THOMSON
FINANCIAL

2004 Annual Report

April 29, 2005

To The Limited Partners in Cronos Global Income Fund XV, L.P.:

The container leasing industry enjoyed another strong year during 2004 as improving economic conditions drove up cargo volumes worldwide and resulted in robust growth in containerized trade volumes. The continued shift in global manufacturing and production to China was central to this global growth. China, with its seemingly endless hunger for raw materials, was the catalyst to the surge in trade volumes and the resulting high demand for existing and new marine cargo containers during the year.

The increase in demand for leased containers exceeded our expectations and propelled the Partnership's fleet utilization to near record levels. Utilization of the Partnership's dry cargo container fleet was 93% at December 31, 2004 and averaged 90% during 2004, compared to 82% during 2003. Utilization of the Partnership's refrigerated container fleet was 75% at December 31, 2004 and averaged 83% during the year, compared with 92% during the previous year. Industry analysts expect that the factors supporting the growth in cargo volumes will continue throughout 2005, therefore prompting our customers, the shipping lines, to increase their requirements for leased containers.

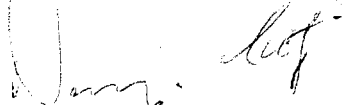

The Partnership's off-hire inventories of dry cargo containers declined as shipping lines employed more leased containers to meet customer demand for moving cargo. This reduction, while contributing to higher fleet utilization, also resulted in substantial decreases in storage costs and in expenses related to repositioning containers. Declining inventories also contributed to an increase in the proceeds realized on the sale of used containers as fewer containers were available to meet the demand of buyers of existing containers.

At December 31, 2004, the Partnership's fleet consisted of 22,097 twenty-foot, 8,042 forty-foot, and 2,031 forty-foot high-cube dry cargo containers, as well as 442 twenty-foot and 93 forty-foot high-cube refrigerated containers. The Partnership is now in its 10th year of operations and will be entering its liquidation phase during which time we will actively dispose of the container fleet in accordance with one of the Partnership's original business objectives – to realize the residual value of the containers at the end of their economic useful lives. In this phase of operations, we will look to dispose of the containers as opportunities arise and when economically advantageous to the Partnership. In doing so, we will take into account the age, condition and location of the container, as well as its suitability for continued leasing and the prevailing market price for used equipment. However, in the interim and given the current strong demand for existing equipment, we will continue to lease the containers in order to capitalize on favorable market conditions.

Going forward, we are optimistic that the container leasing market will continue to grow in the near term, bolstered by the expansion and growth potential in global trade. Against this backdrop, and barring unexpected surprises, we expect to deliver continued good performance in 2005.

In closing, I thank the Limited Partners for their continued support of the General Partner's efforts this past year.

Sincerely,

Dennis J. Tietz
President
Cronos Capital Corp.
The General Partner

CRONOS GLOBAL INCOME FUND XV, L.P.

PART I

Item 1. Business

(a) General Development of Business

The Registrant is a limited partnership organized under the laws of the State of California on August 26, 1993, for the purpose of owning and leasing marine cargo containers, special purpose containers and container-related equipment. The Registrant was initially capitalized with \$100 and commenced offering its limited partnership interests to the public subsequent to December 17, 1993, pursuant to its Registration Statement on Form S-1 (File No. 33-69356). On October 12, 1994, the Registrant filed a Post-Effective Amendment to its Registration Statement on Form S-1. The offering terminated on December 15, 1995.

The Registrant raised \$143,031,380 in subscription proceeds. The following table sets forth the use of said subscription proceeds:

	<u>Amount</u>	<u>Percentage of Gross Proceeds</u>
Gross Subscription Proceeds	\$ 143,031,380	100.0%
Public Offering Expenses:		
Underwriting Commissions	\$ 14,303,138	10.0%
Offering and Organization Expenses	\$ <u>2,977,551</u>	<u>2.1%</u>
Total Public Offering Expenses	\$ <u>17,280,689</u>	<u>12.1%</u>
Net Proceeds	\$ 125,750,691	87.9%
Acquisition Fees	\$ 5,918,588	4.1%
Working Capital Reserve	\$ <u>1,460,334</u>	<u>1.0%</u>
Gross Proceeds Invested in Equipment	\$ <u>118,371,769</u>	<u>82.8%</u>

The general partner of the Registrant is Cronos Capital Corp. ("CCC"), a wholly-owned subsidiary of Cronos Holdings/Investments (U.S.), Inc., a Delaware corporation. These and other affiliated companies are wholly-owned by The Cronos Group, a holding company registered in Luxembourg (the "Parent Company") and are collectively referred to as the "Group." The activities of the container division of the Group are managed through the Group's subsidiary in the United Kingdom, Cronos Containers Limited (the "Leasing Company"). The Leasing Company manages the leasing operations of all equipment owned by the Group on its own behalf or on behalf of other third-party container owners, including all programs organized by CCC.

On December 1, 1993, the Leasing Company entered into a Leasing Agent Agreement with the Registrant assuming the responsibility for all container leasing activities.

For a discussion of recent developments in the Registrant's business, see Item 7, "Management's Discussion and Analysis of Financial Condition and Result of Operations."

For information concerning the containers acquired by the Registrant, see Item 2, "Properties."

(b) Financial Information About Segments

An operating segment is a component of an enterprise that engages in business activities from which it may earn revenues and incur expenses, whose operating results are regularly reviewed by the enterprise's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance, and about which separate financial information is available. The Leasing Company's management operates the Registrant's container fleet as a homogenous unit and has determined that as such it has a single reportable operating segment.

The Registrant derives revenues from dry cargo containers, refrigerated containers and tank containers. As of December 31, 2004, the Registrant operated 22,097 twenty-foot, 8,042 forty-foot and 2,031 forty-foot high-cube marine dry cargo containers, as well as 442 twenty-foot and 93 forty-foot high-cube refrigerated cargo containers, and 215 twenty-four thousand-liter tank containers. A summary of gross lease revenue earned by the Leasing Company, on behalf of the Registrant, by product, for the years ended December 31, 2004, 2003 and 2002 follows:

	<u>2004</u>	<u>2003</u>	<u>2002</u>
Dry cargo containers	\$ 11,074,600	\$ 10,416,781	\$ 10,521,020
Refrigerated containers	1,289,032	1,312,449	1,343,686
Tank containers	<u>628,824</u>	<u>626,863</u>	<u>599,789</u>
Total	\$ <u>12,992,456</u>	\$ <u>12,356,093</u>	\$ <u>12,464,495</u>

Due to the Registrant's lack of information regarding the physical location of its fleet of containers when on lease in the global shipping trade, it is impracticable to provide the geographic area information. Any attempt to separate "foreign" operations from "domestic" operations would be dependent on definitions and assumptions that are so subjective as to render the information meaningless and potentially misleading. Accordingly, the Registrant believes that it does not possess discernible geographic reporting segments as defined in SFAS 131 ("SFAS 131"), "Disclosures about Segments of an Enterprise and Related Information."

No single sub-lessee of the Leasing Company contributed more than 10% of the Leasing Company's rental revenue earned on behalf of the Registrant during 2004, 2003 and 2002.

(c) Narrative Description of Business

(c)(1)(i) A marine cargo container is a reusable metal container designed for the efficient carriage of cargo with a minimum of exposure to loss from damage or theft. Containers are manufactured to conform to worldwide standards of container dimensions and containership fittings adopted by the International Standards Organization ("ISO") in 1968. The standard dry marine cargo container is either 20' long x 8' wide x 8'6" high (one twenty-foot equivalent unit ("TEU"), the standard unit of physical measurement in the container industry) or 40' long x 8' wide x 8'6" high (two TEU). Standardization of the construction, maintenance and handling of containers allows containers to be picked up, dropped off, stored and repaired efficiently throughout the world. This standardization is the foundation on which the container industry has developed.

Standard dry cargo containers are rectangular boxes constructed to carry a wide variety of cargoes ranging from heavy industrial raw materials to light-weight finished goods. Specialized containers such as refrigerated and tank containers are utilized for the transport of temperature-sensitive goods and for the carriage of liquid cargo. Cellular palletwide containers ("CPCs") provide shipping lines with a container with extra width for the carriage of unitized or palletized cargoes.

One of the primary benefits of containerization has been the ability of the shipping industry to effectively lower freight rates due to the efficiencies created by standardized intermodal containers. Containers can be handled much more efficiently than loose cargo and are typically shipped via several modes of transportation, including ship, truck and rail. Containers require loading and unloading only once and remain sealed until arrival at the final destination, significantly reducing transport time, labor and handling costs and losses due to damage and theft. Efficient movement of containerized cargo between ship and shore reduces the amount of time that a ship must spend in port.

The logistical advantages and reduced freight rates brought about by containerization have been major catalysts for world trade growth since the late 1960's, resulting in an increased demand for containers. The world's container fleet has grown from an estimated 270,000 TEU in 1969 to approximately 17 million TEU by the end of 2004.

The container leasing business is cyclical, and depends largely upon the rate of growth in the volume of world trade.

Benefits of Leasing

The container fleets of leasing companies represent approximately 46% of the world's container fleet with the balance owned predominantly by shipping lines. Shipping lines, which traditionally operate on tight profit margins, often supplement their owned fleet of containers by leasing a portion of their equipment from container leasing companies and, in doing so, achieve the following financial and operational benefits:

- Leasing allows the shipping lines to utilize the equipment they need without having to make large capital expenditures;
- Leasing offers a shipping line an alternative source of financing in a traditionally capital-intensive industry;
- Leasing enables shipping lines to expand their trade routes and market shares at a relatively low cost without making a permanent commitment to support their new structure;
- Leasing allows shipping lines to respond to changing seasonal and trade route demands, thereby optimizing their capital investment and minimizing storage costs;
- Leasing provides shipping lines with the flexibility to respond to rapidly changing market opportunities as they arise without relying exclusively on their own containers;
- Leasing allows shipping lines to benefit from the relationship between container manufacturers and leasing companies.

Types of Leases

On behalf of the Registrant, the Leasing Company leases the Registrant's containers primarily to shipping lines operating in major trade routes (see Item 1(d)). Most if not all of the Registrant's marine dry cargo containers are leased pursuant to operating leases, whereby the containers are leased to the ocean carrier on a daily basis for any desired length of time, with the flexibility of picking up and dropping off containers at various agreed upon locations around the world. Some of the Registrant's containers may be leased pursuant to term leases, which may have durations of one to five years. Specialized containers are generally leased on longer-term leases because the higher cost, value and complexity of this equipment makes it more expensive to redeliver and lease out.

- *Master leases.* Master leases are leases under which a customer may lease a certain number of containers, as needed, under a general agreement between the lessor and the lessee. Such leases provide customers with greater flexibility by allowing customers to pick up and drop off containers where and when needed, subject to restrictions and availability, on pre-agreed terms. Master leases also define the number of containers that may be returned within each calendar month, the return locations and applicable drop-off charges. Due to the increased flexibility they offer, master leases usually command higher per-diem rates and generate more ancillary revenue (including pick-up, drop-off, handling and off-hire fees) than term leases. Ocean carriers generally use master leases to manage trade imbalances (where more containerized cargo moves in one direction than another) by picking up a container in one port and dropping it off at another location after one or more legs of a voyage. The commercial terms of master leases are usually negotiated or renewed annually.
- *Term leases.* Term leases are for a fixed period of time, typically varying from three to five years. Term lease agreements may contain early termination penalties that apply in the event of early redelivery. In most cases, however, equipment cannot be returned prior to the expiration of the lease. Term leases provide greater revenue stability to the lessor, but at lower lease rates than master leases. Ocean carriers use term leases to lower their operating costs when they have a need for identified containers for a specified term. They differ from master leases in that they define the number of containers to be leased and the lease term.

The percentage of equipment under term, master and other lease types varies widely among leasing companies, depending upon each company's leasing strategy regarding profit margins, operating costs and cash flows.

Lease rates depend on several factors including a customer's financial strength, type of lease, length of term, type and age of the equipment, equipment replacement costs, interest rates, maintenance provided, and market conditions.

The terms and conditions of the Leasing Company's leases provide that customers are responsible for paying all taxes and service charges arising from container use, maintaining the containers in good and safe operating condition while on lease and paying for repairs, excluding ordinary wear and tear, upon redelivery. Some leases provide for a "damage protection plan" whereby lessees, for an additional payment (which may be in the form of a higher per-diem rate), are relieved of the responsibility of paying some of the repair costs upon redelivery of the containers. The Leasing Company provides this service to selected customers. Repairs provided under such plans are carried out by the same depots, under the same procedures, as are repairs to containers not covered by such plans. Customers also are required to insure leased containers against physical damage and loss, and against third party liability for loss, damage, bodily injury or death.

Customers

The Registrant does not believe that its ongoing business is dependent upon a single customer, although the loss of one or more of its largest customers could have an adverse effect upon its business. None of those customers account for more than 10% of the Leasing Company's rental revenue earned on behalf of the Registrant. Substantially all of the customers of the Leasing Company are billed and pay in United States dollars.

The Leasing Company sets maximum credit limits for all of the Registrant's customers, limiting the number of containers leased to each according to established credit criteria. The Leasing Company continually tracks its credit exposure to each customer. The Leasing Company's credit committee meets quarterly to analyze the performance of the Registrant's customers and to recommend actions to be taken in order to minimize credit risks. The Leasing Company uses specialist third party credit information services and reports prepared by local staff to assess credit quality.

The Registrant may be subject to unexpected loss in rental revenue from sub-lessees of its containers that default under their container lease agreements with the Leasing Company. The Registrant and Leasing Company maintain insurance against loss or damage to the containers, loss of lease revenue in certain cases and costs of container recovery and repair in the event that a customer declares bankruptcy.

Fleet Profile

The Registrant acquired high-quality dry cargo containers manufactured to specifications that exceed ISO standards (the "ISO") and are designed to minimize repair and operating costs.

Dry cargo containers are the most commonly used type of container in the shipping industry. The Registrant's dry cargo container fleet is constructed of all Corten® steel (i.e., Corten® roofs, walls, doors and undercarriage), which is a high-tensile steel yielding greater damage and corrosion resistance than mild steel.

Refrigerated containers are used to transport temperature-sensitive products, such as meat, fruit, vegetables and photographic film. All of the Registrant's refrigerated containers have high-grade stainless steel interiors. The majority of the Registrant's 20-foot refrigerated containers have high-grade stainless steel outer walls, while most of the Registrant's 40-foot refrigerated containers are steel framed with aluminum outer walls to reduce weight. As with the dry cargo containers, all refrigerated containers are designed to minimize repair and maintenance and maximize damage resistance.

The Registrant's tank container fleet is constructed and maintained in accordance with international codes for the worldwide transport and storage of bulk liquids on both land and sea. These codes include the ISO, the International Maritime Organization ("IMO") standards and recommendations and the American Society of Mechanical Engineers (the "ASME") VIII Pressure Vessel Design Code. The Registrant's tank fleet may carry highly flammable materials, corrosives, toxics and oxidizing substances, but are also capable of carrying non-hazardous materials and foodstuffs. They have a capacity of 21,000-24,000 liters and are generally insulated and equipped with steam or electrical heating.

The Registrant purchased its dry cargo containers from manufacturers in China, South Korea, Taiwan, Indonesia, India, Turkey, Italy, Hong Kong and the United Kingdom. The Registrant's refrigerated containers were purchased mainly from Korean manufacturers. The majority of its refrigeration units were purchased from Carrier Transicold, the primary container refrigeration unit supplier in the United States. The Registrant's tank containers were purchased mainly from United Kingdom manufacturers.

As of December 31, 2004, the Registrant owned 22,097 twenty-foot, 8,042 forty-foot and 2,031 forty-foot high-cube marine dry cargo containers, as well as 442 twenty-foot and 93 forty-foot high-cube refrigerated cargo containers, and 215 twenty-four thousand-liter tanks. The following table sets forth the number of containers on lease, by container type and lease type as of December 31, 2004:

	Dry Cargo Containers			Refrigerated Containers		Tank Containers
	20-Foot	40-Foot	40-Foot High-Cube	20-Foot	40-Foot High-Cube	24,000-Liter
Containers on lease:						
Master lease	14,060	4,262	1,512	284	25	127
Term lease						
Short term ¹	5,665	2,323	262	62	5	31
Long term ²	<u>1,489</u>	<u>362</u>	<u>166</u>	<u>32</u>	<u>24</u>	<u>33</u>
Subtotal	21,214	6,947	1,940	378	54	191
Containers off lease	<u>883</u>	<u>1,095</u>	<u>91</u>	<u>64</u>	<u>39</u>	<u>24</u>
Total container fleet	<u>22,097</u>	<u>8,042</u>	<u>2,031</u>	<u>442</u>	<u>93</u>	<u>215</u>

1. Short term leases represent term leases that are either scheduled for renegotiation or that may expire in 2005.

2. Long term leases represent term leases, the majority of which will expire between 2005 and 2009.

The Leasing Company makes payments to the Registrant based upon rentals collected from customers after deducting certain operating expenses associated with the containers, such as the base management fee payable to the Leasing Company, certain expense reimbursements payable to CCC and the Leasing Company, the costs of maintenance and repairs not performed by lessees, independent agent fees and expenses, depot expenses for handling, inspection and storage, and additional insurance.

Repair and Maintenance

All containers are inspected and repaired when redelivered by customers, who are obligated to pay for all damage repair, excluding wear and tear, according to standardized industry guidelines. Some customers are relieved of the responsibility of paying some repair costs upon redelivery of containers, as described under "Description of Business – Lease Profile." Depots in major port areas perform repair and maintenance that is verified by either independent surveyors or the Leasing Company's technical and operations staff.

Before any repair or refurbishment is authorized on older containers in the Registrant's fleet, the Leasing Company's technical and operations staff reviews the age, condition and type of container, and its suitability for continued leasing. The Leasing Company compares the cost of such repair or refurbishment with the prevailing market resale price that might be obtained for that container and makes the decision whether to repair or sell the container accordingly. The Leasing Company is authorized to make this decision on behalf of the Registrant and makes this decision by applying the same standards to the Registrant's containers as to its own containers.

Disposition of Used Containers

The Leasing Company estimates that the period for which a container may be used by the Registrant as a leased marine cargo container ranges from 12 to 15 years. Tank containers may generally be used for 12 to 18 years. On behalf of the Registrant, the Leasing Company disposes of used containers in a worldwide market in which buyers include wholesalers, mini-storage operations, construction companies and others. The market for used containers generally depends on new container prices, the quantity of containers targeted for disposal and the overall lease market for containers at a particular location. As the Registrant's fleet ages, a larger proportion of its revenue and cash flow may be derived from selling its containers.

Operations

The Registrant's container sales and marketing operations are conducted through the Leasing Company in the United Kingdom, with support provided by area offices and dedicated agents located in San Francisco; New Jersey; Antwerp; Genoa; Gothenburg; Hamburg; Singapore; Hong Kong; Sydney; Tokyo; Taipei; Seoul; Rio de Janeiro; Shanghai and Chennai.

The Leasing Company also maintains agency relationships with approximately 14 independent agents around the world, which are generally paid a commission based upon the amount of revenues generated in the region or the number of containers that are leased from their area. The agents are located in jurisdictions where the volume of the Leasing Company's business necessitates a presence in the area but is not sufficient to justify a fully-functioning Leasing Company office or dedicated agent. Agents provide marketing support to the area offices covering the region, together with limited operational support.

In addition, the Leasing Company relies on the services of approximately 350 independently-owned and operated depots around the world to inspect, repair, maintain and store containers while off-hire. The Leasing Company's area offices authorize all container movements into and out of the depot and supervise all repairs and maintenance performed by the depot. The Leasing Company's technical staff sets the standards for repair of its owned and managed fleet throughout the world and monitors the quality of depot repair work. The depots provide a link to the Leasing Company's operations, as the redelivery of a container into a depot is the point at which the container is off-hired from one customer and repaired in preparation for re-leasing to the next customer.

The Leasing Company's global network is integrated with its computer system and provides 24-hour communication between offices, agents and depots. The system allows the Leasing Company to manage and control the Registrant's fleet on a global basis, providing it with the responsiveness and flexibility necessary to service the leasing market effectively. This system is an integral part of the Leasing Company's service, as it processes information received from the various offices, generates billings to lessees and produces a wide range of reports on all aspects of the Leasing Company's leasing activities. The system records the life history of each container, including the length of time on and off-hire and repair costs, as well as port activity trends, leasing activity and equipment data per customer. The operations and marketing data is fully interfaced with the finance and accounting system to provide revenue, cost and asset information to management and staff around the world.

In recent years, the Leasing Company and other lessors have developed certain internet-based applications. For the Leasing Company, these applications allow customers access to make on-line product inquiries. The Leasing Company is continuing to develop its internet-based business and will introduce other internet options as soon as suitable applications are identified.

Insurance

The Leasing Company's lease agreements typically require lessees to obtain insurance to cover all risks of physical damage and loss of the equipment under lease, as well as public liability and property damage insurance. However, the precise nature and amount of the insurance carried by each lessee may vary. In addition, the Registrant has purchased secondary insurance effective in the event that a lessee fails to have adequate primary coverage. This insurance covers liability arising out of bodily injury and/or property damage as a result of the ownership and operation of the containers, as well as insurance against loss or damage to the containers, loss of lease revenue in certain cases and cost of container recovery and repair in the event that a customer goes into bankruptcy. The Registrant believes that the nature and the amounts of its insurance are customary in the container leasing industry and subject to standard industry deductions and exclusions.

(c)(1)(ii) Inapplicable.

(c)(1)(iii) Inapplicable.

(c)(1)(iv) Inapplicable.

(c)(1)(v) The Registrant's containers are leased globally; therefore, seasonal fluctuations are minimal. Other economic and business factors to which the transportation industry in general and the container leasing industry in particular are subject, include fluctuations in general business conditions and fluctuations in supply and demand for

equipment resulting from, among other things, obsolescence, changes in the methods or economics of a particular mode of transportation or changes in governmental regulations or safety standards.

(c)(1)(vi) The Registrant established an initial working capital reserve of approximately 1% of subscription proceeds raised. In addition, the Registrant may reserve additional amounts from anticipated cash distributions to the partners to meet working capital requirements.

Amounts due under master leases are calculated at the end of each month and billed approximately six to eight days thereafter. Amounts due under short-term and long-term leases are set forth in the respective lease agreements and are generally payable monthly. However, payment is normally received within 45-100 days of billing. Past due penalties are not customarily collected from lessees and, accordingly, are not generally levied by the Leasing Company against lessees of the Registrant's containers.

(c)(1)(vii) For the year ended December 31, 2004, no single sub-lessee of the Leasing Company accounted for more than 10% of the Leasing Company's rental income earned on behalf of the Registrant. The Registrant does not believe that its ongoing business is dependent upon a single customer, although the loss of one or more of its largest customers could have an adverse effect upon its business.

(c)(1)(viii) Inapplicable.

(c)(1)(ix) Inapplicable.

(c)(1)(x) Competition among container leasing companies is based upon several factors, including the location and availability of inventory, lease rates, the type, quality and condition of the containers, the quality and flexibility of the service offered and the professional relationship between the customer and the lessor. Other factors include the speed with which a leasing company can prepare its containers for lease and the ease with which a lessee believes it can do business with a lessor or its local area office. Not all container leasing companies compete in the same market, as some supply only dry cargo containers and not specialized containers. In addition to dry cargo containers, refrigerated containers and tanks, the Leasing Company supplies a wide range of dry freight special containers.

The Leasing Company, on behalf of the Registrant, competes with various container leasing companies in the markets in which it conducts business. The container leasing companies are essentially comprised of three broad groups. The first group includes five leasing companies that control almost 65% of the total leased fleet. The second group, which includes the Leasing Company, controls approximately 24% of the total leased fleet. The third group, controlling the remaining 11%, comprises the smaller, more specialized fleet operators. Ocean carriers have a tendency to support a number of lessors simultaneously in order to maximize competition and increase the number of available locations for redelivery of containers. Economies of scale, worldwide operations, diversity, size of fleet and financial strength are increasingly important to the successful operation of a container leasing business. Additionally, as containerization continues to grow, and as regions such as China, South America and the Indian sub-continent generate an increasing volume of containerized cargo, customers may demand more flexibility from leasing companies particularly regarding the structure of leases, per-diem rates, pick-up and drop-off locations, and the availability of containers.

(c)(1)(xi) Inapplicable.

(c)(1)(xii) Environmental Matters

Countries that are signatories to the Montreal Protocol on the environment agreed in November 1992 to restrict the use of environmentally-destructive refrigerants, banning the production (but not use) of refrigerant gases that are chlorofluorocarbon compounds ("CFCs") beginning in January 1996. Since then, the environmental impact of CFCs has become increasingly prominent. On January 1, 2002, it became illegal for environmentally-destructive refrigerants to be handled, other than for disposal, in most member countries of the European Union. A portion of the Registrant's equipment portfolio consists of special purpose containers, primarily refrigerated containers. All of the Registrant's refrigerated containers use non-CFC refrigerant gas in the operation and insulation of the containers. The refrigerant used in the Registrant's refrigerated containers could also become subject to similar governmental regulations.

The Leasing Company has determined that a retrofit of any containers owned by the Registrant is not necessary. In the unlikely event that retrofitting expenses should be required, the Registrant believes they would not be material to its results of operations.

(c)(1)(xiii) The Registrant, as a limited partnership, is managed by CCC, the general partner, and accordingly does not itself have any employees. At February 28, 2005, CCC had 13 employees, consisting of 3 officers, 6 other managers and 4 clerical and staff personnel. The Leasing Company had 31 employees, consisting of 3 officers, 10 other managers, and 18 clerical and staff personnel.

(d) Financial Information About Geographic Areas

The Registrant's business is not divided between foreign or domestic operations. The Registrant's business is the leasing of containers worldwide to ocean carriers. To this extent, the Registrant's operations are subject to the fluctuations of world economic and political conditions. Such factors may affect the pattern and levels of world trade. The Registrant believes that the profitability of, and risks associated with, leases to foreign customers is generally the same as those of leases to domestic customers. The Leasing Company's leases generally require all payments to be made in United States currency.

Lease revenue is deemed to be earned based on the physical location of the containers while on lease. Almost all of the Registrant's lease revenue is earned from containers leased world wide to ocean carriers. Due to the lack of information regarding the physical location of the Registrant's fleet when on lease in the global shipping trade, the Registrant believes that it does not possess discernible geographic reporting segments.

Item 2. Properties

As of December 31, 2004, the Registrant owned 22,097 twenty-foot, 8,042 forty-foot and 2,031 forty-foot high-cube marine dry cargo containers, as well as 442 twenty-foot and 93 forty-foot high-cube refrigerated cargo containers, and 215 twenty-four thousand-liter tank containers, suitable for transporting cargo by rail, sea or highway. The average age, manufacturers' invoice cost and estimated useful life of the Registrant's containers as of December 31, 2004 was as follows:

	<u>Estimated Useful Life</u>	<u>Average Age</u>	<u>Average Cost</u>
20-Foot Dry Cargo Containers	12-15 years	10 years	\$ 2,474
40-Foot Dry Cargo Containers	12-15 years	10 years	\$ 3,975
40-Foot High-Cube Dry Cargo Containers	12-15 years	9 years	\$ 4,031
20-Foot Refrigerated Cargo Containers	12-15 years	10 years	\$ 19,495
40-Foot High-Cube Refrigerated Cargo Containers	12-15 years	11 years	\$ 24,254
24,000-Liter Tanks	12-18 years	10 years	\$ 25,429

Utilization by lessees of the Registrant's containers fluctuates over time depending on the supply of and demand for containers in the Registrant's inventory locations. During 2004, utilization of the dry cargo and refrigerated container fleet averaged 90% and 83% respectively. Utilization of the tank container fleet averaged 89%.

During 2004, the Registrant disposed of 1,647 twenty-foot, 200 forty-foot and 42 forty-foot high-cube marine dry cargo containers, as well as 15 twenty-foot refrigerated cargo containers, six forty-foot high-cube refrigerated cargo containers, and six twenty-four thousand-liter tanks, at an average net gain of \$1 per container.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion of the Registrant's historical financial condition and results of operations should be read in conjunction with the historical consolidated financial statements and the notes thereto and the other financial information appearing elsewhere in this report.

The information in this Annual Report on Form 10-K (the "Report") contains certain "forward-looking statements" within the meaning of the securities law. These forward-looking statements reflect the current view of the Registrant and CCC, with respect to future events and financial performance and are subject to a number of risks and uncertainties, many of which are beyond the control of the Registrant and CCC. All statements other than statements of historical facts included in this Report, including statements under "Management's Discussion and Analysis of Financial Condition and Results of Operations," regarding the Registrant's strategy, future operations, financial position, estimated revenues, projected costs, prospects, plans and objectives of the Registrant are forward-looking statements.

All forward-looking statements speak only as of the date of this Report. The Registrant does not undertake any obligation to update or revise publicly any forward-looking statements, whether as a result of new information, future events or otherwise. Although the Registrant and CCC believe that their plans, intentions and expectations reflected in or suggested by the forward-looking statements made in this report are reasonable, the Registrant and CCC can give no assurance that these plans, intentions or expectations will be achieved. Future economic, political and industry trends that could potentially impact revenues and profitability are difficult to predict, as well as the risks and uncertainties including, but not limited to, changes in demand for leased containers, changes in global business conditions and their effect on world trade, changes within the global shipping industry, the financial strength of the shipping lines and other sub-lessees of the Registrant's containers, fluctuations in new container prices, changes in the costs of maintaining and repairing used containers, changes in competition, changes in the ability of the Leasing Company to maintain insurance on behalf of the Registrant's container fleet, as well as other risks detailed herein and from time to time in the Registrant's filings with the Securities and Exchange Commission.

Liquidity and Capital Resources

The Registrant's primary objective is to generate cash flow from operations for distribution to its limited partners. Aside from the initial working capital reserve retained from gross subscription proceeds (equal to approximately 1% of such proceeds), the Registrant relies primarily on container rental receipts to meet this objective, as well as to finance operating needs. Cash generated from container sales proceeds are distributed to its limited partners. No credit lines are maintained to finance working capital. Commencing in 2004, the Registrant's 11th year of operations, the Registrant began focusing its attention on the disposition of its fleet in accordance with another of its original investment objectives, realizing the residual value of its containers after the expiration of their economic useful lives, estimated to be between 12 to 15 years after placement in leased service. During 2005, the Registrant will begin to actively dispose of its fleet, with cash proceeds from equipment disposals, in addition to cash from operations, providing the cash flow for distributions to the limited partners. The decision to dispose of containers is influenced by various factors including age, condition, suitability for continued leasing as well as the geographical location when disposed. At that time whereby the Registrant's fleet size is reduced to approximately 20% of its original fleet size, the Registrant expects to enter the final phase of its liquidation and wind-up stage of operations, unless terminated sooner upon the occurrence of certain events. At December 31, 2004, the Registrant's fleet size measured approximately 86% of its original fleet size. Upon the liquidation of CCC's interest in the Registrant, CCC shall contribute to the Registrant an aggregate amount equal to the deficit balance in its capital account at the time of such liquidation, after giving effect to the allocation of income or loss arising from the liquidation of the Registrant's assets.

Cash distributions from operations are allocated 5% to the general partner and 95% to the limited partners. Distributions of sales proceeds are allocated 1% to the general partner and 99% to the limited partners. This sharing arrangement will remain in place until the limited partners have received aggregate distributions in an amount equal to their capital contributions plus an 8% cumulative, compounded (daily) annual return on their adjusted capital contributions. Thereafter, all distributions will be allocated 15% to the general partner and 85% to the limited partners, pursuant to Section 6.1(b) of the Registrant's Partnership Agreement. Cash distributions from operations to the general partner in excess of 5% of distributable cash will be considered an incentive fee and compensation to the general partner.

From inception through February 28, 2005, the Registrant has distributed, on a cash basis, \$98,624,167 in cash from operations, and \$4,052,548 in cash from container sales proceeds to its limited partners. This represents total cash basis distributions of \$102,676,715 or 72% of the limited partners' original invested capital. Distributions are paid monthly based primarily on each quarter's cash flow from operations. Distributions are also affected by periodic increases or decreases to working capital reserves, as deemed appropriate by the general partner. Sales proceeds distributed to its partners may fluctuate in subsequent periods, reflecting the level of container disposals.

At December 31, 2004, the Registrant had \$5,488,320 in cash and cash equivalents, an increase of \$1,850,382 and \$1,108,808 from the cash balances at December 31, 2003 and 2002, respectively. The Registrant invests its working capital, as well as cash flows from operations and the sale of containers that have not yet been distributed to CCC or its limited partners in money market funds.

Cash from Operating Activities: Net cash provided by operating activities, primarily generated from the billing and collection of net lease revenue, was \$8,399,924 during 2004, compared to \$7,217,234 and \$6,714,548 during 2003 and 2002, respectively.

Cash from Investing Activities: Net cash provided by investing activities was \$2,233,719 during 2004, compared to \$1,209,725 and \$863,338, in 2003 and 2002, respectively. These amounts represent sales proceeds generated from the sale of rental equipment.

Cash from Financing Activities: Net cash used in financing activities was \$8,783,261 during 2004 compared to \$9,168,533 and \$6,910,461 during 2003 and 2002, respectively. These amounts represent distributions to the Registrant's general and limited partners. The Registrant's continuing container disposals should produce lower operating results and consequently, lower distributions to its partners in subsequent periods.

Off-Balance Sheet Arrangements

As part of the Registrant's ongoing business, the Registrant does not participate in transactions that generate relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purpose entities ("SPEs"), which would have been established for the purpose of facilitating off-balance sheet

arrangements or other contractually narrow or limited purposes. As of December 31, 2004, the Registrant was not involved in any material unconsolidated SPE transactions.

Contractual Obligations

As of December 31, 2004, the Registrant did not have any contractual obligations or commercial commitments.

Results of Operations

Market Overview

Pursuant to the Limited Partnership Agreement of the Registrant, all authority to administer the business of the Registrant is vested in CCC. A Leasing Agent Agreement ("Agreement") exists between the Registrant and the Leasing Company, whereby the Leasing Company has the responsibility to manage the leasing operations of all equipment owned by the Registrant. Pursuant to the Agreement, the Leasing Company is responsible for leasing, managing and re-leasing the Registrant's containers to ocean carriers, and has full discretion over which ocean carriers and suppliers of goods and services it may deal with. The Leasing Agent Agreement permits the Leasing Company to use the containers owned by the Registrant, together with other containers owned or managed by the Leasing Company and its affiliates, as part of a single fleet operated without regard to ownership.

The primary component of the Registrant's results of operations is net lease revenue. Net lease revenue is determined by deducting direct operating expenses, management fees and reimbursed administrative expenses, from gross lease revenues billed by the Leasing Company from the leasing of the Registrant's containers. Net lease revenue is directly related to the size, utilization and per-diem rental rates of the Registrant's fleet. Direct operating expenses are direct costs associated with the Registrant's containers. Direct operating expenses may be categorized as follows:

- Activity-related expenses include agents costs and depot costs such as repairs, maintenance and handling.
- Inventory-related expenses for off-hire containers, comprising of storage and repositioning costs. These costs are sensitive to the quantity of off-hire containers as well as the frequency at which containers are re-delivered.
- Legal and other expenses include legal costs related to the recovery of containers and doubtful accounts, insurance and provisions for doubtful accounts.

At December 31, 2004, approximately 86% of the original equipment remained in the Registrant's fleet, as compared to approximately 91% at December 31, 2003. The following chart summarizes the composition of the Registrant's fleet (based on container type) at December 31, 2004.

	Dry Cargo Containers			Refrigerated Containers				Tank Containers				
	20-Foot		40-Foot	40-Foot High-Cube		20-Foot		40-Foot	24,000-Liter			
	Units	%	Units	Units	%	Units	%	Units	%

1. Short term leases represent term leases that are either scheduled for renegotiation or that may expire in 2005.
2. Long term leases represent term leases, the majority of which will expire between 2005 and 2009.

Container trade volumes, especially within Asia-Europe and intra-Asian trade routes, experienced substantial growth during 2004. China's import and export markets were a catalyst to this growth, in addition to low global interest rates and improved investor and consumer confidence. Economists report that China's 2004 exports and imports increased 35% and 36%, respectively, over the prior year. The increase in 2004 trade volumes also contributed to stronger container leasing market conditions and higher levels of demand for new and existing containers. The Registrant's dry cargo container utilization measured 93% at December 31, 2004, compared to 85% and 81% at December 31, 2003 and 2002, respectively. Based on the current market for leased containers and forecasts from industry analysts indicating continued levels of demand through 2005, CCC and the Leasing Company do not expect a significant decline in the Registrant's utilization rates. The following table summarizes the Registrant's average utilization rates and average fleet size for each of the last three years.

	<u>2004</u>	<u>2003</u>	<u>2002</u>
Fleet size (measured in twenty-foot equivalent units (TEU))			
Dry cargo containers	43,500	44,980	46,497
Refrigerated containers	643	657	658
Tank containers	219	221	225
Average utilization rates			
Dry cargo containers	90%	82%	75%
Refrigerated containers	83%	92%	92%
Tank containers	89%	85%	79%

Container manufacturers increased production output levels in 2004 in order to meet the increased container demand by shipping lines. Production of new containers was hampered somewhat by steel shortages earlier in the year, contributing to stronger market conditions for leased containers. As steel prices increased during 2004, along with the price of other materials including wood flooring, the cost of a new twenty-foot dry cargo container also increased, from \$1,350 during the latter part of 2003, to the current price of \$2,200, an amount higher than at any time since 1995, the last time container prices peaked. As a result of the current high demand for new container equipment, a significant reduction in the price of new containers is unlikely in the near future.

The increase in trade volumes also placed additional burdens on the world's ports and railroads, contributing to congestion in certain locations, particularly in the US and Europe, therefore, increasing the turnaround time for containerships and further reducing the available supply of containers. Within the US, port congestion on the US west coast has encouraged the shipping of cargo directly to less-congested US east and gulf coast ports. The fact that routes from Asia to the US east coast are 50 percent longer than to the US west coast requires shipping lines to utilize additional containerships and a larger volume of containers over a longer period of time.

Off-hire inventories of older containers throughout the world declined, as shipping lines employed more leased containers to meet their increasing container requirements arising from the robust growth in containerized trade and the acceptance of new, larger containerships. This decline in inventories has resulted in substantial decreases in storage expenses and expenditures to reposition containers from low demand locations to locations of higher demand. Declining inventories have also contributed to an increase in the proceeds realized on the sale of used containers, as fewer containers were available to meet the demand of buyers of existing containers. The Registrant's dry cargo inventory of off-hire containers at December 31, 2004 decreased approximately 56% and 67% when compared to off-hire inventories at December 31, 2003 and 2002, respectively. The Leasing Company, on behalf of the Registrant, may consider the disposal of the Registrant's off-hire containers in locations whereby container sale prices equal or exceed targets established by both CCC and the Leasing Company.

The Leasing Company has not undertaken any major repositioning of the Registrants containers since the first quarter of 2004, due primarily to the shortage of containership capacity. If suitable carriers can be sourced, the Leasing Company will reposition off-hire containers from the US east coast during 2005, thereby taking advantage of the strong demand for containers in the Asian trade routes. The repositioning may include the Registrant's containers. The objective of each repositioning is to improve future cash flows, so that savings in storage expense, combined with an increase in future lease revenue, exceed the cost of repositioning the containers.

During 2004, per-diem rates for new containers increased in line with the increase in new container costs. Per-diem rates for older containers experienced modest increases, as the lease market for older containers remains competitive, and therefore, subject to significant pricing pressures. Per-diem rates for older containers are expected to maintain their current level or increase slightly over the next 12 months. The Registrant's average dry cargo container per-diem rate for 2004 increased approximately 1% in comparison to 2003. However, the Registrant's average dry cargo container per-diem rate for 2004 was lower than 2002 by approximately 3%, a result of four main factors that transpired over the 2002 and 2003 periods:

- Per-diem rental rates declined in response to the reduction in container prices;
- The Leasing Company converted lease agreements with several shipping lines from master to long-term leases, providing greater revenue stability but at lower lease rates than those earned under master leases;
- The Leasing Company initiated new term leases for older equipment resulting in lower per-diem rates, while significantly reducing off-hire container inventory levels; and,
- Interest rates, which influence per-diem rental rates, declined world wide.

Additionally, the combined per-diem rental rate for the Registrant's fleet of refrigerated and tank containers for 2004 compared to 2003, increased by 7% and decreased by 7%, respectively.

Although favorable market conditions currently exist for container lessors, current market conditions may negatively impact the shipping lines. Sharply rising and volatile oil prices, combined with the increase in charter rates for ships, higher steel prices and the related increase in new container prices, have created a concern for both the shipping lines and, therefore, the leasing companies. Although the majority of the top 20 shipping lines have experienced strong profit growth during 2004, other shipping lines are facing increased financial pressures, especially those shipping lines that rely on operating their containerships via short-term charters. Current conditions appear to favor the larger more established shipping lines, which have witnessed increases in freight rates due to the strong demand experienced in their respective trade routes. However, some regional intra-Asian shipping lines have struggled to remain profitable, due primarily to the rising charter rates for ships, over capacity and lower freight rates, and have cut back services in certain routes in an attempt to reduce rising costs. Additionally, the delivery of new containerships in 2006 and their additional tonnage capacity will present additional risk for the shipping lines. The Registrant, CCC and the Leasing Company continue to monitor the aging of lease receivables, collections and the credit exposure to various existing and new customers. The financial impact of losses from shipping lines may eventually influence the demand for leased containers, as some shipping lines may experience additional financial difficulties, consolidate, or become insolvent.

Industry analysts are expressing concern that the current program of new shipbuilding may create over capacity within the shipping industry once the new container ships scheduled to be delivered during 2006 and 2007 are placed in service. Based on current orders, industry analysts predict that the world's containership fleet will exceed 10 million TEU by the end of 2007, compared to less than 7 million TEU at the beginning of 2004. Over capacity may contribute to a reduction in profitability for shipping lines, which in turn could have adverse implications for container lessors, including a decline in the demand for leased containers and a reduction in container per-diem rental rates.

Lastly, concerns remain regarding the world's major economies, including the volatility of oil prices, the rate of world economic growth and the related growth of containerized trade volumes, inflation concerns and its impact on interest rates, US trade and budget deficits, the unpredictability of China's economy, performance of global stock markets, geopolitical concerns arising from uncertainties within the Middle East and Asia, threats of terrorism, as well as new container production levels, all of which may have an impact on the current demand for leased containers.

Year Ended December 31, 2004 Compared to the Year Ended December 31, 2003

Net lease revenue was \$8,702,927 for the year ended December 31, 2004 compared to \$7,237,850 for the prior year. The increase was due to a \$636,363 increase in gross rental revenue from the year ended December 31, 2003, and a \$911,586 reduction in rental equipment operating expenses. Gross rental revenue was impacted by an increase in fleet utilization rates. The decrease in direct operating expense was attributable to the Registrant's higher utilization rate in 2004, and its impact on activity-based expenses such as storage and handling, as well as a reduction in repositioning expenses partially offset by an increase in the provision for doubtful accounts. Other components of net lease revenue, including management fees, and reimbursed administrative expenses, were higher by a combined \$82,872 when compared to 2003. This increase was attributable to the operating performance of the Registrant's fleet.

Depreciation expense of \$7,057,111 in 2004 declined by \$220,810 when compared to 2003 due to a declining fleet size.

Other general and administrative expenses amounted \$206,493 in 2004, an increase of \$6,786 or 3% when compared to 2003.

Net gain (loss) on disposal of equipment was a result of the Registrant's disposal of 1,916 containers in 2004, as compared to 1,011 containers during 2003. These disposals resulted in a net gain of \$2,776 during 2004, compared to a net loss of \$296,826 for 2003. The Registrant believes that the net gain on container disposals in 2004 was a result of various factors, including the volume of disposed containers, the age, condition, suitability for continued leasing, as well as the geographical location of the containers when disposed. These factors will continue to influence the decision to repair or dispose of a container when it is returned by a lessee, as well as the amount of sales proceeds received and the related gain or loss on container disposals.

Impairment charges were incurred by the Registrant in the fourth quarter of 2004 relating to certain refrigerated containers with machinery originally supplied by a particular manufacturer (the "Sabroe Machinery"). As a result of issues concerning the Sabroe Machinery's reliability for continued use within the lease market, the lack of sufficient quantities of spare parts within the market for required maintenance and repairs of the Sabroe Machinery, and the unwillingness of potential lessees to lease refrigerated containers utilizing the Sabroe Machinery, CCC and the Leasing Company concluded that off-hire inventories of the Registrant's refrigerated containers utilizing the Sabroe Machinery would be targeted for immediate sale, effective December 1, 2004. CCC and the Leasing Company also conducted a review of the Registrant's refrigerated containers utilizing the Sabroe Machinery that were on lease at December 1, 2004.

Assets to be disposed of: In December 2004, the Leasing Company committed to a plan to dispose of 52 of the Registrant's refrigerated containers utilizing the Sabroe Machinery. It was concluded that the carrying value of these containers, \$539,698, exceeded fair value and accordingly, an impairment charge of \$430,548 was recorded to operations under impairment losses. It is expected that these refrigerated containers will be disposed of over the first two quarters of 2005. Fair value was determined by discounting future expected cash flows.

Assets to be held and used: CCC and the Leasing Company conducted a review of 46 of the Registrant's refrigerated containers utilizing the Sabroe Machinery that were on lease at December 1, 2004. It was concluded that the carrying value of these containers, \$478,364, exceeded the future cash flows expected to result from the use of these containers and their eventual disposition, and therefore was not recoverable. Accordingly, a charge of \$355,137 was recorded to operations under impairment losses. Fair value was determined by discounting future expected cash flows.

Year Ended December 31, 2003 Compared to the Year Ended December 31, 2002

Net lease revenue was \$7,237,850 for the year ended December 31, 2003 compared to \$7,046,605 for the prior year. The increase was due to a \$275,338 reduction in rental equipment operating expenses from the year ended December 31, 2002, partially offset by a \$108,402 decline in gross rental revenue. Gross rental revenue was impacted by a 4% decline in the average rental rates for dry cargo containers during 2003, and smaller fleet size, partially offset by an increase in fleet utilization rates. The decrease in direct operating expense was attributable to the Registrant's higher utilization rate in 2003, and its impact on activity-based expenses such as storage and handling, partially offset by an increase in repositioning expenses. Other components of net lease revenue, including management fees, and reimbursed administrative expenses, were lower by a combined \$24,309 when compared to 2002, and partially offset the decline in gross lease revenue. This decline was attributable to the operating performance of the Registrant's fleet.

During 2003, the Leasing Company employed a leasing strategy that included a repositioning program, whereby the Registrant's off-hire containers in low demand locations, primarily the U.S. East Coast and certain European locations, were repositioned to high demand locations within Asia and other Far East locations. The Leasing Company and CCC believes that the cost of repositioning containers is more than offset from the savings in storage and inventory related expenses, combined with future lease revenues derived from the containers. The Leasing Company, on behalf of the Registrant, has modified many of its lease agreements with the shipping lines to safeguard against the future build-up of container inventories in low demand locations.

Depreciation expense of \$7,277,921 in 2004 declined by \$216,968 when compared to 2003 due to a declining fleet size.

Other general and administrative expenses were \$199,707 in 2003, an increase of \$8,613 or 5% when compared to 2002.

Net loss on disposal of equipment was a result of the Registrant's disposal of 1,011 containers in 2003, as compared to 1,178 containers during 2002. These disposals resulted in a net loss of \$296,826 during 2003, compared to a net loss of \$582,786 for 2002. The Registrant believes that the net loss on container disposals in 2003 was a result of various factors, including the volume of disposed containers, the age, condition, suitability for continued leasing, as well as the geographical location of the containers when disposed.

Critical Accounting Policies

Container equipment – depreciable lives: The Registrant's container rental equipment is depreciated over a useful life of 15 years to a residual value of 10%. The Registrant and CCC evaluate the period of amortization and residual values to determine whether subsequent events and circumstances warrant revised estimates of useful lives and residual values.

Container equipment – valuation: The Registrant and CCC review container rental equipment when changes in circumstances require consideration as to whether the carrying value of the equipment has become impaired, pursuant to guidance established in SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets." The Registrant and CCC consider assets to be impaired if the carrying value of the asset exceeds the future projected cash flows from related operations (undiscounted and without interest charges). When impairment is deemed to exist, the assets are written down to fair value or projected discounted cash flows from related operations. The Registrant and CCC evaluate future cash flows and potential impairment of its fleet by container type rather than for each individual container. Therefore, future losses could result for individual container dispositions due to various factors including age, condition, suitability for continued leasing, as well as geographic location of the containers where disposed. Considerable judgment is required in estimating future cash flows from container rental equipment operations. Accordingly, the estimates may not be indicative of the amounts that may be realized in future periods. As additional information becomes available in subsequent periods, reserves for the impairment of the container rental equipment carrying values may be necessary based upon changes in market and economic conditions.

Allowance for doubtful accounts: The Leasing Company continually tracks the Registrant's credit exposure to each of the sub-lessees of the Registrant's containers using specialist third-party credit information services and reports prepared by its local staff to assess credit quality. The Leasing Company's credit committee meets quarterly to analyze the performance of existing customers and to recommend actions taken in order to minimize credit risk. The Leasing Company derives an allowance for doubtful accounts from specific amounts provided against known probable losses plus an additional amount based on historical loss experience. However, the Registrant's may be subject to an unexpected loss in net lease revenue resulting from sub-lessees of its containers that default under their container lease agreements with the Leasing Company.

New Accounting Pronouncements

In November 2004, the FASB issued SFAS No. 151 – "Inventory Costs – an amendment of ARB No. 43, Chapter 4" ("SFAS 151"). SFAS 151 amends the guidance in ARB No. 43, Chapter 4 - "Inventory Pricing", to clarify the accounting for abnormal amounts of idle facility expense, freight, handling costs, and wasted material (spoilage). SFAS 151 will not have any impact on the financial statements of the Registrant.

In December 2004, the FASB issued SFAS No. 153 – "Exchanges of Nonmonetary Assets – an amendment of APB Opinion No. 29" ("SFAS 153"). This Statement amends Opinion 29 to eliminate the exception for nonmonetary exchanges of similar productive assets and replaces it with a general exception for exchanges of nonmonetary assets that do not have commercial substance. A nonmonetary exchange has commercial substance if the future cash flows of the entity are expected to change significantly as a result of the exchange. The Registrant does not expect the introduction of SFAS 153 to have any impact on its financial statements.

Inflation

The Registrant believes inflation has not had a material adverse effect on the results of its operations.

Risk Factors That Could Affect Future Results

Because of the following factors, as well as other variables affecting the Registrant's operating results, past financial performance may not be a reliable indicator of future performance, and historical trends should not be used to anticipate results or trends in future periods.

Dependence of the Container Leasing Business on the Volume of World Trade and Other Factors. Containers, particularly marine dry cargo containers, are relatively simple, and fungible items of capital equipment. While one distinguishing characteristic of container leasing companies is the level of service they provide to lessees, fundamentally the success of the container leasing business depends upon the level of demand for leased containers. While there is continuing demand from customers to transport their cargo in containers rather than by break-bulk methods, this demand, in turn, largely depends upon levels of world trade and the supply of containers relative to demand. When the volume of world trade decreases, container leasing companies are particularly apt to suffer since container lessees, most of which also have their own fleets of containers, generally reduce the number of leased containers in their fleets in favor of utilizing their fleet of owned containers. In addition, average daily revenue per leased container unit can decrease significantly as the volume of world trade decreases and the supply of available containers exceeds the level of demand. Such factors can cause a material reduction in a leasing company's revenues. Furthermore, the increased availability of capital combined with low interest rates may provide an incentive for shipping lines to reduce their demand for leased containers in favor of purchasing them. As a result, the Registrant's container leasing operations could be negatively affected by future fluctuations in world trade and other factors, including, without limitation, the supply and pricing of new and used containers, economic conditions in the shipping industry, fluctuations in interest rates and currency valuations, and other economic considerations that are inherently unpredictable and beyond the control of the Registrant, CCC and the Leasing Company.

Risks of Ownership and Leasing of Special Purpose Containers. A portion of the Registrant's container portfolio consists of refrigerated and tank containers. Unlike dry cargo containers, these special purpose containers are built for specific market demands. As such, the markets for the leasing of special purpose containers are narrower than the market for dry cargo containers. In the case of tank containers, the Leasing Company, on behalf of the Registrant, will lease to specialist operators (NVOCC's --Non-Vessel Owning Common Carriers), companies that produce and ship their own goods (such as chemical companies and distillers), as well as ocean-going carriers. Lessors in these markets are thus more sensitive to fluctuations in the demand for and supply of such containers. Moreover, the ownership of refrigerated containers entails risks of mechanical breakdown and technological obsolescence not otherwise present in the ownership of dry cargo containers, and in the case of tank containers (which can transport hazardous materials) includes additional risks of environmental and tort liability.

Risk of Terrorism Involving Containers. Since September 11, 2001, the world's governments, maritime authorities, and the maritime industry, have devoted increasing attention to enhancing the security of the global container transport chain. These efforts have included the Maritime Transportation Security Act of 2003 passed by Congress and initiatives by the United States such as the Container Security Initiative and Customs-Trade Partnership Against Terrorism Program. Efforts to date have focused on increasing port security and container inspections, developing and implementing a program of sealing containers with mechanical and electronic seals from the point of loading to final delivery of the container, identifying shippers, storing cargo information in electronic format, and related measures. The task is immense, and the efforts undertaken to date are preliminary. The industry is well aware of the dire consequences should a terrorism incident occur involving the use of a cargo container. In any such event, the impact on global trade and the world economy could be immediate and materially adverse, specifically impacting the Registrant's operations with high insurance costs, additional costs to implement or adopt container related security devices and measures, and ultimately, a loss of container leasing revenue.

Other Risks of Container Leasing. In addition to the factors discussed above, the ability of the Leasing Company, on behalf of the Registrant, to keep the Registrant's containers under leases yielding revenues which, after payment of operating expenses, provide an acceptable return, may be adversely affected by other economic and business factors to which the transportation industry in general and the container leasing industry in particular are subject. These factors, which generally are beyond the control of the Registrant, CCC and the Leasing Company, include:

- general economic conditions, such as inflation and fluctuations in general business conditions;
- fluctuations in supply and demand for containers resulting from, among other things, obsolescence, changes in the methods or economics of a particular mode of transportation or changes in governmental regulations or safety standards;
- increases in maintenance expenses, taxes, insurance costs, third party fees and other expenses attributable to the operation and the maintenance of the containers that cannot be offset by increased lease revenues from the containers;
- the risk of uninsured losses with respect to the containers or insured losses for which insurance proceeds are inadequate, resulting in a possible loss of invested capital in and any profits anticipated from such containers;
- the effects of strikes, labor disputes and foreign political unrest on the Registrant's container leasing business;
- bankruptcies, contract disputes, or defaults in payment by sub-lessees of the Registrant's containers resulting in uncollectible amounts and the accumulation of expenses and off-lease time attributable to the recovery of containers, or the inability to recover containers from such lessees;
- the possibility that sub-lessees of the Registrant's containers will elect to purchase and own equipment rather than lease it from third parties, including the Leasing Company; and loss of revenues and increases in storage expenses during periods when containers are not being utilized.

Effect of Operating Leases: Rental Payments are Insufficient to Return the Original Investment in the Containers. A preponderance of the containers acquired by the Registrant are leased pursuant to operating leases. Under an operating lease, the lessor receives aggregate rental payments in an amount that is insufficient to recover its original investment. In order for the Registrant to recover its investment and earn an adequate return thereon, the Leasing Company, on behalf of the Registrant, will, on termination of the initial leases of the Registrant's containers, have to obtain renewals from the original lessees, find new lessees or sell the containers. Operating leases subject the Registrant to risks of fluctuation in rental rates and lack of demand for a particular container at the expiration of its lease. The success of the Leasing Company in leasing the Registrant's containers and keeping the Registrant's containers on lease will depend upon market conditions in the container and equipment leasing markets, the quality of maintenance of the containers, and other factors.

Residual Value of Containers. The ultimate cash return of the Registrant's investment in its containers will depend in part on the residual value of the containers at the point at which CCC determines that it is in the best interest of the Registrant to sell the containers. The amount realized on the sale of the containers may be substantially less than the price that the Registrant paid for the containers. Generally, used containers are sold in the non-maritime secondary market for use as temporary or permanent storage facilities. An additional use for refrigerated containers in the secondary market is for the temporary storage of perishable products. To a lesser extent, such containers are sold to shipping companies and container leasing companies for use in the maritime market. The demand for used containers depends on a variety of factors including the location of the container at the time of disposition, foreign currency exchange rates, and the factors discussed above that affect the market for marine cargo containers. One factor affecting the residual value of the containers will be the quality of maintenance provided by the Leasing Company and the sub-lessees of the Registrant's containers. There can be no assurance that CCC will be able to arrange, on behalf of the Registrant, for adequate maintenance of the Registrant's containers throughout their economically useful lives. The containers' residual value will also depend upon factors beyond the control of the Registrant, CCC, the Leasing Company, or the container lessees, such as the cost of new containers, the quantity of used containers being supplied to the secondary market, technological advances in container construction and in techniques of ocean transportation, and developments in world trade.

Competition. The Leasing Company, on behalf of the Registrant, will be in competition with several large international container leasing companies and numerous smaller leasing companies. As of mid-2004, five leasing companies controlled approximately 65% of the worldwide leased container fleet. While the container leasing market is highly competitive, the large container leasing companies as a group might be able to exploit their greater financial resources to maintain or enhance their market share at the expense of the competitors such as the Registrant and Leasing Company.

Defaults by Lessees. The default by a sub-lessee under a lease with the Leasing Company may cause the Registrant's containers to be returned at a time when the Leasing Company may be unable to arrange for the re-leasing or sale of such containers. In such event, the Registrant would lose anticipated revenues, incur additional operating expenses, and consequently, may be unable to recover its investment in such containers. In addition, because the Registrant's containers will be leased outside of the United States, repossession of containers from sub-lessees who may default under a lease could prove difficult. In addition, when containers are recovered, the Leasing Company may not be able to re-lease the equipment at comparable rates and at favorable lease terms.

Effect of Environmental Regulation on Refrigerated Containers. Historically, refrigerated containers have utilized a refrigerant gas, which is a chlorofluorocarbon ("CFC") compound. It is generally assumed that CFCs are harmful to the Earth's ozone layer when released into the atmosphere. Many nations, including the United States, have taken action, both collectively and individually, to regulate CFCs. These nations have set various targets for the reduction in production and use of CFCs, and their eventual elimination. There has been substantial progress in securing a viable substitute for the refrigerant used in containers. Production of new container refrigeration units operating with the replacement refrigerant became generally available in 1993. There can be no assurance that the new refrigerant will be as effective or as cost efficient as CFC compounds.

Environmental Liability Risks. Under state and Federal laws of the United States, and under the laws of certain other nations, the owner of a container may be liable for environmental damage and/or cleanup costs and/or other sums in the event of actual or threatened discharge or other contamination by material in a container. This liability may be imposed on a container owner, such as the Registrant, even if the owner is not at fault. It is not possible to predict the amount of liability. The Leasing Company, on behalf of the Registrant, intends, subject to availability and prevailing market conditions, to obtain insurance against these risks on such terms and in such amounts as CCC and the Leasing Company deems reasonable. In addition, subject to availability and applicable insurance and container industry market conditions, the Leasing Company intends to require sub-lessees of the Registrant's containers to obtain insurance which protects against these risks and further to compel lessees to indemnify and defend the Registrant in the case of an occurrence giving rise to possible liability under applicable environmental laws. There can, however, be no guarantee that insurance will be available to fully protect against environmental risk, or that CCC and the Leasing Company will be able to allocate the risk of environmental damage to lessees of the Registrant's containers.

Reliance Upon CCC and the Leasing Company. The Registrant's operations are dependent upon the ability of CCC, and its affiliate, the Leasing Company, to arrange for the leasing, maintenance and eventual sale of containers on behalf of the Registrant. The Registrant's limited partners have no right to take part in the day-to-day management of the Registrant; all decisions with respect to such management will be made exclusively by CCC.

Conflicts of Interest. In managing the Registrant, CCC is subject to conflicts of interest, meaning that it is confronted with decisions whereby it has an economic incentive to place its interests above those of the Registrant. CCC and its affiliates, including the Leasing Company, are in the business of managing containers for third parties, for CCC's existing partnerships and programs, and for their own account, and will be subject to a conflict of interest in times of low demand for and excess supply of such containers. The Registrant's Partnership Agreement provides that neither CCC nor its affiliates will be obligated to present any particular investment or leasing opportunity to the Registrant, even if such opportunity is suitable for the Registrant.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

Exchange rate risk: In 2004, approximately 95% of the gross lease revenues billed by the Leasing Company on behalf of the Group, or on behalf of other third-party container owners, including the Registrant, were billed and paid in US dollars, and approximately 84% of expenses were incurred and paid in US dollars. For non-US dollar denominated revenues and expenses, the Leasing Company may enter into foreign currency contracts to reduce exposure to exchange rate risk. Of the non-US dollar direct operating expenses, the Leasing Company estimates approximately 70% are individually small, unpredictable and were incurred in varying denominations. Thus, the Leasing Company determined such amounts are not suitable for cost effective hedging. As exchange rates are outside of the control of the Registrant and Leasing Company, there can be no assurance that such fluctuations will not adversely affect the Registrant's results of operations and financial condition.

Item 8. Financial Statements and Supplementary Data

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Partners
Cronos Global Income Fund XV, L.P.

We have audited the accompanying balance sheets of Cronos Global Income Fund XV, L.P. (the "Partnership") as of December 31, 2004 and 2003, and the related statements of operations, partners' capital, and cash flows for each of the three years in the period ended December 31, 2004. These financial statements are the responsibility of the Partnership's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances but not for the purpose of expressing an opinion on the effectiveness of the company's internal controls over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such financial statements present fairly, in all material respects, the financial position of the Partnership at December 31, 2004 and 2003, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2004, in conformity with accounting principles generally accepted in the United States of America.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

December 31, 2004, 2003 and 2002

(1) Summary of Significant Accounting Policies

(a) Nature of Operations

Cronos Global Income Fund XV, L.P. (the "Partnership") is a limited partnership organized under the laws of the State of California on August 26, 1993, for the purpose of owning and leasing marine cargo containers, special purpose containers and container related equipment worldwide to ocean carriers. To this extent, the Partnership's operations are subject to the fluctuations of world economic and political conditions. Such factors may affect the pattern and levels of world trade. The Partnership believes that the profitability of, and risks associated with, leases to foreign customers is generally the same as those of leases to domestic customers. The Partnership's leases generally require all payments to be made in United States currency.

Cronos Capital Corp. ("CCC") is the general partner and, with its affiliate Cronos Containers Limited (the "Leasing Company"), manages the business of the Partnership. CCC and the Leasing Company also manage the container leasing business for other partnerships affiliated with CCC.

The Partnership commenced operations on February 22, 1994, when the minimum subscription proceeds of \$2,000,000 were received from over 100 subscribers (excluding from such count Pennsylvania residents, the general partner, and all affiliates of the general partner). The Partnership offered 7,500,000 units of limited partnership interest at \$20 per unit or \$150,000,000. The offering terminated on December 15, 1995, at which time 7,151,569 limited partnership units had been sold.

The decision to dispose of containers is influenced by various factors including age, condition, suitability for continued leasing as well as the geographical location when disposed. At that time whereby the Partnership's fleet size is reduced to approximately 20% of its original fleet size, the Partnership expects to enter the final phase of its liquidation and wind up of its operations, unless terminated sooner upon the occurrence of certain events. At December 31, 2004, the Partnership's fleet size measured approximately 86% of its original fleet size.

(b) Leasing Company and Leasing Agent Agreement

A Leasing Agent Agreement exist between the Partnership and the leasing Company, whereby the Leasing Company has the responsibility to manage the leasing operations of all equipment owned by the Partnership. Pursuant to the Agreement, the Leasing Company is responsible for leasing, managing and re-leasing the Partnership's containers to ocean carriers and has full discretion over which ocean carriers and suppliers of goods and services it may deal with. The Leasing Agent Agreement permits the Leasing Company to use the containers owned by the Partnership, together with other containers owned or managed by the Leasing Company and its affiliates, as part of a single fleet operated without regard to ownership. Since the Leasing Agent Agreement meets the definition of an operating lease in Statement of Financial Accounting Standards (SFAS) No. 13, it is accounted for as a lease under which the Partnership is lessor and the Leasing Company is lessee.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(b) Leasing Company and Leasing Agent Agreement (continued)

The Leasing Agent Agreement generally provides that the Leasing Company will make payments to the Partnership based upon rentals collected from ocean carriers after deducting direct operating expenses and management fees to CCC and the Leasing Company. The Leasing Company leases containers to ocean carriers, generally under operating leases which are either master leases or term leases (mostly one to five years). Master leases do not specify the exact number of containers to be leased or the term that each container will remain on hire but allow the ocean carrier to pick up and drop off containers at various locations, and rentals are based upon the number of containers used and the applicable per-diem rate. Accordingly, rentals under master leases are all variable and contingent upon the number of containers used. Most containers are leased to ocean carriers under master leases; leasing agreements with fixed payment terms are not material to the financial statements. Since there are no material minimum lease rentals, no disclosure of minimum lease rentals is provided in these financial statements.

(c) Concentrations of Credit Risk

The Partnership's financial instruments that are exposed to concentrations of credit risk consist primarily of cash, cash equivalents and net lease receivables due from the Leasing Company. See note 3 for further discussion regarding the credit risk associated with cash and cash equivalents.

Net lease receivables due from the Leasing Company (see notes 1(b) and 4 for discussion regarding net lease receivables) subject the Partnership to a significant concentration of credit risk. These net lease receivables, representing rentals earned by the Leasing Company, on behalf of the Partnership, from ocean carriers after deducting direct operating expenses and management fees to CCC and the Leasing Company, are remitted by the Leasing Company to the Partnership three to four times per month. The Partnership has historically never incurred a loss associated with the collectibility of unremitted net lease receivables due from the Leasing Company.

(d) Basis of Accounting

The Partnership utilizes the accrual method of accounting. Net lease revenue is recorded by the Partnership in each period based upon its leasing agent agreement with the Leasing Company. Net lease revenue is generally dependent upon operating lease rentals from operating lease agreements between the Leasing Company and its various lessees, less direct operating expenses and management fees due in respect of the containers specified in each operating lease agreement.

(e) Use of Estimates

The financial statements are prepared in conformity with accounting principles generally accepted in the United States of America (GAAP), which requires the Partnership to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates.

The most significant estimates included within the financial statements are the container rental equipment estimated useful lives and residual values, and the estimate of future cash flows from container rental equipment operations, used to determine the adequacy of the carrying value of container rental equipment in accordance with SFAS No. 144. Considerable judgment is required in estimating future cash flows from container rental equipment operations. Accordingly, the estimates may not be indicative of the amounts that may be realized in future periods. As additional information becomes available in subsequent periods, reserves for the impairment of the container rental equipment carrying values may be necessary based upon changes in market and economic conditions.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(f) Allocation of Net Income or Loss, Partnership Distributions and Partners' Capital

Net income or loss has been allocated between general and limited partners in accordance with the Partnership Agreement.

Actual cash distributions differ from the allocations of net income or loss between the general and limited partners as presented in these financial statements. Partnership distributions are paid to its partners (general and limited) from distributable cash from operations, allocated 95% to the limited partners and 5% to the general partner. Distributions of sales proceeds are allocated 99% to the limited partners and 1% to the general partner. The allocations remain in effect until such time as the limited partners have received from the Partnership aggregate distributions in an amount equal to their capital contributions plus an 8% cumulative, compounded (daily), annual return on their adjusted capital contributions. Thereafter, all Partnership distributions will be allocated 85% to the limited partners and 15% to the general partner. Cash distributions from operations to the general partner in excess of 5% of distributable cash will be considered an incentive fee and will be recorded as compensation to the general partner, with the remaining distributions from operations charged to partners' capital.

Upon dissolution, the assets of the Partnership will be sold and the proceeds thereof distributed as follows: (i) all of the Partnership's debts and liabilities to person's other than CCC or the limited partners shall be paid and discharged; (ii) all of the Partnership's debts and liabilities to CCC and the limited partners shall be paid and discharged; and (iii) the balance of such proceeds shall be distributed to CCC and the limited partners in accordance with the positive balances of CCC and the limited partners' capital accounts. CCC shall contribute to the Partnership an aggregate amount equal to the deficit balance in its capital account at the time of such liquidation, after giving effect to the allocation of income or loss arising from the liquidation of the Partnership's assets.

(g) Acquisition Fees

Pursuant to the Partnership Agreement, acquisition fees paid to CCC are based on 5% of the equipment purchase price. These fees are capitalized and included in the cost of the container rental equipment.

(h) Container Rental Equipment

Container rental equipment is depreciated using the straight-line method. Depreciation policies are also evaluated to determine whether subsequent events and circumstances warrant revised estimates of useful lives. Effective June 1, 2001, the estimated depreciable life was changed from a twelve-year life to a fifteen-year life and the estimated salvage value was changed from 30% to 10% of the original equipment cost. The effect of these changes is an increase to depreciation expense of approximately \$147,000 for 2002.

SFAS No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets," was adopted by the Partnership effective January 1, 2002, without a significant impact on its financial statements. In accordance with SFAS No. 144, container rental equipment is considered to be impaired if the carrying value of the asset exceeds the expected future cash flows from related operations (undiscounted and without interest charges). If impairment is deemed to exist, the assets are written down to fair value. An analysis is prepared each quarter projecting future cash flows from container rental equipment operations. Current and projected utilization rates, per-diem rental rates, direct operating expenses, fleet size and container disposals are the primary variables utilized by the analysis. Additionally, the Partnership evaluates future cash flows and potential impairment by container type rather than for each individual container, and as a result, future losses could result for individual container dispositions due to various factors, including age, condition, suitability for continued leasing, as well as the geographical location of containers when disposed.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(h) Container Rental Equipment (cont.)

In December 2004 the Partnership recorded impairment charges related to 98 refrigerated containers which reduced results of operations by \$785,685, or \$0.11 per limited partnership unit. The impairment charges were a result of CCC's and the Leasing Company's review of the Partnership's refrigerated containers, specifically those with machinery supplied by a particular manufacturer (the "Sabroe Machinery"). The purpose of the review was to consider the issues concerning the Sabroe Machinery's reliability for continued use within the lease market, the lack of sufficient quantities of spare parts within the market for required maintenance and repairs of the Sabroe Machinery, and the unwillingness of potential lessees to lease refrigerated containers utilizing the Sabroe Machinery, and to identify the consequences, if any, from an accounting perspective. CCC and the Leasing Company identified a number of issues that have had an impact on the carrying value of certain equipment at December 1, 2004.

- i. The current lessees of these containers have communicated to the Leasing Company that due to very high operating costs incurred while leasing the containers, they intend to return all of the leased refrigerated containers utilizing the Sabroe Machinery within the next six months.
- ii. The Leasing Company is unable to obtain sufficient quantities of spare parts within the market for required maintenance and repairs of the Sabroe Machinery, a direct result of the Sabroe Machinery manufacturer no longer conducting business.
- iii. CCC and the Leasing Company has noted issues regarding the Sabroe Machinery's reliability for continued use within the lease market, and have deemed the containers to be beyond economical repair.

CCC and the Leasing Company considered the impact of these factors in December 2004, and determined a change regarding the current marketing strategy for these containers was required. CCC and the Leasing Company concluded that effective December 1, 2004, off-hire inventories of the refrigerated containers utilizing the Sabroe Machinery would be targeted for immediate sale. CCC and the Leasing Company also conducted a review of the refrigerated containers utilizing the Sabroe Machinery that were on lease at December 1, 2004.

Assets to be disposed of: In December 2004, the Leasing Company committed to a plan to dispose of 52 of the Partnership's refrigerated containers utilizing the Sabroe Machinery. It was concluded that the carrying value of these containers, \$539,698, exceeded fair value and accordingly, an impairment charge of \$430,548 was recorded to operations under impairment losses. It is expected that these refrigerated containers will be disposed of over the first two quarters of 2005. Fair value was determined by discounting future expected cash flows.

Assets to be held and used: CCC and the Leasing Company conducted a review of 46 of the Partnership's refrigerated containers utilizing the Sabroe Machinery that were on lease at December 1, 2004. It was concluded that the carrying value of these containers, \$478,364, exceeded the future cash flows expected to result from the use of these containers and their eventual disposition, and therefore was not recoverable. Accordingly, a charge of \$355,137 was recorded to operations under impairment losses. Fair value was determined by discounting future expected cash flows.

There were no impairment charges to the carrying value of container rental equipment during 2003 and 2002.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(i) Income Taxes

The Partnership is not subject to income taxes, consequently no provision for income taxes has been made. The Partnership files federal and state annual information tax returns, prepared on the accrual basis of accounting. Taxable income or loss is reportable by the partners individually.

(j) Financial Statement Presentation

The Partnership has determined that, for accounting purposes, the Leasing Agent Agreement is a lease, and the receivables, payables, gross revenues and operating expenses attributable to the containers managed by the Leasing Company are, for accounting purposes, those of the Leasing Company and not of the Partnership. Consequently, the Partnership's balance sheets and statements of operations display the payments to be received by the Partnership from the Leasing Company as the Partnership's receivables and revenues.

(k) New Accounting Pronouncements

In November 2004, the FASB issued SFAS No. 151 – “Inventory Costs – an amendment of ARB No. 43, Chapter 4” (“SFAS 151”). SFAS 151 amends the guidance in ARB No. 43, Chapter 4 - “Inventory Pricing”, to clarify the accounting for abnormal amounts of idle facility expense, freight, handling costs, and wasted material (spoilage). SFAS 151 will not have any impact on the financial statements of the Partnership.

In December 2004, the FASB issued SFAS No. 153 – “Exchanges of Nonmonetary Assets – an amendment of APB Opinion No. 29” (“SFAS 153”). This Statement amends Opinion 29 to eliminate the exception for nonmonetary exchanges of similar productive assets and replaces it with a general exception for exchanges of nonmonetary assets that do not have commercial substance. A nonmonetary exchange has commercial substance if the future cash flows of the entity are expected to change significantly as a result of the exchange. The Partnership does not expect the introduction of SFAS 153 to have any impact on its financial statements.

(2) Operating Segment

An operating segment is a component of an enterprise that engages in business activities from which it may earn revenues and incur expenses, whose operating results are regularly reviewed by the enterprise’s chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance, and about which separate financial information is available. Management operates the Partnership’s container fleet as a homogenous unit and has determined that as such it has a single reportable operating segment.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(2) Operating Segment (continued)

The Partnership derives revenues from dry cargo containers, refrigerated containers and tank containers used by its customers in global trade routes. As of December 31, 2004, the Partnership owned 22,097 twenty-foot 8,042 forty-foot and 2,031 forty-foot high-cube marine dry cargo containers, as well as 442 twenty-foot and 93 forty-foot high-cube refrigerated cargo containers, and 215 twenty-four thousand-liter tanks. A summary of gross lease revenue earned by the Leasing Company, on behalf of the Partnership, by product, for the years ended December 31, 2004, 2003 and 2002 follows:

	<u>2004</u>	<u>2003</u>	<u>2002</u>
Dry cargo containers	\$ 11,074,600	\$ 10,416,781	\$ 10,521,020
Refrigerated containers	1,289,032	1,312,449	1,343,686
Tank containers	<u>628,824</u>	<u>626,863</u>	<u>599,789</u>
Total	\$ <u>12,992,456</u>	\$ <u>12,356,093</u>	\$ <u>12,464,495</u>

Due to the Partnership's lack of information regarding the physical location of its fleet of containers when on lease in the global shipping trade, the Partnership believes that it does not possess discernible geographic reporting segments as defined in SFAS No. 131 ("SFAS 131), "Disclosures about Segments of an Enterprise and Related Information".

The Partnership does not believe that its ongoing business is dependent upon a single customer, although the loss of one or more of its largest customers could have an adverse effect upon its business. No single sub-lessee of the Leasing Company contributed more than 10% of the Leasing Company's rental revenue earned on behalf of the Partnership during 2004, 2003 and 2002.

(3) Cash and Cash Equivalents

Cash equivalents include money market funds that invest in highly-liquid securities, such as U.S. Treasury obligations, repurchase agreements secured by U.S. Treasury obligations, and obligations whose principal and interest are backed by the U.S. Government. Cash equivalents are carried at cost which approximates fair value, and at times, may exceed federally insured limits. The Partnership has not experienced any losses in such accounts and believes it is not exposed to any significant credit risk.

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(4) Net Lease Receivables Due from Leasing Company

Net lease receivables due from the Leasing Company are determined by deducting direct operating payables and accrued expenses, base management fees payable, and reimbursed administrative expenses payable to CCC and its affiliates from the rental billings earned by the Leasing Company to the Partnership under operating leases to ocean carriers for the containers owned by the Partnership as well as proceeds earned from container disposals. Net lease receivables at December 31, 2004 and 2003 were as follows:

	December 31, 2004	December 31, 2003
Gross lease receivables	\$ 2,704,034	\$ 2,455,335
Less:		
Direct operating payables and accrued expenses	736,263	750,902
Damage protection reserve (note 5)	278,828	207,353
Base management fees payable	85,859	93,258
Reimbursed administrative expenses	61,572	58,583
Allowance for doubtful accounts	192,737	220,700
Net lease receivables	\$ <u>1,348,775</u>	\$ <u>1,124,539</u>

(5) Damage Protection Plan

The Leasing Company offers a repair service to several lessees of the Partnership's containers, whereby the lessee pays an additional rental fee for the convenience of having the Partnership incur the repair expense for containers damaged while on lease. This fee is recorded as revenue when earned according to the terms of the rental contract. An accrual has been recorded to provide for the estimated costs incurred by this service. This accrual is included within rental equipment operating expenses, a component of net lease receivables due from the Leasing Company (see note 4). The Partnership is not responsible in the event repair costs exceed predetermined limits, or for repairs that are required for damages not defined by the damage protection plan agreement.

(6) Net Lease Revenue

Net lease revenue is determined by deducting direct operating expenses, base management fees and reimbursed administrative expenses to CCC and its affiliates from the rental revenue earned by the Leasing Company under operating leases to ocean carriers for the containers owned by the Partnership. Net lease revenue for the years ended December 31, 2004, 2003 and 2002 was as follows:

	2004	2003	2002
Rental revenue	\$ 12,992,456	\$ 12,356,093	\$ 12,464,495
Less:			
Rental equipment operating expenses	2,670,780	3,582,366	3,857,704
Base management fees (note 7)	898,156	852,761	851,979
Reimbursed administrative expenses (note 7):			
Salaries	497,577	479,592	497,295
Other payroll related expenses	62,534	51,690	54,386
General and administrative expenses	160,482	151,834	156,526
Net lease revenue	\$ <u>8,702,927</u>	\$ <u>7,237,850</u>	\$ <u>7,046,605</u>

CRONOS GLOBAL INCOME FUND XV, L.P.

Notes to Financial Statements

(7) Compensation to General Partner and its Affiliates

Base management fees are equal to 7% of gross lease revenues attributable to operating leases pursuant to the Partnership Agreement. Reimbursed administrative expenses are equal to the costs expended by CCC and its affiliates for services necessary for the prudent operation of the Partnership pursuant to the Partnership Agreement. The following compensation was paid or will be paid by the Partnership to CCC or its affiliates:

	2004	2003	2002
Base management fees			
CCC	\$ -	\$ -	\$ -
Leasing Company	898,156	852,761	851,979
Reimbursed administrative expenses			
CCC	92,275	78,899	96,287
Leasing Company	<u>628,318</u>	<u>604,217</u>	<u>611,920</u>
	<u>\$ 1,618,749</u>	<u>\$ 1,535,877</u>	<u>\$ 1,560,186</u>

The following net compensation was payable to CCC and the Leasing Company at December 31, 2004 and 2003:

	2004	2003
CCC	\$ 7,854	\$ 6,020
Leasing Company	<u>139,577</u>	<u>145,821</u>
	<u>\$ 147,431</u>	<u>\$ 151,841</u>

(8) Limited Partners' Capital

Cash distributions made to the limited partners during 2004, 2003 and 2002 included distributions of proceeds from equipment sales in the amount of \$1,460,109, \$1,251,523 and \$506,568, respectively. These distributions, as well as cash distributions from operations, are used in determining "Adjusted Capital Contributions" as defined by the Partnership Agreement.

The limited partners' per unit share of capital at December 31, 2004, 2003 and 2002 was \$8, \$9, and \$10, respectively. This is calculated by dividing the limited partners' capital at the end of each year by 7,151,569 the total number of limited partnership units.

Item 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure

Inapplicable.

Item 9A. Controls and Procedures

The principal executive and principal financial officers of CCC have evaluated the disclosure controls and procedures of the Registrant as of the end of the period covered by this report . As used herein, the term “disclosure controls and procedures” has the meaning given to the term by Rule 13a-15 under the Securities Exchange Act of 1934, as amended (“Exchange Act”), and includes the controls and other procedures of the Registrant that are designed to ensure that information required to be disclosed by the Registrant in the reports that it files with the SEC under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC’s rules and forms. Based upon their evaluation, the principal executive and principal financial officers of CCC have concluded that the Registrant’s disclosure controls and procedures were effective such that the information required to be disclosed by the Registrant in this report is recorded, processed, summarized and reported within the time periods specified in the SEC’s rules and forms applicable to the preparation of this report and is accumulated and communicated to CCC’s management, including CCC’s principal executive officer and principal financial officer, as appropriate to allow timely decisions regarding required disclosures.

There have been no significant changes in the Registrant’s internal controls or in other factors that could significantly affect the Registrant’s internal controls subsequent to the evaluation described above conducted by CCC’s principal executive and financial officers.

Item 9B. Other Information

Inapplicable.

PART III

Item 10. Directors and Executive Officers of the Registrant

The Registrant, as such, has no officers or directors, but is managed by CCC, the general partner. The officers and directors of CCC at February 28, 2005, are as follows:

<u>Name</u>	<u>Office</u>
Dennis J. Tietz	President, Chief Executive Officer and Director
John Kallas	Vice President, Chief Financial Officer and Director
Elinor A. Wexler	Vice President/Administration, Secretary and Director
John M. Foy	Director

Dennis J. Tietz Mr. Tietz, 52, as President and Chief Executive Officer, is responsible for the general management of CCC. Mr. Tietz was appointed Chief Executive Officer of The Cronos Group in December 1998 and appointed Chairman of the Board of Directors in March 1999. Mr. Tietz is also President and a director of Cronos Securities Corp. From 1986 until his appointment as Chief Executive Officer of The Cronos Group, Mr. Tietz was responsible for the organization, marketing and after-market support of CCC's investment programs. Mr. Tietz was a regional manager for CCC, responsible for various container leasing activities in the U.S. and Europe from 1981 to 1986. Prior to joining CCC in December 1981, Mr. Tietz was employed by Trans Ocean Leasing Corporation as Regional Manager based in Houston, with responsibility for all leasing and operational activities in the U.S. Gulf.

Mr. Tietz holds a B.S. degree in Business Administration from San Jose State University and is a Registered Securities Principal with the NASD. Mr. Tietz served as Chairman of the International Institute of Container Lessors for its 2001 fiscal year, and currently sits on the Executive Committee of the Institute's Board of Directors.

John Kallas Mr. Kallas, 42, as Vice President, Chief Financial Officer of CCC, is responsible for managed container investment programs, treasury and CCC's financial operations. Mr. Kallas joined the Board of Directors of CCC in November, 2000. Mr. Kallas has been employed by CCC since 1989, and has held various accounting positions since joining Cronos including Controller, Director of Accounting and Corporate Accounting Manager. From 1985 to 1989, Mr. Kallas was an accountant with KPMG Peat Marwick, San Francisco.

Mr. Kallas holds a Masters degree in Finance and Business Administration from St. Mary's College, a B.S. degree in Business Administration/Accounting from the University of San Francisco and is a certified public accountant.

Elinor A. Wexler Ms. Wexler, 56, as Vice President - Administration and Secretary of CCC is responsible for investor services, compliance and securities registration. Ms. Wexler joined the Board of Directors of CCC in June 1997 and has been employed by CCC since 1987. From 1983 to 1987, Ms. Wexler was Manager of Investor Services for The Robert A. McNeil Corporation, a real estate syndication company, in San Mateo, California. From 1971 to 1983, Ms. Wexler held various positions, including securities trader and international research editor, with Nikko Securities Co., International, based in San Francisco.

Ms. Wexler attended the University of Oregon, Portland State University and the Hebrew University of Jerusalem, Israel. Ms. Wexler is also Vice President and Secretary of Cronos Securities Corp. and a Registered Principal with the NASD.

John M. Foy Mr. Foy, 59, was elected to the Board of Directors of CCC in April 1999. See key management personnel of the Leasing Company for further information.

The key management personnel of the Leasing Company and its affiliates at February 28, 2005, were as follows:

Name	Title
Peter J. Younger	Chief Operating Officer/Chief Financial Officer
John M. Foy	Senior Vice President/Pacific Region
Nico Sciacovelli	Senior Vice President/South Atlantic Region
John C. Kirby	Senior Vice President/North Atlantic Region

Peter J. Younger Mr. Younger, 48, as Chief Operating and Financial Officer of The Cronos Group, is responsible for the operating activities of The Cronos Group and its subsidiaries. Mr. Younger was re-elected to the Board of Directors of The Cronos Group at the 2004 annual meeting of The Cronos Group's shareholders. Mr. Younger will serve as a director until the 2007 annual meeting and his successor is elected and takes office. Mr. Younger was appointed as Chief Operating Officer of The Cronos Group on August 4, 2000, and its Chief Financial Officer in March 1997. Mr. Younger has been employed by Cronos since 1987 and is based in San Francisco. Mr. Younger has held various accounting and financial positions since joining Cronos in 1987, including Vice President of Finance for the Leasing Company, located in the UK, and Vice President and Controller for CCC in San Francisco. Prior to 1987, Mr. Younger was a certified public accountant and a principal with the accounting firm of Johnson, Glaze and Co. in Salem, Oregon. Mr. Younger holds a B.S. degree in Business Administration from Western Baptist College, Salem, Oregon.

John M. Foy Mr. Foy, 59, as Senior Vice President, is directly responsible for the Leasing Company's lease marketing operations in the Pacific region covering the US west coast, Asia, Australia and New Zealand. Mr. Foy joined Cronos in 1985 and is based in San Francisco. From 1977 to 1985 Mr. Foy was Vice President of Marketing for Nautilus Leasing Services in San Francisco with responsibility for worldwide leasing activities. From 1974 to 1977, Mr. Foy was Regional Manager for Flexi-Van Leasing, a container lessor, with responsibility for container leasing activities in the Western United States. Mr. Foy holds a B.A. degree in Political Science from University of the Pacific, and a Bachelor of Foreign Trade from Thunderbird Graduate School of International Management.

Nico Sciacovelli Mr. Sciacovelli, 55, as Senior Vice President, is directly responsible for the Leasing Company's lease marketing operations in the South Atlantic region, including Southern Europe, South America, the Middle East, Africa and the Indian sub-continent. Mr. Sciacovelli joined Cronos in 1983 and is based in Italy. Since joining Cronos in 1983, Mr. Sciacovelli served as Director and Area Manager for Southern Europe, the Middle east and Africa. Prior to joining Cronos, Mr. Sciacovelli was a Sales Manager for Interpool Ltd., a container and chassis lessor.

John C. Kirby Mr. Kirby, 51, as Senior Vice President, is directly responsible for the Leasing Company's lease marketing operations in the North Atlantic region, including Northern Europe, the US east coast, and Scandinavia. Mr. Kirby is also responsible for the Leasing Company's corporate operations and is involved with container purchasing, contract and billing administration, container repairs and leasing-related systems. Mr. Kirby joined CCC in 1985 and is based in the United Kingdom. Since joining Cronos in 1985, Mr. Kirby served as European Technical Manager, Director of European Operations and Senior Vice President/Operations of the Leasing Company. From 1982 to 1985, Mr. Kirby was a Technical Manager with CLOU Containers, a container leasing company based in Hamburg, Germany. Mr. Kirby acquired a professional engineering qualification from the Mid-Essex Technical College in England.

Audit Committee

The Registrant is governed by CCC pursuant to the terms and provisions of its Partnership Agreement. The business of CCC, in turn, is supervised by its board of directors, consisting of Dennis J. Tietz, John Kallas, Elinor A. Wexler and John M. Foy. All of the members of CCC's board of directors are officers of CCC and therefore are not "independent" as defined by the rules of the SEC. The board of directors of CCC oversees the accounting and financial reporting processes of the Registrant and the audits of the financial statements of the Registrant.

Audit Committee Financial Expert

The board of directors of CCC has determined that John Kallas, a member of CCC's board, qualifies as an audit committee financial expert within the meaning of the rules of the SEC. CCC's board has made this judgment by reason of Mr. Kallas' experience and training, described above in Mr. Kallas' biography, under the listing of officers and directors of CCC. Because Mr. Kallas is an officer of CCC, he is not considered "independent" within the meaning of the rules of the SEC.

Code of Ethics

CCC has adopted a Code of Ethics (the "Code") that applies to the senior officers of CCC, including the officers identified above. The Code is designed to promote honest and ethical conduct by such officers in their management of the business of CCC, including its activities as general partner of the Registrant; the full and fair disclosure in the reports and documents CCC prepares for and on behalf of the Registrant; and compliance with applicable governmental laws, rules, and regulations. The Code provides a mechanism for the reporting of violations of the Code and measures to enforce adherence to the Code. A copy of the Code may be requested, without charge, from:

Cronos Capital Corp.
The General Partner
Attention: Corporate Secretary
One Front Street, Suite 925
San Francisco, CA 94111
(415) 677-8990
ir@cronos.com

Section 16(a) Beneficial Ownership Reporting Compliance

The Registrant has followed the practice of reporting acquisitions and dispositions of the Registrant's units of limited partnership interests by CCC, its general partner. As CCC did not acquire or dispose of any of the Registrant's units of limited partnership interests during the fiscal year ended December 31, 2004, no reports of beneficial ownership under Section 16(a) of the Securities Exchange Act of 1934, as amended, were filed with the SEC.

Item 11. Executive Compensation

Partnership distributions are paid to its partners (general and limited) from distributable cash from operations, allocated 95% to the limited partners and 5% to the general partner. Distributions of sales proceeds are allocated 99% to the limited partners and 1% to the general partner. The allocations remain in effect until such time as the limited partners have received from the Partnership aggregate distributions in an amount equal to their capital contributions plus an 8% cumulative, compounded (daily), annual return on their adjusted capital contributions. Thereafter, all Partnership distributions will be allocated 85% to the limited partners and 15% to the general partner.

The Registrant will not pay or reimburse CCC or the Leasing Company for any remuneration payable by them to their executive officers, directors or any other controlling persons. However, the Registrant will reimburse the general partner and the Leasing Company for certain services pursuant to the Partnership Agreement. These services include but are not limited to (i) salaries and related salary expenses for services which could be performed directly for the Registrant by independent parties, such as legal, accounting, transfer agent, data processing, operations, communications, duplicating and other such services; (ii) performing administrative services necessary to the prudent operations of the Registrant.

The following table sets forth the fees the Registrant paid (on a cash basis) to CCC or the Leasing Company ("CCL") for the year ended December 31, 2004.

Name	Description	Cash Fees and Distributions
1) CCL	Base management fees - equal to 7% of gross lease revenues attributable to operating leases pursuant to Section 4.3 of the Limited Partnership Agreement	\$ 905,555
2) CCC	Reimbursed administrative expenses - equal to the costs expended by CCC and its affiliates for services necessary to the prudent operation of the Registrant pursuant to Section 4.4 of the Limited Partnership Agreement	\$ 90,441
CCL		\$ 627,164
3) CCC	Interest in Fund - 5% of distributions of distributable cash for any quarter pursuant to Section 6.1 of the Limited Partnership Agreement	\$ 380,172

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

(a) Security Ownership of Certain Beneficial Owners

There is no person or "group" of persons known to the management of CCC to be the beneficial owner of more than five percent of the outstanding units of limited partnership interests of the Registrant.

(b) Security Ownership of Management

The Registrant has no directors or officers. It is managed by CCC. CCC owns five units, representing 0.00007% of the total amount of units outstanding.

(c) Changes in Control

Inapplicable.

Item 13. Certain Relationships and Related Transactions

(a) Transactions with Management and Others

The Registrant's only transactions with management and other related parties during 2004 were limited to those fees paid or amounts committed to be paid (on an annual basis) to CCC, the general partner, and its affiliates. See Item 11, "Executive Compensation," herein.

(b) Certain Business Relationships

Inapplicable.

(c) Indebtedness of Management

Inapplicable.

(d) Transactions with Promoters

Inapplicable.

Item 14. Principal Accountant Fees and Services

CCC, on behalf of the Registrant has appointed Deloitte & Touche LLP as the Registrant's independent auditor for the fiscal year ending December 31, 2004. CCC's board of directors has the authority to pre-approve audit related and non-audit services on behalf of the Registrant, that are not prohibited by law, to be performed by the Registrant's independent auditors.

Audit Fees

Audit fees represent fees for professional services provided in connection with the audit of the Registrant's financial statements and review of its quarterly financial statements and audit services provided in connection with its statutory or regulatory filings. The Registrant incurred fees of \$47,028 and \$46,797 during the fiscal years ending December 31, 2004 and 2003, respectively, for these audit services.

Audit-Related Fees

The Registrant did not incur audit-related fees during the fiscal years ending December 31, 2004 and 2003. Typically, audit-related fees, if incurred, would consist of fees for accounting consultations and other attestation services.

Tax Fees

The Registrant did not incur tax fees during the fiscal years ending December 31, 2004 and 2003. Typically, tax fees, if incurred, would consist of fees for compliance services, tax advice and tax planning.

All Other Fees

The Registrant did not incur any other fees for services provided by its independent auditor during the fiscal years ending December 31, 2004 and 2003.

PART IV

Item 15. Exhibits and Financial Statement Schedules
