2. Business Lines

There has been no material change in information regarding Business Lines of our group (the Company and its affiliated companies) during the current interim consolidated accounting period.

3. State of Affiliated Companies

In the current interim consolidated accounting period, since Scalar Corporation which was an equity method affiliated company, sold all the shares owned by the Company, it is no longer an affiliated company.

4. State of Employees

(1) State of Consolidated Companies

(as of September 30, 2005)

Business Segments	Number of employees
Manufacturing and sales of industrial materials etc.	1,004
Other businesses	10
Total	1,014

Note: The number of employees indicates full-time employees and does not include part-time and temporary employees.

(2) State of the Submitting Company

(as of September 30, 2005)

Number of Employees	766
---------------------	-----

Note: The number of employees indicates full-time employees and does not include part-time and temporary employees.

(3) Labor Union

There is no material matter concerning the labor-management relationship.

2. Condition of Business

1. Outline of Business Performance, etc.

(1) Performance

The economic situation during the interim consolidated accounting period has been on the trend of gradual recovery due to an improvement in business results and increase in capital investment by the companies.

On the other hand, in the industries in which the Company is involved, recovery of demand was not strong as a result of an increase in material prices due to the sharp rise in crude oil prices and continued inventory adjustments of IT-related products.

In this environment, our group (the Company, consolidated subsidiaries and the equity method affiliated companies) concentrated management resources in the fields of electronic materials and display materials from among the business of manufacturing and sales of industrial materials and made efforts at speed-up of development of new products as well as streamlined management resources and promoted thorough cost reductions. Due to a delay in inventory adjustments and tougher competition, however, sales in the fields of electronic materials and display materials largely decreased from the previous interim consolidated accounting period.

As a result, our performance during the current interim consolidated accounting period amounted to sales of ¥22,146 million, representing a revenue decrease of 30.7% over the previous interim consolidated accounting period. Operating profits decreased by 63.2% from the previous interim consolidated accounting period to ¥2,117 million due to the decrease in sales and selling prices. Ordinary profits recorded ¥2,954 million, a decrease by 54.9% from the previous interim consolidated accounting period and interim net profit decreased by 53.8% as compared to the previous interim consolidated accounting period to ¥1,897 million.

Performance of segments by type of business was as follows and the stated amount is the amount before elimination between segments or before elimination of transactions among all the companies.

1) Business of Manufacturing and Sales of Industrial Materials, etc.

In the field of electronic materials, the business of manufacturing and sales of industrial materials, etc., due to a decrease in sales of flexible printed board materials resulted from tougher competition, net sales decreased by 22.7% (amount of orders received decreased by 26.7% to ¥12,183 million, and production output decreased by 25.5% from the previous interim consolidated accounting period on a non-consolidated basis of the submitting company) from the previous interim consolidated accounting period.

In the field of display materials, due to the decrease in demand for Fresnel lenses and anti-reflection plates as a result of a deterioration in the projection TV market, net sales were ¥4,755 million, a decrease of 57.0% (amount of orders received decreased by 61.2% to ¥4,862 million, production output decreased by 51.9% from the previous interim consolidated accounting period on a non-consolidated basis of the submitting company) from the previous interim consolidated accounting period.

In the fields of electric insulation materials, industrial-use structural materials and related products, net sales recorded ¥4,806 million, an increase of 2.9% from the previous interim consolidated accounting period.

As a result, overall sales increased by 30.9% over the previous interim consolidated accounting period, to ¥21,850 million and operating profit reached ¥2,079 million, which was a decrease of 63.8% over the previous interim consolidated accounting period.

2) Other Business

Net sales from driving ranges and sales of sports recreation equipment decreased due to sluggish market conditions. In order to respond to this situation, the group made efforts to streamline management, including thorough review and reductions in selling expenses.

As a result, net sales decreased by 8.7% from the previous interim consolidated accounting period to ¥297 million, but operating profit recorded an increase of 95.1% to ¥42 million over the previous interim consolidated accounting period.

The category for regional segments does not apply as our corporate group only engages in business within Japan.

It should also be noted that the amounts of sales, orders and the like stated in this section do not include the amount of consumption and local consumption tax, etc.

(2) Cash Flows

Cash and cash equivalents (hereinafter referred to as "Funds") during the current interim consolidated accounting period decreased by ¥682 million from the end of the previous interim consolidated accounting period to ¥4,145 million at the end of the current interim consolidated accounting period due to a large decrease of ¥2,930 million in interim net profit before taxes (a decrease of 55.0% over the previous interim consolidated accounting period).

The following is the status and factors of each of the cash flow categories during the current interim consolidated accounting period.

(Cash Flow from Operating Activities)

Cash inflow from operating activities was ¥986 million (a decrease of ¥3,444 million from the previous interim consolidated accounting period) due to a large decrease in interim net profit before taxes.

(Cash Flow From Investing Activities)

Cash inflow from investment activities was ¥230 million (an increase of ¥3,158 million over the previous interim consolidated accounting period) due to a refund of time deposits while there were expenses in connection with the acquisition of tangible fixed assets.

(Cash Flow from Financing Activities)

Cash outflow in financing activities was ¥3,115 million (an increase of ¥1,934 million over the previous interim consolidated accounting period) as a result of expenditures, including dividend payments and purchase of treasury stocks, etc.

2. Manufacturing, Orders and Sales

The group (the Company and its consolidated subsidiaries. The same shall apply hereinafter.) has many different categories of products manufactured and sold, in widely differing areas, and even products of the same type are not necessarily the same in their volume, construction, form or other elements. There are also products which are not manufactured on a produce to order basis, and we do not indicate production volume or order volume in monetary amounts or quantities for each segment by type of business.

For this reason we have indicated the relationships for performance for each segment by type of business in "1. Outline of Business Performance, etc.," with respect to the status of manufacturing, orders and sales.

The following states the percentages of sales by major customer and percentage of total sales during the previous interim consolidated accounting period and the current interim consolidated accounting period.

Customer	Previous interim consolidated accounting period (April 1, 2004 to September 30, 2004)		Current interim consolidated accounting period (April 1, 2005 to September 30, 2005)	
	Amount (thousands of yen)	Ratio (%)	Amount (thousands of yen)	Ratio (%)
Sumitomo Shoji Plastics *2	10,189,056	31.9	7,672,481	34.6
Kuraray	3,775,288	11.8	1,679,497	7.5
Toppan Printing	3,525,231	11.0	605,439	2.7

Notes: 1. The amounts in the above table do not include consumption tax.

*2. Sumitomo Shoji Plastics Co., Ltd. changed its name to Sumitomo Shoji Chemicals Co., Ltd. as of October 1, 2005.

3. Issues Requiring Attention by the Company

There are no material changes regarding subjects that must be dealt with by the group during the current interim consolidated accounting period.

4. Important Agreement, etc., for Operation

No applicable matters.

5. Research and Development Activities

Most of the research and development activities of our group are conducted by the submitting company and the technologies are deployed in the consolidated subsidiaries.

As a technology development company, we concentrate our research and development resources in the fields of electronic materials, display materials, and compound materials, our core segments, based on a flexible organizational structure in order to meet the needs of users, which have undergone diversification and advancement as well as constantly pursuing research and development of new technologies and products, aiming at promotion of technologies and expansion of fundamental technology, taking into consideration the launch of new products and incubation of next generation products and the future.

Examples of electronic materials include fiberglass cloths for printed circuit boards, pre-preg for special printed circuit boards, and FPC (flexible printed circuit board) materials. Examples of display materials include Fresnel lenses for projection TVs, anti-reflective plates, and materials related to three-dimensional images; while for compound materials examples include materials related to super-conductivity, materials for aircraft interiors, electrical insulation materials and materials related to electronics equipment.

As of the end of the interim consolidated accounting period we had 174 personnel involved in research and development activities, and our research and development expenses during this period amounted to ¥1,348 million.

The following are major research achievements in our manufacturing and sales of industrial materials during the current interim consolidated accounting period.

-Development of Materials for New Grade Two-Layered Flexible Printed Boards

In the field of FPC materials, higher density and down-sizing of devices further advanced. In particular, in HDD, development and improvement of ultra-small products has been accelerated. In order to respond to such a trend, the Company continued to develop new products of CCL of two-layered boards consisting of copper foils and polyimide structures without adhesives and applied thinner copper foils and polyimides to develop ultra-thin two-layered boards, which are superior in bending and flexibility. We have already established mass production technologies and it is expected that these will be developed into differentiated products from the products of other companies.

-Development of PET Boards for PDP Electromagnetic Wave Shield

In plasma displays, shield mesh boards for shielding electromagnetic waves, generated by devices have been employed. The Company fully participated in the market with the development of PET boards for shields, which excel in long-term reliability at the highest level in the industry, including hue and transmission. We will bring into view deployment to overseas users in the future in addition to domestic users.

-Development of Ultra-thin Pre-Preg Adhesive Sheet

Ultra-thin pre-preg materials (20 μ m glass cloth, 40 μ m insulation layer) that utilized our unique glass cloth technology and resin composition technology have been employed in board materials for mobile electronic devices due to their differentiated properties, including adhesiveness with FPC materials, workability (chipping away of resin) and non-flaw characteristics.

The Company further developed a response to thinner products and by the establishment of processing technology of 15 μ m glass cloth, having the flatness of film, we have the capability to make insulation layers as thin as 25 μ m and have organized a production system that meets customer demand, which is multipurpose and diversified.

-Anti-reflection Films for PDP (Plasma Display Panel)

In connection with rapid expansion of the PDP market, it is a top priority of the Company to lower the prices of members. The Company has placed on the market anti-reflection films used for the surface of PDP-TVs and in order to meet market demands for price reductions, as compared to the previous type (ARF), we have developed a low-cost type (LRF), which also maintained surface rigidity and anti-reflection properties. They already enjoy a high reputation from users and we are aiming at large scale supplies in the future.

-Development of Large High Definition (HD) Type 3D Monitors

We have developed 3D monitors, using micro poles in various LCD (liquid crystal display) monitors. In the first half, we started development of micro poles for high definition (HD) TVs and carried out trial manufacturing of high definition micro poles while confirming the image by mounting LCD TVs with a 37-inch width, and have commenced a market study.

3. State of Facilities

1. State of Major Facilities

There was no significant change in major facilities during the current interim consolidated accounting period.

2. Plan of New Installation and Retirement, etc., of Facilities

- (1) There were no major changes in connection with new installation of significant facilities during the current interim consolidated accounting period that were in the planning stage as of the end of the previous consolidated fiscal year:
- (2) The following are newly completed major facilities during the current interim consolidated accounting period that were in the planning stage as of the end of the previous consolidated fiscal year.
New installation of electronic materials manufacturing facilities at the Nakatahara Factory of the submitting company in the business of manufacturing and sales of industrial materials was completed in June 2005 and has started operations. New installation of display materials manufacturing facilities at the Nakatahara Factory and new installation of display materials manufacturing facilities at Nakatahara Nishi Factory as well as new installation of industrial-use structural materials manufacturing facilities at Minami Honcho Factory were completed in August 2005 and have started operations.
Since our group has many products that differ in content and form, and since the facilities used for each of these products can be shared, it is very difficult to state the increased capacity of the manufacturing facilities of our group, and for this reason we have omitted entry of this category.
- (3) There were no new plans or retirement plans for significant facilities which have been newly determined in the current interim consolidated accounting period.
