To Our Stockholders

2009: A Year of Record Accomplishments...

We are pleased that CY09 turned out to be an outstanding year for Volterra even though the first half was negatively impacted by macroeconomic forces beyond our control. Revenue grew from \$104.2M in CY08 to \$104.9M in CY09. Non-GAAP earnings per share came in at 67 cents and gross margins increased from 56.8% in CY08 to 60.1% in CY09. This was our ninth consecutive year of revenue growth and sixth consecutive year of profitability.

Several non-financial achievements in CY08 were outstanding as well:

- First, we again achieved world-class product quality levels based on customer assembly results, achieving a very low defect and return rate. We fixed our product quality issues from several years back and have installed processes and systems that impacted our business and improved our customer ratings to world-class levels
- Second, we had another record year of total new products and have started sampling these new products with existing and new customers that will generate revenue in CY10 and beyond
- Third, we gained market share in all four of our markets, server & storage, consumer & portable (notebook), networking & telecom and workstation & desktop (graphics)
- Fourth, we continued to add new customers with Dell in servers along with the other four major OEM's IBM, HP, Sun Microsystems and Fujitsu Technology Solutions. We added HP to our notebook customer list, along with Dell, Lenovo, Sony and Fujitsu
- Fifth, we repurchased \$7.5 million dollars worth of Volterra stock and exited the year with a very healthy cash position of approximately \$74M and zero debt

The Momentum Continues...

The outlook for 2010 is for high growth as the macroeconomic situation continues to improve and new product cycles kick in. We are well positioned in all our market segments to continue market share growth and expect to see this extend beyond 2011.

Server & Storage. As our largest market segment, we see opportunities for market share growth starting in the first half of 2009 on the Intel® Thurley platform and mid 2009 on the AMD® refresh platforms with our existing blue chip customer base. Looking beyond 2009, we continue to see more opportunities for market share gains as new Intel and AMD platforms launch in 2010 and 2011.

Consumer & Portable. We had significant design wins in 2009 and see significant revenue growth opportunities as a result with both existing and new customers. The introduction of Intel's next notebook platform in early 2010 will offer a significant contribution to our growth in this market segment. This is our largest market opportunity and we are very pleased with our progress and prospects for the future.

Networking & Telecom. This market continues to bring us steady growth with nice profit margins as we maintain our lead in the high-end router market and expand into both new applications and new customers.

Workstations & Desktop. We saw market share gains in high-end graphic, performance and high end mainstream cards in 2009. We expect continued growth as the economy recovers and consumers return to more normalized purchasing patterns. However, we are planning for this volatile segment to become an increasingly smaller piece of the revenue pie as our growth is mainly driven by our other 3 market segments.

Overall, I am extremely excited and optimistic about our business opportunities going forward as the macroeconomic situation continues to improve and our industry rebounds.

Thank You For Your Continued Support

I would like to thank all of our investors for their continued support. I would also like to offer a sincere thank you to all of our employees. Without their hard work and dedication we would not be where we are today.

Jeffrey Staszak
President & CEO

(State or other jurisdiction of incorporation or organization)

94-3251865

(I.R.S. Employer Identification No.)

47467 Fremont Blvd.

Fremont, CA 94538

(Address of principal executive offices, including zip code)

(510) 743-1200

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class

Name of Each Exchange on Which Registered

Common Stock, \$0.001 par value per share

Nasdaq Global Select Market

Securities registered pursuant to Section 12(g) of the Act:

None

Indicate by check mark whether the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark whether the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Regulation S-T during the preceding 12 months (or such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. (See definition of "large accelerated filer," "accelerated filer," and "smaller reporting company" in Rule 12b-2 of the Exchange Act).

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

The aggregate market value of the voting stock held by non-affiliates of the registrant based upon the closing price of the common stock listed on the Nasdaq Global Select Market on June 30, 2009, the last business day of the registrant's most recently completed second quarter, was \$205,220,940, based on a closing price of \$13.14 per share. Shares of the registrant's common stock held by current executive officers and directors and by each person known by the registrant to own 5% or more of the outstanding common stock have been excluded from this computation in that such persons may be deemed to be affiliates of the registrant. Share ownership information for certain persons known by the registrant to own greater than 5% of the outstanding common stock for purposes of the preceding calculation is based solely on information on Schedule 13G filed with the Commission. This determination of affiliate status is not a conclusive determination for other purposes.

As of January 31, 2010, there were 25,823,371 shares of the registrant's common stock outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's definitive Proxy Statement for the 2010 Annual Meeting of Stockholders to be filed with the Securities and Exchange Commission pursuant to Regulation 14A not later than 120 days after the end of the fiscal year covered by this Form 10-K, are incorporated by reference in Part III, Items 10-14 of this Form 10-K.

Cautionary Note Regarding Forward-Looking Statements

This annual report on Form 10-K contains forward-looking statements that involve many risks and uncertainties. These statements relate to future events and our future performance and are based on current expectations, estimates, forecasts and projections about the industries in which we operate and the beliefs and assumptions of our management. In some cases, you can identify forward-looking statements by terms such as “would,” “could,” “may,” “will,” “should,” “expect,” “intend,” “plan,” “anticipate,” “believe,” “estimate,” “predict,” “potential,” “target,” “seek,” or “continue,” the negative of these terms, or other variations of such terms. In addition, any statements that refer to projections of our future financial performance, our anticipated growth and trends in our business and other characterizations of future events or circumstances, are forward-looking statements. These statements are only predictions based upon assumptions made that are believed to be reasonable at the time, and are subject to risk and uncertainties. Therefore, actual events or results may differ materially and adversely from those expressed in any forward-looking statement. In evaluating these statements, you should specifically consider the risks described under Item 1A “Risk Factors” and elsewhere in this Form 10-K. These factors may cause our actual results to differ materially from any forward-looking statements. Except as required by law, we undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

PART I

Item 1. *Business*

We design, develop, and market proprietary, high-performance analog and mixed-signal power management semiconductors for the computing, storage, networking, and consumer markets. Our products are integrated voltage regulator semiconductors and scalable voltage regulator semiconductor chipsets that transform, regulate, deliver, and monitor the power consumed by digital semiconductors. Through our proprietary power system architecture and mixed-signal design techniques, we have integrated power, analog, and digital circuits onto a single complementary metal oxide silicon, or CMOS, semiconductor, thereby eliminating the need for a large number of discrete components required by conventional power management solutions.

Analog and Mixed-Signal Semiconductor Market

Semiconductor components are the building blocks of electronic systems. Semiconductors are generally classified as either “digital” or “analog.” Digital semiconductors, such as microprocessors, graphics processors, digital signal processors, and memory, are used to process and store data in a binary format, using electrical signals to represent the binary digits, “1” and “0.” Analog semiconductors, such as voltage regulators and temperature sensors, monitor, regulate, or transform physical properties, including voltage, current, temperature, pressure, weight, light, sound or speed, using electrical signals that have a continuous range of values. Electronic systems rely on analog semiconductors to provide the interface between digital semiconductors and the physical world. Mixed-signal semiconductors combine elements of both analog and digital semiconductors, but are generally classified as analog semiconductors because of their analog content.

The market for analog and mixed-signal semiconductors differs from the digital semiconductor market in several significant respects. Digital semiconductors provide processing functions in electronic systems and are therefore often optimized for a particular application or market. Analog and mixed-signal semiconductors are often used in a wider variety of applications and markets where different users have unique requirements regarding performance specifications such as size, speed, accuracy, and efficiency. As a result, the analog and mixed-signal semiconductor market is highly fragmented, providing smaller companies an opportunity to compete successfully against larger suppliers in certain market segments. Analog and mixed-signal semiconductors also generally have longer product life cycles than digital semiconductors. The market for digital semiconductors is usually characterized by rapid design cycles and shorter product life cycles. In addition, while digital semiconductors typically gain the performance benefit of leading-edge manufacturing process

technologies, analog and mixed-signal semiconductor companies typically benefit from lower capital requirements through the use of more mature manufacturing process technologies. Analog and mixed-signal semiconductor design has traditionally been more dependent on individual design engineers who have the training and experience to design complex analog and mixed-signal semiconductors.

Moore's Law, which refers to the observation that the number of transistors per semiconductor doubles every 18 months, is facilitating the development of faster and more complex digital semiconductors at prices which allow their proliferation in a broad variety of electronic systems. As digital semiconductors become more advanced, the analog and mixed-signal semiconductors that interface with them must also operate with greater speed, accuracy, and efficiency. These factors, coupled with growth in the electronic equipment markets, are driving growth in the analog and mixed-signal semiconductor market.

Power Management Semiconductor Market

Every digital semiconductor requires power to operate. This power is delivered by one or more analog semiconductors known as power management semiconductors. These power management semiconductors transform, regulate, and monitor power throughout electronic systems. Advances in digital semiconductors require power management solutions with higher performance, measured by greater speed, accuracy, and efficiency. In addition, the demand for smaller electronic devices is driving the need for power management solutions that deliver increased performance but are smaller in size. At the same time, the increased complexity of electronic systems is causing electronic system designers to adopt a distributed system power architecture that requires a larger number of power management semiconductors to meet the varied power requirements throughout the system. We believe these trends exist across multiple electronic equipment markets and are driving demand for greater quantities of more sophisticated power management solutions, and we believe our products have the features and technological advantages to meet and address this demand.

As Moore's Law suggests, the size of each transistor is decreasing as the number of transistors per semiconductor continues to increase. Smaller transistors require lower operating voltages that must be delivered with greater accuracy. At the same time, semiconductors are operating at faster speeds to achieve higher performance levels. More transistors and higher speeds require higher current and a more dynamic power supply. This means new power management solutions must be capable of supporting lower voltages with improved accuracy, higher currents, and faster dynamic response.

Today, high-performance computing, storage, and networking systems use advanced digital semiconductors with greater processing power and therefore require more sophisticated power management solutions. However, with advances in manufacturing process technology, more advanced digital semiconductors can be offered at lower prices and, therefore, are being used in a wider variety of higher-volume applications, such as consumer electronic devices that incorporate audio, image, video and data processing, and wireless communication capabilities. As a result, a broader variety of electronic equipment will require new power management solutions.

Our Solution

Our proprietary, high-performance analog and mixed-signal power management semiconductors target the computing, storage, networking, and consumer markets where power management requirements are particularly challenging. The benefits of our solution to our customers include:

- ***Small Form Factor.*** Our proprietary system architecture integrates the functions of controllers, power transistors, and drivers found in conventional solutions and significantly reduces the quantity and size of the remaining external components, such as inductors and capacitors;
- ***High Performance.*** Our power management solutions are designed to meet or exceed the demanding power requirements of advanced digital semiconductors in a cost-competitive manner;
- ***Complete System-Level Solutions.*** Our highly-integrated products, extensive reference designs and system-level applications expertise enable our customers to incorporate our solutions into electronic systems quickly and easily;

- **Scalability.** Our solutions are scalable and reduce the complexity, time and cost of system design for our customers; and
- **System Management.** Our solutions provide system-level monitoring and control capabilities.

While we believe that we compete favorably in the markets we serve, we face a variety of challenges as our competitors attempt to maintain or gain market share. In particular, many of our competitors may try to take advantage of the fact that they may have greater name recognition or greater resources than we do. In order to continue to grow our business, we must continue to develop new and innovative product offerings, provide high quality and reliable products, attract and retain qualified engineers, provide superior customer support and be able to manage our operations in an efficient and cost effective manner.

Our Strategy

We are a leading provider of high-performance, highly-integrated analog and mixed-signal power management solutions in the computing, storage, networking, and consumer markets and look to strengthen our market position by pursuing the following strategies:

Extend Our Technology. We intend to continue to develop leading-edge power management technology by enhancing our proprietary power system architecture and advancing our analog and mixed-signal and system-level design capabilities;

Expand Our Presence in Our Existing Markets and Enter into New Markets. We intend to continue providing power management solutions in our current markets and in new markets where power management is critical;

Focus on Strategic Customers. We focus on developing relationships with strategic customers that are leaders in their respective markets;

Build Relationships with Leading Developers of Advanced Digital Semiconductors. We intend to continue building relationships with leading developers of advanced digital semiconductors that are driving demand for new power management solutions; and

Expand Our Engineering Team. We intend to continue to attract and retain qualified engineers with experience in the design of analog and mixed-signal semiconductors and expertise in power system and applications engineering.

Our Products and Markets

Our analog and mixed signal power management semiconductor products are primarily used in applications that require peak voltage regulating performance, such as data networking equipment, desktop and notebook computers, digital televisions, digital video recorders, or DVRs, game consoles, enterprise storage equipment, graphics cards, hard disk drives, printers, raid cards, servers, telecommunications equipment, base stations and workstations.

We offer integrated voltage regulator semiconductors, which includes our VT100, VT200, and VT300 products, and scalable voltage regulator semiconductor chipsets, which includes our VT1000 and VT1300 products. We classify our product families by specifications such as input voltage and output voltage, both measured in Volts, and maximum current, measured in Amperes, or Amps. We continually develop new products and new generations and versions of our existing products to improve product performance and features while reducing system cost and size.

The demand for our products depends on many factors, such as our ability to introduce new products in a timely manner, the introduction of competing products, our pricing strategies and the pricing strategies of our

competitors, or a decline in demand for the electronic systems into which our products are incorporated, or macroeconomic factors, such as downturns in the economy or the semiconductor industry in general.

Customers, Sales and Marketing

The electronics manufacturing industry is complex and disaggregated, with many electronic system designers utilizing distributors and outsourced suppliers to provide procurement, manufacturing, design, and other supply chain related services within the industry. We sell our products primarily to original equipment manufacturers, or OEMs, original design manufacturers, or ODMs, contract equipment manufacturers, or CEMs, and merchant power supply manufacturers, directly through our internal sales force and indirectly through distributors and outsourced suppliers.

Although our key customer base has grown and we expect it to continue to broaden, our sales are concentrated with a relatively small group of customers. In 2009, IBM, Promate, and Silicon Application Corp. each accounted for over 10% of our net revenue, and collectively accounted for 65% of our net revenue. In 2008, IBM, Metatech, and Sabre each accounted for over 10% of our net revenue, and collectively accounted for 71% of our net revenue. In 2007, IBM, Metatech, Sabre and EIL Company each accounted for more than 10% of our net revenue, and collectively accounted for 81% of our net revenue. See Item 8 “Financial Statements and Supplementary Data” below for information on our net revenue, profit and loss, and total assets.

A significant portion of our revenue is derived from international sales. We sell our products to customers in North America directly through our internal sales force, and sell our products to international customers both directly through our internal sales force and indirectly through distributors. International sales comprised 98%, 98% and 96% of our net revenue in 2009, 2008 and 2007, respectively. We report our net revenue by geographic areas according to the destination to which our products are shipped, although such geographic area may not be the same geographic area in which such product is ultimately used. A further description of this geographic breakdown is included in Note 2(f) to our consolidated financial statements included in Item 8 “Financial Statements and Supplementary Data” below.

Our products are generally incorporated into a customer’s product early in the design phase. Once our products have been designed to perform a specific power management function in our customer’s system, we typically are the sole source supplier for that function. Our applications engineers provide technical support and assistance to customers in designing, testing, and qualifying systems that incorporate our products. We invest significant time and resources in working with electronic system designers to get our products designed into their systems, but if such investment of time and money is unproductive and electronic system designers do not design our products into their systems, the amounts expended in this investment would be unrecoverable and our business would be materially and adversely affected. In addition, we often incur significant expenditures in the development of a new product line without any assurance that a market for such product will develop or that electronic system designers will select our product for use in their systems. If we incur such expenditures and fail to identify customers or applications for such product, our operating results will be adversely affected.

Although in general we do not view our business as being seasonal, our operating results could be negatively impacted during the first quarter of each year due to the lunar New Year holidays in Asia, during which time many of our customers, manufacturers, and subcontractors cease or significantly reduce their operations. In addition, we may see higher sales in the second half of the year, as sales in higher-volume applications that we could target such as desktop and notebook computers, digital cameras, digital televisions, digital video recorders, or DVRs, game consoles, graphics cards, hard disk drives, printers and set-top boxes are generated in anticipation of the December holiday season.

Manufacturing, Assembly and Test

We design and develop our proprietary products and utilize third-party foundries and assembly and test subcontractors to manufacture, assemble and test these products. By outsourcing our manufacturing, we believe that we are able to reduce our capital requirements, lower our fixed costs and product costs, and focus our

resources on the design, development and marketing of our products. In addition, we benefit from our suppliers' manufacturing expertise and from the flexibility to select those vendors that we believe offer the best capability and value.

Our mixed-signal power management semiconductors are manufactured on processes based on widely-available, mature, standard CMOS technologies. This enables us to produce cost-effective products and allows us to source our semiconductors from multiple foundries. Following fabrication, our production silicon wafers are shipped to our assembly and test subcontractors where they are assembled into packages and electronically tested. We have multiple sources for subcontract assembly and test services. In 2009, our principal foundries and assembly and test subcontractors were located in South Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and China.

We have designed and implemented a structured product development process, which is consistent with ISO 9001 specifications, and a quality management system to provide the framework for quality, reliability, and manufacturability of our products. To ensure consistent product quality, reliability, and yield, we closely monitor the production cycle by reviewing electrical, parametric, and manufacturing process data from our foundries and assembly and test subcontractors. The manufacturing process of our products is technically challenging, however, and may create defects that are difficult to detect. If we deliver poor quality products, our operating results and financial position could be materially impacted if we suffer a reduction in or deferral of our revenue as a result of excessive product returns, if we incur substantial product replacement costs, if we are required to incur significant manufacturing or development costs to improve our quality, or if we have to rework or scrap returned inventory.

We believe we have the resources in place and sufficient manufacturing capacity at our subcontractors through our multiple sources of silicon wafer fabrication, assembly, and test to support our anticipated production requirements. However, none of these third-party vendors are obligated to perform services or supply products to us for any specific period, or in any specific quantities, except as may be provided in a particular purchase order. If we do not successfully manage these relationships, the quality and volume of products shipped to our customers may decline, which would damage our relationships with customers, decrease our net revenue and negatively impact our growth.

To ensure availability of our products for our customers, we typically start the manufacturing of our products based on forecasts provided by these customers in advance of receiving purchase orders. However, these forecasts do not represent binding purchase commitments, and we do not recognize revenue from these products until they are shipped to the customer after receipt of a firm purchase order. In addition, because we sell a substantial portion of our products to distributors and outsourced suppliers and not directly to electronic system designers, we have more limited visibility into ultimate product demand, which makes forecasting more difficult for us. We incur inventory and manufacturing costs in advance of anticipated revenue. If the amount of inventory we are holding increases or our inventory turns decrease, the risk of a potential inventory write-down and adverse impact on our financial results increases. Similarly, if we underestimate demand, we may not have sufficient product inventory and may lose market share and damage customer relationships, which also could harm our business.

Research and Development

Our research and development efforts are focused on strengthening our market position by continually enhancing our proprietary power system architecture and expanding our mixed-signal and system-level design capabilities, as well as advancing our CMOS wafer fabrication process expertise and enhancing our packaging technologies. Through these efforts, we seek to introduce new products to address new market opportunities, to further reduce our design and manufacturing cost and to continue to improve the cost effectiveness, size, and performance of our solutions. If we are unable to identify and develop new products or new generations and versions of our existing products that achieve market acceptance on a timely and cost-effective basis, and to respond to changing requirements, our business, operating results and financial condition would be negatively affected.

We have assembled a team of highly skilled engineers who have expertise in analog and mixed-signal design, power system design, process engineering, and package engineering to collaborate on research and development efforts. We have established a separate, dedicated group within our research and development organization that maintains forward-looking focus on new product architectures and future technologies. This group works closely with our customers, partners, and suppliers to align technology roadmaps and conduct extensive research to enhance our future products.

Research and development expense was \$26.6 million, \$26.1 million and \$23.3 million in 2009, 2008 and 2007, respectively. We intend to invest a significant amount of resources into research and development activities in the future, and expect to fund the cost of these activities from current cash balances and funds generated from operations.

Intellectual Property

We rely primarily on our patents, trade secret laws, contractual provisions, licenses, copyrights, trademarks, and other proprietary rights to protect our intellectual property. As of December 31, 2009, we had 55 issued patents and 36 patent applications pending in the United States, and nine foreign patent applications pending. These patents have expiration dates ranging from December 2017 to July 2027. We are currently pursuing additional patent applications. We cannot guarantee that our pending patent applications will be approved, that any issued patents will protect our intellectual property or will not be challenged by third parties, or that the patents of others will not have an adverse effect on our ability to do business.

Despite our efforts to protect our proprietary rights, unauthorized parties may attempt to obtain, copy, or use information that we regard as proprietary, such as product design and manufacturing process expertise. Competitors may also recruit our employees who currently have or had access to our proprietary technologies. Any efforts that we take or measures that we implement to prevent misappropriation or infringement of our intellectual property may not be successful. In November 2008, we filed a lawsuit in the United States District Court in the Northern District of California against Primarion, Inc., Infineon Technologies AG and Infineon Technologies North America Corporation (the "Defendants") for infringement of several of our patents. In December 2008, the Defendants filed an answer generally denying the allegations, and stating affirmative defenses and counterclaims, including claims for declaratory relief for inequitable conduct before the U.S. patent office and for Sherman Act violations. In July 2009, we filed a notice and motion for preliminary injunction and a motion for summary judgment against the Defendants. The hearing was held in September 2009, at which time the court issued a minute order granting the motion for preliminary injunction and denying the motion for summary judgment without prejudice. In November 2009, the court issued a final order reversing the prior minute order.

On January 22, 2010, Infineon Technologies AG filed a lawsuit against us in the United States District Court for the District of Delaware for infringement of four patents assigned to Infineon. Based on our initial review, we believe this lawsuit is without merit. We are currently reviewing the complaint and the asserted patents to defend the Company against this action.

For a more complete description of these legal matters, please read Item 3. Legal Proceedings. Such actions could consume significant financial and other resources, and although we strongly believe in the validity of our positions, there is no guarantee that any such proceedings would be successful on its merits.

The semiconductor industry is characterized by frequent claims of infringement and litigation regarding patent and intellectual property rights. Further litigation may be necessary to enforce our intellectual property rights, or we may have to defend ourselves against additional claims. Any such actions could subject us to significant expense or liability for damages, or could invalidate our proprietary rights, any of which could have a material adverse effect on our business.

Competition

The markets for semiconductors generally, and power management semiconductors in particular, are intensely competitive. Increased competition may result in price pressure, reduced profitability, and loss of

market share, any of which could seriously harm our business, revenue, and operating results. Our ability to compete effectively and to expand our business will depend on a number of factors, including but not limited to:

- our ability to continue to recruit and retain engineering talent;
- our ability to introduce new products in a timely manner;
- the pricing of components used in competing solutions;
- the pace at which our customers incorporate our products into their systems;
- availability of foundry, assembly, and test capacity;
- protection of our products by effective utilization of intellectual property laws; and
- general economic conditions.

We consider our primary competitors to include International Rectifier, Intersil, Linear Technology, Maxim Integrated Products, Infineon Technologies and Texas Instruments. In addition, we compete with a number of other companies, some of which may become significant competitors. We may also face competition from new and emerging companies that may enter our existing or future markets. Many of our competitors and potential competitors have longer operating histories, greater name recognition, complementary product offerings, a larger customer base, longer relationships with customers and distributors, and significantly greater financial, sales, marketing, manufacturing, distribution, technical, and other resources than we do. We believe we compete favorably on the basis of performance, integration, form factor and cost.

Employees

As of December 31, 2009, we had 205 full-time employees. There were 106 employees in research and development, 47 in sales, marketing and field services, 24 in general, administrative and finance and 28 in operations support. We believe we have good relations with our employees.

About Volterra

We were incorporated in Delaware in August 1996. Our principal executive offices are located at 47467 Fremont Blvd., Fremont, California 94538, and our telephone number is (510) 743-1200. Our web site address is www.volterra.com. The information on, or that can be accessed through, our web site is not part of this report.

We file electronically with the SEC our annual report, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934. We make available free of charge on or through our website copies of these reports as soon as reasonably practicable after we electronically file such material with, or furnish it to, the SEC. The SEC maintains an internet site that contains reports, proxy and information statements, and other information regarding our filings at www.sec.gov. You may also read and copy any of our materials filed with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549. Information regarding the operation of the Public Reference Room can be obtained by calling the SEC at 1-800-SEC-0330.

Executive Officers of the Registrant

Our executive officers, their ages, and their positions effective as of January 1, 2010, were as follows:

<u>Name</u>	<u>Age</u>	<u>Position</u>
Jeffrey Staszak	56	President, Chief Executive Officer and Director
Mike Burns	43	Vice President, Chief Financial Officer and Treasurer
William Numann	53	Vice President of Marketing
Craig Teuscher	42	Vice President of Sales and Applications Engineering

Jeffrey Staszak joined Volterra as our President and Chief Operating Officer in March 1999, and has been our Chief Executive Officer since August 2000 and a member of our board of directors since April 2000. Prior to

joining Volterra, Mr. Staszak was Senior Vice President in the Storage Products Group of Texas Instruments Inc., a semiconductor company, from July 1996 to March 1999. From May 1993 to July 1996, Mr. Staszak served as Senior Vice President and General Manager of the Storage Products Division of Silicon Systems, Inc., a semiconductor company then affiliated with TDK Corporation. Mr. Staszak holds a B.S. in Industrial Technology from the University of Wisconsin, Stout and an M.B.A. from Pepperdine University.

Mike Burns joined Volterra as our Vice President, Chief Financial Officer, Treasurer and Secretary in August 2007. Prior to joining Volterra, Mr. Burns served in various capacities within the finance organization at Intel Corporation, a semiconductor manufacturer, from 1992 to August 2007, most recently as Finance Director and Controller of Intel Capital. Mr. Burns earned his B.A. in economics and M.S. in industrial engineering from Stanford University, and his M.B.A. from the University of California at Berkeley's Haas School of Business.

William Numann joined Volterra as our Vice President of Marketing in November 2000. Prior to joining Volterra, Mr. Numann was Vice President of Standard Products of Supertex, Inc., a semiconductor company, from October 1997 to October 2000. From June 1985 to September 1997, Mr. Numann served as Product Marketing and Applications Director at Siliconix, Inc., a semiconductor company. Mr. Numann holds a B.S.E.E. and an M.B.A. from Rensselaer Polytechnic Institute.

Craig Teuscher co-founded Volterra and has been our Vice President of Sales and Applications Engineering since January 2003. From September 1996 to May 2005, Dr. Teuscher also served as a member of our board of directors. From July 1998 to January 2003, Dr. Teuscher served as our Director of Applications Engineering. Dr. Teuscher holds a B.S.E.E. from Princeton University and an M.S.E.E. and Ph.D. in electrical engineering from the University of California at Berkeley.

Item 1A. Risk Factors

Included below is a description of risk factors related to our business to enable readers to assess, and be appropriately apprised of, many of the risks and uncertainties applicable to the forward-looking statements made in this annual report on Form 10-K. The risks and uncertainties set forth below are not all of the risks and uncertainties facing our business, but we do believe that they reflect important ones. You should carefully consider the risks described below and elsewhere in this report, which could materially and adversely affect our business, results of operations or financial condition. In those cases, the trading price of our common stock could decline and you may lose all or part of your investment. Given these risks and uncertainties, you are cautioned not to place undue reliance on forward-looking statements.

Risks Related to our Financial Performance

Our financial performance in the past has fluctuated and may continue to do so in the future.

We have been profitable on an annual basis since 2004, following annual net losses from 1996 through 2003, and as of December 31, 2009, we had an accumulated deficit of \$5.9 million. While we have experienced revenue growth over the past several years, the rate of revenue growth has fluctuated significantly over such periods. Between 2008 and 2009, our annual net revenue increased 1% from \$104.2 million to \$104.9 million, and between 2007 and 2008, our annual net revenue increased 39% from \$74.7 million to \$104.2 million. We expect our quarterly and annual revenue to continue to fluctuate between periods. Our net revenue may decline over a period to period basis and we may not maintain profitability on a quarterly or annual basis. Accordingly, you should not rely on the results of any prior quarterly or annual periods as an indication of our future revenue growth or financial results. Our ability to maintain profitability on a quarterly or annual basis depends in part on the rate of growth of our target markets, the continued acceptance of our and our customers' products, the competitive position of our products, our ability to develop new products, our ability to secure adequate manufacturing capacity and our ability to manage expenses. Because many of our expenses are fixed in the short term or incurred in advance of anticipated revenue, we may not be able to decrease our expenses in a timely manner or we may elect to not reduce expenses, to offset any shortfall in revenue.

Our operating results have fluctuated in the past, and we expect a number of factors to cause our operating results to fluctuate in the future, making it difficult for us to accurately forecast our operating results.

In the past, our net revenue and operating results have fluctuated from quarter to quarter and year to year, and we expect them to continue to do so in the future. A number of factors, many of which are beyond our control, are likely to cause our net revenue and operating results to fluctuate. These factors include, but are not limited to:

- varying order patterns in the markets in which we sell our products;
- the loss of one or more key customers, or a significant reduction in sales to, or significant product returns by, one or more key customers;
- our ability to develop new products or new generations and versions of our existing products that achieve market acceptance in a timely manner;
- demand for our products or the electronic systems into which our products are incorporated and our ability to accurately forecast such demand;
- our management of our own inventory levels to meet changes in demand;
- changes in orders both received and shipped during the same quarter (our “turns business”);
- the volatile nature of the semiconductor industry;
- the loss of one or more key distributors, or a significant reduction in orders from one or more key distributors, which we are unable to replace;
- our customers’ failure to pay us on a timely basis, or at all;
- the timing of introductions of competing products or technologies;
- litigation involving us or our products;
- disputes regarding intellectual property rights;
- changes in the prices of our products or the electronic systems into which our products are incorporated;
- our ability to obtain sufficient capacity from foundries and other third-party subcontractors to manufacture, assemble and test our products on a timely and cost-effective basis;
- the ability of our foundries and third-party subcontractors to achieve satisfactory yields or quality;
- the ability of our manufacturing subcontractors to manufacture of our products on a timely and cost-effective basis;
- our ability to fulfill orders for our products in a timely manner, or at all; and
- our ability to adequately support our future growth.

Due to these and other factors discussed in this report, you should not rely upon the results of any prior quarter or year as an indication of our future operating performance.

Risks Related to our Markets and Customers

We target our sales and marketing efforts in particular markets, and in these markets we have experienced varying order patterns, and if demand for our products in these markets declines, or if we are unable to adjust to the varying order patterns in these markets or expand into new markets, our business would be harmed.

In 2009, a significant portion of our net revenue was derived from the sale of our products in the server and storage markets. If the demand for our products in these markets declines, or if demand for products in the other

markets we are targeting, such as the consumer and networking markets, does not continue to develop, we may need to further diversify and expand our target markets. If we are unable to do so in a timely and cost-effective manner, our business and operating results could be harmed.

In addition, our business in these markets has been subject to varying order patterns, and we expect business in new markets we enter into will similarly be subject to varying order patterns. In particular, our operating results could be negatively impacted during the first quarter of each year due to the lunar New Year holidays in Asia, during which time many of our customers, manufacturers, and subcontractors cease or significantly reduce their operations. We also address higher-volume applications across multiple markets, which applications could include desktop and notebook computers, digital cameras, digital televisions, digital video recorders, or DVRs, game consoles, graphics cards, hard disk drives, printers and set-top boxes. In these higher-volume applications, we expect a disproportionate amount of our net revenue to be generated during the second half of the year as a result of the December holiday season. If we are unable to adjust production of our products or the levels of our operating expenses to address changes in demand, our operating results would be harmed.

We depend on a small number of customers for substantially all of our net revenue and the loss of, or a significant reduction in orders from, any of them would significantly reduce our net revenue and adversely affect our operating results.

We sell our products primarily to original equipment manufacturers, or OEMs, original design manufacturers, or ODMs, contract equipment manufacturers, or CEMs, and merchant power supply manufacturers, either directly through our internal sales force or indirectly through distributors and outsourced suppliers. Certain of these customers in turn sell more broadly to multiple companies that directly address consumer demand. The markets in which we sell products, particularly in the workstation and desktop market and the consumer and portable market, are prone to significant and unpredictable changes in demand, and our product sales are directly affected by the ability of our concentrated customer base to sell their products or electronic systems that incorporate our products. If these electronic systems are not commercially successful or if the development or commercial introduction of such electronic systems is delayed or fails to occur as planned or forecasted, or if our customers do not consistently manage their inventory of products we sell to them, our operating results will be adversely affected. We expect a significant amount of our revenue to continue to come from the commercial introduction of new systems making our revenue more difficult to forecast.

In 2009, three customers each accounted for more than 10% of our net revenue, and collectively accounted for at least 65% of our net revenue, and in 2008, a different mix of three customers each accounted for over 10% of our net revenue, and collectively accounted for approximately 71% of our net revenue. While we report revenue for direct sales to particular customers, our sales data may not accurately reflect the additional "indirect" demand from distributors and outsourced suppliers who purchase our products pursuant to their business relationships with such significant customers. Because we have less visibility into and are not able to quantify this "indirect" demand, we are unable to determine how much additional revenue these significant customers may affect. In addition, our sales data also may not identify customers who do not directly account for 10% of our net revenue, but may be significant in that such customers also generate significant "indirect" demand from distributors and outsourced suppliers. If any such significant customer were to stop incorporating our products or third party products containing our components into its designs, we would not only lose the direct revenue we receive from the significant customer, but we could also lose a portion of the revenue from third parties who do business with such significant customer. We expect demand from a small number of customers to continue to account for a substantial portion of our net revenue for the current fiscal year. In addition, our accounts receivable tend to be concentrated with a small group of customers and we expect this to continue. Consolidation among our customers may increase our customer concentration. The loss of any of our major customers could materially adversely impact our operating results and financial position.

If we are unable to timely develop new products or new generations and versions of our existing products that achieve market acceptance, our operating results and competitive position could be harmed.

Our industry is characterized by intense competition, rapidly evolving technology, and continually changing customer requirements. These factors could render our existing products obsolete. Accordingly, our ability to compete in the future will depend in large part on our ability to identify and develop new products or new generations and versions of our existing products that achieve market acceptance on a timely and cost-effective basis, and to respond to changing requirements. If we are unable to do so, our business, operating results, and financial condition could be negatively affected.

The successful development and market acceptance of our products depend on a number of factors, including, but not limited to:

- our accurate prediction of changing customer requirements;
- timely development of new designs;
- timely qualification and certification of our products for use in electronic systems;
- commercial acceptance and production of the electronic systems into which our products are incorporated;
- availability, quality, price, performance, and size of our products relative to competing products and technologies;
- our customer service and support capabilities and responsiveness;
- successful development of relationships with existing and potential new customers;
- successful development of relationships with key developers of advanced digital semiconductors; and
- changes in technology, industry standards or consumer preferences.

Products we have recently developed and which we are currently developing may not achieve market acceptance. If these products fail to achieve market acceptance, or if we fail to timely develop new products that achieve market acceptance, our business, operating results, and competitive position could be adversely affected.

We sell a limited number of products and a reduction in demand for these products would harm our business and operating results.

We derive substantially all of our net revenue from the sale of integrated voltage regulator semiconductors and scalable voltage regulator semiconductor chipsets, and we expect to continue to derive substantially all of our net revenue from these products for the current fiscal year. Factors that could cause the demand for our products to decline include downturns in the semiconductor industry or general economic conditions, the introduction of competing products, our pricing strategies and the pricing strategies of our competitors, or a decline in demand for the electronic systems into which our products are incorporated.

Because we often manufacture products in advance of receiving purchase orders, or if existing purchase orders are changed or cancelled, we are subject to inventory risks and manufacturing costs that could negatively impact our operating results.

To ensure availability of our products for our customers, we typically start the manufacturing of our products based on forecasts provided by these customers in advance of receiving purchase orders. However, these forecasts do not represent binding purchase commitments, and we do not recognize revenue from these products until they are shipped to the customer. In addition, because we sell our products to distributors and outsourced suppliers and not always directly to electronic system designers, we have more limited visibility into ultimate product demand, which makes forecasting more difficult for us. We incur inventory and manufacturing costs in advance of anticipated revenue. Demand for our products may not materialize and if we overestimate customer demand for our products, manufacturing based on forecasts subjects us to risks of high inventory carrying costs and obsolescence and may increase our costs. Similarly, if we underestimate demand, we may not

have sufficient product inventory and may lose market share and damage customer relationships, which also could harm our business.

In addition, our current sales practice generally allows customers to, and customers routinely do, revise and cancel orders and reschedule delivery dates on relatively short notice pursuant to changes in the customer's requirements. If, after initial orders are placed, we change certain features of our product to accommodate customer requirements, we may create additional inventory that we may not be able to sell. If purchase orders are changed or cancelled, or if shipments are delayed, we may end up with excess inventory that we cannot sell, which could result in the loss of anticipated revenue and an increase in our costs due to excess inventory charges which could materially impact our financial results.

Our inventory levels were \$10.3 million at December 31, 2009, and inventory turns, calculated as our annualized cost of revenue for the quarter divided by our inventory as of the end of such quarter, decreased to 4.9 turns in the fourth quarter of 2009 compared to 5.7 turns in the third quarter of 2009 and increased from 2.8 turns in the fourth quarter of 2008. If the amount of inventory we are holding increases or our inventory turns decrease, the risk of a potential inventory write-down and adverse impact on our financial results increases.

We are subject to the highly cyclical nature of the semiconductor industry and any future downturns could significantly harm our business.

Our business is heavily influenced by the cyclical nature of the semiconductor industry. The semiconductor industry has experienced significant downturns, often in connection with, or in anticipation of, maturing product cycles of both semiconductor companies and their customers and declines in general economic conditions. These downturns have been characterized by production overcapacity, high inventory levels, and accelerated erosion of average selling prices. Any future downturns could significantly harm our business or reduce our revenue from one period to the next or for a prolonged period of time. From time to time, the semiconductor industry also has experienced periods of increased demand and production capacity constraints. We may experience substantial changes in future operating results due to factors that affect the semiconductor industry generally.

We rely on a small number of distributors to market and distribute our products, and if we fail to manage these relationships, our net revenue may decline.

Many purchases of our products are made through a concentrated group of distributors, which group may change over time. Sales to these distributors account for a substantial portion of our net revenue. Our sales to distributors accounted for 37% of our net revenue in 2009 compared to 54% in 2008. None of our distributors are required to purchase a specified minimum level of products from us. Currently, our sales to distributors are made pursuant to standard purchase orders rather than long-term contracts and although we do not grant them a right of return pursuant to these purchase orders, their orders may be cancelled or changed more readily than if we had long-term purchase commitments. In the event of a cancellation, reduction or delay of an order, we may not have enough time to reduce operating expenses to minimize the effect of the lost revenue on our business. We also rely on our distributors to provide certain support services and other customer service to our customers. If they fail to provide appropriate levels of support and service to our customers on a timely basis, our relationships with our customers will suffer.

We need to maintain our relationships with our distributors while expanding additional channels for the marketing and sale of our products. If we fail to do so manage these relationships, our distributors may decide not to include our products among those that they sell or they may not make marketing and selling our products a priority. In addition, our distributors may sell product lines that are competitive with ours. If we fail to successfully manage our relationships with distributors while we look for additional channels for marketing and selling our products, our business would be harmed.

We are exposed to credit risk and payment delinquencies on our accounts receivable.

A substantial majority of our outstanding accounts receivables are not covered by collateral or credit insurance. In addition, our standard terms and conditions permit payment within a specified number of days following shipment of product. While we have procedures to monitor and limit exposure to credit risk on our

receivables, there can be no assurance such procedures will effectively limit our credit risk and avoid losses. As economic conditions change, certain of our customers may face liquidity concerns and may be unable to satisfy their payment obligations, which would have a material adverse effect on our financial condition and operating results.

Risks Related to Competition, Intellectual Property, Litigation and Regulation

We face significant competition and many of our competitors have greater resources than we have, and thus we may be unsuccessful in competing against current and future competitors.

The markets for semiconductors generally, and power management semiconductors in particular, are intensely competitive, and we expect competition to increase and intensify in the future as larger semiconductor manufacturers enter into our market space. Increased competition may result in price pressure, reduced profitability, and loss of market share, any of which could seriously harm our business, revenue, and operating results. Our ability to compete effectively and to expand our business will depend on a number of factors, including, but not limited to:

- our ability to continue to recruit and retain engineering talent;
- our ability to introduce new products in a timely manner;
- the pricing of components used in competing solutions;
- the pace at which our customers incorporate our products into their systems;
- the availability of foundry, assembly, and test capacity for our products;
- protection of our products by effective utilization of intellectual property laws; and
- general economic conditions.

We consider our primary competitors to include International Rectifier, Intersil, Linear Technology, Maxim Integrated Products, Infineon Technologies and Texas Instruments. In addition, we compete with a number of other companies, some of which may become significant competitors. We may also face competition from new and emerging companies that may enter our existing or future markets. Many of our competitors and potential competitors have longer operating histories, greater name recognition, complementary product offerings, a larger customer base, longer relationships with customers and distributors, and significantly greater financial, sales, marketing, manufacturing, distribution, technical, and other resources than we do. As a result, they may be able to respond more quickly to customer requirements, to devote greater resources to the development, promotion, and sales of their products and to influence industry acceptance of their products better than we can. These competitors may also be able to adapt more quickly to new or emerging technologies or standards and may be able to deliver products with performance comparable or superior to that of our products at a lower cost. In addition, in the event of a manufacturing capacity shortage, these competitors may have or be able to obtain silicon wafer fabrication capacity when we are unable to obtain such capacity.

We expect our competitors to continue to introduce new or enhanced products technologies with greater performance and improved pricing, which could cause our products to become obsolete or uncompetitive and harm our operating results.

Our ability to compete will be harmed if we are unable to adequately protect our intellectual property.

We rely primarily on a combination of patent, trademark, trade secret, and copyright law and contractual restrictions to protect our intellectual property. These afford only limited protection. Despite our efforts to protect our proprietary rights, unauthorized parties may attempt to obtain, copy, or use information that we regard as proprietary, such as product design and manufacturing process expertise. In November 2008, we filed a lawsuit in the United States District Court in the Northern District of California against Primarion, Inc., Infineon Technologies AG and Infineon Technologies North America Corporation (collectively, the “Defendants”) for infringement of several of our patents. In December 2008, the Defendants filed an answer generally denying the

allegations, and stating affirmative defenses and counterclaims, including claims for declaratory relief for inequitable conduct before the U.S. patent office and for Sherman Act violations. In July 2009, we filed a notice and motion for preliminary injunction and a motion for summary judgment against the Defendants. The hearing was held in September 2009, at which time the court issued a minute order granting the motion for preliminary injunction and denying the motion for summary judgment without prejudice. In November 2009, the court issued a final order reversing the prior minute order. On January 22, 2010, Infineon Technologies AG filed a lawsuit against us in the United States District Court for the District of Delaware for infringement of four patents assigned to Infineon. Based on our initial review, we believe this lawsuit is without merit. We are currently reviewing the complaint and the asserted patents to defend the Company against this action. These actions or any similar action could consume significant financial and other resources, and in 2009, our litigation related expenses were approximately \$5.2 million. Although we strongly believe in the validity of its positions, we are unable to assess the possible outcome of these cases, and there is no guarantee that any such proceedings would be successful on its merits or that we will receive monetary damages awards or recoup our legal expenses. Because of the nature and inherent uncertainties of litigation, should the outcome of these actions be unfavorable, our business, financial condition, results of operations or cash flows could be materially adversely affected.

As of December 31, 2009, we had 55 issued patents and 36 patent applications pending in the United States, and nine foreign patent applications pending. These patents have expiration dates ranging from December 2017 to July 2027. Our pending patent applications and any future applications may not result in issued patents or may not be sufficiently broad to protect our proprietary technologies. Moreover, policing any unauthorized use of our products is difficult and costly, and we cannot be certain that the measures we have implemented will prevent misappropriation or unauthorized use of our technologies, particularly in foreign jurisdictions where the laws may not protect our proprietary rights as fully as the laws of the United States. The enforcement of patents by others may harm our ability to conduct our business. Others may independently develop substantially equivalent intellectual property or otherwise gain access to our trade secrets or intellectual property. Our failure to effectively protect our intellectual property could harm our business.

Assertions by third parties of infringement by us or our vendors of their intellectual property rights could result in significant costs and cause our operating results to suffer.

The semiconductor industry is characterized by vigorous protection and pursuit of intellectual property rights and positions, which has resulted in protracted and expensive litigation for many companies. In the future we may receive communications from various industry participants alleging infringement of patents, trade secrets or other intellectual property rights. Any lawsuits resulting from such allegations could subject us to significant liability for damages and invalidate our proprietary rights. These lawsuits, regardless of their success, would likely be time-consuming and expensive to resolve and would divert management's time and attention. Any potential intellectual property litigation also could force us to take steps that may be harmful to our business, including, but not limited to:

- stop selling products or using technology that contain the allegedly infringing intellectual property;
- pay damages to the party claiming infringement;
- attempt to obtain a license to the relevant intellectual property, which may not be available on reasonable terms or at all; and
- attempt to redesign those products that contain the allegedly infringing intellectual property.

In addition, the third-party foundries or subcontractors that manufacture our products may also face litigation for claims of intellectual property. Although not directly creating liabilities for us, such litigation may cause such third parties to cease providing services to us, or may cause us to incur increased costs, either of which may harm our business.

We may also initiate claims or litigation against third parties for infringement of our proprietary rights or to establish the validity of our proprietary rights. In some cases, we may have an existing direct or indirect relationship with these third parties, such as customers, vendors, partners or companies within the industry that

generally affect our business. Such claims or litigation could not only affect our intellectual property or proprietary rights, but may also affect and disrupt our business relationship with such third parties, impairing our ability to conduct our business and adversely affecting our financial and operational results.

Any potential dispute involving our patents or other intellectual property could also include our customers, which could trigger our indemnification obligations to them and result in substantial expense to us.

In any potential dispute involving our patents or other intellectual property, our customers could also become the target of litigation. Because we indemnify our customers against claims made against them based on allegations that our products infringe intellectual property rights, such litigation could result in substantial expense for us. In addition to the time and expense required for us to indemnify our customers, any such litigation could hurt our relations with our customers and cause our operating results to be harmed.

The average selling prices of our products could decrease rapidly, which may negatively impact our net revenue and operating results.

The average selling prices for power management solutions have historically declined over time. Factors that we expect to cause downward pressure on the average selling price for our products include competitive pricing pressures, the cost sensitivity of our customers, particularly in the higher-volume markets, new product introductions by us or our competitors, and other factors. To maintain acceptable operating results, we will need to offset any reduction in the average selling prices of our products by developing and introducing new products and developing new generations and versions of existing products on a timely basis, increasing sales volume, and reducing costs. If the average selling prices for our products decline and we are unable to offset those reductions, our operating results will suffer.

Our stock price will fluctuate and may be volatile, which could result in substantial losses for investors and significant costs related to litigation.

Investors may be unable to resell their shares at or above the purchase price and this could result in substantial losses for those investors. The market price of our common stock may fluctuate significantly in response to a number of factors, some of which are beyond our control. These factors include, but are not limited to:

- actual or anticipated fluctuations in our revenue, operating results or growth rate;
- failure to meet the expectations of securities analysts or investors with respect to our financial performance;
- actual or anticipated fluctuations in our competitors' operating results or changes in their growth rates;
- sales of our common stock or other securities in the future;
- stock market price and trading volume fluctuations of publicly-traded companies in general and semiconductor companies in particular;
- the trading volume of our common stock;
- changes in financial estimates and ratings by securities analysts for us, our competitors or companies in the semiconductor industry generally;
- changes in the condition of the financial markets, the economy as a whole, the semiconductor industry, our customers or our competitors;
- publicity about the semiconductor industry, our competitors or our customers; and
- changes in key personnel.

The stock market in general, and the Nasdaq Global Select Market in particular, has experienced extreme price and volume fluctuations in recent years that have often been unrelated or disproportionate to the operating

performance of the listed companies. Broad market and industry factors may materially harm the market price of our common stock, regardless of our operating performance.

In the past, securities class action litigation has often been brought against companies following periods of volatility and decline in the market price of their securities. If our stock price is volatile or declines, we may be the target of similar litigation in the future. Securities litigation could result in significant costs and divert management's attention and resources, which could seriously harm our business and operating results.

Environmental laws and regulations could cause a disruption in our business and operations.

We are subject to various state, federal and international laws and regulations governing the environment, including those restricting the presence of certain substances in electronic products and making manufacturers of those products financially responsible for the collection, treatment, recycling and disposal of certain products. Such laws and regulations have been passed in several jurisdictions in which we operate, including various European Union member countries. We will need to ensure that we comply with such laws and regulations as they are enacted, and that our third-party semiconductor assembly subcontractors such as Amkor Technology, STATS ChipPAC Ltd., Carsem, Advanced Semiconductor Engineering and UTAC, timely comply with such laws and regulations. Because we work with subcontractors to make specified modifications to their standard processes, transitioning the manufacturing of our products can require substantial lead time. Any future delay resulting from such transition could negatively affect product performance, delivery, and yields or increase manufacturing costs. If we, or the subcontractors that we use, fail to timely comply with such laws, our customers may refuse to purchase our products. Such refusal or delay would have a materially adverse effect on our business, financial condition and results of operations.

Risks Related to our Manufacturing and Development Activities

Our dependence on third-party semiconductor manufacturers, or foundries, reduces our control over the manufacture of our products and increases our exposure to third party solvency risks, which could harm our business.

We are a fabless semiconductor company and, as such, we rely on third-party semiconductor manufacturers, or foundries, such as GlobalFoundries and Taiwan Semiconductor Manufacturing Corporation. The ability of these foundries to provide silicon wafers to us is limited by their available capacity. Moreover, the price of our silicon wafers has in the past fluctuated and is expected to continue to fluctuate, based on changes in available industry capacity. We do not have long-term supply contracts with any of our foundries. Therefore, our manufacturers could choose to prioritize capacity for other customers, particularly larger customers, reduce or eliminate deliveries to us on short notice or increase the prices they charge us. There are significant risks associated with our reliance on these third-party manufacturers, including, but not limited to:

- inability to increase production and achieve acceptable yields on a timely basis;
- reduced control over delivery schedules and product quality;
- inability of our foundries to obtain an adequate supply of the raw materials used in the manufacturing of our products on a timely and cost-effective basis;
- increased exposure to potential misappropriation of our intellectual property;
- limited warranties on silicon wafers or products supplied to us;
- labor shortages or labor strikes;
- natural disasters affecting countries in which we conduct our business or in which our products are manufactured; and
- political instability in countries where our products are manufactured.

In addition, these third party manufacturers may elect or may be forced to shut down particular facilities for reasons beyond our control, which may require us to transition the manufacturing of our products to other facilities of such third party manufacturer or to other third party manufacturers. Because we work with foundries to make specified modifications to their standard process technologies, transitioning the manufacturing of our products to other foundries or other facilities of an existing foundry can require process design changes and may require substantial lead time. Any such delay resulting from such transition could negatively affect product performance, delivery, and yields or increase manufacturing costs. If we are not able to obtain foundry capacity as required, our relationships with our customers would be harmed and our net revenue would likely decline.

Deterioration of worldwide economic conditions and financial markets and tightening in credit markets may adversely impact the financial position of our third party manufacturers. If our third party manufacturers are unable to obtain the necessary capital to operate their business, this may also impact their ability to provide us with the foundry capacity we need, or may adversely affect their ability to provide timely services or to make timely deliveries of products to us. Any such result could adversely affect our operations and financial condition.

We rely on third-party subcontractors to assemble and test our products and our failure to successfully manage our relationships with these subcontractors could damage our relationships with our customers, decrease our net revenue, and limit our growth.

We rely on third-party subcontractors, such as Amkor Technology, STATS ChipPAC Ltd., Carsem, Advanced Semiconductor Engineering and UTAC, to assemble and test our products. None of these third-party vendors are obligated to perform services or supply products to us for any specific period, or in any specific quantities, except as may be provided in a particular purchase order. Moreover, none of our assembly and test subcontractors has provided contractual assurances to us that adequate capacity will be available to us to meet future demand for our products. We are subject to many of the same risks with these vendors as with our foundries, including risks related to the ability of such vendors to continue to provide us with the agreed-upon services or products as needed, and our ability to control delivery schedules and product quality. If we do not successfully manage these relationships, the quality of products shipped to our customers may decline, which would damage our relationships with customers, decrease our net revenue, and negatively impact our growth.

Our products are highly complex and may require modifications to resolve previously undetected design or process errors or defects and to meet our customers' specifications, which could lead to an increase in our costs, a loss of revenue and customers, a delay in market acceptance of our products, or product liability claims.

Our power management products are highly complex and may contain previously undetected errors or defects in design or that occur in the manufacturing or assembly process that may significantly affect yields or quality. If we deliver products with errors or defects, we may suffer a reduction in or deferral of our revenue as a result of significant product returns and our operating results and financial position could be materially impacted. We may incur product replacement costs, and we may have to rework or scrap inventory that is returned. In addition, we may incur additional manufacturing and/or development costs to fix the defect or error and may have to rework or scrap inventory that had been built with the error or defect resulting in additional costs. If we are unable to fully recover or be reimbursed for all or a portion of these costs, our financial position and operating results may be adversely impacted. Also as a result of shipping products with defects or errors, our credibility and the market acceptance of our products could be harmed. Defects could also lead to liability for defective products as a result of lawsuits against our customers or us. We have agreed to indemnify our customers in some circumstances against liability from defects in our products. In the future, as we increase the amount of business with any given customer, we may be expected to agree upon additional terms and conditions of sale regarding product quality or product defects which may increase our costs, obligations and liabilities in connection with our product sales. Although we maintain insurance coverage consistent with customary industry practice to defray potential costs from lawsuits, including lawsuits arising from product liability, if liabilities arise that are not effectively limited or covered by such insurance, a successful product liability claim could require us to pay a significant amount of damages, which could have a material adverse impact on our financial results and financial position.

Our products comprise only part of the complex electronic systems in which they are used. As a result, our products must operate according to specifications with the other components in the electronic system. If other components of the electronic system fail to operate properly with our products, we may be required to incur additional development time and costs to enable interoperability of our products with these other components and may not be able to sell our existing inventory resulting in additional cost of revenue and materially adversely affecting our financial results.

Any disruption to our operations or the operations of our foundries or assembly and test subcontractors resulting from earthquakes, droughts, or other natural disasters, public health issues or other catastrophic events beyond our control could significantly delay the production or shipment of our products.

Our principal offices are located in California. In addition, we rely on foundries and assembly and test subcontractors in South Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and China. The risk of an earthquake in these Pacific Rim locations is significant. The occurrence of an earthquake, drought, floods, fires or other natural disaster near our principal offices or our subcontractors' locations could result in damage, power outages, and other disruptions that impair our design, manufacturing, and assembly capacity and otherwise interfere with our ability to conduct our business. In addition, public health issues, acts of terrorism or other catastrophic events could significantly delay the production or shipment of our products. Any disruption resulting from such events could cause significant delays in the shipment of our products until we are able to shift our fabrication, assembling, testing or other operations from the affected subcontractor to another third-party vendor.

Because we rely on third party foundries and assembly and test subcontractors, we have experienced, and may in the future experience, delays in the manufacture, development and introduction of our new products, which may harm our business and operating results.

The development of our products is highly complex, costly and inherently risky. Because we rely on third party foundries and assembly and test subcontractors, we have experienced, and may in the future experience, delays in the manufacture, development and introduction of new products or new generations and versions of our existing products. If we are unable to manufacture, develop or introduce products on a timely basis, we may lose new or existing market and customer opportunities and our financial results or competitive position could be harmed. We cannot assure you that the procedures that we have implemented to minimize delays will be effective or that delays may not occur in the future. In particular, we expect to continue to bring new products to production in new manufacturing and assembly processes. Any future delays in the introduction of new products or new generations or versions of our existing products could materially harm our business and operating results.

The nature of the design process requires us to incur expenses prior to earning revenue associated with those expenses, and we will have difficulty selling our products and generating profits if electronic system designers do not design our products into their electronic systems.

We devote significant time and resources in working with electronic system designers to get our products designed into their systems. If the system designer chooses a competitor's product for its electronic system, it becomes significantly more difficult for us to sell our products for use in that electronic system because changing suppliers involves significant cost, time, effort, and risk for electronic system designers. If electronic system designers do not design our products into their systems, our business would be materially adversely affected.

We often incur significant expenditures in the development of a new product without any assurance that electronic system designers will select our product for use in their electronic systems. If we incur such expenditures and fail to be selected, or if we are selected and subsequently excluded from such designs, our operating results will be adversely affected. Furthermore, even if electronic system designers use our products in their electronic systems, we cannot be assured that these systems will be commercially successful or that we will receive any associated revenue.

Even if our products are selected for design into a particular electronic system, a substantial period of time will elapse before we generate revenue related to the significant expenses we have incurred. The reasons for this delay generally include, but are not limited to, the following:

- it can typically take up to 12 months from the time our products are selected to complete the design process, and in some cases such design process may take substantially more time to complete;
- it can typically take an additional six to 12 months to complete commercial introduction of the electronic systems that use our products, and in some cases such introduction may take substantially more time to complete, if they are introduced at all;
- our customers usually require a comprehensive technical evaluation of our products before they incorporate them into their electronic systems, which may also result in our products being excluded from the system design for reasons other than our design specifications;
- OEMs typically limit the initial release of their electronic systems to evaluate performance and consumer demand; and
- the development and commercial introduction of products incorporating new technology are frequently delayed.

As a result, we may be unable to accurately forecast the volume and timing of our orders and revenue. In addition, incurring research and development expenses prior to generating revenue may cause our operating results to fluctuate significantly from period to period.

Risks Related to our International Activities

We have significant international activities and customers, and plan to continue such efforts, which subjects us to additional business risks including increased logistical complexity, additional regulatory restrictions and political instability.

A number of our customers are multinational corporations, with operations located throughout the world. In 2009, 98% of our net revenue was attributable to customers, or customers' operations, located outside of the United States, primarily in Asia, and we anticipate that a significant portion of our future revenue will continue to be generated by sales to these customers or to the customers' operations in Asia. We have engineering, sales, and operations personnel in Japan, Singapore, Taiwan, China and the United Kingdom. Our foundries, assembly and test subcontractors, and distributors are also primarily located in Asia. Our international operations and sales are subject to a number of risks, including, but not limited to:

- cultural and language barriers;
- increased complexity and costs of managing international operations;
- protectionist laws and business practices that favor local competition in some countries;
- multiple, conflicting and changing laws and regulatory and tax environments;
- potentially longer and more difficult collection periods;
- political instability, international terrorism, and anti-American sentiment, particularly in emerging markets;
- highly volatile economies in Asia;
- difficulty in hiring qualified management, technical sales personnel, and applications engineers; and
- less effective protection of intellectual property than is afforded to us in the United States.

Our inability to overcome these risks could adversely affect our foreign operations, and some of our customers and suppliers, and could harm our business and operating results.

We do not hedge fluctuations in currency exchange rates, which could harm our financial results.

Substantially all sales to international customers and purchases of production materials and manufacturing services from international suppliers in 2009 were denominated in U.S. dollars. However, fluctuations in currency exchange rates could have an effect on our results of operations and financial condition. An increase in the value of the U.S. dollar relative to foreign currencies could make our products more expensive for our international customers to purchase, thus rendering the prices of our products less competitive. If the value of the U.S. dollar decreases relative to foreign currencies, this could result in an increase in the effective costs of working with our international vendors or suppliers, and our ability to control our cost structure and maintain our financial results could be harmed.

Risks Related to our Growth and Organization

We may undertake acquisitions to expand our business that may pose risks to our business and dilute the ownership of our existing stockholders.

We will evaluate opportunities to acquire other businesses, products or technologies that would complement our current offerings, expand the breadth of markets we can address or enhance our technical capabilities. Acquisitions that we may potentially make in the future entail a number of risks that could materially adversely affect our operating and financial results, including, but not limited to:

- our lack of experience acquiring other businesses;
- problems integrating the acquired operations, technologies, or products with our existing business and products;
- diversion of management's time and attention from our core business;
- the need for financial resources above our planned investment levels;
- overestimation of potential synergies or a delay in realizing those synergies;
- difficulties in retaining business relationships with suppliers and customers of the acquired company;
- risks associated with entering markets in which we lack prior experience; and
- the potential loss of key employees of the acquired company.

Future acquisitions also could cause us to incur debt or contingent liabilities or cause us to issue equity securities that would reduce the ownership percentages of existing stockholders. Furthermore, acquisitions could result in adverse tax consequences, substantial depreciation, deferred compensation charges, impairment of goodwill, or the amortization of amounts related to deferred compensation and to identifiable purchased intangible assets, any of which would negatively affect our operating results.

If we do not effectively manage our growth, our resources, systems, and controls may be strained and our operating results may suffer.

In recent periods, we have continued to increase the scope of our operations and the size of our workforce. This growth has placed, and any future growth of our operations will continue to place, a significant strain on our management personnel, systems, and resources. We anticipate that we will need to implement a variety of new and upgraded operational and financial systems, procedures, and controls, including the improvement of our accounting and other internal management systems. We also will need to continue to expand, train, manage, and motivate our workforce, and manage our customer and distributor relationships, develop our internal sales force, and manage our foundry and assembly and test subcontractors. All of these endeavors will require substantial management effort and skill, and we anticipate that we will require additional personnel and internal processes to manage these efforts. We plan to fund the costs of our operational and financial systems, additional personnel, and internal processes from current cash balances and funds generated from operations. If we are unable to effectively manage our expanding operations, our revenue and operating results could be materially adversely affected.

We evaluate our internal controls over financial reporting in order to allow management to report on, and our independent auditors to attest to, our internal controls over financial reporting, as required by Section 404 of the Sarbanes-Oxley Act of 2002 and the rules and regulations of the SEC, which we collectively refer to as Section 404. As we grow and implement new and upgraded operational and financial systems, procedures, and controls, we will need to maintain internal control over financial reporting. In addition, in the course of our Section 404 compliance, we may identify deficiencies in our internal controls, some of which may be categorized as significant deficiencies. In the future, we may identify material weaknesses in our internal controls. If we fail to correct the deficiencies that we identify and to maintain the adequacy of our internal control over financial reporting, as such standards are modified, supplemented or amended from time to time, we may not be able to ensure that we can conclude on an ongoing basis that we have effective internal control over financial reporting in accordance with Section 404. If we cannot favorably assess, or our independent registered public accountants are unable to provide an unqualified report on the effectiveness of our internal control over financial reporting, investor confidence in the reliability of our financial reports may be adversely affected, which could have a material adverse effect on our stock price.

We rely on the services of our key personnel, and if we are unable to retain our current personnel and hire additional personnel, our ability to develop and successfully market our products could be harmed.

We rely upon the continued service and performance of a relatively small number of key technical and senior management personnel. If we are unable to retain any of our key technical or senior management personnel, such as Jeffrey Staszak, our President and Chief Executive Officer, or are unable to fill key positions, our business could be harmed. As a result, our future success depends on retaining our management team and other key employees. We rely on these individuals for the management of our company, development of our products and business strategy, and management of our strategic relationships, and for the reliability of our financial reporting and the design and maintenance of our internal controls over financial reporting. In addition, we rely on a relatively small number of analog and mixed-signal design engineers who have the training and experience to design our products. Any of these employees could leave our company with little or no prior notice and could work with our competitors, subject to their continuing confidentiality obligations to us. We do not have “key person” life insurance policies covering any of our employees. Additionally, there are a limited number of qualified technical personnel with significant experience in the design, development, manufacture, and sale of power management semiconductors, and we may face challenges in hiring and retaining these types of employees.

If our computer and communications hardware fails, our business, results of operations and financial condition would be harmed.

Our ability to successfully operate our business depends in part on the efficient and uninterrupted operation of our computer and communications systems. Substantially all of the computer and communications hardware necessary to operate our business is located at a single leased facility. Our systems and operations are vulnerable to damage or interruption from human error, fire, flood, power loss, telecommunications failure, terrorist attacks, acts of war, break-ins, computer viruses, earthquakes and similar events, any of which may result in interruptions, delays, loss of critical data, the inability to accept and fulfill customer orders or the unauthorized disclosure of confidential customer data or proprietary technical information. We do not presently have redundant systems in multiple locations or a formal disaster recovery plan, and our business interruption insurance may be insufficient to compensate us for losses that may occur. If any of these events or interruptions were to occur, our business and results of operations could be substantially harmed.

Our principal stockholders have significant voting power and may influence actions that may not be in the best interests of our other stockholders.

Our executive officers, directors, and principal stockholders collectively hold a significant portion of our outstanding common stock. As a result, these stockholders, acting together, may have the ability to exert substantial influence over matters requiring approval of our stockholders, including the election and removal of directors and the approval of mergers or other business combinations. This concentration of beneficial ownership could be disadvantageous to other stockholders whose interests are different from those of our executive officers,

directors, and principal stockholders. For example, our executive officers, directors, and principal stockholders, acting together with stockholders owning a relatively small percentage of our outstanding stock, could delay or prevent an acquisition or merger even if the transaction would benefit other stockholders.

Anti-takeover provisions of our charter documents and Delaware law could prevent or delay transactions resulting in a change in control.

Our certificate of incorporation and our bylaws may make more difficult or discourage, delay or prevent a change in the ownership of our company or a change in our management or our board of directors. The following are examples of provisions that are included in our certificate of incorporation and bylaws that might have those effects:

- our board of directors is classified so that not all members of our board of directors may be elected at one time;
- directors may only be removed “for cause” and only with the approval of stockholders holding a majority of our outstanding voting stock;
- the ability of our stockholders to call a special meeting of stockholders is prohibited;
- advance notice is required for nominations for election to our board of directors or for proposing matters that can be acted upon at stockholder meetings;
- stockholder action by written consent is prohibited, thereby requiring all stockholder actions to be taken at a meeting of our stockholders; and
- our board of directors may designate the terms of and issue new series of preferred stock, commonly referred to as “blank check” preferred stock, with rights senior to those of common stock without stockholder approval.

In addition, we are also subject to Section 203 of the Delaware General Corporation Law, which provides, subject to enumerated exceptions, that if a person acquires 15% or more of our voting stock, the person is an “interested stockholder” and may not engage in “business combinations” with us for a period of three years from the time the person acquired 15% or more of our voting stock.

These provisions may have the effect of entrenching our management team and may deprive you of the opportunity to sell your shares to potential acquirers at a premium over prevailing prices. This potential inability to obtain a premium could reduce the price of our common stock.

Item 1B. *Unresolved Staff Comments*

Not applicable.

Item 2. *Properties*

Our principal offices and primary research and development, operations management, and Western U.S. sales office occupy approximately 57,000 square feet in Fremont, California, under a lease that expires in 2012. Our regional headquarters in Asia, research and development, operations management, and sales office, occupy approximately 9,000 square feet in Singapore under leases that expire in 2012. We also lease properties throughout the United States, Asia and in Europe for use as sales, research and development, business development or applications support offices. We may change the size and location of our facilities from time to time based on business requirements. We do not own any manufacturing facilities and we contract to third parties the production and distribution of our products. We believe our space is adequate for our current needs and that additional or substitute space will be available to accommodate any foreseeable expansion of our operations in the current fiscal year.

Item 3. Legal Proceedings

From time to time we may become subject to legal proceedings in the ordinary course of our business. In November 2008, we filed a lawsuit in the United States District Court in the Northern District of California against Primarion, Inc., Infineon Technologies AG and Infineon Technologies North America Corporation (the “Defendants”), Case No. CV 085029, for infringement of Volterra’s U.S. patent numbers 6,278,264, 6,462,522, 6,713,823, 6,020,729 and 6,225,795, which seeks declaratory relief, an injunction, unspecified damages, and attorneys’ fees against the Defendants. In December 2008, the Defendants filed an answer generally denying the allegations, and stating affirmative defenses and counterclaims, including claims for declaratory relief for inequitable conduct before the U.S. patent office and for Sherman Act violations. In July 2009, we filed a notice and motion for preliminary injunction and a motion for summary judgment against the Defendants. The hearing was held in September 2009, at which time the court issued a minute order granting the motion for preliminary injunction and denying the motion for summary judgment without prejudice. In November 2009, the court issued a final order reversing the prior minute order.

On January 22, 2010, Infineon Technologies AG filed a lawsuit against us in the United States District Court for the District of Delaware for infringement of four patents assigned to Infineon, Case No. 10-47, for infringement of Infineon’s U.S. patent numbers 5,945,730, 7,095,281, 5,402,017 and 6,621,343. Infineon seeks an injunction, unspecified damages, and attorneys’ fees. Based on our initial review, we believe this lawsuit is without merit. We are currently reviewing the complaint and the asserted patents to defend the Company against this action.

We are unable to assess the possible outcome of these litigation cases. However, because of the nature and inherent uncertainties of litigation, should the outcome of these actions be unfavorable, our business, financial condition, results of operations or cash flows could be materially and adversely affected.

Item 4. [Reserved]

PART II

Item 5. Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Market Information and Stockholders

Our common stock is traded on the Nasdaq Global Select Market under the symbol “VLTR.” The following table sets forth the high and low sales prices (based on daily closing prices) of our common stock as reported on the Nasdaq Global Select Market for the periods indicated.

	<u>High</u>	<u>Low</u>
Year ended December 31, 2009:		
Fourth quarter ended December 31	\$19.89	\$13.17
Third quarter ended September 30	\$19.46	\$13.65
Second quarter ended June 30	\$14.26	\$ 8.50
First quarter ended March 31	\$ 9.05	\$ 6.28
Year ended December 31, 2008:		
Fourth quarter ended December 31	\$12.19	\$ 6.33
Third quarter ended September 30	\$17.23	\$12.21
Second quarter ended June 30	\$17.46	\$11.01
First quarter ended March 31	\$11.33	\$ 7.94

The closing price for our common stock as reported by the Nasdaq Global Select Market on January 29, 2010 was \$19.49 per share. As of January 29, 2010, there were approximately 392 registered stockholders of record of our common stock.

The following graph compares the cumulative 60-month total return provided shareholders on our common stock relative to the cumulative total returns of the Nasdaq Composite Index and the Philadelphia Semiconductor Index. An investment of \$100 (assuming reinvestment of all dividends) is assumed to have been made in our common stock on or in these indexes on December 31, 2004 and its relative performance is tracked through December 31, 2009. The Company has not paid any dividends on its common stock during this period. The stock price information shown on the graph below is not indicative of future price performance.

COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN*

Among Volterra Semiconductor Corporation, The NASDAQ Composite Index
And The PHLX Semiconductor Index

*\$100 invested on 12/31/04 in stock or index, including reinvestment of dividends.
Fiscal year ending December 31.

* The information contained in the Stock Performance Graph section shall not be deemed to be “soliciting material” or “filed” or incorporated by reference in future filings with the SEC, or subject to the liabilities of Section 18 of the Exchange Act, except to the extent that the Company specifically incorporates it by reference into a document filed under the Securities Act of 1933, as amended, or the Securities Exchange Act of 1934, as amended.

Dividends

We have never declared or paid any cash dividends on our capital stock, and do not anticipate paying cash dividends on our common stock. Any future determination to pay dividends will be at the discretion of our board of directors. None of our outstanding capital stock is entitled to any dividends.

ISSUER PURCHASES OF EQUITY SECURITIES

The following table provides information about our share repurchase activity for the three months ended December 31, 2009:

<u>Period</u>	<u>Total Number of Shares Purchased</u>	<u>Average Cost Paid per Share(2)</u>	<u>Total Number of Shares Purchased as Part of Publicly Announced Program(1)</u>	<u>Approximate Dollar Value of Shares that May Yet Be Purchased Under the Program</u>
October 1, 2009 to October 31, 2009	—	\$ —	—	\$5,000,000
November 1, 2009 to November 30, 2009	170,965	\$13.93	170,965	\$2,619,215
December 1, 2009 to December 31, 2009	—	\$ —	—	\$2,619,215
Total	<u>170,965</u>	<u>\$13.93</u>	<u>170,965</u>	

- (1) Represents shares of Common Stock repurchased in the open market in connection with our share repurchase program, under which we may repurchase up to \$20 million of our common stock from time to time in the open market subject to prevailing business and market conditions and other factors. This board of directors authorized an initial \$10 million and publicly announced such program on January 28, 2008, increased such program by \$5 million as publicly announced on October 20, 2008, and increased such program by an additional \$5 million as publicly announced on April 24, 2009. There is no expiration date for the repurchase program.
- (2) Includes \$0.03 per share broker commission.

Item 6. Selected Financial Data

You should read the following selected consolidated financial and operating information for Volterra together with “Management’s Discussion and Analysis of Financial Condition and Results of Operations” and our consolidated financial statements and notes thereto included elsewhere in this annual report on Form 10-K.

The consolidated statements of operations and consolidated balance sheet data for the years ended December 31, 2009, 2008 and 2007 are derived from the audited consolidated financial statements included elsewhere in this report. The consolidated statements of operations data and the consolidated balance sheet data as of December 31, 2006 and 2005 are derived from audited consolidated financial statements not included in this report. Historical results for any prior or interim period are not necessarily indicative of the results to be expected for a full fiscal year or for any future period.

Total assets	\$106,442	\$ 91,292	\$74,095	\$83,703	\$65,503
Total stockholders’ equity	\$ 91,803	\$ 75,913	\$63,358	\$71,816	\$57,760

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of our financial condition and results of our operations should be read in conjunction with the consolidated financial statements and the notes to those statements included elsewhere in this annual report on Form 10-K. This discussion contains forward-looking statements that involve risks and uncertainties. Our actual results could differ materially from those contained in these forward-looking statements due to a number of factors, including but not limited to those discussed in Item 1A "Risk Factors" and elsewhere in this report.

Overview

Our net revenue was \$104.9, \$104.2 million and \$74.7 million in 2009, 2008, and 2007, respectively. We generated net income of \$10.9, \$14.3 million and \$0.3 million in 2009, 2008, and 2007, respectively. As of December 31, 2009, we had an accumulated deficit of \$5.9 million.

Our net revenue consists primarily of sales of our power management semiconductor products. When evaluating our net revenue, we categorize our sales into four major market segments: servers and storage; desktop and workstation; networking and communications; and consumer and portable. The electronics manufacturing industry is complex and disaggregated, and electronic system designers typically utilize distributors and outsourced suppliers to provide procurement, manufacturing, design, and other supply chain related services within the industry. We attempt to quantify the amount of sales within the major markets identified above, but such quantified amounts are approximations only, as we must rely upon estimates and assumptions regarding the incorporation of our products sold to distributors or other outsourced suppliers into the systems of the OEMs, ODMs, CEMs, or merchant power supply manufacturers for each particular market. In 2009, we estimate that 66% of our net revenue was derived from sales in the server and storage market, 10% from the networking and communications market, 14% from the desktop and workstation market; and 10% from the consumer and portable market. We believe that the most significant portion of our revenues in the upcoming fiscal year will continue to be derived from sales in the server and storage market.

Our sales and accounts receivable are currently concentrated with a small group of customers, and we expect this to continue in the future. In 2009, IBM, Promate and SAC each accounted for more than 10% of our net revenue, and collectively accounted for 65% of our net revenue. In 2008, IBM, Metatech, and Sabre each accounted for over 10% of our net revenue, and collectively accounted for 71% of our net revenue. While we report revenue for direct sales to particular customers, our sales data may not accurately reflect the additional "indirect" demand from distributors and outsourced suppliers who purchase our products pursuant to their business relationships with these same customers. Because we have less visibility into and are not able to quantify this "indirect" demand, we are unable to determine how much additional revenue these customers may generate. In addition, our sales data also may not identify customers who do not directly account for 10% of our net revenue, but may be significant in that such customers also generate substantial "indirect" demand from distributors and outsourced suppliers. If any such customer were to stop incorporating our products or third party products containing our components into its designs, we would not only lose the direct revenue we receive from the customer, but we could also lose a portion of the indirect revenue from third parties who do business with such customer. If we were to lose or experience a significant reduction in demand from one or more of our key customers either to which we sell directly or which generates "indirect" demand or if we were to fail to collect our accounts receivable from one or more of our key customers, our operating results and financial position would be materially adversely impacted.

Because demand for our products is impacted by demand for our customers' products, our revenue depends on the timing, size, and speed of commercial introductions of systems that use our products, and our customers' ability to manage their inventory in relationship to such demand. We continue to expect a significant amount of our revenue to come from the commercial introduction of new systems, which is often more difficult to forecast than ongoing demand for previously introduced systems. A number of our customers' applications, particularly in the desktop and workstation market and consumer and portable market, are subject to short product cycles and prone to delays in development and commercial introduction or significant changes in demand, making it

inherently difficult to accurately forecast demand for such applications in any period. A number of our customers, such as ODMs, CEMs, and merchant power supply manufacturers, also are dependent upon the demand of other companies, which makes sales to such parties more difficult to forecast accurately. These fluctuations in demand could materially affect our operating results on a period by period basis.

We recognize revenue on our sales upon shipment with a provision for estimated sales returns and allowances. A portion of our revenues come from customer orders that are both received and shipped against within the same quarter, or “turns business,” which is inherently difficult to forecast. We estimate turns business as a percent of net revenue as the ratio of net revenue less beginning backlog to net revenue making adjustments for the effect of sales return reserves or other adjustments to net revenue not included in backlog. Turns business was between 15% and 25% in the fourth quarter of 2009, compared to between 15% and 25% in the third quarter of 2009 and between 15% and 20% the fourth quarter of 2008. If our turns business increases, forecasting revenue becomes more difficult. Generally, our current sales practice allows customers to, and customers routinely do, revise and cancel orders and reschedule delivery dates on relatively short notice pursuant to changes in the customer’s requirements. In addition, in circumstances where we have achieved our objectives in a period or when we have limited or insufficient inventory available, we may delay shipment of orders. For these reasons, backlog has limited value as a predictor of future revenues.

We typically sell directly through our internal sales force to customers in North America. We sell both directly and indirectly through distributors internationally, under agreements that generally do not provide for price adjustments after purchase and provide limited return rights in the event of product failure. We have made no sales to U.S. distributors. In 2009, sales to international distributors represented 37% of net revenue, compared to 54% in 2008. We expect the sales channels we use and the mix of business between distribution and direct sales to change as our product offerings and customers evolve. Our use of distributors has gradually declined over time as we improved our internal service capabilities.

Our cost of revenue consists primarily of purchases of silicon wafers and related costs of assembly, test and shipment of our products, and compensation and related costs of personnel and equipment associated with production management and quality assurance. Our gross margins have historically varied significantly, and may continue to vary, based on a variety of factors, including changes in the relative mix of the products we sell, the markets and geographies where we sell, the size and nature of our customers in these markets, the levels of sales to distributors, manufacturing volumes and yields, discounts or other financial incentives to customers and inventory and overhead costs. Generally, as we introduce new products, we initially incur higher unit production costs, and as the product ramp progresses, our overall unit production costs decrease as manufacturing efficiency improves. In addition, because our power management products are highly complex and the manufacturing process for our products is technically challenging, previously undetected design defects and minor deviations in the manufacturing process can cause substantial decreases in yields or quality. Such decreases in yields or quality can impact our gross margins due to a reduction in our revenue as a result of significant product returns, may cause us to incur product replacement costs, and may cause us to rework or scrap inventory that had been manufactured with the defect. If we are unable to manage these risks, our revenue and gross margins and financial position may be materially adversely impacted. Finally, consistent with the overall market for power management solutions, we expect to face price pressure over time. In order to maintain or improve our gross margins, we will need to introduce new, lower cost products, increase volumes, reduce unit costs or achieve a combination of these objectives.

We purchase our inventory pursuant to standard purchase orders. As lead times at our manufacturing vendors can be up to three months or more, we typically build inventory based on our sales forecasts rather than customers’ orders, subjecting us to inventory risk. If, after initial orders are placed, we change certain features of our product to accommodate customer requirements, we may create additional inventory that we may not be able to sell. In the event of an inventory write-down either because the inventory exceeds demand, becomes obsolete, or contains previously undetected defects and must be reworked or scrapped, our gross margins could be materially adversely impacted. On the other hand, because our manufacturing lead times tend to be longer than our order lead times and capacity at our manufacturing vendors may be constrained, our net revenue and relationship with our customers could be adversely impacted if we do not have adequate inventory available to

meet customer demand. Our inventory levels were \$10.3 million at the end of the fourth quarter of 2009, and inventory turns, calculated as our annualized cost of revenue for the quarter divided by our inventory as of the end of such quarter, decreased to 4.9 in the fourth quarter of 2009 compared to 5.7 turns in third quarter of 2009 and increased from 2.8 turns in the fourth quarter of 2008. If the amount of inventory we are holding increases or our inventory turns decrease, the risk of a potential inventory write-down and adverse impact on our gross margins increases.

Our research and development expense consists primarily of compensation and related costs for employees involved in the design and development of our products, prototyping and other development expense, and the depreciation costs related to equipment being used for research and development. All research and development costs are expensed as incurred. Research and development expenses can fluctuate as a result of long design cycles with periods of relatively low expenses punctuated with increased expenditures for prototypes and product development toward the end of the design cycle.

Selling, general and administrative expense consists primarily of compensation and related costs for employees involved in sales and marketing, general management, finance, human resources and information technology, as well as expenses related to travel and entertainment, professional services, and insurance.

Litigation expenses consist primarily of attorneys' fees and costs and expenses associated with our litigation matters described in Item 3. Legal Proceedings, and such legal proceedings may continue for the upcoming year and beyond. In 2009, our litigation expenses were approximately \$5.2 million.

Our income tax provision is dependent on our estimated annual effective tax rate. Our annual effective tax rate has fluctuated and is dependent on the mix of income and losses between domestic and international operations, as well as the utilization of available net operating loss carryforwards to offset taxable income and tax credit carryforwards that offsets income tax in the U.S. and changing assessments of statutory income tax rates. Our domestic deferred tax assets are fully offset by a valuation allowance because, dependent on the available objective evidence, we believe it is more likely than not that the net deferred tax assets will not be realizable. If we later determine that it is more likely than not that the deferred tax assets would be realized, we may revise this assessment, which could result in a favorable adjustment to the reported income tax provision in the period of re-assessment followed by higher reported tax rates in subsequent periods. Our foreign income is typically subject to lower statutory rates than our domestic income. We expect that both our geographical mix of taxable income and losses as well as the statutory rates we are subject to internationally may change over time, resulting in changes to our effective tax rate and reported income tax provision.

Critical Accounting Policies and Estimates

Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these consolidated financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenue and expenses, and related disclosure of contingent assets and liabilities. On an ongoing basis, we evaluate our estimates, including those related to sales returns and allowances, inventory valuation, income taxes, and stock-based compensation. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances and form the basis for making judgments about the carrying value of assets and liabilities that are not readily apparent from other sources. Actual results may differ from the estimates under different conditions.

We believe the following critical accounting policies and estimates involve more significant judgments used in the preparation of our financial statements.

Revenue Recognition. We recognize revenue when the four basic criteria are met. They are: (1) persuasive evidence of an arrangement exists; (2) delivery has occurred or service has been rendered; (3) collectability is reasonably assured, and (4) the fee is fixed or determinable. Determination of criteria (1) is based on a purchase order received from the customer. Determination of criterion (2) and (3) are based on shipment when title transfers to

the customer and management's judgment regarding the collectability of the amounts billed. Determinations of criteria (4) is based on the fixed price charged for products delivered adjusted for any applicable discounts. Should management determine that these criteria are not met for certain transactions, revenue recognized for any reporting period could be adversely impacted.

Revenue from product sales is recognized upon shipment when title passes and a provision is made for estimated returns and allowances. Our sales to distributors are made under agreements that do not provide for price adjustments after purchase and provide for limited return rights in the event of a product failure. Revenue on these sales is recognized upon shipment at which time title passes.

We track historical rates of return by identifying the period in which the returned products were originally shipped. We then compute a historical sales return rate for prior quarterly periods. To determine the estimated return rate for any period, this historical sales return rate is adjusted for unusual past returns experience related to specific quality issues or other unusual circumstances that are not expected to recur and consideration of any current information about known product failure rates or business developments. Based on this historical data as well as current business expectations, we estimate sales returns. While we believe our methodology enables us to make reasonable estimates of sales returns, because of the inherent nature of estimates and our limited historical experience, there is a risk that there could be significant differences between actual amounts and our estimates. A significant difference between actual amounts and our estimates could significantly impact our reported operating results.

Inventory Valuation. Inventory is valued at the lower of standard cost (which approximates actual cost on a first-in-first-out basis) or market. We record provisions for inventories for excess or obsolete work-in-process and finished goods. Newly developed products are generally not valued until they have been qualified for manufacturing and success in the marketplace has been demonstrated through sales and backlog, among other factors. Until products have been qualified for manufacturing and success in the marketplace has been demonstrated, costs associated with these products are considered period costs and expensed to research and development. In addition to provisions based on newly introduced parts, statistical and judgmental assessments are made for the remaining inventory based on assumptions about future demand. We identify excess and obsolete inventory by analyzing inventory aging, recent sales, order backlog, and demand forecasts. Based on these and other factors, we estimate on an individual product basis the net realizable value of our inventory. Net realizable value is determined as the forecast sales of the product less the estimated cost of disposal. We reduce the carrying value to estimated net realizable value if it is less than standard cost. While our estimates require us to make significant judgments and assumptions about future events, we believe our relationships with our customers, combined with our understanding of the markets we serve, provide us with the ability to make reliable estimates. If actual market conditions and resulting product sales were to be less favorable than our projections, additional inventory provisions may be required that could adversely affect our operating results.

Accounting for Income Taxes. We account for income taxes using the assets and liability method. Under this method, we determine deferred tax assets and liabilities based upon the differences between the financial statement carrying amounts of existing assets and liabilities reported in the financial statements and the tax basis of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to affect taxable income.

The tax consequences of most events recognized in the current year's financial statements are included in determining income taxes currently payable. However, because tax laws and financial accounting standards differ in their recognition and measurement of assets, liabilities, equity, revenue, expenses, gains, and losses, differences arise between the amount of taxable income and pretax financial income for a reporting period and between the tax basis of assets or liabilities and their reported amounts in the financial statements. Because it is assumed that the reported amounts of assets and liabilities will be recovered and settled, respectively, a difference between the tax basis of an asset or a liability and its reported amount in the consolidated balance sheet will result in a taxable or a deductible amount in some future years when the related liabilities are settled or the reported amounts of the assets are recovered, hence giving rise to deferred tax assets and liabilities. We have established a full valuation allowance against our domestic deferred tax assets for all periods since inception.

We assess the likelihood that our deferred tax assets will be recovered from future taxable income, considering all available evidence such as historical levels of income or losses, expectations and risks associated with estimates of future taxable income and ongoing prudent and feasible tax strategies. We believe it is more likely than not that such assets will not be realized. Likewise, if we later determine that it is more likely than not that the deferred tax assets would be realized, the previously provided valuation allowance would be reversed, which would likely result in the recording of an income tax benefit in the period of reduction and increase our effective tax rate in subsequent periods. See Note 7, "Income Taxes" to Notes to the Consolidated Financial Statements for further discussion.

Stock-based Compensation. We account for stock-based compensation arrangements as follows. Compensation cost is calculated on the date of grant based on the estimated fair value of the award. For grants made prior to January 1, 2006, the compensation cost is recognized on an accelerated basis over the vesting period of each grant. For grants made on or after January 1, 2006, the compensation cost is recognized on a straight-line basis over the vesting period.

In the absence of an actively traded market for similar financial instruments to those being granted, estimating the fair value of stock-based compensation is inherently difficult because the value of the financial instruments cannot be objectively verified even in retrospect. We currently use the Black-Scholes option pricing model to estimate the fair value of our stock options. The determination of the fair value of share based payment awards utilizing the Black-Scholes is affected by our stock price and a number of assumptions including expected term, volatility, and forfeiture rates. We estimate these key assumptions using historical information, peer company data and judgment regarding Company-specific and market factors and trends. When estimating expected volatility, we consider the historical volatility of our stock and implied volatility on traded options on our stock. Prior to 2009, due to the limited history of trading and lack of liquidity in both the market for our stock and options on our stock, we also considered the implied volatility on a group of peer companies to develop our estimates as well as other factors. Option grants typically vest over four years to provide long-term compensation and a retention incentive to employees. To estimate the expected term of options granted, we consider the contractual life and vesting period of the option, historical exercise behavior of our employees, and other factors. If the estimates for these key inputs are changed over time, the amounts recorded for future stock-based compensation arrangements may increase or decrease, which could materially adversely affect our results of operations.

Results of Operations

The following table sets forth our results of operations as a percentage of net revenue for the periods indicated:

	Year Ended December 31,		
	2009	2008	2007
Net revenue	100%	100%	100%
Cost of revenue	40	43	51
Gross margin	60	57	49
Operating expenses:			
Research and development	25	25	31
Selling, general and administrative	19	18	20
Litigation	5	—	—
Total operating expenses	49	43	51
Income (loss) from operations	11	14	(2)
Interest and other income, net	—	1	3
Income before income taxes	11	15	1
Income tax expense (benefit)	—	1	—
Income before cumulative effect of accounting change accounting change	11	14	1
Cumulative effect of accounting change	—	—	—
Net income	11%	14%	1%

Comparison of Year Ended December 31, 2009 to Year Ended December 31, 2008

Net Revenue. Net revenue was \$104.9 million in 2009 and \$104.2 million in 2008, an increase of 1%. Revenues increased approximately \$0.8 million and \$6.9 million in the consumer and portable and the server and storage markets, respectively, but these increases were offset by decreases in revenue of approximately \$6.6 million and \$0.4 million in the desktop and workstation and the networking and telecom markets, respectively.

Cost of Revenue and Gross Margin. Cost of revenue was \$42.3 million in 2009 and \$45.2 million in 2008, a decrease of 7%. Gross margin was \$62.7 million in 2009 and \$58.9 million in 2008, an increase of 6%. Gross margin as a percent of net revenue was 60% in 2009 and 57% in 2008. The increase in gross margin was largely due to a 1.7% benefit in 2009 from the sale of previously reserved products, but was also a result of ongoing cost reduction activities.

Research and Development. Research and development expenses were \$26.6 million in 2009 and \$26.1 million in 2008, an increase of 2%. The increase in 2009 was primarily due to the increase in wages and related expenses of \$1.3 million partially offset by a decrease in product development and prototype expenses of \$0.9 million.

Selling, General and Administrative. Selling, general and administrative expenses were \$19.7 million in 2009 and \$18.6 million in 2008, an increase of 6%. The increase in 2009 was primarily due to increases in wages and related expenses of \$0.9 million and increases in stock-based compensation expenses of \$0.4 million.

Litigation. Litigation expenses were approximately \$5.2 million in 2009 and \$0.3 million in 2008. The increase in 2009 was primarily due to the increase in activity related to our litigation brought in the United States District Court in the Northern District of California against the Defendants, as described in Item 3. Legal Proceedings.

Provision for Income Tax. Our annual income tax provision was \$0.2 million and \$0.6 million in fiscal years 2009 and 2008, respectively. Our effective tax rate for fiscal years 2009 and 2008 were 2% and 4%, respectively. The decrease in the effective tax rate in fiscal year 2009 was primarily due to a non-recurring benefit from a recent change in U.S. tax law regarding a 5-year U.S. net operating loss carryback.

Comparison of Year Ended December 31, 2008 to Year Ended December 31, 2007

Net Revenue. Net revenue was \$104.2 million in 2008 and \$74.7 million in 2007, an increase of 39%. The increase in net revenue occurred in all four of our markets, as follows: revenues in our consumer and portable market increased by approximately \$6.9 million, revenues in our desktop and workstation market increased by approximately \$13.7 million, revenues in our networking and telecom market increased by approximately \$1.2 million and revenues in our server and storage market increased by approximately \$7.7 million.

Cost of Revenue and Gross Margin. Cost of revenue was \$45.2 million in 2008 and \$37.9 million in 2007, an increase of 19%. Gross margin was \$58.9 million in 2008 and \$36.8 million in 2007, an increase of 60%. Gross margin as a percent of net revenue was 57% in 2008 and 49% in 2007. The increase in gross margin percentage was primarily due to charges in 2007 related to product recall which did not recur in 2008, as well as cost reduction activities and operational improvements in 2008.

Research and Development. Research and development expenses were \$26.1 million in 2008 and \$23.3 million in 2007, an increase of 12%. The increase in 2008 was primarily due to the increase in wages and related expenses of \$1.9 million and increases in product development and prototype expenses of \$0.8 million.

Selling, General and Administrative. Selling, general and administrative expenses were \$18.6 million in 2008 and \$15.1 million in 2007, an increase of 25%. The increase in 2008 was primarily due to increases in wages and related expenses of \$2.9 million, increases in stock-based compensation expenses of \$0.4 million and increases in other professional services of \$0.4 million.

Litigation. Litigation expenses were \$0.3 million in 2008 and zero in 2007. The increase in 2008 was primarily due to the commencement of activities related to our litigation brought in the United States District Court in the Northern District of California against the Defendants, as described in Item 3. Legal Proceedings.

Provision for Income Tax. Our annual income tax provision was \$0.6 million and \$0.2 million in fiscal years 2008 and 2007, respectively. The significant increase in income before taxes increased the income tax provision. Our effective tax rate for fiscal years 2008 and 2007 were 4% and 29%, respectively. The decrease in the effective tax rate in fiscal year 2008 is primarily due to the increase in income before taxes from international operations which are subject to lower statutory income tax rates.

Liquidity and Capital Resources

As of December 31, 2009, we had working capital of \$88.3 million, including cash, cash equivalents and short-term investments of \$73.8 million. Our cash, cash equivalents and short-term investments increased by \$16.4 million in 2009. We currently have no debt and believe that our current cash, cash equivalents, and short-term investments as well as cash flows from operations will be sufficient to continue to fund our operations and meet our capital needs for the current fiscal year.

Our operating activities provided net cash of \$18.2 million, \$18.0 million and \$10.4 million in 2009, 2008 and 2007, respectively. Cash provided from operating activities in 2009 was primarily due to net income of \$10.9 million and decreases in inventory of \$3.4 million due to improvements in our inventory management practices and improving business conditions in the second half of 2009. There was additional cash generated from increases in accrued liabilities and long-term liabilities of \$1.7 million related to higher wage accruals, other employment benefit related expense accruals and bonus accruals. The above increases in cash were partially offset by an increase in accounts receivables of \$3.3 million, consistent with the increased shipments to our customers in the final quarter of 2009. Partially offsetting our increases in cash was a decrease in accounts payable of \$2.3 million which was primarily due to the timing of payments to our vendors. The primary sources of cash from operations in 2008 was primarily due to net income of \$14.3 million, adjustments for depreciation and amortization of \$2.4 million, stock-based compensation of \$4.1 million and increases in accrued liabilities and long term liabilities of \$4.1 million related to wage accruals, other employment benefit related expense accruals and bonus accruals. The above increases in cash were partially offset by an increase in inventory of \$7.4 million in 2008. The primary sources of cash from operations in 2007 are adjustments for depreciation of \$2.1

million, stock-based compensation of \$4.0 million and decreases in inventory of \$6.3 million related to sales of inventory and disposition of inventory related to product recalls, partially offset by decreases in accounts payable of \$3.4 million.

Our investing activities provided net cash of \$4.6 million in 2009, compared to net cash used of \$12.7 million in 2008 and net cash provided of \$7.9 million in 2007. The primary source of cash from investing in 2009 was the maturity of short-term investments of \$22.0 million partially offset by the purchase of short-term investments of \$16.0 million and purchases of property and equipment of \$1.4 million. The primary use of cash from investing in 2008 was the purchase of short-term investments of \$12.9 million and purchases of property and equipment of \$2.3 million, partially offset by \$2.5 million from the maturity of short-term investments. The primary source of cash from investing in 2007 was the net maturity of short-term investments of \$9.8 million, and partially offset by \$2.0 million of purchases of property and equipment primarily related to the leasehold improvements for our new office in Fremont, California.

Our financing activities used net cash of \$0.5 million, \$5.9 million and \$12.7 million in 2009, 2008 and 2007, respectively. The primary use of cash from financing in 2009 was the repurchase of our common stock of \$7.5 million, partially offset by sales of securities under the stock option and employee stock purchase plans of \$7.0 million. The primary use of cash from financing in 2008 was the repurchase of our common stock of \$9.9 million, partially offset by sales of securities under the stock option and employee stock purchase plans of \$4.0 million. We used \$15.0 million in 2007 to repurchase our common stock, which was partially offset by sales of securities under our stock option and employee stock purchase plans of \$2.3 million.

Contractual Obligations

The following table sets forth our contractual obligations as of December 31, 2009 (in thousands) and the periods in which such obligations are expected to be settled.

	<u>Total</u>	<u>Less than 1 year</u>	<u>1-3 years</u>	<u>3-5 years</u>	<u>More than 5 years</u>
Operating lease obligations	\$2,852	\$1,060	\$1,792	\$—	\$—
Purchase obligations	3,451	3,451	—	—	—
	<u>\$6,303</u>	<u>\$4,511</u>	<u>\$1,792</u>	<u>\$—</u>	<u>\$—</u>

Operating Lease obligations consist of the estimated obligations under the Company's real property or facility leases. Purchase obligations are comprised of the estimated obligation for non-cancelable in-process silicon wafers. We depend entirely upon third-party foundries to manufacture our silicon wafers. Due to lengthy foundry lead times, we typically order these materials up to three months or more in advance of required delivery dates, and we are obligated to pay for the materials in accordance with the contractual payment terms, which typically require payment within three months.

The amounts in the table above exclude \$1,072 of income tax liabilities as we are unable to reasonably estimate the timing of settlement. See Note 7, "Income Taxes" of Notes to the Consolidated Financial Statements for further discussion.

Recent Accounting Pronouncements

In June 2009, the Financial Accounting Standards Board (FASB) issued an amendment to the accounting and disclosure requirements for transfers of financial assets to be included in Accounting Standards Codification ("ASC") 860 "Transfers and Servicing". This amendment requires greater transparency and additional disclosures for transfers of financial assets and the entity's continuing involvement with them and changes the requirements for derecognizing financial assets. In addition, this amendment eliminates the concept of a qualifying special-purpose entity (QSPE). This amendment is effective for financial statements issued for fiscal years beginning after November 15, 2009. This amendment does not have a material effect on our financial position, results of operations or liquidity.

In June 2009, the FASB also issued an amendment to the accounting and disclosure requirements for the consolidation of variable interest entities (VIEs) to be included in ASC 810 "*Consolidation*". The elimination of the concept of a QSPE, as discussed above, removes the exception from applying the consolidation guidance within this amendment. This amendment requires an enterprise to perform a qualitative analysis when determining whether or not it must consolidate a VIE. The amendment also requires an enterprise to continuously reassess whether it must consolidate a VIE. Additionally, the amendment requires enhanced disclosures about an enterprise's involvement with VIEs and any significant change in risk exposure due to that involvement, as well as how its involvement with VIEs impacts the enterprise's financial statements. Finally, an enterprise will be required to disclose significant judgments and assumptions used to determine whether or not to consolidate a VIE. This amendment is effective for financial statements issued for fiscal years beginning after November 15, 2009. This amendment does not have a material effect on our financial position, results of operations or liquidity.

Item 7A. *Quantitative and Qualitative Disclosures About Market Risk*

The primary objective of our investment activities is to preserve principal while maximizing income without significantly increasing risk. Some of the securities in which we invest may be subject to interest rate risk. This means that a change in prevailing interest rates may cause the market value of the investment to fluctuate. To minimize this risk, we may maintain our portfolio of cash equivalents and short-term investments in a variety of securities, including money market funds, government treasury and agency securities. The risk associated with fluctuating interest rates is limited to our investment portfolio. As of December 31, 2009, all of our short-term investments were U.S. treasury securities and our cash equivalents were held in checking and money market accounts, and as of December 31, 2008, we held no short-term investments. If market interest rates were to increase or decline by 10% from interest rates as of December 31, 2009 and 2008, the impact on our portfolio on these dates would not have been material. We do not currently use derivative instruments in our investment portfolio.

Our sales outside the United States are transacted in U.S. dollars; accordingly, our sales are not generally impacted by foreign currency rate changes. As of December 31, 2009 and 2008, fluctuations in foreign currency exchange rates did not have a material impact on our results of operations.

The accompanying notes are an integral part of these consolidated financial statements

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(In thousands, except share and per share data)

1. Description of Business

Volterra Semiconductor Corporation (the “Company” or “Volterra”) was incorporated in Delaware in 1996, and its principal offices are located in Fremont, California. The Company designs, develops and markets proprietary, high-performance analog and mixed-signal power management semiconductors.

2. Summary of Significant Accounting Policies

(a) Principles of Consolidation

The accompanying consolidated financial statements include the accounts of the Company and its wholly owned subsidiaries. All significant inter-company balances and transactions have been eliminated in consolidation. The functional currency of foreign subsidiaries is the U.S. dollar and foreign currency transaction gains and losses are recorded in income. For all periods presented, there have been no material foreign currency transaction gains and losses.

(b) Risk and Uncertainties

The Company’s operations and performance depend significantly on worldwide economic conditions and their impact on purchases of the Company’s products as well as the ability of our suppliers to provide the Company with timely services. The impact of any of the matters described below could have an adverse affect on the Company’s business, results of operations and financial condition.

- The Company’s sales are concentrated with a relatively small group of customers as 65% of net revenue is represented by three customers. Customers in any of the Company’s target market sectors may experience unexpected reductions in demand for their products and reduce their purchase orders from us, resulting in either the loss of a significant customer or a notable decrease in the level of sales to a significant customer. In addition, if any of these customers are unable to obtain the necessary capital to operate their business, they may be unable to satisfy their payment obligations to the Company.
- The Company utilizes third-party foundries and assembly and test subcontractors to manufacture, assemble and test its products. The Company does not have long-term supply contracts with any of its foundries or suppliers. If one of these third-parties was unable to obtain the necessary capital to operate their business, they may be unable to provide the Company with timely services or to make timely deliveries of products.
- Because a substantial portion of the Company’s sales are to distributors and outsourced suppliers and not directly to electronic system designers, we have limited visibility into ultimate product demand, which makes sales forecasting more difficult for the Company. Demand for our products may not materialize, subjecting the Company to risks of high inventory carrying costs and obsolescence.

(c) Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles in the United States of America requires management to make estimates and assumptions that affect the amounts reported in the financial statements and the accompanying notes.

The accounting estimates that require our most significant, difficult and subjective judgments include:

- the recognition and measurement of current and deferred income taxes (including the measurement of uncertain tax positions); and
- the valuation of inventory.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

Actual results could differ from those estimates.

(d) Financial Instruments and Concentrations of Credit Risk

Financial instruments consist of cash equivalents, short-term investments, accounts receivable, and accounts payable. The carrying value of the Company's financial instruments approximates the respective fair value due to the relatively short maturities of these instruments. Financial instruments that potentially subject the Company to concentrations of credit risk consist principally of investments and trade accounts receivable.

The Company maintains cash, cash equivalents, and short-term investments with high credit quality financial institutions. Cash equivalents consist of highly liquid investments maturing in 90 days or less from the date of purchase. Short-term investments are comprised of U.S. Treasury and government agency debt securities with remaining contractual maturities on the date of purchase greater than 90 days but less than one year. Investments in debt securities are classified as held-to-maturity and carried at amortized cost. The following table reconciles the amortized cost to the fair value of investments:

	As of December 31,	
	2009	2008
Amortized cost	\$4,549	\$10,461
Unrealized gains	—	35
Fair value	\$4,549	\$10,496

The Company sells its products to international distributors and original equipment manufacturers (and their outsourced suppliers) in the computing, storage, networking, and consumer electronic industries. The Company performs credit evaluations of its customers' financial condition and generally does not require collateral from its customers. An allowance is provided for bad debts when it is probable and estimable that accounts receivable will not be collected.

(e) Accounts Receivable

An allowance for doubtful accounts is recorded based on management's judgments and estimates on the collectability of accounts receivable based on historical bad debt experience, customers' creditworthiness, and recent changes in customers' payment trends. If circumstances change adversely, additional bad debt allowances may be required.

(f) Segment Reporting and Significant Customers

The Company is organized and operates as a single business segment: analog and mixed-signal power management semiconductors. The Company's chief operating decision maker, the Chief Executive Officer, reviews financial information presented on a consolidated basis for the purposes of making operating decisions and assessing financial performance.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

Significant customers are those customers accounting for more than 10% of the Company's total net revenue or accounts receivable. For each significant customer, net revenue as a percentage of total net revenue and accounts receivable as a percentage of total accounts receivable are as follows:

<u>Customer</u>	<u>Net Revenue</u>			<u>Accounts Receivable</u>	
	<u>Year Ended December 31,</u>			<u>As of December 31,</u>	
	<u>2009</u>	<u>2008</u>	<u>2007</u>	<u>2009</u>	<u>2008</u>
A	39%	27%	37%	53%	21%
B	15%	*	*	10%	21%
C	11%	*	*	*	19%
D	*	31%	20%	*	18%
E	*	13%	12%	*	10%
F	*	*	12%	*	*

* Less than 10%

The Company reports its net revenue by geographic areas according to the destination to which the product was shipped. The geographic area to which a product was shipped is not necessarily the same location in which the product is ultimately used. In all periods, substantially all of the Company's net revenue was denominated in U.S. dollars. Net revenue by geographic area was as follows:

<u>Geographic Area</u>	<u>Year Ended December 31,</u>		
	<u>2009</u>	<u>2008</u>	<u>2007</u>
Singapore	47%	40%	49%
China	42%	47%	31%
Taiwan	4%	4%	10%
United States	2%	2%	4%
Japan	2%	5%	3%
Other	3%	2%	3%

(g) Inventory

Inventory is stated at the lower of standard cost (which approximates actual cost on a first-in, first-out basis) or market. Provisions, when required, are made to reduce excess and obsolete inventories to their estimated net realizable values.

(h) Property and Equipment

Property and equipment are stated at cost and depreciated using the straight-line method over the estimated useful lives of the assets, which are three years for computer hardware and software, and five to seven years for equipment and furniture. Leasehold improvements are amortized over the shorter of the lease term or the estimated useful life of seven years. The Company's long-lived assets are primarily located in the United States.

(i) Revenue Recognition

Revenue from the sale of semiconductor products is recognized upon shipment when title transfers to the customer provided that persuasive evidence of an arrangement exists, the price is fixed or determinable, and collection of the resulting receivable is reasonably assured. An allowance is recorded at the time of sale to provide for estimated future sales returns. The allowance is based upon historical experience, current trends, and the Company's expectations regarding future experience. Sales returns must be authorized by Volterra and are

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

generally limited to instances of product failure under the Company warranty that generally provide that products will be free from defects for a limited period of time following shipment, generally not longer than twelve months.

The Company has made no sales to U.S. distributors. Volterra's sales to international distributors are made under agreements that do not provide for price adjustments after purchase and provide limited return rights under the Company's standard warranty. Revenue on these sales is recognized upon shipment when title passes to the distributor. Volterra estimates future international distributor sales returns based on historical data and current business expectations and reduces revenue for estimated future returns through the allowance for sales returns.

Revenue generally is recognized net of any taxes collected from customers and subsequently remitted to governmental authorities.

(j) Earnings Per Share

Basic net income per share is calculated by dividing net income by the weighted average shares of common stock outstanding during the period. Diluted net income per share is calculated by dividing the net income by the weighted average shares of common stock outstanding and dilutive potential common shares outstanding during the period. Dilutive potential common shares consist of dilutive shares issuable upon the exercise of outstanding stock options and warrants, computed using the treasury stock method.

The following table sets forth for all periods presented the computation of basic and diluted net income per share, including the reconciliation of the numerator and denominator used in the calculation:

	Year Ended December 31,		
	2009	2008	2007
Numerator:			
Net income	\$ 10,940	\$ 14,258	\$ 313
Denominator:			
Weighted average shares outstanding, basic	22,968,017	23,749,978	24,332,270
Effect of dilutive securities:			
Stock options	1,415,305	1,451,478	1,969,769
Weighted average shares outstanding, diluted	24,383,322	25,201,456	26,302,039
Basic net income per share	\$ 0.48	\$ 0.60	\$ 0.01
Diluted net income per share	\$ 0.45	\$ 0.57	\$ 0.01

Stock options outstanding in the amount of 2,742,579, 2,932,419 and 2,567,183 shares for the twelve months ended December 31, 2009, 2008 and 2007, respectively, were excluded from the computation of diluted earnings per share because they were anti-dilutive in the period. The securities outstanding as of December 31, 2009 could dilute net income per share in the future.

(k) Income Taxes

Income taxes are accounted for under the asset and liability method. Deferred tax assets and liabilities are recognized for future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, operating loss and tax credit carryforwards. Deferred tax assets and liabilities are measured using enacted income tax rates expected to apply

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in income tax rates is recognized in income in the period that includes the enactment date. The Company has established a full valuation allowance against the domestic deferred tax asset for all periods since inception.

The Company assesses the likelihood that the deferred tax assets will be recovered from future taxable income, considering all available evidence such as historical levels of income or losses, expectations and risks associated with estimates of future taxable income on a jurisdiction by jurisdiction basis and ongoing prudent and feasible tax strategies. These assumptions require significant judgment about the forecasts of future taxable income and are consistent with the plans and estimates we are using to manage the underlying businesses. The Company believes it is more likely than not that such assets will not be realized. Likewise, if the Company later determines that it is more likely than not that the deferred tax assets would be realized, the previously provided valuation allowance would be reversed, which would likely result in the recognition of an income tax benefit in the period of reduction and increase the effective tax rate in subsequent periods.

The Company must make certain estimates and judgments about the application of complex tax laws, the expected resolution of uncertain tax positions and other matters. In the event that uncertain tax positions are resolved for amounts different than the Company's estimates, or the related statutes of limitations expire without the assessment of additional income taxes, the Company will be required to adjust the amounts of the related assets and liabilities in the period in which such events occur. Note 7, "Income Taxes" of the Consolidated Financial Statements describes *unrecognized tax benefits* and the effects on the results of operations and financial position.

(1) Stock-Based Compensation

We account for stock-based compensation arrangements as follows. Compensation cost is calculated on the date of grant based on the estimated fair value of the award. For grants made prior to January 1, 2006, the compensation cost is recognized on an accelerated basis over the vesting period of each grant. For grants made on or after January 1, 2006, the compensation cost is recognized on a straight-line basis over the vesting period.

In the absence of an actively traded market for similar financial instruments to those being granted, estimating the fair value of stock-based compensation is inherently difficult because the value of the financial instruments cannot be objectively verified even in retrospect. We currently use the Black-Scholes option pricing model to estimate the fair value of our stock options. The determination of the fair value of share based payment awards utilizing the Black-Scholes is affected by our stock price and a number of assumptions including expected term, volatility, and forfeiture rates. We estimate these key assumptions using historical information, peer company data and judgment regarding Company-specific and market factors and trends. When estimating expected volatility, we consider the historical volatility of our stock and implied volatility on traded options on our stock. Prior to 2009, due to the limited history of trading and lack of liquidity in both the market for our stock and options on our stock, we also consider the implied volatility on a group of peer companies to develop our estimates as well as other factors. Option grants typically vest over four years to provide long-term compensation and a retention incentive to employees. To estimate the expected term of options granted, we consider the contractual life and vesting period of the option, historical exercise behavior of our employees, and other factors. If the estimates for these key inputs are changed over time, the amounts recorded for future stock-based compensation arrangements may increase or decrease, which could materially adversely affect our results of operations.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

The effect of stock-based compensation was as follows:

	Year Ended December 31,		
	2009	2008	2007
Stock-based compensation expense:			
Cost of revenue	\$ 425	\$ 232	\$ 190
Research and development	2,705	1,967	2,242
Sales, general and administrative	2,303	1,925	1,548
Total stock-based compensation expense	5,433	4,124	3,980
Tax effect of stock-based compensation	—	—	—
Effect on net income	<u>\$5,433</u>	<u>\$4,124</u>	<u>\$3,980</u>
Effect on basic net income per share	<u>\$ 0.24</u>	<u>\$ 0.17</u>	<u>\$ 0.16</u>
Effect on diluted net income per share	<u>\$ 0.22</u>	<u>\$ 0.16</u>	<u>\$ 0.15</u>

The fair value of options granted under the Company's stock option plans and rights granted under the 2004 Employee Stock Purchase Plan (ESPP) are estimated on the date of grant using the Black-Scholes valuation model. Expected volatility was estimated based on historical volatility of the Company's stock and the implied volatility of traded options on the Company's stock. Prior to 2009, due to the limited history of trading and lack of liquidity in both the market for our stock and options on our stock, we also consider the implied volatility on a group of peer companies to develop our estimates as well as other factors. Expected term was estimated based on the contractual life of the instrument, the vesting period of the grant, and the historical exercise behavior. The following table summarizes the assumptions used in fair value calculations:

	Stock Options			ESPP		
	Year Ended December 31,			Year Ended December 31,		
	2009	2008	2007	2009	2008	2007
Expected life (in years)	4.4	4.4	3.9	0.5	0.5	0.5
Expected volatility	49%	47%	38%	55%	50%	36%
Risk-free interest rates	1.9%	2.6%	4.6%	0.2%	1.3%	4.8%
Expected dividend yield	—	—	—	—	—	—

The weighted-average grant-date fair value of stock options granted was \$5.03, \$5.10 and \$4.61 during the years ended December 31, 2009, 2008, and 2007, respectively. The weighted-average grant-date fair value of rights granted under the ESPP was \$4.00, \$3.37 and \$3.55 during the years ended December 31, 2009, 2008 and 2007, respectively.

(m) Comprehensive Income

Under ASC 220, comprehensive income is defined as the changes in financial position of an enterprise excluding stockholder transactions. Elements of comprehensive income other than net income were immaterial for the years ended December 31, 2009, 2008, and 2007.

(n) Accounting for Lease Incentives

As part of the Company's existing leased facilities, the Company has received various lease incentives which take the form of a fixed allowance towards lease improvements on the facility. The Company used the allowance to make leasehold improvements which are being depreciated over the useful life of the assets or the lease term, whichever is shorter. The offsetting lease incentives liability is being amortized on a straight-line basis over the term of the lease.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

3. Inventory

Inventory consisted of the following:

	<u>December 31, 2009</u>	<u>December 31, 2008</u>
Work-in-process	\$ 6,495	\$ 5,672
Finished goods	3,789	7,996
	<u>\$10,284</u>	<u>\$13,668</u>

4. Property and Equipment

Property and equipment consisted of the following:

	<u>December 31, 2009</u>	<u>December 31, 2008</u>
Computer hardware	\$ 2,139	\$ 1,544
Computer software	4,724	4,587
Equipment and furniture	6,373	6,222
Leasehold improvements	1,988	1,994
	<u>15,224</u>	<u>14,347</u>
Less accumulated depreciation and amortization	<u>(10,568)</u>	<u>(9,062)</u>
	<u>\$ 4,656</u>	<u>\$ 5,285</u>

Depreciation and amortization expense was \$1,774, \$2,367 and \$2,063 for the years ended December 31, 2009, 2008, and 2007, respectively.

5. Accrued Liabilities

Accrued liabilities consisted of the following:

	<u>As of December 31,</u>	
	<u>2009</u>	<u>2008</u>
Accrued compensation	\$5,922	\$4,962
Professional services	1,436	1,361
Other taxes payable	1,213	715
Income tax (receivable) payable, net	(105)	188
Short-term lease incentives	243	243
Other accrued liabilities	797	604
	<u>\$9,506</u>	<u>\$8,073</u>

6. Stockholders' Equity

(a) Common and Preferred Stock

As of December 31, 2009, the Company is authorized to issue 200,000,000 shares of \$0.001 par value common stock and 5,000,000 shares of \$0.001 par value preferred stock. The Company has the authority to issue undesignated preferred stock in one or more series and to fix the rights, preferences, privileges, and restrictions

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

thereof, including dividend rights, dividend rates, conversion rights, voting rights, terms of redemption, and liquidation preferences. As of December 31, 2009, 2008 and 2007, no shares of preferred stock were outstanding.

The Company has reserved shares of common stock for future issuance at December 31, 2009 as follows:

Stock options outstanding	6,050,096
Stock options available for future grants	5,217,625
Employee stock purchase plan	<u>2,072,148</u>
	<u>13,339,869</u>

(b) Stock Option Plans

As of December 31, 2009, the Company had authorized 16,156,814 shares of common stock for issuance under the Company's stock option plans, the 2004 Equity Incentive Plan and the 2004 Non-Employee Director Plan. Options typically vest and become exercisable over a four year period. Options granted after May 18, 2006 expire seven years from the date of grant while previously issued options expire after ten years.

The following table summarizes stock option activity under the plans during the years 2007, 2008, and 2009:

	Options Available for Grant	Options Outstanding	
		Number of Shares	Weighted Average Exercise Price
Balances as of December 31, 2006	3,911,930	5,274,124	\$ 8.90
Authorized	1,356,830	—	—
Granted	(1,541,575)	1,541,575	\$12.89
Exercised	—	(347,616)	\$ 4.54
Canceled	<u>457,764</u>	<u>(457,764)</u>	\$14.88
Balances as of December 31, 2007	4,184,949	6,010,319	\$ 9.72
Authorized	1,302,760	—	—
Granted	(1,342,975)	1,342,975	\$12.49
Exercised	—	(656,997)	\$ 4.24
Canceled	<u>626,388</u>	<u>(626,388)</u>	\$14.13
Balances as of December 31, 2008	4,771,122	6,069,909	\$10.47
Authorized	1,282,201	—	—
Granted	(1,018,305)	1,018,305	\$12.16
Exercised	—	(855,511)	\$ 6.47
Canceled	<u>182,607</u>	<u>(182,607)</u>	\$12.06
Balances as of December 31, 2009	<u>5,217,625</u>	<u>6,050,096</u>	\$11.27

As of December 31, 2009, the weighted average remaining contractual life for options outstanding was 4.6 years. Additionally, as of December 31, 2009, there were 3,787,011 options exercisable with a weighted average exercise price of \$10.61 per share, and the weighted-average remaining contractual life for exercisable options was 4.1 years. As of December 31, 2009, there were 1,936,246 options expected to vest with a weighted average exercise price of \$12.46 per share, and the weighted-average remaining contractual life for options expected to vest was 5.6 years. The aggregate intrinsic value of options outstanding, exercisable and expected to vest was

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

\$47,539, \$33,696 and \$12,891, respectively. The total intrinsic value of options exercised was \$7,340, \$4,001, and \$3,016 during the years ended December 31, 2009, 2008, and 2007, respectively.

As of December 31, 2009, there was \$9,767 of total unrecognized compensation cost related to non-vested options granted under both of the Company's option plans. That cost is expected to be recognized over a weighted-average period of 1.5 years. The total fair value of options vested was \$5,834, \$4,772 and \$4,904 during the years ended December 31, 2009, 2008 and 2007, respectively.

(c) Employee Stock Purchase Plan

In June 2004, the Company authorized the 2004 Employee Stock Purchase Plan. In 2005, the initial offering under the ESPP began on February 21, 2005 and ended on May 15, 2005. Subsequent six month offering periods began on the first trading day on or after May 16 and November 16. The price of the Company's common stock purchased pursuant to the offerings is 85% of the lesser of the fair market value of the common stock on the first and last day of the offering period. Participants must remain employed by the Company for the entire term of the offering in order to be eligible to purchase shares. As of December 31, 2009, the Company had authorized 2,685,472 shares for issuance under the ESPP. The Company issued 190,252, 151,423, and 98,835 shares at a weighted-average price of \$7.60, \$8.05 and \$11.65 per share pursuant to the ESPP during the years ended December 31, 2009, 2008 and 2007, respectively.

7. Income Taxes

The Company is incorporated in the U.S. and operates in various countries with differing tax laws and rates. A significant portion of the Company's income before taxes and the provision for income taxes are generated from international operations.

Income (loss) before income taxes for the fiscal years ended December 31, 2009, 2008 and 2007 is summarized as follows:

	Year Ended December 31,		
	2009	2008	2007
United States	\$ 1,023	\$ (2,774)	\$ (1,333)
Foreign	10,146	17,589	2,137
Income before income taxes	\$11,169	\$14,815	\$ 804

Income tax provision in 2009, 2008 and 2007 is comprised of federal, state, and foreign taxes.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

The components of the provision for income taxes are summarized as follows:

	<u>Year Ended December 31,</u>		
	<u>2009</u>	<u>2008</u>	<u>2007</u>
Current:			
Federal	\$(303)	\$(183)	\$ 34
State	1	4	(2)
Foreign	284	921	258
	<u>(18)</u>	<u>742</u>	<u>290</u>
Deferred:			
Federal	—	—	—
State	—	—	—
Foreign	247	(185)	(54)
	<u>247</u>	<u>(185)</u>	<u>(54)</u>
Provision for income taxes	<u>\$ 229</u>	<u>\$ 557</u>	<u>\$236</u>

The difference between the provision for income taxes and the expected tax provision at the statutory income tax rate is reconciled below:

	<u>Year Ended December 31,</u>		
	<u>2009</u>	<u>2008</u>	<u>2007</u>
Expected income tax provision at statutory income tax rate	\$ 3,909	\$ 5,186	\$ 273
State taxes, net of federal tax benefit	1	3	(1)
Foreign taxes at different rates	(3,020)	(5,410)	(483)
Non-deductible expenses	59	34	24
Tax credits	(1,603)	(1,054)	(973)
Stock-based compensation	(1,141)	283	266
Valuation allowance related to net operating losses and other	2,024	1,515	1,130
Provision for income taxes	<u>\$ 229</u>	<u>\$ 557</u>	<u>\$ 236</u>

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

Effective from April 2005 through March 2015, the Company has negotiated a tax holiday on certain earnings in Singapore, which is conditional upon the Company meeting certain employment and investment thresholds. The tax holiday represents a tax benefit aimed to attract foreign investment in Singapore. The tax holiday decreased income tax expense by approximately \$2,261, \$1,875 and \$627 for the fiscal years 2009, 2008 and 2007, respectively. The benefit of the tax holiday on net income per share (diluted) was approximately \$0.09, \$0.07 and \$0.02 in fiscal years 2009, 2008 and 2007, respectively.

As of December 31, 2009, U.S. income taxes were not provided on a cumulative total of approximately \$23,426 of undistributed earnings for certain foreign subsidiaries. Determination of the amount of unrecognized deferred tax liability for temporary differences related to investments in these foreign subsidiaries that are essentially permanent in duration is not practicable. The Company currently intends to reinvest these earnings in operations outside the U.S.

Deferred income tax assets and liabilities consist of the following:

	December 31,	
	2009	2008
Deferred tax assets:		
Property and equipment	\$ 11	\$ —
Accruals and reserves	933	1,362
Tax credits	8,980	7,751
Capitalized research and development costs	1,706	3,007
Net operating loss carryforwards	3,334	2,681
Gross deferred tax assets	14,964	14,801
Deferred tax liabilities:		
Property and equipment	\$ —	\$ (111)
Net deferred tax assets	14,964	14,690
Valuation allowance	(14,931)	(14,410)
Net deferred tax assets	\$ 33	\$ 280

The realization of the tax benefits of deferred tax assets is dependent on future levels of taxable income in the periods the items are deductible or creditable. Based on the available objective evidence, management believes it is more likely than not that the domestic net deferred tax assets will not be realizable. Accordingly, the Company has provided a full valuation allowance against its domestic net deferred tax assets as of December 31, 2009 and 2008.

As of December 31, 2009, the Company has net operating loss carryforwards of approximately \$16,520 for federal and \$15,360 for California state tax purposes. The cumulative amount related to stock options included in net operating loss carryforwards for federal and California state is \$7,780 and \$10,576. Upon realization of the tax benefit associated with stock options, the impact will be recorded in equity. If not utilized, these carryforwards will begin to expire in 2023 for federal tax purposes and 2012 for California state tax purposes.

As of December 31, 2009, the Company has research credit carryforwards of approximately \$7,008 and \$7,987 for federal and California state tax purposes. If not utilized, the federal carryforwards will expire in various amounts beginning in 2017. The California credit can be carried forward indefinitely. As of December 31, 2009, the Company has state manufacturer investment tax credits (MIC) of \$159, which begins to expire in 2010.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

Under the Tax Reform Act of 1986, the amount of benefit from net operating loss and tax credit carryforwards may be impaired or limited in certain circumstances. Events which cause limitations in the amount of net operating losses that the Company may utilize in any one year include, but are not limited to, a cumulative ownership change of more than 50%, as defined, over a three-year period.

The Company accounts for uncertainty in income taxes using a two-step approach to recognizing and measuring uncertain tax positions. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the tax benefit as the largest amount that is more than 50% likely of being realized upon ultimate settlement.

As of December 31, 2009 and 2008, the total gross unrecognized tax benefits, was \$5,120 and \$4,107, of which \$4,394 and \$3,507 would affect the effective tax rate if recognized. The Company classified unrecognized tax benefits as non-current income taxes payable, as no amounts appear payable within the next 12 months. The Company recognizes interest and penalties related to uncertain tax positions in income tax expense. Cumulative interest and penalties through 2009 are immaterial.

The aggregate changes in gross unrecognized tax benefits for fiscal year 2009 are as follows:

Balance at January 1, 2009	\$4,107
Decreases in balances related to tax positions taken during prior periods	—
Increases in balances related to tax positions taken during current period	<u>1,013</u>
Balance at December 31, 2009	<u>\$5,120</u>

The Company files U.S. federal, state, and foreign income tax returns and is subject to examination in these jurisdictions for all tax years since inception. Although timing of the resolution or closure on audits is highly uncertain, the Company does not believe it is reasonably possible that the unrecognized tax benefits would materially change in the next 12 months.

8. Commitments and Contingencies

The Company leases its facilities under non-cancelable operating lease agreements expiring between 2009 and 2012. Rent expense was \$1,024, \$1,061 and \$936 for the years ended December 31, 2009, 2008, and 2007, respectively.

The following table sets forth the Company's contractual obligations as of December 31, 2009 and the years in which such obligations are expected to be settled.

	<u>Total</u>	<u>Less than 1 year</u>	<u>1-3 years</u>	<u>3-5 years</u>	<u>More than 5 years</u>
Operating lease obligations	\$2,852	\$1,060	\$1,792	\$—	\$—
Purchase obligations	<u>3,451</u>	<u>3,451</u>	<u>—</u>	<u>—</u>	<u>—</u>
	<u>\$6,303</u>	<u>\$4,511</u>	<u>\$1,792</u>	<u>\$—</u>	<u>\$—</u>

Purchase obligations are comprised of the estimated obligation for non-cancelable orders of in-process silicon wafers.

The amounts in the table above exclude \$1,072 of income tax liabilities as we are unable to reasonably estimate the timing of settlement. See Note 7, "Income Taxes" of Notes to the Consolidated Financial Statements for further discussion.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

In November 2008, we filed a lawsuit in the United States District Court in the Northern District of California against Primarion, Inc., Infineon Technologies AG and Infineon Technologies North America Corporation (the “Defendants”), Case No. CV 085029, for infringement of Volterra’s U.S. patent numbers 6,278,264, 6,462,522, 6,713,823, 6,020,729 and 6,225,795, which seeks declaratory relief, an injunction, unspecified damages, and attorneys’ fees against the Defendants. In December 2008, the Defendants filed an answer generally denying the allegations, and stating affirmative defenses and counterclaims, including claims for declaratory relief for inequitable conduct before the U.S. patent office and for Sherman Act violations. In July 2009, we filed a notice and motion for preliminary injunction and a motion for summary judgment against the Defendants. The hearing was held in September 2009, at which time the court issued a minute order granting the motion for preliminary injunction and denying the motion for summary judgment without prejudice. In November 2009, the court issued an order reversing the prior minute order.

On January 22, 2010, Infineon Technologies AG filed a lawsuit against us in the United States District Court for the District of Delaware for infringement of four patents assigned to Infineon, Case No. 10-47, for infringement of Infineon’s U.S. patent numbers 5,945,730, 7,095,281, 5,402,017 and 6,621,343, which seeks an injunction, unspecified damages, and attorneys’ fees against us. Based on our initial review, we believe this lawsuit is without merit. We are currently reviewing the complaint and the asserted patents to defend the Company against this action.

We are unable to assess the possible outcome of these litigation cases. However, because of the nature and inherent uncertainties of litigation, should the outcome of these actions be unfavorable, our business, financial condition, results of operations or cash flows could be materially and adversely affected.

9. Valuation and Qualifying Accounts

	<u>Balance at Beginning of Period</u>	<u>Additions Deducted from Revenue/ Charged to Expense</u>	<u>Deductions</u>	<u>Balance at End of Period</u>
Year ended December 31, 2009:				
Allowance for doubtful accounts	\$ 496	\$ —	\$ (192)	\$ 304
Sales returns and allowances	\$2,164	\$1,946	\$(2,618)	\$1,492
Year ended December 31, 2008:				
Allowance for doubtful accounts	\$ 155	\$ 341	\$ —	\$ 496
Sales returns and allowances	\$ 831	\$4,378	\$(3,045)	\$2,164
Year ended December 31, 2007:				
Allowance for doubtful accounts	\$ —	\$ 155	\$ —	\$ 155
Sales returns and allowances	\$ 538	\$4,604	\$(4,311)	\$ 831

10. Change in Accounting Principle

Effective January 1, 2007, the Company adopted new accounting requirements issued by the Emerging Issues Task Force to account for our employee sabbatical leave program. As a result, the Company recognized in accrued expenses a \$271 liability for sabbatical leave expense incurred prior to adoption and recorded a \$255 charge for the cumulative effect of a change in accounting principle, net of tax. Subsequent sabbatical leave expenses are recognized consistent with other employee leave related expenses.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

11. Stock Repurchases

Under the Company's stock repurchase program announced on January 28, 2008 and further increased on October 20, 2008 and April 24, 2009, the Company repurchased 820,772 shares during the year ended December 31, 2009 for \$7,475, at an average cost of \$9.11 per share including commissions. The Company's policy is to consider shares to have been repurchased upon the settlement date of the transaction, which is typically three days subsequent to the trading date. Shares repurchased during 2009 have been reported as treasury stock. As of December 31, 2009, this repurchase program has \$2.6 million remaining under our repurchase authorization.

12. Fair Value Measurements

On January 1, 2008, The Company adopted a newly issued accounting standard for fair value measurements of financial assets and liabilities. The accounting standard for fair value measurements provides a framework for measuring fair value and requires expanded disclosures regarding fair value measurements. Fair value is defined as the price that would be received for an asset or the exit price that would be paid to transfer a liability in the principal or most advantageous market in an orderly transaction between market participants on the measurement date. The accounting standard established a fair value hierarchy which requires an entity to maximize the use of observable inputs, where available. The following summarizes the three levels of inputs required as well as the assets and liabilities that we value using those levels of inputs.

The Company currently has only cash and cash equivalents and short-term investments held and used in the ordinary course of business that must be measured under the new fair value standard. The Company does not have other non-financial assets or non-financial liabilities that are required to be measured at fair value on a recurring basis. The Company's cash and cash equivalents and short-term investments are measured using inputs from Level 1 and Level 2 of the fair value hierarchy. The Company does not have nor has historically had any Level 3 investments. Level 1 and Level 2 are described as follows:

Level 1—Inputs are unadjusted quoted prices in active markets for identical assets that the Company has the ability to access at the measurement date.

Level 2—Observable inputs other than Level 1 prices, such as quoted prices for similar assets or liabilities, quoted prices in markets with insufficient volume or infrequent transactions (less active markets), or model-derived valuations in which all significant inputs are observable or can be derived principally from or corroborated with observable market data for substantially the full term of the assets or liabilities.

Based on the nature of cash and cash equivalents and the underlying securities, there are no realized or unrealized gains and losses recorded from holding these assets.

Short-term investments have remaining contractual maturities on the date of purchase greater than 90 days but less than one year. Investments in debt securities are classified as held-to-maturity. Unrealized gain and losses were not material at December 31, 2009.

VOLTERRA SEMICONDUCTOR CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS — (Continued)
(In thousands, except share and per share data)

The Company measures certain financial assets at fair value on a recurring basis. The fair value of those financial assets was determined using the following inputs at December 31, 2009:

	Fair value measurements at reporting date using			
	Total	Quoted prices in active markets for identical assets (Level 1)	Significant other observable inputs (Level 2)	Significant unobservable inputs (Level 3)
Money market funds	\$65,729	\$65,729	\$—	\$—
US treasury securities	4,549	4,549	—	—
Total	\$70,278	\$70,278	\$—	\$—

13. Selected Quarterly Financial Information (unaudited)

	Year Ended December 31, 2009			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Net revenue	\$18,275	\$22,789	\$29,687	\$34,186
Gross margin	10,172	13,373	17,590	21,552
Net (loss) income	(519)	1,074	3,427	6,958
Net (loss) income per share:				
Basic	(\$ 0.02)	\$ 0.05	\$ 0.15	\$ 0.30
Diluted	(\$ 0.02)	\$ 0.04	\$ 0.14	\$ 0.28

	Year Ended December 31, 2008			
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
Net revenue	\$23,011	\$28,703	\$30,576	\$21,865
Gross margin	12,862	16,158	17,670	12,248
Net income	2,486	5,287	5,391	1,094
Net income per share:				
Basic	\$ 0.10	\$ 0.22	\$ 0.23	\$ 0.05
Diluted	\$ 0.10	\$ 0.21	\$ 0.21	\$ 0.04

Basic and diluted net income per share are computed independently for each of the quarters presented. Therefore, the sum of quarterly basic and diluted net income per share information may not equal annual basic and diluted net income per share.

13. Subsequent Event

On January 22, 2010, Infineon Technologies AG filed a lawsuit against us in the United States District Court for the District of Delaware for infringement of four patents assigned to Infineon. Based on our initial review, we believe this lawsuit is without merit. We are currently reviewing the complaint and the asserted patents to defend the Company against this action.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders
Volterra Semiconductor Corporation:

We have audited the accompanying consolidated balance sheets of Volterra Semiconductor Corporation and subsidiaries (the Company) as of December 31, 2009 and 2008, and the related consolidated statements of operations, stockholders' equity, and cash flows for each of the years in the three-year period ended December 31, 2009. We also have audited Volterra Semiconductor Corporation's internal control over financial reporting as of December 31, 2009, based on criteria established in *Internal Control—Integrated Framework*, issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying management's report of internal control over financial reporting. Our responsibility is to express an opinion on these consolidated financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audit of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Volterra Semiconductor Corporation and subsidiaries as of December 31, 2009 and 2008, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2009, in conformity with U.S. generally accepted accounting principles. Also in our opinion, Volterra Semiconductor Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2009, based on criteria established in *Internal Control—Integrated Framework*, issued by COSO.

As described in note 10 to the consolidated financial statements, effective January 1, 2007, Volterra Semiconductor Corporation adopted new accounting requirements issued by the Emerging Issues Task Force to account for its employee sabbatical leave program.

/s/ KPMG LLP

Mountain View, California
March 3, 2010

Item 9. *Changes in and Disagreements with Accountants on Accounting and Financial Disclosure*

Not applicable.

Item 9A. *Controls and Procedures*

Evaluation of Disclosure Controls and Procedures

As of the end of the period covered by this report, an evaluation was performed under the supervision and with the participation of our management, including our chief executive officer and chief financial officer (collectively, our “certifying officers”), of the effectiveness of the design and operation of our disclosure controls and procedures. Based on their evaluation, our certifying officers concluded that these disclosure controls and procedures are effective.

Management’s Report of Internal Control over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15e. Under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework set forth in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on our evaluation under the framework set forth in *Internal Control—Integrated Framework*, our management concluded that our internal control over financial reporting was effective as of December 31, 2009. KPMG LLP, an independent registered public accounting firm, has audited our financial statements included herein and has issued an audit report on the effectiveness of our internal control over financial reporting, which report is included herein.

Inherent Limitations of the Effectiveness of Internal Controls

We believe that a system of internal controls, no matter how well designed and operated, is based in part upon certain assumptions about the likelihood of future events, and can be affected by limitations inherent in all internal controls systems including the realities that human judgment in decision-making can be faulty, that persons responsible for establishing controls need to consider their relative costs and benefits, that breakdowns can occur because of human failures such as simple error or mistake, and that controls can be circumvented by collusion of two or more people. Accordingly, we believe that our system of internal controls, while effective, can only provide reasonable, not absolute, assurance that the objectives of the controls system are met, and no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within our company have been detected.

Changes in Internal Control over Financial Reporting

We have reviewed our internal controls over financial reporting and have made no changes during the quarter ended December 31, 2009, that our certifying officers concluded materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Item 9B. *Other Information*

Not applicable.

PART III

Certain information required by Part III of this Form 10-K is omitted from this report because the registrant will file a definitive Proxy Statement within 120 days after the end of its fiscal year pursuant to Regulation 14A for its 2010 Annual Meeting of Stockholders (the "Proxy Statement"), and certain information included therein is incorporated herein by reference.

Item 10. *Directors, Executive Officers and Corporate Governance*

Information relating to our executive officers required by this item is set forth in Part I—Item 1 of this report under the caption "Executive Officers of the Registrant" and is incorporated herein by reference. The other information required by this item, including such information regarding our directors and executive officers, compliance with Section 16(a) of the Securities Exchange Act of 1934, our code of ethics and corporate governance, is incorporated herein by reference from the Proxy Statement.

Item 11. *Executive Compensation*

The information required by this item is incorporated herein by reference from the section entitled "Executive Compensation" in the Proxy Statement.

Item 12. *Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters*

The information required by this item is incorporated herein by reference from the section entitled "Security Ownership of Certain Beneficial Owners and Management" in the Proxy Statement.

Item 13. *Certain Relationships and Related Transactions, and Director Independence*

The information required by this item is incorporated herein by reference from the sections entitled "Certain Transactions," "Equity Compensation Plan Information" and "Proposal 1—Election of Directors" in the Proxy Statement.

Item 14. *Principal Accountant Fees and Services*

The information required by this item is incorporated herein by reference from the section entitled "Proposal 2—Ratification of Selection of Independent Registered Public Accounting Firm" in the Proxy Statement.

ADDITIONAL INFORMATION

If you would like to receive additional information regarding the company, including annual and quarterly reports, we will gladly mail it directly to you without charge. You may add your name to our mailing list by either calling Investor Relations at 510.743.1718 or by visiting our website at

This annual report contains forward-looking statements that involve many risks and uncertainties. These statements relate to future events and our future performance and are based on current expectations, estimates, forecasts and projections about the industries in which we operate and the beliefs and assumptions of our management. In some cases, you can identify forward-looking statements by terms such as "would," "could," "may," "will," "should," "expect," "intend," "plan," "anticipate," "believe," "estimate," "predict," "potential," "target," "seek," or "continue," the negative of these terms, or other variations of such terms. In addition, any statements that refer to projections of our future financial performance, our anticipated growth and trends in our business and other characterizations of future events or circumstances, are forward-looking statements. These statements are only predictions based upon assumptions made that are believed to be reasonable at the time, and are subject to risk and uncertainties. Therefore, actual events or results may differ materially and adversely from those expressed in any forward-looking statement. In evaluating these statements, you should specifically consider the risks described under Item 1A "Risk Factors" in our Form 10-K as filed with the Securities and Exchange Commission. These factors may cause our actual results to differ materially from any forward-looking statements. Except as required by law, we undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.
