Collateral Analysis

NOTES:

With respect to any particular row, only loans satisfying the stipulationsd in Columns A, B and C of that row (the "Line Item Loans") should be evaluated when providing the information required by Columns E through Q in each row. Therefore, all percentage information (*except for Column D*) requested in each row should use the total Line Item Loans relating to that particular row in the denominator.

Each of the Total rows under each of the sub-group strats requested should compute the totals for each column using the total number of loans satisfying the particular sub-group.

If the deal is an "H" structure, *PLEASE GENERATE STRATS ONLY ON COLLATERAL THAT COULD GENERATE LOSSES TO OUR TRANCHE*

NOTES:

With respect to any particular row, only loans satisfying the stipulationsd in Columns A, B and C of that row (the "Line Item Loans") should be evaluated when providing the information required by Columns E through Q in each row. Therefore, all percentage information (*except for Column D*) requested in each row should use the total Line Item Loans relating to that particular row in the denominator.

Each of the Total rows under each of the sub-group strats requested should compute the totals for each column using the total number of loans satisfying the particular sub-group.

If the deal is an "H" structure, *PLEASE GENERATE STRATS ONLY ON COLLATERAL THAT COULD GENERATE LOSSES TO OUR TRANCHE*

Stress Run 1:
Provide A/L and duration assuming a stepdown fail at 50%, 75% and 100% of pricing speed.

Stress Run 2:
Run to forward libor
Solve iteratively for peak cdr that results in first dollar of loss associated with the vector below
CDR ramp: 0 cdr (1-6 months)
25% peak (7-12)
50% peak (13-24)
75% peak (25-36)

Trigger Fail
Run to Maturity
Defaults are in addition to prepayments
Principal and Interest Advanced
Run at 75% pricing speed for fixed rate loans
Solve for CDR "break" that results in first dollar of principal loss. This case is iterative because it asks that you find the cdr curve (above) such that results in a "break".

The BANK of NEW YORK

Securities Lending Division

SUBPRIME ABS/MBS PURCHASE GUIDELINES

DATE: May 10, 2005

CONTACT: Robert W. Pierson
212-804-5019

In order to facilitate the discussions, between the Cash Reinvestment Desk, at the Bank of New York's Securities Lending Division, and the brokers issuing new Subprime Asset Backed Securities, we have created the below guidelines of the types of securities we will be looking for:

Structure (Mandatory):

- The Subprime Asset Backed Securities will be secured by or represent an undivided interest in the Collateral;
- The prospective tranche will have a AAA rating from two (2) of either Moody's, S&P or Fitch;
- The prospective tranche will have an approximate one (1) year average life;
- The prospective tranche will have an approximate 24 month payment window;
- The Settlement Price will be equal to 100.00%, multiplied by the principal amount of the Securities delivered;
- The Payment Delay will be Zero (0) days;
- The Securities will be DTC eligible;
- The Bank of New York will not purchase more than 30% of the total amount of the Mortgage Pass-Through Certificates (including any non-offered tranches);
- The Trust Tax Status is to be a REMIC or Owners Trust;
- The Securitization Trust Status is to be a QSPE;
- The Governing Law is to be New York or Delaware.
- The Credit Enhancement will be Senior / Subordinate.
- The Bonds will have a "LIBOR SWAP" or a "Yield Maintenance Agreement/Cap Contract", which covers the prospective tranche, to partially mitigate basis risk shortfalls. Both the Swap and the Cap Contract will begin on the settlement date and expire no earlier than the 12th month past the payment window of the prospective tranche. If the margin between the Cap Contract ceiling rate and the 3 year SWAP MID rate (as displayed on the USSWAP page on BB) is **less** than 500 bps, then the Trust will purchase a hedge to remove the ceiling on the imbedded Cap Contract, from settlement, through the end of the 12th month, following the payment window.
- Second Mortgages will not make up more than 10% of the underlying pool of collateral.

Pool Characteristics (General Guidelines):

The below guidelines are General Guidelines we use when evaluating collateral pools and the actual characteristics may very depending on other compensating characteristics. The only guideline that may not vary is the limit on second lien mortgage in the collateral pool, which **cannot exceed 10%**. The Collateral Pool supporting the prospective tranche will have the following characteristics.

- The Maximum Weighted Average Original Loan Size will be <$275,000;
- The Maximum Geographic Concentration for California will be <= 50%;
- The Maximum Geographic Concentration for Northern California and/or any other individual state will be <= 20%:
- The Minimum Owner Occupied Concentration will be >= 85%;
- The Maximum Weighted Average LTV will be <= 85%;
- The Maximum amount of "Silent Second" Loans will be <25%, with no individual Combined Loan to Value Ratio (including the Silent Seconds) >100%. In addition, the Weighted Average CLTV of the entire pool of mortgages (including the Silent Seconds) will not be >92.5%;
- The Weighted Average FICO score will be >600, with a Minimum >500;
- The Maximum Amount of Interest Only Loans <=25%, if the average FICO score of the IO loans is less than 640. If the average FICO score of the IO loans is greater than 640, there is no limit;
- The Minimum Amount of Full Documentation Loans >=50%;

Please keep in mind that the above General Guidelines for the Pool Characteristics are just that, General Guidelines. We can be flexible on each item, given our overall view of the pool. However, the amount of second lien mortgages in the pool **cannot exceed 10%.**
