These projects exclude development projects owned by the Essex Apartment Value Fund, L.P., which are described in the following section.

- The San Marcos (formerly Vista del Mar) The Company has completed construction at its 312-unit apartment community located in Richmond, California. As of June 30, 2003, the property was 72 percent leased and 62 percent occupied. Aggressive leasing initiatives continue with stabilization anticipated in September of this year.
- San Marcos (phase II) During the quarter construction began on an additional 120 units, which are located directly adjacent to the first phase. The cost of the additional units is estimated at \$23.9 million, and stabilization is anticipated in the fourth quarter of 2004.

Funds from Operations

Funds from Operations, as defined by the National Association of Real Estate Investment Trusts ("NAREIT") is generally considered by industry analysts as an appropriate measure of performance of an equity REIT. Generally, FFO adjusts the net income of equity REITS for noncash charges such as depreciation and amortization of rental properties, gains/ losses on sales of real estate and extraordinary items. Management considers FFO to be a useful financial performance measurement of an equity REIT because, together with net income and cash flows, FFO provides investors with an additional basis to evaluate the performance and ability of a REIT to incur and service debt and to fund acquisitions and other capital expenditures. FFO does not represent net income or cash flows from operations as defined by generally accepted accounting principles (GAAP) and is not intended to indicate whether cash flows will be sufficient to fund cash needs. It should not be considered as an alternative to net income as an indicator of the REIT's operating performance or to cash flows as a measure of liquidity. FFO does not measure whether cash flow is sufficient to fund all cash needs including principal amortization, capital improvements and distributions to shareholders. FFO also does not represent cash flows generated from operating, investing or financing activities as defined under GAAP. Further, Funds from Operations as disclosed by other REITs may not be comparable to the Company's calculation of FFO.

^{*} **New Residential Supply**: represents Essex's internal estimate of *actual deliveries* during the year, which are related to but can differ from the 12 Month trailing *Permit Levels* reported on Appendix A.

^{**} **Job Forecast/Performance** refers to the difference between Total Non-Farm Industry Employment (not Seasonally Adjusted) projected through December 2003 over the comparable actual figures for December 2002. The first column represents the *current* Essex forecast of the increase in Total Non-Farm Industry Employment. The second column represents these forecasted new jobs as a percent of the December 2002 base. For each market, a month-to-month growth path from January to December is constructed to track actual growth verses forecast growth. The third column represents the deviation of actual jobs from their forecast level as of June 2003.
