Thunder uses a hedging strategy to mitigate the effects of changes in commodity prices. This strategy is not used to speculate on future prices, but to help stabilize cash flow, thereby protecting the near term capital expenditure budget and cash distributions to unitholders. The strategy calls for the trust to hedge up to 50% of its total production and allows for the use of various hedging techniques including costless collars and net puts with no ceiling.

Thunder Energy Trust is an oil and gas income trust having been created in July 2005 as a component of a plan of arrangement, which combined three entities Thunder Energy Inc., Mustang Resources Inc. and Forte Resources.
