Fund) and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by a Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Administration Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Administration Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Administration Shares of a Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Administration Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Funds are also reflected in regular statements issued by the Funds to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Administration Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions: Each Fund contemplates declaring as dividends each year all or substantially all of its net investment income. Except for the Tax-Exempt Funds, distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations or interest on obligations of your state of residence or its municipalities or authorities, they will in most cases be exempt from state and local income taxes. Distributions from the Tax-Exempt Funds that are designated as ''exempt interest dividends'' are generally not subject to federal income tax. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

You should note that a portion of the exempt-interest dividends paid by the Tax-Exempt Funds may be a preference item when determining your federal alternative minimum tax liability. Exempt-interest dividends are also taken into account in determining the taxable portion of social security or railroad retirement benefits. Any interest on indebtedness incurred by you to purchase or carry shares in the Tax-Exempt Funds generally will not be deductible for federal income tax purposes.

Other Information: When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs. A Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

Some Funds invest in U.S. Treasury Obligations and certain U.S. Government Securities the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. government, including the Federal Home Loan Banks, Federal Farm Credit Banks, Tennessee Valley Authority and Student Loan Marketing Association.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. Certain Funds may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, certain Funds may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

If a Fund invests more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. A Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by a Fund consists of direct U.S. dollar-

denominated obligations of domestic or, in the case of certain Funds, foreign issuers. Asset-backed commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. A Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by a Fund may be regarded as illiquid.

Repurchase Agreements. Certain Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by a Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, a Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, a Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, a Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to a Fund's shareholders. In addition, certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. Certain Funds may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. Certain Funds may invest in foreign government obligations. Foreign government obligations that the Funds invest in are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by a Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. The legal remedies for investors may be more limited than the remedies available in the United States. In addition, changes in the exchange rate of a foreign currency relative to the U.S. dollar (e.g., weakening of the currency against the U.S. dollar) may adversely affect the ability of a foreign issuer to pay interest and repay principal on an obligation.

Municipal Obligations. Certain Funds may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and

possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which a Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Municipal Notes and Bonds. Municipal notes include tax anticipation notes (''TANs''), revenue anticipation notes (''RANs''), bond anticipation notes (''BANs''), tax and revenue anticipation notes (''TRANs'') and construction loan notes. Municipal bonds include general obligation bonds and revenue bonds. General obligation bonds are backed by the taxing power of the issuing municipality and are considered the safest type of municipal obligation. Revenue bonds are backed by the revenues of a project or facility such as the tolls from a toll bridge. Revenue bonds also include lease rental revenue bonds which are issued by a state or local authority for capital projects and are secured by annual lease payments from the state or locality sufficient to cover debt service on the authority's obligations. Industrial development bonds (''private activity bonds'') are a specific type of revenue bond backed by the credit and security of a private user and, therefore, have more potential risk. Municipal bonds may be issued in a variety of forms, including commercial paper, tender option bonds and variable and floating rate securities.

Tender Option Bonds. A tender option bond is a municipal obligation (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued in conjunction with the agreement of a third party, such as a bank, broker-dealer or other financial institution, pursuant to which the institution grants the security holder the option, at periodic intervals, to tender its securities to the institution. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution will normally not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund's average portfolio maturity. There is a risk that a Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender option bonds may be illiquid or may become illiquid as a result of a credit rating downgrade, a payment default or a disqualification from tax-exempt status.

Revenue Anticipation Warrants. Revenue Anticipation Warrants (''RAWs'') are issued in anticipation of the issuer's receipt of revenues and present the risk that such revenues will be insufficient to satisfy the issuer's payment obligations. The entire amount of principal and interest on RAWs is due at maturity. RAWs, including those with a maturity of more than 397 days, may also be repackaged as instruments which include a demand feature that permits the holder to sell the RAWs to a bank or other financial institution at a purchase price equal to par plus accrued interest on each interest rate reset date.

Industrial Development Bonds. Certain Funds may invest in industrial development bonds (private activity bonds). Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user, the interest from which would be an item of tax preference when distributed by a Fund as ''exempt-interest dividends'' to shareholders under the AMT.

Other Municipal Obligation Policies. Certain Funds may invest 25% or more of the value of their respective total assets in municipal obligations which are related in such a way that an economic, business or political development or change affecting one municipal obligation would also affect the other municipal obligation. For example, a Fund may invest all of its assets in (a) municipal obligations the interest of which is paid solely from revenues from similar projects such as hospitals, electric utility systems, multi-family housing, nursing homes, commercial facilities (including hotels), steel companies or life care facilities; (b) municipal obligations whose issuers are in the same state; or (c) industrial development obligations. Concentration of a Fund's investments in these municipal obligations will subject the Fund, to a greater extent than if such investment was not so concentrated, to the risks of adverse economic, business or political developments affecting the particular state, industry or other area of concentration.

Municipal obligations may also include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment contracts. Moral obligation bonds are supported by the moral commitment but not the legal obligation of a state or municipality. Municipal leases, certificates of participation and moral obligation bonds present the risk that the state or municipality involved will not appropriate the monies to meet scheduled payments under these instruments.

Municipal obligations may be backed by letters of credit or other forms of credit enhancement issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss to a Fund that invests in municipal obligations. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition

to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

In order to enhance the liquidity, stability or quality of a municipal obligation, a Fund may acquire the right to sell the obligation to another party at a guaranteed price and date.

Custodial Receipts. Certain Funds may invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. A Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the acquiring Fund and will be subject to substantially the same risks. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels.

Subject to the conditions for using amortized cost valuation under the Act, a Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Funds may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. Each Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is

liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of a Fund’s portfolio.

Borrowings. Each Fund may borrow up to 33⅓% of its total assets from banks for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report along with a Funds' financial statements, is included in the Fund's annual report (available upon request without charge). The information for all other periods prior to the period ended December 31, 2000 has been audited by the Fund's previous independent accountants.

Footnotes:

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions. Returns for periods less than a full year are not annualized.

(c) Annualized.

(d) Less than $.005 per share.

Goldman Sachs

Asset Management

NOT FDIC-Insured	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Funds. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Money Market Funds are managed to seek preservation of capital, daily liquidity and maximum current income. With each Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Funds. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target***—WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure***—Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and each Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities***—The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- Each Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

Benchmarks for the Money Market Funds are the **iMoneyNet, Inc. Indices.** Each Fund uses the iMoneyNet Index which best corresponds to the Fund's eligible investments.

References in this Prospectus to a Fund's benchmark are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

- ***The Funds:*** Each Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, each Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').
  - ***Taxable Funds:*** Prime Obligations, Money Market, Treasury Obligations and Government Funds.
  - ***Tax-Advantaged Funds:*** Treasury Instruments and Federal Funds.
  - ***Tax-Exempt Fund:*** Tax-Free Money Market Fund.
- ***The Investors:*** The Funds are designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges. The Funds are particularly suitable for banks, corporations and other financial institutions that seek investment of short-term funds for their own accounts or for the accounts of their customers. Shares of the Government Fund are intended to qualify as eligible investments for federally chartered credit unions pursuant to Sections 107(7), 107(8) and 107(15) of the Federal Credit Union Act, Part 703 of the National Credit Union Administration (''NCUA'') Rules and Regulations and NCUA Letter Number 155. The Fund intends to review changes in the applicable laws, rules and regulations governing eligible investments for federally chartered credit unions, and to take such action as may be necessary so that the investments of the Fund qualify as eligible investments under the Federal Credit Union Act and the regulations thereunder. Shares of the Government Fund, however, may or may not qualify as eligible investments for particular state-chartered credit unions. A state-chartered credit union should consult qualified legal counsel to determine whether the Government Fund is a permissible investment under the law applicable to it.
- ***NAV:*** Each Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.
- ***Maximum Remaining Maturity of Portfolio Investments:*** 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.
- ***Dollar-Weighted Average Portfolio Maturity (''WAM''):*** Not more than 90 days (as required by Rule 2a-7).

- ***Investment Restrictions:*** Each Fund is subject to certain investment restrictions that are described in detail under ‘‘Investment Restrictions’’ in the Additional Statement. Fundamental investment restrictions of a Fund cannot be changed without approval of a majority of the outstanding shares of that Fund. The Treasury Obligations Fund’s policy of limiting its investments to U.S. Treasury Obligations (as defined in Appendix A) and related repurchase agreements is also fundamental. All investment objectives and policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.
- ***Diversification:*** Diversification can help a Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ‘‘SEC’’), each Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, a Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees and securities that are not ‘‘First Tier Securities’’ as defined by the SEC are subject to different diversification requirements as described in the Additional Statement.

Fund Investment Objectives and Strategies

INVESTMENT OBJECTIVES

The Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government, Federal and Tax-Free Money Market Funds seek to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

Taxable and Tax-Advantaged Funds: The Prime Obligations and Money Market Funds pursue their investment objectives by investing in U.S. Government Securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Money Market Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments. The Treasury Obligations Fund pursues its investment objective by investing only in securities issued by the U.S. Treasury and repurchase agreements relating to such securities. The Government Fund pursues its investment objective by investing, directly or indirectly, only in U.S. Government Securities and repurchase agreements relating to such securities. The Treasury Instruments and Federal Funds pursue their investment objectives by limiting their investments only to certain U.S. Treasury Obligations and U.S. Government Securities, respectively, the interest from which is generally exempt from state income taxation. You should consult your tax adviser to determine whether distributions from the Treasury Instruments and Federal Funds (and any other Fund that may hold such obligations) derived from interest on such obligations are exempt from state income taxation in your own state.

In order to obtain a rating from a rating organization, the Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government and Federal Funds will observe special investment restrictions.

Tax-Exempt Fund: The Tax-Free Money Market Fund pursues its investment objective by investing in securities issued by or on behalf of states, territories, and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia, the interest from which, if any, is in the opinion of bond counsel excluded from gross income for federal income tax purposes, and not an item of tax preference under the federal alternative minimum tax (‘‘AMT’’).

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences among the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information see Appendix A.

Investment Policies Matrix

Fund	U.S. Treasury Obligations	U.S. Government Securities	Bank Obligations	Commercial Paper
Prime Obligations	■[1]	■	■ U.S. banks only[2]	■
Money Market	■[1]	■	■ Over 25% of total assets must be invested in U.S. and foreign (US$) banks[3]	■ U.S. and foreign (US$) commercial paper
Treasury Obligations	■[4]			
Treasury Instruments	■[4]			
Government	■[1]	■		
Federal	■[1]	■		
Tax-Free Money Market				■ Tax-exempt only

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*
[2] *Including foreign branches of U.S. banks.*
[3] *If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*
[4] *Issued by the U.S. Treasury.*
[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*
[6] *The Money Market Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

Short-Term Obligations of Corporations and Other Entities	Repurchase Agreements	Asset-Backed and Receivables-Backed Securities[5]	Foreign Government Obligations (US$)
■ U.S. entities only	■	■	
■ U.S. and foreign (US$) entities	■	■	■[6]
	■		
	■		
	■ (Does not intend to invest)		

Investment Policies Matrix continued

Fund	Municipals	Custodial Receipts	Unrated Securities[9]	Investment Companies
Prime Obligations	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Money Market	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Treasury Obligations				
Treasury Instruments				
Government				■ Up to 10% of total assets in other investment companies
Federal				
Tax-Free Money Market	■ At least 80% of net assets in tax-exempt municipal obligations (except in extraordinary circumstances)[8]	■	■	■ Up to 10% of total assets in other investment companies

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *Ordinarily expect that 100% of the Fund's assets will be invested in municipal obligations, but the Fund may, for temporary defensive purposes, hold cash or invest in short-term taxable securities.*

[9] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities, or to the extent that a Fund may purchase Second Tier Securities, comparable in quality to Second Tier Securities. In addition, a Fund holding a security supported by a guarantee or demand feature may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

Private Activity Bonds	Credit Quality[9]	Summary of Taxation for Distributions[14]	Miscellaneous
■	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
■	First Tier[12]	Taxable federal and state[15]	May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Under extraordinary circumstances, may hold cash, U.S. Government Securities subject to state taxation or cash equivalents. Reverse repurchase agreements not permitted
■ Does not intend to invest if subject to AMT[10,11]	First[12] or Second Tier[13]	Tax-exempt federal and taxable state[16]	May (but does not currently intend to) invest up to 20% of net assets in securities subject to AMT and may temporarily invest in the taxable money market instruments described herein. Reverse repurchase agreements not permitted

[10] *If such policy should change, private activity bonds subject to AMT would not exceed 20% of the Fund's net assets under normal market conditions.*

[11] *No more than 25% of the value of the Fund's total assets may be invested in industrial development bonds or similar obligations where the non-governmental entities supplying the revenues from which such bonds or obligations are to be paid are in the same industry.*

[12] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[13] *Second Tier Securities are (a) rated in the top two short-term rating categories by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings.*

[14] *See ''Taxation'' for an explanation of the tax consequences summarized in the table above.*

[15] *Taxable in many states except for distributions from U.S. Treasury Obligation interest income and certain U.S. Government Securities interest income.*

[16] *Taxable except for distributions from interest on obligations of an investor's state of residence in certain states.*

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

• Applicable — Not applicable	Prime Obligations Fund	Money Market Fund	Treasury Obligations Fund	Treasury Instruments Fund	Government Fund	Federal Fund	Tax-Free Money Market Fund
NAV	•	•	•	•	•	•	•
Interest Rate	•	•	•	•	•	•	•
Credit/Default	•	•	•	•	•	•	•
Liquidity	•	•	•	•	•	•	•
U.S. Government Securities	•	•	—	—	•	•	—
Concentration	—	—	—	—	—	—	•
Foreign	—	•	—	—	—	—	—
Banking Industry	—	•	—	—	—	—	—
Tax	—	—	—	—	—	—	•

Risks that apply to all Funds:

- ***NAV Risk***—The risk that a Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, a Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, a Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations. In addition, with respect to the Tax-Free Money Market Fund, this risk includes the risk of default on foreign letters of credit or guarantees that back municipal securities.
- ***Liquidity Risk***—The risk that a Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.

Risk that applies to the Prime Obligations, Money Market, Government and Federal Funds:

- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by a Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risks that apply to the Money Market Fund:

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Money Market Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Money Market Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

Risks that apply to the Tax-Free Money Market Fund:

- ***Concentration Risk***—The risk that if the Fund invests more than 25% of its total assets in issuers within the same state, industry or economic sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if its investments were not so concentrated.
- ***Tax Risk***—The risk that future legislative or administrative changes or court decisions may materially affect the value of the Fund's portfolio and/or the ability of the Fund to pay federal tax-exempt dividends. This Fund would not be a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal, state or local tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table below provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's FST Shares from year to year for up to the last ten years; and (b) the average annual total returns of a Fund's FST Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced. You may obtain a Fund's current yield by calling 1-800-621-2550.

Fund Fees and Expenses (FST Shares)

This table describes the fees and expenses that you would pay if you buy and hold FST Shares of a Fund.

	Prime Obligations Fund	Money Market Fund
Shareholder Fees (fees paid directly from your investment):		
Maximum Sales Charge (Load) Imposed on Purchases	None	None
Maximum Deferred Sales Charge (Load)	None	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends	None	None
Redemption Fees	None	None
Exchange Fees	None	None
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]		
Management Fees[2]	0.205%	0.205%
Other Expenses[3]	0.015%	0.015%
Total Fund Operating Expenses*	0.220%	0.220%

See page 24 for all other footnotes.

* As a result of current waivers and expense limitations, ''Other Expenses'' and ''Total Fund Operating Expenses'' of the Funds which are actually incurred as of the date of this Prospectus are as set forth below. The waivers and expense limitations may be terminated at any time at the option of the Investment Adviser. If this occurs, ''Other Expenses'' and ''Total Fund Operating Expenses'' may increase without shareholder approval.

	Prime Obligations Fund	Money Market Fund
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]		
Management Fees[2]	*0.17%*	*0.17%*
Other Expenses[3]	*0.01%*	*0.01%*

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee equal to 0.015% of the Treasury Obligations, Treasury Instruments and Federal Funds' average daily net assets and equal to 0.035% of all other Funds' average daily net assets. ***As a result of fee waivers, the current management fees of the Treasury Obligations Fund, Treasury Instruments Fund, Federal Fund and all other Funds are 0.19%, 0.19%, 0.19% and 0.17%, respectively, of such Funds' average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] The Investment Adviser has voluntarily agreed to reduce or limit ''Other Expenses'' of each Fund (excluding management fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of each Fund's average daily net assets.

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in FST Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Prime Obligations	$23	$71	$124	$280
Money Market	$23	$71	$124	$280
Treasury Obligations	$23	$71	$124	$280
Treasury Instruments	$26	$80	$141	$318
Government	$23	$71	$124	$280
Federal	$23	$71	$124	$280
Tax-Free Money Market	$23	$71	$124	$280

Institutions that invest in FST Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your institution for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain institutions that invest in FST Shares may receive other compensation in connection with the sale and distribution of FST Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs, served as the Funds' investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management, L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser also performs the following services for the Funds:

- Continually manages each Fund, including the purchase, retention and disposition of securities and other assets
- Administers each Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, certain Funds may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

Fund	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Prime Obligations	0.205%	0.17%
Money Market	0.205%	0.17%
Treasury Obligations	0.205%	0.19%
Treasury Instruments	0.205%	0.19%
Government	0.205%	0.17%
Federal	0.205%	0.19%
Tax-Free Money Market	0.205%	0.17%

The difference, if any, between the stated fees and the actual fees paid by the Funds reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

Dividends will be distributed monthly. You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

All or substantially all of each Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of the following times:

Fund	Dividend Declaration Time (New York Time)
Prime Obligations	5:00 p.m.
Money Market	5:00 p.m.
Treasury Obligations	5:00 p.m.
Treasury Instruments	4:00 p.m.
Government	5:00 p.m.
Federal	4:00 p.m.
Tax-Free Money Market	4:00 p.m.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in a Fund's daily distributions.

Each Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

The income declared as a dividend for the Prime Obligations, Money Market, Treasury Obligations and Government Funds is based on estimates of net investment income for each Fund. Actual income may differ from estimates, and differences, if any, will be included in the calculation of subsequent dividends.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' FST Shares.

HOW TO BUY SHARES

How Can I Purchase FST Shares Of The Funds?

You may purchase FST Shares on any business day at their NAV next determined after receipt of an order. Shares begin earning dividends after the receipt of the purchase amount in federal funds. No sales load is charged. You may place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

In order to make an initial investment in a Fund, you must furnish to the Fund or Goldman Sachs the Account Application.

You may send your payment as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other

financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Treasury Instruments and Federal Funds:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day
Prime Obligations, Money Market, Treasury Obligations and Government Funds:	
■ By 5:00 p.m. New York time	Same business day
■ After 5:00 p.m. New York time	Next business day
Tax-Free Money Market Fund:	
■ By 2:00 p.m. New York time	Same business day
■ After 2:00 p.m. New York time	Next business day

How Do I Purchase Shares Through A Financial Institution?

Certain institutions (including banks, trust companies, brokers and investment advisers) that provide recordkeeping, reporting and processing services to their customers may be authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized institution or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Authorized institutions or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your institution or intermediary directly to learn whether it is authorized to accept orders for the Trust.

These institutions may receive payments from the Funds or Goldman Sachs for the services provided by them with respect to the Funds' FST Shares. These payments may be in addition to other payments borne by the Funds.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to certain institutions and other persons in connection with the sale,

distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds.

In addition to FST Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than FST Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Minimum initial investment	$10 million (may be allocated among the Funds)
Minimum account balance	$10 million
Minimum subsequent investments	None

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement.
- Reject any purchase order for any reason.

The Funds may allow you to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange FST Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

Fund	NAV Calculated
Treasury Instruments, Federal and Tax-Free Money Market	As of the close of regular trading of the New York Stock Exchange (normally 4:00 p.m. New York time or such later time as the New York Stock Exchange or the NASDAQ market may officially close) on each business day
Prime Obligations, Money Market, Treasury Obligations and Government	As of 5:00 p.m. New York time on each business day

- NAV per share of each class is generally calculated by the accounting agent on each business day. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.
- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, each Fund reserves the right to close at or prior to the BMA recommended closing time. If a Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open one or more Funds for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help each Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell FST Shares Of The Funds?

You may arrange to take money out of your account by selling (redeeming) some or all of your shares. **Generally, each Fund will redeem its FST Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** You may request that redemption proceeds be sent to you by check or by wire (if the wire instructions are on record). Redemptions may be requested in writing or by telephone.

Instructions For Redemptions:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund name and Class of Shares ■ The dollar amount you want to sell ■ How and where to send the proceeds ■ Mail your request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain institutions and intermediaries are authorized to accept redemption requests on behalf of the Funds as described under ‘‘How Do I Purchase Shares Through A Financial Institution?’’ A redemption may also be made with respect to certain Funds by means of the check redemption privilege described in the Additional Statement.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the

Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on your Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Treasury Instruments and Federal Funds:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received
Prime Obligations, Money Market, Treasury Obligations and Government Funds:		
■ By 5:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 5:00 p.m. New York time	Wired next business day	Earned on day request is received
Tax-Free Money Market Fund:		
■ By 1:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 1:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request (or up to three business days later with respect to the Tax-Free Money Market Fund) and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an

emergency exists which makes the disposal of securities owned by a Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.

- To change the bank designated on your Account Application, you must send written instructions signed by an authorized person designated on the Account Application to the Transfer Agent.
- Neither the Trust, Goldman Sachs nor any other institution assumes any responsibility for the performance of your bank or any intermediaries in the transfer process. If a problem with such performance arises, you should deal directly with your bank or any such intermediaries.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.

The Trust reserves the right to:

- Redeem your shares if your account balance falls below the minimum as a result of a redemption. The Fund will give you 60 days' prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Institutional Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

You may exchange FST Shares of a Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice to you.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need to Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be

subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will Be Sent Regarding Investments In FST Shares?

Recordholders will receive an annual report containing audited financial statements and a semi-annual report. To eliminate unnecessary duplication, only one copy of such reports will be sent to shareholders with the same mailing address. If you would like a duplicate copy to be mailed to you, please contact Goldman Sachs Funds at 1-800-621-2550. Recordholders will also be provided with an individual monthly statement. Any dividends and distributions paid by the Funds are also reflected in regular statements issued by the Funds to recordholders. If you purchase shares through an institution or other intermediary, the institution or intermediary is responsible for providing these or other reports to their customers who are the beneficial owners of the Fund shares in accordance with the rules that apply to their accounts with the institution or intermediary.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions: Each Fund contemplates declaring as dividends each year all or substantially all of its net investment income. Except for the Tax-Exempt Funds, distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations or interest on obligations of your state of residence or its municipalities or authorities, they will in most cases be exempt from state and local income taxes. Distributions from the Tax-Exempt Funds that are designated as ''exempt interest dividends'' are generally not subject to federal income tax. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

You should note that a portion of the exempt-interest dividends paid by the Tax-Exempt Funds may be a preference item when determining your federal alternative minimum tax liability. Exempt-interest dividends are also taken into account in determining the taxable portion of social security or railroad retirement benefits. Any interest on indebtedness incurred by you to purchase or carry shares in the Tax-Exempt Funds generally will not be deductible for federal income tax purposes.

Other Information: When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs. A Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

Some Funds invest in U.S. Treasury Obligations and certain U.S. Government Securities the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. government, including the Federal Home Loan Banks, Federal Farm Credit Banks, Tennessee Valley Authority and Student Loan Marketing Association.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. Certain Funds may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, certain Funds may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

If a Fund invests more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. A Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by a Fund consists of direct U.S. dollar-

denominated obligations of domestic or, in the case of certain Funds, foreign issuers. Asset-backed commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. A Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by a Fund may be regarded as illiquid.

Repurchase Agreements. Certain Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by a Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, a Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, a Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, a Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to a Fund's shareholders. In addition, certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. Certain Funds may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. Certain Funds may invest in foreign government obligations. Foreign government obligations that the Funds invest in are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by a Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. The legal remedies for investors may be more limited than the remedies available in the United States. In addition, changes in the exchange rate of a foreign currency relative to the U.S. dollar (e.g., weakening of the currency against the U.S. dollar) may adversely affect the ability of a foreign issuer to pay interest and repay principal on an obligation.

Municipal Obligations. Certain Funds may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which a Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Municipal Notes and Bonds. Municipal notes include tax anticipation notes (''TANs''), revenue anticipation notes (''RANs''), bond anticipation notes (''BANs''), tax and revenue anticipation notes (''TRANs'') and construction loan notes. Municipal bonds include general obligation bonds and revenue bonds. General obligation bonds are backed by the taxing power of the issuing municipality and are considered the safest type of municipal obligation. Revenue bonds are backed by the revenues of a project or facility such as the tolls from a toll bridge. Revenue bonds also include lease rental revenue bonds which are issued by a state or local authority for capital projects and are secured by annual lease payments from the state or locality sufficient to cover debt service on the authority's obligations. Industrial development bonds (''private activity bonds'') are a specific type of revenue bond backed by the credit and security of a private user and, therefore, have more potential risk. Municipal bonds may be issued in a variety of forms, including commercial paper, tender option bonds and variable and floating rate securities.

Tender Option Bonds. A tender option bond is a municipal obligation (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued in conjunction with the agreement of a third party, such as a bank, broker-dealer or other financial institution, pursuant to which the institution grants the security holder the option, at periodic intervals, to tender its securities to the institution. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution will normally not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund's average portfolio maturity. There is a risk that a Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender

option bonds may be illiquid or may become illiquid as a result of a credit rating downgrade, a payment default or a disqualification from tax-exempt status.

Revenue Anticipation Warrants. Revenue Anticipation Warrants (''RAWs'') are issued in anticipation of the issuer's receipt of revenues and present the risk that such revenues will be insufficient to satisfy the issuer's payment obligations. The entire amount of principal and interest on RAWs is due at maturity. RAWs, including those with a maturity of more than 397 days, may also be repackaged as instruments which include a demand feature that permits the holder to sell the RAWs to a bank or other financial institution at a purchase price equal to par plus accrued interest on each interest rate reset date.

Industrial Development Bonds. Certain Funds may invest in industrial development bonds (private activity bonds). Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user, the interest from which would be an item of tax preference when distributed by a Fund as ''exempt-interest dividends'' to shareholders under the AMT.

Other Municipal Obligation Policies. Certain Funds may invest 25% or more of the value of their respective total assets in municipal obligations which are related in such a way that an economic, business or political development or change affecting one municipal obligation would also affect the other municipal obligation. For example, a Fund may invest all of its assets in (a) municipal obligations the interest of which is paid solely from revenues from similar projects such as hospitals, electric utility systems, multi-family housing, nursing homes, commercial facilities (including hotels), steel companies or life care facilities; (b) municipal obligations whose issuers are in the same state; or (c) industrial development obligations. Concentration of a Fund's investments in these municipal obligations will subject the Fund, to a greater extent than if such investment was not so concentrated, to the risks of adverse economic, business or political developments affecting the particular state, industry or other area of concentration.

Municipal obligations may also include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment contracts. Moral obligation bonds are supported by the moral commitment but not the legal obligation of a state or municipality. Municipal leases, certificates of participation and moral obligation bonds present the risk that the state or municipality involved will not appropriate the monies to meet scheduled payments under these instruments.

Municipal obligations may be backed by letters of credit or other forms of credit enhancement issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss

to a Fund that invests in municipal obligations. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

In order to enhance the liquidity, stability or quality of a municipal obligation, a Fund may acquire the right to sell the obligation to another party at a guaranteed price and date.

Custodial Receipts. Certain Funds may invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. A Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the acquiring Fund and will be subject to substantially the same risks. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, a Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Funds may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. Each Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities

- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of a Fund's portfolio.

Borrowings. Each Fund may borrow up to 33⅓% of its total assets from banks for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report along with a Funds' financial statements, is included in the Fund's annual report (available upon request without charge). The information for all other periods prior to the period ended December 31, 2000 has been audited by the Fund's previous independent accountants.

Footnotes:

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions. Returns for periods less than a full year are not annualized.

(c) Annualized.

(d) Less than $.005 per share.

Goldman Sachs

Asset Management

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Funds. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Money Market Funds are managed to seek preservation of capital, daily liquidity and maximum current income. With each Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Funds. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target***—WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure***—Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and each Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities***—The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- Each Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

Benchmarks for the Money Market Funds are the **iMoneyNet, Inc. Indices.** Each Fund uses the iMoneyNet Index which best corresponds to the Fund's eligible investments.

References in this Prospectus to a Fund's benchmark are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

- ***The Funds:*** Each Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, each Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').
  - ***Taxable Funds:*** Prime Obligations, Money Market, Treasury Obligations and Government Funds.
  - ***Tax-Advantaged Funds:*** Treasury Instruments and Federal Funds.
  - ***Tax-Exempt Fund:*** Tax-Free Money Market Fund.
- ***The Investors:*** The Funds are designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges. The Funds are particularly suitable for banks, corporations and other financial institutions that seek investment of short-term funds for their own accounts or for the accounts of their customers. Shares of the Government Fund are intended to qualify as eligible investments for federally chartered credit unions pursuant to Sections 107(7), 107(8) and 107(15) of the Federal Credit Union Act, Part 703 of the National Credit Union Administration (''NCUA'') Rules and Regulations and NCUA Letter Number 155. The Fund intends to review changes in the applicable laws, rules and regulations governing eligible investments for federally chartered credit unions, and to take such action as may be necessary so that the investments of the Fund qualify as eligible investments under the Federal Credit Union Act and the regulations thereunder. Shares of the Government Fund, however, may or may not qualify as eligible investments for particular state-chartered credit unions. A state-chartered credit union should consult qualified legal counsel to determine whether the Government Fund is a permissible investment under the law applicable to it.
- ***NAV:*** Each Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.
- ***Maximum Remaining Maturity of Portfolio Investments:*** 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.
- ***Dollar-Weighted Average Portfolio Maturity (''WAM''):*** Not more than 90 days (as required by Rule 2a-7).

- ***Investment Restrictions:*** Each Fund is subject to certain investment restrictions that are described in detail under ‘‘Investment Restrictions’’ in the Additional Statement. Fundamental investment restrictions of a Fund cannot be changed without approval of a majority of the outstanding shares of that Fund. The Treasury Obligations Fund’s policy of limiting its investments to U.S. Treasury Obligations (as defined in Appendix A) and related repurchase agreements is also fundamental. All investment objectives and policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.
- ***Diversification:*** Diversification can help a Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ‘‘SEC’’), each Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, a Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees and securities that are not ‘‘First Tier Securities’’ as defined by the SEC are subject to different diversification requirements as described in the Additional Statement.

Fund Investment Objectives and Strategies

INVESTMENT OBJECTIVES

The Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government, Federal and Tax-Free Money Market Funds seek to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

Taxable and Tax-Advantaged Funds: The Prime Obligations and Money Market Funds pursue their investment objectives by investing in U.S. Government Securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Money Market Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments. The Treasury Obligations Fund pursues its investment objective by investing only in securities issued by the U.S. Treasury and repurchase agreements relating to such securities. The Government Fund pursues its investment objective by investing, directly or indirectly, only in U.S. Government Securities and repurchase agreements relating to such securities. The Treasury Instruments and Federal Funds pursue their investment objectives by limiting their investments only to certain U.S. Treasury Obligations and U.S. Government Securities, respectively, the interest from which is generally exempt from state income taxation. You should consult your tax adviser to determine whether distributions from the Treasury Instruments and Federal Funds (and any other Fund that may hold such obligations) derived from interest on such obligations are exempt from state income taxation in your own state.

In order to obtain a rating from a rating organization, the Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government and Federal Funds will observe special investment restrictions.

Tax-Exempt Fund: The Tax-Free Money Market Fund pursues its investment objective by investing in securities issued by or on behalf of states, territories, and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia, the interest from which, if any, is in the opinion of bond counsel excluded from gross income for federal income tax purposes, and not an item of tax preference under the federal alternative minimum tax (‘‘AMT’’).

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences among the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information see Appendix A.

Investment Policies Matrix

Fund	U.S. Treasury Obligations	U.S. Government Securities	Bank Obligations	Commercial Paper
Prime Obligations	■[1]	■	■ U.S. banks only[2]	■
Money Market	■[1]	■	■ Over 25% of total assets must be invested in U.S. and foreign (US$) banks[3]	■ U.S. and foreign (US$) commercial paper
Treasury Obligations	■[4]			
Treasury Instruments	■[4]			
Government	■[1]	■		
Federal	■[1]	■		
Tax-Free Money Market				■ Tax-exempt only

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*
[2] *Including foreign branches of U.S. banks.*
[3] *If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*
[4] *Issued by the U.S. Treasury.*
[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*
[6] *The Money Market Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

Short-Term Obligations of Corporations and Other Entities	Repurchase Agreements	Asset-Backed and Receivables-Backed Securities[5]	Foreign Government Obligations (US$)
■ U.S. entities only	■	■	
■ U.S. and foreign (US$) entities	■	■	■[6]
	■		
	■		
	■ (Does not intend to invest)		

Investment Policies Matrix continued

Fund	Municipals	Custodial Receipts	Unrated Securities[9]	Investment Companies
Prime Obligations	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Money Market	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Treasury Obligations				
Treasury Instruments				
Government				■ Up to 10% of total assets in other investment companies
Federal				
Tax-Free Money Market	■ At least 80% of net assets in tax-exempt municipal obligations (except in extraordinary circumstances)[8]	■	■	■ Up to 10% of total assets in other investment companies

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *Ordinarily expect that 100% of the Fund's assets will be invested in municipal obligations, but the Fund may, for temporary defensive purposes, hold cash or invest in short-term taxable securities.*

[9] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities, or to the extent that a Fund may purchase Second Tier Securities, comparable in quality to Second Tier Securities. In addition, a Fund holding a security supported by a guarantee or demand feature may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

Private Activity Bonds	Credit Quality[9]	Summary of Taxation for Distributions[14]	Miscellaneous
■	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
■	First Tier[12]	Taxable federal and state[15]	May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Under extraordinary circumstances, may hold cash, U.S. Government Securities subject to state taxation or cash equivalents. Reverse repurchase agreements not permitted
■ Does not intend to invest if subject to AMT[10,11]	First[12] or Second Tier[13]	Tax-exempt federal and taxable state[16]	May (but does not currently intend to) invest up to 20% of net assets in securities subject to AMT and may temporarily invest in the taxable money market instruments described herein. Reverse repurchase agreements not permitted

[10] *If such policy should change, private activity bonds subject to AMT would not exceed 20% of the Fund's net assets under normal market conditions.*

[11] *No more than 25% of the value of the Fund's total assets may be invested in industrial development bonds or similar obligations where the non-governmental entities supplying the revenues from which such bonds or obligations are to be paid are in the same industry.*

[12] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[13] *Second Tier Securities are (a) rated in the top two short-term rating categories by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings.*

[14] *See ''Taxation'' for an explanation of the tax consequences summarized in the table above.*

[15] *Taxable in many states except for distributions from U.S. Treasury Obligation interest income and certain U.S. Government Securities interest income.*

[16] *Taxable except for distributions from interest on obligations of an investor's state of residence in certain states.*

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

• Applicable — Not applicable	Prime Obligations Fund	Money Market Fund	Treasury Obligations Fund	Treasury Instruments Fund	Government Fund	Federal Fund	Tax-Free Money Market Fund
NAV	•	•	•	•	•	•	•
Interest Rate	•	•	•	•	•	•	•
Credit/Default	•	•	•	•	•	•	•
Liquidity	•	•	•	•	•	•	•
U.S. Government Securities	•	•	—	—	•	•	—
Concentration	—	—	—	—	—	—	•
Foreign	—	•	—	—	—	—	—
Banking Industry	—	•	—	—	—	—	—
Tax	—	—	—	—	—	—	•

Risks that apply to all Funds:

- ***NAV Risk***—The risk that a Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, a Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, a Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations. In addition, with respect to the Tax-Free Money Market Fund, this risk includes the risk of default on foreign letters of credit or guarantees that back municipal securities.
- ***Liquidity Risk***—The risk that a Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.

Risk that applies to the Prime Obligations, Money Market, Government and Federal Funds:

- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by a Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risks that apply to the Money Market Fund:

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Money Market Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Money Market Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

Risks that apply to the Tax-Free Money Market Fund:

- ***Concentration Risk***—The risk that if the Fund invests more than 25% of its total assets in issuers within the same state, industry or economic sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if its investments were not so concentrated.
- ***Tax Risk***—The risk that future legislative or administrative changes or court decisions may materially affect the value of the Fund's portfolio and/or the ability of the Fund to pay federal tax-exempt dividends. This Fund would not be a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal, state or local tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table below provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Service Shares from year to year for up to the last ten years; and (b) the average annual total returns of a Fund's Service Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced. You may obtain a Fund's current yield by calling 1-800-621-2550.

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee equal to 0.015% of the Treasury Obligations, Treasury Instruments and Federal Funds' average daily net assets and equal to 0.035% of all other Funds' average daily net assets. ***As a result of fee waivers, the current management fees of the Treasury Obligations Fund, Treasury Instruments Fund, Federal Fund and all other Funds are 0.19%, 0.19%, 0.19% and 0.17%, respectively, of such Funds' average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees directly to their customers who are beneficial owners of Service Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of each Fund (excluding management fees, service fees, shareholder administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of each Fund's average daily net assets.

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Service Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Prime Obligations	$74	$230	$401	$894
Money Market	$74	$230	$401	$894
Treasury Obligations	$74	$230	$401	$894
Treasury Instruments	$77	$240	$417	$930
Government	$74	$230	$401	$894
Federal	$74	$230	$401	$894
Tax-Free Money Market	$74	$230	$401	$894

Service Organizations that invest in Service Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Service Shares may receive other compensation in connection with the sale and distribution of Service Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs, served as the Funds' investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management, L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser also performs the following services for the Funds:

- Continually manages each Fund, including the purchase, retention and disposition of securities and other assets
- Administers each Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, certain Funds may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

Fund	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Prime Obligations	0.205%	0.17%
Money Market	0.205%	0.17%
Treasury Obligations	0.205%	0.19%
Treasury Instruments	0.205%	0.19%
Government	0.205%	0.17%
Federal	0.205%	0.19%
Tax-Free Money Market	0.205%	0.17%

The difference, if any, between the stated fees and the actual fees paid by the Funds reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

Dividends will be distributed monthly. You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

All or substantially all of each Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of the following times:

Fund	Dividend Declaration Time (New York Time)
Prime Obligations	5:00 p.m.
Money Market	5:00 p.m.
Treasury Obligations	5:00 p.m.
Treasury Instruments	4:00 p.m.
Government	5:00 p.m.
Federal	4:00 p.m.
Tax-Free Money Market	4:00 p.m.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in a Fund's daily distributions.

Each Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

The income declared as a dividend for the Prime Obligations, Money Market, Treasury Obligations and Government Funds is based on estimates of net investment income for each Fund. Actual income may differ from estimates, and differences, if any, will be included in the calculation of subsequent dividends.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Service Shares.

HOW TO BUY SHARES

How Can I Purchase Service Shares Of The Funds?

Generally, Service Shares may be purchased only through institutions that have agreed to provide shareholder administration and personal and account maintenance services to their customers who are the beneficial owners of Service Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Service Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs the Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Treasury Instruments and Federal Funds:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day
Prime Obligations, Money Market, Treasury Obligations and Government Funds:	
■ By 5:00 p.m. New York time	Same business day
■ After 5:00 p.m. New York time	Next business day
Tax-Free Money Market Fund:	
■ By 2:00 p.m. New York time	Same business day
■ After 2:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Service Shares:

- Personal and account maintenance services; and
- Shareholder administration services.

Personal and account maintenance services include:

- Providing facilities to answer inquiries and responding to correspondence with the Service Organization's customers
- Acting as liaison between the Service Organization's customers and the Trust
- Assisting customers in completing application forms, selecting dividend and other options, and similar services

Shareholder administration services include:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem and exchange shares for customers
- Processing confirmation statements and payments for customers
- Facilitating the inclusion of the Funds in customer accounts, products or services

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a service plan and a separate shareholder administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payments for their services from the Trust. These payments are equal to 0.25% (annualized) for personal and account maintenance services plus an additional 0.25% (annualized) for shareholder administration services of the average daily net assets of the Service Shares of the Funds that are attributable to or held in the name of a Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds.

In addition to Service Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Service Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Minimum initial investment	$10 million (may be allocated among the Funds)
Minimum account balance	$10 million
Minimum subsequent investments	None

A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Service Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem Service Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement.
- Reject any purchase order for any reason.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Service Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\begin{array}{c}\text{(Value of Assets of the Class)} \\ - \text{ (Liabilities of the Class)}\end{array}}{\text{Number of Outstanding Shares of the Class}}$$

Fund	NAV Calculated
Treasury Instruments, Federal and Tax-Free Money Market	As of the close of regular trading of the New York Stock Exchange (normally 4:00 p.m. New York time or such later time as the New York Stock Exchange or the NASDAQ market may officially close) on each business day
Prime Obligations, Money Market, Treasury Obligations and Government	As of 5:00 p.m. New York time on each business day

- NAV per share of each class is generally calculated by the accounting agent on each business day. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.
- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, each Fund reserves the right to close at or prior to the BMA recommended closing time. If a Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open one or more Funds for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help each Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Service Shares Of The Funds?

Generally, Service Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Service Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6572
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Funds as described under ''What Do I Need To Know About Service Organizations?'' A redemption may also be made with respect to certain Funds by means of the check redemption privilege described in the Additional Statement.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Treasury Instruments and Federal Funds:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received
Prime Obligations, Money Market, Treasury Obligations and Government:		
■ By 5:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 5:00 p.m. New York time	Wired next business day	Earned on day request is received
Tax-Free Money Market Fund:		
■ By 1:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 1:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request (or up to three business days later with respect to the Tax-Free Money Market Fund) and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by a Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.

- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Service Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Service Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Service Shares of a Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be

subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Service Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Funds are also reflected in regular statements issued by the Funds to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Service Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions: Each Fund contemplates declaring as dividends each year all or substantially all of its net investment income. Except for the Tax-Exempt Funds, distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations or interest on obligations of your state of residence or its municipalities or authorities, they will in most cases be exempt from state and local income taxes. Distributions from the Tax-Exempt Funds that are designated as ''exempt interest dividends'' are generally not subject to federal income tax. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

You should note that a portion of the exempt-interest dividends paid by the Tax-Exempt Funds may be a preference item when determining your federal alternative minimum tax liability. Exempt-interest dividends are also taken into account in determining the taxable portion of social security or railroad retirement benefits. Any interest on indebtedness incurred by you to purchase or carry shares in the Tax-Exempt Funds generally will not be deductible for federal income tax purposes.

Other Information: When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs. A Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

Some Funds invest in U.S. Treasury Obligations and certain U.S. Government Securities the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. government, including the Federal Home Loan Banks, Federal Farm Credit Banks, Tennessee Valley Authority and Student Loan Marketing Association.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. Certain Funds may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, certain Funds may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

If a Fund invests more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. A Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by a Fund consists of direct U.S. dollar-

denominated obligations of domestic or, in the case of certain Funds, foreign issuers. Asset-backed commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. A Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by a Fund may be regarded as illiquid.

Repurchase Agreements. Certain Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by a Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, a Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, a Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, a Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to a Fund's shareholders. In addition, certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. Certain Funds may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. Certain Funds may invest in foreign government obligations. Foreign government obligations that the Funds invest in are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by a Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. The legal remedies for investors may be more limited than the remedies available in the United States. In addition, changes in the exchange rate of a foreign currency relative to the U.S. dollar (e.g., weakening of the currency against the U.S. dollar) may adversely affect the ability of a foreign issuer to pay interest and repay principal on an obligation.

Municipal Obligations. Certain Funds may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which a Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Municipal Notes and Bonds. Municipal notes include tax anticipation notes (''TANs''), revenue anticipation notes (''RANs''), bond anticipation notes (''BANs''), tax and revenue anticipation notes (''TRANs'') and construction loan notes. Municipal bonds include general obligation bonds and revenue bonds. General obligation bonds are backed by the taxing power of the issuing municipality and are considered the safest type of municipal obligation. Revenue bonds are backed by the revenues of a project or facility such as the tolls from a toll bridge. Revenue bonds also include lease rental revenue bonds which are issued by a state or local authority for capital projects and are secured by annual lease payments from the state or locality sufficient to cover debt service on the authority's obligations. Industrial development bonds (''private activity bonds'') are a specific type of revenue bond backed by the credit and security of a private user and, therefore, have more potential risk. Municipal bonds may be issued in a variety of forms, including commercial paper, tender option bonds and variable and floating rate securities.

Tender Option Bonds. A tender option bond is a municipal obligation (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued in conjunction with the agreement of a third party, such as a bank, broker-dealer or other financial institution, pursuant to which the institution grants the security holder the option, at periodic intervals, to tender its securities to the institution. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution will normally not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund's average portfolio maturity. There is a risk that a Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender

option bonds may be illiquid or may become illiquid as a result of a credit rating downgrade, a payment default or a disqualification from tax-exempt status.

Revenue Anticipation Warrants. Revenue Anticipation Warrants (''RAWs'') are issued in anticipation of the issuer's receipt of revenues and present the risk that such revenues will be insufficient to satisfy the issuer's payment obligations. The entire amount of principal and interest on RAWs is due at maturity. RAWs, including those with a maturity of more than 397 days, may also be repackaged as instruments which include a demand feature that permits the holder to sell the RAWs to a bank or other financial institution at a purchase price equal to par plus accrued interest on each interest rate reset date.

Industrial Development Bonds. Certain Funds may invest in industrial development bonds (private activity bonds). Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user, the interest from which would be an item of tax preference when distributed by a Fund as ''exempt-interest dividends'' to shareholders under the AMT.

Other Municipal Obligation Policies. Certain Funds may invest 25% or more of the value of their respective total assets in municipal obligations which are related in such a way that an economic, business or political development or change affecting one municipal obligation would also affect the other municipal obligation. For example, a Fund may invest all of its assets in (a) municipal obligations the interest of which is paid solely from revenues from similar projects such as hospitals, electric utility systems, multi-family housing, nursing homes, commercial facilities (including hotels), steel companies or life care facilities; (b) municipal obligations whose issuers are in the same state; or (c) industrial development obligations. Concentration of a Fund's investments in these municipal obligations will subject the Fund, to a greater extent than if such investment was not so concentrated, to the risks of adverse economic, business or political developments affecting the particular state, industry or other area of concentration.

Municipal obligations may also include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment contracts. Moral obligation bonds are supported by the moral commitment but not the legal obligation of a state or municipality. Municipal leases, certificates of participation and moral obligation bonds present the risk that the state or municipality involved will not appropriate the monies to meet scheduled payments under these instruments.

Municipal obligations may be backed by letters of credit or other forms of credit enhancement issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss

to a Fund that invests in municipal obligations. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

In order to enhance the liquidity, stability or quality of a municipal obligation, a Fund may acquire the right to sell the obligation to another party at a guaranteed price and date.

Custodial Receipts. Certain Funds may invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. A Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the acquiring Fund and will be subject to substantially the same risks. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, a Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Funds may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. Each Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities

- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of a Fund’s portfolio.

Borrowings. Each Fund may borrow up to 33⅓% of its total assets from banks for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report along with a Funds' financial statements, is included in the Fund's annual report (available upon request without charge). The information for all other periods prior to the period ended December 31, 2000 has been audited by the Fund's previous independent accountants.

Footnotes:

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions. Returns for periods less than a full year are not annualized.

(c) Annualized.

(d) Less than $.005 per share.

Asset Management

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Funds. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Money Market Funds are managed to seek preservation of capital, daily liquidity and maximum current income. With each Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Funds. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target***—WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure***—Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and each Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities***—The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- Each Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

Benchmarks for the Money Market Funds are the **iMoneyNet, Inc. Indices.** Each Fund uses the iMoneyNet Index which best corresponds to the Fund's eligible investments.

References in this Prospectus to a Fund's benchmark are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

- ***The Funds:*** Each Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, each Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').
  - ***Taxable Funds:*** Prime Obligations, Money Market, Treasury Obligations and Government Funds.
  - ***Tax-Advantaged Funds:*** Treasury Instruments and Federal Funds.
  - ***Tax-Exempt Fund:*** Tax-Free Money Market Fund.
- ***The Investors:*** The Funds are designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges. The Funds are particularly suitable for banks, corporations and other financial institutions that seek investment of short-term funds for their own accounts or for the accounts of their customers. Shares of the Government Fund are intended to qualify as eligible investments for federally chartered credit unions pursuant to Sections 107(7), 107(8) and 107(15) of the Federal Credit Union Act, Part 703 of the National Credit Union Administration (''NCUA'') Rules and Regulations and NCUA Letter Number 155. The Fund intends to review changes in the applicable laws, rules and regulations governing eligible investments for federally chartered credit unions, and to take such action as may be necessary so that the investments of the Fund qualify as eligible investments under the Federal Credit Union Act and the regulations thereunder. Shares of the Government Fund, however, may or may not qualify as eligible investments for particular state-chartered credit unions. A state-chartered credit union should consult qualified legal counsel to determine whether the Government Fund is a permissible investment under the law applicable to it.
- ***NAV:*** Each Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.
- ***Maximum Remaining Maturity of Portfolio Investments:*** 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.
- ***Dollar-Weighted Average Portfolio Maturity (''WAM''):*** Not more than 90 days (as required by Rule 2a-7).

- ***Investment Restrictions:*** Each Fund is subject to certain investment restrictions that are described in detail under ‘‘Investment Restrictions’’ in the Additional Statement. Fundamental investment restrictions of a Fund cannot be changed without approval of a majority of the outstanding shares of that Fund. The Treasury Obligations Fund’s policy of limiting its investments to U.S. Treasury Obligations (as defined in Appendix A) and related repurchase agreements is also fundamental. All investment objectives and policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.
- ***Diversification:*** Diversification can help a Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ‘‘SEC’’), each Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, a Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees and securities that are not ‘‘First Tier Securities’’ as defined by the SEC are subject to different diversification requirements as described in the Additional Statement.

Fund Investment Objectives and Strategies

INVESTMENT OBJECTIVES

The Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government, Federal and Tax-Free Money Market Funds seek to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

Taxable and Tax-Advantaged Funds: The Prime Obligations and Money Market Funds pursue their investment objectives by investing in U.S. Government Securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Money Market Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments. The Treasury Obligations Fund pursues its investment objective by investing only in securities issued by the U.S. Treasury and repurchase agreements relating to such securities. The Government Fund pursues its investment objective by investing, directly or indirectly, only in U.S. Government Securities and repurchase agreements relating to such securities. The Treasury Instruments and Federal Funds pursue their investment objectives by limiting their investments only to certain U.S. Treasury Obligations and U.S. Government Securities, respectively, the interest from which is generally exempt from state income taxation. You should consult your tax adviser to determine whether distributions from the Treasury Instruments and Federal Funds (and any other Fund that may hold such obligations) derived from interest on such obligations are exempt from state income taxation in your own state.

In order to obtain a rating from a rating organization, the Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government and Federal Funds will observe special investment restrictions.

Tax-Exempt Fund: The Tax-Free Money Market Fund pursues its investment objective by investing in securities issued by or on behalf of states, territories, and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia, the interest from which, if any, is in the opinion of bond counsel excluded from gross income for federal income tax purposes, and not an item of tax preference under the federal alternative minimum tax (‘‘AMT’’).

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences among the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information see Appendix A.

Investment Policies Matrix

Fund	U.S. Treasury Obligations	U.S. Government Securities	Bank Obligations	Commercial Paper
Prime Obligations	■[1]	■	■ U.S. banks only[2]	■
Money Market	■[1]	■	■ Over 25% of total assets must be invested in U.S. and foreign (US$) banks[3]	■ U.S. and foreign (US$) commercial paper
Treasury Obligations	■[4]			
Treasury Instruments	■[4]			
Government	■[1]	■		
Federal	■[1]	■		
Tax-Free Money Market				■ Tax-exempt only

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*
[2] *Including foreign branches of U.S. banks.*
[3] *If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*
[4] *Issued by the U.S. Treasury.*
[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*
[6] *The Money Market Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

Short-Term Obligations of Corporations and Other Entities	Repurchase Agreements	Asset-Backed and Receivables-Backed Securities[5]	Foreign Government Obligations (US$)
■ U.S. entities only	■	■	
■ U.S. and foreign (US$) entities	■	■	■[6]
	■		
	■		
	■ (Does not intend to invest)		

Investment Policies Matrix continued

Fund	Municipals	Custodial Receipts	Unrated Securities[9]	Investment Companies
Prime Obligations	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Money Market	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Treasury Obligations				
Treasury Instruments				
Government				■ Up to 10% of total assets in other investment companies
Federal				
Tax-Free Money Market	■ At least 80% of net assets in tax-exempt municipal obligations (except in extraordinary circumstances)[8]	■	■	■ Up to 10% of total assets in other investment companies

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *Ordinarily expect that 100% of the Fund's assets will be invested in municipal obligations, but the Fund may, for temporary defensive purposes, hold cash or invest in short-term taxable securities.*

[9] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities, or to the extent that a Fund may purchase Second Tier Securities, comparable in quality to Second Tier Securities. In addition, a Fund holding a security supported by a guarantee or demand feature may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

Private Activity Bonds	Credit Quality[9]	Summary of Taxation for Distributions[14]	Miscellaneous
■	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
■	First Tier[12]	Taxable federal and state[15]	May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Under extraordinary circumstances, may hold cash, U.S. Government Securities subject to state taxation or cash equivalents. Reverse repurchase agreements not permitted
■ Does not intend to invest if subject to AMT[10,11]	First[12] or Second Tier[13]	Tax-exempt federal and taxable state[16]	May (but does not currently intend to) invest up to 20% of net assets in securities subject to AMT and may temporarily invest in the taxable money market instruments described herein. Reverse repurchase agreements not permitted

[10] *If such policy should change, private activity bonds subject to AMT would not exceed 20% of the Fund's net assets under normal market conditions.*

[11] *No more than 25% of the value of the Fund's total assets may be invested in industrial development bonds or similar obligations where the non-governmental entities supplying the revenues from which such bonds or obligations are to be paid are in the same industry.*

[12] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[13] *Second Tier Securities are (a) rated in the top two short-term rating categories by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings.*

[14] *See ''Taxation'' for an explanation of the tax consequences summarized in the table above.*

[15] *Taxable in many states except for distributions from U.S. Treasury Obligation interest income and certain U.S. Government Securities interest income.*

[16] *Taxable except for distributions from interest on obligations of an investor's state of residence in certain states.*

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

• Applicable — Not applicable	Prime Obligations Fund	Money Market Fund	Treasury Obligations Fund	Treasury Instruments Fund	Government Fund	Federal Fund	Tax-Free Money Market Fund
NAV	•	•	•	•	•	•	•
Interest Rate	•	•	•	•	•	•	•
Credit/Default	•	•	•	•	•	•	•
Liquidity	•	•	•	•	•	•	•
U.S. Government Securities	•	•	—	—	•	•	—
Concentration	—	—	—	—	—	—	•
Foreign	—	•	—	—	—	—	—
Banking Industry	—	•	—	—	—	—	—
Tax	—	—	—	—	—	—	•

Risks that apply to all Funds:

- ***NAV Risk***—The risk that a Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, a Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, a Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations. In addition, with respect to the Tax-Free Money Market Fund, this risk includes the risk of default on foreign letters of credit or guarantees that back municipal securities.
- ***Liquidity Risk***—The risk that a Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.

Risk that applies to the Prime Obligations, Money Market, Government and Federal Funds:

- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by a Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risks that apply to the Money Market Fund:

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Money Market Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Money Market Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

Risks that apply to the Tax-Free Money Market Fund:

- ***Concentration Risk***—The risk that if the Fund invests more than 25% of its total assets in issuers within the same state, industry or economic sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if its investments were not so concentrated.
- ***Tax Risk***—The risk that future legislative or administrative changes or court decisions may materially affect the value of the Fund's portfolio and/or the ability of the Fund to pay federal tax-exempt dividends. This Fund would not be a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal, state or local tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table below provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Preferred Shares from year to year for up to the last ten years; and (b) the average annual total returns of a Fund's Preferred Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced. You may obtain a Fund's current yield by calling 1-800-621-2550.

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee equal to 0.015% of the Treasury Obligations, Treasury Instruments and Federal Funds' average daily net assets and equal to 0.035% of all other Funds' average daily net assets. ***As a result of fee waivers, the current management fees of the Treasury Obligations Fund, Treasury Instruments Fund, Federal Fund and all other Funds are 0.19%, 0.19%, 0.19% and 0.17%, respectively, of such Funds' average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees directly to their customers who are beneficial owners of Preferred Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of each Fund (excluding management fees, preferred administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of each Fund's average daily net assets.

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Preferred Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Prime Obligations	$33	$103	$180	$406
Money Market	$33	$103	$180	$406
Treasury Obligations	$33	$103	$180	$406
Treasury Instruments	$36	$113	$197	$443
Government	$33	$103	$180	$406
Federal	$33	$103	$180	$406
Tax-Free Money Market	$33	$103	$180	$406

Service Organizations that invest in Preferred Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Preferred Shares may receive other compensation in connection with the sale and distribution of Preferred Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs, served as the Funds' investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management, L.P. (''GSAM''), 32 Old Slip, New York, New York, 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser also performs the following services for the Funds:

- Continually manages each Fund, including the purchase, retention and disposition of securities and other assets
- Administers each Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, certain Funds may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

Fund	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Prime Obligations	0.205%	0.17%
Money Market	0.205%	0.17%
Treasury Obligations	0.205%	0.19%
Treasury Instruments	0.205%	0.19%
Government	0.205%	0.17%
Federal	0.205%	0.19%
Tax-Free Money Market	0.205%	0.17%

The difference, if any, between the stated fees and the actual fees paid by the Funds reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

Dividends will be distributed monthly. You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

All or substantially all of each Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of the following times:

Fund	Dividend Declaration Time (New York Time)
Prime Obligations	5:00 p.m.
Money Market	5:00 p.m.
Treasury Obligations	5:00 p.m.
Treasury Instruments	4:00 p.m.
Government	5:00 p.m.
Federal	4:00 p.m.
Tax-Free Money Market	4:00 p.m.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in a Fund's daily distributions.

Each Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

The income declared as a dividend for the Prime Obligations, Money Market, Treasury Obligations and Government Funds is based on estimates of net investment income for each Fund. Actual income may differ from estimates, and differences, if any, will be included in the calculation of subsequent dividends.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Preferred Shares.

HOW TO BUY SHARES

How Can I Purchase Preferred Shares Of The Funds?

Generally, Preferred Shares may be purchased only through institutions that have agreed to provide shareholder administration services to their customers who are the beneficial owners of Preferred Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Preferred Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs the Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee

Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Treasury Instruments and Federal Funds:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day
Prime Obligations, Money Market, Treasury Obligations and Government Funds:	
■ By 5:00 p.m. New York time	Same business day
■ After 5:00 p.m. New York time	Next business day
Tax-Free Money Market Fund:	
■ By 2:00 p.m. New York time	Same business day
■ After 2:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Preferred Shares:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem or exchange shares for customers
- Processing confirmation statements for customers

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their

customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a preferred administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payment for their services from the Trust of up to 0.10% (on an annualized basis) of the average daily net assets of the Preferred Shares of the Funds, which are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds.

In addition to Preferred Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Preferred Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Minimum initial investment	$10 million (may be allocated among the Funds)
Minimum account balance	$10 million
Minimum subsequent investments	None

A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Preferred Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem Preferred

Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement.
- Reject any purchase order for any reason.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Preferred Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

Fund	NAV Calculated
Treasury Instruments, Federal and Tax-Free Money Market	As of the close of regular trading of the New York Stock Exchange (normally 4:00 p.m. New York time or such later time as the New York Stock Exchange or the NASDAQ market may officially close) on each business day
Prime Obligations, Money Market, Treasury Obligations and Government	As of 5:00 p.m. New York time on each business day

- NAV per share of each class is generally calculated by the accounting agent on each business day. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.

- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, each Fund reserves the right to close at or prior to the BMA recommended closing time. If a Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open one or more Funds for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help each Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Preferred Shares Of The Funds?

Generally, Preferred Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Preferred Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service

Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Funds as described under ''What Do I Need To Know About Service Organizations?'' A redemption may also be made with respect to certain Funds by means of the check redemption privilege described in the Additional Statement.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Treasury Instruments and Federal Funds:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received
Prime Obligations, Money Market, Treasury Obligations and Government Funds:		
■ By 5:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 5:00 p.m. New York time	Wired next business day	Earned on day request is received
Tax-Free Money Market Fund:		
■ By 1:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 1:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request (or up to three business days later with respect to the Tax-Free Money Market Fund) and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by a Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer

process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Preferred Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Preferred Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Preferred Shares of a Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ‘‘What Do I Need To Know About Telephone Redemption Requests?’’ in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Preferred Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Funds are also reflected in regular statements issued by the Funds to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Preferred Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions: Each Fund contemplates declaring as dividends each year all or substantially all of its net investment income. Except for the Tax-Exempt Funds, distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations or interest on obligations of your state of residence or its municipalities or authorities, they will in most cases be exempt from state and local income taxes. Distributions from the Tax-Exempt Funds that are designated as ''exempt interest dividends'' are generally not subject to federal income tax. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

You should note that a portion of the exempt-interest dividends paid by the Tax-Exempt Funds may be a preference item when determining your federal alternative minimum tax liability. Exempt-interest dividends are also taken into account in determining the taxable portion of social security or railroad retirement benefits. Any interest on indebtedness incurred by you to purchase or carry shares in the Tax-Exempt Funds generally will not be deductible for federal income tax purposes.

Other Information: When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs. A Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

Some Funds invest in U.S. Treasury Obligations and certain U.S. Government Securities the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. government, including the Federal Home Loan Banks, Federal Farm Credit Banks, Tennessee Valley Authority and Student Loan Marketing Association.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. Certain Funds may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, certain Funds may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

If a Fund invests more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. A Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by a Fund consists of direct U.S. dollar-

denominated obligations of domestic or, in the case of certain Funds, foreign issuers. Asset-backed commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. A Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by a Fund may be regarded as illiquid.

Repurchase Agreements. Certain Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by a Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, a Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, a Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, a Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to a Fund's shareholders. In addition, certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. Certain Funds may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. Certain Funds may invest in foreign government obligations. Foreign government obligations that the Funds invest in are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by a Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. The legal remedies for investors may be more limited than the remedies available in the United States. In addition, changes in the exchange rate of a foreign currency relative to the U.S. dollar (e.g., weakening of the currency against the U.S. dollar) may adversely affect the ability of a foreign issuer to pay interest and repay principal on an obligation.

Municipal Obligations. Certain Funds may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which a Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Municipal Notes and Bonds. Municipal notes include tax anticipation notes (''TANs''), revenue anticipation notes (''RANs''), bond anticipation notes (''BANs''), tax and revenue anticipation notes (''TRANs'') and construction loan notes. Municipal bonds include general obligation bonds and revenue bonds. General obligation bonds are backed by the taxing power of the issuing municipality and are considered the safest type of municipal obligation. Revenue bonds are backed by the revenues of a project or facility such as the tolls from a toll bridge. Revenue bonds also include lease rental revenue bonds which are issued by a state or local authority for capital projects and are secured by annual lease payments from the state or locality sufficient to cover debt service on the authority's obligations. Industrial development bonds (''private activity bonds'') are a specific type of revenue bond backed by the credit and security of a private user and, therefore, have more potential risk. Municipal bonds may be issued in a variety of forms, including commercial paper, tender option bonds and variable and floating rate securities.

Tender Option Bonds. A tender option bond is a municipal obligation (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued in conjunction with the agreement of a third party, such as a bank, broker-dealer or other financial institution, pursuant to which the institution grants the security holder the option, at periodic intervals, to tender its securities to the institution. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution will normally not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund's average portfolio maturity. There is a risk that a Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender

option bonds may be illiquid or may become illiquid as a result of a credit rating downgrade, a payment default or a disqualification from tax-exempt status.

Revenue Anticipation Warrants. Revenue Anticipation Warrants (''RAWs'') are issued in anticipation of the issuer's receipt of revenues and present the risk that such revenues will be insufficient to satisfy the issuer's payment obligations. The entire amount of principal and interest on RAWs is due at maturity. RAWs, including those with a maturity of more than 397 days, may also be repackaged as instruments which include a demand feature that permits the holder to sell the RAWs to a bank or other financial institution at a purchase price equal to par plus accrued interest on each interest rate reset date.

Industrial Development Bonds. Certain Funds may invest in industrial development bonds (private activity bonds). Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user, the interest from which would be an item of tax preference when distributed by a Fund as ''exempt-interest dividends'' to shareholders under the AMT.

Other Municipal Obligation Policies. Certain Funds may invest 25% or more of the value of their respective total assets in municipal obligations which are related in such a way that an economic, business or political development or change affecting one municipal obligation would also affect the other municipal obligation. For example, a Fund may invest all of its assets in (a) municipal obligations the interest of which is paid solely from revenues from similar projects such as hospitals, electric utility systems, multi-family housing, nursing homes, commercial facilities (including hotels), steel companies or life care facilities; (b) municipal obligations whose issuers are in the same state; or (c) industrial development obligations. Concentration of a Fund's investments in these municipal obligations will subject the Fund, to a greater extent than if such investment was not so concentrated, to the risks of adverse economic, business or political developments affecting the particular state, industry or other area of concentration.

Municipal obligations may also include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment contracts. Moral obligation bonds are supported by the moral commitment but not the legal obligation of a state or municipality. Municipal leases, certificates of participation and moral obligation bonds present the risk that the state or municipality involved will not appropriate the monies to meet scheduled payments under these instruments.

Municipal obligations may be backed by letters of credit or other forms of credit enhancement issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss

to a Fund that invests in municipal obligations. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

In order to enhance the liquidity, stability or quality of a municipal obligation, a Fund may acquire the right to sell the obligation to another party at a guaranteed price and date.

Custodial Receipts. Certain Funds may invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. A Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the acquiring Fund and will be subject to substantially the same risks. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, a Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Funds may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. Each Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities

- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of a Fund’s portfolio.

Borrowings. Each Fund may borrow up to 33⅓% of its total assets from banks for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report along with a Funds' financial statements, is included in the Fund's annual report (available upon request without charge). The information for all other periods prior to the period ended December 31, 2000 has been audited by the Fund's previous independent accountants.

Footnotes:

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions. Returns for periods less than a full year are not annualized.

(c) Annualized.

(d) Less than $.005 per share.

Asset Management

NOT FDIC-Insured	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Funds. GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Money Market Funds are managed to seek preservation of capital, daily liquidity and maximum current income. With each Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Funds. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target***—WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure***—Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and each Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities***—The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- Each Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

Benchmarks for the Money Market Funds are the **iMoneyNet, Inc. Indices.** Each Fund uses the iMoneyNet Index which best corresponds to the Fund's eligible investments.

References in this Prospectus to a Fund's benchmark are for informational purposes only, and unless otherwise noted are not an indication of how a particular Fund is managed.

- ***The Funds:*** Each Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, each Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').
  - ***Taxable Funds:*** Prime Obligations, Money Market, Treasury Obligations and Government Funds.
  - ***Tax-Advantaged Funds:*** Treasury Instruments and Federal Funds.
  - ***Tax-Exempt Fund:*** Tax-Free Money Market Fund.
- ***The Investors:*** The Funds are designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges. The Funds are particularly suitable for banks, corporations and other financial institutions that seek investment of short-term funds for their own accounts or for the accounts of their customers. Shares of the Government Fund are intended to qualify as eligible investments for federally chartered credit unions pursuant to Sections 107(7), 107(8) and 107(15) of the Federal Credit Union Act, Part 703 of the National Credit Union Administration (''NCUA'') Rules and Regulations and NCUA Letter Number 155. The Fund intends to review changes in the applicable laws, rules and regulations governing eligible investments for federally chartered credit unions, and to take such action as may be necessary so that the investments of the Fund qualify as eligible investments under the Federal Credit Union Act and the regulations thereunder. Shares of the Government Fund, however, may or may not qualify as eligible investments for particular state-chartered credit unions. A state-chartered credit union should consult qualified legal counsel to determine whether the Government Fund is a permissible investment under the law applicable to it.
- ***NAV:*** Each Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.
- ***Maximum Remaining Maturity of Portfolio Investments:*** 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.
- ***Dollar-Weighted Average Portfolio Maturity (''WAM''):*** Not more than 90 days (as required by Rule 2a-7).

- ***Investment Restrictions:*** Each Fund is subject to certain investment restrictions that are described in detail under ‘‘Investment Restrictions’’ in the Additional Statement. Fundamental investment restrictions of a Fund cannot be changed without approval of a majority of the outstanding shares of that Fund. The Treasury Obligations Fund’s policy of limiting its investments to U.S. Treasury Obligations (as defined in Appendix A) and related repurchase agreements is also fundamental. All investment objectives and policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.
- ***Diversification:*** Diversification can help a Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ‘‘SEC’’), each Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, a Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees and securities that are not ‘‘First Tier Securities’’ as defined by the SEC are subject to different diversification requirements as described in the Additional Statement.

Fund Investment Objectives and Strategies

INVESTMENT OBJECTIVES

The Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government, Federal and Tax-Free Money Market Funds seek to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

Taxable and Tax-Advantaged Funds: The Prime Obligations and Money Market Funds pursue their investment objectives by investing in U.S. Government Securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Money Market Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments. The Treasury Obligations Fund pursues its investment objective by investing only in securities issued by the U.S. Treasury and repurchase agreements relating to such securities. The Government Fund pursues its investment objective by investing, directly or indirectly, only in U.S. Government Securities and repurchase agreements relating to such securities. The Treasury Instruments and Federal Funds pursue their investment objectives by limiting their investments only to certain U.S. Treasury Obligations and U.S. Government Securities, respectively, the interest from which is generally exempt from state income taxation. You should consult your tax adviser to determine whether distributions from the Treasury Instruments and Federal Funds (and any other Fund that may hold such obligations) derived from interest on such obligations are exempt from state income taxation in your own state.

In order to obtain a rating from a rating organization, the Prime Obligations, Money Market, Treasury Obligations, Treasury Instruments, Government and Federal Funds will observe special investment restrictions.

Tax-Exempt Fund: The Tax-Free Money Market Fund pursues its investment objective by investing in securities issued by or on behalf of states, territories, and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia, the interest from which, if any, is in the opinion of bond counsel excluded from gross income for federal income tax purposes, and not an item of tax preference under the federal alternative minimum tax (‘‘AMT’’).

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Funds in seeking to achieve their investment objectives. The table also highlights the differences among the Funds in their use of these techniques and other investment practices and investment securities. Numbers in this table show allowable usage only; for actual usage, consult the Funds' annual and semi-annual reports. For more information see Appendix A.

Investment Policies Matrix

Fund	U.S. Treasury Obligations	U.S. Government Securities	Bank Obligations	Commercial Paper
Prime Obligations	■[1]	■	■ U.S. banks only[2]	■
Money Market	■[1]	■	■ Over 25% of total assets must be invested in U.S. and foreign (US$) banks[3]	■ U.S. and foreign (US$) commercial paper
Treasury Obligations	■[4]			
Treasury Instruments	■[4]			
Government	■[1]	■		
Federal	■[1]	■		
Tax-Free Money Market				■ Tax-exempt only

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*
[2] *Including foreign branches of U.S. banks.*
[3] *If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*
[4] *Issued by the U.S. Treasury.*
[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*
[6] *The Money Market Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

Short-Term Obligations of Corporations and Other Entities	Repurchase Agreements	Asset-Backed and Receivables-Backed Securities[5]	Foreign Government Obligations (US$)
■ U.S. entities only	■	■	
■ U.S. and foreign (US$) entities	■	■	■[6]
	■		
	■		
	■ (Does not intend to invest)		

Investment Policies Matrix continued

Fund	Municipals	Custodial Receipts	Unrated Securities[9]	Investment Companies
Prime Obligations	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Money Market	■[7]	■	■	■ Up to 10% of total assets in other investment companies
Treasury Obligations				
Treasury Instruments				
Government				■ Up to 10% of total assets in other investment companies
Federal				
Tax-Free Money Market	■ At least 80% of net assets in tax-exempt municipal obligations (except in extraordinary circumstances)[8]	■	■	■ Up to 10% of total assets in other investment companies

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *Ordinarily expect that 100% of the Fund's assets will be invested in municipal obligations, but the Fund may, for temporary defensive purposes, hold cash or invest in short-term taxable securities.*

[9] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities, or to the extent that a Fund may purchase Second Tier Securities, comparable in quality to Second Tier Securities. In addition, a Fund holding a security supported by a guarantee or demand feature may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

Private Activity Bonds	Credit Quality[9]	Summary of Taxation for Distributions[14]	Miscellaneous
■	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
■	First Tier[12]	Taxable federal and state[15]	May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and state[15]	Reverse repurchase agreements not permitted
	First Tier[12]	Taxable federal and generally exempt from state taxation	Under extraordinary circumstances, may hold cash, U.S. Government Securities subject to state taxation or cash equivalents. Reverse repurchase agreements not permitted
■ Does not intend to invest if subject to AMT[10,11]	First[12] or Second Tier[13]	Tax-exempt federal and taxable state[16]	May (but does not currently intend to) invest up to 20% of net assets in securities subject to AMT and may temporarily invest in the taxable money market instruments described herein. Reverse repurchase agreements not permitted

[10] *If such policy should change, private activity bonds subject to AMT would not exceed 20% of the Fund's net assets under normal market conditions.*

[11] *No more than 25% of the value of the Fund's total assets may be invested in industrial development bonds or similar obligations where the non-governmental entities supplying the revenues from which such bonds or obligations are to be paid are in the same industry.*

[12] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[13] *Second Tier Securities are (a) rated in the top two short-term rating categories by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow a Fund under certain conditions to demand payment from, an entity with such ratings.*

[14] *See ''Taxation'' for an explanation of the tax consequences summarized in the table above.*

[15] *Taxable in many states except for distributions from U.S. Treasury Obligation interest income and certain U.S. Government Securities interest income.*

[16] *Taxable except for distributions from interest on obligations of an investor's state of residence in certain states.*

Principal Risks of the Funds

Loss of money is a risk of investing in each Fund. An investment in a Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Funds and may result in a loss of your investment. None of the Funds should be relied upon as a complete investment program. There can be no assurance that a Fund will achieve its investment objective.

• Applicable — Not applicable	Prime Obligations Fund	Money Market Fund	Treasury Obligations Fund	Treasury Instruments Fund	Government Fund	Federal Fund	Tax-Free Money Market Fund
NAV	•	•	•	•	•	•	•
Interest Rate	•	•	•	•	•	•	•
Credit/Default	•	•	•	•	•	•	•
Liquidity	•	•	•	•	•	•	•
U.S. Government Securities	•	•	—	—	•	•	—
Concentration	—	—	—	—	—	—	•
Foreign	—	•	—	—	—	—	—
Banking Industry	—	•	—	—	—	—	—
Tax	—	—	—	—	—	—	•

Risks that apply to all Funds:

- ***NAV Risk***—The risk that a Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, a Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, a Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations. In addition, with respect to the Tax-Free Money Market Fund, this risk includes the risk of default on foreign letters of credit or guarantees that back municipal securities.
- ***Liquidity Risk***—The risk that a Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.

Risk that applies to the Prime Obligations, Money Market, Government and Federal Funds:

- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. Government Securities purchased by the Funds, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac''), are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some U.S. Government Securities held by a Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Risks that apply to the Money Market Fund:

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Money Market Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Money Market Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

Risks that apply to the Tax-Free Money Market Fund:

- ***Concentration Risk***—The risk that if the Fund invests more than 25% of its total assets in issuers within the same state, industry or economic sector, an adverse economic, business or political development may affect the value of the Fund's investments more than if its investments were not so concentrated.
- ***Tax Risk***—The risk that future legislative or administrative changes or court decisions may materially affect the value of the Fund's portfolio and/or the ability of the Fund to pay federal tax-exempt dividends. This Fund would not be a suitable investment for IRAs, other tax-exempt or tax-deferred accounts or for other investors who are not sensitive to the federal, state or local tax consequences of their investments.

More information about the Funds' portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUNDS HAVE PERFORMED

The bar chart and table below provide an indication of the risks of investing in a Fund by showing: (a) changes in the performance of a Fund's Select Shares from year to year for up to the last ten years; and (b) the average annual total returns of a Fund's Select Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. A Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, a Fund's performance would have been reduced. You may obtain a Fund's current yield by calling 1-800-621-2550.

Fund Fees and Expenses continued

[1] The Funds' annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee equal to 0.015% of the Treasury Obligations, Treasury Instruments and Federal Funds' average daily net assets and equal to 0.035% of all other Funds' average daily net assets. ***As a result of fee waivers, the current management fees of the Treasury Obligations Fund, Treasury Instruments Fund, Federal Fund and all other Funds are 0.19%, 0.19%, 0.19% and 0.17%, respectively, of such Funds' average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees directly to their customers who are beneficial owners of Select Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of each Fund (excluding management fees, select service fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of each Fund's average daily net assets.

Example

The following Example is intended to help you compare the cost of investing in a Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Select Shares of a Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that a Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Prime Obligations	$26	$80	$141	$318
Money Market	$26	$80	$141	$318
Treasury Obligations	$26	$80	$141	$318
Treasury Instruments	$29	$90	$157	$356
Government	$26	$80	$141	$318
Federal	$26	$80	$141	$318
Tax-Free Money Market	$26	$80	$141	$318

Service Organizations that invest in Select Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Select Shares may receive other compensation in connection with the sale and distribution of Select Shares or for services to their customers' accounts and/or the Funds. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISERS

Prior to the end of April 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs, served as the Funds' investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management, L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the SEC since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Funds' portfolio transactions. The Investment Adviser also performs the following services for the Funds:

- Continually manages each Fund, including the purchase, retention and disposition of securities and other assets
- Administers each Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, certain Funds may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fees, computed daily and payable monthly, at the annual rates listed below (as a percentage of each respective Fund's average daily net assets):

Fund	Contractual Rate	Actual Rate For the Fiscal Year Ended December 31, 2002
Prime Obligations	0.205%	0.17%
Money Market	0.205%	0.17%
Treasury Obligations	0.205%	0.19%
Treasury Instruments	0.205%	0.19%
Government	0.205%	0.17%
Federal	0.205%	0.19%
Tax-Free Money Market	0.205%	0.17%

The difference, if any, between the stated fees and the actual fees paid by the Funds reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of each Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Funds' transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Funds. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

Dividends will be distributed monthly. You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the applicable Fund.

All or substantially all of each Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of the following times:

Fund	Dividend Declaration Time (New York Time)
Prime Obligations	5:00 p.m.
Money Market	5:00 p.m.
Treasury Obligations	5:00 p.m.
Treasury Instruments	4:00 p.m.
Government	5:00 p.m.
Federal	4:00 p.m.
Tax-Free Money Market	4:00 p.m.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in a Fund's daily distributions.

Each Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

The income declared as a dividend for the Prime Obligations, Money Market, Treasury Obligations and Government Funds is based on estimates of net investment income for each Fund. Actual income may differ from estimates, and differences, if any, will be included in the calculation of subsequent dividends.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Funds' Select Shares.

HOW TO BUY SHARES

How Can I Purchase Select Shares Of The Funds?

Generally, Select Shares may be purchased only through institutions that have agreed to provide shareholder administration services to their customers who are the beneficial owners of Select Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Select Shares may be purchased from the Funds on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs an Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (each Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Funds will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Treasury Instruments and Federal Funds:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day
Prime Obligations, Money Market, Treasury Obligations and Government Funds:	
■ By 5:00 p.m. New York time	Same business day
■ After 5:00 p.m. New York time	Next business day
Tax-Free Money Market Fund:	
■ By 2:00 p.m. New York time	Same business day
■ After 2:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Select Shares:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem or exchange shares for customers

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- A Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business

day, and the order will be priced at the Fund's NAV next determined after such acceptance.

- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a select plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payment for their services from the Trust of up to .03 of 1% (on an annualized basis) of the average daily net assets of the Select Shares of the Funds, which are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Funds, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Funds and other Goldman Sachs Funds.

In addition to Select Shares, each Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Select Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Funds?

Minimum initial investment	$10 million (may be allocated among the Funds)
Minimum account balance	$10 million
Minimum subsequent investments	None

A Service Organization may, however, impose a minimum amount for initial and subsequent investments in Select Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem Select Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement.
- Reject any purchase order for any reason.

The Funds may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Funds to verify the identity of any investor opening an account with the Funds. To the extent permitted by applicable law, the Funds reserve the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Funds or to involuntarily redeem an investor's shares and close an account in the event that the Funds are unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Select Shares is the Fund's next determined NAV. The Funds calculate NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

Fund	NAV Calculated
Treasury Instruments, Federal and Tax-Free Money Market	As of the close of regular trading of the New York Stock Exchange (normally 4:00 p.m. New York time or such later time as the New York Stock Exchange or the NASDAQ market may officially close) on each business day
Prime Obligations, Money Market, Treasury Obligations and Government	As of 5:00 p.m. New York time on each business day

- NAV per share of each class is generally calculated by the accounting agent on each business day. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.
- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, each Fund reserves the right to close at or prior to the BMA recommended closing time. If a Fund does so, it will cease

granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.

- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open one or more Funds for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether a Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help each Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that a Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by a Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Select Shares Of The Funds?

Generally, Select Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Funds. **Generally, each Fund will redeem its Select Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

Instructions For Redemptions:	
By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Funds as described under ''What Do I Need To Know About Service Organizations?'' A redemption may also be made with respect to certain Funds by means of the check redemption privilege described in the Additional Statement.

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Treasury Instruments and Federal Funds:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received
Prime Obligations, Money Market, Treasury Obligations and Government Funds:		
■ By 5:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 5:00 p.m. New York time	Wired next business day	Earned on day request is received
Tax-Free Money Market Fund:		
■ By 1:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 1:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request (or up to three business days later with respect to the Tax-Free Money Market Fund) and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by a Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer

process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Select Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to a Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Select Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Select Shares of a Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be

subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Select Shares?

Service Organizations will receive from the Funds annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Funds are also reflected in regular statements issued by the Funds to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Select Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Funds will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Funds.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions: Each Fund contemplates declaring as dividends each year all or substantially all of its net investment income. Except for the Tax-Exempt Funds, distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations or interest on obligations of your state of residence or its municipalities or authorities, they will in most cases be exempt from state and local income taxes. Distributions from the Tax-Exempt Funds that are designated as ''exempt interest dividends'' are generally not subject to federal income tax. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Funds will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

You should note that a portion of the exempt-interest dividends paid by the Tax-Exempt Funds may be a preference item when determining your federal alternative minimum tax liability. Exempt-interest dividends are also taken into account in determining the taxable portion of social security or railroad retirement benefits. Any interest on indebtedness incurred by you to purchase or carry shares in the Tax-Exempt Funds generally will not be deductible for federal income tax purposes.

Other Information: When you open your account, you should provide your social security or tax identification number on your Account Application. By law, each Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Funds, including their associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in a Fund's investment objective, you should consider whether that Fund remains an appropriate investment in light of your then current financial position and needs. A Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

Some Funds invest in U.S. Treasury Obligations and certain U.S. Government Securities the interest from which is generally exempt from state income taxation. Securities generally eligible for this exemption include those issued by the U.S. Treasury and certain agencies, authorities or instrumentalities of the U.S. government, including the Federal Home Loan Banks, Federal Farm Credit Banks, Tennessee Valley Authority and Student Loan Marketing Association.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. Certain Funds may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, certain Funds may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

If a Fund invests more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. A Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by a Fund consists of direct U.S. dollar-

denominated obligations of domestic or, in the case of certain Funds, foreign issuers. Asset-backed commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. A Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by a Fund may be regarded as illiquid.

Repurchase Agreements. Certain Funds may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by a Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, a Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, a Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, a Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to a Fund's shareholders. In addition, certain Funds, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. Certain Funds may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, a Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, a Fund will be unable to possess and sell the underlying collateral and that a Fund's recoveries on repossessed collateral may not be available to support payments on the securities. In the event of a default, a Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. Certain Funds may invest in foreign government obligations. Foreign government obligations that the Funds invest in are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by a Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. The legal remedies for investors may be more limited than the remedies available in the United States. In addition, changes in the exchange rate of a foreign currency relative to the U.S. dollar (e.g., weakening of the currency against the U.S. dollar) may adversely affect the ability of a foreign issuer to pay interest and repay principal on an obligation.

Municipal Obligations. Certain Funds may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumentalities, and the District of Columbia. Municipal obligations in which a Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; tax-exempt commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Municipal Notes and Bonds. Municipal notes include tax anticipation notes (''TANs''), revenue anticipation notes (''RANs''), bond anticipation notes (''BANs''), tax and revenue anticipation notes (''TRANs'') and construction loan notes. Municipal bonds include general obligation bonds and revenue bonds. General obligation bonds are backed by the taxing power of the issuing municipality and are considered the safest type of municipal obligation. Revenue bonds are backed by the revenues of a project or facility such as the tolls from a toll bridge. Revenue bonds also include lease rental revenue bonds which are issued by a state or local authority for capital projects and are secured by annual lease payments from the state or locality sufficient to cover debt service on the authority's obligations. Industrial development bonds (''private activity bonds'') are a specific type of revenue bond backed by the credit and security of a private user and, therefore, have more potential risk. Municipal bonds may be issued in a variety of forms, including commercial paper, tender option bonds and variable and floating rate securities.

Tender Option Bonds. A tender option bond is a municipal obligation (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term, tax-exempt rates. The bond is typically issued in conjunction with the agreement of a third party, such as a bank, broker-dealer or other financial institution, pursuant to which the institution grants the security holder the option, at periodic intervals, to tender its securities to the institution. As consideration for providing the option, the financial institution receives periodic fees equal to the difference between the bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par on the date of such determination. Thus, after payment of this fee, the security holder effectively holds a demand obligation that bears interest at the prevailing short-term, tax-exempt rate. An institution will normally not be obligated to accept tendered bonds in the event of certain defaults or a significant downgrading in the credit rating assigned to the issuer of the bond. The tender option will be taken into account in determining the maturity of the tender option bonds and a Fund's average portfolio maturity. There is a risk that a Fund will not be considered the owner of a tender option bond for federal income tax purposes, and thus will not be entitled to treat such interest as exempt from federal income tax. Certain tender

option bonds may be illiquid or may become illiquid as a result of a credit rating downgrade, a payment default or a disqualification from tax-exempt status.

Revenue Anticipation Warrants. Revenue Anticipation Warrants (''RAWs'') are issued in anticipation of the issuer's receipt of revenues and present the risk that such revenues will be insufficient to satisfy the issuer's payment obligations. The entire amount of principal and interest on RAWs is due at maturity. RAWs, including those with a maturity of more than 397 days, may also be repackaged as instruments which include a demand feature that permits the holder to sell the RAWs to a bank or other financial institution at a purchase price equal to par plus accrued interest on each interest rate reset date.

Industrial Development Bonds. Certain Funds may invest in industrial development bonds (private activity bonds). Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user, the interest from which would be an item of tax preference when distributed by a Fund as ''exempt-interest dividends'' to shareholders under the AMT.

Other Municipal Obligation Policies. Certain Funds may invest 25% or more of the value of their respective total assets in municipal obligations which are related in such a way that an economic, business or political development or change affecting one municipal obligation would also affect the other municipal obligation. For example, a Fund may invest all of its assets in (a) municipal obligations the interest of which is paid solely from revenues from similar projects such as hospitals, electric utility systems, multi-family housing, nursing homes, commercial facilities (including hotels), steel companies or life care facilities; (b) municipal obligations whose issuers are in the same state; or (c) industrial development obligations. Concentration of a Fund's investments in these municipal obligations will subject the Fund, to a greater extent than if such investment was not so concentrated, to the risks of adverse economic, business or political developments affecting the particular state, industry or other area of concentration.

Municipal obligations may also include municipal leases, certificates of participation and ''moral obligation'' bonds. A municipal lease is an obligation issued by a state or local government to acquire equipment or facilities. Certificates of participation represent interests in municipal leases or other instruments, such as installment contracts. Moral obligation bonds are supported by the moral commitment but not the legal obligation of a state or municipality. Municipal leases, certificates of participation and moral obligation bonds present the risk that the state or municipality involved will not appropriate the monies to meet scheduled payments under these instruments.

Municipal obligations may be backed by letters of credit or other forms of credit enhancement issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States or by other financial institutions. The credit quality of these banks and financial institutions could, therefore, cause a loss

to a Fund that invests in municipal obligations. Letters of credit and other obligations of foreign banks and financial institutions may involve risks in addition to those of domestic obligations because of less publicly available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks.

In order to enhance the liquidity, stability or quality of a municipal obligation, a Fund may acquire the right to sell the obligation to another party at a guaranteed price and date.

Custodial Receipts. Certain Funds may invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes a Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. A Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on any Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of a Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. A Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the acquiring Fund and will be subject to substantially the same risks. Although the Funds do not expect to do so in the foreseeable future, each Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which a Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Funds may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, a Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks which have a branch, agency or subsidiary in the United States. A Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Funds may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to a Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although a Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, a Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. Each Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities

- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of a Fund’s portfolio.

Borrowings. Each Fund may borrow up to 33⅓% of its total assets from banks for temporary or emergency purposes. A Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, a Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights tables are intended to help you understand a Fund's financial performance for the past five years (or less if the Fund has been in operation for less than five years). Certain information reflects financial results for a single Fund share. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a Fund (assuming reinvestment of all dividends and distributions). This information for the periods ended December 31, 2000 and thereafter has been audited by PricewaterhouseCoopers LLP, whose report along with a Funds' financial statements, is included in the Fund's annual report (available upon request without charge). The information for all other periods prior to the period ended December 31, 2000 has been audited by the Fund's previous independent accountants.

Footnotes:

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions. Returns for periods less than a full year are not annualized.

(c) Annualized.

(d) Less than $.005 per share.

CASH PORTFOLIO

■ Cash Portfolio

THE SECURITIES AND EXCHANGE COMMISSION HAS NOT APPROVED OR DISAPPROVED THESE SECURITIES OR PASSED UPON THE ADEQUACY OF THIS PROSPECTUS. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.

AN INVESTMENT IN THE FUND IS NOT A BANK DEPOSIT AND IS NOT INSURED BY THE FEDERAL DEPOSIT INSURANCE CORPORATION OR ANY OTHER GOVERNMENT AGENCY. ALTHOUGH THE FUND SEEKS TO PRESERVE THE VALUE OF YOUR INVESTMENT AT $1.00 PER SHARE, IT IS POSSIBLE TO LOSE MONEY BY INVESTING IN THE FUND.

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Cash Portfolio (the ''Fund''). GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Fund is managed to seek preservation of capital, daily liquidity and maximum current income. With the Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Fund. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target*—**WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure*—**Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and the Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities*—**The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- The Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

The benchmark for the Fund is the **iMoneyNet, Inc. First Tier Institutional Index.**

Reference in this Prospectus to the Fund's benchmark is for informational purposes only, and unless otherwise noted is not an indication of how the Fund is managed.

Fund Investment Objective and Strategies

INVESTMENT OBJECTIVE

The Cash Portfolio seeks to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

The Fund:

The Fund pursues its investment objective by investing in U.S. government securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments.

The Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, the Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').

The Investors: The Fund is designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges.

NAV: The Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that the Fund will be able at all times to maintain a NAV of $1.00 per share.

Maximum Remaining Maturity of Portfolio Investments: 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.

Dollar-Weighted Average Portfolio Maturity (''WAM''): Not more than 90 days (as required by Rule 2a-7).

Investment Restrictions: The Fund is subject to certain investment restrictions that are described in detail under ''Investment Restrictions'' in the Additional Statement. Fundamental investment restrictions of the Fund cannot be changed without approval of a majority of the outstanding shares of the Fund. The Fund's investment objective and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.

In order to obtain a rating from a rating organization, the Fund will observe special investment restrictions.

Diversification: Diversification can help the Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ''SEC''), the Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, the Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees are subject to different diversification requirements as described in the Additional Statement.

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Fund in seeking to achieve its investment objective. For more information see Appendix A.

■ No specific percentage limitation on usage; limited only by the objective and strategies of the Fund

Investment Policies Matrix	Cash Portfolio
U.S. Treasury Obligations[1]	■
U.S. Government Securities	■
Bank Obligations[2]	■
Commercial Paper[3]	■
Short-Term Obligations of Corporations and Other Entities[4]	■
Repurchase Agreements	■
Asset-Backed and Receivables-Backed Securities[5]	■
Foreign Government Obligations (US$)[6]	■

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*

[2] *Over 25% of total assets must be invested in U.S. and foreign (US$) banks. If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*

[3] *U.S. and foreign (US$) commercial paper.*

[4] *U.S. and foreign (US$) entities.*

[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*

[6] *The Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

■ No specific percentage limitation on usage; limited only by the objective and strategies of the Fund

Investment Policies Matrix continued	Cash Portfolio
Municipals[7]	■
Custodial Receipts	■
Unrated Securities[8]	■
Investment Companies[9]	■
Private Activity Bonds	■
Credit Quality[8,10]	First Tier
Miscellaneous[11]	■

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities. In addition, when the Fund holds a security supported by a guarantee or demand feature, it may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

[9] *Up to 10% of total assets in other investment companies.*

[10] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow the Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[11] *May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted.*

Principal Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Fund and may result in a loss of your investment. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective.

• Applicable	Cash Portfolio
NAV	•
Interest Rate	•
Credit/Default	•
Liquidity	•
U.S. Government Securities	•
Foreign	•
Banking Industry	•

Risks that apply to the Fund:

- ***NAV Risk***—The risk that the Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, the Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, the Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations.
- ***Liquidity Risk***—The risk that the Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.
- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. government securities purchased by the Fund, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac'') are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some

U.S. government securities held by the Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

More information about the Fund's portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUND HAS PERFORMED

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) for the 2002 calendar year, the performance of the Fund's Institutional Shares; and (b) the average annual total returns of the Fund's Institutional Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, the Fund's performance would have been reduced. You may obtain the Fund's current yield by calling 1-800-621-2550.

Cash Portfolio

TOTAL RETURN

Best Quarter*
Q2 02 0.43%

Worst Quarter*
Q4 02 0.34%

CALENDAR YEAR (Institutional Shares)

AVERAGE ANNUAL TOTAL RETURN

For the period ended December 31, 2002	1 Year	Since Inception
Institutional Shares (Inception 5/1/01)	1.59%	2.20%

* *Please note that ''Best Quarter'' and ''Worst Quarter'' figures are applicable only to the time period covered by the bar chart.*

Fund Fees and Expenses (Institutional Shares)

This table describes the fees and expenses that you would pay if you buy and hold Institutional Shares of the Fund.

	Cash Portfolio
Shareholder Fees (fees paid directly from your investment):	
Maximum Sales Charge (Load) Imposed on Purchases	None
Maximum Deferred Sales Charge (Load)	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends	None
Redemption Fees	None
Exchange Fees	None
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]	
Management Fees[2]	0.15%
Other Expenses[3]	13.41%
Total Fund Operating Expenses*	13.56%

See page 12 for all other footnotes.

* As a result of current waivers and expense limitations, ''Other Expenses'' and ''Total Fund Operating Expenses'' of the Fund which are actually incurred as of the date of this Prospectus are as set forth below. The waivers and expense limitations may be terminated at any time at the option of the Investment Adviser. If this occurs, ''Other Expenses'' and ''Total Fund Operating Expenses'' may increase without shareholder approval.

	Cash Portfolio
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]	
Management Fees[2]	*0.11%*
Other Expenses[3]	*0.01%*
Total Fund Operating Expenses (after current waivers and expense limitations)	*0.12%*

[1] *The Fund's annual operating expenses are based on actual expenses.*

[2] *The Investment Adviser has voluntarily agreed not to impose a portion of the management fee on the Fund equal on an annualized basis to 0.04% of the Fund's average daily net assets.* ***As a result of fee waivers, the current management fees of the Fund are 0.11% of the Fund's average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] *The Investment Adviser has voluntarily agreed to reduce or limit ''Other Expenses'' of the Fund (excluding management fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of the Fund's average daily net assets.*

Example

The following Example is intended to help you compare the cost of investing in the Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Institutional Shares of the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Cash Portfolio	$1,298	$3,570	$5,470	$8,967

Institutions that invest in Institutional Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your institution for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain institutions that invest in Institutional Shares may receive other compensation in connection with the sale and distribution of Institutional Shares or for services to their customers' accounts and/or the Fund. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISER

Prior to the end of April, 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs served as the Fund's investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Fund's portfolio transactions. The Investment Adviser also performs the following services for the Fund:

- Continually manages the Fund, including the purchase, retention and disposition of securities and other assets
- Administers the Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, the Fund may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fee, computed daily and payable monthly, at the annual rate listed below (as a percentage of the Fund's average daily net assets):

	Contractual Rate	Actual Rate for the Fiscal Period Ended December 31, 2002
Cash Portfolio	0.15%	0.11%

The difference, if any, between the stated fees and the actual fees paid by the Fund reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of the Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Fund's transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Fund. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

All or substantially all of the Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of 4:00 p.m. New York time as a dividend and distributed monthly.

You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the Fund.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in the Fund's daily distributions.

The Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Fund's Institutional Shares.

HOW TO BUY SHARES

How Can I Purchase Institutional Shares Of The Fund?

You may purchase Institutional Shares on any business day at their NAV next determined after receipt of an order. Shares begin earning dividends after the receipt of the purchase amount in federal funds. No sales load is charged. You may place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

In order to make an initial investment in the Fund, you must furnish to the Fund or Goldman Sachs the Account Application.

You may send your payment as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (the Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other

financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Cash Portfolio	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day

How Do I Purchase Shares Through A Financial Institution?

Certain institutions (including banks, trust companies, brokers and investment advisers) that provide recordkeeping, reporting and processing services to their customers may be authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- The Fund will be deemed to have received an order in proper form when the order is accepted by the authorized institution or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Authorized institutions or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your institution or intermediary directly to learn whether it is authorized to accept orders for the Trust.

These institutions may receive payments from the Fund or Goldman Sachs for the services provided by them with respect to the Fund's Institutional Shares. These payments may be in addition to other payments borne by the Fund.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Fund, to certain institutions and other persons in connection with the sale, distribution and/or servicing of shares of the Fund and other Goldman Sachs Funds.

In addition to Institutional Shares, the Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Institutional Shares. Information regarding these other share classes may be obtained from your

sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Fund?

Minimum initial investment	$1 billion
Minimum account balance	$1 billion
Minimum subsequent investments	None

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement. The Fund may waive the minimum investment and minimum account balance required and may require you to provide a written Statement of Intention which expresses your non-binding commitment to invest in the aggregate $1 billion or more (not counting reinvestments of dividends and distributions and redemptions) within a period of 13 months in Institutional Shares of the Fund. The Trust may approve, reject or discontinue any such waiver at its discretion.
- Reject any purchase order for any reason.

The Fund may allow you to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Fund to verify the identity of any investor opening an account with the Fund. To the extent permitted by applicable law, the Fund reserves the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Fund or to involuntarily redeem an investor's shares and close an account in the event that the Fund is unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Institutional Shares is the Fund's next determined NAV. The Fund calculates NAV as follows:

$$\text{NAV} = \frac{\begin{array}{c}\text{(Value of Assets of the Class)} \\ - \text{ (Liabilities of the Class)}\end{array}}{\text{Number of Outstanding Shares of the Class}}$$

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New

York Stock Exchange or NASDAQ market may officially close. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.

- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, the Fund reserves the right to close at or prior to the BMA recommended closing time. If the Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to, open the Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether the Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help the Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that the Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by the Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Institutional Shares Of The Fund?

You may arrange to take money out of your account by selling (redeeming) some or all of your shares. **Generally, the Fund will redeem its Institutional Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** You may request that redemption proceeds be

sent to you by check or by wire (if the wire instructions are on record). Redemptions may be requested in writing or by telephone.

Instructions For Redemptions:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund name and Class of Shares ■ The dollar amount you want to sell ■ How and where to send the proceeds ■ Mail your request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain institutions and intermediaries are authorized to accept redemption requests on behalf of the Fund as described under ''How Do I Purchase Shares Through A Financial Institution?''

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on your Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Cash Portfolio:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by the Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.
- To change the bank designated on your Account Application, you must send written instructions signed by an authorized person designated on the Account Application to the Transfer Agent.
- Neither the Trust, Goldman Sachs nor any other institution assumes any responsibility for the performance of your bank or any intermediaries in the transfer process. If a problem with such performance arises, you should deal directly with your bank or any such intermediaries.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.

The Trust reserves the right to:

- Redeem your shares if your account balance falls below the minimum as a result of a redemption. The Fund will give you 60 days' prior written notice to allow you to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to the Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Institutional Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

You may exchange Institutional Shares of the Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice to you.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ Your name(s) and signature(s) ■ Your account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need to Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will Be Sent Regarding Investments In Institutional Shares?

Recordholders will receive an annual report containing audited financial statements and a semi-annual report. To eliminate unnecessary duplication, only one copy of such reports will be sent to shareholders with the same mailing address. If you would like a duplicate copy to be mailed to you, please contact Goldman Sachs Funds at 1-800-621-2550. Recordholders will also be provided with an individual monthly statement. Any dividends and distributions paid by the Fund are also reflected in regular statements issued by the Fund to recordholders. If you purchase shares through an institution or other intermediary, the institution or intermediary is responsible for providing these or other reports to their customers who are the beneficial owners of the Fund shares in accordance with the rules that apply to their accounts with the institution or intermediary.

Taxation

As with any investment, you should consider how your investment in the Fund will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Fund.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions. The Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations, they may be exempt from state and local income taxes. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Fund will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

Other Information. When you open your account, you should provide your social security or tax identification number on your Account Application. By law, the Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Fund, including its associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that the Fund's investment objective and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in the Fund's investment objective, you should consider whether the Fund remains an appropriate investment in light of your then current financial position and needs. The Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are

so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. The Fund may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, the Fund may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

Because the Fund will invest more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. The Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by the Fund consists of direct U.S. dollar-denominated obligations of domestic issuers or foreign issuers. Asset-backed

commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. The Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by the Fund may be regarded as illiquid.

Repurchase Agreements. The Fund may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by the Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, the Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, the Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, the Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to the Fund's shareholders. In addition, the Fund, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. The Fund may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, the Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, the Fund will be unable to possess and sell the underlying collateral and that the Fund's recoveries on repossessed collateral may not be available to support payments on these securities. In the event of a default, the Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. The Fund may invest in foreign government obligations. Foreign government obligations are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by the Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. In addition, the legal remedies for investors may be more limited than the remedies available in the United States.

Municipal Obligations. The Fund may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumen-

talities, and the District of Columbia. Municipal obligations in which the Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Custodial Receipts. The Fund may also invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes the Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, the Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. The Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on the Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of the Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. The Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the Fund and will be subject to substantially the same risks. Although the Fund does not expect to do so in the foreseeable future, the Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which the Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Fund may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, the Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury

Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks. The Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to the Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although the Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, the Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. The Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of the Fund's portfolio.

Borrowings. The Fund may borrow up to 33$^{1}/_{3}$% of its total assets from banks for temporary or emergency purposes. The Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, the Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights table is intended to help you understand the Fund's financial performance from commencement of operations (May 1, 2001) to December 31, 2002. Certain information relates to a single Fund share. The information has been audited by PricewaterhouseCoopers LLP, whose report, along with the Fund's financial statements, is included in the Fund's annual report (available upon request). The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions).

CASH PORTFOLIO

	Net asset value, beginning of period	Net investment income[(a)]	Distributions to shareholders
For the Period Ended December 31,			
2002 - Institutional shares	$1.00	$0.02	$(0.02)
2002 - Preferred shares	1.00	0.02	(0.02)
2002 - Administration shares	1.00	0.01	(0.01)
For the Period Ended December 31,			
2001 - Institutional shares (commenced May 1, 2001)	1.00	0.02	(0.02)
2001 - Preferred shares (commenced May 1, 2001)	1.00	0.02	(0.02)
2001 - Administration shares (commenced May 1, 2001)	1.00	0.02	(0.02)

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Total returns for periods less than one full year are not annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions.

(c) Results for 2001 are annualized.

Net asset value, end of period	Total return[b]	Net assets, end of period (in 000s)	Ratio of net expenses to average net assets[c]	Ratio of net investment income to average net assets[c]	Ratios assuming no expense reductions	
					Ratio of expenses to average net assets[c]	Ratio of net investment loss to average net assets[c]

AN INVESTMENT IN THE FUND IS NOT A BANK DEPOSIT AND IS NOT INSURED BY THE FEDERAL DEPOSIT INSURANCE CORPORATION OR ANY OTHER GOVERNMENT AGENCY. ALTHOUGH THE FUND SEEKS TO PRESERVE THE VALUE OF YOUR INVESTMENT AT $1.00 PER SHARE, IT IS POSSIBLE TO LOSE MONEY BY INVESTING IN THE FUND.

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Cash Portfolio (the ''Fund''). GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Fund is managed to seek preservation of capital, daily liquidity and maximum current income. With the Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Fund. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target*—**WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure*—**Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and the Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities*—**The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- The Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

The benchmark for the Fund is the **iMoneyNet, Inc. First Tier Institutional Index.**

Reference in this Prospectus to the Fund's benchmark is for informational purposes only, and unless otherwise noted is not an indication of how the Fund is managed.

Fund Investment Objective and Strategies

INVESTMENT OBJECTIVE

The Cash Portfolio seeks to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

The Fund:

The Fund pursues its investment objective by investing in U.S. government securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments.

The Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, the Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').

The Investors: The Fund is designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges.

NAV: The Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that the Fund will be able at all times to maintain a NAV of $1.00 per share.

Maximum Remaining Maturity of Portfolio Investments: 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.

Dollar-Weighted Average Portfolio Maturity (''WAM''): Not more than 90 days (as required by Rule 2a-7).

Investment Restrictions: The Fund is subject to certain investment restrictions that are described in detail under ''Investment Restrictions'' in the Additional Statement. Fundamental investment restrictions of the Fund cannot be changed without approval of a majority of the outstanding shares of the Fund. The Fund's investment objective and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.

In order to obtain a rating from a rating organization, the Fund will observe special investment restrictions.

Diversification: Diversification can help the Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ''SEC''), the Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, the Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees are subject to different diversification requirements as described in the Additional Statement.

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Fund in seeking to achieve its investment objective. For more information see Appendix A.

■ No specific percentage limitation on usage; limited only by the objective and strategies of the Fund

Investment Policies Matrix	Cash Portfolio
U.S. Treasury Obligations[1]	■
U.S. Government Securities	■
Bank Obligations[2]	■
Commercial Paper[3]	■
Short-Term Obligations of Corporations and Other Entities[4]	■
Repurchase Agreements	■
Asset-Backed and Receivables-Backed Securities[5]	■
Foreign Government Obligations (US$)[6]	■

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*

[2] *Over 25% of total assets must be invested in U.S. and foreign (US$) banks. If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*

[3] *U.S. and foreign (US$) commercial paper.*

[4] *U.S. and foreign (US$) entities.*

[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*

[6] *The Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

■ No specific percentage limitation on usage; limited only by the objective and strategies of the Fund

Investment Policies Matrix continued	Cash Portfolio
Municipals[7]	■
Custodial Receipts	■
Unrated Securities[8]	■
Investment Companies[9]	■
Private Activity Bonds	■
Credit Quality[8,10]	First Tier
Miscellaneous[11]	■

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities. In addition, when the Fund holds a security supported by a guarantee or demand feature, it may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

[9] *Up to 10% of total assets in other investment companies.*

[10] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow the Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[11] *May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted.*

Principal Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Fund and may result in a loss of your investment. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective.

• Applicable	Cash Portfolio
NAV	•
Interest Rate	•
Credit/Default	•
Liquidity	•
U.S. Government Securities	•
Foreign	•
Banking Industry	•

Risks that apply to the Fund:

- ***NAV Risk***—The risk that the Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, the Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, the Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations.
- ***Liquidity Risk***—The risk that the Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.
- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. government securities purchased by the Fund, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac'') are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some

U.S. government securities held by the Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

More information about the Fund's portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUND HAS PERFORMED

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) For the 2002 calendar year, the performance of the Fund's Preferred Shares; and (b) the average annual total returns of the Fund's Preferred Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, the Fund's performance would have been reduced. You may obtain the Fund's current yield by calling 1-800-621-2550.

Cash Portfolio

Worst Quarter*
Q4 02 0.31%

CALENDAR YEAR (Preferred Shares)

AVERAGE ANNUAL TOTAL RETURN

For the period ended December 31, 2002	1 Year	Since Inception
Preferred Shares (Inception 5/1/01)	1.49%	2.10%

* *Please note that ''Best Quarter'' and ''Worst Quarter'' figures are applicable only to the time period covered by the bar chart.*

[This page intentionally left blank]

Fund Fees and Expenses (Preferred Shares)

This table describes the fees and expenses that you would pay if you buy and hold Preferred Shares of the Fund.

	Cash Portfolio
Shareholder Fees (fees paid directly from your investment):	
Maximum Sales Charge (Load) Imposed on Purchases	None
Maximum Deferred Sales Charge (Load)	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends	None
Redemption Fees	None
Exchange Fees	None
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]	
Management Fees[2]	0.15%
Other Expenses	13.51%
Preferred Administration Fees[3]	0.10%
All Other Expenses[4]	13.41%
Total Fund Operating Expenses*	13.66%

See page 13 for all other footnotes.

* As a result of current waivers and expense limitations, ''Other Expenses'' and ''Total Fund Operating Expenses'' of the Fund which are actually incurred as of the date of this Prospectus are as set forth below. The waivers and expense limitations may be terminated at any time at the option of the Investment Adviser. If this occurs, ''Other Expenses'' and ''Total Fund Operating Expenses'' may increase without shareholder approval.

	Cash Portfolio
Annual Fund Operating Expenses (expenses that are deducted from Fund assets):[1]	
Management Fees[2]	*0.11%*
Other Expenses	*0.11%*
Preferred Administration Fees[3]	*0.10%*
All Other Expenses[4]	*0.01%*
Total Fund Operating Expenses (after current waivers and expense limitations)	*0.22%*

[1] The Fund's annual operating expenses are based on actual expenses.

[2] The Investment Adviser has voluntarily agreed not to impose a portion of the management fee on the Fund equal on an annualized basis to 0.04% of the Fund's average daily net assets. ***As a result of fee waivers, the current management fees of the Fund are 0.11% of the Fund's average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] Service Organizations may charge other fees directly to their customers who are beneficial owners of Preferred Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.

[4] The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of the Fund (excluding management fees, preferred administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of the Fund's average daily net assets.

Fund Fees and Expenses continued

Example

The following Example is intended to help you compare the cost of investing in the Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Preferred Shares of the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Cash Portfolio	$1,307	$3,591	$5,496	$8,991

Service Organizations that invest in Preferred Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Preferred Shares may receive other compensation in connection with the sale and distribution of Preferred Shares or for services to their customers' accounts and/or the Fund. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISER

Prior to the end of April, 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs served as the Fund's investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management L.P., has been registered as an investment adviser with the Securities and Exchange Commission since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Fund's portfolio transactions. The Investment Adviser also performs the following services for the Fund:

- Continually manages the Fund, including the purchase, retention and disposition of securities and other assets
- Administers the Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, the Fund may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fee, computed daily and payable monthly, at the annual rate listed below (as a percentage of the Fund's average daily net assets):

	Contractual Rate	Actual Rate for the Fiscal Period Ended December 31, 2002
Cash Portfolio	0.15%	0.11%

The difference, if any, between the stated fees and the actual fees paid by the Fund reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of the Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Fund's transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Fund. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

All or substantially all of the Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of 4:00 p.m. New York time as a dividend and distributed monthly.

You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the Fund.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in the Fund's daily distributions.

The Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Fund's Preferred Shares.

HOW TO BUY SHARES

How Can I Purchase Preferred Shares Of The Fund?

Generally, Preferred Shares may be purchased only through institutions that have agreed to provide shareholder administration services to their customers who are the beneficial owners of Preferred Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Preferred Shares may be purchased from the Fund on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs the Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (the Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds—(Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Cash Portfolio	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Preferred Shares:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem or exchange shares for customers

In addition, some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- The Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to a preferred administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payment for their services from the Trust of up to 0.10% (on an annualized basis) of the average daily net assets of the Preferred Shares of the Fund, which are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Fund, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Fund and other Goldman Sachs Funds.

In addition to Preferred Shares, the Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Preferred Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Fund?

Minimum initial investment	$1 billion
Minimum account balance	$1 billion
Minimum subsequent investments	None

A Service Organization may, however, impose other minimum amounts for initial and subsequent investments by its customer accounts in Preferred Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem Preferred Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement. The Fund may waive the minimum investment and minimum account balance required and may require you to provide a written Statement of Intention which expresses your non-binding commitment to invest in the aggregate $1 billion or more (not counting reinvestments of dividends and distributions and redemptions) within a period of 13 months in Preferred Shares

of the Fund. The Trust may approve, reject or discontinue any such waiver at its discretion.

- Reject any purchase order for any reason.

The Fund may allow Service Organizations to purchase shares with securities instead of cash if consistent with a Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Fund to verify the identity of any investor opening an account with the Fund. To the extent permitted by applicable law, the Fund reserves the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Fund or to involuntarily redeem an investor's shares and close an account in the event that the Fund is unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Preferred Shares is the Fund's next determined NAV. The Fund calculates NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.
- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, the Fund reserves the right to close at or prior to the BMA recommended closing time. If the Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to,

open the Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether the Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help the Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that the Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by the Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Preferred Shares Of The Fund?

Generally, Preferred Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Fund. **Generally, the Fund will redeem its Preferred Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Fund as described under ‘‘What Do I Need To Know About Service Organizations?’’

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone

redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Cash Portfolio:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by the Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would

ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.

- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Preferred Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem your shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to the Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Preferred Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Preferred Shares of the Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The exchange

privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
By Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Preferred Shares?

Service Organizations will receive from the Fund annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Fund are also reflected in regular statements issued by the Fund to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Preferred Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Fund will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Fund.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions. The Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations, they may be exempt from state and local income taxes. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Fund will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

Other Information. When you open your account, you should provide your social security or tax identification number on your Account Application. By law, the Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Fund, including its associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that the Fund's investment objective and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in the Fund's investment objective, you should consider whether the Fund remains an appropriate investment in light of your then current financial position and needs. The Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are

so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. The Fund may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, the Fund may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

Because the Fund will invest more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. The Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by the Fund consists of direct U.S. dollar-denominated obligations of domestic issuers or foreign issuers. Asset-backed

commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. The Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by the Fund may be regarded as illiquid.

Repurchase Agreements. The Fund may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by the Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, the Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, the Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, the Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to the Fund's shareholders. In addition, the Fund, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. The Fund may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, the Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, the Fund will be unable to possess and sell the underlying collateral and that the Fund's recoveries on repossessed collateral may not be available to support payments on these securities. In the event of a default, the Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. The Fund may invest in foreign government obligations. Foreign government obligations are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by the Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. In addition, the legal remedies for investors may be more limited than the remedies available in the United States.

Municipal Obligations. The Fund may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumen-

talities, and the District of Columbia. Municipal obligations in which the Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Custodial Receipts. The Fund may also invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes the Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, the Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. The Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on the Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of the Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. The Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the Fund and will be subject to substantially the same risks. Although the Fund does not expect to do so in the foreseeable future, the Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which the Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Fund may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, the Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury

Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks. The Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to the Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although the Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, the Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. The Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of the Fund's portfolio.

Borrowings. The Fund may borrow up to 33$^{1}/_{3}$% of its total assets from banks for temporary or emergency purposes. The Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, the Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights table is intended to help you understand the Fund's financial performance from commencement of operations (May 1, 2001) to December 31, 2002. Certain information relates to a single Fund share. The information has been audited by PricewaterhouseCoopers LLP, whose report, along with the Fund's financial statements, is included in the Fund's annual report (available upon request). The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions).

CASH PORTFOLIO

	Net asset value, beginning of period	Net investment income[(a)]	Distributions to shareholders
For the Period Ended December 31,			
2002 - Institutional shares	$1.00	$0.02	$(0.02)
2002 - Preferred shares	1.00	0.02	(0.02)
2002 - Administration shares	1.00	0.01	(0.01)
For the Period Ended December 31,			
2001 - Institutional shares (commenced May 1, 2001)	1.00	0.02	(0.02)
2001 - Preferred shares (commenced May 1, 2001)	1.00	0.02	(0.02)
2001 - Administration shares (commenced May 1, 2001)	1.00	0.02	(0.02)

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Total returns for periods less than one full year are not annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions.

(c) Results for 2001 are annualized.

AN INVESTMENT IN THE FUND IS NOT A BANK DEPOSIT AND IS NOT INSURED BY THE FEDERAL DEPOSIT INSURANCE CORPORATION OR ANY OTHER GOVERNMENT AGENCY. ALTHOUGH THE FUND SEEKS TO PRESERVE THE VALUE OF YOUR INVESTMENT AT $1.00 PER SHARE, IT IS POSSIBLE TO LOSE MONEY BY INVESTING IN THE FUND.

NOT FDIC-INSURED	May Lose Value	No Bank Guarantee

General Investment Management Approach

Goldman Sachs Asset Management, L.P. (''GSAM®'') serves as Investment Adviser to the Cash Portfolio (the ''Fund''). GSAM is referred to in this Prospectus as the ''Investment Adviser.''

Goldman Sachs' Money Market Investment Philosophy:

The Fund is managed to seek preservation of capital, daily liquidity and maximum current income. With the Fund, the Investment Adviser follows a conservative, risk-managed investment process that seeks to:

- Manage credit risk
- Manage interest rate risk
- Manage liquidity

Since 1981, the Investment Adviser has actively managed the Goldman Sachs Money Market Funds to provide investors with the greatest possible preservation of principal and income potential.

INVESTMENT PROCESS

1. Managing Credit Risk

The Investment Adviser's process for managing risk emphasizes:

- ***Intensive research***—The Credit Department, a separate operating entity of Goldman, Sachs & Co. (''Goldman Sachs''), approves all money market fund eligible securities for the Fund. Sources for the Credit Department's analysis include third-party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as the Investment Research, Legal and Compliance departments of Goldman Sachs.
- ***Timely updates***—A Credit Department-approved list of securities is continuously communicated on a ''real-time'' basis to the portfolio management team via computer link.

The Result: An ''approved'' list of high-quality credits—The Investment Adviser's portfolio management team uses this approved list to construct portfolios which offer the best available risk-return tradeoff within the ''approved'' credit universe.

2. Managing Interest Rate Risk

Three main steps are followed in seeking to manage interest rate risk:

- ***Establish weighted average maturity (WAM) target*—**WAM (the weighted average time until the yield of a portfolio reflects any changes in the current interest rate environment) is constantly revisited and adjusted as market conditions change. An overall strategy is developed by the portfolio management team based on insights gained from weekly meetings with both Goldman Sachs economists and economists from outside the firm.
- ***Implement optimum portfolio structure*—**Proprietary models that seek the optimum balance of risk and return, in conjunction with the Investment Adviser's analysis of factors such as market events, short-term interest rates and the Fund's asset volatility, are used to identify the most effective portfolio structure.
- ***Conduct rigorous analysis of new securities*—**The Investment Adviser's five-step process includes legal, credit, historical index and liquidity analysis, as well as price stress testing to determine suitability for money market mutual funds.

3. Managing Liquidity

Factors that the Investment Adviser's portfolio managers continuously monitor and that affect liquidity of a money market portfolio include:

- The Fund's investors and factors that influence their asset volatility;
- Technical events that influence the trading range of federal funds and other short-term fixed-income markets; and
- Bid-ask spreads associated with securities in the portfolios.

The benchmark for the Fund is the **iMoneyNet, Inc. First Tier Institutional Index.**

Reference in this Prospectus to the Fund's benchmark is for informational purposes only, and unless otherwise noted is not an indication of how the Fund is managed.

Fund Investment Objective and Strategies

INVESTMENT OBJECTIVE

The Cash Portfolio seeks to maximize current income to the extent consistent with the preservation of capital and the maintenance of liquidity by investing exclusively in high quality money market instruments.

The Fund:

The Fund pursues its investment objective by investing in U.S. government securities, obligations of U.S. banks, commercial paper and other short-term obligations of U.S. companies, states, municipalities and other entities and repurchase agreements. The Fund may also invest in U.S. dollar-denominated obligations of foreign banks, foreign companies and foreign governments.

The Fund's securities are valued by the amortized cost method as permitted by Rule 2a-7 under the Investment Company Act of 1940, as amended (the ''Act''). Under Rule 2a-7, the Fund may invest only in U.S. dollar-denominated securities that are determined to present minimal credit risk and meet certain other criteria, including conditions relating to maturity, diversification and credit quality. These operating policies may be more restrictive than the fundamental policies set forth in the Statement of Additional Information (the ''Additional Statement'').

The Investors: The Fund is designed for institutional investors seeking a high rate of return, a stable net asset value (''NAV'') and convenient liquidation privileges.

NAV: The Fund seeks to maintain a stable NAV of $1.00 per share. There can be no assurance that the Fund will be able at all times to maintain a NAV of $1.00 per share.

Maximum Remaining Maturity of Portfolio Investments: 13 months (as determined pursuant to Rule 2a-7) at the time of purchase.

Dollar-Weighted Average Portfolio Maturity (''WAM''): Not more than 90 days (as required by Rule 2a-7).

Investment Restrictions: The Fund is subject to certain investment restrictions that are described in detail under ''Investment Restrictions'' in the Additional Statement. Fundamental investment restrictions of the Fund cannot be changed without approval of a majority of the outstanding shares of the Fund. The Fund's investment objective and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval.

In order to obtain a rating from a rating organization, the Fund will observe special investment restrictions.

Diversification: Diversification can help the Fund reduce the risks of investing. In accordance with current regulations of the Securities and Exchange Commission (the ''SEC''), the Fund may not invest more than 5% of the value of its total assets at the time of purchase in the securities of any single issuer. However, the Fund may invest up to 25% of the value of its total assets in the securities of a single issuer for up to three business days. These limitations do not apply to cash, certain repurchase agreements, U.S. Government Securities (as defined in Appendix A) or securities of other investment companies. In addition, securities subject to certain unconditional guarantees are subject to different diversification requirements as described in the Additional Statement.

PRINCIPAL INVESTMENT STRATEGIES

The table below identifies some of the investment techniques that may (but are not required to) be used by the Fund in seeking to achieve its investment objective. For more information see Appendix A.

■ No specific percentage limitation on usage; limited only by the objective and strategies of the Fund

Investment Policies Matrix	Cash Portfolio
U.S. Treasury Obligations[1]	■
U.S. Government Securities	■
Bank Obligations[2]	■
Commercial Paper[3]	■
Short-Term Obligations of Corporations and Other Entities[4]	■
Repurchase Agreements	■
Asset-Backed and Receivables-Backed Securities[5]	■
Foreign Government Obligations (US$)[6]	■

Note: See Appendix A for a description of, and certain criteria applicable to, each of these categories of investments.

[1] *Issued or guaranteed by the U.S. Treasury.*

[2] *Over 25% of total assets must be invested in U.S. and foreign (US$) banks. If adverse economic conditions prevail in the banking industry (such as substantial losses on loans, increases in non-performing assets and charge-offs and declines in total deposits) the Fund may, for temporary defensive purposes, invest less than 25% of its total assets in bank obligations.*

[3] *U.S. and foreign (US$) commercial paper.*

[4] *U.S. and foreign (US$) entities.*

[5] *To the extent required by Rule 2a-7, asset-backed and receivables-backed securities will be rated by the requisite number of nationally recognized statistical rating organizations (''NRSROs'').*

[6] *The Fund may invest in U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government. The Fund may also invest in U.S. dollar-denominated obligations issued or guaranteed by any entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.*

■ No specific percentage limitation on usage; limited only by the objective and strategies of the Fund

Investment Policies Matrix continued	Cash Portfolio
Municipals[7]	■
Custodial Receipts	■
Unrated Securities[8]	■
Investment Companies[9]	■
Private Activity Bonds	■
Credit Quality[8,10]	First Tier
Miscellaneous[11]	■

[7] *Will only make such investments when yields on such securities are attractive compared to other taxable investments.*

[8] *To the extent permitted by Rule 2a-7, securities without short-term ratings may be purchased if they are deemed to be of comparable quality to First Tier Securities. In addition, when the Fund holds a security supported by a guarantee or demand feature, it may rely on the credit quality of the guarantee or demand feature in determining the credit quality of the investment.*

[9] *Up to 10% of total assets in other investment companies.*

[10] *First Tier Securities are (a) rated in the highest short-term rating category by at least two NRSROs, or if only one NRSRO has assigned a rating, by that NRSRO; or (b) issued or guaranteed by, or otherwise allow the Fund under certain conditions to demand payment from, an entity with such ratings. U.S. Government Securities are considered First Tier Securities.*

[11] *May invest in obligations of the International Bank for Reconstruction and Development. Reverse repurchase agreements not permitted.*

Principal Risks of the Fund

Loss of money is a risk of investing in the Fund. An investment in the Fund is not a deposit of any bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The following summarizes important risks that apply to the Fund and may result in a loss of your investment. The Fund should not be relied upon as a complete investment program. There can be no assurance that the Fund will achieve its investment objective.

• Applicable	Cash Portfolio
NAV	•
Interest Rate	•
Credit/Default	•
Liquidity	•
U.S. Government Securities	•
Foreign	•
Banking Industry	•

Risks that apply to the Fund:

- ***NAV Risk***—The risk that the Fund will not be able to maintain a NAV per share of $1.00 at all times.
- ***Interest Rate Risk***—The risk that during periods of rising interest rates, the Fund's yield (and the market value of its securities) will tend to be lower than prevailing market rates; in periods of falling interest rates, the Fund's yield will tend to be higher.
- ***Credit/Default Risk***—The risk that an issuer or guarantor of a security, or a bank or other financial institution that has entered into a repurchase agreement, may default on its payment obligations.
- ***Liquidity Risk***—The risk that the Fund will be unable to pay redemption proceeds within the time period stated in this Prospectus, because of unusual market conditions, an unusually high volume of redemption requests, or other reasons.
- ***U.S. Government Securities Risk***—The risk that the U.S. government will not provide financial support to U.S. government agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Many U.S. government securities purchased by the Fund, such as those issued by the Federal National Mortgage Association (''Fannie Mae'') and Federal Home Loan Mortgage Corporation (''Freddie Mac'') are not backed by the full faith and credit of the United States. The maximum potential liability of the issuers of some

U.S. government securities held by the Fund may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

- ***Foreign Risk***—The risk that a foreign security could lose value as a result of political, financial and economic events in foreign countries, less publicly available financial and other information, less stringent foreign securities regulations and accounting and disclosure standards, or other factors. The Fund may not invest more than 25% of its total assets in the securities of any one foreign government.
- ***Banking Industry Risk***—The risk that if the Fund invests more than 25% of its total assets in bank obligations, an adverse development in the banking industry may affect the value of the Fund's investments more than if the Fund's investments were not invested to such a degree in the banking industry. Normally, the Fund intends to invest more than 25% of its total assets in bank obligations. Banks may be particularly susceptible to certain economic factors such as interest rate changes, adverse developments in the real estate market, fiscal and monetary policy and general economic cycles.

More information about the Fund's portfolio securities and investment techniques, and their associated risks, is provided in Appendix A. You should consider the investment risks discussed in this section and in Appendix A. Both are important to your investment choice.

Fund Performance

HOW THE FUND HAS PERFORMED

The bar chart and table below provide an indication of the risks of investing in the Fund by showing: (a) for the 2002 calendar year, the performance of the Fund's Administration Shares; and (b) the average annual total returns of the Fund's Administration Shares. Investors should be aware that the fluctuation of interest rates is one primary factor in performance volatility. The bar chart and table assume reinvestment of dividends and distributions. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future. Performance reflects expense limitations in effect. If expense limitations were not in place, the Fund's performance would have been reduced. You may obtain the Fund's current yield by calling 1-800-621-2550.

Total Fund Operating Expenses (after current waivers and expense limitations)	*0.37%*

[1] *The Fund's annual operating expenses are based on actual expenses.*

[2] *The Investment Adviser has voluntarily agreed not to impose a portion of the management fee on the Fund equal on an annualized basis to 0.04% of the Fund's average daily net assets.* ***As a result of fee waivers, the current management fees of the Fund are 0.11% of the Fund's average daily net assets. The waivers may be terminated at any time at the option of the Investment Adviser.***

[3] *Service Organizations may charge other fees directly to their customers who are beneficial owners of Administration Shares in connection with their customers' accounts. Such fees may affect the return customers realize with respect to their investments.*

[4] *The Investment Adviser has voluntarily agreed to reduce or limit ''All Other Expenses'' of the Fund (excluding management fees, administration fees, taxes, interest, brokerage fees and litigation, indemnification, shareholder meeting and other extraordinary expenses) to 0.01% of the Fund's average daily net assets.*

Example

The following Example is intended to help you compare the cost of investing in the Fund (without the waivers and expense limitations) with the cost of investing in other mutual funds. The Example assumes that you invest $10,000 in Administration Shares of the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

Fund	1 Year	3 Years	5 Years	10 Years
Cash Portfolio	$1,320	$3,622	$5,536	$9,027

Service Organizations that invest in Administration Shares on behalf of their customers may charge other fees directly to their customer accounts in connection with their investments. You should contact your Service Organization for information regarding such charges. Such fees, if any, may affect the return such customers realize with respect to their investments.

Certain Service Organizations that invest in Administration Shares may receive other compensation in connection with the sale and distribution of Administration Shares or for services to their customers' accounts and/or the Fund. For additional information regarding such compensation, see ''Shareholder Guide'' in the Prospectus and ''Other Information'' in the Additional Statement.

Service Providers

INVESTMENT ADVISER

Prior to the end of April, 2003, Goldman Sachs Asset Management, a business unit of the Investment Management Division of Goldman Sachs served as the Fund's investment adviser. On or about April 26, 2003, Goldman Sachs Asset Management L.P. (''GSAM''), 32 Old Slip, New York, New York 10005, assumed Goldman Sachs Asset Management's investment advisory responsibilities for the Fund. GSAM, formerly called Goldman Sachs Funds Management, L.P., has been registered as an investment adviser with the Securities and Exchange Commission since 1990 and is an affiliate of Goldman Sachs. As of December 31, 2002, GSAM, along with other units of the Investment Management Division of Goldman Sachs, had assets under management of $329.6 billion.

The Investment Adviser provides day-to-day advice regarding the Fund's portfolio transactions. The Investment Adviser also performs the following services for the Fund:

- Continually manages the Fund, including the purchase, retention and disposition of securities and other assets
- Administers the Fund's business affairs
- Performs various recordholder servicing functions (to the extent not provided by other organizations)

Pursuant to SEC orders, the Fund may enter into principal transactions in certain money market instruments, including repurchase agreements, with Goldman Sachs.

MANAGEMENT FEES

As compensation for its services and its assumption of certain expenses, the Investment Adviser is entitled to the following fee, computed daily and payable monthly, at the annual rate listed below (as a percentage of the Fund's average daily net assets):

	Contractual Rate	Actual Rate for the Fiscal Period Ended December 31, 2002
Cash Portfolio	0.15%	0.11%

The difference, if any, between the stated fees and the actual fees paid by the Fund reflects that the Investment Adviser did not charge the full amount of the fees to which it would have been entitled. The Investment Adviser may discontinue or modify any such voluntary limitations in the future at its discretion.

DISTRIBUTOR AND TRANSFER AGENT

Goldman Sachs, 85 Broad Street, New York, New York 10004, serves as the exclusive distributor (the ''Distributor'') of the Fund's shares. Goldman Sachs, 4900 Sears Tower, Chicago, Illinois 60606-6372, also serves as the Fund's transfer agent (the ''Transfer Agent'') and, as such, performs various shareholder servicing functions.

From time to time, Goldman Sachs or any of its affiliates may purchase and hold shares of the Fund. Goldman Sachs reserves the right to redeem at any time some or all of the shares acquired for its own account.

Dividends

All or substantially all of the Fund's net investment income will be declared as a dividend daily. Dividends will normally, but not always, be declared as of 4:00 p.m. New York time as a dividend and distributed monthly.

You may choose to have dividends paid in:

- Cash
- Additional shares of the same class of the same Fund

You may indicate your election on your Account Application. Any changes may be submitted in writing to Goldman Sachs at any time. If you do not indicate any choice, dividends and distributions will be reinvested automatically in the Fund.

Dividends will be reinvested as of the last calendar day of each month. Cash distributions normally will be paid on or about the first business day of each month. Net short-term capital gains, if any, will be distributed in accordance with federal income tax requirements and may be reflected in the Fund's daily distributions.

The Fund may distribute at least annually other realized capital gains, if any, after reduction by available capital losses. In order to avoid excessive fluctuations in the amount of monthly capital gains distributions, a portion of any net capital gains realized on the disposition of securities during the months of November and December may be distributed during the subsequent calendar year. The realized gains and losses are not expected to be of an amount which would affect the Fund's NAV of $1.00 per share.

Shareholder Guide

The following section will provide you with answers to some of the most often asked questions regarding buying and selling the Fund's Administration Shares.

HOW TO BUY SHARES

How Can I Purchase Administration Shares Of The Fund?

Generally, Administration Shares may be purchased only through institutions that have agreed to provide shareholder administration services to their customers who are the beneficial owners of Administration Shares. These institutions are called ''Service Organizations.'' Customers of a Service Organization will normally give their purchase instructions to the Service Organization, and the Service Organization will, in turn, place purchase orders with Goldman Sachs. Service Organizations will set times by which purchase orders and payments must be received by them from their customers. Generally, Administration Shares may be purchased from the Fund on any business day at their NAV next determined after receipt of an order by Goldman Sachs from a Service Organization. Shares begin earning dividends after the Fund's receipt of the purchase amount in federal funds. No sales load is charged.

Service Organizations are responsible for transmitting purchase orders and payments to Goldman Sachs in a timely fashion. Service Organizations should place a purchase order in writing or by telephone.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Before or immediately after placing an initial purchase order, a Service Organization should complete and send to Goldman Sachs the Account Application.

In certain instances, Goldman Sachs Trust (the ''Trust'') may require a signature guarantee in order to effect purchase, redemption or exchange transactions. Signature guarantees must be obtained from a bank, brokerage firm or other financial intermediary that is a member of an approved Medallion Guarantee Program or that is otherwise approved by the Trust. A notary public cannot provide a signature guarantee.

Service Organizations may send their payments as follows:

- Wire federal funds to The Northern Trust Company (''Northern''), as sub-custodian for State Street Bank and Trust Company (''State Street'') (the Fund's custodian); ***or***
- Send a check or Federal Reserve draft payable to Goldman Sachs Funds — (Name of Fund and Class of Shares), 4900 Sears Tower, Chicago, IL 60606-6372. The Fund will not accept a check drawn on a foreign bank or a third-party check.

It is strongly recommended that payment be effected by wiring federal funds to Northern.

It is expected that Federal Reserve drafts will ordinarily be converted to federal funds on the day of receipt and that checks will be converted to federal funds within two business days after receipt.

When Do Shares Begin Earning Dividends?

Dividends begin to accrue as follows:

If an effective order and federal funds are received:	Dividends begin:
Cash Portfolio:	
■ By 3:00 p.m. New York time	Same business day
■ After 3:00 p.m. New York time	Next business day

What Do I Need To Know About Service Organizations?

Service Organizations may provide the following services in connection with their customers' investments in Administration Shares:

- Acting, directly or through an agent, as the sole shareholder of record
- Maintaining account records for customers
- Processing orders to purchase, redeem or exchange shares for customers

Some (but not all) Service Organizations are authorized to accept, on behalf of the Trust, purchase, redemption and exchange orders placed by or on behalf of their customers, and may designate other intermediaries to accept such orders, if approved by the Trust. In these cases:

- The Fund will be deemed to have received an order in proper form when the order is accepted by the authorized Service Organization or intermediary on a business day, and the order will be priced at the Fund's NAV next determined after such acceptance.
- Service Organizations or intermediaries will be responsible for transmitting accepted orders and payments to the Trust within the time period agreed upon by them.

You should contact your Service Organization directly to learn whether it is authorized to accept orders for the Trust.

Pursuant to an administration plan adopted by the Trust's Board of Trustees, Service Organizations are entitled to receive payment for their services from the Trust of up to 0.25% (on an annualized basis) of the average daily net assets of the Administration Shares of the Fund, which are attributable to or held in the name of the Service Organization for its customers.

The Investment Adviser, Distributor and/or their affiliates may pay additional compensation from time to time, out of their assets and not as an additional charge to the Fund, to selected Service Organizations and other persons in connection with the sale, distribution and/or servicing of shares of the Fund and other Goldman Sachs Funds.

In addition to Administration Shares, the Fund also offers other classes of shares to investors. These other share classes are subject to different fees and expenses (which affect performance), and are entitled to different services than Administration Shares. Information regarding these other share classes may be obtained from your sales representative or from Goldman Sachs by calling the number on the back cover of this Prospectus.

What Is My Minimum Investment In The Fund?

Minimum initial investment	$1 billion
Minimum account balance	$1 billion
Minimum subsequent investments	None

A Service Organization may, however, impose other minimum amounts for initial and subsequent investments in Administration Shares and may establish other requirements such as a minimum account balance. A Service Organization may redeem Administration Shares held by non-complying accounts, and may impose a charge for any special services.

What Else Should I Know About Share Purchases?

The Trust reserves the right to:

- Modify or waive the minimum investment and minimum account balance requirement. The Fund may waive the minimum investment and minimum account balance required and may require you to provide a written Statement of Intention which expresses your non-binding commitment to invest in the aggregate $1 billion or more (not counting reinvestments of dividends and distributions and redemptions) within a period of 13 months in Administration

Shares of the Fund. The Trust may approve, reject or discontinue any such waiver at its discretion.

- Reject any purchase order for any reason.

The Fund may allow Service Organizations to purchase shares with securities instead of cash if consistent with the Fund's investment policies and operations and if approved by the Fund's Investment Adviser.

Federal regulations may require the Fund to verify the identity of any investor opening an account with the Fund. To the extent permitted by applicable law, the Fund reserves the right (i) to place limits on transactions in any account until the identity of the investor is verified; or (ii) to refuse an investment in the Fund or to involuntarily redeem an investor's shares and close an account in the event that the Fund is unable to verify an investor's identity.

How Are Shares Priced?

The price you pay or receive when you buy, sell or exchange Administration Shares is the Fund's next determined NAV. The Fund calculates NAV as follows:

$$\text{NAV} = \frac{\text{(Value of Assets of the Class)} - \text{(Liabilities of the Class)}}{\text{Number of Outstanding Shares of the Class}}$$

- NAV per share of each class is generally calculated by the accounting agent on each business day as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. New York time) or such later time as the New York Stock Exchange or NASDAQ market may officially close. Fund shares will be priced on any day the New York Stock Exchange is open, except for days on which Chicago, Boston or New York banks are closed for local holidays.
- On any business day when the Bond Market Association (''BMA'') recommends that the securities markets close early, the Fund reserves the right to close at or prior to the BMA recommended closing time. If the Fund does so, it will cease granting same business day credit for purchase and redemption orders received after the Fund's closing time and credit will be given to the next business day.
- The Trust reserves the right to advance the time by which purchase and redemption orders must be received for same business day credit as otherwise permitted by the SEC.

Note: The time at which transactions and shares are priced and the time by which orders must be received may be changed in case of an emergency or if regular trading on the New York Stock Exchange is stopped at a time other than 4:00 p.m. New York time. In the event the New York Stock Exchange does not open for business because of an emergency, the Trust may, but is not required to,

open the Fund for purchase, redemption and exchange transactions if the Federal Reserve wire payment system is open. To learn whether the Fund is open for business during an emergency situation, please call 1-800-621-2550.

To help the Fund maintain its $1.00 constant share price, portfolio securities are valued at amortized cost in accordance with SEC regulations. Amortized cost will normally approximate market value. There can be no assurance that the Fund will be able at all times to maintain a NAV of $1.00 per share.

In addition, if an event that affects the value of a security occurs after the publication of market quotations used by the Fund to price its securities but before the close of trading on the New York Stock Exchange, the Trust in its discretion and consistent with applicable regulatory guidance may determine whether to make an adjustment in light of the nature and significance of the event.

HOW TO SELL SHARES

How Can I Sell Administration Shares Of The Fund?

Generally, Administration Shares may be sold (redeemed) only through Service Organizations. Customers of a Service Organization will normally give their redemption instructions to the Service Organization, and the Service Organization will, in turn, place redemption orders with the Fund. **Generally, the Fund will redeem its Administration Shares upon request on any business day at their NAV next determined after receipt of such request in proper form.** A Service Organization may request redemptions in writing or by telephone if the optional telephone redemption privilege is elected on the Account Application.

By Writing:	Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6572
By Telephone:	If you have elected the telephone redemption privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

Certain Service Organizations are authorized to accept redemption requests on behalf of the Fund as described under ‘‘What Do I Need To Know About Service Organizations?’’

What Do I Need To Know About Telephone Redemption Requests?

The Trust, the Distributor and the Transfer Agent will not be liable for any loss you may incur in the event that the Trust accepts unauthorized telephone

redemption requests that the Trust reasonably believes to be genuine. In an effort to prevent unauthorized or fraudulent redemption and exchange requests by telephone, Goldman Sachs employs reasonable procedures specified by the Trust to confirm that such instructions are genuine. If reasonable procedures are not employed, the Trust may be liable for any loss due to unauthorized or fraudulent transactions. The following general policies are currently in effect:

- All telephone requests are recorded.
- Any redemption request that requires money to go to an account or address other than that designated on the Account Application must be in writing and signed by an authorized person designated on the Account Application. The written request may be confirmed by telephone with both the requesting party and the designated bank account to verify instructions.
- The telephone redemption option may be modified or terminated at any time.

Note: It may be difficult to make telephone redemptions in times of drastic economic or market conditions.

When Will Redemption Proceeds Be Wired?

Redemption proceeds will normally be wired to the bank account designated on a Service Organization's Account Application as follows:

Redemption Request Received	Redemption Proceeds	Dividends
Cash Portfolio:		
■ By 3:00 p.m. New York time	Wired same business day	Not earned on day request is received
■ After 3:00 p.m. New York time	Wired next business day	Earned on day request is received

- Although redemption proceeds will normally be wired as described above, under certain circumstances, (a) redemption proceeds may be paid the next business day following receipt of a properly executed wire transfer redemption request and (b) redemption requests or payments may be postponed or suspended as permitted pursuant to Section 22(e) of the Act. Generally, under that section, redemption requests or payments may be postponed or suspended if (a) the New York Stock Exchange is closed for trading or trading is restricted; (b) an emergency exists which makes the disposal of securities owned by the Fund or the fair determination of the value of the Fund's net assets not reasonably practicable; or (c) the SEC by order permits the suspension of the right of redemption. If you are selling shares you recently paid for by check, the Fund will pay you when your check has cleared, which may take up to 15 days. If the Federal Reserve Bank is closed on the day the redemption proceeds would

ordinarily be wired, wiring the redemption proceeds may be delayed one additional business day.

- Neither the Trust nor Goldman Sachs assumes any responsibility for the performance of intermediaries or your Service Organization in the transfer process. If a problem with such performance arises, you should deal directly with such intermediaries or Service Organizations.

What Else Do I Need To Know About Redemptions?

The following generally applies to redemption requests:

- Additional documentation may be required when deemed appropriate by the Transfer Agent. A redemption request will not be in proper form until such additional documentation has been received.
- Service Organizations are responsible for the timely transmittal of redemption requests by their customers to the Transfer Agent. In order to facilitate the timely transmittal of redemption requests, Service Organizations may set times by which they must receive redemption requests. Service Organizations may also require additional documentation from you.

The Trust reserves the right to:

- Redeem the Administration Shares of any Service Organization whose account balance falls below the minimum as a result of a redemption. The Fund will give 60 days' prior written notice to allow a Service Organization to purchase sufficient additional shares of the Fund in order to avoid such redemption. Different rules may apply to investors who have established brokerage accounts with Goldman Sachs in accordance with the terms and conditions of their account agreements.
- Redeem shares in other circumstances determined by the Board of Trustees to be in the best interest of the Trust.
- Pay redemptions by a distribution in-kind of securities (instead of cash). If you receive redemption proceeds in-kind, you should expect to incur transaction costs upon the disposition of those securities.
- Reinvest any dividends or other distributions which you have elected to receive in cash should your check for such dividends or other distributions be returned to the Fund as undeliverable or remain uncashed for six months. In addition, that distribution and all future distributions payable to you will be reinvested at NAV in additional Administration Shares of the Fund that pays the distributions. No interest will accrue on amounts represented by uncashed distribution or redemption checks.

Can I Exchange My Investment From One Fund To Another?

A Service Organization may exchange Administration Shares of the Fund at NAV for shares of the corresponding class of another Goldman Sachs Fund. The

exchange privilege may be materially modified or withdrawn at any time upon 60 days' written notice.

Instructions For Exchanging Shares:	
Writing:	■ Write a letter of instruction that includes: ■ The recordholder name(s) and signature(s) ■ The account number ■ The Fund names and Class of Shares ■ The dollar amount to be exchanged ■ Mail the request to: Goldman Sachs Funds 4900 Sears Tower Chicago, IL 60606-6372
By Telephone:	If you have elected the telephone exchange privilege on your Account Application: ■ 1-800-621-2550 (8:00 a.m. to 4:00 p.m. New York time)

You should keep in mind the following factors when making or considering an exchange:

- You should obtain and carefully read the prospectus of the Fund you are acquiring before making an exchange.
- All exchanges which represent an initial investment in a Fund must satisfy the minimum initial investment requirements of that Fund, except that this requirement may be waived at the discretion of the Trust.
- Telephone exchanges normally will be made only to an identically registered account.
- Shares may be exchanged among accounts with different names, addresses and social security or other taxpayer identification numbers only if the exchange instructions are in writing and are signed by an authorized person designated on the Account Application.
- Exchanges are available only in states where exchanges may be legally made.
- It may be difficult to make telephone exchanges in times of drastic economic or market conditions.
- Goldman Sachs may use reasonable procedures described under ''What Do I Need To Know About Telephone Redemption Requests?'' in an effort to prevent unauthorized or fraudulent telephone exchange requests.
- Exchanges into Funds that are closed to new investors may be restricted.

For federal income tax purposes, an exchange from one Fund to another is treated as a redemption of the shares surrendered in the exchange, on which you may be subject to tax, followed by a purchase of shares received in the exchange. You should consult your tax adviser concerning the tax consequences of an exchange.

What Types Of Reports Will I Be Sent Regarding Investments In Administration Shares?

Service Organizations will receive from the Fund annual reports containing audited financial statements and semi-annual reports. Upon request, Service Organizations will also be provided with a printed confirmation for each transaction. Any dividends and distributions paid by the Fund are also reflected in regular statements issued by the Fund to Service Organizations. Service Organizations are responsible for providing these or other reports to their customers who are the beneficial owners of Administration Shares in accordance with the rules that apply to their accounts with the Service Organizations.

Taxation

As with any investment, you should consider how your investment in the Fund will be taxed. The tax information below is provided as general information. More tax information is available in the Additional Statement. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Fund.

Unless your investment is an IRA or other tax-advantaged account, you should consider the possible tax consequences of Fund distributions.

Taxes on Distributions. The Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions of investment income are taxable as ordinary income for federal tax purposes, and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund shares or receive them in cash. To the extent that Fund distributions are attributable to interest on federal obligations, they may be exempt from state and local income taxes. Distributions of short-term capital gains are taxable to you as ordinary income. Any long-term capital gain distributions are taxable as long-term capital gains, no matter how long you have owned your Fund shares.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November or December but paid in January are taxable as if they were paid in December. The Fund will inform shareholders of the character and tax status of all distributions promptly after the close of each calendar year.

Other Information. When you open your account, you should provide your social security or tax identification number on your Account Application. By law, the Fund must withhold a percentage of your taxable distributions and any redemption proceeds if you do not provide your correct taxpayer identification number, or certify that it is correct, or if the IRS instructs the Fund to do so. For payments made during 2003, the withholding rate is 30% and for payments made during 2004, the withholding rate will be 29%. Lower rates are scheduled to apply in certain later years.

Non-U.S. investors may be subject to U.S. withholding and estate tax.

Appendix A
Additional Information on Portfolio Risks, Securities and Techniques

This section provides further information on certain types of securities and investment techniques that may be used by the Fund, including its associated risks. Additional information is provided in the Additional Statement, which is available upon request. Among other things, the Additional Statement describes certain fundamental policies and investment restrictions that cannot be changed without shareholder approval. You should note, however, that the Fund's investment objective and all investment policies not specifically designated as fundamental are non-fundamental and may be changed without shareholder approval. If there is a change in the Fund's investment objective, you should consider whether the Fund remains an appropriate investment in light of your then current financial position and needs. The Fund may purchase other types of securities or instruments similar to those described in this section if otherwise consistent with the Fund's investment objective and policies.

U.S. Treasury Obligations and U.S. Government Securities. U.S. Treasury Obligations include securities issued or guaranteed by the U.S. Treasury (''U.S. Treasury Obligations''). Payment of principal and interest on these obligations is backed by the full faith and credit of the U.S. government. U.S. Treasury Obligations include, among other things, the separately traded principal and interest components of securities guaranteed or issued by the U.S. Treasury if such components are traded independently under the Separate Trading of Registered Interest and Principal of Securities program (''STRIPS'').

U.S. Government Securities are obligations issued or guaranteed by U.S. government agencies, authorities, instrumentalities or sponsored enterprises (''U.S. Government Securities''). Unlike U.S. Treasury Obligations, U.S. Government Securities can be supported by either (a) the full faith and credit of the U.S. Treasury (such as the Government National Mortgage Association (''Ginnie Mae'')); (b) the right of the issuer to borrow from the U.S. Treasury (such as securities of the Student Loan Marketing Association); (c) the discretionary authority of the U.S. government to purchase certain obligations of the issuer; or (d) only the credit of the issuer.

U.S. Government Securities are deemed to include (a) securities for which the payment of principal and interest is backed by an irrevocable letter of credit issued by the U.S. government, its agencies, authorities or instrumentalities; and (b) participations in loans made to foreign governments or their agencies that are

so guaranteed. Certain of these participations may be regarded as illiquid. U.S. Government Securities also include zero coupon bonds.

U.S. Government Securities have historically involved little risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. government will provide financial support to U.S. government agencies, authorities, instrumentalities or sponsored enterprises if it is not obligated to do so by law.

Bank Obligations. Bank obligations include certificates of deposit, commercial paper, unsecured bank promissory notes, bankers' acceptances, time deposits and other debt obligations. The Fund may invest in obligations issued or backed by U.S. banks when a bank has more than $1 billion in total assets at the time of purchase or is a branch or subsidiary of such a bank. In addition, the Fund may invest in U.S. dollar-denominated obligations issued or guaranteed by foreign banks that have more than $1 billion in total assets at the time of purchase, U.S. branches of such foreign banks (Yankee obligations), foreign branches of such foreign banks and foreign branches of U.S. banks having more than $1 billion in total assets at the time of purchase. Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligation or by government regulation.

Because the Fund will invest more than 25% of its total assets in bank obligations (whether foreign or domestic), it may be especially affected by favorable and adverse developments in or related to the banking industry. The activities of U.S. and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of domestic and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the real estate markets. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Commercial Paper. The Fund may invest in commercial paper, including variable amount master demand notes and asset-backed commercial paper. Commercial paper normally represents short-term unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations, finance companies and other issuers. The commercial paper purchased by the Fund consists of direct U.S. dollar-denominated obligations of domestic issuers or foreign issuers. Asset-backed

commercial paper is issued by a special purpose entity that is organized to issue the commercial paper and to purchase trade receivables or other financial assets. The credit quality of asset-backed commercial paper depends primarily on the quality of these assets and the level of any additional credit support.

Short-Term Obligations. The Fund may invest in other short-term obligations, including short-term funding agreements payable in U.S. dollars and issued or guaranteed by U.S. corporations, foreign corporations or other entities. A funding agreement is a contract between an issuer and a purchaser that obligates the issuer to pay a guaranteed rate of interest on a principal sum deposited by the purchaser. Funding agreements will also guarantee a stream of payments over time. A funding agreement has a fixed maturity date and may have either a fixed or variable interest rate that is based on an index and guaranteed for a set time period. Because there is normally no secondary market for these investments, funding agreements purchased by the Fund may be regarded as illiquid.

Repurchase Agreements. The Fund may enter into repurchase agreements with securities dealers and banks. Repurchase agreements are similar to collateralized loans, but are structured as a purchase of securities by the Fund, subject to the seller's agreement to repurchase the securities at a mutually agreed upon date and price. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral at least equal in value or market price to the amount of the seller's repurchase obligation.

If the seller under a repurchase agreement defaults, the Fund could suffer a loss to the extent that the proceeds from the sale of the underlying securities and other collateral held by the Fund are less than the repurchase price and the Fund's cost associated with delay and enforcement of the repurchase agreement. In addition, in the event of bankruptcy or insolvency proceedings concerning the seller, the Fund could suffer additional losses if the collateral held by the Fund is subject to a court ''stay'' that prevents the Fund from promptly selling the collateral. If this occurs, the Fund will bear the risk that the value of the collateral will decline below the repurchase price. Furthermore, the Fund could experience a loss if a court determines that the Fund's interest in the collateral is not enforceable.

In evaluating whether to enter into a repurchase agreement, the Investment Adviser will carefully consider the creditworthiness of the seller. Distributions of the income from repurchase agreements will be taxable to the Fund's shareholders. In addition, the Fund, together with other registered investment companies having advisory agreements with the Investment Adviser or any of its affiliates, may transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements.

Asset-Backed and Receivables-Backed Securities. The Fund may invest in asset-backed and receivables-backed securities whose principal and interest payments are collateralized by pools of assets such as auto loans, credit card receivables, leases, mortgages, installment contracts and personal property. Asset-backed and receivables-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. During periods of declining interest rates, prepayment of loans underlying asset-backed and receivables-backed securities can be expected to accelerate. Accordingly, the Fund's ability to maintain positions in such securities will be affected by reductions in the principal amount of such securities resulting from prepayments, and its ability to reinvest the returns of principal at comparable yields is subject to generally prevailing interest rates at that time. In addition, securities that are backed by credit card, automobile and similar types of receivables generally do not have the benefit of a security interest in collateral that is comparable in quality to mortgage assets. If the issuer of an asset-backed security defaults on its payment obligation, there is the possibility that, in some cases, the Fund will be unable to possess and sell the underlying collateral and that the Fund's recoveries on repossessed collateral may not be available to support payments on these securities. In the event of a default, the Fund may suffer a loss if it cannot sell collateral quickly and receive the amount it is owed.

Foreign Government Obligations and Related Foreign Risks. The Fund may invest in foreign government obligations. Foreign government obligations are U.S. dollar-denominated obligations (limited to commercial paper and other notes) issued or guaranteed by a foreign government or other entity located or organized in a foreign country that maintains a short-term foreign currency rating in the highest short-term ratings category by the requisite number of NRSROs.

Investments by the Fund in foreign securities, whether issued by a foreign government, bank, corporation or other issuer, may present a greater degree of risk than investments in securities of domestic issuers because of less publicly-available financial and other information, less securities regulation, potential imposition of foreign withholding and other taxes, war, expropriation or other adverse governmental actions. Foreign banks and their foreign branches are not regulated by U.S. banking authorities, and generally are not bound by the accounting, auditing and financial reporting standards applicable to U.S. banks. In addition, the legal remedies for investors may be more limited than the remedies available in the United States.

Municipal Obligations. The Fund may invest in municipal obligations. Municipal obligations are issued by or on behalf of states, territories and possessions of the United States and their political subdivisions, agencies, authorities and instrumen-

talities, and the District of Columbia. Municipal obligations in which the Fund may invest include fixed rate notes and similar debt instruments; variable and floating rate demand instruments; commercial paper; municipal bonds; and unrated notes, paper, bonds or other instruments.

Custodial Receipts. The Fund may also invest in custodial receipts representing interests in U.S. Government Securities, municipal obligations or other debt instruments held by a custodian or trustee. Custodial receipts evidence ownership of future interest payments, principal payments or both on notes or bonds issued or guaranteed as to principal or interest by the U.S. government, its agencies, instrumentalities, political subdivisions or authorities, or by a state or local governmental body or authority, or by other types of issuers. For certain securities law purposes, custodial receipts are not considered obligations of the underlying issuers. In addition, if for tax purposes the Fund is not considered to be the owner of the underlying securities held in the custodial account, the Fund may suffer adverse tax consequences. As a holder of custodial receipts, the Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Other Investment Companies. The Fund may invest in securities of other investment companies subject to statutory limitations prescribed by the Act. These limitations include a prohibition on the Fund acquiring more than 3% of the voting shares of any other investment company, and a prohibition on investing more than 5% of the Fund's total assets in securities of any one investment company or more than 10% of its total assets in securities of all investment companies. The Fund will indirectly bear its proportionate share of any management fees and other expenses paid by such other investment companies. Such other investment companies will have investment objectives, policies and restrictions substantially similar to those of the Fund and will be subject to substantially the same risks. Although the Fund does not expect to do so in the foreseeable future, the Fund is authorized to invest substantially all of its assets in a single open-end investment company or series thereof that has substantially the same investment objective, policies and fundamental restrictions as the Fund. Pursuant to an exemptive order obtained from the SEC, other investment companies in which the Fund may invest include money market funds which the Investment Adviser or any of its affiliates serves as investment adviser, administrator or distributor.

Floating and Variable Rate Obligations. The Fund may purchase floating and variable rate obligations. The value of these obligations is generally more stable than that of a fixed rate obligation in response to changes in interest rate levels. Subject to the conditions for using amortized cost valuation under the Act, the Fund may consider the maturity of a variable or floating rate obligation to be shorter than its ultimate stated maturity if the obligation is a U.S. Treasury

Obligation or U.S. Government Security, if the obligation has a remaining maturity of 397 calendar days or less, or if the obligation has a demand feature that permits the Fund to receive payment at any time or at specified intervals not exceeding 397 calendar days. The issuers or financial intermediaries providing demand features may support their ability to purchase the obligations by obtaining credit with liquidity supports. These may include lines of credit, which are conditional commitments to lend, and letters of credit, which will ordinarily be irrevocable, both of which may be issued by domestic banks or foreign banks. The Fund may purchase variable or floating rate obligations from the issuers or may purchase certificates of participation, a type of floating or variable rate obligation, which are interests in a pool of debt obligations held by a bank or other financial institution.

When-Issued Securities and Forward Commitments. The Fund may purchase when-issued securities and make contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time. When-issued securities are securities that have been authorized, but not yet issued. When-issued securities are purchased in order to secure what is considered to be an advantageous price and yield to the Fund at the time of entering into the transaction. A forward commitment involves entering into a contract to purchase or sell securities for a fixed price at a future date beyond the customary settlement period.

The purchase of securities on a when-issued or forward commitment basis involves a risk of loss if the value of the security to be purchased declines before the settlement date. Conversely, the sale of securities on a forward commitment basis involves the risk that the value of the securities sold may increase before the settlement date. Although the Fund will generally purchase securities on a when-issued or forward commitment basis with the intention of acquiring the securities for its portfolio, the Fund may dispose of when-issued securities or forward commitments prior to settlement if the Investment Adviser deems it appropriate.

Illiquid Securities. The Fund may invest up to 10% of its net assets in illiquid securities which cannot be disposed of in seven days in the ordinary course of business at fair value. Illiquid securities include:

- Both domestic and foreign securities that are not readily marketable
- Certain municipal leases and participation interests
- Certain stripped mortgage-backed securities
- Repurchase agreements and time deposits with a notice or demand period of more than seven days
- Certain restricted securities, unless it is determined, based upon a review of the trading markets for a specific restricted security, that such restricted security is liquid because it is so-called ‘‘4(2) commercial paper’’ or is otherwise eligible for resale pursuant to Rule 144A under the Securities Act of 1933.

Investing in restricted securities may decrease the liquidity of the Fund's portfolio.

Borrowings. The Fund may borrow up to 33$^{1}/_{3}$% of its total assets from banks for temporary or emergency purposes. The Fund may not make additional investments if borrowings exceed 5% of its net assets. For more information, see the Additional Statement.

Downgraded Securities. After its purchase, a portfolio security may be assigned a lower rating or cease to be rated. If this occurs, the Fund may continue to hold the security if the Investment Adviser believes it is in the best interest of the Fund and its shareholders.

Appendix B
Financial Highlights

The financial highlights table is intended to help you understand the Fund's financial performance from commencement of operations (May 1, 2001) to December 31, 2002. Certain information relates to a single Fund share. The information has been audited by PricewaterhouseCoopers LLP, whose report, along with the Fund's financial statements, is included in the Fund's annual report (available upon request). The total returns in the table represent the rate that an investor would have earned or lost on an investment in the Fund (assuming reinvestment of all dividends and distributions).

CASH PORTFOLIO

	Net asset value, beginning of period	Net investment income[(a)]	Distributions to shareholders
For the Period Ended December 31,			
2002 - Institutional shares	$1.00	$0.02	$(0.02)
2002 - Preferred shares	1.00	0.02	(0.02)
2002 - Administration shares	1.00	0.01	(0.01)
For the Period Ended December 31,			
2001 - Institutional shares (commenced May 1, 2001)	1.00	0.02	(0.02)
2001 - Preferred shares (commenced May 1, 2001)	1.00	0.02	(0.02)
2001 - Administration shares (commenced May 1, 2001)	1.00	0.02	(0.02)

(a) Calculated based on the average shares outstanding methodology.

(b) Assumes investment at the net asset value at the beginning of the period, reinvestment of all distributions and a complete redemption of the investment at the net asset value at the end of the period. Total returns for periods less than one full year are not annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on fund distributions.

(c) Results for 2001 are annualized.

Net asset value, end of period	Total return[b]	Net assets, end of period (in 000s)	Ratio of net expenses to average net assets[c]	Ratio of net investment income to average net assets[c]	Ratios assuming no expense reductions	
					Ratio of expenses to average net assets[c]	Ratio of net investment loss to average net assets[c]
$1.00	1.59%	$1,034	0.12%	1.58%	13.56%	(11.86)%
1.00	1.49	2	0.22	1.66	13.66	(11.78)
1.00	1.33	1	0.37	1.33	13.81	(12.11)
1.00	2.08	1,017	0.12	3.07	25.49	(22.30)
1.00	2.02	2	0.22	3.18	25.59	(22.19)
1.00	1.92	2	0.37	2.95	25.74	(22.42)
