NEWS RELEASE

“ ST. JUDE DISCOVERS NEW HIGH GRADE GOLD DEPOSIT AT SOUTH BENSO ”

Vancouver, March 19, 2003 - St. Jude Resources Ltd. (SJD - TSX Venture) is pleased to announce the discovery of a new high-grade gold zone at the South Benso concession in Ghana, West Africa. The South Benso concession is a joint venture with Fairstar Explorations Inc. The discovery hole at the “G-Zone” intersected **42 meters of 6.9 grams per ton gold**. The G-Zone is located south west of the Subriso West gold deposit and is the first of seven new highly prospective geochemical gold anomalies. These new anomalies were established by re-interpreting the local geology where the presence of quartz-feldspar porphyry intrusions is now known to have a significant impact on gold mineralization in the entire Subriso area. The table below sets out significant new drill results from South Benso.

St. Jude's exploration team has mobilized pitting, trenching and drill crews that are now aggressively examining extensions of the G-Zone and the six other new prospects. Once this phase of drilling is complete, previous results from *Subriso Central* (12 m of 78 g/t), *Subriso West* (36 m of 7.16 g/t), *Subriso East* (10 m of 14.49 g/t), will be incorporated with new results from the G-Zone area into a preliminary gold resource estimate at South Benso.

St. Jude is a leading West Africa explorer with three high quality gold projects in Ghana and Burkina Faso. These projects cover over 300 square kilometers of one of the most prolific gold belts in the world, which is host to several multi-million ounce deposits. The Subriso area at South Benso is less than 30 kilometers from the initial 936,000 ounce gold resource (indicated 562,000 inferred 374,000) already established at Hwini-Butre.
