ANNUAL REPORT 2002

COBRA ELECTRONICS CORP

A
P.E.
12-31-02

AR/S

Corporate Profile

Cobra Electronics Corporation is a leading global manufacturer of mobile communications products for consumers, with leadership positions in each of its current markets. Cobra is a leading provider in the U.S., Canada and Europe of FRS/GMRS (Family Radio Service/General Mobile Radio Service) two-way radios, one of the largest categories of mobile communications. In addition, 2003 marks Cobra's entry into the GPS (Global Positioning System) market with the development of its latest innovative

mobile communications product line. Cobra, ranked among *Forbes'* 200 Best Small Companies for two of the past three years, has a track record of designing and marketing innovative and award-winning products. ■

About the Cover

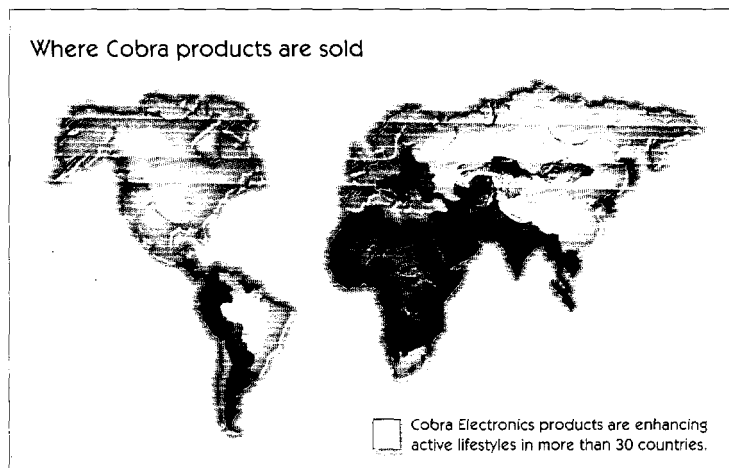

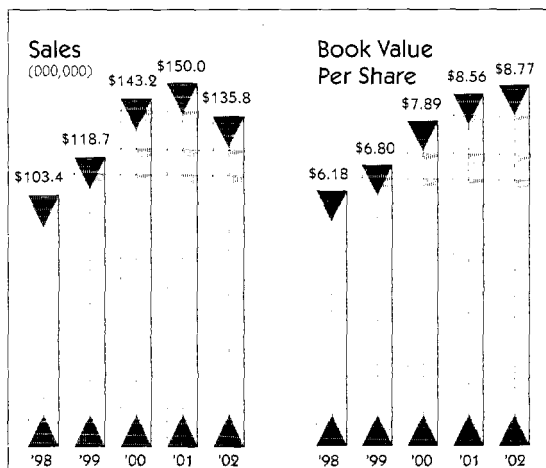

Cobra Electronics is attracting an increasingly broad range of active consumers who use its innovative, user-friendly products to keep connected, improve their productivity and enhance their safety.

Book value per share	8.77	8.56	2.5%
Shares outstanding	6,420	6,303	1.9%

“While 2002 was a year of mixed results, Cobra’s future is unequivocally bright.”

James R. Bazet, President and CEO

A Year of Resilience

It is often said that we cannot control external events; we can only control how we react to those events. That adage was especially apt in 2002, as Cobra Electronics was faced with a weak economy, severe competitive price pressures, the bankruptcy of one of our largest customers, and an unprecedented FCC ruling that threatened to render some of our inventories obsolete. While these events did combine to affect our 2002 results adversely, we refused to be deterred from investing in our future or protecting our brand equity.

It has been more than 50 years since a young entrepreneur named Carl Korn co-founded what would eventually become Cobra Electronics. During the past several years, Jim Bazet and his management team have heightened Cobra’s commitment to cultivating a stimulating and entrepreneurial working environment. The results of that commitment were acknowledged when Carl and Jim were named “2002 Master Entrepreneurs of the Year” for Illinois by Ernst & Young.

Net sales for the year ended December 31, 2002 were \$135.8 million, a decline of 9.5% from the prior year. Net income was \$1.7 million, compared with \$4.7 million in 2001. Our balance sheet remains strong and capable of supporting our many growth initiatives, however, as we ended the year with no interest-bearing debt and more than \$56 million in shareholders’ equity.

The challenges we faced in 2002 gave us cause to examine thoroughly our markets, our organizational structure, and our long-term corporate strategy. The result of this

James R. Bazet, President & CEO
(left), and Carl Korn, Chairman

no-holds-barred self-examination is a continually evolving strategic vision that will ensure our company's long-term growth and prosperity.

A Year of Progress

One of our key continuing strategic objectives is to be number-one or a very strong number-two player in each of our markets. Much progress was made toward that objective in 2002. In addition to increasing our leading market shares in the Radar Detection and Citizens Band Radio markets, we moved significantly closer to the number-one position in the FRS/GMRS radio business. Importantly, we accomplished this in an intensely deflationary environment *not* by recklessly cutting prices, but by adding value for the consumer through the inclusion of special features and accessories with our radios.

Navigating A New And Exciting Course

Our 2003 introduction of three hand-held GPS receivers is a major milestone for our company, as we believe that the market for GPS-related technologies is still in its infancy. Moreover, we believe that Cobra's brand equity and distribution strength will accelerate the market's already-impressive growth. Finally, the high barriers-to-entry associated with this complex technology should make it less susceptible to entry by low-priced, "me-too" competitors typically seen in other consumer electronics categories.

The depth of our commitment to GPS-related technologies was reflected in our recent signing of an exclusive product development contract with Horizon Navigation, one of the world's pioneers in GPS-based navigation technology. We expect this relationship to result in several innovative navigation products, the first of which should start shipping in early 2004.

Reinventing Cobra

The reality of today's increasingly fast-paced business environment dictates that any consumer electronics company must continually reinvent itself if it is to grow consistently and profitably. This requires an unrelenting focus on the consumer, a tight grasp of emerging technologies, and a clear insight into how the organization can consistently outmaneuver its competition. Reinvention involves risk, but staying in place is even riskier. We are confident that the course we are navigating is one that will take Cobra to the greatest heights in its history.

Sincerely,

A handwritten signature in cursive script that reads "Carl Korn".

Carl Korn, Chairman of the Board

A handwritten signature in cursive script that reads "James R. Bazet".

James R. Bazet, President and Chief Executive Officer
March 31, 2003

A Time For Leadership

Despite a fragile economy and numerous other external challenges facing Cobra in 2002, the company remained focused on the success factors that will enhance shareholder value over the long term. Cobra strengthened its leadership position in each of its markets, continued its proud tradition of product innovation, expanded its powerful retail presence, and played an increasingly vital role in its consumers' lifestyles.

The past year saw Cobra build on its clear leadership of the Radar Detection and Citizens Band Radio markets. The company demonstrated a significant competitive edge in its ability to anticipate and respond to the FCC's unprecedented decision to regulate radar detector emissions frequencies. This agility played a critical role in minimizing the impact on the company's sales and margins, particularly in light of the extremely short period the industry was given to make all of its products compliant with the new regulations.

◀ Cobra's two-way radios and GPS receivers are fun and convenient ways for active families to keep connected and stay safe in the great outdoors.

▶ Out of the tens of thousands of new products displayed at the 2003 International Consumer Electronics Show, only 17 received the prestigious *Popular Mechanics* "Editor's Choice Award" — and Cobra's PR 4000 WX was one of them!

▼ Cobra's passion for high performance and extreme user-friendliness makes its two-way radios the preferred choice for both recreational and commercial applications.

Even more impressive was Cobra's dramatic growth in market share in the U.S. FRS/GMRS two-way radio market. Cobra had been the number two player in this market since late 1998. While the company had moved closer to the leading brand in each succeeding year, entering 2002 this gap was still rather sizeable. By year's end, however, Cobra was able to catapult itself within close reach of the number-one position. What makes this feat all the more impressive is that while Cobra's competitors reduced their prices by an unheard-of average of 45 percent in 2002, Cobra reduced its prices by less than half of that rate. Cobra was able to do this because its on-going dialogue with consumers revealed that *good value* — rather than cheap prices — is what consumers are really looking for. And by being the industry's most aggressive marketer of longer-range radios and "value packs" featuring battery chargers and rechargeable batteries, Cobra was able to set a new standard for value while simultaneously pricing its products well above the industry average.

Cobra's U.S. Retail Storefronts

Cobra's decision to stress value over price certainly did not hurt its retail placement. In fact, by the end of 2002, Cobra products were featured in more retail storefronts worldwide than any time in the company's history.

A Deepening Passion For Innovation

For the past several years Cobra has lived by a mantra of "develop or die" regarding new product development. While other companies often scale back their product development commitments during difficult times, the challenges of 2002 only served to intensify Cobra's passion for innovation. The result is a 2003 product line-up incorporating user-friendly features and attractive designs that complement consumer lifestyles better than ever before.

Almost 80 percent of Cobra's 2002 sales came from products that did not exist in 2000, and 2003's sales are anticipated to show a similar pattern. In the Radar Detection category, Cobra will be introducing two stunning models that were awarded the prestigious Design & Engineering Innovations Award at the 2003 International Consumer Electronics Show. These models' breakthrough features include 11 Band™ technology, which detects the latest monitoring system to hit the market, and SmartPower™ technology, which prevents draining the vehicle's battery by shutting the detector off after the vehicle's engine has been turned off.

When Cobra entered the Family Radio Service category in 1997, its sole model had two channels and a two-mile range. Cobra's new line-up for 2003 comprises 15 models, all of which have 22 channels with 38 privacy codes per channel and deliver a range of anywhere from two to seven miles. The seven-mile model,

▲ The industry's first 11 Band™ radar detectors were the recipients of two Design & Engineering Innovation Awards at the 2003 International Consumer Electronics Show.

◀ Cobra's cool blue Street Xtreme™ two-way radio gives "Generation Y" drivers a cool way to keep in touch while cruising, without the hassle or expense of monthly service fees.

▶ "Type A" consumers will really appreciate Cobra's unique ASAP™ technology, which locates satellite positions — and gets users up-and-running — in half the time of other brands.

ASAP™
technology

the PR 4000 WX, also incorporates a ten-channel NOAA All Hazards Alert radio, a digital compass, and over a dozen other special features. Out of thousands of new products introduced at the 2003 International Consumer Electronics Show, this model was one of only 17 that received the prestigious *Popular Mechanics* "Editor's Choice Award."

Innovation is also alive and well in Cobra's Citizens Band Radio business. Capitalizing on the booming popularity of neon and illumination in automotive accessories among 18-to-24 year-old males, Cobra will introduce its Street Xtreme™ line of Citizens Band Radios. Each of these radios illuminates with a cool blue color whenever the power is on, while the external antenna also radiates a cool blue color whenever the user is transmitting. These contemporary designs, coupled with the lack of monthly service fees, could make these radios a popular alternative to mobile phones for money-conscious younger drivers.

Looking Beyond The Horizon

Cobra is continually searching for new opportunities to apply its core competencies in order to reach new consumers and grow sales and earnings. One such opportunity is the rapidly growing market for location-based products and services incorporating Global Positioning System (GPS) technology. The Cobra brand is such a natural fit with GPS technology that several retailers have actually asked Cobra to enter this market in recent years. One reason is that Cobra has earned a widespread reputation as a trusted manufacturer of innovative, user-friendly electronics products that make people's lives more productive, convenient and secure. In contrast, most current GPS manufacturers enjoy less retail exposure as well as less brand awareness and brand equity. And while Cobra is new to the GPS market, its relationship with Rand McNally—the world's premier map provider—brings Cobra instant recognition and credibility in this new arena.

▼ Cobra's exclusive relationship with world-renowned mapping expert Rand McNally gives the company instant credibility in the GPS market.

Cobra is committed to bringing the same degree of innovation and energy to the GPS market that it has brought to each of its other markets. While the hand-held GPS receiver market has grown impressively over the past several years by targeting serious outdoors enthusiasts, hobbyists and “gadget guys”, Cobra’s market research indicates that current GPS products are too complicated for most mainstream consumers to operate. By introducing the market’s first truly user-friendly line, Cobra intends to not only grab a significant slice of the GPS market but also help accelerate the market’s growth.

One of the biggest limitations of current GPS receivers is the time it takes to “acquire”, or locate, three satellites’ positions necessary to determine the user’s exact location.

▲ Cobra’s high-end GPS 1000 receiver is the ultimate complement to any outdoor enthusiast’s lifestyle — and an easy way to return to that hot fishing spot!

► Cobra’s GMRS radios are already finding a home in the marine market, and new VHF radios and power inverters specially designed for marine users are targeted for the second half of 2003.

By utilizing 18 GPS channels instead of the standard 12 channels used by current competitors, Cobra is able to get users up-and-running in half the time. This exclusive A.S.A.P.™ (Accelerated Satellite Acquisition Protocol™) technology, coupled with Cobra's exclusive use of Rand McNally mapping software and a highly intuitive user interface, will enable Cobra to raise the bar for user-friendliness dramatically.

Cobra's new line of hand-held GPS receivers is just the first step in the company's foray into the world of GPS and navigation. In January 2003, Cobra announced an exclusive product development and licensing agreement with Horizon Navigation, one the world's pioneers in GPS and navigation technology. A division of Visteon Corporation

until it was spun off and purchased by its management in March of 2002, Horizon was named "#1 Navigation Systems Supplier" by *Automotive Industries* magazine in 2001. Cobra and Horizon are currently co-developing a line of breakthrough vehicle navigation models for introduction in early 2004. Beyond this, Cobra is talking with Horizon and other technology vendors about several other new product and new business opportunities that incorporate GPS technology.

GPS technology holds the potential to enhance the mass market consumer's productivity, safety and security in an untold number of ways. Cobra fully intends to be one of the companies leading the way in applying this exciting technology to enrich people's everyday lives.

▷ Consumers have more reasons to use Cobra products than ever before – and the company's efforts to reach out to new users are just beginning.

A Changing Consumer . . . A Changing Company

Over the past several years, Cobra has dramatically broadened its consumer base. Cobra products now effectively target young professionals and professional drivers, “soccer moms” and “gadget guys”, cyclists and business people, hikers and “off-roaders”, skiers and boaters, kids and grandparents, and more. Cobra complements *all* of these consumers’ lifestyles by being available *wherever* they shop—electronics stores, office supply stores, mass merchandisers, department stores, sporting goods stores, boating marinas, automotive supply stores, membership clubs and virtually anywhere else consumer electronics are sold.

This diverse group of consumers is more active—and often more pressured—than ever before, and they know they can count on Cobra to continually bring out new models that make their lives more productive, safer and less stressful. While Cobra makes a broad range of products, the one trait they all share is unsurpassed user-friendliness.

In addition to meeting the ever-changing needs of existing consumers, Cobra is actively recruiting new consumers to the fold. In 2002 the company began introducing its two-way radios to serious boating and outdoors enthusiasts by hiring the country’s premier sales representative firm serving the marine and sporting goods channels. In 2003, Cobra is expanding its presence in these channels with its hand-held GPS receivers, and with new lines of marine VHF radios and marine power inverters. The company will also be targeting 18-to-24 year-old members of “Generation Y” with its new cool blue illuminated Street Xtreme™ radios.

▷ Cobra's microTALK® two-way radios now offer up to 7 miles of range, making it easier for families and friends to keep connected while on the go.

Reinventing Cobra

While Cobra has come a long way in the past several years, Cobra's management is acutely aware that the objectives, strategies and tactics that brought past success will not necessarily work in the future. Cobra must be in a constant state of reinvention, for that is the only way to keep up with constantly evolving markets. Equally important, it is the only way Cobra can position itself to successfully identify and enter dynamic new markets.

Looking toward the next year or two, a Cobra is emerging that serves three broad markets: Personal Communications, Navigation and Marine. The Personal Communications market is currently targeted by Cobra's microTALK® line of FRS/GMRS radios and its line of Citizens Band Radios. The Navigation market is targeted by the company's hand-held GPS line being introduced in 2003 as well as

▼ Exceptional ergonomics and unsurpassed ease-of-use make Cobra radios accessible to consumers of all ages.

a mobile GPS line planned for early 2004. Cobra's radar detectors, with features like digital compasses to keep drivers on course and its exclusive Strobe Alert™ technology to keep drivers out of harm's way, also target this market. Finally, the Marine market will be targeted by the company's new marine VHF radio and marine inverter lines being introduced in the second half of 2003. Beyond this, the company is continually on the lookout for emerging technologies that create opportunities for the company to enter and lead new markets.

For the past few years, advertising, packaging and other forms of communication have told people, "Nothing comes close to a Cobra®." By steadfastly and passionately pursuing a policy of continual reinvention, Cobra management is committed to ensuring that the Cobra of tomorrow will be far removed from, and far ahead of, the Cobra of today. ■

"Nothing comes close to a Cobra®."

Note: Under the terms of its credit agreement, the Company may not pay cash dividends.

The financial statements and selected financial data included herein have not been audited. The information was derived from the full consolidated financial statements for the year ended December 31, 2002, which were presented in accordance with accounting principles generally accepted in the United States of America and which were audited by Deloitte & Touche LLP in accordance with auditing standards generally accepted in the United States of America. Copies of the full consolidated financial statements and of the independent auditors' report that expressed an unqualified opinion (dated February 18, 2003) are included in the Company's Proxy Statement and in its Annual Report on Form 10-K filed with the U.S. Securities and Exchange Commission, both of which are available on request.

Corporate Information

Transfer Agent and Registrar

Shareholder address changes should be sent directly to:

American Stock Transfer & Trust Co.,
59 Maiden Lane, New York, NY 10007,
(718) 921-8206.
