FOCUSED

2009 ANNUAL REPORT

Improving life with energy

CHAIRMAN'S LETTER

2009 Annual Report

Dear Shareholders,

This past year was one of tremendous change and challenge for the global economy, for the energy industry and for Black Hills Corporation. However, we remained focused and continued to make substantial progress on strategic projects that strengthened our balance sheet, increased our asset base, improved operating efficiencies and unified our organization for the long-term benefit of our shareholders and customers. Because of our defined strategy, diversified assets and partnership approach, we have continued to achieve critical operational milestones and are well positioned to complete our integration efforts in 2010 which will establish a stronger platform for future earnings growth. For the 40th consecutive year, we increased our quarterly dividend for shareholders, an indication of the strength of our company and the value we create even during turbulent times.

In the midst of extremely challenging capital market conditions, we successfully completed several long-term financings during 2009 using a patient and disciplined approach that reduced our short-term debt on favorable terms and established a strong financial foundation to fund growth projects during the next several years. We also consolidated systems, processes and programs including those pertaining to compensation, performance management, employee benefits, payroll, field resource, and customer information. During 2010, we expect to achieve additional operating efficiencies by integrating our accounting, procurement, inventory, outage management, utility engineering, power marketing, and resource planning systems and processes throughout our organization.

From a market perspective, during 2009 energy commodity prices dropped from historic highs in the summer of 2008, the global economy experienced a crisis compared to the Great Depression, and mild weather for much of the year significantly reduced energy consumption. Low commodity prices decreased income from our oil and gas and energy marketing businesses and lowered off-system sales margins for our electric utilities. However, the gas utilities performed above our expectations, demonstrating the value of our diversified business strategy. Our growth projects are on track with the expected early completion of Wygen III, a 110 megawatt coal-fired generation facility at our Gillette, Wyo., energy complex, and our plans to build an additional 380 megawatts of gas-fired generation to serve our electric utility customers in southern Colorado.

We continually monitor capital investments and utility expenditures to determine when rate requests or other regulatory filings are necessary and make such filings to ensure we receive fair allowed rates of return in the jurisdictions where we serve utility customers. During the year, we completed rate cases for Black Hills Energy – Colorado Gas resulting in a \$1.4 million increase in revenues and Black Hills Energy – Iowa Gas resulting in a \$10.8 million increase. During the fourth quarter, we filed rate requests in South Dakota and Wyoming for Black

Hills Power and in Nebraska for Black Hills Energy – Nebraska Gas. In addition, Black Hills Power benefited from newly increased transmission rates resulting from a FERC transmission rate structure that uses a formulaic approach for recovering capital investments in transmission infrastructure.

In our gas and oil operations, we prudently limited capital investments during this period of low commodity prices. Our ability to invest in the growth of production and reserves may continue to be hindered in the near term by the low commodity prices resulting from the impact of a weakened economy on demand, as well as increased domestic supplies. In the long term, we believe that demand for natural gas and crude oil will be strong.

Given increased regulatory emphasis on wind and solar power generation and potential greenhouse gas legislation that may limit construction of new coal-fired power plants, we believe that natural gas will be the fuel of choice for power generation. Renewable wind and solar power generation will also create new demand for additional gas-fired peaking resources to provide back-up supply for renewable technologies.

We continue to explore new markets for our coal production, including the development of additional power plants at our mine site. Nearly 50 percent of all electricity generated in the United States is currently supplied from coal-fired plants, so it will take decades and significant capital investment before this generation can be replaced cost effectively with alternative technologies. We believe coal-fired resources will remain essential to the nation's electric supply for the foreseeable future. Potential greenhouse gas regulation may limit construction of new conventional coal-fired power plants, but technologies such as carbon capture and sequestration should create additional opportunities for the long-term economic use of coal. We are investigating the possible deployment of these technologies at our energy complex located near Gillette, Wyo.

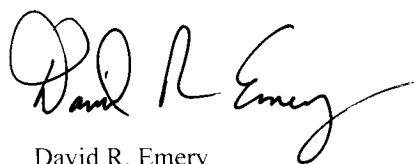

In 2008, while we sold seven IPP plants to capture significant value for shareholders, we did not exit the non-regulated power generation business. Our proven experience in permitting, constructing and operating power generation facilities – combined with our experience and knowledge of electric resource planning and regulatory requirements – provides a significant opportunity for us to serve other wholesale customers and add long-term shareholder value. We intend to grow our non-regulated power generation business by continuing to focus on long-term contractual agreements with other load-serving utilities. This was exemplified by the September 2009 announcement that our non-regulated generation subsidiary was selected as the successful bidder to build 200 MW of combined-cycle gas-fired power generation to provide energy and capacity to our Black Hills Energy – Colorado Electric customers through a 20-year power purchase agreement.

Although our energy marketing business performed below our expectations in 2009, this business continues to provide an opportunity for long-term profitability through a risk-managed and disciplined approach to producer services, origination, storage, transportation and proprietary marketing strategies. We also use our marketing expertise to enhance the value of our other energy assets, particularly our oil and gas and power generation assets.

Moving forward, we continue to align our organization and provide development opportunities so we can attract and retain an engaged and skilled work force. In January, Bob Myers joined the company as senior vice president of human resources to replace Jim Mattern who retired mid-year. Perry Krush was appointed to the position of vice president, supply chain. Jeff Berzina's role was expanded to vice president, corporate controller, to encompass the accounting responsibilities previously managed by Krush.

Our company is well positioned with the most clearly defined growth strategy in our history. We have demonstrated access to the capital markets, which will be essential to our future success. We are fortunate to have talented and dedicated employees committed to serving our customers and successfully executing our business plans. These fundamental strengths, combined with an improving business climate and increasing commodity prices, will lead to the strong financial and operational performance our shareholders expect from Black Hills Corporation.

Sincerely,

A handwritten signature in black ink, appearing to read "David R. Emery". The signature is fluid and cursive, with the first name "David" being particularly prominent.

David R. Emery

Chairman, President and Chief Executive Officer

GLOSSARY OF TERMS AND ABBREVIATIONS

The following terms and abbreviations appear in the text of this report and have the definitions described below:

Acquisition Facility	Our \$1.0 billion single-draw, senior unsecured facility from which a \$383 million draw was used to provide part of the funding for our Aquila Transaction
AFUDC	Allowance for Funds Used During Construction
AOCI	Accumulated Other Comprehensive Income
Aquila	Aquila, Inc.
Aquila Transaction	Our July 14, 2008 acquisition of five utilities from Aquila
ARO	Asset Retirement Obligations
Basin Electric	Basin Electric Power Cooperative
Bbl	Barrel
Bcf	Billion cubic feet
Bcfe	Billion cubic feet equivalent
BHC Pension Plan	The Pension Plan of Black Hills Corporation
BHCCP	Black Hills Corporation Credit Policy
BHCRPP	Black Hills Corporation Risk Policies and Procedures
BHEP	Black Hills Exploration and Production, Inc., a direct, wholly-owned subsidiary of Black Hills Non-regulated Holdings
Black Hills Colorado IPP	Black Hills Colorado IPP, LLC a direct wholly-owned subsidiary of Black Hills Electric Generation
Black Hills Corporation Plan	Black Hills Corporation Retirement Savings Plan
Black Hills Energy	The name used to conduct the business of Black Hills Utility Holdings, Inc.
Black Hills Electric Generation	Black Hills Electric Generation, LLC, a direct, wholly-owned subsidiary of Black Hills Non-regulated Holdings
Black Hills Non-regulated Holdings	Black Hills Non-regulated Holdings, LLC, a direct, wholly-owned subsidiary of Black Hills Corporation
Black Hills Power	Black Hills Power, Inc., a direct, wholly-owned subsidiary of Black Hills Corporation
Black Hills Utility Holdings	Black Hills Utility Holdings, Inc., a direct, wholly-owned subsidiary of Black Hills Corporation formed to acquire and own the utility properties acquired in the Aquila Transaction, all which are now doing business as Black Hills Energy
Black Hills Wyoming	Black Hills Wyoming, LLC, a direct, wholly-owned subsidiary of Black Hills Electric Generation
Btu	British thermal unit
Cheyenne Light	Cheyenne Light, Fuel and Power Company, a direct, wholly-owned subsidiary of Black Hills Corporation
Cheyenne Light Pension Plan	The Cheyenne Light, Fuel and Power Company Pension Plan
Cheyenne Light Plan	Cheyenne Light, Fuel and Power Company Retirement Savings Plan
CO ₂	Carbon Dioxide
Colorado Electric	Black Hills Colorado Electric Utility Company, LP, (doing business as Black Hills Energy), an indirect, wholly-owned subsidiary of Black Hills Utility Holdings
Colorado Gas	Black Hills Colorado Gas Utility Company, LP, (doing business as Black Hills Energy), an indirect, wholly-owned subsidiary of Black Hills Utility Holdings
CPUC	Colorado Public Utilities Commission
CT	Combustion turbine
EBITDA	Earnings before interest, taxes, depreciation and amortization
Enserco	Enserco Energy Inc., a wholly-owned subsidiary of Black Hills Non-regulated Holdings
Enserco Facility	The \$300 million committed stand alone credit facility that supports Enserco's marketing and trading operations, which currently expires May 7, 2010
EPA	U. S. Environmental Protection Agency
ERISA	Employee Retirement Income Security Act
FASB	Financial Accounting Standards Board
FERC	Federal Energy Regulatory Commission
Fitch	Fitch Ratings
GAAP	Accounting principles generally accepted in the United States of America
GCA	Gas Cost Adjustment
GHG	Greenhouse gases
Great Plains	Great Plains Energy Incorporated

Happy Jack	Happy Jack Wind Farm, LLC, owned by Duke Energy Generation Services
Hastings	Hastings Fund Management Ltd
IGCC	Integrated Gasification Combined Cycle
IIF	IIF BH Investment LLC, a subsidiary of an investment entity advised by JPMorgan Asset Management
Indeck	Indeck Capital, Inc.
Iowa Gas	Black Hills Iowa Gas Utility Company, LLC, (doing business as Black Hills Energy), a direct, wholly-owned subsidiary of Black Hills Utility Holdings
IPP	Independent power production
IPP Transaction	The July 11, 2008 sale of seven of our IPP plants to affiliates of Hastings and IIF
IRS	Internal Revenue Service
Kansas Gas	Black Hills Kansas Gas Utility Company, LLC, (doing business as Black Hills Energy), a direct, wholly-owned subsidiary of Black Hills Utility Holdings
KCC	Kansas Corporation Commission
KW	Kilowatt
KWh	Kilowatt-hour
LIBOR	London Interbank Offered Rate
LOE	Lease Operating Expense
MAPP	Mid-Continent Area Power Pool
Mbbl	Thousand barrels of oil
Mcf	Thousand cubic feet
Mcfe	Thousand cubic feet equivalent
MDU	Montana Dakota Utilities Co., a public utility division of MDU Resources Group, Inc.
MEAN	Municipal Energy Agency of Nebraska
MMBtu	Million British thermal units
MMcf	Million cubic feet
MMcfe	Million cubic feet equivalent
Moody's	Moody's Investors Service, Inc.
MW	Megawatts
MWh	Megawatt-hours
NCREIF	National Council of Real Estate Investment Fiduciaries
Nebraska Gas	Black Hills Nebraska Gas Utility Company, LLC (doing business as Black Hills Energy), a direct, wholly-owned subsidiary of Black Hills Utility Holdings
NOL	Net operating loss
NQDC	Non-Qualified Deferred Compensation Plan
NYMEX	New York Mercantile Exchange
PCA	Power Cost Adjustment
PGA	Purchase Gas Adjustment
PPA	Purchase Power Agreement
PSCo	Public Service Company of Colorado
PUD	Proved undeveloped reserves
RMSA	Retiree Medical Savings Account
SDPUC	South Dakota Public Utilities Commission
SEC	U. S. Securities and Exchange Commission
Silver Sage	Silver Sage Windpower, LLC, owned by Duke Energy Generation Services
S&P	Standard & Poor's, a division of The McGraw-Hill Companies, Inc.
Valencia	Valencia Power, LLC, a former subsidiary of Black Hills Non-regulated Holdings that was sold as part of our IPP Transaction
VEBA	Voluntary Employee Benefit Association
VIE	Variable Interest Entity
WECC	Western Electricity Coordinating Council
WPSC	Wyoming Public Service Commission
WRDC	Wyodak Resources Development Corporation, a direct, wholly-owned subsidiary of Black Hills Non-regulated Holdings

ACCOUNTING PRONOUNCEMENTS

ASC	Accounting Standards Codification
ASC 105	ASC 105, "FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles - a replacement of FASB Standard No. 162"
ASC 260	ASC 260, "Earnings Per Share"

FORWARD-LOOKING INFORMATION

This Annual Report includes "forward-looking statements" as defined by the SEC. We make these forward-looking statements in reliance on the safe harbor protections provided under the Private Securities Litigation Reform Act of 1995. All statements, other than statements of historical facts, included in this report that address activities, events or developments that we expect, believe or anticipate will or may occur in the future are forward-looking statements. These forward-looking statements are based on assumptions that we believe are reasonable based on current expectations and projections about future events and industry conditions and trends affecting our business. Forward-looking statements involve risks and uncertainties, and certain important factors can cause actual results to differ materially from those anticipated. In some cases, forward-looking statements can be identified by terminology such as "may," "will," "could," "should," "expects," "plans," "anticipates," "believes," "estimates," "projects," "predicts," "potentials," or "continue" or the negative of these terms or other similar terminology. There are various factors that could cause actual results to differ materially from those suggested by the forward-looking statements; accordingly, there can be no assurances that such indicated results will be realized. Whether actual results and developments will conform to our expectations and predictions is subject to a number of risks and uncertainties that, among other things, could cause actual results to differ materially from those contained in the forward-looking statements, including the factors discussed above, the risk factors described in Item 1A of Part 1 of our 2009 Annual Report on Form 10-K filed with the SEC, and other reports that we file with the SEC from time to time, and the following:

- Our ability to successfully integrate and profitably operate any recent and future acquisitions;
- Macro- and micro-economic changes in the economy and energy industry, including the impact of (i) consolidations and changes in competition, (ii) changing conditions in the capital and credit markets, which affect our ability to raise capital on favorable terms, and (iii) general economic and political conditions, including tax rates or policies and inflation rates;
- Our ability to successfully maintain our corporate credit rating;
- Our ability to access revolving credit capacity and comply with loan covenants;
- Capital market conditions and market uncertainties related to interest rates, which may affect our ability to raise capital on favorable terms;
- The amount and timing of capital deployment in new investment opportunities or for the repurchase of debt or stock;
- Our ability to obtain permanent financing for capital expenditures on reasonable terms either through long-term debt or issuance of equity;
- The outcome of any ongoing or future litigation or similar disputes and the impact of any such outcome or related settlements on our financial condition or results of operations;
- Price risk due to marketable securities held as investments in employee benefit plans;
- The effect of accounting policies issued periodically by accounting standard-setting bodies;
- The accounting treatment and earnings impact associated with interest rate swaps;
- Our ability to comply, or to make expenditures required to comply, with changes in laws and regulations, particularly those relating to energy markets, taxation, safety and protection of the environment, and our ability to recover those expenditures in customer rates, where applicable;
- Federal and state laws concerning climate change and air emissions, including emission reduction mandates, carbon emissions and renewable energy portfolio standards, may materially increase our generation and production costs and could render some of our generating units uneconomical to operate and maintain;
- Changes in business, regulatory compliance and financial reporting practices arising from the enactment of the Energy Policy Act of 2005 and subsequent rules and regulations promulgated thereunder;
- Additional liabilities for environmental conditions, including remediation and reclamation obligations, under environmental laws;
- Our ability to minimize losses related to defaults on amounts due from customers and counterparties, including counterparties to trading and other commercial transactions;

- The timing, volatility and extent of changes in energy and commodity prices, supply or volume, the cost and availability of transportation of commodities, changes in interest or foreign exchange rates, and the demand for our services, any of which can affect our earnings, our financial liquidity and the underlying value of our assets;
- The cost and effects on our business, including insurance, resulting from terrorist actions or responses to such actions or events;
- Our ability to obtain adequate cost recovery for our utility operations through regulatory proceedings and receive favorable rulings in periodic applications to recover costs for fuel, transportation, transmission and purchased power in our regulated utilities;
- Our ability to receive regulatory approval in rate base for new power generation facilities;
- Our ability to recover our borrowing costs, including debt service costs, in our customer rates;
- The timing and extent of scheduled and unscheduled outages of power generation facilities;
- The possibility that we may be required to take impairment charges to reduce the carrying value of some of our long-lived assets when indicators of impairment emerge;
- Our ability to complete the permitting, construction, start-up and operation of power generating facilities in a cost-effective and timely manner;
- Our ability to successfully complete labor negotiations with four of the six unions currently or soon to be in contract renewal negotiations;
- Our ability to accurately estimate demand from our customers for natural gas;
- Weather and other natural phenomena;
- Changes in state laws or regulations that could cause us to curtail our independent power production or exploration and production activities;
- Our ability to meet production targets for our oil and gas properties, which may be dependent upon issuance by federal, state and tribal governments, or agencies thereof, of drilling, environmental and other permits, and the availability of specialized contractors, work force and equipment, or the possibility of reductions in our drilling program resulting from the current economic climate and commodity prices, which also may prevent us from maintaining production rates and replacing reserves for our oil and gas properties;
- The amount of collateral required to be posted from time to time in our transactions;
- Our ability to effectively use derivative financial instruments to hedge commodity, currency exchange rate and interest rate risks;
- The possibility that we may be required to take impairment charges under the SEC's full cost ceiling test for the accumulated costs of our natural gas and oil reserves;
- The extent of our success in connecting natural gas supplies to gathering, processing and pipeline systems;
- Our ability to provide accurate estimates of proved oil and gas reserves, coal reserves and future production rates and associated costs; and
- The cost and effect on our business, including insurance, resulting from terrorist actions or responses to such actions or events.

New factors that could cause actual results to differ materially from those described in forward-looking statements emerge from time to time, and it is not possible for us to predict all such factors, or the extent to which any such factor or combination of factors may cause actual results to differ from those contained in any forward-looking statement. We assume no obligation to update publicly any such forward-looking statements, whether as a result of new information, future events or otherwise.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS AND QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are an integrated energy company operating principally in the United States with two major business groups - Utilities and Non-regulated Energy. We report for our business groups in the following financial segments:

<u>Business Group</u>	<u>Financial Segment</u>
<i>Utilities</i>	Electric Utilities Gas Utilities
<i>Non-regulated Energy</i>	Oil and Gas Power Generation Coal Mining Energy Marketing

Our Utilities Group consists of our regulated Electric and Gas utility segments. Our Electric Utilities segment generates, transmits and distributes electricity to approximately 201,100 customers in South Dakota, Wyoming, Colorado and Montana and includes the operations of Cheyenne Light and its approximately 33,900 gas utility customers in Wyoming. Our Gas Utilities segment serves approximately 528,300 natural gas customers in Colorado, Nebraska, Iowa and Kansas. Our Non-regulated Energy Group engages in the production of coal, natural gas and crude oil primarily in the Rocky Mountain region; the production of electric power through ownership of a portfolio of generating plants and the sale of electric power and capacity primarily under mid- and long-term contracts; and the marketing of natural gas, crude oil and related services.

Industry Overview

The United States energy industry experienced a second consecutive tumultuous year in 2009. Energy commodity prices, which were near historic highs in July 2008, with natural gas trading over \$13.00 per Mcf and crude oil selling for nearly \$145 per barrel, experienced dramatic declines to less than \$2.80 and \$35, respectively, by February 2009. The global economic crisis that commenced in late 2008 and continued through 2009 significantly reduced energy demand. In addition, domestic energy prices continued to be influenced by global factors, including foreign economic conditions (especially in China and Asia), the policies of OPEC and other large foreign oil producers, and political tensions and conflict in many regions. Mild weather dominated the United States during much of the year, further reducing demand for fuel used for power generation and heating.

Beginning in late summer 2008, a proliferation of sub-prime lending produced a global credit crisis. Other credit quality concerns also emerged, creating an international-scale financial crisis, plunging the United States economy into its worst recession since the 1930s. The capital markets were impacted dramatically by the crisis during late 2008 and the first several months of 2009, severely inhibiting the ability of companies to raise both debt and equity capital, and significantly increasing the cost of capital. For creditworthy companies, the capital markets improved materially beginning in the second quarter of 2009.

Like other United States industries, the energy industry is faced with numerous uncertainties, both short and long-term. Many utilities have large capital spending needs over the next few years to replace aging infrastructure, and to add new assets such as transmission lines and renewable energy resources. Utility companies generally are less impacted by economic downturns, but the prolonged, severe recession has affected the demand for energy services and the ability of customers to pay their utility bills, particularly in certain parts of the country. The recession has also impacted the ability of companies to obtain the capital necessary for infrastructure expansion.

The state utility regulatory climate in 2009 remained relatively constructive among government, industry and consumer representatives. In the seven-state region encompassing our utility operations, regulators were willing to establish rates based on multi-year considerations, including fuel and other reasonable cost adjustments, justifiable capital expenditures for maintenance and expansion of energy systems, and a response to environmental concerns through demand management and energy efficiency programs. Challenges remain, however, in obtaining satisfactory rate recovery for utility investments due to the general state of the economy and concern by regulators in various states that utility rate increases may cause further harm to local economies.

At the federal level, the November 2008 elections caused a significant change in the domestic political environment, and a dramatic shift in domestic policy. The passage of a major economic stimulus package by Congress early in 2009, and the bailout of several "too large to fail" financial firms and automobile manufacturers, set the stage for an emphasis on increased regulation and government oversight of industry, which continued throughout the year. Despite all of the focus on the economy, environmental issues remained a priority for the President and many in Congress. Federal legislation, mandating the reduction of GHG emissions utilizing a "cap-and-

trade" system and increased renewable energy use, passed the House and was introduced in the Senate. Although it did not pass during 2009, the legislation remains a key priority of the President and Congressional leadership. In addition, in late 2009, Congress focused on the passage of major healthcare reform legislation. These potential legislative actions could have significant macroeconomic consequences, as the associated cost increases may cause a dramatic increase in consumer costs for products and services, including rates for electricity and other energy in the mid- to long-term. State legislatures also remained active on environmental issues in 2009, with a majority of states now having adopted some form of renewable energy standard, including some in which we operate. In addition, several states have passed greenhouse gas emissions legislation, which places limits on the emissions of CO₂ and other greenhouse gases.

Progress in the domestic energy industry during 2009 included increasing levels of domestic natural gas production activity, particularly related to the various shale "resource plays"; planning and construction of liquefied natural gas port facilities; proposals for additional gas-fired, coal-fired and nuclear power plants; planning for additional electric transmission capacity; and the advancement of renewable energy resources and utilization.

The energy industry continues to adjust to change, although the economic crisis suppressed the recent trend of consolidation in the electric and gas utility sectors. The energy marketplace continues to respond to increased the oversight and enforcement activity of FERC, and increased environmental and emissions reviews and mandates. In recent years, several state regulatory agencies allowed electric utilities to construct and operate power plants in vertically integrated structures after years of discouraging or prohibiting such activity.

Over the last several years, the corporate structure of many energy companies underwent evaluation and change, in large part due to efforts to create additional shareholder value. Prior to the economic crisis, a number of companies contemplated or implemented a realignment of business lines, reflecting a shift in long-term strategies. Some divested certain energy properties to focus on core businesses, such as exiting non-regulated power production, energy marketing or oil and gas production in favor of more stable utility operations. Others engaged in mergers and acquisitions with a goal to improve economies of scale and returns to investors. Private equity investors continued to play a role in the changing composition of energy ownership, but to a lesser extent following the economic crisis.

Many industry analysts cite the need for expanded energy capacity and delivery systems. They continue to foresee an increase in capital investment across a wide spectrum of energy companies. Many electric and gas utilities must replace aging plant and equipment, and regulators appear willing to provide acceptable rate treatment for additional utility investment, although the current state of the economy makes rate recovery more challenging in the short run. Oil and gas producers will continue to explore for new reserves, particularly of natural gas, which will be the primary fuel of choice in light of concern regarding greenhouse gas emissions and the need to provide backup generation for renewable energy resources. The growing focus on environmental regulation made it increasingly more difficult to obtain drilling permits, particularly on public and Native American lands. However, in the short-term, low natural gas prices prompted companies to curtail projects in order to conserve cash during a period of low cash flow and constrained capital markets.

In early 2008, the domestic coal industry benefited from a positive price environment, in large part due to high and volatile natural gas prices. Coal prices have moderated considerably in response to a trend of lower overall natural gas prices. Powder River Basin coal (8800 Btu per pound) was \$13.50 per ton in December 2008 and by the end of 2009 it was as low as \$6.50 per ton or a decline of 52%. Fossil fuel combustion continues to be a contentious domestic and international public policy issue, as many nations, including United States allies, advocate reductions in CO₂ and other emissions. Many states now encourage the energy industry to invest in renewable energy resources, such as wind or solar power, or the use of bio-mass as a fuel. In many instances, renewable energy use is mandated by state regulators. Several years ago, the State of California mandated that future imports of power must come from power plants with emission levels no greater than combined-cycle natural gas-fired plants. Such restrictions may alter transmission flow of power in western states, as a large percentage of current power generation in the western grid comes from coal sources.

The power generation industry continues to make improvements in emissions control, voluntarily and in response to regulatory mandates. Emissions from new coal-fired plants are now a small fraction of those produced by power plants built a generation ago. With similar technological progress, coal can and likely will remain an important, domestically available, and economical national energy resource that is vital to meet growing energy demand. In that regard, the United States Department of Energy is beginning to take positive steps toward ensuring the future of coal through research funding for "clean coal" technologies and methods of carbon capture and sequestration.

Energy providers, government authorities and private interests continue to address issues concerning electric transmission, power generation capacity, the use of renewable and other diversified sources of energy, oil and natural gas pipelines and storage, and other infrastructure requirements. In the short-term, prevailing economic conditions will reduce industrial and retail energy consumption. Despite public and private efforts to promote conservation and efficiency, however, the demand for energy is expected to increase

steadily over the long term. To meet this demand growth, the industry will need to provide capital, resources and innovation to serve customers cost effectively, and to achieve suitable returns on investment.

We believe that we are well-positioned in this industry setting, and able to proceed with our key business objectives. Along with industry counterparts, we are preparing to address the challenges discussed in this overview, such as new environmental regulations and mandates, renewable portfolio standards, CO₂-related taxes or trading practices, credit market conditions, inflation, or other factors that may affect energy demand and supply. In particular, we are sensitive to additional costs that can negatively affect our customers or our profitability. To that end, we intend to work closely with regulators and industry leaders to assure that cost-conscious proposals and solutions are carefully explored in public policy proceedings.

Business Strategy

We are a customer-focused integrated energy company. Our business is comprised of electric and natural gas utility operations, power generation, and fuel assets and services, including production and marketing operations for crude oil, natural gas and coal. Our focus on customers - whether they are utility customers or non-regulated generation, fuel or marketing customers - provides opportunities to expand our businesses by constructing additional rate base assets to serve our utility customers and expand our non-regulated energy holdings to provide additional products and services to our wholesale customers.

The diversity of our energy operations reduces reliance on any single business segment to achieve our strategic objectives. It mitigates our overall corporate risk and enhances our ability to earn stronger returns for shareholders over the long term. Despite challenging conditions in the capital markets over the past year, we have sufficient liquidity and solid cash flows, and expect to have continued access to the capital markets as needed. Consequently, our financial foundation is sound and capable of supporting an expansion of operations in both the near and long term.

During 2009, we focused on the continued integration of the five utility properties acquired from Aquila in mid-2008 and the achievement of certain operating efficiencies made possible by the acquisition. During the year, we consolidated compensation, performance management, employee benefits, payroll, field resource, and customer information systems and processes. During 2010, we expect to achieve additional operating efficiencies by consolidating accounting and information systems, along with systems and processes for procurement, inventory, outage management, utility engineering, power marketing, resource planning and other areas.

Our long-term strategy focuses on growing both our utility and non-regulated energy businesses, primarily by increasing our customer base and providing superior service to both utility and non-regulated energy customers. In our natural gas and electric utilities, we intend to grow our asset base to serve projected customer demand in our existing utility service territories through expansion of infrastructure and construction of new rate-based power generation facilities. We also plan to pursue acquisitions of additional utility properties, primarily in the Great Plains and Rocky Mountain regions of the country. By maintaining our high customer service and reliability standards in a cost-efficient manner, our goal is to secure appropriate rate recovery to provide solid economic returns on our utility investments.

In our fuel production operations, we will continue to prudently grow and develop our existing inventory of oil and gas reserves, while we strive to maintain strong relationships with mineral owners, landowners and regulatory authorities. Our ability to grow both production and reserves may be hindered in the short-term by low price levels for both crude oil and natural gas resulting from the impact on demand from a weakened economy. In the long-term, however, we believe that demand for both natural gas and crude oil will be strong. Given increased regulatory emphasis on wind and solar power generation, and potential greenhouse gas legislation that may limit construction of new coal-fired power plants, natural gas will be the fuel of choice for power generation. Additional gas-fired peaking resources will also be required to provide back-up supply for renewable technologies.

We will continue efforts to develop additional markets for our coal production, including the development of additional power plants at our mine site. Nearly 50% of all electricity generated in the United States is currently supplied from coal-fired plants. It will take decades and significant expense before this generation can be replaced with alternative technologies. As a result, coal-fired resources will remain a necessary component of the nation's electric supply for the foreseeable future. Potential greenhouse gas legislation may limit construction of new conventional coal-fired power plants, but technologies such as carbon capture and sequestration should provide for the long-term economic use of coal. We are investigating the possible deployment of these technologies at our mine site in Wyoming.

We divested of seven IPP plants in 2008 because we were able to capture significant value for shareholders, but we have not exited the non-regulated power generation business. We have expertise in permitting, constructing and operating power generation facilities. These skills, combined with our understanding of electric resource planning and regulatory procedures, provide a significant opportunity for us to add long-term shareholder value. We intend to grow our non-regulated power generation business by continuing to focus on long-term contractual relationships with other load-serving utilities. This was exemplified with the September 2009

announcement that our non-regulated generation subsidiary was selected as the successful bidder to build 200 MWs of combined-cycle gas fired power generation to provide energy and capacity to our Colorado Electric subsidiary, through a 20-year power purchase agreement.

The expertise of our energy marketing business should provide continued long-term profitability through a risk-managed and disciplined approach to producer services, origination, storage, transportation and proprietary marketing strategies. We will also continue to utilize our marketing expertise to enhance the value of our other energy assets, particularly our fuel and power generation assets.

We operate our lines of business as Utilities and Non-regulated Energy Groups. The Utilities Group consists of regulated electric and natural gas utility assets and services. The Non-regulated Energy Group consists of fuel production, mid-stream assets, power generation facilities and energy marketing.

The following are key elements of our business strategy:

- Complete the integration of the five utility properties acquired in the July 2008 Aquila Transaction, focusing on the achievement of operating efficiencies and cost reductions;
- Provide stable long-term rates for customers and increase earnings by efficiently planning, constructing and operating rate-base power generation facilities needed to serve our electric utilities;
- Proactively integrate alternative and renewable energy into our utility energy supply while mitigating and remaining mindful of customer rate impacts;
- Expand utility operations through selective acquisitions of electric and gas utilities consistent with our regional focus and strategic advantages;
- Build and maintain strong relationships with wholesale power customers of both our utilities and non-regulated power generation businesses;
- Selectively grow our non-regulated power generation business in targeted regional markets by developing assets and selling most of the capacity and energy production through mid- and long-term contracts primarily to load-serving utilities;
- Exploit our fuel cost advantages and our operating and marketing expertise to produce and sell power at attractive margins;
- Grow our reserves and increase our production of natural gas and crude oil in a cost-effective manner;
- Opportunistically expand our energy marketing operations including producer and end-use origination services and, as warranted by market conditions, natural gas and crude oil storage and transportation opportunities;
- Diligently manage the credit, price and operational risks inherent in buying and selling energy commodities; and
- Maintain an investment grade credit rating and ready access to debt and equity capital markets.

Complete the integration of the five utility properties acquired in the 2008 Aquila Transaction, focusing on the achievement of operating efficiencies and cost reductions. The July 14, 2008 acquisition of five utility properties in four states from Aquila significantly expanded our regional presence and the size and scope of our utility operations. The expanded utility operations enhanced our ability to serve customers and communities, and to build long-term value for our shareholders. As we have during 2009, we will continue to work diligently in 2010 to complete the integration of operating system consolidations and establish more efficient processes so that we have a unified scalable platform ready for additional growth. By standardizing processes, centralizing purchasing and inventory, and utilizing common computer systems and processes for customer service, accounting, human resources and operations, it will be possible to reduce costs and improve our operating efficiency.

Provide stable long-term rates for customers and increase earnings by efficiently planning, constructing and operating rate-base power generation facilities needed to serve our electric utilities. Our Company began as a vertically integrated electric utility, and this business model remains a core strength and strategy today, as we invest in and operate efficient power generation resources to cost effectively transmit and distribute electricity to our customers. We provide power at reasonable and stable rates to our customers, and earn competitive returns for our investors. Rate-based generation assets offer several advantages for consumers, regulators and

investors. First, since the generating assets are included in the utility rate base and reviewed and approved by government authorities, customer rates are more stable than if the power was purchased from the open market through wholesale contracts that are renegotiated over time. Second, regulators participate in a planning process where long-term investments are designed to match long-term energy demand. Third, investors are assured that a long-term, reasonable, stable rate of return may be earned on their investment. A lower risk profile may also improve credit ratings which, in turn, can benefit both consumers and investors by lowering our cost of capital.

Examples of our progress include the January 2008 completion of Wygen II to serve the customers of Cheyenne Light and the ongoing construction of Wygen III, projected to be completed in April 2010, to serve the customers of Black Hills Power. During 2009, our Colorado Electric subsidiary completed a comprehensive resource planning process, through which we received approval to construct two gas-fired power plants representing approximately 180 MW, as rate base assets to serve the customers of Colorado Electric. The projected commercial operation date for the plants is January 1, 2012.

Proactively integrate alternative and renewable energy into our utility energy supply while mitigating and remaining mindful of customer rate impacts. The energy and utility industries face tremendous uncertainty related to the potential impact of legislation intended to reduce greenhouse gas emissions and increase the use of renewable and other alternative energy sources. To date, many states have enacted and others are considering some form of mandatory renewable energy standard, requiring utilities to meet certain thresholds of renewable energy use. Additionally, many states have either enacted or are considering legislation setting greenhouse gas emissions reduction targets. Federal legislation for both renewable energy standards and greenhouse gas emission reductions is also under consideration.

Mandates for the use of renewable energy or the reduction of greenhouse gas emissions will likely produce substantial increases in the prices for electricity and natural gas. At the same time, however, as a regulated utility we are responsible for providing safe, reasonably priced, reliable sources of energy to our customers. As a result, we have developed a customer-centered strategy for renewable energy standards and greenhouse gas emission reductions that balances our customers' rate concerns with environmental considerations. We attempt to strike this balance by prudently and proactively incorporating renewable energy into our resource supply, while seeking to minimize the magnitude and frequency of rate increases for our utility customers. Examples of our balanced approach include:

- In states such as South Dakota and Wyoming that currently have no legislative mandate on the use of renewable energy, we have proactively integrated cost-effective renewable energy into our generation supply based upon our expectation that there will be mandatory renewable energy standards in the future. For example, under two 20-year PPAs we purchase a total of 60 MW of wind energy from wind farms located near Cheyenne, Wyoming for use at Black Hills Power and Cheyenne Light;
- Colorado and Montana have legislative mandates regarding the use of renewable energy, therefore we aggressively pursue cost-effective initiatives with the regulators that will allow us to meet our renewable energy requirements. In Colorado for instance, we filed an electric resource plan that includes enough renewable energy additions and greenhouse gas emission reductions to permit us to satisfy both (i) the State's requirement that 20% of a utility's distributed energy must be supplied by renewable energy resources by 2020, and (ii) the governor's executive order that requires a 20% reduction in carbon dioxide emissions by 2020; and
- In all states in which we conduct electric utility operations, we are exploring other potential biomass, solar and wind energy projects and evaluating other potential wind generator sites, particularly sites located near our utility service territories.

Using reasonable assumptions, we have also carefully evaluated our coal-fired generating facilities and the potential future economic impact of a carbon tax or cap-and-trade regime intended to reduce CO₂ emissions. For customers in states without renewable or CO₂ mandates, such as South Dakota and Wyoming, we believe it is in our utility customers' long-term interest to construct new mine-mouth, coal-fired generating facilities, such as our Wygen II generation facility (completed in January 2008) and our Wygen III generation facility (expected to be completed on April 1, 2010). Constructing these state-of-the-art, cost-efficient, coal-fired facilities allows us to plan for the future retirement of older, less efficient plants with higher emissions and keep rates reasonable for customers. In addition, we are actively evaluating alternative coal-fired generation technologies, including IGCC and carbon capture and sequestration, though both appear cost prohibitive in the near term. These technologies may become cost effective in the future if the cost of CO₂ emissions reaches sufficiently high levels or further technological advancements reduce the costs of those technologies. The location of our coal mine and power plant complex in the Powder River Basin of Wyoming provides key strategic advantages for carbon capture and sequestration projects, such as readily available saline aquifers for the injection and sequestration of CO₂, as well as a potential CO₂ market for use in enhanced oil recovery projects. Additionally, over the past two years, the Wyoming legislature has been proactive in passing legislation to address pore space ownership, injection regulations and other legal issues associated with the underground sequestration of CO₂.

Expand utility operations through selective acquisitions of electric and gas utilities consistent with our regional focus and strategic advantages. For nearly 127 years we have provided reliable utility services, delivering quality and value to our customers. Our tradition of accomplishment supports efforts to expand our utility operations into other markets, most likely in areas that permit us to take advantage of our intrinsic competitive advantages, such as baseload power generation, system reliability, superior customer service, community involvement and a relationship-based approach to regulatory matters. The 2005 acquisition of Cheyenne Light and the 2008 Aquila Transaction are examples of such expansion efforts. Utility operations also enhance other important business development, including gas transmission pipelines and storage infrastructure, which could promote other non-regulated energy operations. Utility operations can contribute substantially to the stability of our long-term cash flows, earnings and dividend policy.

Although we do not expect to make any significant utility acquisitions in 2010, some industry experts believe that the current financial turmoil and economic recession may produce opportunities for healthy utility companies to acquire utility assets and operations of less creditworthy companies upon attractive terms and conditions. We would expect to consider such opportunities if we believe they would further our long-term strategy and help maximize shareholder value.

Build and maintain strong relationships with wholesale power customers of both our utilities and non-regulated power generation business. We strive to build strong relationships with other utilities, municipalities and wholesale customers and believe we will continue to be a primary provider of electricity to wholesale utility customers. We further believe that these entities will need products, such as capacity, in order to reliably serve their customers. By providing these products under long-term contracts, we are able to help our customers meet their energy needs. Through this approach, we also believe we can earn more stable revenues and greater returns over the long term than we could by selling energy into more volatile spot markets. In addition, relationships that we've established with wholesale power customers have developed into other opportunities. MEAN and MDU, both wholesale power customers, are now also joint owners in two of our power plants.

Selectively grow our non-regulated power generation business in targeted Western markets by developing assets and selling most of the capacity and energy production through mid- and long-term contracts primarily to load-serving utilities. In late 2007, we initiated an evaluation of the merits of divesting certain power generation assets. That strategic review resulted in the mid-2008 divestiture of seven IPP plants for a total of \$840 million. While much of our recent power plant development has been for our regulated utilities, we intend to continue to expand our non-regulated power generation business by developing and operating power plants in regional markets based on prevailing supply and demand fundamentals in a manner that complements our existing fuel assets and marketing capabilities. We intend to grow this business through a combination of the development of new power generation facilities and disciplined acquisitions primarily in the western region where our detailed knowledge of market and electric transmission fundamentals provides us a competitive advantage, and, consequently increases our ability to earn attractive returns. We expect to prioritize small-scale facilities that serve incremental growth, and are typically easier to permit and construct than large-scale generation projects.

Most of the energy and capacity from our non-regulated power facilities is sold under mid- and long-term contracts. When possible, we structure long-term contracts as tolling arrangements, whereby the contract counterparty assumes the fuel risk. Going forward, we will continue to focus on selling a majority of our non-regulated capacity and energy primarily to load-serving utilities under long-term agreements that have been reviewed or approved by state utility commissions. An example of this strategy is the 200 MW of combined-cycle gas-fired generation being constructed to serve our Colorado Electric subsidiary beginning January 1, 2012, under a 20-year tolling agreement.

With respect to our current power sale agreements, two of our long-term power contracts provide for the sale of capacity and energy to Cheyenne Light from our Gillette CT and Wygen I plants. The Gillette CT contract expires in 2011, and as part of our integrated resource planning efforts, the company is evaluating a potential extension of the contract. The Wygen I contract was extended during 2009 and now expires in 2022.

Exploit our fuel cost advantages and our operating and marketing expertise to produce and sell power at attractive margins. We expect to selectively expand our portfolio of power plants which have relatively low marginal costs of producing energy and related products and services. We intend to utilize a competitive power production strategy, together with access to coal and natural gas reserves, to be competitive as a power generator. Competitive production costs can result from a variety of factors, including low fuel costs, efficiency in converting fuel into energy, and low per unit operation and maintenance costs. In addition, we typically operate our plants with high levels of availability, as compared to industry benchmarks. We aggressively manage each of these factors with the goal of achieving low production costs.

One of our primary competitive advantages is our WRDC coal mine, which is located in reasonably close proximity to our electric utility service territories. We leverage this competitive advantage by building additional state-of-the-art mine-mouth coal-fired generating capacity, which allows us to substantially eliminate fuel transportation and storage costs. This strengthens our position as

a low-cost producer because transportation costs often represent the largest component of the delivered cost of coal for many other utilities.

Grow our reserves and increase our production of natural gas and crude oil in a cost-effective manner. Our strategy is to cost-effectively grow our reserves and increase our production of natural gas and crude oil through both organic growth and acquisitions. While consistent growth remains our objective, we realize the necessity of managing for value over managing for growth and intend to be appropriately responsive to market conditions. Growth in our core areas in the Rocky Mountain region is a focus that we must balance with opportunities in plays or basins which are new to us. In the short-term, growth plans are negatively impacted by the current economic crisis, and low natural gas and crude oil prices. Over the long term, however, we believe that demand will lead to higher product prices and opportunity for growth. Specifically, we plan to:

- Primarily focus on lower-risk development and exploratory drilling, preferably where we can serve as the operator;
- Participate on a non-operated basis with other operators to gain exposure to additional plays and producing basins;
- Focus on various plays in the Rocky Mountain region, where we can more easily integrate with our existing oil and natural gas operations as well as our fuel marketing and/or power generation activities;
- Support the future capital requirements of our drilling program by stabilizing cash flows with a hedging program that mitigates commodity price risk for a substantial portion of our established production for up to two years in the future; and
- Enhance our oil and gas production activities with the construction or acquisition of mid-stream gathering, compression and treating facilities in a manner that maximizes the economic value of our operations.

Opportunistically expand our energy marketing operations including producer and end-use origination services and, as warranted by market conditions, natural gas and crude oil storage and transportation opportunities. Our energy marketing business seeks to provide services to producers and end-users of natural gas and crude oil and to capitalize on market volatility by employing storage, transportation and proprietary trading strategies. The service provider focus of our energy marketing activities largely differentiates us from other energy marketers. Through our producer services group, we assist mostly small- to medium-sized independent producers throughout the Western United States with marketing and transporting their crude oil and natural gas. Through our origination services, we work with utilities, municipalities and industrial users of natural gas to provide customized delivery services, as well as to support their efforts to optimize their transportation and storage positions.

Diligently manage the credit, price and operational risks inherent in buying and selling energy commodities. All of our operations require effective management of counterparty credit risk. We mitigate this risk by conducting business with a diverse group of creditworthy counterparties. In certain cases where creditworthiness merits security, we require prepayment, secured letters of credit or other forms of financial collateral. We establish counterparty credit limits and employ continuous credit monitoring, with regular review of compliance under our credit policy by our Executive Credit Committee. Our oil and gas, power generation and energy marketing operations require effective management of price and operational risks related to adverse changes in commodity prices and the volatility and liquidity of the commodity markets. To mitigate these risks, we implemented risk management policies and procedures, particularly for our marketing operations. Our oversight committees monitor compliance with these policies. We also limit exposure to energy marketing risks by maintaining a credit facility separate from our corporate credit facility. We experienced very limited counterparty credit losses in 2009 despite the economic turmoil.

Maintain an investment grade credit rating and ready access to debt and equity capital markets. Access to capital will be critical to our future success. We will require access to the capital markets to fund our planned capital investments or, when possible, to make strategic acquisitions that prudently grow our businesses. Our access to adequate and cost-effective financing depends upon our ability to maintain our investment grade issuer credit rating.

In late 2008 and throughout 2009, disruption in worldwide capital markets substantially reduced liquidity in the debt capital markets and caused significant write-offs in the financial services sector, the re-pricing of credit risk, and the failure of certain financial institutions. Despite actions of the United States government, these events contributed to a general economic decline that is materially and adversely impacting the broader financial and credit markets, and reducing the availability of debt and equity capital. Our acquisition of additional utility properties in 2008, combined with the divestiture of seven IPP plants, reduced our overall corporate risk profile. Even so, our access to capital markets was impacted by the conditions described above, particularly during the fourth quarter of 2008 and the first quarter of 2009.

Notwithstanding these adverse market conditions, in 2009 we completed several key financings on reasonable terms, including a \$250 million senior unsecured corporate bond offering, a \$300 million committed stand-alone credit facility for our energy marketing

subsidiary, a \$180 million first mortgage bond financing for Black Hills Power, and a \$120 million project financing for our Wygen I and Gillette CT power plants.

Prospective Information

We expect to generate long-term growth through the expansion of integrated, balanced and diverse energy operations. We recognize that sustained growth requires near continual capital deployment. As capital market conditions improved in 2009, we were able to complete three key long-term debt financings and we are confident in our ability to obtain additional financing to continue our growth plans. We will remain focused on managing our operations cautiously and maintaining our overall liquidity to meet our operating, capital and financing needs, as well as executing our long-term strategic plan.

Utilities Group

The Utilities Group successfully completed a full year of operations including those operations purchased in the Aquila Transaction. Post-close integration activities are being executed so that our workforces and systems will be combined to establish a growth platform that delivers value to our shareholders. During 2009, the Utilities Group completed conversion to a single customer information system which unified our customer service and billing processes. We continue to work to unify our performance management and compensation systems, outage management, inventory management and accounting systems. We anticipate these process improvements will be completed in 2010.

Electric Utilities

Business at Black Hills Power remained relatively strong in 2009. We continue construction of the Wygen III power plant, which is planned for commercial operation by April 2010. Black Hills Power owns 75% of the facility with MDU purchasing a 25% ownership interest in the facility in April 2009. Beginning January 1, 2009, we benefited from an increase in transmission rates resulting from a FERC transmission rate case. The rate structure also includes a formula approach to rates that allows us to recover our capital investment as the capital is placed in service on the related transmission infrastructure. To accommodate both the load growth within the region and the addition of Wygen III, additional transmission infrastructure is planned over the next several years.

During 2009, Black Hills Power filed two rate cases. One with the SDPUC and the other with WPSC, requesting an electric revenue increase to recover costs associated with Wygen III and other generation, transmission and distribution assets and increased operating expenses. A \$32.0 million, or approximately 26.6%, increase in annual utility revenues was requested in South Dakota and the new rates are expected to be in effect on or around April 1, 2010. The request for our Wyoming customers is a \$3.8 million, or approximately 38.95%, increase in annual utility revenues and new rates are anticipated to be effective on or around July 1, 2010, although recovery could be delayed until August 2010 as part of the regulatory process. The proposed rate increases are subject to approval by the applicable state commissions.

We are focused on Colorado Electric's Energy Resource Plan and during 2009, Colorado Electric received approval from the CPUC to build power generation facilities representing approximately 180 MW. These generation facilities are part of a plan to replace the capacity and energy supplied under a PPA with PSCo that currently supplies approximately 75% of Colorado Electric's annual energy and capacity needs and expires at the end of 2011. The addition of these plants to our utility rate base will have a significant positive impact on our financial results. We filed a normal rate case for Colorado Electric in January 2010 to recover increased costs and investments made since the last rate case was filed and plan a future filing pertinent to the new generation and transmission assets as they are ready to begin serving customers.

The remaining capacity and energy needed for Colorado Electric was acquired through a competitive bidding process including other power producers. Our Power Generation segment participated in this bidding process, and in September 2009, our Power Generation segment was awarded the bid to provide 200 MW of capacity and energy to Colorado Electric through a 20-year PPA.

Gas Utilities

Our regulated Gas Utilities are focused on the continued investment in our gas distribution network and related technology such as automated meter reading and mobile data terminals. We received approval for rate increases and specific cost recoveries for Iowa Gas, Colorado Gas and Kansas Gas in 2009. We also filed a rate request for Nebraska Gas of \$12.1 million to be effective subject to refund on March 1, 2010. As part of the KCC approval of the Aquila Transaction, the KCC implemented a moratorium on filing for a general rate increase until 2011 for Kansas Gas. We continually monitor our investments and costs of operations in all states to determine when additional rate case or other rate filings will be necessary.

Non-regulated Energy Group

Power Generation

During January 2009, we completed the sale of a 23.5% interest in Wygen I to MEAN for \$51.0 million. We recognized a gain on the sale of approximately \$16.9 million after-tax. Concurrently with this sale, we also terminated a 10-year power purchase contract under which MEAN was obligated to buy 20 MW of power and capacity from Wygen I. The decreased revenues associated with the terminated agreement will be partially replaced by agreements under which MEAN will pay for costs associated with administrative services, plant operations, site leases and coal supplied by our Coal Mining operation.

Our Power Generation segment was awarded the bid to provide 200 MW of power to our Colorado Electric subsidiary through a 20-year PPA. The 200 MW natural gas-fired electric generation facilities will be built in Colorado and are expected to be completed by the end of 2011.

We plan to continue evaluating opportunities to bid on the construction of generation resources, both new and existing, for other regional electric utilities for their energy and capacity needs.

Coal Mining

Production from the Coal Mining segment primarily serves mine-mouth generation plants and select regional customers with long-term fuel needs. Increased demand will come from additional mine-mouth generation either currently being constructed or in various stages of development. Total annual production is estimated to be approximately 6.6 million tons in 2010.

Oil and Gas

During 2009, we limited our development capital due to low oil and gas prices. Although we are focused on growing our oil and gas production through development of existing acreage and limited acquisitions depending on economic and industry conditions, our decision to shut-in production at properties with the highest operating costs and limit development capital due to low prices will continue into 2010. During 2010, we expect to limit our development capital to no more than the cash flows produced by our oil and gas properties. The current economic conditions will be particularly challenging since low commodity prices make many of our development drilling sites uneconomical, which could further reduce our development capital expenditures. The lower development capital expenditures will lead to lower production levels due to the natural production decline of existing wells.

In the first quarter of 2009, we recorded a \$27.8 million after-tax ceiling test impairment charge to our oil and gas properties. For reporting periods ending on or after December 31, 2009, the SEC adopted new reporting and accounting requirements for oil and gas companies which changed the way we test for partial ceiling test impairments. Key revisions include changes to the pricing used to determine reserves to a 12-month average price. This change does not alleviate the potential for future impairments, but currently none are anticipated.

Energy Marketing

We have a strong marketing portfolio with a significant amount of optionality that can provide opportunities to create economic value over the next several years. While we expect to derive earnings from these contracts over many years, the required methods of accounting for these transactions could result in additional earnings volatility during the term of these contracts. Our 2009 earnings were negatively impacted as market conditions prevented us from replacing the positive mark-to-market value of contracts that settled during the year.

During 2008 and continuing into 2009, there was a significant contraction in the availability of capital. Despite these challenges, we entered into an agreement for a committed Enserco Credit Facility on May 8, 2009. Impacting results in 2009, was our decision beginning in late 2008 and continuing into mid-2009 to conduct our Enserco business operation in a manner to preserve overall liquidity, which included minimizing utilization of the existing non-committed Enserco Credit Facility until the new committed facility was finalized. This constraint on capital restricted Enserco's ability to take advantage of favorable transactions that might have been available in the marketplace in the first half of 2009. The Credit Facility relieves these constraints for Enserco's operations in 2010.

Corporate

During 2009, we completed several long-term financings including a \$250.0 million senior unsecured bond offering which was used along with the Corporate Credit Facility to repay the Acquisition Facility; a \$180.0 million first mortgage bond issuance at Black Hills Power; a \$120.0 million project financing at Black Hills Wyoming; and refinancing of two Industrial Development Revenue Bonds at Cheyenne Light. We continue to work toward integration and unification of our processes and systems. In 2009, we completed conversion of our customer information system, implemented new performance management and compensation programs, commenced unification of our employee benefits, and continued efforts on converting our financial, outage management, utility engineering, procurement and inventory, and work management systems.

As of December 31, 2009, we had interest rate swaps with a notional amount of \$250.0 million, which do not currently qualify for "hedge accounting" treatment provided by accounting standards for derivatives and hedges. Accordingly, all mark-to-market adjustments on these swaps are recorded through the income statement. As of December 31, 2009, the mark-to-market value of these swaps was a liability of \$38.8 million. In 2009, we recorded an unrealized mark-to-market after-tax gain of \$36.2 million on these swaps. Fluctuations in interest rates create volatility in the fair value of these swaps which will likely have an impact on our 2010 earnings as we record the associated unrealized mark-to-market gains or losses within our income statement. These swaps are for terms of nine and nineteen years and have amended mandatory early termination dates ranging from December 15, 2010 to December 29, 2010. We have continued to maintain these swaps in anticipation of our upcoming financing needs, particularly as they relate to our planned capital requirements to build gas-fired power generation facilities to serve our Colorado Electric customers, and because of our upcoming holding company debt maturities, which are \$225 million and \$250 million in years 2013 and 2014, respectively. Alternatively, we may choose to cash settle these swaps at their fair value prior to their mandatory early termination dates, or unless these dates are extended, we will cash settle these swaps for an amount equal to their fair value on the termination dates.

Results of Operations

Executive Summary and Overview

	<u>2009</u>	<u>2008</u>	<u>2007</u>
		(in thousands)	
Revenue:			
Utilities	\$ 1,100,204	\$ 749,250	\$ 301,514
Non-regulated Energy	169,374	256,540	273,324
	<u>\$ 1,269,578</u>	<u>\$ 1,005,790</u>	<u>\$ 574,838</u>

	<u>2009</u>	<u>2008</u>	<u>2007</u>
		(in thousands)	
Income (loss) from continuing operations:			
Utilities	\$ 57,071	\$ 43,904	\$ 31,633
Non-regulated Energy	579	(23,345)	49,897
Corporate	21,106	(72,596)	(5,872)
	<u>\$ 78,756</u>	<u>\$ (52,037)</u>	<u>\$ 75,658</u>

	<u>2009</u>	<u>2008</u>	<u>2007</u>
		(in thousands)	
Net income available for common stock:			
Utilities	\$ 57,071	\$ 43,904	\$ 31,633
Non-regulated Energy	1,938	(5,312)	73,089
Corporate	22,546	66,488	(5,950)
	<u>\$ 81,555</u>	<u>\$ 105,080</u>	<u>\$ 98,772</u>

2009 Compared to 2008

Income from continuing operations was \$78.8 million, or \$2.04 per share, in 2009 compared to a loss from continuing operations of \$52.0 million, or \$1.37 per share for 2008. The 2009 income from continuing operations includes a gain on sale of \$16.9 million after-tax of a 23.5% ownership interest in the Wygen I plant; a \$36.2 million after-tax non-cash mark-to-market gain on certain interest rate swaps; and a \$27.8 million after-tax impact of a non-cash ceiling test impairment at our Oil and Gas segment. Results

also reflect a full year of operations for the utilities purchased in the Aquila Transaction. The 2008 loss from continuing operations includes a \$61.4 million after-tax non-cash mark-to-market loss on certain interest rate swaps; and a \$59.0 million after-tax loss of a non-cash ceiling test impairment at our Oil and Gas segment.

Net income available for common stock was \$81.6 million, or \$2.11 per share, in 2009 compared to \$105.1 million or \$2.75 per share for 2008. In addition to the items mentioned in income from continuing operations, the 2008 net income includes \$157.2 million after-tax income from discontinued operations for the sale of seven IPP properties. Return on common stock equity in 2009 and 2008 was 7.6% and 10.4%, respectively.

Highlights of our business groups are as follows:

Utilities Group

The Utilities Group's income from continuing operations for 2009 was \$57.1 million in 2009, compared to \$43.9 million in 2008. Income from continuing operations at the Electric Utilities were impacted \$7.6 million by low off-system sales margins due to low commodity prices while income from continuing operations at the Gas Utilities was strong due to favorable weather. In addition, 2009 Utilities Group highlights include the following:

- Construction of the Wygen III generation facility project continued in 2009 and is scheduled to begin commercial operation by April 1, 2010. A 25% ownership interest in this generation facility was sold in April 2009. AFUDC increased \$4.0 million related to this construction.
- Colorado Electric continued plans and purchases to construct 180 MW of utility-owned, gas-fired generation. AFUDC increased \$1.2 million due to this construction.
- Black Hills Power received approval from FERC for a \$3.8 million increase in annual transmission revenues.
- Colorado Gas received approval from the CPUC for a \$1.4 million increase in annual revenues, effective on April 1, 2009.
- Iowa Gas received approval from the IPUB for a \$10.8 million increase in annual revenues, with an effective date of July 31, 2009.
- Black Hills Power completed a first mortgage bond for \$180.0 million. The bonds carry an interest rate of 6.125% and mature in November 2039. Interest from this debt and other debt transactions increased interest expense \$12.7 million.
- We completed the retirement of \$383.0 million of borrowings on our bridge acquisition facility which was used to finance the Aquila Transaction on July 14, 2008.
- We completed our first full year of operations for Colorado Electric and the Gas Utilities acquired in the Aquila Transaction.

Non-Regulated Energy Group

Income from continuing operations was \$0.6 million in 2009 for the Non-regulated Group compared to a loss from continuing operations of \$23.3 million in 2008. Our Energy Marketing and Oil and Gas segments were impacted significantly by low commodity prices. In addition, 2009 Non-regulated Energy Group highlights include the following:

- Oil and Gas recorded a \$43.3 million non-cash ceiling test impairment loss in 2009 compared to a \$91.8 million ceiling test impairment loss in 2008.
- Power Generation's improved earnings reflect a gain of \$26.0 million for the sale of a 23.5% ownership interest in the Wygen I power generation facility to MEAN.
- Our Coal Mining segment executed a site lease agreement with the owners of the currently under construction Wygen III plant increasing earnings \$2.9 million for rental revenue in 2009.
- Energy Marketing completed a \$300.0 million committed stand-alone credit facility in May 2009, to replace its previously uncommitted \$300.0 million credit facility.

- Black Hills Wyoming completed \$120.0 million in project financing in December 2009. The loan matures in December 2016 with an interest rate of LIBOR plus 3.25% per annum.
- Black Hills Colorado IPP was selected to provide power to Colorado Electric and began planning and purchasing to build 200 MW of natural gas-fired electric generation to sell to Colorado Electric through a 20-year PPA.

Corporate Segment

- We recognized a mark-to-market gain related to certain interest rate swaps of \$55.7 million in 2009 compared to a \$94.4 million loss recognized in 2008.
- We completed a \$250.0 million public offering of senior notes due in 2014 in May 2009. The notes were priced at par and carry an interest rate of 9%.

2008 Compared to 2007

Consolidated loss from continuing operations for 2008 was \$52.0 million, or \$1.37 per share, compared to earnings of \$75.7 million, or \$2.02 per share, in 2007. Income from discontinued operations was \$157.2 million, or \$4.12 per share, compared to income of \$23.5 million, or \$0.63 per share in 2007 and includes a \$139.7 million gain on the sale of the operating assets from the IPP Transaction. Return on average common stock equity in 2008 and 2007 was 10.4% and 11.2%, respectively.

The Utilities Group income from continuing operations increased \$12.3 million in 2008 compared to 2007. 2008 results include the earnings from the operations of the five utilities acquired in the Aquila Transaction subsequent to the July 14, 2008 acquisition date. Earnings from continuing operations from the regulated Electric Utilities increased \$8.0 million primarily due to an increase in retail rates and increased electricity sold to retail customers. Earnings from continuing operations from the regulated Gas Utilities were \$4.2 million for the period July 14, 2008 through December 31, 2008.

The Non-regulated Energy Group's loss from continuing operations was \$23.3 million in 2008, compared to earnings of \$49.9 million in 2007, primarily due to a \$59.0 million after-tax ceiling test impairment at the Oil and Gas segment and lower earnings from Energy Marketing of \$14.5 million. Partially offsetting these decreases was an increase in Power Generation earnings of \$6.6 million, which includes the impact of increased earnings from investment partnerships and lower indirect corporate costs related to the IPP Transaction.

Consolidated revenues for 2008 were \$431.0 million higher than 2007 primarily due to the addition of the utilities acquired in the Aquila Transaction and increased Oil and Gas and Coal Mining revenues, partially offset by decreased revenues from Energy Marketing.

Consolidated operating expenses for 2008 increased \$500.8 million compared to 2007. Operating expenses were impacted by the \$91.8 million pre-tax ceiling test impairment at the Oil and Gas segment, increased overburden removal costs at the coal mine, additional operating costs from the Wygen II plant placed into service in January, 2008 and the addition of operating costs of the acquired utilities since their acquisition date.

Income from continuing operations was also impacted by a \$94.4 million pre-tax mark-to-market loss related to interest rate swaps no longer designated as hedges for accounting purposes.

A discussion of operating results from our business segments follows.

The following business group and segment information does not include discontinued operations or intercompany eliminations. Accordingly, 2009, 2008 and 2007 information has been revised to remove information related to operations that were discontinued. Amounts are presented on a pre-tax basis unless otherwise indicated.

Utilities Group

Regulated Electric Utilities

Operating results for the years ended December 31, for the regulated Electric Utilities are as follows (in thousands):

	<u>2009</u>	<u>2008</u> ⁽¹⁾	<u>2007</u>
Revenue - electric	\$ 485,152	\$ 425,123	\$ 270,943
Revenue - gas	35,613	48,296	32,468
Total revenue	<u>520,765</u>	<u>473,419</u>	<u>303,411</u>
Fuel and purchased power - electric	260,150	222,826	133,289
Purchased gas	20,859	33,735	22,649
Total fuel and purchased power	<u>281,009</u>	<u>256,561</u>	<u>155,938</u>
Gross margin - electric	225,002	202,297	137,654
Gross margin - gas	14,754	14,561	9,819
Total gross margin	<u>239,756</u>	<u>216,858</u>	<u>147,473</u>
Operating expenses	<u>168,788</u>	<u>138,992</u>	<u>94,161</u>
Operating income	70,968	77,866	53,312
Interest expense, net	33,012	23,294	13,730
Other income	(7,869)	(3,984)	(4,877)
Income tax expense	<u>13,126</u>	<u>18,882</u>	<u>12,826</u>
Income from continuing operations and net income	<u>\$ 32,699</u>	<u>\$ 39,674</u>	<u>\$ 31,633</u>

(1) 2008 results include the operations of Colorado Electric acquired on July 14, 2008.

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Regulated power plant fleet availability:			
Coal-fired plants	92.1%	93.7%	95.4%
Other plants	96.9%	91.4%	99.4%
Total availability	94.0%	92.8%	97.2%

2009 Compared to 2008

2009 results include a full year of operations at Colorado Electric, which was acquired on July 14, 2008.

Income from continuing operations was \$32.7 million after-tax in 2009 compared to \$39.7 million after-tax in 2008 primarily due to:

- A \$7.6 million decrease in margins from off-system sales reflecting the lower margins available in the current low energy price environment; and
- A \$9.7 million increase in net interest expense primarily due to additional debt associated with the acquisition of Colorado Electric, additional long-term project debt at Black Hills Power, and inter-segment debt restructuring at Colorado Electric, partially offset by AFUDC-borrowed.

Partially offsetting these were:

- A \$6.5 million increase in other margins primarily due to an increase in transmission rates effective January 1, 2009 at Black Hills Power; and

- Increased other income primarily due to an increase in AFUDC-equity of \$2.1 million from the construction of Wygen III in 2009.

2008 Compared to 2007

2008 results include a partial year of operations at Colorado Electric, which was acquired on July 14, 2008.

Income from continuing operations was \$39.7 million after-tax in 2008 compared to \$31.6 million after-tax in 2007, primarily due to:

- An increase in earnings of approximately \$8.0 million primarily due to the impact of a rate increase at Cheyenne Light effective January 1, 2008; and
- A 34% increase in electric MWh sales to retail customers, primarily due to the acquisition of Colorado Electric.

Partially offsetting these were:

- Increased plant maintenance costs and depreciation expense of approximately \$11.1 million associated with the Wygen II plant placed into service January 1, 2008; and
- Lower AFUDC compared to 2007.

Regulated Gas Utilities

Operating results for the years ended December 31, for the regulated Gas Utilities are as follows (in thousands):

	<u>2009</u>	<u>For the Period July 14, 2008 to December 31, 2008</u>
Revenue:		
Natural gas - regulated	\$ 553,576	\$ 261,887
Other - non-regulated	26,736	15,189
Total sales	<u>580,312</u>	<u>277,076</u>
Cost of sales:		
Natural gas - regulated	356,623	180,556
Other - non-regulated	15,093	11,294
Total cost of sales	<u>371,716</u>	<u>191,850</u>
Gross margin:		
Natural gas – regulated	196,953	81,331
Other non-regulated	11,643	3,895
Total gross margin	<u>208,596</u>	<u>85,226</u>
Operating expenses	<u>153,386</u>	<u>70,338</u>
Operating income	55,210	14,888
Interest expense, net	17,100	8,125
Other expense	285	86
Income tax expense	<u>13,453</u>	<u>2,447</u>
Income from continuing operations and net income	<u>\$ 24,372</u>	<u>\$ 4,230</u>

The regulated Gas Utilities located in Colorado, Nebraska, Iowa and Kansas were acquired on July 14, 2008. Income from continuing operations was \$24.4 million in 2009, compared to \$4.2 million in 2008. The increase was primarily due to a full year of regulated Gas Utilities operation in 2009 compared to the partial year in 2008. Natural gas demand is typically higher in the first and

fourth quarters as gas is used for residential and commercial heating. The regulated Gas Utilities have GCAs that allow them to pass through the cost of gas to customers. For this reason, we believe gross margins are a more useful performance measure than revenues as fluctuations in the cost of gas are passed through to revenues.

In addition to a full year of operations at the Gas Utilities, results were impacted by favorable weather as well as rate increases from general rate cases in Colorado (\$1.4 million annual increase effective April 1, 2009), general rate cases in Iowa (\$10.8 million annual increase effective July 27, 2009), and from cost tracking riders in Kansas (\$0.5 million annual increase effective September 14, 2009).

Non-regulated Energy Group

Oil and Gas

Oil and Gas operating results were as follows (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Revenue	\$ 70,684	\$ 106,347	\$ 101,522
Operating expenses ^(a)	69,904	85,753	76,085
Impairment of long-lived assets	43,301	91,782	-
Operating (loss) income	<u>(42,521)</u>	<u>(71,188)</u>	<u>25,437</u>
Interest expense, net	4,673	5,092	8,657
Other income	(350)	(611)	(1,108)
Income tax (benefit) expense	<u>(21,016)</u>	<u>(26,001)</u>	<u>5,182</u>
Income (loss) from continuing operations and net income	<u>\$ (25,828)</u>	<u>\$ (49,668)</u>	<u>\$ 12,706</u>

(a) Operating expenses included a \$43.3 million and \$91.8 million ceiling test impairment charge in 2009 and 2008, respectively.

The following tables provide certain operating statistics for the Oil and Gas segment:

Crude Oil and Natural Gas Production

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Bbls of oil sold	366,000	387,400	409,040
Mcf of natural gas sold	10,266,900	11,209,600	12,172,400
Mcf equivalent sales	12,462,900	13,534,000	14,626,640

Average Price Received^(a)

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Gas/Mcf ^(b)	\$ 4.58 ^(c)	\$ 6.24 ^(c)	\$ 6.19
Oil/Bbl	\$ 59.19	\$ 79.35	\$ 60.29

(a) Net of hedge settlement gains/losses

(b) Exclusive of gas liquids

(c) Does not include the negative revenue impact of a \$1.2 million and \$2.1 million royalty settlement accrual for 2009 and 2008, respectively, resulting in a \$0.13/Mcf and \$0.20/Mcf price impact

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Average production cost (per Mcfe):			
LOE	\$ 1.22	\$ 1.33	\$ 0.98
Production taxes	0.46	0.91	0.70
Total	<u>\$ 1.68</u>	<u>\$ 2.24</u>	<u>\$ 1.68</u>

		<u>2009</u>		<u>2008</u>		<u>2007</u>
Depletion expense/Mcfe*	\$	2.16	\$	2.68	\$	2.21

* The average depletion rate per Mcfe is a function of capitalized costs, future development costs and the related underlying reserves in the periods presented. The 2009 rate was particularly impacted by a lower asset base as a result of previous asset impairment charges. This impact was partially offset by persistent low product prices during the year, which resulted in lower oil and gas reserve quantities.

The following is a summary of annual average operating expenses per Mcfe at December 31:

	<u>2009</u>			<u>2008</u>			<u>2007</u>		
	<u>LOE</u>	<u>Gathering Compression and Processing</u>	<u>Total</u>	<u>LOE</u>	<u>Gathering Compression and Processing</u>	<u>Total</u>	<u>LOE</u>	<u>Gathering Compression and Processing</u>	<u>Total</u>
New Mexico	\$ 1.29	\$ 0.30	\$ 1.59	\$ 1.48	\$ 0.29	\$ 1.77	\$ 1.04	\$ 0.31	\$ 1.35
Colorado	1.06	0.41	1.47	1.29	0.77	2.06	0.95	0.79	1.74
Wyoming	1.42	-	1.42	1.55	-	1.55	1.19	-	1.19
All other properties	0.91	0.26	1.17	0.89	0.12	1.01	0.71	0.17	0.88
Total	\$ 1.22	\$ 0.22	\$ 1.44	\$ 1.33	\$ 0.22	\$ 1.55	\$ 0.98	\$ 0.23	\$ 1.21

At the East Blanco Field in New Mexico and our Piceance Basin assets in Colorado, we own and operate gas gathering systems, including associated compression and treating facilities.

The following is a summary of our proved oil and gas reserves at December 31:

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Bbls of oil (in thousands)	5,274	5,185	5,807
MMcf of natural gas	87,660	154,432	172,964
Total MMcfe	119,304	185,542	207,806

Reserves are based on reports prepared by an independent consulting and engineering firm. The reports were prepared by Cawley, Gillespie & Associates, Inc., an independent engineering company. Reserves were determined using SEC-defined product prices. Such reserve estimates are inherently imprecise and may be subject to revisions as a result of numerous factors including, but not limited to, additional development activity, evolving production history and continual reassessment of the viability of production under varying economic conditions. The current estimate takes into account 2009 production of approximately 11.9 Bcfe, additions from extensions, discoveries and acquisitions of 3.5 Bcfe and negative revisions to previous estimates of 57.8 Bcfe, including approximately 54.9 Bcfe due to lower product prices.

Reserves reflect SEC-defined pricing held constant for the life of the reserves, as follows:

	<u>2009*</u>		<u>2008</u>		<u>2007</u>	
	<u>Oil</u>	<u>Gas</u>	<u>Oil</u>	<u>Gas</u>	<u>Oil</u>	<u>Gas</u>
NYMEX prices	\$ 61.18	\$ 3.87	\$ 44.60	\$ 5.71	\$ 95.98	\$ 6.80
Well-head reserve prices	\$ 53.59	\$ 2.52	\$ 32.74	\$ 4.44	\$ 83.23	\$ 5.88

* On December 31, 2008, the SEC issued final rules amending its oil and gas reserve reporting requirements effective for years ending on or after December 31, 2009. The final rule changed the use of prices at the end of each reporting period to an average of the first day of the month for the preceding twelve months held constant for the life of production. Previously, the rule required the use of the spot price on the last day of the reporting period, held constant for the life of production.

2009 Compared to 2008

Loss from continuing operations was \$25.8 million after-tax compared to a loss of \$49.7 million after-tax in the prior year, primarily due to:

- A \$27.8 million after-tax non-cash ceiling test impairment charge was taken during the first quarter of 2009. The write-down in the net carrying value of our natural gas and crude oil properties resulted from low March 31, 2009 quarter-end natural gas prices for the commodities. The write-down of gas and oil properties was based on period end NYMEX prices of \$3.63 per Mcf, adjusted to \$2.23 per Mcf at the wellhead, for natural gas and \$49.66 per barrel, adjusted to \$45.32 per barrel at the wellhead, for crude oil. This compares to a \$59.0 million after-tax non-cash ceiling test impairment charge taken during the fourth quarter 2008. The write-down in value of our natural gas and crude oil properties in 2008 resulted from low year-end prices for the commodities. The write-down of gas and oil properties was based on year end NYMEX prices of \$5.71 per Mcf, adjusted to \$4.44 per Mcf at the wellhead, for natural gas and \$44.60 per barrel, adjusted to \$32.74 per barrel at the wellhead, for crude oil;
- LOE decreased \$2.8 million due to lower production and cost reduction efforts;
- Lower depletion expense of \$9.1 million primarily due to reduced depletion rate caused by a lower asset base as a result of previous asset impairment charges and lower production;
- Decreased production taxes of approximately \$6.6 million primarily due to lower oil and natural gas prices; and
- A \$3.8 million income tax benefit related to an adjustment of a previously recorded tax position.

Partially offsetting these were:

- Decreased revenues of \$35.7 million primarily due to a 25% and 27% decrease in the annual average hedged price of oil and gas received, respectively, and a 6% and 8% decrease in oil and gas production, respectively. The decrease in natural gas production is due to a lower level of capital spending than in prior years and a voluntary shut-in of production at properties with the highest operating costs. Shut-ins reduced production for the year ended December 31, 2009 by approximately 458 MMcfe.

2008 Compared to 2007

Loss from continuing operations was \$49.7 million after-tax compared to income from continuing operations of \$12.7 million after-tax in the prior year, primarily due to:

- A \$59.0 million after-tax non-cash ceiling test impairment charge was taken during the fourth quarter 2008. The write-down in the net carrying value of our natural gas and crude oil properties resulted from low year-end prices for the commodities. The write-down of gas and oil properties was based on year end NYMEX prices of \$5.71 per Mcf, adjusted to \$4.44 per Mcf at the wellhead, for natural gas and \$44.60 per barrel, adjusted to \$32.74 per barrel at the wellhead, for crude oil;
- LOE increased \$3.6 million due to costs related to severe weather conditions in New Mexico, increased fuel costs and higher industry-related costs; and
- Increased depletion expense of \$3.7 million primarily due to negative reserve revisions driven by the impact of lower year-end commodity prices.

Partially offsetting these was:

- Increased revenues of \$4.8 million primarily due to a 32% increase in the annual average hedged price of oil received and a 1% increase in the annual average hedged price of gas received, partially offset by a 7% decrease in production and the impact of a royalty settlement with the Jicarilla Apache Nation. The decrease in production resulted from severe weather at the beginning of 2008, federal drilling permit delays, voluntary shut-in of volumes in response to low price levels at the CIG pricing location and delays in drilling activity on our non-operated property as well as a reduction in capital spending due to the low commodity prices.

Additional information on our Oil and Gas operations can be found in Note 21 to the Notes to Consolidated Financial Statements in this Annual Report.

Power Generation

Our Power Generation segment produced the following results (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Revenue	\$ 30,575	\$ 38,181	\$ 38,658
Gain on sale of operating asset	25,971	-	-
Operating expenses	16,491	23,966	36,062
Operating income	<u>40,055</u>	<u>14,215</u>	<u>2,596</u>
Interest expense, net	9,388	11,649	5,918
Other (income) expense	(1,091)	(3,698)	2,397
Income tax expense (benefit)	<u>11,097</u>	<u>3,013</u>	<u>(2,625)</u>
Income (loss) from continuing operations	<u>\$ 20,661</u>	<u>\$ 3,251</u>	<u>\$ (3,094)</u>

The following table provides certain operating statistics for the Power Generation segment at December 31:

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Independent power capacity:			
MW of independent power capacity in service	120	141	158
Contracted fleet plant availability:			
Gas-fired plants	92.0%	96.2%	96.2%
Coal-fired plants	96.1%	95.3%	70.3%
Total	94.4%	95.9%	86.0%

2009 Compared to 2008

Income from continuing operations was \$20.7 million after-tax in 2009 compared to \$3.3 million after-tax in 2008. The increase of \$17.4 million was primarily due to:

- A \$26.0 million gain on the sale of a 23.5% ownership interest in the Wygen I power generation facility;
- 2008 operating expenses reflect \$3.1 million of allocated indirect costs relating to the IPP assets sold not reclassified to discontinued operations in accordance with accounting guidance for discontinued operations; and
- Interest expense in 2008 includes \$8.7 million of allocated net interest expense relating to the IPP assets sold not reclassified to discontinued operations in accordance with accounting guidance for discontinued operations partially offset in 2009 by an increase in interest expense of \$6.4 million primarily due to a change in intersegment debt to equity capital structure.

Partially offsetting these were:

- A decrease of \$1.9 million reflecting net earnings impact of replacing a 20 MW PPA with operating and site lease agreements related to MEAN's purchase of a 23.5% ownership interest in Wygen I; and
- A \$2.7 million gain on the sale of excess emission credits in 2008, which were made available by the decommissioning of the Ontario facility.

2008 Compared to 2007

Income from continuing operations was \$3.3 million after-tax in 2008 compared to a loss from continuing operations of \$3.1 million in 2007. The increase of \$6.3 million was primarily due to:

- Increased earnings from our investments due to 2007 partnership impairment charges of \$0.6 million for the Glenss Ferry and Rupert power plants, in which we hold a 50% ownership interest;
- Increased operating income from our Gillette CT of \$1.0 million after-tax. Operating income was impacted by lower gas and purchased power costs and maintenance expense;
- Allocated indirect corporate costs, related to the IPP assets sold and not reclassified to discontinued operations decreased \$1.9 million after-tax. 2008 costs represent a partial year through the sale date of the IPP Transaction, compared to a full 12 months of costs in 2007; and
- The recording of an impairment loss, and related costs, in 2007 of \$2.7 million relating to the Ontario plant.

Partially offsetting the increased earnings was a decrease in non-operating income of \$6.4 million after-tax, resulting from a change in business segment debt to equity capital structure.

Coal Mining

Coal Mining results were as follows (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Revenue	\$ 58,490	\$ 56,901	\$ 42,488
Operating expenses	53,435	52,608	36,311
Operating income	5,055	4,293	6,177
Interest income, net	(1,452)	(1,346)	(1,684)
Other income	(3,475)	(584)	(337)
Income tax expense	3,234	2,190	2,091
Income from continuing operations	\$ 6,748	\$ 4,033	\$ 6,107

The following table provides certain operating statistics for the Coal Mining segment (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Tons of coal sold	5,955	6,017	5,049
Cubic yards of overburden moved	14,539	12,203	7,467
Coal reserves	268,000	274,000	280,000

2009 Compared to 2008

Income from continuing operations was \$6.7 million after-tax in 2009 compared to \$4.0 million after-tax in 2008. The increase of \$2.7 million was due to:

- A \$1.6 million increase in revenues primarily due to a higher average price received, partially offset by lower coal volumes sold. The higher average price received includes the impact of sales prices to our regulated utility subsidiaries that are determined in part by a return on investment base; and
- A \$2.9 million increase in other income primarily from a site lease agreement recently entered into with the owners of Wygen III, which is located on mine property. The agreement provided for a March 2008 start date reflecting the commencement of construction on Wygen III.

Partially offsetting these was:

- A \$0.8 million increase in operating costs primarily due to higher depreciation from an increased asset base and higher usage levels related to increased production, partially offset by lower estimated future reclamation costs.

2008 Compared to 2007

Income from continuing operations was \$4.0 million after-tax in 2008 compared to \$6.1 million after-tax in 2007. The decrease of \$2.1 million was due to:

- Increased overburden removal costs of \$5.3 million due to a 63% increase in overburden yards moved, compounded by a higher strip ratio, longer haul distances and higher diesel fuel costs; and
- Increased depreciation expense of \$4.4 million due to an increase in the asset base and usage related to increased production.

Offsetting the decreases was a \$14.4 million increase in revenues due to a 19% increase in coal sold at a higher average price. The increase in coal volumes was due to additional Wygen II and train load-out sales.

Energy Marketing

Our Energy Marketing segment produced the following results (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Revenue:			
Realized gas marketing gross margin	\$ 30,134	\$ 18,593	\$ 84,823
Unrealized gas marketing gross margin	(19,777)	33,247	468
Realized oil marketing gross margin	11,278	1,038	4,146
Unrealized oil marketing gross margin	(8,254)	6,432	4,399
	<hr/> 13,381	<hr/> 59,310	<hr/> 93,836
Operating expenses	13,804	29,175	42,067
Operating (loss) income	<hr/> (423)	<hr/> 30,135	<hr/> 51,769
Interest expense (income), net	1,547	254	(2,131)
Other (income) expense	(22)	12	(24)
Income tax (benefit) expense	(460)	10,180	19,746
Income (loss) from continuing operations	<hr/> \$ (1,488)	<hr/> \$ 19,689	<hr/> \$ 34,178

The following table provides certain operating statistics for the Energy Marketing segment:

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Natural gas average daily physical sales - MMBtu	1,974,300	1,873,400	1,743,500
Crude oil average daily physical sales - Bbls	12,400	7,880	8,600

2009 Compared to 2008

Loss from continuing operations was \$1.5 million after-tax in 2009 compared to income from continuing operations of \$19.7 million in 2008. The decrease of \$21.2 million was due to:

- A \$67.7 million decrease in unrealized marketing margins, primarily due to prevailing conditions in natural gas markets affecting both transportation and storage strategies. Unrealized mark-to-market gains in 2008 were driven by accelerated margins within our proprietary trading portfolio and narrowing basis differentials at year end that resulted in unrealized mark-to-market gains on our hedged transportation positions. Those positions were settled and the margins realized primarily in 2009 and to a lesser extent in 2010.

Partially offsetting this was:

- A \$21.8 million increase in realized marketing margins primarily due to settlement of trades which produced unrealized gains in the previous year; and
- Lower operating expenses of \$15.4 million primarily due to a lower provision for incentive compensation.

2008 Compared to 2007

Income from continuing operations decreased \$14.5 million due to:

- A \$69.3 million decrease in realized marketing margins, primarily due to prevailing conditions in natural gas markets affecting both transportation and storage strategies; and
- Lower crude oil marketing margins due to the impact of decreasing commodity prices on inventory held to meet pipeline requirements.

Partially offsetting these were:

- A \$34.8 million increase in unrealized marketing margins. Unrealized mark-to-market gains in 2008 were driven by accelerated margins within our proprietary trading portfolio and narrowing basis differentials at year end that resulted in unrealized mark-to-market gains on our hedged transportation positions. These positions were settled and the margins realized primarily in 2009 and to a lesser extent in 2010; and
- Lower operating expenses as incentive compensation decreased compared to incentive compensation for strong marketing performance in 2007.

Corporate

2009 Compared to 2008

Income from continuing operations was \$21.1 million after-tax compared to a loss from continuing operations of \$72.6 million after-tax in 2008. The increase of \$93.7 million was primarily due to:

- A \$97.6 million after-tax increase in unrealized mark-to-market gains related to certain interest rate swaps that are no longer designated as hedges for accounting purposes; and
- 2008 included \$10.6 million in integration and acquisition costs.

Partially offsetting these was:

- A \$14.2 million increase in net interest expense primarily due to interest settlements of the de-designated interest rate swaps and amortization of amendment fees to extend the mandatory early termination dates of these swaps through the end of 2010.

2008 Compared to 2007

Loss from continuing operations was \$72.6 million after-tax in 2008 compared to a loss from continuing operations of \$5.9 million after-tax in 2007. The decrease of \$66.7 million was primarily due to:

- A \$61.4 million after-tax unrealized mark-to-market loss related to interest rate swaps that were no longer designated as hedges for accounting purposes;
- A \$2.4 million increase in net interest expense due to higher borrowings; and
- A \$10.6 million increase in costs from integration and acquisition of the utilities purchased in the Aquila Transaction.

Critical Accounting Estimates

We prepare our consolidated financial statements in conformity with GAAP. In many cases, the accounting treatment of a particular transaction is specifically dictated by GAAP and does not require management's judgment in application. There are also areas which require management's judgment in selecting among available GAAP alternatives. We are required to make certain estimates, judgments and assumptions that we believe are reasonable based upon the information available. These estimates and assumptions affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the periods presented. Actual results may differ from our estimates and to the extent there are material differences between these estimates, judgments or assumptions and actual results, our financial statements will be affected. We believe the following accounting estimates are the most critical in understanding and evaluating our reported financial results. We have reviewed these critical accounting estimates and related disclosures with our Audit Committee.

The following discussion of our critical accounting estimates should be read in conjunction with Note 1, "Business Description and Summary of Significant Accounting Policies" of our Notes to Consolidated Financial Statements in this Annual Report.

Impairment of Long-lived Assets

We evaluate for impairment, the carrying values of our long-lived assets, including goodwill and other intangibles, whenever indicators of impairment exist and at least annually for goodwill as required by accounting standards for goodwill.

For long-lived assets with finite lives, this evaluation is based upon our projections of anticipated future cash flows (undiscounted and without interest charges) from the assets being evaluated. If the sum of the anticipated future cash flows over the expected useful life of the assets is less than the assets' carrying value, then a permanent non-cash write-down equal to the difference between the assets' carrying value and the assets' fair value is required to be charged to earnings. In estimating future cash flows, we generally use a probability weighted average expected cash flow method with assumptions based on those used for internal budgets. The determination of future cash flows, and, if required, fair value of a long-lived asset is by its nature a highly subjective judgment. Significant assumptions are required in the forecast of future operating results used in the preparation of the long-term estimated cash flows. Changes in these estimates could have a material effect on the evaluation of our long-lived assets.

According to accounting standards for goodwill, goodwill and other intangibles are required to be evaluated whenever indicators of impairment exist and at least annually. We conduct our annual evaluations during the fourth quarter. The standard requires a two-step process be performed to analyze whether or not goodwill has been impaired. The first step of this test, used to identify potential impairment, compares the estimated fair value of a reporting unit with its carrying amount. The second step, if necessary, measures the amount of the impairment. The underlying assumptions used for determining fair value are susceptible to change from period to period and could potentially cause a material impact to the income statement. Management's assumptions about future revenues and operating costs, the amount and timing of anticipated capital expenditures for power generating facilities, discount rates, inflation rates, and economic conditions, require significant judgment.

We have \$353.7 million in goodwill as of December 31, 2009, of which \$339.0 million relates to our Black Hills Energy utilities. Colorado Electric holds 72% and the Gas Utilities hold 28% of the Black Hills Energy goodwill. For the Colorado Electric impairment analysis, we estimate the fair value of the goodwill using a discounted cash flows methodology. This analysis required the input of several critical assumptions in building our risk-adjusted discount rate and cash flow projections including future growth rates, operating cost escalation rates, timing and level of success in regulatory rate proceedings, and the cost of debt and equity capital. We believe the goodwill amount reflects the value of the opportunity to build a significant amount of rate-based generation and transmission in the next two years followed by the relatively stable, long-lived cash flows of the regulated utility business, considering the regulatory environment and market growth potential. The results of the analysis show Colorado Electric with a carrying value of \$489.2 million as of November 30, 2009, compared to a fair value of \$591.9 million. The fair value exceeds the carrying value by 21%; therefore we do not have an impairment.

The remaining \$93.9 million of goodwill relates to the Gas Utilities. We tested this goodwill for impairment using an EBITDA multiple method and a discounted cash flow method at each reporting unit. The analysis required the input of several critical assumptions in determining EBITDA, the multiple to apply to EBITDA, cash flow projections and risk-adjusted discount rate. These assumptions include future growth rates, operating cost escalation rates, timing and level of success in regulatory rate proceedings, and long-term earnings and merger multiples for comparable companies. The results of the analysis show the Gas Utilities with a carrying value of \$466.3 million as of November 30, 2009, compared to a fair value of \$777.4 million. The fair value exceeds the carrying value by 67%; therefore we do not have an impairment.

Full Cost Method of Accounting for Oil and Gas Activities

Accounting for oil and gas activities is subject to special, unique rules. Two generally accepted methods of accounting for oil and gas activities are available - successful efforts and full cost. We account for our oil and gas activities under the full cost method whereby all productive and nonproductive costs related to acquisition, exploration and development drilling activities are capitalized. These costs are amortized using a unit-of-production method based on volumes produced and proved reserves. Any conveyances of properties, including gains or losses on abandonments of properties, are treated as adjustments to the cost of the properties with no gain or loss recognized. Net capitalized costs are subject to a ceiling test that limits such costs to the aggregate of the present value of future net revenues of proved reserves and the lower of cost or fair value of unproved properties. This method values the reserves based upon SEC-defined prices for oil and gas as of the end of each reporting period adjusted for contracted price changes. The prices, as well as costs and development capital, are assumed to remain constant for the remaining life of the properties. If the net capitalized costs exceed the full-cost ceiling, then a permanent non-cash write-down is required to be charged to earnings in that reporting period. Under these SEC-defined product prices, our net capitalized costs were more than the full cost ceiling at March 31, 2009 and December 31, 2008 requiring an after-tax write-down of \$27.8 million and \$59.0 million, respectively. Under the SEC-defined product prices at December 31, 2009, no additional write-down was required. Given the fluctuations in natural gas and oil prices, we can provide no assurance that future write-downs will not occur depending on oil and gas prices at that point in time. On December 31, 2008, the SEC issued final rules amending its oil and gas reporting requirements effective for fiscal years ending on or after December 31, 2009. The final rule changes the use of prices at the end of each reporting period to an average of the first day of the month price for the preceding twelve months.

Oil and Natural Gas Reserve Estimates

Estimates of our proved oil and natural gas reserves are based on the quantities of oil and natural gas that geological and engineering data demonstrate with reasonable certainty to be recoverable in future years from known reservoirs under existing economic and operating conditions. An independent petroleum engineering company prepares reports that estimate our proved oil and natural gas reserves annually. The accuracy of any oil and natural gas reserve estimate is a function of the quality of available data, engineering and geological interpretation and judgment. For example, we must estimate the amount and timing of future operating costs, severance taxes, development costs and workover costs, all of which may in fact vary considerably from actual results. In addition, as oil and gas prices and cost levels change from year to year, the estimate of proved reserves may also change. Any significant variance in these assumptions could materially affect the estimated quantity and value of our reserves.

Despite the inherent imprecision in estimating our oil and natural gas reserves, the estimates are used throughout our financial statements. For example, since we use the unit-of-production method of calculating depletion expense, the amortization rate of our capitalized oil and gas properties incorporates the estimated unit-of-production attributable to the estimates of proved reserves. The net book value of our oil and gas properties is also subject to a "ceiling" limitation based in large part on the quantity of our proved reserves. Finally, these reserves are the basis for our supplemental oil and gas disclosures.

Risk Management Activities

In addition to the information provided below, see Note 3, "Risk Management Activities" and Note 4, "Fair Value Measurement," of our Notes to Consolidated Financial Statements in this Annual Report.

Derivatives

Accounting standards for derivatives require the recognition of all derivative instruments as either assets or liabilities on the balance sheet and their measurement at fair value. Our policy for recognizing the changes in fair value of derivatives varies based on the designation of the derivative. The changes in fair value of derivatives that are not designated as hedges are recognized currently in earnings. Derivatives may be designated as hedges of expected future cash flows or fair values. The effective portion of changes in fair values of derivatives designated as cash flow hedges is recorded as a component of other comprehensive income (loss) until it is reclassified into earnings in the same period that the hedged item is recognized in earnings. The ineffective portion of changes in fair value of derivatives designated as cash flow hedges is recorded in current earnings. Changes in fair value of derivatives designated as fair value hedges are recognized in current earnings along with fair value changes of the underlying hedged item.

We currently use derivative instruments, including options, swaps, futures, forwards and other contractual commitments for both non-trading (hedging) and trading purposes. Our typical non-trading (hedging) transactions relate to contracts we enter into to fix the price received for anticipated future production at our Oil and Gas segment, or to fulfill the annual winter hedging plan for our regulated gas utilities (see below), and for interest rate swaps we enter into to convert a portion of our variable rate debt, or associated variable rate interest payments, to a fixed rate. Our Energy Marketing operations utilize various physical and financial contracts to effectively manage our marketing and trading portfolios.

Fair values of derivative instruments and energy trading contracts are based on actively quoted market prices or other external source pricing information, where possible. If external market prices are not available, fair value is determined based on other relevant factors and pricing models that consider current market and contractual prices for the underlying financial instruments or commodities, as well as time value and yield curve or volatility factors underlying the positions.

Pricing models and their underlying assumptions impact the amount and timing of unrealized gains and losses recorded, and the use of different pricing models or assumptions could produce different financial results. Changes in the commodity markets will impact our estimates of fair value in the future. To the extent financial contracts have extended maturity dates, our estimates of fair value may involve greater subjectivity due to the lack of transparent market data available upon which to base modeling assumptions. A 20% change to the estimated fair value prices would have affected 2009 net income by approximately \$3.6 million.

As allowed by state regulatory commissions, we have entered into certain financial instruments to reduce our customers' underlying exposure to fluctuations in gas prices. These financial instruments are considered derivatives and are marked-to-market. We apply the accounting standards for regulated operations to periodic changes in fair value of the derivatives associated with these instruments and record an offset in regulatory asset or regulatory liability accounts. Most of our contracts for purchase and sale of natural gas qualify for the normal purchase and normal sale exceptions under accounting standards for derivatives, and are not required to be recorded as derivative assets and liabilities.

Counterparty Credit Risk and Allowance for Doubtful Accounts

Our largest counterparties consist primarily of financial institutions and major energy companies. This concentration of counterparties may materially impact our exposure to credit risk resulting from market, economic or regulatory conditions. Recent adverse developments in the global financial and credit markets have made it more difficult and more expensive for companies to access the short-term bank markets, which may negatively impact the creditworthiness of our counterparties. We seek to minimize counterparty credit risk through an evaluation of their financial condition and credit ratings and collateral requirements under certain circumstances, including the use of master netting agreements in our energy marketing segment.

We continuously monitor collections and payments from our customers and establish an allowance for doubtful accounts based upon our historical experience and any specific customer collection issue that we have identified. The allowances provided are estimated and may be impacted by economic, market and regulatory conditions, which could have an effect on future allowance requirements and significantly impact future results of operations. While most credit losses have historically been within our expectations and established provisions, we can provide no assurance that our actual credit losses will be consistent with our estimates.

Pension and Other Postretirement Benefits

The Company, as described in Note 18 to the Consolidated Financial Statements in this Annual Report, has three defined benefit pension plans and three defined post-retirement healthcare plans. Accounting for pension and other postretirement benefit obligations involves numerous assumptions, the most significant of which relate to the discount rate for measuring the present value of future plan obligations; expected long-term rates of return on plan assets; rate of future increases in compensation levels; and healthcare cost projections. The determination of our obligation and expenses for pension and other postretirement benefits is dependent on the assumptions used by actuaries in calculating the amounts. In 2008, we changed our measurement date to December 31. Although we believe our assumptions are appropriate, significant differences in our actual experience or significant changes in our assumptions may materially affect our pension and other postretirement obligations and our future expense.

In July 2009, the Board of Directors froze our Defined Benefit Pension Plans to certain new participants and transferred certain existing participants to an age and service based defined contribution plan, effective January 1, 2010. Plan assets and obligations for the Black Hills Corporation Plan which covers eligible employees of Black Hills Service Company, Black Hills Power, WRDC, and BHEP, and the Black Hills Utility Holdings Plan, which covers eligible employees of our Black Hills Utility Holding subsidiaries were revalued as of July 31, 2009 in conjunction with the curtailment of these plans. As a result, we recognized a pre-tax curtailment expense of approximately \$0.3 million in the third quarter of 2009. The Cheyenne Light Plan recognized a pre-tax curtailment expense of less than \$0.1 million and this expense was booked in the fourth quarter of 2009. In July 2009, the Board of Directors also approved amendments to the BHC Retiree Healthcare Plan and the Black Hills Utility Holdings Plan effective January 1, 2010, from a cost sharing plan to a RMSA for non-union employees and participating union employees and expand eligibility of plan participants.

The pension benefit cost for 2010 for our non-contributory funded pension plan is expected to be \$9.9 million compared to \$11.8 million in 2009. The estimated discount rate used to determine annual benefit cost accruals will be 6.0% in 2010; the discount rate used in 2009 was 6.2%. In selecting the discount rate, we consider cash flow durations for each Plan's liabilities and returns on high credit quality fixed income yield curves for comparable durations.

Our pension plan assets are held in trust and primarily consist of equity, fixed income and real estate securities. In 2009, our target long-term investment allocations were 65% equity and 35% fixed income. At December 31, 2009, our investment allocation was 65% equities, 32% fixed income/cash and 3% real estate.

We do not pre-fund our non-qualified pension plans or two of the three postretirement benefit plans. The table below shows the expected impacts of a 1% increase or decrease to our 5.68% discount rate assumption for our Retiree Healthcare Plans (in thousands):

Change in Assumed Discount Rate	Impact on December 31, 2009		Impact on 2009 Service and Interest Cost
		Accumulated Postretirement Benefit Obligation	
Increase 1%	\$	3,057	\$ 384
Decrease 1%	\$	(2,505)	\$ (275)

Contingencies

When it is probable that an environmental or other legal liability has been incurred, a loss is recognized when the amount of the loss can be reasonably estimated. Estimates of the probability and the amount of loss are made based on currently available facts. Accounting for contingencies requires significant judgment regarding the estimated probabilities and ranges of exposure to potential liability. Our assessment of our exposure to contingencies could change to the extent there are additional future developments, or as more information becomes available. If actual obligations incurred are different from our estimates, the recognition of the actual amounts could have a material impact on our financial position and results of operations.

Valuation of Deferred Tax Assets

We use the liability method of accounting for income taxes. Under this method, deferred income taxes are recognized, at currently enacted income tax rates, to reflect the tax effect of temporary differences between the financial and tax basis of assets and liabilities, as well as operating loss and tax credit carryforwards. The amount of deferred tax assets recognized is limited to the amount of the benefit that is more likely than not to be realized.

In assessing the realization of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized and provides any necessary valuation allowances as required. If we determine that we will be unable to realize all or part of our deferred tax assets in the future, an adjustment to the deferred tax asset would be charged to income in the period such determination was made. Although we believe our assumptions, judgments and estimates are reasonable, changes in tax laws or our interpretations of tax laws and the resolution of the current and any future tax audits could significantly impact the amounts provided for income taxes in our consolidated financial statements.

Liquidity and Capital Resources

Overview

Information about our financial position as of December 31 is presented in the following table (dollars, in thousands):

Financial Position Summary			Percentage Change
	2009	2008	
Cash and cash equivalents	\$ 112,901	\$ 168,491	(33.0)%
Restricted cash	17,502	-	100.0%
Short-term debt	199,745	705,878	(71.7)%
Long-term debt	1,015,912	501,252	102.7%
Stockholders' equity	1,084,837	1,050,536	3.3%
<u>Ratios</u>			
Long-term debt ratio	48.4%	32.3%	49.7%
Total debt ratio	52.8%	53.5%	(1.2)%

We believe that our cash on hand, operating cash flows, existing borrowing capacity and ability to complete new debt financings, taken as a whole, provide sufficient resources to fund our ongoing operating requirements, debt maturities, anticipated dividends, and

anticipated capital expenditures during the next twelve months. However, a material change in available financing (including further changes resulting from a recurrence of the capital market disruptions experienced in 2008 and early 2009) could impact our ability to fund our current liquidity and capital resource requirements.

Liquidity

Historically, our principal sources of short-term liquidity have been our revolving credit facilities and cash from operations. We have utilized availability under our revolving credit facilities to manage our cash flow needs, which are affected by the seasonality of our utility businesses and changes in the trading volumes of our energy marketing operation. Our principal sources of long-term liquidity have been proceeds raised from public and private offerings of equity and long-term debt securities issued by the Company and its subsidiaries. We have also managed liquidity needs through hedging activities, primarily in connection with seasonal needs of our Utility operations (including seasonal peaks in fuel requirements), interest rate movements, and commodity price movements.

At December 31, 2009, we had approximately \$112.9 million of unrestricted cash on hand and approximately \$315.7 million of additional capacity on our Corporate Credit Facility available for additional borrowings or letters of credits. We had the following cash borrowings and letters of credit outstanding under our credit facilities, as set forth below (in millions):

<u>Credit Facility</u>	<u>Expiration</u>	<u>Maximum Capacity</u>	<u>Borrowings and Letters of Credit Issued at December 31, 2009</u>
Corporate Credit Facility	May 4, 2010	\$ 525.0	\$ 209.3
Enserco Facility	May 7, 2010	\$ 300.0	\$ 103.0

Credit Facilities and Long-Term Debt

Corporate Credit Facility

Our unsecured revolving credit facility has a maximum capacity of \$525 million. The cost of borrowing or letters of credit under our corporate revolver is determined based on our credit ratings. At our current ratings levels, the facility has an annual facility fee of 17.5 basis points, and has a borrowing spread of 70 basis points over LIBOR (which equates to a 0.93% one-month borrowing rate as of December 31, 2009). The revolver can be used to fund our working capital needs and for general corporate purposes. At December 31, 2009, we had borrowings of \$164.5 million and \$44.8 million of letters of credit issued under the facility, and we had approximately \$315.7 million of capacity available for additional borrowings or letters of credit.

Our revolving credit facility contains customary affirmative and negative covenants, such as limitations on the creation of new indebtedness and on certain liens, restrictions on certain transactions, and maintenance of the following financial covenants: (i) a consolidated net worth in an amount of not less than the sum of \$625 million and 50% of our aggregate consolidated net income beginning January 1, 2005; (ii) a recourse leverage ratio not to exceed 0.65 to 1.00 and, (iii) an interest expense coverage ratio of not less than 2.5 to 1.0. Subject to applicable cure periods, a violation of any of these covenants would constitute an event of default that entitles the lenders to terminate their remaining commitments and accelerate all principal and interest outstanding.

At December 31, 2009, our consolidated net worth was \$1,084.8 million, which was approximately \$259.9 million in excess of the net worth we were required to maintain under the credit facility. At December 31, 2009, our long-term debt ratio was 48.4%, our total debt leverage (long-term debt and short-term debt) was 52.8%, our recourse leverage ratio was approximately 55.2% and our interest expense coverage ratio for the year ended December 31, 2009 was 4.10 to 1.0. Accordingly, we were in compliance with all of our financial covenants in the revolving credit facility as of December 31, 2009.

In addition to covenant violations, an event of default under the credit facility may be triggered by other events, such as a failure to make payments when due or a failure to make payments when due in respect of, or a failure to perform obligations relating to, other debt obligations of \$20 million or more. Subject to applicable cure periods (none of which apply to a failure to timely pay indebtedness), an event of default would permit the lenders to restrict our ability to further access the credit facility for loans or new letters of credit, and could require both the immediate repayment of any principal and interest outstanding and the cash collateralization of outstanding letter of credit obligations.

The credit facility prohibits us from paying cash dividends if a default or an event of default exists prior to, or would result after giving effect to such action.

Enserco Credit Facility

On May 8, 2009, Enserco entered into an agreement for a \$240 million committed credit facility. Societe Generale, Fortis Capital Corp., and BNP Paribas were co-lead arranger banks. On May 27, 2009, Enserco entered into an agreement for an additional \$60 million of commitments under the credit facility with three participating banks: Credit Agricole Corporate and Investment Bank, Rabobank and RZB Finance. The \$300 million credit facility expires on May 7, 2010. The facility is a borrowing base line of credit, the structure of which requires certain levels of net worth and net working capital to be maintained for a given borrowing base election level. In order to maintain a borrowing base election level, we may be restricted from making dividend payments from Enserco to the Parent. Maximum borrowings under the facility are subject to a sublimit of \$50 million. Borrowings under this facility are available under a base rate option or a Eurodollar option. The base rate option borrowing rate is 2.75% plus the higher of: (i) 0.5% above the Federal Funds Rate, or (ii) the prime rate established by Fortis Bank S.A./N.V. The Eurodollar option borrowing rate is 2.75% plus the higher of the Eurodollar Rate or the reference bank cost of funds. The facility structure requires certain levels of tangible net worth and net working capital to be maintained for a given borrowing base election level. In order to maintain a borrowing base election level, we may be restricted from making dividend payments from Enserco to the parent company. At December 31, 2009, \$103 million of letters of credit were issued under this facility and there were no cash borrowings outstanding.

We expect to replace the Corporate Credit Facility and the Enserco Credit Facility with similar facilities prior to their maturities. We expect to renew the Corporate Credit Facility for a three-year term at a \$400 to \$500 million total commitment level and the Enserco Credit Facility for a one-year term at a \$250 million level.

Acquisition Facility

In July 2008, in conjunction with the closing of the Aquila Transaction, we borrowed \$382.8 million under our \$1 billion bridge acquisition credit facility dated May 7, 2007. The Acquisition Facility was structured as a single-draw term loan facility for the sole purpose of financing the Aquila Transaction. During 2009, we paid off the Acquisition Facility with proceeds of \$30.2 million from the sale of 25% of the Wygen III plant to MDU, net proceeds from the \$250 million public debt offering of senior notes, and with borrowings of \$104.6 million on our Corporate Credit Facility.

Industrial Development Revenue Bonds

Cheyenne Light completed a \$17 million weekly variable rate refunding bond issuance on September 3, 2009. The new issue replaced existing debt and converted the bond credit support structure from an AMBAC Financial Group insurance policy to a direct-pay letter of credit issued by Wells Fargo Bank. Laramie County, Wyoming was the tax-exempt conduit issuer for this transaction. The bonds were issued in two series: a \$10.0 million series maturing March 1, 2027, and a \$7.0 million series maturing September 1, 2021. The principal amounts and maturity dates did not change from the original financing. Including the letter of credit fees and other issuance costs, the current all-in rate as of December 31, 2009, was approximately 2.69%.

Under the terms of our Reimbursement Agreement with the letter of credit provider, Cheyenne Light is required to maintain a consolidated debt to capitalization ratio of no more than 0.60 to 1.00 and a consolidated interest coverage ratio greater than or equal to 2.50 to 1.00. If Cheyenne Light fails to meet these covenants, subject to a 30-day cure period, it would constitute an event of default and the bank would have the right to cause the bonds and related outstanding obligations to become immediately due and payable.

Cross-Default Provisions

Our revolving credit facility contains cross-default provisions that would result in an event of default under the credit facility upon (i) a failure by us or certain of our subsidiaries (including, among others, Enserco and most of our Utility subsidiaries) to timely pay indebtedness in an aggregate principal amount of \$20 million or more, or (ii) the occurrence of a default under any agreement under which we or certain of our subsidiaries (including, among others, Enserco and most of our Utility subsidiaries) may incur indebtedness in an aggregate principal amount of \$20 million or more, and such default continues for a period of time sufficient to permit an acceleration of the maturity of such indebtedness or a mandatory prepayment of such indebtedness. In addition, our credit facility contains default provisions under which an event of default would result if we or certain of our subsidiaries (including, among others, Enserco and most of our Utility subsidiaries) fail to timely make certain payments, such as ERISA funding obligations or payments in satisfaction of judgments, in an aggregate principal amount of \$20 million or more.

Holding Company Debt Offering

In May 2009, we issued a \$250 million aggregate principal amount of senior unsecured notes due in 2014 pursuant to a public offering. The notes were priced at par and carry a fixed interest rate of 9%. We received proceeds of \$248.5 million, net of

underwriting fees. Proceeds were used to pay down a portion of the Acquisition Facility. Deferred financing costs related to the offering of \$2.3 million were capitalized and are being amortized over the term of the debt.

Black Hills Power Bond Issuance

In October 2009, our regulated utility Black Hills Power completed a \$180.0 million first mortgage bond issuance. The bonds were priced at 99.931% of par with a reoffer yield of 6.13%. The bonds mature on November 1, 2039, and carry an annual interest rate of 6.125%, which will be paid semi-annually. We received proceeds of \$178.3 million net of underwriting fees, which were used to repay borrowings under the Corporate Credit Facility. Deferred financing costs of \$2.2 million were capitalized and are being amortized over the term of the bonds.

Black Hills Wyoming Project Financing

On December 9, 2009, our subsidiary Black Hills Wyoming issued \$120.0 million in project financing debt. The debt is secured by our ownership interest in the Wygen I facility and by the Gillette CT generation facility. The loan amortizes over a seven-year term and matures on December 9, 2016, at which time the remaining balance of \$83.0 million is due. Principal and interest payments are made on a quarterly basis with the principal payments based on projected cash flows available for debt service. Interest is charged at LIBOR plus 3.25% (3.49% at December 31, 2009). Proceeds were used to repay borrowings on the Corporate Credit Facility. Estimated deferred financing costs of \$6.2 million were capitalized and are being amortized over the term of the debt. Black Hills Non-regulated Holdings, the Parent of Black Hills Wyoming, must maintain equity of \$100.0 million. We were in compliance of this requirement at December 31, 2009.

Our Black Hills Wyoming project financing is secured by our ownership interest in the Wygen I plant and by the Gillette CT plant. The financing places restrictions on dividends or the loaning of funds by Black Hills Wyoming, and allows it only in limited circumstances when cash flows for the projects exceed project debt service and reserve requirements. We had approximately \$39.1 million of equity at Black Hills Wyoming as of December 31, 2009.

Interest Rate Swaps

We have entered into floating-to-fixed interest rate swap agreements to reduce our exposure to interest rate fluctuations. We have interest rate swaps with a notional amount of \$250.0 million that are not designated as hedge instruments. Accordingly, mark-to-market changes in value on the swaps are recorded within the income statement. For the year ended December 31, 2009, we recorded a \$55.7 million pre-tax unrealized mark-to-market non-cash gain on the swaps. For the year ended December 31, 2008, we recorded a \$94.4 million pre-tax unrealized mark-to-market non-cash loss on the swaps. The mark-to-market value on these swaps was a liability of \$38.8 million at December 31, 2009. Subsequent mark-to-market adjustments could have a significant impact on our results of operations. A one basis point move in the interest rate curves over the term of the swaps would have a pre-tax impact of approximately \$0.3 million. These swaps are for terms of nine and nineteen years and have amended mandatory early termination dates ranging from December 15, 2010 to December 29, 2010. We have continued to maintain these swaps in anticipation of our upcoming financing needs, particularly as they relate to our planned capital requirements to build gas-fired power generation facilities to serve our Colorado Electric customers and our upcoming holding company debt maturities, which are \$225 million and \$250 million in years 2013 and 2014, respectively. Alternatively, we may choose to cash settle these swaps at their fair value prior to their mandatory early termination dates, or unless these dates are extended, we will cash settle these swaps for an amount equal to their fair value on the stated termination dates.

In addition, we have \$150.0 million notional amount floating-to-fixed interest rate swaps, having a maximum term of seven years. These swaps have been designated as cash flow hedges and accordingly, their mark-to-market adjustments are recorded in Accumulated other comprehensive loss on the accompanying Consolidated Balance Sheets. The mark-to-market value of these swaps was a liability of \$15.4 million at December 31, 2009.

Working Capital

The most significant items impacting working capital are our capital expenditures, the purchase of natural gas for our regulated Gas Utilities, and funding for natural gas and crude oil marketing activities. We could experience significant working capital requirements during peak months of the winter heating season due to higher natural gas consumption and during periods of high natural gas prices. We anticipate using a combination of credit capacity available under our corporate revolver and cash on hand to meet our peak winter working capital requirements.

Our Energy Marketing segment engages in trading activities involving natural gas storage which carry working capital requirements. The level of those requirements vary depending on market circumstances, the capacity contracted for by the Company and the degree

to which the Company has elected to utilize those opportunities. In addition, Enserco's credit facility contains working capital requirements for each borrowing base election level.

Collateral

As of December 31, 2009, we had posted with counterparties the following amounts of collateral in the form of cash or letters of credit (in thousands):

Trading positions (energy marketing)	\$ 133,805
Utility cash collateral requirements	3,789
Letters of credit on Corporate Credit Facility	44,752
Total Funds on Deposit	<u>\$ 182,346</u>

Collateral requirements for our trading positions will fluctuate based on the movement in commodity prices and our credit rating. Changes in collateral requirements will vary depending on the magnitude of the price movement and the current position of our energy marketing trading portfolio. As these trading positions settle in the future, the collateral will be returned.

At our Gas Utilities and Energy Marketing segments, we are required to post collateral with certain commodity and pipeline transportation vendors. This amount will fluctuate depending on gas prices and projected volumetric deliveries.

Utility Money Pool

As a utility holding company, we are required to establish a cash management program to address lending and borrowing activities between our utility subsidiaries and the Company. We have established utility money pool agreements which address these requirements. These agreements are on file with FERC and appropriate state regulators. Under the utility money pool agreements, our utilities may borrow and extend short-term loans to our other utilities via a utility money pool at market-based rates (0.93% at December 31, 2009). While the utility money pool may borrow funds from the Company (as ultimate parent company), the money pool arrangement does not allow loans from our utility subsidiaries to the Company (as ultimate parent company) or to non-regulated affiliates.

At December 31, 2009, money pool balances included (in thousands):

<u>Subsidiary</u>	Borrowings From (Loans To) Money Pool Outstanding at December 31, 2009
Black Hills Utility Holdings	\$ 128,357
Black Hills Power	\$ (59,309)
Cheyenne Light	\$ (1,182)

Registration Statements

Our articles of incorporation authorize the issuance of 100 million shares of common stock, \$1 par value, and 25 million shares of preferred stock, no-par value. As of December 31, 2009, we had approximately 39.0 million shares of common stock outstanding, and no shares of preferred stock outstanding. The Company has an effective automatic shelf registration statement on file with the SEC under which we may issue, from time to time, senior debt securities, subordinated debt securities, common stock, preferred stock, warrants and other securities. Although the shelf registration statement does not limit our issuance capacity, our ability to issue securities is limited to the authority granted by our Board of Directors, certain covenants in our finance arrangements and restrictions imposed by federal and state regulatory authorities.

Anticipated Financing Plans

We have substantial capital expenditure requirements in 2010 and 2011, which are primarily due to the construction of additional generation to serve our Colorado Electric utility. Our capital requirements for 2010 and 2011 are expected to be financed through a combination of operating cash flows, borrowings on our revolving credit facility and long-term financings. We intend to maintain a consolidated debt-to-capitalization level in the range of 50% to 55%.

We expect to complete long-term senior unsecured debt financings at the holding company level in 2010 or 2011; a portion of the long-term debt financings may be completed at certain subsidiaries. We also intend to complete a portion of the permanent financing through the issuance of common stock to maintain our target debt to capitalization level.

Factors Influencing Liquidity

Many of our operations are subject to seasonal fluctuations in cash flow. We have traditionally sourced (i) variations in the working capital needs of our subsidiaries with cash on hand and capacity available under our credit facilities, and (ii) the capital expenditures of our subsidiaries through a combination of internally generated cash, equity contributions and borrowings by our subsidiaries from us (financed primarily with net proceeds of equity and long-term debt issuances by us) and, in limited instances, debt offerings by our subsidiaries. Increased volatility in commodity prices and interest rates has made it more difficult for us to adequately forecast the liquidity needs of our subsidiary operations. Moreover, based on general market conditions and various predictions of a prolonged recession and weak recovery, we face an increasing risk of higher payment defaults by our customers. As a result, our liquidity needs are subject to greater fluctuation and are more difficult to forecast than in the past.

To the extent we issue long-term debt securities or arrange new credit facilities or extensions of existing credit lines in the bank loan market, we expect to pay significant fees in connection with these activities. In particular, future banking fees for new credit facilities or additional maturity extensions may be significantly more costly than in the past.

Although our Utility operations are subject to regulatory lag in terms of recovering capital expenditures and other prudently-incurred costs, revenues from our Utility operations traditionally have been stable. In light of volatile commodity prices and the lingering effects of a severe economic recession, our cash flows from Utility operations could be less stable going forward.

As a utility holding company which owns several regulated utilities, we are subject to various regulations that could influence our liquidity. For example, the issuance of debt by our utility subsidiaries (including the ability of Black Hills Utility Holdings to issue debt) and the use of our utility assets as collateral generally requires the prior approval of the state regulators in the state in which the utility assets are located. As a result of our holding company structure, our right as a common shareholder, to receive assets of any of our direct or indirect subsidiaries upon a subsidiary's liquidation or reorganization, is junior to the claims against the assets of such subsidiaries by their creditors. Therefore, our holding company debt obligations are effectively subordinated to all existing and future claims of the creditors of our subsidiaries, including trade creditors, debt holders, secured creditors, taxing authorities, and guarantee holders.

Due to market conditions, the funding status of our pension plans for 2010 and future periods is subject to multiple variables, most of which are beyond our control, including changes to the fair value of the pension assets and changes in actuarial assumptions (in particular, the discount rate used in determining the projected benefit obligation). As a result, we may be required to contribute material amounts to our pension plans in 2010 and future periods, which could materially affect our liquidity and results of operations.

Credit Ratings

Credit ratings impact our ability to obtain short- and long-term financing, the cost of such financing, and vendor payment terms, including collateral requirements. As of December 31, 2009, our senior unsecured credit ratings, as assessed by the three major credit rating agencies, were as follows:

Rating Agency	Rating	Outlook
Moody's	Baa3	Stable
S&P	BBB-	Stable
Fitch	BBB	Stable

In addition, the first mortgage bonds issued by Black Hills Power were rated at December 31, 2009 as follows:

Rating Agency	Rating	Outlook
Moody's	A3	Stable
S&P	BBB	Stable
Fitch	A-	Stable

We do not have any trigger events (i.e., an acceleration of repayment of outstanding indebtedness, an increase in interest costs or the posting of additional cash collateral) tied to our stock price and have not executed any transactions that require us to issue equity based on our credit ratings or other trigger events. If our senior unsecured credit rating should drop below investment grade, pricing

under our credit agreements would be affected, increasing annual interest expense by approximately \$1.2 million pre-tax based on our December 31, 2009 debt balances.

We have an interest rate swap with a notional amount of \$50.0 million which has collateral requirements based upon our corporate credit ratings. At our current credit ratings, we would be required to post collateral for any amount by which the swap's negative mark-to-market fair value exceeds \$20.0 million. If our senior unsecured credit rating would drop to BB+ or below by S&P, or Ba1 or below by Moody's, we would be required to post collateral for the entire amount of the swap's negative mark-to-market fair value.

Capital Requirements

Our primary capital requirements for the three years ended December 31 were as follows (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Acquisition costs:			
Payment for acquisition of net assets, net of cash acquired	\$ -	\$ 938,423 ⁽¹⁾	\$ -
Property additions:			
Utilities -			
Electric Utilities	241,963 ⁽²⁾	186,237 ⁽²⁾	104,963 ⁽²⁾⁽³⁾
Gas Utilities	43,005	19,337 ⁽⁴⁾	-
Non-regulated Energy -			
Oil and Gas	20,522	89,169 ⁽⁵⁾	72,153
Power Generation	20,537 ⁽⁶⁾	5,105	128
Coal Mining	11,765	25,190	4,991
Energy Marketing	220	22	177
Corporate	9,807	11,033	22,316 ⁽⁷⁾
	<u>347,819</u>	<u>336,093</u>	<u>204,728</u>
Discontinued operations investing activities	-	29,836 ⁽⁸⁾	62,319 ⁽⁸⁾
	<u>347,819</u>	<u>1,304,352</u>	<u>267,047</u>
Common stock dividends	55,151	53,663	50,300
Maturities/redemptions of long-term debt	2,173	130,297	62,109
Discontinued operations financing activities	-	73,928	12,858
	<u>\$ 405,143</u>	<u>\$ 1,562,240</u>	<u>\$ 392,314</u>

(1) Cash paid for the Aquila properties, net of cash acquired.

(2) Includes \$61.9 million, \$99.3 million and \$13.5 million for Wygen III construction in 2009, 2008 and 2007, respectively, reflecting our 75% ownership interest in the plant, \$48.1 million in 2009 for construction associated with our Colorado Electric Energy Resource Plan, and \$21.1 million and \$24.0 million in new transmission projects in 2009 and 2008, respectively. 2008 includes Colorado Electric acquired July 14, 2008.

(3) Includes \$50.4 million for construction of Wygen II.

(4) The Gas Utilities were acquired on July 14, 2008.

(5) Includes \$16.9 million for acquisition of a non-operated interest in Wyoming in 2008.

(6) Includes \$16.4 million in 2009 for construction of two 100 MW natural gas-fired power generation facilities at Colorado IPP.

(7) Includes \$19.1 million for Aquila acquisition and development costs.

(8) Includes \$27.8 million and \$62.2 million in 2008 and 2007, respectively, for the construction of the Valencia plant, which was sold in the IPP Transaction.

Our capital additions for 2009 were \$347.8 million. Capital expenditures were primarily for construction of the Wygen III power plant, construction of natural gas-fired power generation facilities at or benefiting Colorado Electric.

Our capital additions for 2008 were \$365.9 million, exclusive of the \$938.4 million payment for the Aquila Transaction. Capital expenditures were primarily for construction of the Wygen III power plant, acquisition of non-operated oil and gas interests in Wyoming, development drilling of oil and gas properties, increased coal mining equipment and maintenance capital.

Our capital additions for 2007 were \$267.0 million. Capital expenditures were primarily for the construction of the Wygen II power plant, the Valencia power plant, which is reclassified to Discontinued operations, development drilling of oil and gas properties, capitalized costs associated with the Aquila Transaction, and maintenance capital.

Forecasted Capital Expenditures

Forecasted capital requirements for maintenance capital and development capital are as follows (in thousands):

	<u>2010</u>	<u>2011</u>	<u>2012</u>
Regulated Utilities:			
Electric Utilities ⁽¹⁾⁽²⁾	\$ 277,360	\$ 228,910	\$ 120,530
Gas Utilities	56,480	56,070	56,730
Non-regulated Energy:			
Oil and Gas ⁽³⁾	38,320	63,810	79,770
Power Generation ⁽⁴⁾	86,300	150,420	2,390
Coal Mining	16,540	17,260	12,610
Energy Marketing	400	400	400
Corporate	-	-	-
	<u>\$ 475,400</u>	<u>\$ 516,870</u>	<u>\$ 272,430</u>

- (1) Electric Utilities capital requirements include approximately \$12.0 million for the development of the Wygen III coal-fired plant in 2010 reflecting our 75% ownership interest in the plant.
- (2) Capital expenditures for our Electric Utilities include expenditures associated with our Colorado Electric Energy Resource Plan. The construction of two natural gas-fired combustion turbine facilities at Colorado Electric are expected to cost approximately \$240 million to \$260 million. The planned expenditures included in this table reflect the mid-point of this range. We expect to spend approximately \$130.2 million and \$72.8 million in 2010 and 2011, respectively, for this construction. Included in these expected expenditures is \$25.3 million and \$13.6 million in 2010 and 2011, respectively, for transmission construction projects at Colorado Electric.
- (3) Development capital for our oil and gas properties is expected to be limited to no more than the cash flows produced by those properties. Continued low commodity prices make many of our development drilling sites uneconomical, which could further reduce our development capital expenditures.
- (4) Our Power Generation segment was awarded the bid to provide 200 MW of power through a 20-year PPA with Colorado Electric. The total construction cost is expected to be approximately \$240 million to \$265 million which is expected to be completed by the end of 2011. The planned expenditures included in this table reflect the mid-point of this range. We expect to spend approximately \$80.0 million and \$149.9 million in 2010 and 2011, respectively, on this construction.

Contractual Obligations and Commitments

The following information is provided to summarize our cash obligations and commercial commitments at December 31, 2009. Actual future costs of estimated obligations may differ materially from these amounts.

Contractual Obligations	Payments Due by Period				
	(in thousands)				
	Total	Less Than 1 Year	1-3 Years	4-5 Years	After 5 Years
Long-term debt ^{(a)(b)}	\$ 1,051,380	\$ 35,245	\$ 242,492	\$ 273,347	\$ 500,296
Unconditional purchase obligations ^(c)	1,239,203	338,705	436,821	163,364	300,313
Operating lease obligations ^(d)	15,200	2,612	4,819	2,454	5,315
Capital leases ^(e)	29	22	7	-	-
Other long-term obligations ^(f)	39,663	-	-	-	39,663
Employee benefit plans ^(g)	156,826	5,166	42,887	36,441	72,332
Liability for unrecognized tax benefits in accordance with accounting guidance for uncertain tax positions ^(h)	47,952	-	32,737	14,928	287
Credit facilities	164,500	164,500	-	-	-
Total contractual cash obligations ⁽ⁱ⁾	<u>\$ 2,714,753</u>	<u>\$ 546,250</u>	<u>\$ 759,763</u>	<u>\$ 490,534</u>	<u>\$ 918,206</u>

(a) Long-term debt amounts do not include discounts or premiums on debt.

- (b) The following amounts are estimated for interest payments on long-term debt over the next five years: \$69.5 million in 2010, \$68.0 million in 2011, \$67.7 million in 2012, \$59.9 million in 2013 and \$41.0 in 2014. Estimated interest payments on variable rate debt are calculated by utilizing the applicable rates as of December 31, 2009.
- (c) Unconditional purchase obligations include the capacity costs associated with our power purchase agreement with PacifiCorp, the capacity and energy costs associated with our power purchase agreement with PSCo, and certain transmission, gas purchase and gas transportation and storage agreements. The energy charge under the purchase power agreement and the commodity price under the gas purchase contract are variable costs, which for purposes of estimating our future obligations, were based on costs incurred during 2009 and price assumptions using existing prices at December 31, 2009. The pricing for the PSCo power purchase agreement is based on annual contracted capacity and an 85% load factor at current FERC approved rates. Our transmission obligations are based on filed tariffs as of December 31, 2009.
- (d) Includes operating leases associated with several office buildings, warehouses and call centers, equipment and vehicle leases.
- (e) Represents a capital lease on office equipment.
- (f) Includes estimated asset retirement obligations associated with our Oil and Gas, Coal Mining, Electric Utilities and Gas Utilities segments as discussed in Note 10 to the Notes to Consolidated Financial Statements in this Annual Report.
- (g) Represents estimated employer contributions to employee benefit plans through the year 2019.
- (h) Years 1-3 includes an estimated reversal of approximately \$21.2 million associated with the gain deferred from the tax treatment related to the IPP Transaction and the Aquila Transaction. The liability includes on income tax refund receivable of approximately \$59.1 million that is long-term in nature and reflected in the After 5-year category in the above table.
- (i) Amounts in the above table exclude any obligation that may arise from our derivatives, including interest rate swaps and commodity related contracts that have a negative fair value at December 31, 2009. These amounts have been excluded as it is impracticable to reasonably estimate the final amount and/or timing of any associated payments.

Dividends

Our dividend payout ratio for the year ended December 31, 2009, was 67% compared to 51% and 52% for the years ended December 31, 2008 and 2007, respectively. Dividends paid on our common stock totaled \$1.42 per share in 2009, as compared to \$1.40 per share in 2008 and \$1.37 per share in 2007. Our three-year annualized dividend growth rate was 2.5%, and all dividends were paid out of operating cash flows.

In January 2010, our Board of Directors declared a quarterly dividend of \$0.36 per share. If this dividend is maintained throughout 2010, it will be equivalent to \$1.44 per share. The determination of the amount of future cash dividends, if any, to be declared and paid will depend upon, among other things, our financial condition, funds from operations, the level of our capital expenditures, restrictions under our credit facilities and our future business prospects.

Dividend Restrictions

Due to our holding company structure, substantially all of our operating cash flow is provided by dividends paid or distributions made by our subsidiaries. As a result, certain statutory limitations or regulatory or financing agreements could affect the levels of distributions allowed to be made by our subsidiaries. Our utility subsidiaries are generally limited to the amount of dividends allowed by state regulatory authorities to be paid to us as a utility holding company and also may have further restrictions under the Federal Power Act. As of December 31, 2009, the net assets restricted from distribution at our regulated Electric and regulated Gas Utilities were approximately \$277.0 million.

In December 2009, one of the covenants to the Enserco Credit Facility was amended to temporarily increase the allowable rolling twelve month Net Cumulative Loss as calculated on a Non-GAAP basis and temporarily restrict all dividends or loans to the Company. In addition to the borrowing base structure which requires Enserco to maintain certain levels of tangible net worth and net working capital, the amendment to the covenants restricted 100% of Enserco's net assets. Therefore, upon review of this covenant at December 31, 2009, restricted net assets at Enserco total \$205.8 million for this stand-alone Enserco Credit Facility. The amendment to the covenants expired on December 31, 2009, and is not a requirement under the facility subsequent to December 31, 2009.

Off-Balance Sheet Arrangements

Guarantees

We provide various guarantees supporting certain of our subsidiaries under specified agreements or transactions. At December 31, 2009, we had guarantees totaling \$197.4 million in place. Of the \$197.4 million, \$181.9 million was related to performance obligations under subsidiary contracts and \$15.5 million was related to indemnification for reclamation and surety bonds of subsidiaries. For more information on these guarantees, see Note 20 of the Notes to Consolidated Financial Statements in this Annual Report.

As of December 31, 2009, we had the following guarantees in place (in thousands):

<u>Nature of Guarantee</u>	<u>Outstanding at December 31, 2009</u>	<u>Year Expiring</u>
Guarantee obligations of Enserco under an agency agreement	\$ 7,000	2010
Guarantees for payment of obligations arising from commodity-related physical and financial transactions by Black Hills Utility Holdings	70,000	Ongoing
Guarantees for payment obligations arising from purchase contracts for four gas turbines for Black Hills Colorado IPP	62,090	2011
Guarantees for payment obligations arising from purchase contracts for two gas turbines for Colorado Electric	42,742	2010
Indemnification for subsidiary reclamation/surety bonds	15,532	Ongoing
	<u>\$ 197,364</u>	

At December 31, 2009, we had outstanding letters of credit of \$209.3 million on the Corporate Credit Facility and \$103.0 million on the Enserco Credit Facility, respectively.

Variable Interest Entities

In 2003, our Black Hills Wyoming subsidiary entered into an agreement with Wygen Funding, Limited Partnership (the variable interest entity) to lease the Wygen I plant. We were considered the "primary beneficiary" of this arrangement and, therefore, we included the VIE in our consolidated financial statements. The initial term of the lease was five years and included a purchase option equal to the adjusted acquisition cost, which was essentially equal to the cost of the plant. We guaranteed the obligations of Black Hills Wyoming under the lease agreement.

At the end of the initial lease term in June 2008, we elected to purchase the Wygen I plant at an adjusted acquisition cost of \$133.1 million. In conjunction with this purchase, we retired \$128.3 million of Wygen I project debt through borrowings on our revolving credit facility, and extinguished the \$111.0 million guarantee obligation under the Wygen I lease. Since the plant and its financial activities were previously consolidated into our financial statements, the transaction had minimal impact on our consolidated financial statements.

Cash Flow Activities

2009

Cash flows from operations of \$270.5 million increased \$124.9 million from the prior year amount, due primarily to a \$130.8 million increase in income from continuing operations and the following:

- An \$84.7 million increase in cash flows from working capital changes. This increase primarily resulted from a \$129.8 million increase from lower accounts receivable and other current assets offset by a \$31.7 million decrease from lower accounts payable and other current liabilities. A \$13.4 million decrease in materials, supplies and fuel primarily relates to natural gas held in storage by Energy Marketing and the regulated Gas Utilities which fluctuates based on seasonal trends and economic decisions reflecting current market conditions;
- A \$14.0 million increase in depreciation, depletion and amortization expense;
- A \$55.7 million pre-tax unrealized gain related to interest rate swaps marked-to-market through earnings compared to a \$94.4 million unrealized loss in 2008;
- A \$64.2 million increase in cash flows from the net change in derivative assets and liabilities primarily from derivatives associated with normal operations of our gas and oil marketing business and our Oil and Gas segment related to commodity price fluctuations;
- A \$39.7 million increase in cash flows from regulatory assets and liabilities primarily resulting from deferred gas adjustments for our regulated Gas Utilities segment and employee benefits at our regulated Electric Utilities and regulated Gas Utilities;

- A \$26.0 million decrease to adjust for the non-cash effect of the gain on sale of operating assets. This gain relates to the sale of 23.5% interest in the Wygen I power plant to MEAN for which we received \$51.9 million included in investing activities;
- A \$48.5 million decrease for non-cash ceiling test impairment charges to write down the net carrying value of our natural gas and crude oil properties due to low year-end commodity prices; and
- A \$37.7 million increase from deferred income taxes primarily the result of accelerated deductions associated with property, plant and equipment.

Net cash outflows from investing activities of \$269.8 million, included the following:

- Cash outflows of \$346.9 million of property, plant and equipment additions. Significant additions during 2009 included approximately \$61.9 million for Wygen III, and approximately \$64.5 million for construction of 380 MW of natural gas-fired electric generation in Colorado;
- Cash inflows of \$51.9 million of proceeds from the sale of the 23.5% ownership interest in the Wygen I power plant to MEAN;
- Cash inflows of \$32.8 million of proceeds from the sale of the 25% ownership interest in the Wygen III power plant to MDU; and
- Cash inflows of \$7.9 million for working capital adjustments on the purchase price allocation for the Aquila Transaction.

Net cash outflows from financing activities of \$56.3 million included the following:

- Net cash outflows of \$539.3 million for net re-payment on the Corporate Credit Facility and the Acquisition Facility;
- Cash outflows of \$55.1 million of cash dividends on common stock;
- Cash inflows of \$248.5 million from the proceeds from issuance of senior unsecured five year notes;
- Cash inflows of \$180.0 million from the proceeds of first mortgage bonds; and
- Cash inflows of \$114.6 million from the proceeds of a Black Hills Wyoming project financing.

2008

Cash flows from operations of \$145.6 million decreased \$110.6 million from the prior year amount, due primarily to a \$127.4 million decrease in income from continuing operations and by the following:

- A \$98.5 million decrease in cash flows from the change in operating assets and liabilities. The primary changes include changes in working capital accounts and current tax effects of both the IPP Transaction and the Aquila Transaction;
- Higher depreciation, depletion and amortization expense of \$35.5 million;
- A \$94.4 million pre-tax unrealized loss related to interest rate swaps marked-to-market through earnings; and
- A \$91.8 million pre-tax ceiling test impairment charge to write down the net carrying value of our natural gas and crude oil properties due to low year-end commodity prices.

We had net cash outflows from investing activities of \$457.1 million, including:

- The acquisition costs of \$938.4 million for the Aquila Transaction; and
- Approximately \$328.9 million of property, plant and equipment additions. Significant additions during 2008 included approximately \$99.3 million for Wygen III, approximately \$75.3 million for development drilling at our oil and gas properties, and \$16.9 million for the acquisition of an additional non-operated interest in a Wyoming oil and gas property.

Partially offsetting the cash outflows from investing activities was \$835.6 million of cash received for the IPP Transaction.

We had net cash inflows from financing activities of \$398.7 million primarily due to the following:

- A \$382.8 million increase in borrowings under the Acquisition Facility, in conjunction with the Aquila Transaction; and
- A \$284.0 million increase in borrowings on our revolving bank facility.

Partially offsetting the cash inflows from financing activities were the following:

- The payment of \$53.7 million of cash dividends on common stock;
- Repayment of \$130.3 million of long-term debt, including \$128.3 million for the Wygen I project level debt; and
- Repayment of \$73.9 million for Colorado IPP project-level debt, which was retired as part of the IPP Transaction and is included in financing activities of discontinued operations.

Market Risk Disclosures

Our activities expose us to a number of risks in the normal operation of our businesses. Depending on the activity, we are exposed to varying degrees of market risk and counterparty risk. We have developed policies, processes, systems, and controls to manage and mitigate these risks.

Market risk is the potential loss that might occur as a result of an adverse change in market price or rate. We are exposed to the following market risks:

- Commodity price risk associated with our marketing business, our natural long position with crude oil and natural gas reserves and production, and fuel procurement for certain of our gas-fired generation assets;
- Interest rate risk associated with our variable rate credit facilities and our project financing floating rate debt as described in Notes 8 and 9 of our Notes to Consolidated Financial Statements; and
- Foreign currency exchange risk associated with our natural gas marketing business transacted in Canadian dollars.

Our exposure to these market risks is affected by a number of factors including the size, duration, and composition of our energy portfolio, the absolute and relative levels of interest rates, currency exchange rates and commodity prices, the volatility of these prices and rates, and the liquidity of the related interest rate and commodity markets.

To manage and mitigate these identified risks, we have adopted the BHCRRP. These policies have been approved by our Executive Risk Committee and reviewed by our Board of Directors. These policies include governance, control infrastructure, authorized commodities and trading instruments, prohibited activities, employee conduct, etc. The Executive Risk Committee, which includes senior level executives, meets on a regular basis to review our business and credit activities and to ensure that these activities are conducted within the authorized policies.

Utilities

We produce, purchase and distribute power in four states, and purchase and distribute natural gas in five states. All of our gas distribution utilities have PGA provisions that allow them to pass the prudently-incurred cost of gas through to the customer. To the extent that gas prices are higher or lower than amounts in our current billing rates, adjustments are made on a periodic basis to "true-up" billed amounts to match the actual natural gas cost we incurred. These adjustments are subject to periodic prudence reviews by the state utility commissions. In South Dakota, Colorado, Wyoming and Montana, we have a mechanism for our regulated electric utilities that serves a purpose similar to the PGAs for our regulated gas utilities. To the extent that our fuel and purchased power energy costs are higher or lower than the energy cost built into our tariffs, the difference (or a portion thereof) is passed through to the customer.

As allowed or required by state utility commissions, we have entered into certain exchange-traded natural gas futures, options and basis swaps to reduce our customers' underlying exposure to volatility of natural gas prices. These transactions are considered derivatives and are marked-to-market. Gains or losses, as well as option premiums on these transactions, are recorded in Regulatory assets or Regulatory liabilities.

The fair value of our Gas Utilities derivative contracts are summarized below (in thousands):

	<u>December 31, 2009</u>	<u>December 31, 2008</u>
Net derivative liabilities	\$ (1,511)	\$ (7,444)
Cash collateral	3,789	8,744
	<hr/>	<hr/>
	\$ 2,278	\$ 1,300
	<hr/>	<hr/>

Trading Activities

Natural Gas and Crude Oil Marketing

We have a natural gas and crude oil marketing business specializing in producer services, end-use origination and wholesale marketing that conducts business in the western and mid-continent regions of the United States and Canada. For producer services our main objective is to provide value in the supply chain by acting as the producer's "marketing arm" for wellhead purchases, scheduling services, imbalance management, risk management services and transportation management. We accomplish this goal through industry experience, extensive contacts, transportation and risk management expertise, trading skills and personal attention. Our end-use origination efforts focus on supplying and providing electricity generators and industrial customers with flexible options to procure their energy inputs and asset optimization services to these large end-use consumers of natural gas. Our wholesale marketing activity has two functions: support the efforts of producer services and end-use origination groups, and marketing and trading natural gas and crude oil.

To effectively manage our producer services, end-use origination and wholesale marketing portfolios, we enter into forward physical commodity contracts, financial derivative instruments including over-the-counter swaps and options, and storage and transportation agreements.

We conduct our energy marketing business activities within the parameters as defined and allowed in the BHCRPP and further delineated in the energy marketing Risk Management Policies and Procedures as approved by our Executive Risk Committee.

Monitoring and Reporting Market Risk Exposures

We use a number of quantitative tools to measure, monitor and limit our exposure to market risk in our natural gas and oil marketing portfolio. We limit and monitor our market risk through established limits on the nominal size of positions based on type of trade, location and duration. Such limits include those on fixed price, basis, index, storage, transportation and foreign exchange positions.

Our market risk limits are monitored by our Risk Management function to ensure compliance with our stated risk limits. The Risk Management function operates independently from our Energy Marketing Group. The limits are measured, monitored and regularly reported to and reviewed by our Executive Risk Committee.

Daily risk management activities include reviewing positions in relation to established position limits, assessing changes in daily mark-to-market and other non-statistical risk management techniques.

The contract or notional amounts, terms and mark-to-market values of our natural gas and crude oil marketing and derivative commodity instruments at December 31, 2009 and 2008, are set forth in Note 3 of the Notes to the Consolidated Financial Statements in this Annual Report.

Fair Value of Energy Marketing Positions

The following table provides a reconciliation of activity in our natural gas and crude oil marketing portfolio that has been recorded at fair value in accordance with GAAP during the year ended December 31, 2009 (in thousands):

Total fair value of energy marketing positions marked-to-market at December 31, 2008	\$ 28,447 ^(a)
Net cash settled during the period on positions that existed at December 31, 2008	(41,331)
Change in fair value due to change in assumptions	-
Unrealized gain on new positions entered during the period and still existing at December 31, 2009	7,580
Realized gain on positions that existed at December 31, 2008 and were settled during the period	(2,798)
Change in cash collateral ^(b)	19,043
Unrealized gain on positions that existed at December 31, 2008 and still exist at December 31, 2009	<u>8,580</u>
 Total fair value of energy marketing positions at December 31, 2009	 <u>\$ 19,521^(a)</u>

(a) The fair value of energy marketing positions consists of the mark-to-market values of derivative assets/liabilities and market value adjustments to natural gas inventory that has been designated as a hedged item as part of a fair value hedge, as follows (in thousands):

	December 31, <u>2009</u>	December 31, <u>2008</u>
Net derivative assets	\$ 17,084	\$ 54,117
Cash collateral	2,728	(16,315)
Market adjustment recorded in material, supplies and fuel	<u>(291)</u>	<u>(9,355)</u>
 Total fair value of energy marketing positions marked-to-market	 <u>\$ 19,521</u>	 <u>\$ 28,447</u>

(b) In accordance with accounting standards for balance sheet offsetting when the right of offset exists under a master netting agreement, we offset our cash collateral with our trading positions effective January 1, 2008. See Note 3 of the Notes to the Consolidated Financial Statements in this Annual Report.

To value the assets and liabilities for our outstanding derivative contracts, we use the fair value methodology outlined in accounting standards for fair value measurements and disclosures. See Note 4 of the Notes to Consolidated Financial Statements in this 2009 Annual Report.

The sources of fair value measurements were as follows (in thousands):

<u>Source of Fair Value</u>	<u>Maturities</u>		<u>Total Fair Value</u>
	<u>Less than 1 year</u>	<u>1 - 2 years</u>	
Level 1	\$ -	\$ -	\$ -
Level 2	14,451	4,650	19,101
Level 3	(939)	(1,078)	(2,017)
Cash collateral	2,728	-	2,728
Market value adjustment for inventory (see footnote (a) above)	<u>(291)</u>	<u>-</u>	<u>(291)</u>
 Total fair value of our energy marketing positions	 <u>\$ 15,949</u>	 <u>\$ 3,572</u>	 <u>\$ 19,521</u>

GAAP restricts mark-to-market accounting treatment primarily to only those contracts that meet the definition of a derivative under accounting standards for derivatives and hedges. Therefore, the above reconciliation does not present a complete picture of our overall portfolio of trading activities or our expected cash flows from energy trading activities. In our natural gas and crude oil marketing operations, we often employ strategies that include utilizing derivative contracts along with inventory, storage and transportation positions to accomplish the objectives of our producer services, end-use origination and wholesale marketing groups. Except in circumstances when we are able to designate transportation, storage or inventory positions as part of a fair value hedge, accounting standards for derivatives generally do not allow us to mark our inventory, transportation or storage positions to market. The result is that while a significant majority of our energy marketing positions are fully economically hedged, we are required to mark some parts of our overall strategies (the derivatives) to market value, but are generally precluded from marking the rest of our economic hedges (transportation, inventory or storage) to market. Volatility in reported earnings and derivative positions should be expected given these accounting requirements. The table below references non-GAAP measures that quantify these positions.

The following table presents a reconciliation of our energy marketing positions recorded at fair value under GAAP to a non-GAAP measure of the fair value of our energy marketing forward book wherein all forward trading positions are marked-to-market (in thousands):

	December 31, <u>2009</u>	December 31, <u>2008</u>
Fair value of our energy marketing positions marked-to-market in accordance with GAAP (see footnote (a) above)	\$ 19,521	\$ 28,447
Market value adjustments for inventory, storage and transportation positions that are not marked-to-market under GAAP	(2,916)	45,192
Fair value of all forward positions (non-GAAP)	16,605	73,639
Cash collateral included in GAAP fair value	(2,728)	16,315
Fair value of all forward positions excluding cash collateral (non-GAAP)*	<u>\$ 13,877</u>	<u>\$ 89,954</u>

* We consider this measure a Non-GAAP financial measure. This measure is presented because we believe it provides a more comprehensive view to our investors of our energy trading activities and thus a better understanding of these activities than would be presented by the GAAP measure alone.

Activities Other than Trading

Oil and Gas Exploration and Production

We produce natural gas and crude oil through our exploration and production activities. Our reserves are natural "long" positions, or unhedged open positions, and introduce commodity price risk and variability in our cash flows. We employ risk management methods to mitigate this commodity price risk and preserve our cash flows. We have adopted guidelines covering hedging for our natural gas and crude oil production. These guidelines have been approved by our Executive Risk Committee and reviewed by our Board of Directors.

To mitigate commodity price risk and preserve cash flows, we primarily use over-the-counter swaps and options. Our hedging policy allows up to 75% of our natural gas and 100% of our crude oil production from proven producing reserves to be hedged for a period up to two years in the future. Our hedging strategy is conducted from an enterprise-wide risk perspective; accordingly, we might not externally hedge a portion of our natural gas production when we have offsetting price risk for the fuel requirements of certain of our power generating activities.

The Company has entered into agreements to hedge a portion of its estimated 2010, 2011 and 2012 natural gas and crude oil production. The hedge agreements in place are as follows:

Natural Gas

The hedge agreements entered into by the Company as of December 31, 2009 had a fair value of approximately \$4.5 million as of December 31, 2009.

Wholesale Power

A potential risk related to power sales is the price risk arising from the sale of wholesale power that exceeds our generating capacity. These short positions can arise from unplanned plant outages or from unanticipated load demands. To control such risk, we restrict wholesale off-system sales to amounts by which our anticipated generating capabilities and purchased power resources exceed our anticipated load requirements plus a required reserve margin.

Financing Activities

We engage in activities to manage risks associated with changes in interest rates. We have entered into floating-to-fixed interest rate swap agreements to reduce our exposure to interest rate fluctuations associated with our floating rate debt obligations. At December 31, 2009, we had \$150.0 million of notional amount floating-to-fixed interest rate swaps, having a maximum term of 7 years. These swaps have been designated as hedges in accordance with accounting standards for derivatives and hedges and accordingly their mark-to-market adjustments are recorded in Accumulated other comprehensive loss on the Consolidated Balance Sheet.

We also have interest rate swaps with a notional amount of \$250.0 million which were entered into for the purpose of hedging interest rate movements that would impact long-term financings that were originally expected to occur in 2008. The swaps were originally designated as cash flow hedges and the mark-to-market value was recorded in "Accumulated other comprehensive loss" on the Consolidated Balance Sheet. Based on credit market conditions that transpired during the fourth quarter of 2008, we determined it was probable that the forecasted long-term debt financings would not occur in the time period originally specified and as a result, the swaps were no longer effective hedges and the hedge relationships were de-designated. Mark-to-market adjustments on the swaps are now recorded within the income statement and during 2009 we recorded a \$55.7 million pre-tax unrealized mark-to-market gain to earnings, while in 2008 we recorded a \$94.4 million pre-tax unrealized mark-to-market charge to earnings. These swaps are ten and twenty year swaps which have amended mandatory early termination dates ranging from December 15, 2010 to December 29, 2010.

We have continued to maintain these swaps in anticipation of our upcoming financing needs, particularly as they relate to our planned capital requirements to build gas-fired power generation facilities to serve our Colorado Electric customers, and our upcoming holding company debt maturities, which are \$225 million and \$250 million in years 2013 and 2014, respectively. Alternatively, we may choose to cash settle these swaps at their fair value prior to their mandatory early termination dates, or unless these dates are extended, we will cash settle these swaps for an amount equal to their fair value on the stated termination dates.

Further details of the swap agreements are set forth in Note 3 of the Notes to the Consolidated Financial Statements in this Annual Report.

On December 31, 2009 and 2008, our interest rate swaps and related balances were as follows (dollars in thousands):

	Notional	Weighted Average Fixed Interest Rate	Maximum Terms in Years	Current Assets	Non- current Assets	Current Liabilities	Non- current Liabilities	Pre-tax Accumulated Other Comprehensive Income (Loss)	Pre-tax Income (Loss)
December 31, 2009									
Interest rate swaps	\$ 150,000	5.04%	7.0	\$ -	\$ -	\$ 6,342	\$ 9,075	\$ (15,417)	\$ -
Interest rate swaps	\$ 250,000	5.67%	1.0	\$ -	\$ -	\$ 38,787	\$ -	\$ -	\$ 55,653
	<u>\$ 400,000</u>			<u>\$ -</u>	<u>\$ -</u>	<u>\$ 45,129</u>	<u>\$ 9,075</u>	<u>\$ (15,417)</u>	<u>\$ 55,653</u>
December 31, 2008									
Interest rate swaps	\$ 150,000	5.04%	8.00	\$ -	\$ -	\$ 5,740	\$ 22,495	\$ (28,235)	\$ -
Interest rate swaps	250,000	5.67%	1.00	-	-	94,440	-	-	\$ (94,440)
	<u>\$ 400,000</u>			<u>\$ -</u>	<u>\$ -</u>	<u>\$ 100,180</u>	<u>\$ 22,495</u>	<u>\$ (28,235)</u>	<u>\$ (94,440)</u>

Based on December 31, 2009 market interest rates and balances, a loss of approximately \$6.3 million would be realized and reported in pre-tax earnings during the next twelve months. Estimated and realized losses will likely change during the next twelve months as market interest rates change.

The table below presents principal (or notional) amounts and related weighted average interest rates by year of maturity for our long-term debt obligations, including current maturities (dollars in thousands):

(a) Excludes unamortized premium or discount.

Credit Risk

Credit risk is the risk of financial loss resulting from non-performance of contractual obligations by a counterparty. We have adopted the BHCCP that establishes guidelines, controls, and limits to manage and mitigate credit risk within risk tolerances established by the Board of Directors. In addition, our Executive Credit Committee, which includes senior executives, meets on a regular basis to review our credit activities and to monitor compliance with the adopted policies.

For our energy marketing, production, and generation activities, we seek to mitigate our credit risk by conducting a majority of our business with investment grade companies, setting tenor and credit limits commensurate with counterparty financial strength, obtaining netting agreements, and securing our credit exposure with less creditworthy counterparties through parental guarantees, prepayments, letters of credit, and other security agreements.

We perform ongoing credit evaluations of our customers and adjust credit limits based upon payment history and the customer's current creditworthiness, as determined by our review of their current credit information. We maintain a provision for estimated credit losses based upon our historical experience and any specific customer collection issue that we have identified. While most credit losses have historically been within our expectations and provisions established, we cannot provide assurance that we will continue to experience the same credit loss rates that we have in the past, or that an investment grade counterparty will not default sometime in the future.

At December 31, 2009, approximately 77% of our credit exposure (exclusive of retail customers of our regulated utilities) was with investment grade companies. The remaining credit exposure is with non-investment grade or non-rated counterparties, of which a portion was supported through letters of credit, prepayments, or parental guarantees.

Foreign Exchange Contracts

Our natural gas and crude oil marketing subsidiary conducts its business in the United States and Canada. Transactions in Canada are generally transacted in Canadian dollars, which creates exchange rate risk. To mitigate this risk, we enter into forward currency exchange contracts to offset earnings volatility from changes in exchange rates between the Canadian and United States dollars. At December 31, 2009, we had no outstanding forward exchange contracts. At December 31, 2008, we had outstanding forward exchange contracts to purchase approximately \$52.0 million Canadian dollars. These contracts had a fair value of \$(0.2) million at December 31, 2008, and have been recorded as Derivative assets/liabilities on the accompanying Consolidated Balance Sheets.

New Accounting Pronouncements

See Note 2 of the Notes to the Consolidated Financial Statements in this Annual Report for information on new accounting standards adopted in 2009 or pending adoption.

MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

We are responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934, as amended. Our internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting as of December 31, 2009, based on the criteria set forth in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission. This evaluation included review of the documentation of controls, evaluation of the design effectiveness of controls, testing of the operating effectiveness of controls and a conclusion on this evaluation. Based on our evaluation we have concluded that our internal control over financial reporting was effective as of December 31, 2009.

Deloitte & Touche, LLP, an independent registered public accounting firm, as auditors of Black Hills Corporation's financial statements, has issued an attestation report on the effectiveness of Black Hills Corporation's internal control over financial reporting as of December 31, 2009. Deloitte & Touche LLP's report on Black Hills Corporation's internal control over financial reporting is included herein.

Black Hills Corporation

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
Black Hills Corporation
Rapid City, South Dakota

We have audited the internal control over financial reporting of Black Hills Corporation and subsidiaries (the "Company") as of December 31, 2009, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying *Management's Report on Internal Control over Financial Reporting*. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2009, based on the criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and the financial statement schedules as of and for the year ended December 31, 2009, of the Company and our report dated February 26, 2010, expressed an unqualified opinion on those consolidated financial statements and financial statement schedules and included an explanatory paragraph regarding the Company's change in an accounting principle.

Minneapolis, Minnesota
February 26, 2010

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
Black Hills Corporation
Rapid City, South Dakota

We have audited the accompanying consolidated balance sheets of Black Hills Corporation and subsidiaries (the "Company") as of December 31, 2009 and 2008, and the related consolidated statements of income, common stockholders' equity and comprehensive income, and cash flows for each of the three years in the period ended December 31, 2009. Our audits also included the financial statement schedules listed in the Index at Item 15 of the Annual Report on Form 10-K. These financial statements and financial statement schedules are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedules based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Black Hills Corporation and subsidiaries as of December 31, 2009 and 2008, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2009, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedules, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

As discussed in Note 2 to the consolidated financial statements, the Company changed certain items related to its oil and gas operations in 2009.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2009, based on the criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 26, 2010 expressed an unqualified opinion on the Company's internal control over financial reporting.

BLACK HILLS CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
December 31, 2009, 2008 and 2007

(1) BUSINESS DESCRIPTION AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Business Description

Black Hills Corporation is a diversified energy company headquartered in Rapid City, South Dakota. We are a holding company that, through our subsidiaries, operates in two primary business groups: Utilities and Non-regulated Energy. The Utilities Group includes two financial reporting segments: regulated Electric Utilities and regulated Gas Utilities. Regulated Electric Utilities include the operating results of the regulated electric utility operations of Black Hills Power and Colorado Electric, and the regulated electric and natural gas utility operations of Cheyenne Light. Regulated Gas Utilities consist of the operating results of the regulated natural gas utility operations of Colorado Gas, Iowa Gas, Kansas Gas and Nebraska Gas all doing business as Black Hills Energy.

The Non-regulated Energy Group includes four financial reporting segments: Oil and Gas, Power Generation, Coal Mining and Energy Marketing. Oil and Gas, which is conducted through BHEP and its subsidiaries, engages in oil and natural gas exploration and production activities. Power Generation, which is conducted through Black Hills Electric Generation and its subsidiaries, engages in independent power generation activities. Coal Mining, which is conducted through WRDC, engages in coal mining activities. Energy Marketing, which is conducted through Enserco, engages in natural gas and crude oil marketing activities. All of these businesses are aggregated for reporting purposes as Non-Regulated Energy.

For further descriptions of our reportable business segments, see Note 17.

On July 14, 2008, we completed the acquisition of a regulated electric utility in Colorado and regulated gas utilities in Colorado, Iowa, Kansas and Nebraska from Aquila. Effective as of the acquisition date, the assets and liabilities, results of operations and cash flows of these acquired utilities are included in our Consolidated Financial Statements. See Note 23 for additional information.

On July 11, 2008, we completed the sale of seven IPP plants. For all periods presented, amounts associated with the divested IPP plants have been classified as discontinued operations on the accompanying Consolidated Financial Statements. See Note 22 for additional information.

Use of Estimates and Basis of Presentation

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The significant accounting policies that we believe include management estimates that are critical in understanding our financial results relate to market value of derivatives, intangible asset valuations and useful lives, long-lived asset values and useful lives, proved oil and gas reserve volumes, employee benefit plans, valuation of deferred taxes and contingencies. Actual results could differ materially from those estimates.

Certain prior years' data presented in the financial statements have been reclassified to conform to the current year presentation. The consolidated statements of income for the prior periods have been modified to reflect the retrospective application of accounting requirements under ASC 810 for non-controlling interests. The consolidated statement of cash flows at December 31, 2008 and 2007 has been modified with Net cash provided by operating activities to reflect the amount of "Other non-cash adjustments" previously included within "Other operating activities" and to present "Regulatory assets" and "Regulatory liabilities" as separate components of the operating cash flows. The consolidated statement of cash flows at December 31, 2008 and 2007 has also been modified within the Net cash provided by financing activities to reflect separate presentation of cash flows from short-term borrowings and cash outflows from short-term borrowings. The increase (decrease) in short-term debt was previously combined. The statement of common stockholders' equity has been modified to provide more details of the transactions affecting the changes in the balances. The recurring fair value measures included in Note 4, Fair Value Measures, have been modified to present the cash collateral previously included in Level 1 derivative assets and liabilities in "Counterparty Netting and Cash Collateral." These reclassifications had no effect on total assets, net income, cash flows or earnings per share.

Principles of Consolidation

The consolidated financial statements include the accounts of Black Hills Corporation and its wholly-owned and majority-owned subsidiaries. Generally, we use the equity method of accounting for investments of which we own between 20% and 50% and investments in partnerships under 20% if we exercise significant influence. In May 2003, our subsidiary, Black Hills Wyoming,

entered into an agreement with Wygen Funding, LP (a VIE), to lease the Wygen I plant. We were considered the primary beneficiary of the plant and therefore, consolidated Wygen Funding under ASC 805-10. In June 2008, we purchased the Wygen I plant. Since the plant was previously consolidated into our financial statements, the transaction had minimal impact on our Consolidated Financial Statements.

All intercompany balances and transactions have been eliminated in consolidation except for revenues and expenses associated with regulated intercompany fuel sales in accordance with accounting standards for rate regulated operations. Total intercompany fuel and energy sales not eliminated were \$48.7 million, \$47.5 million and \$13.2 million in 2009, 2008 and 2007, respectively.

Our consolidated statements of income include operating activity of acquired companies beginning with their acquisition date.

We use the proportionate consolidation method to account for our working interests in oil and gas properties and for our ownership interest in the jointly owned Black Hills Power transmission tie, the Wyodak power plant, the Wygen I power plant, the Wygen III power plant under construction, and the BHEP gas processing plant. See Note 7 for additional information.

Cash Equivalents

We consider all highly liquid investments with an original maturity of three months or less to be cash equivalents.

Restricted Cash

The Black Hills Wyoming project financing completed in December 2009, requires that cash accounts are maintained for various specified purposes. We do not readily have access to these accounts and can only withdraw funds upon meeting certain requirements. Therefore, we have classified these amounts as restricted cash.

Allowance for Doubtful Accounts

We maintain an allowance for doubtful accounts which reflects our best estimate of potentially uncollectible trade receivables. We regularly review our trade receivable allowances by considering such factors as historical experience, credit worthiness, the age of the receivable balances and current economic conditions that may affect the ability to pay.

Following is a summary of receivables at December 31 (in thousands):

	<u>2009</u>	<u>2008</u>
Accounts receivable	\$ 217,723	\$ 291,151
Unbilled revenues	61,387	73,004
Total accounts receivable	<u>279,110</u>	<u>364,155</u>
Allowance for doubtful accounts	(4,621)	(6,751)
Net accounts receivable	<u>\$ 274,489</u>	<u>\$ 357,404</u>

Materials, Supplies and Fuel

As of December 31, the following amounts by major classification are included in Materials, supplies and fuel on the accompanying Consolidated Balance Sheets (in thousands):

	<u>2009</u>	<u>2008</u>
Materials and supplies	\$ 31,535	\$ 32,580
Fuel - Electric Utilities	7,128	10,058
Natural gas in storage - Gas Utilities	24,053	59,529
Gas and oil held by Energy Marketing*	<u>60,606</u>	<u>15,854</u>
Total materials, supplies and fuel	<u>\$ 123,322</u>	<u>\$ 118,021</u>

* As of December 31, 2009 and 2008, market adjustments related to Gas and oil held by Energy Marketing and recorded in inventory as part of a fair value hedge transaction, were \$(0.3) million and \$(9.4) million, respectively.

Natural gas in storage at our regulated Gas Utilities primarily represents gas purchased for use by our customers and is valued at the weighted-average cost of the gas. The value of our natural gas in storage fluctuates with the season volume requirements of our business and the commodity price of natural gas. There has been a notable overall price decrease from 2008 to 2009.

Gas and oil held by Energy Marketing primarily consists of gas held in storage and gas imbalances held on account with pipelines. Gas imbalances represent the differences that arise between volumes of gas received into the pipeline versus gas delivered off of the pipeline. Natural gas and oil inventory is stated at the lower of cost or market on a weighted-average cost basis. To the extent that gas and oil held by Energy Marketing has been designated as the underlying hedged item in a fair value hedge transaction, those volumes are stated at market value using published industry quotations. See Note 3 for further discussion of Energy Marketing trading activities.

Property, Plant and Equipment

Additions to property, plant and equipment are recorded at cost. Included in the cost of regulated construction projects is AFUDC, which represents the approximate composite cost of borrowed funds and a return on equity used to finance a project. In addition, we also capitalize interest, when applicable, on undeveloped leasehold costs and certain non-regulated construction projects. The amount of AFUDC and interest capitalized was \$12.1 million, \$8.0 million and \$14.8 million in 2009, 2008 and 2007, respectively. The cost of regulated utility property, plant and equipment retired, or otherwise disposed of in the ordinary course of business, less salvage, is charged to accumulated depreciation. Removal costs associated with non-legal obligations related to our regulated properties are reclassified from accumulated depreciation and reflected as regulatory liabilities. Retirement or disposal of all other assets, except for oil and gas properties as described below, results in gains or losses recognized as a component of operating income. Ordinary repairs and maintenance of property are charged to operations as incurred.

Depreciation provisions for property, plant and equipment are generally computed on a straight-line basis. Capitalized coal mining costs and coal leases are amortized on a unit-of-production method based on volumes produced and estimated reserves. For certain non-utility power plant components, a unit-of-production methodology based on plant hours run is used.

Oil and Gas Operations

We account for our oil and gas activities under the full cost method. Under the full cost method, costs related to acquisition, exploration and estimated future expenditures to be incurred in developing proved reserves as well as estimated dismantlement and abandonment costs, net of estimated salvage values are capitalized. These costs are amortized using a unit-of-production method based on volumes produced and proved reserves. Any conveyances of properties, including gains or losses on abandonment of properties, are treated as adjustments to the cost of the properties with no gain or loss recognized.

Costs directly associated with unproved properties and major development projects, if any, are excluded from the costs to be amortized. These excluded costs are subsequently included within the costs to be amortized when it is determined whether or not proved reserves can be assigned to the properties. The properties excluded from the costs to be amortized are assessed for impairment at least annually and any amount of impairment is added to the costs to be amortized. These costs are generally expected to be included in costs to be amortized within the term of the underlying lease agreement which varies in length.

Under the full cost method, net capitalized costs are subject to a ceiling test which limits these costs to the present value of future net cash flows discounted at 10%, net of related tax effects, plus the lower of cost or fair value of unproved properties included in the net capitalized costs. Future net cash flows are estimated based on SEC-defined end-of-period commodity prices adjusted for contracted price changes. Effective for the 2009 fiscal year end, a twelve month average price is calculated using the price at the first day of each month for each of the preceding twelve months. If the net capitalized costs exceed the full cost "ceiling" at period end, a permanent non-cash write-down would be charged to earnings in that period.

As a result of lower natural gas prices at March 31, 2009, we recorded a non-cash ceiling test impairment of oil and gas long-lived assets included in the Oil and Gas segment. The lower prices at March 31, 2009 resulted in a \$43.3 million pre-tax decrease in the full cost accounting method's ceiling limit for capitalized oil and gas property costs. The write-down in the net carrying value of our natural gas and crude oil properties was recorded as Impairment of long-lived assets and was based on the March 31, 2009 NYMEX price of \$3.63 per Mcf, adjusted to \$2.23 per Mcf at the wellhead, for natural gas; and NYMEX price of \$49.66 per barrel, adjusted to \$45.32 per barrel at the wellhead, for crude oil.

Also at December 31, 2008, as a result of low crude oil and natural gas prices we recorded a pre-tax non-cash ceiling test impairment of our oil and gas long-lived assets totaling \$91.8 million. The write-down of gas and oil properties was based on December 31, 2008 NYMEX spot prices of \$5.71 per Mcf, adjusted to \$4.44 per Mcf at the wellhead, for natural gas; and \$44.60 per barrel, adjusted to \$32.74 per barrel at the wellhead, for crude oil. No ceiling test write-downs were recorded during 2007.

Impairment of Long-lived Assets

For our long-lived assets, other than assets of our oil and gas activities described above, we periodically evaluate whether events and circumstances have occurred which may affect the estimated useful life or the recoverability of the remaining asset balance. If such events or circumstances were to indicate that the carrying amount of these assets was not recoverable, we would estimate the future cash flows expected to result from the use of the assets and their eventual disposition. If the sum of the expected future cash flows (undiscounted and without interest charges) was less than the carrying amount of the long-lived assets, we would recognize an impairment loss. In 2007, we recorded a \$2.7 million pre-tax impairment charge to reduce the carrying value of the Ontario power plant and related intangibles and a \$0.6 million pre-tax impairment charge of goodwill related to lower partnership earnings as a result of a partnership impairment charge for the Glenss Ferry and Rupert power plants, in which we hold a 50% interest and account for under the equity method (see Note 12).

Goodwill and Intangible Assets

Under accounting standards for goodwill and intangible assets, goodwill and intangible assets with indefinite lives are not amortized but the carrying values are reviewed annually for impairment. Intangible assets with a finite life continue to be amortized over their estimated useful lives. We perform this annual review of goodwill and intangible assets during the fourth quarter of each year (or more frequently if impairment indicators arise).

The substantial majority of our goodwill and intangible assets are contained within the Utilities Group relating to the 2008 purchase of utility properties in the Aquila Transaction. Changes to goodwill and intangible assets during the years ended December 31, 2009 and 2008 are as follows (in thousands):

	<u>Goodwill</u>	<u>Amortized Other Intangible Assets</u>
Balance at December 31, 2007, net of accumulated amortization	\$ 11,482	\$ 3
Additions	347,808	4,919
Amortization expense	-	(38)
Balance at December 31, 2008, net of accumulated amortization	359,290	4,884
Adjustments	(5,556)	(365)
Amortization expense	-	(210)
Balance at December 31, 2009, net of accumulated amortization	<u>\$ 353,734</u>	<u>\$ 4,309</u>

On July 14, 2008, we completed the acquisition of one regulated electric and four regulated gas utilities from Aquila. As of December 31, 2008, \$344.5 million was recorded to goodwill for this transaction. Goodwill was adjusted for final working capital and tax adjustments during 2009 of \$5.6 million. Final allocation of the purchase price included \$339.0 million of goodwill and \$4.9 million of intangible assets (see Note 23). Less than \$0.1 million of the intangible assets have an indefinite life while the remaining amount of \$4.8 million is being amortized over twenty years.

During 2008, we adjusted goodwill \$3.3 million for issuance of shares of common stock related to the settlement of the Earn-out Litigation with former Indeck shareholders. This resulted from the settlement of two proceedings brought by former stockholders of Indeck, a company we acquired in 2000. In the first settlement agreement, we agreed to pay additional earn-out consideration to the former Indeck stockholders. The aggregate value of the 451,465 shares of additional Black Hills common stock issued was recorded as additional goodwill. The second proceeding was an arbitration proceeding which settled on September 19, 2008. The arbitrator instructed us to pay \$4.0 million in earn-out consideration and on December 19, 2008, we issued 142,339 shares of additional common stock to former Indeck stockholders. In accordance with accounting standards for discontinued operations, the goodwill held at the IPP plants was allocated while recording the IPP Transaction.

We performed our annual goodwill impairment tests during the fourth quarter. We estimated the fair value of the goodwill using discounted cash flow methodology and an analysis of comparable transactions. These analyses required the input of several critical assumptions, including future growth rates, cash flow projections, operating cost escalation rates, rates of return, a risk-adjusted discount rate, timing and level of success in regulatory rate proceedings, the cost of debt and equity capital, and long-term earnings and merger multiples for comparable companies. We believe that the goodwill amount reflects the value of the relatively stable, long-

lived cash flows of the regulated gas utility business, considering the regulatory environment and market growth potential and the value of the significant rate base growth opportunities at our electric utility in Colorado.

Intangible assets represent easements, right-of-way and trademarks and are amortized using a straight-line method using estimated useful lives of 20 years. Intangible assets totaled \$4.3 million at December 31, 2009 with amortization expense for intangible assets was \$0.2 million, less than \$0.1 million and \$0.1 million in each of the years 2009, 2008 and 2007, respectively. Amortization expense for existing intangible assets is expected to be \$0.2 million per year through 2014.

Asset Retirement Obligations

We initially record liabilities for the present value of retirement costs for which we have a legal obligation, with an equivalent amount added to the asset cost. The asset is then depreciated or depleted over the appropriate useful life and the liability is accreted over time by applying an interest method of allocation. Any difference in the actual cost of the settlement of the liability and the recorded amount is recognized as a gain or loss in the results of operations at the time of settlement. For the Oil and Gas segment, differences in the settlement of the liability and the recorded amount are generally reflected as adjustments to the capitalized cost of oil and gas properties and depleted pursuant to our use of the full cost method.

Derivatives and Hedging Activities

The accounting standards for derivatives and hedging require that derivative instruments be recorded on the balance sheet as either an asset or liability measured at its fair value and that changes in the derivative instrument's fair value be recognized currently in earnings unless specific hedge accounting criteria are met.

Accounting standards for derivatives and hedging require that the unrealized gains or losses on a derivative instrument designated and qualifying as a fair value hedging instrument as well as the offsetting unrealized loss or gain on the hedged item attributable to the hedged risk be recognized currently in earnings in the same accounting period. Conversely, the effective portion of the unrealized gain or loss on a derivative instrument designated and qualifying as a cash flow hedging instrument must be reported as a component of other comprehensive income and be reclassified into earnings in the same period or periods during which the hedged forecasted transaction affects earnings. The remaining gain or loss on the derivative instrument, if any, is recognized currently in earnings.

Weather Hedges

As approved in the State of Iowa, Iowa Gas uses a weather derivative to mitigate the effect of fluctuations from normal weather, but not for trading or speculative purposes. Accounting standards for derivatives and hedging require that weather hedges are accounted for by the intrinsic value method which records an asset or liability for the difference between the actual and contracted threshold cooling or heating degree days in the period, multiplied by the contract price. Any gains or losses recorded on these contracts are recorded as regulatory assets or regulatory liabilities, respectively. Anticipated settlements totaling \$1.8 million are included in Accounts receivable on the accompanying Consolidated Balance Sheets as of December 31, 2009. Anticipated settlements totaling \$1.8 million are included in Other current liabilities on the accompanying Consolidated Balance Sheets as of December 31, 2008.

Currency Adjustments

Our functional currency for all operations is the United States dollar. Through Enserco, we engage in natural gas marketing transactions in Canada and accordingly, have various transactions that have been denominated in Canadian dollars. These Canadian denominated transactions/balances are adjusted to United States dollars for financial reporting purposes using the year-end exchange rate for balance sheet items and an average exchange rate during the period for income statement items. Gains or losses on currency transactions executed in Canadian dollars are recorded in Operating revenues on the accompanying Consolidated Statements of Income as incurred.

Deferred Financing Costs

Deferred financing costs are amortized using the effective interest method over the term of the related debt.

Development Costs

Commencing in 2009 with the adoption of revised accounting standards for business combinations, we expense, when incurred, development and acquisition costs associated with corporate development activities prior to acquiring or beginning construction of a project. Expensed development costs are included in Administrative and general operating expenses on the accompanying Consolidated Statement of Income.

Legal Costs

Litigation liabilities, including potential settlements are recorded when it is probable we are likely to incur liability or settlement costs, and those costs can be reasonably estimated. Litigation settlement accruals are recorded net of probable insurance recoveries. Legal costs related to ongoing litigation are expensed as incurred.

Non-controlling Interest

Under accounting standards for variable interest entities, we were considered the primary beneficiary of the agreement with Wygen Funding, LP to lease the Wygen I plant. Non-controlling interest in the accompanying Consolidated Statements of Income represents the non-affiliated equity investors' interest in Wygen Funding, L.P., a VIE. In June 2008, at the end of the lease term, we purchased the Wygen I plant.

Earnings attributable to minority ownership are shown on the accompanying Consolidated Statements of Income on a pre-tax basis as the entity with the non-controlling investor is a limited partnership which pays no tax at the corporate level.

AFUDC

AFUDC represents the approximate composite cost of borrowed funds and a return on equity used to finance a utility project. AFUDC for the years ended December 31, 2009, 2008 and 2007 was \$11.7 million, \$6.6 million and \$11.2 million, respectively. The equity component of AFUDC for 2009, 2008 and 2007 was \$5.9 million, \$3.8 million and \$4.8 million, respectively. The borrowed funds component of AFUDC for 2009, 2008 and 2007 was \$5.8 million, \$2.8 million and \$6.4 million, respectively. The equity component of AFUDC is included in Other income (expense), and the borrowed funds component of AFUDC is an offset to Interest expense on the accompanying Consolidated Statements of Income.

Regulatory Accounting

Our Utilities Group is subject to regulation by various state and federal agencies. The accounting policies followed are generally subject to the Uniform System of Accounts of FERC. These accounting policies differ in some respects from those used by our non-regulated businesses.

Our financial statements follow accounting standards for regulated operations and reflect the effects of the different ratemaking principles followed by the various jurisdictions regulating the utilities. If rate recovery becomes unlikely or uncertain due to competition or regulatory action, these accounting standards may no longer apply. As of December 31, 2009 and 2008, we had \$111.1 million and \$135.4 million in net regulatory assets for which we will recover the cost, but are not allowed a return. In the event we determine that Black Hills Power, Cheyenne Light, Iowa Gas, Nebraska Gas, Kansas Gas, Colorado Gas or Colorado Electric no longer meet the criteria for following accounting standards for regulated operations, the accounting impact to the Company could be an extraordinary non-cash charge to operations, which could be material.

On December 31, 2009 and 2008, we had the following regulatory assets and liabilities (in thousands):

	<u>2009</u>	<u>2008</u>
Regulatory assets		
Deferred energy and fuel costs adjustments	\$ 30,590	\$ 32,198
Deferred gas cost adjustments and gas price derivatives	11,496	25,364
AFUDC	13,935	8,719
Employee benefit plans	86,818	98,414
Environmental	2,268	2,406
Asset retirement obligations	2,912	2,598
Bond issue cost	3,990	4,121
Other regulatory assets	8,654	5,275
	<u>\$ 160,663</u>	<u>\$ 179,095</u>

	<u>2009</u>	<u>2008</u>
Regulatory liabilities		
Deferred energy and gas costs	\$ 1,932	\$ 2,417
Employee benefit plans	-	1,513
Cost of removal	35,983	31,351
Revenue subject to refund	3,938	2,786
Other regulatory liabilities	7,697	5,592
	<u>\$ 49,550</u>	<u>\$ 43,659</u>

Regulatory assets are primarily recorded for the probable future revenue to recover the costs associated with regulated utilities' defined benefit postretirement plans, future income taxes related to the deferred tax liability for the equity component of allowance for funds used during construction of utility assets and unrecovered energy and fuel costs.

Deferred Energy and Fuel Cost Adjustments – deferred energy and fuel cost adjustments represent the cost of electricity delivered to our electric utility customers in excess of current rates and which will be recovered in future rates. Deferred energy and fuel cost adjustments are recorded and recovered or amortized as approved by the appropriate state commission. As of December 31, 2009 and 2008, respectively, \$27.9 million and \$29.4 million was considered current and \$2.6 million and \$2.8 million, respectively, is classified as non-current as it is expected to be recovered through the first quarter of the following year.

Deferred Gas Cost Adjustment and Gas Price Derivatives - Our regulated gas utilities have PGA provisions that allow them to pass the cost of gas on to their customers. In addition, as allowed by state utility commissions, we have entered into certain exchange-traded natural gas futures and options to reduce our customers' underlying exposure to fluctuations in gas prices. Cheyenne Light files monthly with the WPSC a GCA to be included in tariff rates. The GCA is based on forecasts of the upcoming gas costs and recovery or refund of prior under-recovered or over-recovered costs. To the extent that gas costs are under-recovered or over-recovered, they are recorded as a regulatory asset or liability, respectively. Our Gas Utilities file periodic estimates of future gas costs based on market forecasts. These are pass-through costs recovered in less than one year.

AFUDC - The equity component of AFUDC is considered a permanent difference for tax purposes with the tax benefit being flowed through to customers as prescribed or allowed by regulators. If, based on a regulator's action, it is probable the utility will recover the future increase in taxes payable represented by this flow-through treatment through a rate revenue increase, a regulatory asset is recognized. This regulatory asset itself is a temporary difference for which a deferred tax liability must be recognized. Accounting standards for income taxes specifically address AFUDC-equity, and require a gross-up of such amounts to reflect the revenue requirement associated with a rate-regulated environment. Recovery of this asset is up to 45 years.

Employee Benefit Plans - Employee benefit plans include the unrecognized prior service costs and net actuarial loss associated with our defined benefit pension plans and post-retirement benefit plans in regulatory assets rather than in accumulated other comprehensive income. The recovery period is up to 13 years.

Environmental – Environmental is associated with Manufactured Gas Plant sites. The amortization of this asset is first offset by recognition of insurance proceeds and settlements with other third parties. Any remaining recovery will be requested in future rate filings. Recovery has not yet been approved by the applicable commission or board and therefore, the recovery period is unknown.

Asset Retirement Obligations - AROs represent the estimated recoverable costs for legal obligations associated with the retirement of a tangible long-lived asset. See Note 10 for additional details. The recovery period is up to 44 years.

Bond Issue Costs – Bond issue costs are recovered over the remaining life of the original issue or, if refinanced, over the life of the new issue, which as of December 31, 2009 will be amortized through November 2037.

Regulatory liabilities represent items we expect to refund to customers through probable future decreases in rates.

Deferred Energy and Gas Costs - Deferred energy costs related to over-recovery in purchased power, transmission and natural gas costs charged to Cheyenne Light customers through a PCA and GCA mechanism. Settlement is expected within one year.

Employee Benefit Plans – Employee benefit plans represents the cumulative excess of pension costs recovered in rates over pension expense recorded in accordance with accounting standards for compensation - retirements.

Cost of Removal - Cost of removal for utility plant represents the estimated cumulative net provisions for future removal costs included in depreciation expense for which there is no legal obligation for removal. Liabilities will be settled and trued up following completion of the related activities of up to 44 years.

Revenues Subject To Refund - Revenues subject to refund represent a portion of the revenues collected from customers based on approved interim rates which are contingent on the outcome of final rate orders. Settlement is expected within one year.

Income Taxes

The Company and its subsidiaries file consolidated federal income tax returns. Income taxes for consolidated subsidiaries are allocated to the subsidiaries based on separate company computations of taxable income or loss.

We use the liability method in accounting for income taxes. Under the liability method, deferred income taxes are recognized at currently enacted income tax rates, to reflect the tax effect of temporary differences between the financial and tax basis of assets and liabilities as well as operating loss and tax credit carryforwards. Such temporary differences are the result of provisions in the income tax law that either require or permit certain items to be reported on the income tax return in a different period than they are reported in the financial statements. We classify deferred tax assets and liabilities into current and non-current amounts based on the nature of the related assets and liabilities.

We account for uncertainty in income taxes recognized in the financial statements in accordance with accounting standards for income taxes. The unrecognized tax benefit is classified in Deferred credits and other liabilities, Other on the accompanying Consolidated Balance Sheets. See Note 14 for additional information.

Revenue Recognition

Revenue is recognized when there is persuasive evidence of an arrangement with a fixed or determinable price, delivery has occurred or services have been rendered, and collectibility is reasonably assured.

Utility revenues are based on authorized rates approved by the state regulatory agencies and FERC. Revenues related to the sale, transmission and distribution of energy delivery service are generally recorded when service is rendered or energy is delivered to customers. However, the determination of the energy sales to individual customers is based on systematic meter readings throughout a month. Meters that are not read during a given month are estimated and trued-up to actual use in a future period. At the end of each month, amounts of energy delivered to customers since the date of their last meter reading are estimated and the corresponding unbilled revenue is recorded. The amount of unbilled revenues recorded in Accounts receivable on the Consolidated Balance Sheets as of December 31, 2009 and 2008 was \$61.4 million and \$73.0 million, respectively.

In addition, in accordance with accounting standards for derivatives and hedging, certain energy marketing activities are recorded at fair value as of the balance sheet date and net gains or losses resulting from the revaluation of these contracts to fair value are recognized currently in the results of operations. All energy marketing contracts that do not meet the definition of a derivative have been accounted for under the accrual method of accounting.

We present our operating revenues from energy marketing operations in accordance with the accounting standards for energy trading contracts. Accordingly, gains and losses (realized and unrealized) on transactions at our natural gas and crude oil marketing operations are presented on a net basis in operating revenues, whether or not settled physically.

For long-term power sales agreements, revenue is recognized either in accordance with accounting standards for revenue recognition for regulated operations, or in accordance with accounting standards for leases, as appropriate. Under accounting standards for revenue recognition for a regulated operation, revenue is generally recognized as the lesser of the amount billed or the average rate expected over the life of the agreement.

For our Investment in Associated Companies, which are involved in power generation, we use the equity method to recognize our pro rata share of the net income or loss of the associated company. As of December 31, 2009 and 2008, we held \$1.6 million and \$2.6 million in investments which is included in Investments on the accompanying Consolidated Balance Sheets.

Earnings per Share of Common Stock

Basic earnings per share from continuing operations is computed by dividing "Income from continuing operations" less preferred stock dividends, by the weighted average number of common shares outstanding during each year. Diluted earnings per share gives effect to all dilutive potential common shares outstanding during a period. A reconciliation of income from continuing operations and basic and diluted share amounts is as follows (in thousands):

	<u>2009</u>		<u>2008</u>		<u>2007</u>	
	<u>Income</u>	<u>Average Shares</u>	<u>(Loss)</u>	<u>Average Shares</u>	<u>Income</u>	<u>Average Shares</u>
Basic - Income (loss) from continuing operations	\$ 78,756	38,614	\$ (52,037)	38,193	\$ 75,658	37,024
Dilutive effect of:						
Stock options	-	-	-	-	-	111
Contingent shares issuable for prior acquisition	-	-	-	-	-	159
Restricted stock	-	66	-	-	-	81
Other dilutive effects	-	4	-	-	-	39
Diluted - Income (loss) from continuing operations	<u>\$ 78,756</u>	<u>38,684</u>	<u>\$ (52,037)</u>	<u>38,193</u>	<u>\$ 75,658</u>	<u>37,414</u>

The following outstanding securities were not included in the computation of diluted earnings per share as their effect would have been anti-dilutive (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Options to purchase common stock	<u>462</u>	<u>-</u>	<u>34</u>

(2) RECENTLY ADOPTED AND RECENTLY ISSUED ACCOUNTING STANDARDS

Recently Adopted Accounting Standards

FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles, ASC 105

On July 1, 2009, the FASB Accounting Standards Codification™ (the Codification) became the source of authoritative GAAP recognized by the FASB to be applied by non-governmental entities. On the effective date of this Statement, the Codification superseded all then-existing non-SEC accounting and reporting standards. All other non-SEC accounting literature not included or grandfathered in the Codification became non-authoritative. This Statement is effective for financial statements issued for interim and annual periods ending after September 15, 2009.

Following this Statement, the FASB will not issue new standards in the form of Statements, FASB Staff Positions, or Emerging Issues Task Force Abstracts. Instead, it will issue Accounting Standards Updates. The FASB will not consider Accounting Standards Updates as authoritative in their own right. Accounting Standards Updates will serve only to update the Codification, provide background information about the guidance, and provide the basis for conclusions on the change(s) in the Codification.

Earnings Per Share, ASC 260

The ASC for Earnings per Share states that unvested share-based payment awards that contain non-forfeitable rights to dividends are "participating securities" as defined and should be included in computing EPS using the two-class method. The two-class method is an earnings allocation method for computing EPS and determines EPS based on dividends declared on common stock and participating securities in any undistributed earnings. As of January 1, 2009, we prepared our current and prior period EPS computation in accordance with these accounting standards and there was no impact on our EPS.

Business Combinations, ASC 805

The ASC for Business Combinations requires that the acquisition method of accounting be used for all business combinations and for an acquirer to be identified for each business combination. It also establishes principles and requirements for how the acquirer (i) recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, and any non-controlling interest in the acquiree, (ii) recognizes and measures the goodwill acquired in the business combination or a gain from a bargain purchase and (iii) discloses the nature and financial effects of the business combination; and requires restructuring and acquisition-related costs to be expensed. In addition, if income tax liabilities are settled for an amount other than as previously recorded, such adjustments could affect income tax expense in the period of adjustment. Effective January 1, 2009, any impact the standard will have on our consolidated financial statements will depend on the nature and magnitude of any future acquisitions we consummate including any tax-related adjustments.

Derivatives and Hedging, ASC 815

Accounting standards for Derivatives and Hedging require enhanced disclosures about derivatives and hedging activities and their affect on an entity's financial position, financial performance and cash flows. Accounting standards for derivatives and hedging encourages, but does not require, disclosures for earlier periods presented for comparative purposes at initial adoption. Required disclosures for periods subsequent to January 1, 2009 are provided in Note 3 and Note 4.

Fair Value Measurements and Disclosures, ASC 820

The ASC for Fair Value Measurements and Disclosures defines fair value, establishes a framework for measuring fair value in GAAP and expands disclosure requirements related to fair value measurements. This does not expand the application of fair value accounting to any new circumstances, but applies the framework to other applicable GAAP that requires or permits fair value measurement. We apply fair value measurements to certain assets and liabilities, primarily commodity derivatives within our Energy Marketing and Oil and Gas segments, interest rate swap instruments, and other miscellaneous financial instruments.

On January 1, 2008, we discontinued our use of a "liquidity reserve" in valuing the total forward positions within our energy marketing portfolio. This impact was accounted for prospectively as a change in accounting estimate and resulted in a \$1.2 million after-tax benefit that was recorded within our unrealized marketing margins. Unrealized margins are presented as a component of Operating revenues on the accompanying Consolidated Statements of Income. Disclosures regarding the level of pricing observability associated with instruments carried at fair value are provided in Note 4.

Financial Instruments, ASC 825

The ASC for Financial Instruments requires public companies to provide more frequent disclosures about the fair value of their financial instruments for interim and annual periods ending after June 15, 2009. These disclosures are included in Note 5.

Subsequent Events, ASC 855

The ASC for Subsequent Events establishes general standards of accounting for and disclosures of events that occur after the balance sheet date, but before financial statements are issued or are available to be issued. These standards and disclosures were applied to our financial statements issued after June 15, 2009.

Consolidation of Non-Controlling Interest, ASC 810

The ASC for Consolidation of Non-Controlling Interest establishes accounting and reporting standards for ownership interests in subsidiaries held by parties other than the parent, the amount of consolidated net income attributable to the parent and to the non-controlling interest, changes in a parent's ownership interest, and the valuation of retained non-controlling equity investments when a subsidiary is deconsolidated. The ASC establishes disclosure requirements that clearly identify and distinguish between the interests of the parent and the interests of the non-controlling owners. These standards and disclosure requirements were effective January 1, 2009.

Non-controlling interest in the accompanying Consolidated Statements of Income represents a non-affiliated equity investors' interest in Wygen Funding LP, a Variable Interest Entity. In June 2008, we purchased the non-controlling share retiring \$128.3 million of Wygen I project debt. Presentation of a non-controlling interest that we held until June 2008 was retrospectively applied as required, and had an immaterial overall effect on our consolidated financial position, results of operations and cash flows.

Employer's Accounting for Defined Benefit Pension and Other Postretirement Plans, ASC 715

The ASC 715 for Employer's Accounting for Defined Benefit Pension and Other Postretirement Plans requires the recognition of the overfunded or underfunded status of defined benefit postretirement plans as an asset or liability in the statement of financial position, recognition of changes in the funded status in comprehensive income, measurement of the funded status of a plan as of the date of the year-end statement of financial position and provides for related disclosures. Effective for fiscal years ending after December 15, 2008, this accounting standard required the measurement of the funded status of the plan to coincide with the date of the year-end statement of financial position. Therefore, the measurement date for the funded status of our pension and other postretirement benefit plans was changed to December 31 from September 30. ASC 715 also provides guidance on an employer's disclosure about plan assets for a defined benefit pension or other postretirement plans. These disclosures are effective for fiscal years ending after December 15, 2009. See Note 18 for additional information.

Extractive Activities - Oil and Gas Reserves (SEC Release #33-8995), ASC 932-10-S99

The FASB issued an accounting standards update which aligns the oil and gas reserve estimation and disclosure requirements with the SEC released Final Rule, "Modernization of Oil and Gas Reporting" amending the existing Regulation S-K and Regulation S-X reporting requirements to align with current industry practices and technology advances. Key revisions include the ability to include non-traditional resources in reserves, the use of new technology for determining reserves, permitting disclosure of probable and possible reserves, and changes to the pricing used to determine reserves from the year-end price to a 12-month average price. The average is calculated using the first-day-of-the-month price for each of the 12 months that make up the reporting period. The amendment is effective for annual reporting periods ending on or after December 31, 2009. The implementation of this SEC requirement resulted in additional depletion expense of \$1.3 million in 2009.

Recently Issued Accounting Pronouncements

Consolidation of Variable Interest Entities, ASC 810-10-15

In June 2009, the FASB issued a revision regarding consolidations. The revised accounting guidance requires a company to consider whether an entity that is insufficiently capitalized or is not controlled through voting should be consolidated. It will require additional disclosures about the involvement with variable interest entities and any significant changes in risk exposure due to that involvement. This standard is effective for annual periods that begin after November 15, 2009. We are currently assessing the impact that the adoption of this standard will have on our financial condition, results of operations, and cash flows.

Fair Value Measurements, ASC 820

In January 2010, the FASB issued guidance related to improving disclosures about fair value measurements. The guidance requires separate disclosures of the amounts of transfers in and out of Level 1 and Level 2 fair value measurements and a description of the reason for such transfers. In the reconciliation for Level 3, fair value measurements using significant unobservable inputs, information about purchases, sales, issuances and settlements shall be presented separately. These disclosures are required for interim and annual reporting periods and were effective for the Company on January 1, 2010, except for the disclosures related to the purchases, sales, issuances and settlements in the roll forward activity of Level 3 fair value measurements, which are effective on January 1, 2011. The guidance will require additional disclosures, but will not impact our financial position or results of operations.

(3) RISK MANAGEMENT ACTIVITIES

Our activities in the regulated and non-regulated energy sectors expose the Company to a number of risks in the normal operations of its businesses. Depending on the activity, we are exposed to varying degrees of market risk and counterparty risk. We have developed policies, processes, systems, and controls to manage and mitigate these risks.

Market risk is the potential loss that might occur as a result of an adverse change in market price or rate. We are exposed to the following market risks including, but not limited to:

- Commodity price risk associated with our marketing businesses, our natural long position with crude oil and natural gas reserves and production, fuel procurement for certain of our gas-fired generation assets and variability in revenue due to changes in gas usage at our regulated Gas Utilities segment resulting from commodity price changes;
- Interest rate risk associated with variable rate credit facilities and project financing floating rate debt as described in Notes 8 and 9; and

- Foreign currency exchange risk associated with natural gas marketing business transacted in Canadian dollars.

Our exposure to these market risks is affected by a number of factors including the size, duration, and composition of our energy portfolio, the absolute and relative levels of interest rates, currency exchange rates and commodity prices, the volatility of these prices and rates, and the liquidity of the related interest rate and commodity markets.

Trading Activities

Natural Gas and Crude Oil Marketing

We have a natural gas and crude oil marketing business specializing in producer services, end-use origination and wholesale marketing that conducts business in the United States and Canada.

Contracts and other activities at our natural gas and crude oil marketing operations are accounted for under the accounting standards for derivatives and hedging and energy trading contracts. As such, all of the contracts and other activities at our natural gas and crude oil marketing operations that meet the definition of a derivative are accounted for at fair value. The fair values are recorded as either Derivative assets or Derivative liabilities on the accompanying Consolidated Balance Sheets. The net gains or losses are recorded as Operating revenues in the accompanying Consolidated Statements of Income. ASC 940-325-S99 precludes mark-to-market accounting for energy trading contracts that are not defined as derivatives. As part of our natural gas and crude oil marketing operations, we often employ strategies that include derivative contracts along with inventory, storage and transportation positions to accomplish the objectives of our producer services, end-use origination and wholesale marketing groups. Except in limited circumstances when we are able to designate transportation, storage or inventory positions as part of a fair value hedge, accounting standards for derivatives and hedging generally do not allow us to mark inventory, transportation or storage positions to market. The result is that while a significant majority of our natural gas and crude oil marketing positions are economically hedged, we are required to mark a portion of our overall strategies (the derivatives) to market value, but are generally precluded from marking the rest of our economic hedges (transportation, inventory or storage) to market. Volatility in reported earnings and derivative positions results from these accounting requirements.

To effectively manage our portfolios, we enter into forward physical commodity contracts, financial derivative instruments including over-the-counter swaps and options and storage and transportation agreements. The business activities of our Energy Marketing segment are conducted within the parameters as defined and allowed in the BHCRRP and further delineated in the energy marketing Risk Management Policies and Procedures as approved by our Executive Risk Committee. Our contracts do not include credit risk-related contingent features.

We use a number of quantitative tools to measure, monitor and limit our exposure to market risk in our natural gas and oil marketing portfolio. We limit and monitor our market risk through established limits on the nominal size of positions based on type of trade, location and duration. Such limits include those on fixed price, basis, storage, transportation and foreign exchange positions.

Daily risk management activities include reviewing positions in relation to established position limits, assessing changes in daily mark-to-market and other non-statistical risk management techniques.

The contract or notional amounts and terms of the natural gas and crude oil marketing and derivative commodity instruments at December 31, are set forth below:

	<u>2009</u>	Latest	<u>2008</u>	Latest
	<u>Notional</u>	expiration	<u>Notional</u>	expiration
	<u>Amounts</u>	<u>(months)</u>	<u>Amounts</u>	<u>(months)</u>
(thousands of MMBtu)

Crude oil swaps purchased	-	-	435	24
Crude oil swaps sold	69	2	502	24

Derivatives and certain natural gas and oil marketing activities were marked to fair value on December 31, 2009 and 2008, and the associated gains and/or losses recognized in earnings. The amounts related to the accompanying Consolidated Balance Sheets and Consolidated Statements of Income as of December 31, 2009 and 2008 are as follows (in thousands):

	December 31,	
	<u>2009</u>	<u>2008</u>
Current assets	\$ 25,366	\$ 52,723
Non-current assets	3,090	(145)
Current liabilities	9,377	15,553
Non-current liabilities	(733)	(777)
Cash collateral receivable/(payable) included in derivative assets/liabilities ^(a)	2,728	(16,315)
Unrealized gain	17,084	54,117

(a) A master netting agreement is an agreement between two parties who have multiple contracts with each other that provides for the net settlement of all contracts in the event of default on or termination of any one contract. When the right of offset exists, accounting standards permit the netting of receivables and payables under a legally enforceable master netting agreement between counterparties. Accounting standards also permit offsetting of fair value amounts recognized for the right to reclaim, or the obligation to return, cash collateral against fair value amounts recognized for derivative instruments executed with the same counterparty. At December 31, 2009, we had the right to reclaim cash collateral of \$2.7 million and at December 31, 2008, we had an obligation to return cash collateral of \$16.3 million.

In addition, certain volumes of natural gas inventory have been designated as the underlying hedged item in a fair value hedge transaction. These volumes include market adjustments based on published industry quotations. Market adjustments are recorded in inventory on the Consolidated Balance Sheets and the related unrealized gain/loss on the Consolidated Statements of Income effectively offsetting the earnings impact of the unrealized gain/loss recognized on the associated derivative asset or liability described above. As of December 31, 2009 and 2008, the market adjustments recorded in inventory were \$(0.3) million and \$(9.4) million, respectively.

Activities Other than Trading

Oil and Gas Exploration and Production

We produce natural gas and crude oil through our exploration and production activities. Our natural "long" positions, or unhedged open positions, introduce commodity price risk and variability in our cash flows. We employ risk management methods to mitigate this commodity price risk and preserve cash flows and we have adopted guidelines covering hedging for our natural gas and crude oil production. These guidelines have been approved by our Executive Risk Committee, and are reviewed by our Board of Directors.

Over-the-counter swaps and options are used to mitigate commodity price risk and preserve cash flows. These derivative instruments fall under the purview of accounting standards for derivatives and hedges and we generally elect to utilize hedge accounting as allowed under this Statement.

At December 31, 2009 and 2008, we had a portfolio of swaps and options to hedge portions of our crude oil and natural gas production. We elect hedge accounting on those over-the-counter swaps and options. These transactions were designated at inception as cash flow hedges, properly documented and initially met prospective effectiveness testing. Effectiveness of our hedging position is evaluated at least quarterly.

At December 31, 2009 and 2008, the derivatives were marked to fair value and were recorded as Derivative assets or Derivative liabilities on the Consolidated Balance Sheets. The effective portion of the gain or loss on these derivatives was reported in other comprehensive income (loss) and the ineffective portion was reported in earnings.

On December 31, 2009 and 2008, we had the following swaps, options and related balances (dollars in thousands):

	December 31, 2009		December 31, 2008	
	Crude oil swaps/options	Natural gas swaps	Crude oil swaps/options	Natural gas swaps
Notional*	472,500	9,602,300	435,000	8,523,500
Maximum duration in years**	0.25	0.75	0.25	1.00
Current assets	\$ 3,345	\$ 5,994	\$ 7,674	\$ 11,828
Non-current assets	\$ 136	\$ 551	\$ 3,464	\$ 3,749
Current liabilities	\$ 1,220	\$ 1,435	\$ -	\$ -
Non-current liabilities	\$ 2,502	\$ 391	\$ 10	\$ 297
Pre-tax accumulated other comprehensive income (loss)	\$ (862)	\$ 4,719	\$ 9,642	\$ 15,280
Earnings	\$ 621	\$ -	\$ 1,486	\$ -

* Crude in Bbls, gas in MMBtu.

** Refers to the term of the derivative instrument. Assets and liabilities are classified as current/non-current based on the timing of the hedged transaction and the corresponding settlement of the derivative instrument.

Most of our crude oil and natural gas hedges are deemed highly effective, resulting in limited earnings impact prior to realization. We estimate that a portion of the unrealized earnings currently recorded in accumulated other comprehensive loss will be realized in earnings during 2010. Based on December 31, 2009 market prices, a \$4.7 million gain would be realized and reported in earnings during 2010. Estimated and actual realized gains will likely change during 2010 as market prices fluctuate.

Gas Utilities

Our regulated Gas Utilities segment purchases natural gas and distributes it in four states. During the winter heating season, our gas customers are exposed to potential price volatility; therefore, as allowed or required by state utility commissions, we have entered into certain exchange-traded natural gas futures, options and basis swaps to reduce our customers' underlying exposure to these fluctuations. These transactions are considered derivatives in accordance with accounting standards for derivatives and hedging and mark-to-market adjustments are recorded as Derivative assets or Derivative liabilities on the accompanying Consolidated Balance Sheets. Gains and losses, as well as option premiums, on these transactions are recorded as Regulatory assets or Regulatory liabilities in accordance with accounting standards for regulated operations. Accordingly, the earnings impact is recognized in the Consolidated Statements of Income as a component of PGA costs when the related costs are recovered through our rates as part of PGA costs in operating revenue.

On December 31, 2009 and 2008, the contract or notional amounts and terms of the natural gas derivative commodity instruments held by our regulated Gas Utilities are as follows:

	2009		2008	
	Notional*	Latest Expiration (months)	Notional*	Latest Expiration (months)
Natural gas futures purchased	6,220,000	15	1,290,000	3
Natural gas options purchased	1,910,000	3	3,990,000	3
Natural gas options sold	-	-	820,000	3
Natural gas basis swaps purchased	225,000	3	-	-

* Gas in MMBtu

On December 31, 2009 and 2008, our Gas Utilities held the following derivative-related balances (in thousands):

	<u>December 31, 2009</u>	<u>December 31, 2008</u>
Current derivative assets ^(a)	\$ 3,042	\$ 4,224
Non-current derivative assets	\$ -	\$ -
Current derivative liabilities	\$ -	\$ 2,924
Non-current derivative liabilities	\$ 764	\$ -
Regulatory assets	\$ 2,578	\$ 11,668
Cash collateral included in derivative assets/liabilities ^(b)	\$ 3,789	\$ 8,744

(a) Includes option premium of \$1.1 million and \$4.2 million at December 31, 2009 and 2008, respectively, which will be recorded as a regulatory asset upon settlement of the options.

(b) A master netting agreement is an agreement between two parties who have multiple contracts with each other that provides for the net settlement of all contracts in the event of default on or termination of any one contract. When the right of offset exists, accounting standards permit the netting of receivables and payables under a legally enforceable master netting agreement between counterparties. Accounting standards also permit offsetting of fair value amounts recognized for the right to reclaim or the obligation to return cash collateral against fair value amounts recognized for derivative instruments executed with the same counterparty under a master netting agreement. At December 31, 2009 and 2008 we had the right to reclaim cash collateral of \$3.8 million and \$8.7 million, respectively.

Electric Utilities

At our regulated Electric Utilities, we occasionally hold natural gas in storage for use as fuel for generating electricity with our gas-fired combustion turbines. To minimize associated price risk and seasonal storage level requirements, we occasionally utilize various derivative instruments. These transactions are marked-to-market, designated as cash flow hedges, and recorded in Derivative liabilities, current and Accumulated other comprehensive income on the accompanying Consolidated Balance Sheets. Gains or losses on these transactions will be recorded in gross margins upon settlement.

On December 31, 2009, we had the following swaps and related balances (dollars, in thousands):

Notional*	232,500
Maximum terms in months	10
Current derivative liability	\$ 5
Pre-tax accumulated other comprehensive income (loss)	\$ (5)

* Gas in MMBtu

Based on December 31, 2009 market prices, a loss of less than \$0.1 million will be realized in earnings during 2010. Estimated and actual realized losses will likely change during 2010 as market prices fluctuate.

Financing Activities

We engage in activities to manage risks associated with changes in interest rates. We have entered into floating-to-fixed interest rate swap agreements to reduce our exposure to interest rate fluctuations associated with our floating rate debt obligations.

- At December 31, 2009, we have \$150.0 million of notional amount floating-to-fixed interest rate swaps designated as cash flow hedges in accordance with accounting guidance for derivatives and hedging and accordingly, the mark-to-market adjustments are recorded in Accumulated other comprehensive loss on the Consolidated Balance Sheets. The swaps have a maximum term of seven years.
- We also have interest rate swaps with a notional amount of \$250.0 million which were entered into for the purpose of hedging interest rate movements that would impact long-term financings that were originally expected to occur in 2008. The swaps were originally designated as cash flow hedges in accordance with accounting guidance for derivatives and the mark-to-market values were recorded in Accumulated other comprehensive loss on the Consolidated Balance Sheets. Based on credit market conditions that transpired during the fourth quarter of 2008, we determined it was probable that the forecasted long-term debt financings would not occur in the time period originally specified and as a result, the swaps were no longer effective hedges and the hedge relationships were de-designated. Mark-to-market adjustments on the swaps are now recorded within the income statement and during 2009 we recorded a \$55.7 million pre-tax unrealized mark-to-market gain,

while in 2008 we recorded a \$94.4 million pre-tax unrealized mark-to-market loss. These swaps are nine and nineteen year swaps which have amended mandatory early termination dates ranging from December 15, 2010 to December 29, 2010. We have continued to maintain these swaps in anticipation of our upcoming financing needs, particularly as they relate to our planned capital requirements to build gas-fired power generation facilities to serve our Colorado Electric customers and our upcoming holding company debt maturities, which are \$225 million and \$250 million in years 2013 and 2014, respectively. Alternatively, we may choose to cash settle these swaps at their fair value prior to their mandatory early termination dates, or unless these dates are extended, we will cash settle these swaps for an amount equal to their fair value on the stated termination dates.

On December 31, 2009 and 2008, our interest rate swaps and related balances were as follows (dollars in thousands):

	<u>December 31, 2009</u>		<u>December 31, 2008</u>	
	<u>Interest Rate Swaps</u>	<u>Dedesignated Interest Rate Swaps</u>	<u>Interest Rate Swaps</u>	<u>Dedesignated Interest Rate Swaps</u>
Notional	\$ 150,000	\$ 250,000	\$ 150,000	\$ 250,000
Weighted average fixed interest rate	5.04%	5.67%	5.04%	5.67%
Maximum terms in years	7.0	1.0 ^(a)	8.0	1.0
Current derivative assets	\$ -	\$ -	\$ -	\$ -
Non-current derivative assets	\$ -	\$ -	\$ -	\$ -
Current derivative liabilities	\$ 6,342	\$ 38,787	\$ 5,740	\$ 94,440
Non-current derivative liabilities	\$ 9,075	\$ -	\$ 22,495	\$ -
Pre-tax accumulated other comprehensive (loss)	\$ (15,417)	\$ -	\$ (28,235)	\$ -
Pre-tax gain (loss)	\$ -	\$ 55,653	\$ -	\$ (94,440)

(a) Reflects the amended mandatory early termination dates of the nine and nineteen year swaps. If the mandatory early termination dates are not extended, the swaps will require cash settlement based on the swap value on the termination date.

Based on December 31, 2009 market interest rates and balances, a loss of approximately \$6.3 million would be realized and reported in pre-tax earnings during the next twelve months associated with our interest rate swaps that have been designated as hedges. Estimated and realized losses will change during the next twelve months as market interest rates fluctuate.

Foreign Exchange Contracts

Our Energy Marketing Segment conducts its gas marketing in the United States and Canada. Transactions in Canada are generally transacted in Canadian dollars and create exchange risk for us. To mitigate this risk, we enter into forward currency exchange contracts to offset earnings volatility from changes in exchange rates between the Canadian dollar and United States dollar.

The outstanding forward exchange contracts, which had a fair value of \$0 million and \$(0.2) million at December 31, 2009 and 2008, respectively, have been recorded as Derivative assets or Derivative liabilities on the accompanying Consolidated Balance Sheets. For the years ended December 31, 2009 and 2008, respectively, the unrealized foreign exchange gain was \$0.2 million and \$0.3 million. For the year ended December 31, 2009, the realized foreign currency gain was \$1.9 million, while for the year ended December 31, 2008, the amount of foreign currency (loss) was \$(1.4) million. Currency transaction gains or losses on transactions executed in Canadian dollars are recorded in Operating revenues on the accompanying Consolidated Statements of Income as incurred.

There were no forward exchange contracts outstanding at December 31, 2009. All forward exchange contracts outstanding at December 31, 2008 were as follows (dollars in thousands):

	<u>Outstanding at December 31, 2009</u>		<u>Outstanding at December 31, 2008</u>	
	<u>Notional Amounts</u>	<u>Latest Expiration (months)</u>	<u>Notional Amounts</u>	<u>Latest Expiration (months)</u>
Canadian dollars purchased	\$ -	-	\$ 52,000	1

Credit Risk

Credit risk is the risk of financial loss resulting from non-performance of contractual obligations by a counterparty. We adopted the BHCCP for the purpose of establishing guidelines, controls, and limits to manage and mitigate credit risk within risk tolerances established by our Board of Directors. In addition, we have a credit committee which includes senior executives that meet on a regular basis to review our credit activities and monitor compliance with our credit policies.

For energy marketing, production, and generation activities, we attempt to mitigate our credit exposure by conducting business primarily with investment grade companies, setting tenor and credit limits commensurate with counterparty financial strength, obtaining master netting agreements, and mitigating credit exposure with less creditworthy counterparties through parental guarantees, prepayments, letters of credit, and other security agreements.

We perform ongoing credit evaluations of our customers and adjust credit limits based upon payment history and the customer's current creditworthiness, as determined by review of their current credit information. We maintain a provision for estimated credit losses based upon historical experience and any specific customer collection issue that is identified.

At December 31, 2009, our credit exposure (exclusive of retail customers of the regulated utilities) was concentrated primarily among investment grade companies. Approximately 77% of the credit exposure was with investment grade companies. The remaining credit exposure was with non-investment grade or non-rated counterparties, of which a portion was supported through letters of credit, prepayments or parental guarantees.

(4) FAIR VALUE MEASUREMENTS

Accounting standards for fair value measurements require, among other things, enhanced disclosures regarding assets and liabilities carried at fair value and also provide a single definition of fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. As permitted under accounting standards for fair value measurements, we utilize a mid-market pricing convention (the mid-point price between bid and ask prices) as a practical expedient for valuing a significant portion of the assets and liabilities measured and reported at fair value.

Disclosures are required based on a fair value hierarchy that prioritizes the inputs used to measure fair value. The fair value hierarchy ranks the quality and reliability of the information used to determine fair values giving the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (level 1 measurements) and the lowest priority to unobservable inputs (level 3 measurements). We are able to classify fair value balances based on the observability of inputs.

Financial assets and liabilities carried at fair value are classified and disclosed in one of the following three categories:

Level 1 - Unadjusted quoted prices available in active markets that are accessible at the measurement date for identical unrestricted assets or liabilities. This level primarily consists of financial instruments such as exchange-traded securities and listed derivatives.

Level 2 - Pricing inputs include quoted prices for identical or similar assets and liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability and inputs that are derived principally from or corroborated by observable market data by correlation or other means.

Level 3 - Pricing inputs include significant inputs that are generally less observable from objective sources. These inputs reflect management's best estimate of fair value using their own judgments about the assumptions a market participant would use in pricing the asset or liability.

Assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. Our assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect their placement within the fair value hierarchy levels. The following tables set forth, by level within the fair value hierarchy, our assets and liabilities that were accounted for at fair value on a recurring basis as of December 31, 2009 and 2008 (in thousands):

Recurring Fair Value Measures

At Fair Value as of December 31, 2009

	<u>Level 1</u>	<u>Level 2</u>	<u>Level 3</u>	<u>Counterparty Netting and Cash Collateral</u> ^(a)	<u>Total</u>
Assets:					
Commodity derivatives	\$ -	\$ 154,205	\$ 4,879	\$ (117,560)	\$ 41,524
Money market fund	6,000	-	-	-	6,000
Total	\$ 6,000	\$ 154,205	\$ 4,879	\$ (117,560)	\$ 47,524
Liabilities:					
Commodity derivatives	\$ -	\$ 133,604	\$ 5,435	\$ (124,078)	\$ 14,961
Interest rate swaps	-	54,204	-	-	54,204
Total	\$ -	\$ 187,808	\$ 5,435	\$ (124,078)	\$ 69,165

Recurring Fair Value Measures

At Fair Value as of December 31, 2008

	<u>Level 1</u>	<u>Level 2</u>	<u>Level 3</u>	<u>Counterparty Netting and Cash Collateral</u> ^(a)	<u>Total</u>
Assets:					
Commodity derivatives	\$ -	\$ 267,932	\$ 28,407	\$ (208,952)	\$ 87,387
Liabilities:					
Commodity derivatives	\$ -	\$ 211,672	\$ 12,009	\$ (201,381)	\$ 22,300
Foreign currency derivatives	-	227	-	-	227
Interest rate swaps	-	122,675	-	-	122,675
Total	\$ -	\$ 334,574	\$ 12,009	\$ (201,381)	\$ 145,202

(a) A master netting agreement is an agreement between two parties who have multiple contracts with each other that provides for the net settlement of all contracts in the event of default on or termination of any one contract. When the right of offset exists, accounting standards permit the netting of receivables and payables under a legally enforceable master netting agreement between counterparties. Offsetting of fair value amounts recognized for the right to reclaim or the obligation to return cash collateral against fair value amounts recognized for derivative instruments executed with the same counterparty under a master netting agreement is also permitted. Cash collateral on deposit in margin accounts at December 31, 2009 and December 31, 2008 totaled a net \$6.5 million and \$(7.6) million, respectively.

The following tables present the changes in level 3 recurring fair value for the years ended December 31, 2009 and 2008 (in thousands):

Commodity DerivativesYear Ended December 31,
2009 2008

Balance at beginning of year	\$ 16,398	\$ 6,422
Realized and unrealized (losses) gains	(10,709)	11,059
Purchases, issuance and (settlements)	(164)	(1,083)
Transfers in and/or (out) of level 3 ^(a)	(6,081)	-
Balances at year end	\$ (556)	\$ 16,398
Changes in unrealized (losses) gain relating to instruments still held as of year end	\$ (1,836)	\$ 1,886

(a) Transfers into level 3 represent existing assets and liabilities that were previously categorized as a higher level for which the inputs became unobservable. Transfers out of level 3 represent existing assets and liabilities that were previously classified as level 3 for which the lowest significant input became observable during the period.

Gains and losses (realized and unrealized) for level 3 commodity derivatives are included in Operating revenues on the Consolidated Statements of Income. We believe an analysis of commodity derivatives classified as level 3 needs to be undertaken with the understanding that these items may be economically hedged as part of a total portfolio of instruments that may be classified in level 1 or 2, or with instruments that may not be accounted for at fair value. Accordingly, gains and losses associated with level 3 balances may not necessarily reflect trends occurring in the underlying business. Further, unrealized gains and losses for the period from level 3 items may be offset by unrealized gains and losses in positions classified in level 1 or 2, as well as positions that have been realized during the quarter.

As required by accounting standards for derivatives and hedging, fair values within the following tables are presented on a gross basis and do not reflect the netting of asset and liability positions permitted in accordance with accounting standards for offsetting and under terms of our master netting agreements. Further, the amounts do not include net cash collateral of \$6.5 million on deposit in margin accounts at December 31, 2009 to collateralize certain financial instruments, which is included in Derivative assets - current. Therefore, the gross balances are not indicative of either our actual credit exposure or net economic exposure. Additionally, the amounts below will not agree with the amounts presented on our Consolidated Balance Sheets, nor will they agree to the fair value measurements presented in Note 3. The following table presents the fair value and balance sheet classification of our derivative instruments as of December 31, 2009 (in thousands):

Fair Value as of December 31, 2009

	<u>Balance Sheet Location</u>	<u>Fair Value of Asset Derivatives</u>	<u>Fair Value of Liability Derivatives</u>
Derivatives designated as hedges:			
Commodity derivatives	Derivative assets - current	\$ 4,163	\$ 2,977
Commodity derivatives	Derivative assets - non-current	72	-
Commodity derivatives	Derivative liabilities - current	16	801
Commodity derivatives	Derivative liabilities - non-current	-	55
Interest rate swaps	Derivative liabilities - current	-	6,342
Interest rate swaps	Derivative liabilities - non-current	-	9,075
Total derivatives designated as hedges		<u>\$ 4,251</u>	<u>\$ 19,250</u>
Derivatives not designated as hedges:			
Commodity derivatives	Derivative assets - current	\$ 135,807	\$ 103,035
Commodity derivatives	Derivative assets - non-current	6,490	2,785
Commodity derivatives	Derivative liabilities - current	19,089	33,069
Commodity derivatives	Derivative liabilities - non-current	946	3,815
Interest rate swap	Derivative liabilities - current	-	38,787
Total derivatives not designated as hedges		<u>\$ 162,332</u>	<u>\$ 181,491</u>

A description of our derivative activities is discussed in Note 3. The following tables present the impact that derivatives had on our Consolidated Statements of Income for the year ended December 31, 2009.

Fair Value Hedges

The impact of commodity contracts designated as fair value hedges and the related hedged items on our accompanying Consolidated Statements of Income for the year ended December 31, 2009 is presented as follows (in thousands):

<u>Derivatives in Fair Value Hedging Relationships</u>	<u>Location of Gain/(Loss) on Derivatives Recognized in Income</u>	<u>Year Ended December 31, 2009 Amount of Gain/(Loss) on Derivatives Recognized in Income</u>
Commodity derivatives	Operating revenue	\$ 8,148
Fair value adjustment for natural gas inventory designated as the hedged item	Operating revenue	(9,064)
Total		<u>\$ (916)</u>

Cash Flow Hedges

The impact of cash flow hedges on our Consolidated Statements of Income and Balance Sheets for the year ended December 31, 2009 is presented as follows (in thousands):

Derivatives in Cash Flow Hedging Relationships	Amount of Gain/(Loss) Recognized in AOCI Derivative (Effective Portion)	Location of Gain/(Loss) Reclassified from AOCI into Income (Effective Portion)	Amount of Gain/(Loss) Reclassified from AOCI into Income (Effective Portion)	Location of Gain/(Loss) Recognized in Income on Derivative (Ineffective Portion)	Amount of Gain/(Loss) Recognized in Income on Derivative (Ineffective Portion)
Interest rate swaps	\$ 12,818	Interest expense	\$ (3,292)		\$ -
Commodity derivatives	(21,070)	Operating revenue	23,102	Operating revenue	(1,394)
Total	\$ (8,252)		\$ 19,810		\$ (1,394)

Derivatives Not Designated as Hedge Instruments

The impact of derivative instruments that have not been designated as hedging instruments on our Consolidated Statements of Income for the year ended December 31, 2009 is as follows (in thousands):

Derivatives Not Designated as Hedging Instruments	Location of Gain/(Loss) on Derivatives Recognized in Income	Year Ended December 31, 2009 Amount of Gain/(Loss) on Derivatives Recognized in Income
Commodity derivatives	Operating revenue	\$ (27,280)
Interest rate swap	Unrealized gain (loss) on interest rate swap	55,653
Foreign currency contracts	Operating revenue	227
		<u>\$ 28,600</u>

(5) FAIR VALUE OF FINANCIAL INSTRUMENTS

The estimated fair values of our financial instruments at December 31, are as follows (in thousands):

	2009		2008	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
Cash and cash equivalents	\$ 112,901	\$ 112,901	\$ 168,491	\$ 168,491
Restricted cash	\$ 17,502	\$ 17,502	\$ -	\$ -
Derivative financial instruments - assets	\$ 41,524	\$ 41,524	\$ 82,867	\$ 82,867
Derivative financial instruments - liabilities	\$ 69,165	\$ 69,165	\$ 140,682	\$ 140,682
Notes payable	\$ 164,500	\$ 164,500	\$ 703,800	\$ 703,800
Long-term debt, including current maturities	\$ 1,051,157	\$ 1,123,703	\$ 503,330	\$ 456,322

The following methods and assumptions were used to estimate the fair value of each class of our financial instruments.

Cash and Cash Equivalents and Restricted Cash

The carrying amount approximates fair value due to the short maturity of these instruments.

Derivative Financial Instruments

These instruments are carried at fair value. The Company's fair value measurements are developed using a variety of inputs by its risk management group, which is independent of the trading function. These inputs include unadjusted quoted prices where available; prices published by various third-party providers; and, when necessary, internally developed adjustments. In many cases, the internally developed prices are corroborated with external sources. Certain Company transactions take place in markets with limited liquidity and limited price visibility. Descriptions of the various instruments we use and the valuation method employed are included in Notes 3 and 4.

Notes Payable

The carrying amount approximates fair value due to their variable interest rates with short reset periods.

Long-Term Debt

The fair value of our long-term debt is estimated based on quoted market rates for debt instruments having similar maturities and similar debt ratings. The first mortgage bonds issued by Black Hills Power and Cheyenne Light are either currently not callable or are subject to make-whole provisions which would eliminate any economic benefits for us to call the bonds.

(6) PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment at December 31, consisted of the following (dollars in thousands):

Utilities Group

<u>Electric Utilities</u>	<u>2009</u>	2009 Weighted Average Useful <u>Life</u>	<u>2008</u>	2008 Weighted Average Useful <u>Life</u>	<u>Lives (in years)</u>

(7) JOINTLY OWNED FACILITIES

Oil and Gas

- Through our BHEP subsidiary, we own a 44.7% non-operating interest in the Newcastle Gas Plant (the Gas Plant). The natural gas processing facility gathers and processes approximately 3,000 Mcf/day of gas, primarily from the Finn-Shurley Field in Wyoming. We receive our proportionate share of the Gas Plant's net revenues and are committed to pay our proportionate share of additions, replacements and operating and maintenance expenses. As of December 31, 2009, our investment in the Gas Plant included \$4.2 million in plant and equipment and is included in the corresponding caption in the accompanying Consolidated Balance Sheets. This asset is included in the asset pool being depleted and therefore accumulated depreciation is not separated by asset. Our share of revenues of the Gas Plant was \$2.3 million, \$4.1 million and \$2.8 million for the years ended December 31, 2009, 2008 and 2007, respectively. Our share of direct expenses was \$0.4 million, \$0.4 million and \$0.3 million for each of the years ended December 31, 2009, 2008 and 2007. These items are included in the corresponding categories of operating revenues and expenses in the accompanying Consolidated Statements of Income.

Utility Plant

- Our subsidiary, Black Hills Power, owns a 20% interest in the Wyodak plant (the "Plant"), a 362 MW coal-fired electric generating station located in Campbell County, Wyoming. PacifiCorp owns the remaining 80% and operates the Plant. Black Hills Power receives 20% of the Plant's capacity and is committed to pay 20% of its additions, replacements and operating and maintenance expenses. Black Hills Power's share of direct expenses of the Plant was \$8.0 million, \$8.0 million and \$7.3 million for the years ended December 31, 2009, 2008 and 2007, respectively, and are included in the corresponding categories of operating expenses in the accompanying Consolidated Statements of Income. As discussed in Note 19, our Coal Mining subsidiary, WRDC, supplies PacifiCorp's share of the coal to the Plant under an agreement expiring in 2022. This coal supply agreement is collateralized by a mortgage on and a security interest in some of WRDC's coal reserves. Under the coal supply agreement, PacifiCorp is obligated to purchase a minimum of 1.5 million tons of coal each year of the contract term, subject to adjustment for planned outages. WRDC's sales to the Plant were \$22.8 million, \$23.3 million and \$21.5 million for the years ended December 31, 2009, 2008 and 2007, respectively.
- Black Hills Power also owns a 35% interest in, and is the operator of, the Converter Station Site and South Rapid City Interconnection (the transmission tie), an AC-DC-AC transmission tie. Basin Electric owns the remaining 65%. The transmission tie provides an interconnection between the Western and Eastern transmission grids, which provides us with access to both the WECC region and the MAPP region. The total transfer capacity of the tie is 400 MW - 200 MW West to East and 200 MW from East to West. Black Hills Power is committed to pay 35% of the additions, replacements and operating and maintenance expenses. For the year ended December 31, 2009, 2008 and 2007, Black Hills Power's share of direct expenses was \$0.1 million for each year.
- On April 9, 2009, Black Hills Power sold to MDU a 25% undivided ownership interest in its 110 MW Wygen III generation facility currently under construction. At closing, MDU made a payment to us for its 25% share of the costs to date on the ongoing construction of the facility. MDU reimburses Black Hills Power monthly for 25% of the total costs paid to complete the project.
- In January 2009, Black Hills Wyoming sold a 23.5% undivided ownership interest in its 90 MW Wygen I to MEAN for a price of \$51.0 million, which was based on the current replacement cost for the coal-fired plant. In connection with this sale transaction, we entered into agreements with MEAN under which it will make payments for costs associated with administrative services, plant operations and coal supply provided by our Coal Mining subsidiary during the life of the facility. We retain responsibility for plant operations following the transaction. Black Hills Wyoming's share of direct

expenses of the Plant was \$11.0 million in 2009 and are included in the corresponding categories of Operating expenses in the accompanying Consolidated Statements of Income.

At December 31, 2009, our interests in jointly-owned generating facilities and transmission systems were (dollars in thousands):

	<u>Ownership %</u>	<u>Plant in Service</u>	<u>Construction Work in Progress</u>	<u>Accumulated Depreciation</u>
Wyodak Plant	20.0%	\$ 79,822	\$ 570	\$ 52,233
Transmission Tie	35.0%	19,615	-	3,752
Wygen I	76.5%	102,559	535	17,229
Wygen III	75.0%	-	175,586	-
		<u>\$ 201,996</u>	<u>\$ 176,691</u>	<u>\$ 73,214</u>

(8) LONG-TERM DEBT

Long-term debt outstanding at December 31 is as follows (in thousands):

	<u>2009</u>	<u>2008</u>
Senior unsecured notes:		
Senior unsecured notes at 6.5% due 2013	\$ 225,000	\$ 225,000
Unamortized discount on notes due 2013	(99)	(128)
Senior unsecured notes at 9.0% due 2014	250,000	-
Total senior unsecured notes	<u>474,901</u>	<u>224,872</u>
First mortgage bonds:		
<u>Electric Utilities</u>		
<i>Black Hills Power:</i>		
8.06% due 2010	30,000	30,000
9.49% due 2018	2,520	2,810
9.35% due 2021	19,980	21,645
7.23% due 2032	75,000	75,000
6.125% due 2039	180,000	-
Unamortized discount on 6.125% bonds	(124)	-
<i>Cheyenne Light:</i>		
6.67% due 2037	110,000	110,000

Industrial development revenue bonds due 2027, variable rate, at 0.32% ^(a)	10,000	10,000
Total first mortgage bonds	<u>434,376</u>	<u>256,455</u>
Other long-term debt:		
Pollution control revenue bonds at 4.8% due 2014	6,450	6,450
Pollution control revenue bonds at 5.35% due 2024	12,200	12,200
Other long-term debt	3,230	3,353
Total other long-term debt	<u>21,880</u>	<u>22,003</u>
Project financing floating rate debt:		
Black Hills Wyoming project due 2016, variable debt rate at 3.49% ^(a)	120,000	-
Total long-term debt	1,051,157	503,330
Less current maturities	(35,245)	(2,078)
Net long-term debt	<u>\$ 1,015,912</u>	<u>\$ 501,252</u>

(a) Interest rates are presented as of December 31, 2009.

Scheduled maturities of long-term debt, excluding amortization of premium or discount, for the next five years are: \$35.2 million in 2010, \$7.1 million in 2011, \$4.4 million in 2012, \$230.9 million in 2013, \$264.4 million in 2014 and \$509.2 million thereafter.

Certain debt instruments of the Company and its subsidiaries contain restrictions and covenants, all of which the Company and its subsidiaries were in compliance with at December 31, 2009.

Substantially all of the tangible utility property of Black Hills Power and Cheyenne Light is subject to the lien of indentures securing their first mortgage bonds. First mortgage bonds of Black Hills Power and Cheyenne Light may be issued in amounts limited by property, earnings and other provisions of the mortgage indentures.

Debt Offering

In May 2009, we issued a \$250 million aggregate principal amount of senior unsecured notes due in 2014 pursuant to a public offering. The notes were priced at par and carry a fixed interest rate of 9%. We received proceeds, net of underwriting fees, of \$248.5 million. Proceeds were used to pay down the Acquisition Facility. Deferred financing costs of \$2.3 million related to the offering were capitalized and are being amortized over the term of the debt. Amortization of these deferred financing costs is included in interest expense and for the year ended December 31, 2009 was approximately \$0.3 million.

Industrial Development Revenue Bonds

Cheyenne Light completed a \$17 million weekly variable rate refunding bond issuance on September 3, 2009. The new issue replaces existing debt and converted the bond credit support structure from an AMBAC Financial Group insurance policy to a direct-pay letter of credit issued by Wells Fargo Bank. Laramie County, Wyoming was the tax-exempt conduit issuer for this transaction. The bonds were issued in two series: a \$10.0 million series maturing March 1, 2027 and a \$7.0 million series maturing September 1, 2021. The principal amounts and maturity dates did not change from the original financing. Including the letter of credit fees and other issuance costs, the all-in rate as of December 31, 2009 was approximately 2.69%.

Under the terms of our Reimbursement Agreement with the letter of credit provider, Cheyenne Light is required to maintain a consolidated debt to capitalization ratio of no more than 0.60 to 1.00 and a consolidated interest coverage ratio greater than or equal to 2.50 to 1.00. If Cheyenne Light fails to meet these covenants, subject to a 30-day cure period, it would constitute an event of default and the bank would have the right to cause the bonds and related outstanding obligations to become immediately due and payable.

Black Hills Power Bond Issuance

In October 2009, Black Hills Power completed a \$180 million first mortgage bond issuance. The bonds were priced at 99.931% of par with a reoffer yield of 6.13%. The bonds mature on November 1, 2039 and carry an annual interest rate of 6.125%, which will be paid semi-annually. We received proceeds, net of underwriting fees, of \$178.3 million which were used to repay borrowings under the Corporate Credit Facility. Deferred financing costs of \$2.2 million were capitalized and are being amortized over the term of the bonds.

Black Hills Wyoming

On December 9, 2009, Black Hills Wyoming issued \$120 million in project financing debt. Proceeds were used to pay down short-term borrowings on our Corporate Credit Facility. The debt is secured by our ownership interest in the Wygen I plant and Gillette CT generation facility. The loan amortizes over a seven year term and matures on December 9, 2016, at which time the remaining unamortized balance of \$83.0 million is due. Principal and interest payments are made on a quarterly basis with the principal payments based on projected cash flows available for debt service. Interest is charged at LIBOR plus 3.25%. Deferred financing costs of \$6.1 million were capitalized and are being amortized over the term of the debt. Substantially all of the assets of Black Hills Wyoming are subject to the lien securing the project financing debt.

Our Black Hills Wyoming project financing is secured by our ownership interest in the Wygen I plant and by the Gillette CT generation facility. The financing places restrictions on dividends or the loaning of funds by Black Hills Wyoming, and allows it only in limited circumstances when cash flows for the projects exceed project debt service and reserve requirements. We had approximately \$39.1 million of equity at Black Hills Wyoming as of December 31, 2009.

(9) NOTES PAYABLE

Our credit facilities and debt securities contain certain restrictive financial covenants including, among others, interest expense coverage ratios, recourse leverage ratios and consolidated net worth ratios. At December 31, 2009, we were in compliance with these financial covenants. None of our facilities or debt securities contains default provisions pertaining to our credit ratings.

Corporate Credit Facility

Black Hills Corporation had a committed line of credit with various banks totaling \$525.0 million at December 31, 2009 and 2008, respectively. Our credit line is a revolving credit facility, which expires May 4, 2010. The lenders' commitments under this credit facility were increased from \$400.0 million to \$525.0 million in July 2008. We had \$164.5 million of borrowings and \$44.8 million of letters of credit and \$321.0 million of borrowings and \$60.7 million of letters of credit issued under the facility at December 31, 2009 and 2008, respectively. The cost of borrowings or letters of credit issued under the facility is determined based on our credit ratings. At our current ratings levels, the facility has an annual facility fee of 17.5 basis points, and has a borrowing spread of 70 basis points over LIBOR (which equates to a 0.93% one-month borrowing rate as of December 31, 2009). We have no compensating balance requirements associated with this credit facility.

Enserco Credit Facility

In May 2009, Enserco entered into a \$300 million committed credit facility. This credit facility expires on May 7, 2010 and is a borrowing base line of credit, which allows for the issuance of letters of credit and for borrowings. Maximum borrowings under the facility are subject to a sublimit of \$50 million. Borrowings under this facility are available under a base rate option or a Eurodollar option. The base rate option borrowing rate is 2.75% plus the higher of: (i) 0.5% above the Federal Funds Rate, or (ii) the prime rate established by Fortis Bank S.A./N.V. The Eurodollar option borrowing rate is 2.75% plus the higher of the Eurodollar Rate or the reference bank cost of funds.

At December 31, 2009, \$103.0 million of letters of credit were issued and outstanding under this facility and there were no cash borrowings outstanding. Deferred financing costs of \$2.0 million were capitalized and are amortized over the life of the facility. Amortization of deferred financing costs included in Interest expense for the year ended December 31, 2009 was approximately \$1.4 million. For the year ended December 31, 2008, under our previous uncommitted Enserco Credit Facility, amortization of deferred financing costs was \$0.6 million.

Acquisition Facility

In July 2008, in conjunction with the closing of the Aquila Transaction, we borrowed \$382.8 million under our \$1 billion bridge acquisition credit facility dated May 7, 2007. The Acquisition Facility was structured as a single-draw term loan facility for the sole purpose of financing the Aquila Transaction. During 2009, we repaid the Acquisition Facility with proceeds of \$30.2 million for the sale of 25% of the Wygen III plant to MDU, net proceeds from the \$250 million public debt offering, and with a borrowing of \$104.6 million on our Corporate Credit Facility.

(10) ASSET RETIREMENT OBLIGATIONS

Accounting standards for asset retirement obligations associated with long-lived assets requires that the present value of retirement costs for which we have a legal obligation be recorded as liabilities with an equivalent amount added to the asset cost and depreciated over an appropriate period. The liability is then accreted over time by applying an interest method of allocation to the liability. The associated ARO accretion expense is included within Depreciation, depletion and amortization on the accompanying Consolidated Statements of Income. The recording of the obligation for regulated operations has no income statement impact due to the deferral of the adjustments through the establishment of a regulatory asset pursuant to accounting standards for regulated operations. We have identified legal retirement obligations related to plugging and abandonment of natural gas and oil wells in the Oil and Gas segment, reclamation of coal mining sites at the Coal Mining segment and removal of fuel tanks, asbestos and transformers containing polychlorinated biphenyls at the regulated Electric Utilities segment and asbestos at our regulated Gas Utilities segment.

The following table presents the details of our ARO which are included on the accompanying Consolidated Balance Sheets in Other deferred credits and other liabilities (in thousands):

	Balance at <u>12/31/08</u>	Liabilities <u>Incurred</u>	Liabilities <u>Settled</u>	<u>Accretion</u>	Balance at <u>12/31/09</u>
Oil and Gas	\$ 19,623	\$ 623	\$ (239)	\$ 1,226	\$ 21,233
Coal Mining	17,699	1,882	(5,414)	1,118	15,285
Electric Utilities	2,616	-	-	288	2,904
Gas Utilities	222	-	-	19	241
Total	<u>\$ 40,160</u>	<u>\$ 2,505</u>	<u>\$ (5,653)</u>	<u>\$ 2,651</u>	<u>\$ 39,663</u>

	Balance at <u>12/31/07</u>	Liabilities <u>Incurred</u>	Liabilities <u>Settled</u>	<u>Accretion</u>	Balance at <u>12/31/08</u>
Oil and Gas	\$ 14,952	\$ 5,029	\$ (1,213)	\$ 855	\$ 19,623
Coal Mining	14,778	4,121	(1,839)	639	17,699
Electric Utilities	180	2,381*	-	55	2,616
Gas Utilities	-	213*	-	9	222
Total	<u>\$ 29,910</u>	<u>\$ 11,744</u>	<u>\$ (3,052)</u>	<u>\$ 1,558</u>	<u>\$ 40,160</u>

* This balance was recorded as part of the purchase price allocation of the Aquila acquisition (see Note 23).

We also have legally required asset retirement obligations related to certain assets within our electric and gas utility transmission and distribution systems. These retirement obligations are pursuant to an easement or franchise agreement and are only required if we discontinue our utility service under such easement or franchise agreement. Accordingly, it is not possible to estimate a time period when these obligations could be settled and therefore, a value for the cost of these obligations cannot be measured at this time.

(11) COMMON STOCK

Equity Compensation Plans

We have several employee equity compensation plans, which allow for the granting of stock, restricted stock, restricted stock units, stock options and performance shares. We had 751,996 shares available to grant at December 31, 2009.

Compensation expense is determined using the grant date fair value estimated in accordance with the provisions of accounting standards for stock compensation and is recognized over the vesting periods of the individual plans. Total stock-based compensation expense for the years ended December 31, 2009, 2008 and 2007 was \$4.0 million (\$2.6 million, after-tax), \$1.3 million (\$0.9 million, after-tax) and \$5.8 million (\$3.8 million, after-tax), respectively, and is included in Administrative and general expense on the accompanying Consolidated Statements of Income. As of December 31, 2009, total unrecognized compensation expense related to non-vested stock awards was \$5.2 million and is expected to be recognized over a weighted-average period of 1.8 years.

Stock Options

We have granted options with an option exercise price equal to the fair market value of the stock on the day of the grant. The options granted vest one-third each year for three years and expire ten years after the grant date.

A summary of the status of the stock option plans at December 31, 2009 is as follows:

	Shares (in thousands)	Weighted- Average Exercise Price	Weighted- Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Balance at January 1, 2009	435	\$ 30.01		
Granted	-	-		
Forfeited/cancelled	(3)	24.06		
Expired	(17)	23.97		
Exercised	(79)	22.05		
Balance and exercisable at December 31, 2009	336	\$ 32.24	2.9	\$ (1,885)

No options were granted for the years ended December 31, 2009, 2008 and 2007, respectively. The total intrinsic value of options (the amount by which the market price of the stock on the date of exercise exceeded the exercise price of the option) exercised during the years ended December 31, 2009, 2008 and 2007 was \$0.3 million, \$1.2 million and \$1.9 million, respectively. The total fair value of shares vested during the years ended December 31, 2009, 2008 and 2007 was immaterial. As of December 31, 2009, there was no unrecognized compensation expense related to stock options.

Net cash received from the exercise of options for the years ended December 31, 2009, 2008 and 2007 was \$1.7 million, \$2.0 million and \$4.7 million, respectively. The tax benefit realized from the exercise of shares granted for the years ended December 31, 2009, 2008 and 2007 was \$0.1 million, \$0.4 million and \$0.7 million, respectively, and was recorded as an increase to equity.

Restricted Stock and Restricted Stock Units

The fair value of restricted stock and restricted stock unit awards equals the market price of our stock on the date of grant.

The shares carry a restriction on the ability to sell the shares until the shares vest. The shares substantially vest one-third per year over three years, contingent on continued employment. Compensation cost related to the awards is recognized over the vesting period.

A summary of the status of the restricted stock and non-vested restricted stock units at December 31, 2009 is as follows:

	Stock and Stock Units (in thousands)	Weighted-Average Grant Date Fair Value
Balance at January 1, 2009	172	\$ 33.69
Granted	89	26.76
Vested	(69)	34.99
Forfeited	(6)	32.98
Balance at December 31, 2009	186	\$ 29.92

The weighted-average grant-date fair value of restricted stock and restricted stock units granted and the total fair value of shares vested during the years ended December 31, 2009, 2008 and 2007 was as follows:

	Weighted-Average Grant Date Fair Value	Total Fair Value of Shares Vested (in thousands)
2009	\$ 26.76	\$ 1,799
2008	\$ 32.39	\$ 2,061
2007	\$ 38.67	\$ 1,975

As of December 31, 2009, there was \$3.7 million of unrecognized compensation expense related to non-vested restricted stock and non-vested restricted stock units that is expected to be recognized over a weighted-average period of 1.8 years.

Performance Share Plan

Certain officers of the Company and its subsidiaries are participants in a performance share award plan, a market-based plan. Performance shares are awarded based on the Company's total shareholder return over designated performance periods as measured against a selected peer group. In addition, our stock price must also increase during the performance periods.

Participants may earn additional performance shares if the Company's total shareholder return exceeds the 50th percentile of the selected peer group. The final value of the performance shares may vary according to the number of shares of common stock that are ultimately granted based upon the performance criteria.

Outstanding Performance Periods at December 31, 2009 are as follows (in thousands):

<u>Grant Date</u>	<u>Performance Period</u>	<u>Target Grant of Shares</u>
January 1, 2007	January 1, 2007 - December 31, 2009	28
January 1, 2008	January 1, 2008 - December 31, 2010	27
January 1, 2009	January 1, 2009 - December 31, 2011	77

The performance awards are paid 50% in cash and 50% in common stock. The cash portion accrued is classified as a liability and the stock portion is classified as equity. In the event of a change-in-control, performance awards are paid 100% in cash. If it is determined that a change-in-control is probable, the equity portion of \$1.3 million at December 31, 2009 would be reclassified as a liability.

A summary of the status of the Performance Share Plan at December 31, 2009 and changes during the year ended December 31, 2009, is as follows:

	<u>Equity Portion</u>		<u>Liability Portion</u>	
	Shares (in thousands)	Weighted- Average Grant Date Fair Value	Shares (in thousands)	Weighted- Average December 31, 2009 Fair Value
Balance at January 1, 2009	42	\$ 37.51	42	
Granted	39	29.20	39	
Forfeited	(2)	35.05	(2)	
Vested	(13)	32.06	(13)	
Balance at December 31, 2009	66	\$ 33.67	66	\$ 13.31

The grant date fair value for the performance shares granted in 2009, 2008 and 2007 were determined by Monte Carlo simulation using a blended volatility of 39%, 23% and 20%, respectively, comprised of 50% historical volatility and 50% implied volatility and the average risk-free interest rate of the three-year United States Treasury security rate in effect as of the grant date. The weighted-average grant-date fair value of performance share awards granted in the years ended December 31, 2009, 2008 and 2007 was as follows:

	<u>Weighted Average Grant Date Fair Value</u>	
2009	\$	29.20
2008	\$	46.00
2007	\$	34.17

Performance plan payouts have been as follows (dollars and shares in thousands):

<u>Performance Period</u>	<u>Year of Payment</u>	<u>Stock Issued</u>	<u>Cash Paid</u>	<u>Total Intrinsic Value</u>
January 1, 2006 to December 31, 2008	2009	-	\$ -	\$ -
January 1, 2005 to December 31, 2007	2008	35	\$ 1,526	\$ 3,051
March 1, 2004 to December 31, 2006	2007	4	\$ 160	\$ 320

On January 27, 2010, the Compensation Committee of our Board of Directors determined that the plan criteria for the January 1, 2007 to December 31, 2009 performance period was not met. As a result, there will be no payout for this performance period.

As of December 31, 2009, there was \$1.5 million of unrecognized compensation expense related to outstanding performance share plans that is expected to be recognized over a weighted-average period of 1.9 years.

Dividend Reinvestment and Stock Purchase Plan

We have a Dividend Reinvestment and Stock Purchase Plan under which shareholders may purchase additional shares of common stock through dividend reinvestment and/or optional cash payments at 100% of the recent average market price. We have the option of issuing new shares or purchasing the shares on the open market. In March 2009, we began issuing new shares. In 2009, 143,333 new shares were issued at a weighted-average price of \$21.63. There are 295,983 shares of unissued common stock available for future offerings under the Plan.

Other Plans

We issued 47,331 fully-vested shares of common stock with an intrinsic value of \$0.7 million in the year ended December 31, 2009 to certain key employees under the Short-term Annual Incentive Plan, a performance-based plan. The payout was fully accrued at December 31, 2008. We issued 32,568 and 33,143 shares of common stock in 2008 and 2007, respectively, under the Short-term Annual Incentive Plan.

In addition, we will issue common stock with an intrinsic value of approximately \$0.4 million in 2010 for the 2009 Short-term Annual Incentive Plan.

Private Placement of Common Stock

In 2007, we completed the issuance and sale of approximately 4.17 million shares of common stock at a price of \$36.00 per share in a private placement offering. We used approximately \$145.6 million of net proceeds from this offering for debt reduction. Subsequently, the shares were registered for resale under the Securities Act of 1933 and at December 31, 2009, the shares are freely tradable by non-affiliates of the Company.

Issuance of Unregistered Securities

In 2008, we issued 593,804 common shares as additional consideration associated with the Earn-out Litigation described in Note 1. No additional consideration was received in exchange for the earn-out shares.

Dividend Restrictions

Our revolving credit facility contains restrictions on the payment of cash dividends upon a default or event of default. An event of default would be deemed to have occurred if we did not meet certain financial covenants. The most restrictive financial covenants include the following: interest expense coverage ratio of not less than 2.5 to 1.0; a recourse leverage ratio not to exceed 0.65 to 1.00; and a minimum consolidated net worth of \$625 million plus 50% of aggregate consolidated net income since January 1, 2005. As of December 31, 2009, we were in compliance with the above covenants.

Due to our holding company structure, substantially all of our operating cash flows are provided by dividends paid or distributions made by our subsidiaries. The cash to pay dividends to our shareholders is derived from these cash flows. As a result, certain statutory limitations or regulatory or financing agreements could affect the levels of distributions allowed to be made by our subsidiaries. The following restrictions on distributions from our subsidiaries existed at December 31, 2009:

- Our utility subsidiaries are generally limited to the amount of dividends allowed by state regulatory authorities to be paid to us as a utility holding company and also may have further restrictions under the Federal Power Act. As of December 31, 2009, the restricted net assets at our regulated Electric and regulated Gas Utilities were approximately \$277.0 million.
- In 2009, one of the covenants to the Enserco Credit Facility was amended to temporarily increase the allowable rolling twelve month Net Cumulative Loss as calculated on a non-GAAP basis and temporarily restrict all dividends or loans to the Company. This amendment expired on December 31, 2009 and is not a requirement under the Facility subsequent to December 31, 2009. Upon review of the covenants, restricted net assets at Enserco total \$205.8 million for this stand-alone Enserco Credit Facility at December 31, 2009.

Treasury Shares

We acquired 6,088 shares, 15,107 shares and 767 shares of treasury stock related to forfeitures of unvested restricted stock in 2009, 2008 and 2007, respectively, and 21,569 shares, 17,233 shares and 16,418 shares related to the share withholding for the payment of taxes associated with the vesting of restricted shares and stock option exercise stock swaps in 2009, 2008 and 2007, respectively.

We utilized 59,006 shares, 38,073 shares and 8,030 shares of treasury stock in 2009, 2008 and 2007, respectively, related to grants from the different equity plans.

(12) IMPAIRMENT OF LONG LIVED ASSETS, GOODWILL AND CAPITALIZED DEVELOPMENT COSTS

Oil and Gas Segment

As a result of lower natural gas prices at March 31, 2009, we recorded a \$43.3 million pre-tax non-cash ceiling test impairment of oil and gas assets included in the Oil and Gas segment. The write-down in the net carrying value of our natural gas and crude oil properties was recorded in Impairment of long-lived assets on the accompanying Consolidated Statements of Income and was based on the March 31, 2009 NYMEX price of \$3.63 per Mcf, adjusted to \$2.23 per Mcf at the wellhead, for natural gas; and NYMEX price of \$49.66 per barrel, adjusted to \$45.32 per barrel at the wellhead, for crude oil.

Also, as a result of low crude oil and natural gas prices at the end of 2008, we recorded a \$91.8 million pre-tax non-cash ceiling test impairment charge of oil and gas assets included in the Oil and Gas segment. The write-down in the net carrying value of our natural gas and crude oil property was recorded as impairment expense and was based on the December 31, 2008 NYMEX price of \$5.71 per Mcf, adjusted to \$4.44 per Mcf at the wellhead, for natural gas; and \$44.60 per barrel, adjusted to \$32.74 per barrel at the wellhead, for crude oil.

Idaho Operation

In December 2007, the Rupert and Glens Ferry partnerships, in which we have 50% ownership interests, impaired the carrying amounts of their property, plant and equipment to reflect the partnerships' assessment of the recoverability of their respective carrying amounts. We account for these investments using the equity method of accounting. Accordingly, our carrying amount for these investments was reduced by \$3.9 million to reflect the increased losses from the partnerships' impairment charges. In addition, we wrote off \$0.6 million of net goodwill impairment directly related to our investments in the partnerships. At December 31, 2007, our remaining carrying amount for these partnership investments was nominal. Our investment in the Rupert and Glens Ferry partnership is included in the Power Generation segment.

Ontario Operations

During September 2007, we assessed the recoverability of the carrying value of the Ontario power plant due to the pending thermal host contract expiration without a long-term extension. The carrying amount of the assets tested for impairment was \$1.3 million. The assessment resulted in an impairment charge of \$1.3 million, primarily for net property, plant and equipment and intangible assets. This charge reflects the amount by which the carrying value of the facility exceeded its estimated fair value determined by future discounted cash flow estimates. In addition, \$1.4 million was accrued for a contract termination payment and other related

costs. These charges were included as a component of Operating expenses on the accompanying Consolidated Statements of Income. Operating results from the Ontario plant are included in the Power Generation segment through December 31, 2009, when the plant was decommissioned.

(13) OPERATING LEASES

We have entered into agreements relating to vehicle leases and office facility leases. Rental expense incurred under these operating leases was \$4.5 million, \$3.5 million and \$0.8 million for the years ended December 31, 2009, 2008 and 2007, respectively.

The following is a schedule of future minimum payments required under the operating lease agreements (in thousands):

2010	\$	2,612
2011		1,879
2012		1,669
2013		1,271
2014		1,237
Thereafter		6,532
	\$	<u>15,200</u>

(14) INCOME TAXES

Income tax expense (benefit) from continuing operations for the years indicated was (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Current:			
Federal	\$ (6,124)	\$ (215,957)	\$ 22,605
State	(222)	(1,330)	246
Foreign ⁽¹⁾	(82)	1,179	2,114
	<u>(6,428)</u>	<u>(216,108)</u>	<u>24,965</u>
Deferred:			
Federal	40,219	185,614	7,405
State	(108)	1,414	349
Tax credit amortization	(368)	(315)	(292)
	<u>39,743</u>	<u>186,713</u>	<u>7,462</u>
	<u>\$ 33,315</u>	<u>\$ (29,395)</u>	<u>\$ 32,427</u>

(1) Foreign taxes represent income taxes incurred through our Canadian activities.

2008 amounts reflect the income tax impacts associated with our like-kind exchange tax planning structure. The tax planning structure allowed us to defer approximately \$185 million of income taxes related to the IPP Transaction which would have been payable for the 2008 tax year without such a structure.

The temporary differences, which gave rise to the net deferred tax liability, were as follows (in thousands):

Years ended December 31,	<u>2009</u>	<u>2008</u>
Deferred tax assets, current:		
Asset valuation reserves	\$ 1,651	\$ 2,366
Mining development and oil exploration	779	896
Unbilled revenue	581	581
Employee benefits	4,993	5,839
Items of other comprehensive income	3,872	1,717
Derivative fair value adjustments	12,596	33,054
Other deferred tax assets, current	2,940	142
Total deferred tax assets, current	<u>27,412</u>	<u>44,595</u>
Deferred tax liabilities, current:		
Prepaid expenses	2,121	2,139
Derivative fair value adjustments	3,740	12,252
Items of other comprehensive income	3,273	6,566
Deferred costs	5,132	10,369
Other deferred tax liabilities, current	8,623	3,025
Total deferred tax liabilities, current	<u>22,889</u>	<u>34,351</u>
Net deferred tax asset, current	<u>\$ 4,523</u>	<u>\$ 10,244</u>
Deferred tax assets, non-current:		
Employee benefits	\$ 17,191	\$ 17,838

State net operating loss	2,813	342
Items of other comprehensive income	10,535	15,872
Foreign tax credit carryover	2,966	3,591
Net operating loss (net of valuation allowance)	8,023	7,816
Asset impairment	47,557	32,607
Derivative fair value adjustment	902	-
Other deferred tax assets, non-current	10,622	8,794
Total deferred tax assets, non-current	<u>124,450</u>	<u>115,911</u>
Deferred tax liabilities, non-current:		
Accelerated depreciation, amortization and other plant-related differences	237,578	200,119
Regulatory assets	34,097	36,088
Mining development and oil exploration	101,407	94,994
Deferred costs	9,491	352
Derivative fair value adjustments	1,254	221
Items of other comprehensive income	2,657	4,139
Other deferred tax liabilities, non-current	-	3,605
Total deferred tax liabilities, non-current	<u>386,484</u>	<u>339,518</u>
Net deferred tax liability, non-current	<u>\$ 262,034</u>	<u>\$ 223,607</u>
Net deferred tax liability	<u>\$ 257,511</u>	<u>\$ 213,363</u>

The following table reconciles the change in the net deferred income tax liability from December 31, 2008 to December 31, 2009 to deferred income tax expense (in thousands):

	<u>2009</u>	<u>2008</u>
Net change in net deferred income tax liability from the preceding table	\$ 44,148	\$ 10,140
Deferred taxes associated with other comprehensive income	(941)	(1,773)
Deferred taxes related to net operating loss from acquisition	-	2,071
Deferred taxes associated with IPP Transaction	-	48,131
Deferred taxes related to regulatory assets and liabilities	(3,565)	(1,333)
Deferred taxes related to acquisition	7,992	13,422
Deferred taxes associated with property basis differences	(9,013)	114,170
Other net deferred income tax liability	1,122	1,885
	<hr/>	<hr/>
Deferred income tax expense for the period	\$ 39,743	\$ 186,713
	<hr/>	<hr/>

The effective tax rate differs from the federal statutory rate for the years ended December 31, as follows:

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Federal statutory rate	35.0%	(35.0)%	35.0%
State income tax (net of federal tax effect)	(0.2)	-	0.4
Amortization of excess deferred and investment tax credits	(0.3)	(0.4)	(0.4)
Percentage depletion in excess of cost	(0.8)	-	(1.3)
Equity AFUDC	(1.7)	(1.4)	(1.6)
State exam tax adjustment*	-	-	(0.6)
Tax credits	-	-	(0.3)
Accounting for uncertain tax positions adjustment	(2.1)	-	-
Other tax differences	(0.2)	0.8	(1.1)
	<hr/>	<hr/>	<hr/>
	29.7%	(36.0)%	30.1%

* As a result of state tax exam settlements for the 2001-2003 tax years, a tax benefit of approximately \$0.7 million (net of the federal tax effect) was recorded in 2007.

At December 31, 2009, we had the following remaining NOL carryforwards which were acquired as part of our 2003 acquisition of Mallon Resources Corporation (Mallon) (in thousands):

	<u>Net Operating Loss Carryforward</u>	<u>Expiration Year</u>
\$	1,685	2021
\$	17,146	2022
\$	3,104	2023

As of December 31, 2009, we had a valuation allowance of \$1.2 million against these NOL carryforwards. Ultimate usage of these NOL's depends upon our future tax filings. If the valuation allowance is adjusted due to higher or lower than anticipated utilization of the NOL's, the offsetting amount would affect our financial reporting basis in the acquired Mallon properties.

We adopted the accounting standards for uncertain tax positions on January 1, 2007 which clarifies the accounting for uncertainty in income taxes recognized in an enterprise's financial statements in accordance with accounting standards for income taxes and prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken. As a result of this implementation, we recognized an approximate \$0.7 million benefit from a decrease in the liability for unrecognized tax benefits. This benefit was accounted for as an adjustment to the January 1, 2007 balance of retained earnings.

The following table reconciles the total amounts of unrecognized tax benefits at the beginning and end of the period included in Other deferred credits and other liabilities on the accompanying Consolidated Balance Sheets (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Beginning balance at December 31	\$ 120,022	\$ 75,770	\$ 72,583
Additions for prior year tax positions	5,752	5,015	4,719
Reductions for prior year tax positions	(18,686)	(72,948)	(46)
Additions for current year tax positions	-	112,185	623
Settlements	-	-	(2,109)
Ending balance at December 31	107,088	120,022	75,770
Income tax refund receivable related to uncertain tax positions above	(59,136)	(60,612)	-
Net liability for uncertain tax positions	<u>\$ 47,952</u>	<u>\$ 59,410</u>	<u>\$ 75,770</u>

The total amount of unrecognized tax benefits that, if recognized, would impact the effective tax rate is approximately \$0.4 million.

It is our continuing practice to recognize interest and/or penalties related to income tax matters in income tax expense. During the years ended December 31, 2009, 2008 and 2007, we recognized approximately \$1.2 million, \$0.5 million and \$0.1 million, respectively of interest expense. We had approximately \$0.8 million accrued for interest payable and \$0.4 million accrued for interest receivable at December 31, 2009 and 2008, respectively.

We file income tax returns with the IRS, various state jurisdictions and Canada. We are currently under examination by the IRS for the 2004, 2005 and 2006 tax years. We remain subject to examination by Canadian income tax authorities for tax years as early as 1999.

We do not anticipate that total unrecognized tax benefits will significantly change due to the settlement of any audits or the expiration of statute of limitations prior to December 31, 2010.

In 2005, Canadian income tax returns were filed for the years of 1999 - 2003. Excess foreign tax credits were generated and are available to offset United States federal income taxes. At December 31, 2009, we had the following remaining foreign tax credit carryforwards (in thousands):

Foreign Tax Credit Carryforward	Expiration Year
\$ 31	2014
\$ 694	2015
\$ 940	2016
\$ 1,301	2017

(15) COMPREHENSIVE INCOME

The following table displays the related tax effects allocated to each component of Other comprehensive income (loss) for the years ended December 31 (in thousands):

	<u>Pre-tax Amount</u>	<u>2009 Tax (Expense) Benefit</u>	<u>Net-of-tax Amount</u>
Minimum pension liability adjustments	\$ 6,922	\$ (2,431)	\$ 4,491
Fair value adjustment of derivatives designated as cash flow hedges	(27,442)	9,961	(17,481)
Reclassification adjustments of cash flow hedges settled and included in net income	19,810	(7,201)	12,609
Other comprehensive income (loss)	<u>\$ (710)</u>	<u>\$ 329</u>	<u>\$ (381)</u>

	<u>Pre-tax Amount</u>	<u>2008 Tax (Expense) Benefit</u>	<u>Net-of-tax Amount</u>
Minimum pension liability adjustments	\$ (12,343)	\$ 4,331	\$ (8,012)

Interest (net of amount capitalized)	\$ 71,891	\$ 55,864	\$ 44,700
Income taxes paid (refunded)	\$ (23,231)	\$ 32,988	\$ 14,204

(17) BUSINESS SEGMENTS

Our reportable segments are based on our method of internal reporting, which generally segregates the strategic business groups due to differences in products, services and regulation. As of December 31, 2009, with the exception of our energy marketing operations in Canada, all of our operations and assets are located within the United States.

The Company conducts its operations through the following six reportable segments:

Utilities Group -

- Electric Utilities, which supply regulated electric utility service to areas in South Dakota, Wyoming, Colorado and Montana and natural gas utility services to Cheyenne, Wyoming and vicinity; and
- Gas Utilities, which supply regulated gas utility service to Colorado, Iowa, Kansas and Nebraska. The regulated Gas Utilities were acquired in July 2008 as described in Note 23.

Non-regulated Energy Group -

- Oil and Gas, which produces, explores and operates oil and natural gas interests located in Colorado, Louisiana, Montana, Oklahoma, Nebraska, New Mexico, North Dakota, Wyoming, Texas and California;
- Power Generation, which produces and sells power and capacity to wholesale customers. The power plants are located in Wyoming and Idaho;
- Coal Mining, which engages in the mining and sale of coal from its mine near Gillette, Wyoming; and
- Energy Marketing, which markets natural gas, crude oil and related services primarily in the United States and Canada.

On July 11, 2008, we sold entities that owned seven IPP plants with a total capacity of 974 megawatts. The financial information related to these plants was previously reported in the Power Generation segment and has been reclassified to discontinued operations. Our remaining IPP assets continue to be reported in the Power Generation segment.

(a) As a result of lower natural gas prices at March 31, 2009, we recorded a \$27.8 million after-tax non-cash ceiling test impairment of oil and gas assets in the first quarter of 2009 (see Note 12).

- (b) As a result of low crude oil and natural gas prices at the end of 2008, we recorded a \$59.0 million after-tax non-cash ceiling test impairment of oil and gas assets (see Note 12).
- (c) Includes \$16.9 million after-tax gain on sale to MEAN of a 23.5% ownership interest in the Wygen I power generation facility.
- (d) Includes \$36.2 million after-tax net mark-to-market gain for the year ended December 31, 2009 and a \$61.4 million after-tax net mark-to-market loss for the year ended December 31, 2008.

(18) EMPLOYEE BENEFIT PLANS

Defined Contribution Plans

We sponsor a 401(k) retirement savings plan. Participants in the Plan may elect to invest a portion of their eligible compensation to the Plan up to the maximum amounts established by the IRS. The Plan provides the following benefits:

Cheyenne Light employees may elect to invest up to 50% of their eligible compensation on a pre-tax or after-tax basis. Cheyenne employee contributions are eligible for one of two matching formulas depending on an employee's status as a bargaining unit employee or as a non-bargaining unit employee. Bargaining unit employees receive a maximum match of 5% of eligible compensation based upon the following formula: 100% of the employee's tax-deferred contribution on the first 3% of eligible compensation, plus 50% of the next 4% of eligible compensation. Non-bargaining unit employees receive a maximum match of 4% of eligible compensation based upon the following formula: 100% of the employee's tax-deferred contribution on the first 3% of eligible compensation, plus 50% of the next 2% of eligible compensation. The matching contributions under both formulas vest immediately. In addition, certain Cheyenne Light employees are eligible for a Profit Sharing contribution equal to 3.5% to 10% of eligible compensation, depending on age and years of service. Profit sharing contributions vest at 20% per year and are fully vested after completion of five years of service with the Company.

Black Hills Energy employees may elect to invest up to 50% of their eligible base compensation on a pre-tax or after-tax basis. These employees receive a matching contribution of 100% of the employee's annual contribution up to a maximum of 6% of their eligible compensation. These matching contributions vest at 20% per year and are fully vested when the participant has five years of service with the Company.

Employees of the remaining subsidiaries may elect to invest up to 50% of their eligible compensation on a pre-tax basis. These employees receive a matching contribution of 100% of the employee's annual tax-deferred contribution up to a maximum of 3% of eligible compensation. Matching contributions vest at 20% per year and are fully vested when the participant has five years of service with the Company.

Matching contributions for the retirement savings plans totaled \$5.7 million for 2009, \$3.8 million for 2008 and \$2.0 million for 2007. Cheyenne Light profit sharing contributions were \$0.1 million for each of 2009, 2008 and 2007.

Effective January 1, 2010, in conjunction with the partial freeze of our defined benefit pension plans, we amended our 401(k) retirement savings plan. This amendment covers all employees with the exception of the bargaining unit employees of Black Hills Power, Cheyenne Light and certain other employees grandfathered under a prior defined benefit plan election. The amendment provides for a matching contribution of 100% of the eligible employee's annual contribution up to a maximum of 6% of eligible compensation. The amendment also provides certain eligible participants an age and service-based additional employer contribution.

Funded Status of Benefit Plans

The funded status of postretirement benefit plans is required to be recognized in the statement of financial position. The funded status for pension plans is measured as the difference between the projected benefit obligation and the fair value of plan assets. The funded status for all other benefit plans is measured as the difference between the accumulated benefit obligation and the fair value of plan assets. A liability is recorded for an amount by which the benefit obligation exceeds the fair value of plan assets or an asset is recorded for any amount by which the fair value of plan assets exceeds the benefit obligation. Except for our regulated utilities, the unrecognized net periodic benefit cost is recorded within Accumulated other comprehensive income (loss), net of tax. For our regulated utilities, we applied accounting standards for regulated operations, and accordingly, the unrecognized net periodic benefit cost was alternatively recorded as a regulatory asset or regulatory liability, net of tax. As of December 31, 2009, the funded status of our Defined Benefit Pension Plan was \$79.9 million; the funded status of our Non-Qualified Defined Benefit Retirement Plan was \$21.6 million; and the funded status of our Non-Pension Defined Benefit Postretirement Plan was \$41.7 million.

Defined Benefit Pension Plan

We have three non-contributory defined benefit pension plans (the Pension Plans). The Black Hills Corporation Pension Plan covers eligible employees of Black Hills Service Company, Black Hills Power, WRDC and BHEP. Benefits are based on years of service and compensation levels during the highest five consecutive years of the last ten years of service. The Cheyenne Light Pension Plan covers eligible employees of Cheyenne Light. Benefits for the bargaining unit employees of Cheyenne Light are based on years of service and compensation levels during the highest three consecutive 12-month periods of service, reduced by the vested benefits under the predecessor plans, if any. Benefits for the non-bargaining unit employees of Cheyenne Light are based on annual credits for years of service plus investment credits. The Black Hills Energy Pension Plan covers eligible employees of our utility subsidiaries doing business as Black Hills Energy. Benefits are based on years of service and compensation levels during the highest four consecutive years of the last ten years of service.

In July 2009, the Board of Directors approved a partial freeze to the Black Hills Corporation Pension Plan (with the exception of bargaining unit participants), the Black Hills Energy Pension Plan and the Cheyenne Light Pension Plan (with the exception of bargaining unit participants) which is effective January 1, 2010. The Black Hills Corporation freeze eliminates new non-bargaining unit employees from participation in the plan, and freezes the benefits of current non-bargaining unit participants except for the following group: those non-bargaining unit participants who are both 1) age 45 or older as of December 31, 2009 and have 10 years or more of credited service as of January 1, 2010; and 2) elect to continue to accrue additional benefits under the pension plan and consequently forego the additional age- and points-based employer contribution under the Company's 401(k) retirement savings plan. The Black Hills Energy Plan freeze eliminates new employees from participation in the Plan, and freezes the benefits of current participants except for the following group: those participants who are both 1) age 45 or older as of December 31, 2009 and have 10 years or more of credited service as of January 1, 2010; and 2) elect to continue to accrue additional benefits under the pension plan and consequently forego the additional age- and points-based employer contribution under the Company's 401(k) retirement savings plan. The Cheyenne Light Pension Plan freeze eliminates new non-bargaining unit employees from participation in the plan and freezes the benefits of existing non-bargaining unit participants. The assets and obligations for the Black Hills Corporation Plan and the Black Hills Energy Pension Plan were revalued July 31, 2009 in conjunction with the freeze of these plans and we recognized a pre-tax curtailment expense of approximately \$0.3 million in the third quarter of 2009. The valuation of the Cheyenne Light Pension Plan at December 31, 2009, resulted in recognition of a pre-tax curtailment expense of less than \$0.1 million in the fourth quarter of 2009.

Our funding policy is in accordance with the federal government's funding requirements. The Pension Plans' assets are held in trust and consist primarily of equity and fixed income investments. We use a December 31 measurement date for the Pension Plans.

The Investment Policy for the Pension Plans is to seek to achieve the following long-term objectives: 1) a rate of return in excess of the annualized inflation rate based on a five year moving average; 2) a rate of return that meets or exceeds the assumed actuarial rate of return as stated in the Plan's actuarial report; 3) a rate of return on investments, net of expenses, that is equal to or exceeds various benchmark rates on a moving three year average, and 4) maintenance of sufficient income and liquidity to pay monthly retirement benefits. The policy strategy seeks to prudently invest in a diversified portfolio of predominately equity and fixed income assets. The policy contains certain prohibitions on transactions in separately managed portfolios in which the Pension Plans may invest, including prohibitions on short sales.

The Pension Plans' expected long-term rate of return on assets assumptions are based upon the weighted-average expected long-term rate of return for each individual asset class. The asset class weighting is determined using the target allocation for each class in the Plan portfolio. The expected long-term rate of return for each asset class is determined primarily from adjusted long-term historical returns for the asset class. It is anticipated that long-term future returns will not achieve historical results.

The expected long-term rate of return for equity investments was 9.5% for the 2009 and 2008 plan years. For determining the expected long-term rate of return for equity assets, we reviewed annual 20-, 30-, 40-, and 50-year returns on the S&P 500 Index, which were, at December 31, 2009, 8.1%, 11.1%, 9.7% and 9.3%, respectively. Fund management fees were estimated to be 0.18% for S&P 500 Index assets and 0.45% for other assets. The expected long-term rate of return for real estate investments was 7.0%; the return was based on five-year forward-looking return projections from our investment manager for the NCREIF index. The expected long-term rate of return on fixed income investments was 6.0%; the return was based upon historical returns on 10-year treasury bonds of 6.9% from 1962 to 2009, and adjusted for recent declines in interest rates. The expected long-term rate of return on cash investments was estimated to be 1.0%, which was based upon current one-year LIBOR rates.

Plan Assets

The percentages of total plan asset fair value by investment category for our Pension Plans at December 31, were as follows:

	<u>2009</u>	<u>2008</u>
Equity	65%	60%
Real estate	3	5
Fixed income	28	33
Cash	4	2
Total	<u>100%</u>	<u>100%</u>

Cash Flows

We made a contribution of \$0.4 million to the Black Hills Corporation Pension Plan in 2009 and expect no contributions to the Plan in fiscal year 2010. We made a \$1.5 million contribution to the Cheyenne Light Pension Plan in 2009 and expect to make a \$0.7 million contribution during fiscal year 2010. We made a contribution of \$15.0 million to the Black Hills Energy Pension Plan in 2009 and expect no contributions in fiscal year 2010.

Supplemental Non-qualified Defined Benefit Retirement Plans

We have various supplemental retirement plans for key executives of the Company. The plans are non-qualified defined benefit plans. We use a December 31 measurement date for the plans. Effective January 1, 2010, we eliminated a non-qualified pension plan in which some of our officers participated due to the partial freeze of our qualified pension plans. We also amended the NQDC, which was adopted in 1999. The NQDC is a non-qualified deferred compensation plan that provides executives with an opportunity to elect to defer compensation and receive benefits without reference to the limitations on contributions in the Black Hills Corporation Retirement Savings Plan or those imposed by the Internal Revenue Code of 1986, as amended. The amended NQDC provides for non-elective non-qualified restoration benefits to certain officers who are not eligible to continue accruing benefits under the Defined Benefit Pension Plans and associated non-qualified pension restoration plans.

All contributions to the non-qualified plans are subject to a graded vesting schedule at 20% per year over five years with vesting credit beginning with service in the plan on and after January 1, 2010.

Plan Assets

The plans have no assets. We fund on a cash basis as benefits are paid.

Estimated Cash Flows

The estimated employer contribution is expected to be \$0.9 million in 2010. Contributions are expected to be made in the form of benefit payments.

Non-pension Defined Benefit Postretirement Plan

We sponsor three retiree healthcare plans (the Plans): the Black Hills Corporation Postretirement Healthcare Plan, the Healthcare Plan for Retirees of Cheyenne Light, and the Black Hills Energy Postretirement Healthcare Plan. Employees who participate in the Black Hills Corporation Postretirement Healthcare Plan and who retire from the Company on or after attaining age 55 after completing at least five years of service with the Company are entitled to postretirement healthcare benefits. Employees who participate in the Healthcare Plan for Retirees of Cheyenne Light and who retire from Cheyenne Light on or after attaining age 55 and after completion of a number of consecutive years of service, which when added to the employee's age totals 90, are entitled to postretirement healthcare benefits. Employees who are participants in the Black Hills Utility Holdings Postretirement Healthcare Plan and who retire from the Company on or after attaining age 55 after completing at least five years of service with the Company are entitled to postretirement healthcare benefits. In July 2009, the Board of Directors also approved amendments to the BHC Retiree Healthcare Plan and the Black Hills Utility Holdings Plan which changed the structure of the Plans for non-union employees and participating union employees to an RMSA and expanded eligibility of plan participants, effective January 1, 2010.

The benefits for all of the plans are subject to premiums, deductibles, co-payment provisions and other limitations. We may amend or change the plans periodically. We are not pre-funding the Black Hills Corporation or Cheyenne Light retiree healthcare plans. A

portion of Black Hills Energy's Postretirement Healthcare Plan is pre-funded via VEBAs, and the assets are held in trust. We use a December 31 measurement date for the Plans.

It has been determined that the post-65 retiree prescription drug plans are actuarially equivalent and qualify for the Medicare Part D subsidy. The effect of the Medicare Part D subsidy on the accumulated postretirement benefit obligation for the 2009 fiscal year was an actuarial gain of approximately \$4.3 million. The effect on 2009 net periodic postretirement benefit cost was a decrease of approximately \$0.5 million.

Plan Assets

The Black Hills Corporation and Cheyenne Light retiree healthcare plans have no assets. We fund on a cash basis as benefits are paid. The Black Hills Energy Plan provides for partial pre-funding via VEBAs. Assets of \$4.7 million related to this pre-funding are held in trust and are for the benefit of the union and non-union employees of Black Hills Energy located in the states of Kansas and Iowa. We do not pre-fund the Postretirement Healthcare Plan for those employees outside Kansas and Iowa.

Estimated Cash Flows

The estimated employer contributions are expected to be \$4.3 million in 2010. Contributions are expected to be made in the form of benefit payments.

Fair Value Measurements

Accounting standards for Compensation – Retirement Benefits provides a single definition of fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date and also requires disclosures and establishes a fair value hierarchy that prioritizes the inputs used to measure fair value. The fair value hierarchy ranks the quality and reliability of the information used to determine fair values giving the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (level 1 measurements) and the lowest priority to unobservable inputs (level 3 measurements). The pension plans and VEBA are able to classify fair value balances based on the observability of inputs.

Financial assets and liabilities carried at fair value are classified and disclosed in one of the following three categories:

Level 1 - Unadjusted quoted prices available in active markets that are accessible at the measurement date for identical unrestricted assets or liabilities.

Level 2 - Pricing inputs include quoted prices for identical or similar assets and liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, inputs other than quoted prices that are observable for the asset or liability and inputs that are derived principally from or corroborated by observable market data by correlation or other means.

Level 3 - Pricing inputs include significant inputs that are generally less observable from objective sources.

As required by accounting standards for Compensation – Retirement Benefits, assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. The Company's assessment of the significance of a particular input to the fair value measurement requires judgment, and may affect their placement within the fair value hierarchy levels. The following tables set forth, by level within the fair value hierarchy, the assets that were accounted for at fair value on a recurring basis as of December 31, 2009 and 2008:

<u>Defined Benefit Pension Plan</u> Recurring Fair Value Measures	At Fair Value as of December 31, 2009			
	Level 1	Level 2	Level 3	Total

Accumulated Other Comprehensive Income

In accordance with accounting standards for defined benefit plans, amounts included in accumulated other comprehensive income (loss), after-tax, that have not yet been recognized as components of net periodic benefit cost at December 31 are as follows (in thousands):

	<u>Defined Benefit Pension Plans</u>		<u>Supplemental Nonqualified Defined Benefit Retirement Plans</u>		<u>Non-pension Defined Benefit Postretirement Plans</u>	
	<u>2009</u>	<u>2008</u>	<u>2009</u>	<u>2008</u>	<u>2009</u>	<u>2008</u>
Net (gain) loss	\$ 6,436	\$ 18,176	\$ 3,429	\$ (5,235)	\$ 2,131	\$ 9
Prior service cost	144	314	16	(3)	(2,510)	-
Transition obligation	-	-	-	-	-	(21)
Total accumulated other comprehensive income	\$ 6,580	\$ 18,490	\$ 3,445	\$ (5,238)	\$ (379)	\$ (12)

The amounts in accumulated other comprehensive income, regulatory assets or regulatory liabilities, after-tax, expected to be recognized as a component of net periodic benefit cost during calendar year 2010 are as follows (in thousands):

	Defined Benefit Pension Plans	Supplemental Nonqualified Defined Benefit Retirement Plans	Non-pension Defined Benefit Postretirement Plans
Net loss	\$ 2,032	\$ 185	\$ 413
Prior service cost	64	2	(201)
Transition obligation	-	-	-
Total net periodic benefit cost expected to be recognized during calendar year 2010	<u>\$ 2,096</u>	<u>\$ 187</u>	<u>\$ 212</u>

Assumptions

	Defined Benefit Pension Plans			Supplemental Nonqualified Defined Benefit Retirement Plans			Non-pension Defined Benefit Postretirement Plans		
	<u>2009</u>	<u>2008</u>	<u>2007</u>	<u>2009</u>	<u>2008</u>	<u>2007</u>	<u>2009</u>	<u>2008</u>	<u>2007</u>
Weighted-average assumptions used to determine benefit obligations:									
Discount rate	6.03%	6.20%	6.35%	5.58%	6.20%	6.35%	5.68%	6.10%	6.35%
Rate of increase in compensation levels	4.20%	4.25%	4.34%	5.00%	5.00%	5.00%	N/A	N/A	N/A
Weighted-average assumptions used to determine net periodic benefit cost for plan year:									
Discount rate:									
Black Hills Corporation	6.25%	6.35%	5.95%	6.20%	6.35%	5.95%	6.10%	6.35%	5.95%
Black Hills Energy	6.25%	7.00%	N/A	5.00%	5.00%	N/A	6.10%	6.75%	N/A
Expected long-term rate of return on assets*	8.50%	8.50%	8.50%	N/A	N/A	N/A	5.00%	5.00%	N/A
Rate of increase in compensation levels	4.20%	4.34%	4.31%	5.00%	N/A	5.00%	N/A	N/A	N/A

* The expected rate of return on plan assets changed to 8% for the calculation of the 2010 net periodic pension cost.

The healthcare trend rate assumption for 2009 fiscal year benefit obligation determination and 2010 fiscal year expense is a 10% increase for 2009 grading down until a 4.5% ultimate trend rate is reached in fiscal year 2027. The healthcare cost trend rate assumption for the 2008 fiscal year benefit obligation determination and 2009 fiscal year expense was a 9% increase for 2009 grading down 1% per year until a 5% ultimate trend rate is reached in fiscal year 2013.

The healthcare cost trend rate assumption has a significant effect on the amounts reported. A 1% increase in the healthcare cost trend assumption would increase the service and interest cost \$0.4 million or 12% and the accumulated periodic postretirement benefit obligation \$3.1 million or 7%. A 1% decrease would reduce the service and interest cost by \$0.3 million or 8.0%, and the accumulated periodic postretirement benefit obligation \$2.5 million or 5%.

The following benefit payments, which reflect future service, are expected to be paid (in thousands):

	Non-pension Defined Benefit Postretirement Plans				
	Defined Benefit Pension Plans	Supplemental Nonqualified Defined Benefit Retirement Plan	Expected Gross Benefit Payments	Expected Medicare Part D Drug Benefit Subsidy	Expected Net Benefit Payments
2010	\$ 10,484	\$ 891	\$ 4,329	\$ (505)	\$ 3,824
2011	11,262	920	4,602	(559)	4,043
2012	11,991	927	4,679	(620)	4,059
2013	12,968	941	4,564	(681)	3,883
2014	14,038	1,090	4,478	(743)	3,735
2015-2019	87,049	7,003	19,860	(1,685)	18,175

(19) COMMITMENTS AND CONTINGENCIES

Partial Sale of Wygen I to MEAN

During August 2008, we entered into a definitive agreement to sell a 23.5% ownership interest in the Wygen I plant to MEAN. The sale was completed in January 2009 for a price of \$51.0 million, which was based on the then-current replacement cost for the coal-fired plant. We realized an after-tax gain of \$16.9 million on the sale, and our property, plant and equipment was reduced by \$25.0 million. We retain responsibility for operations of the plant, and at closing entered into a site lease, and operating agreements with MEAN for coal supply and operations. In addition, we terminated a 10-year PPA requiring MEAN to purchase 20 MW of power annually from Wygen I.

Partial Sale of Wygen III to MDU

On April 9, 2009, Black Hills Power sold to MDU a 25% ownership interest in its Wygen III generation facility currently under construction. At closing, MDU made a payment to us for its 25% share of the costs to date on the ongoing construction of the facility. Proceeds of \$32.8 million were received of which \$30.2 million was used to pay down a portion of the Acquisition Facility. MDU will continue to reimburse Black Hills Power for its 25% of the total costs paid to complete the project. In conjunction with the sales transaction, we also modified a 2004 PPA between Black Hills Power and MDU. The PPA with MDU now provides that once in commercial operations, the first 25 MW of MDU's required 74 MW will be supplied from its ownership interest in Wygen III. During periods of reduced production at Wygen III, or during periods when Wygen III is offline, MDU will be provided with its 25 MW from our other generation facilities or from system purchases.

Power Purchase and Transmission Services Agreements

Through our subsidiaries, we have the following significant long-term power purchase contracts with non-affiliated third-parties:

- We have a PPA with PacifiCorp expiring in 2023, for the purchase of 50 MW of electric capacity and energy from PacifiCorp's system. The price paid for the capacity and energy is based on the operating costs of one of PacifiCorp's coal-fired electric generating plants. Costs incurred under this agreement were \$11.8 million in 2009, \$11.6 million in 2008 and \$10.9 million in 2007.
- Colorado Electric has a PPA with PSCo, expiring in 2011, for 280 MW of capacity and energy in 2009, increasing 10 MW per year to 300 MW in 2011. Pricing for the PPA is based on annual contracted capacity and an 85% load factor at current FERC approved rates.
- We have a firm point-to-point transmission service agreement with PacifiCorp that expires in December 2023. The agreement provides 50 MW of capacity and energy to be transmitted annually by PacifiCorp through 2023. Costs incurred under this agreement were \$1.2 million in 2009, \$1.2 million in 2008 and \$1.2 million in 2007.
- Cheyenne Light's 20-year PPA with Duke Energy's Happy Jack wind site, expiring in September 2028, provides up to 29.4 MW of wind energy from Happy Jack to Cheyenne Light. Under a separate intercompany agreement, Cheyenne Light sells 50% of the facility output to Black Hills Power.

- Cheyenne Light entered into a 20-year PPA with Duke Energy's Silver Sage wind site for 30 MW of energy. Commercial operations commenced in October 2009. Under a separate intercompany agreement, Cheyenne Light has agreed to sell 20 MW of energy from Silver Sage to Black Hills Power.

Our Gas Utilities also purchase natural gas, including transportation capacity to meet customers' needs under short-term and long-term purchase contracts. These contracts extend to 2017.

On September 29, 2009, FERC approved an extension of a PPA between our subsidiaries, Black Hills Wyoming and Cheyenne Light. The PPA for 60 MW of capacity and energy from Black Hills Wyoming's Wygen I generating facility, which was scheduled to expire in 2013, has been extended through December 31, 2022. The agreement includes an option for Cheyenne Light to purchase Black Hills Wyoming's ownership in the Wygen I facility during years one to seven of the term of the extended agreement. The purchase price related to the option is \$2.55 million per MW which is the equivalent per MW of the estimated price of new construction of the Wygen III plant. This option purchase price is reduced annually by an amount equal to annual depreciation assuming a facility life of 35 years.

Long-Term Power Sales Agreements

Through our subsidiaries, we have the following significant long-term power sales contracts with non-affiliated third-parties:

- An agreement under which we supply up to 74 MW of capacity and energy to MDU for the Sheridan, Wyoming electric service territory through the end of 2016. The sales to MDU have been integrated into Black Hills Power's control area and are considered part of our firm native load. In accordance with the terms of this agreement, MDU exercised an option to participate in the ownership of the Wygen III plant that is currently being constructed. Under an agreement entered into in April 2009, MDU purchased a 25% undivided interest in the Wygen III plant. We retain responsibility for operations of the facility with a life-of-plant lease and agreements with MDU for operations and coal supply. In conjunction with the sales transaction, we also modified the 2004 PPA under which Black Hills Power supplied MDU with 74 MW of capacity and energy through 2016. The agreement now provides that once in commercial operations, the first 25 MW of the required 74 MW will be supplied by MDU's ownership interest in Wygen III. During periods of reduced production at Wygen III, or during periods when Wygen III is offline, we will provide MDU with its first 25 MW from our other generation facilities or from system purchases;
- An agreement with the City of Gillette, Wyoming, to provide the City its first 23 MW of capacity and energy annually. The sales to the City of Gillette have been integrated into Black Hills Power's control area and are considered part of our firm native load. The agreement renews automatically and requires a seven year notice of termination. As of December 31, 2009, neither party to the agreement had given a notice of termination; and
- We have a purchase agreement with Basin Electric for the supply of 80 MW of capacity and energy through 2012 and a separate agreement to receive 80 MW of capacity and energy through 2012. The agreements were entered into with Basin Electric to accommodate delivery of electricity to Cheyenne Light's service territory.
- In March 2009, our 10-year power sales contract between MEAN and Black Hills Power that originally would have expired in 2013 was re-negotiated and extended until 2023. Under the new contract, MEAN will purchase 20 MW of unit-contingent capacity from the Neil Simpson II and Wygen III plants, with capacity purchase decreasing to 15 MW in 2018, 12 MW in 2020 and 10 MW in 2022. The unit-contingent capacity amounts from Wygen III and Neil Simpson II plants are as follows:

2010-2017	20 MW - 10 MW contingent on Wygen III and 10 MW contingent on Neil Simpson II
2018-2019	15 MW - 10 MW contingent on Wygen III and 5 MW contingent on Neil Simpson II
2020-2021	12 MW - 6 MW contingent on Wygen III and 6 MW contingent on Neil Simpson II
2022-2023	10 MW - 5 MW contingent on Wygen III and 5 MW contingent on Neil Simpson II
- Black Hills Power's five-year PPA with MEAN executed in July 2009, which commences the month following the onset of commercial operations of Wygen III. Under this contract, MEAN will purchase 5 MW of unit-contingent capacity from Neil Simpson II and 5 MW of unit-contingent capacity from Wygen III.

Reclamation Liability

Under its mining permit, WRDC is required to reclaim all land where it has mined coal reserves. The reclamation liability is recorded at the present value of the estimated future cost to reclaim the land with an equivalent amount added to the asset costs. The asset is depreciated over the appropriate time period and the liability is accreted over time using an interest method of allocation. Approximately \$1.1 million, \$0.6 million and \$0.3 million was charged to accretion expense for the years ended December 31, 2009, 2008 and 2007, respectively. Approximately \$2.0 million, \$0.6 million and \$0.5 million was charged to depreciation expense for the years ended December 31, 2009, 2008 and 2007, respectively. Accrued reclamation costs included in Other deferred credits and other liabilities on the accompanying Consolidated Balance Sheets were approximately \$15.3 million and \$17.7 million at December 31, 2009 and 2008, respectively.

Legal Proceedings

In the normal course of business, we are subject to various lawsuits, actions, proceedings, claims and other matters asserted under laws and regulations. We believe the amounts provided in the consolidated financial statements are adequate in light of the probable and estimable contingencies. However, there can be no assurance that the actual amounts required to satisfy alleged liabilities from various legal proceedings, claims and other matters discussed, and to comply with applicable laws and regulations, will not exceed the amounts reflected in the consolidated financial statements. As such, costs, if any, that may be incurred in excess of those amounts provided as of December 31, 2009, cannot be reasonably determined and could have a material adverse effect on the results of operations or financial position.

FERC Compliance Investigation

During 2007, following an internal review of natural gas marketing activities conducted within the Energy Marketing segment, we identified possible instances of noncompliance with regulatory requirements applicable to those activities. We notified the enforcement staff of FERC of our findings and shared information with the purpose of resolving any potential enforcement concerns. On August 24, 2009, FERC entered its Order approving a stipulation and consent agreement between the FERC Office of Enforcement and Enserco Energy Inc., which settled all matters presented to FERC in the 2007 self-report. Pursuant to the Agreement and Order, we agreed to pay a civil penalty of \$1.4 million, and submit semi-annual monitoring reports to FERC's Office of Enforcement for one year. No further enforcement action was taken or is expected relative to the matters presented to the Office of Enforcement. The settlement of this matter, including the payment of a civil penalty by Enserco Energy Inc., did not have a material impact upon our overall consolidated results of operations and cash flows.

(20) GUARANTEES

We have entered into various agreements providing financial or performance assurance to third parties on behalf of certain of our subsidiaries. The agreements include guarantees of debt obligations, contractual performance obligations and indemnification for reclamation and surety bonds.

As of December 31, 2009, we had the following guarantees in place (in thousands):

<u>Nature of Guarantee</u>	<u>Outstanding at December 31, 2009</u>	<u>Year Expiring</u>
Guarantee obligations of Enserco under an agency agreement	\$ 7,000	2010
Guarantees of payment obligations arising from commodity-related physical and financial transactions by Black Hills Utility Holdings	70,000	Ongoing
Guarantees for payment obligations arising from purchase contracts for four gas turbines for Black Hills Colorado IPP	62,090	2011
Guarantees for payment obligations arising from purchase contracts for two gas turbines for Colorado Electric	42,742	2010
Indemnification for subsidiary reclamation/surety bonds	15,532	Ongoing
	<u>\$ 197,364</u>	

We have guaranteed up to \$7.0 million of the obligations of Enserco under an agency agreement whereby Enserco provides services to structure up to \$143.3 million United States dollars (converted from \$150.0 million Canadian dollars as of December 31, 2009) of certain transactions involving the buying, selling, transportation and storage of natural gas on behalf of another energy company. The guarantee expires in July 2010.

We have guaranteed up to \$25.0 million of the obligations of Black Hills Utility Holdings for payment obligations arising from commodity-related physical and financial transactions with BP Energy Company and/or BP Canada Energy Marketing Corp. These commodity transactions secure natural gas supply for our regulated gas utilities. The guarantee is a continuing guarantee that may be terminated upon 30 days written notice to the counterparty.

We have guaranteed up to \$20.0 million of the obligations of Black Hills Utility Holdings for payment obligations arising from commodity-related physical and financial transactions with Northern Natural Gas Company. These commodity transactions secure natural gas supply for our regulated gas utilities. The guarantee is a continuing guarantee that may be terminated upon 30 days written notice to the counterparty.

We have guaranteed up to \$25.0 million of the obligations of Black Hills Utility Holdings for payment obligations arising from commodity-related physical and financial transactions with PSCo. These commodity transactions secure natural gas supply for our regulated gas utilities. The guarantee is a continuing guarantee that may be terminated upon 30 days written notice to the counterparty.

We have issued two guarantees totaling \$42.7 million to GE for payment obligations arising from a contract to purchase two LMS100 natural gas turbine generators by Colorado Electric, which will be used in meeting a portion of the capacity and energy needs of our Colorado Electric customers. These are continuing guarantees which terminate upon payment in full of the purchase price to GE. Payments are scheduled based upon estimated construction milestone dates with the final payment due October 27, 2010.

We have issued four guarantees totaling \$62.1 million to GE for payment obligations arising from contracts to purchase four LM6000 gas turbines for Black Hills Colorado IPP. These are continuous guarantees which terminate upon payment in full of the purchase price to GE. Payments are scheduled based upon estimated construction milestone dates with the final payment due February 8, 2011.

In addition, at December 31, 2009, we had guarantees in place totaling approximately \$15.5 million for reclamation and surety bonds for our subsidiaries. The guarantees were entered into in the normal course of business. To the extent liabilities are incurred as a result of activities covered by the surety bonds, such liabilities are included in our Consolidated Balance Sheets.

(21) OIL AND GAS RESERVES AND RELATED FINANCIAL DATA (Unaudited)

BHEP has operating and non-operating interests in 1,314 developed oil and gas wells in ten states and holds leases on approximately 406,200 net acres.

Costs Incurred

Following is a summary of costs incurred in oil and gas property acquisition, exploration and development during the years ended December 31 (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Acquisition of properties:			
Proved	\$ -	\$ 15,710	\$ -
Unproved	3,443	1,290	-
Exploration costs	5,962	13,703	7,250
Development costs	10,133	49,441	62,104
Asset retirement obligations incurred	623	5,029	1,934
	<u>\$ 20,161</u>	<u>\$ 85,173</u>	<u>\$ 71,288</u>

Reserves

The following table summarizes BHEP's quantities of proved developed and undeveloped oil and natural gas reserves, estimated using SEC-defined product prices, as of December 31, 2009, 2008 and 2007, and a reconciliation of the changes between these dates. These estimates are based on reserve reports by Cawley, Gillespie & Associates, Inc., an independent engineering company. Such reserve estimates are inherently imprecise and may be subject to revisions as a result of numerous factors including, but not limited to, additional development activity, evolving production history and continual reassessment of the viability of production under varying economic conditions. The current estimate takes into account 2009 production of approximately 11.9 Bcfe, additions from extensions, discoveries and acquisitions of 3.5 Bcfe and negative revisions to previous estimates of 57.8 Bcfe, including approximately 54.9 Bcfe due to lower crude oil and natural gas prices. The reserves below as of December 31, 2009 incorporate SEC reserve reporting changes that apply to this Annual Report.

	2009		2008		2007	
	Oil	Gas	Oil	Gas	Oil	Gas
(in thousands of Bbls of oil and MMcf of gas)						
Proved developed and undeveloped reserves:						
Balance at beginning of year	5,185	154,432	5,807	172,964	5,723	164,754
Production	(366)	(9,710)	(387)	(10,704)	(409)	(11,697)
Additions - acquisitions	-	-	2	3,352	-	-
Additions - extensions and discoveries	152	2,560	438	4,037	373	21,318
Revisions to previous estimates	303	(59,622)	(675)	(15,217)	120	(1,411)
Balance at end of year	5,274	87,660	5,185	154,432	5,807	172,964
Proved developed reserves at end of year included above	4,274	74,911	4,429	88,701	5,095	92,522
NYMEX prices	\$ 61.18*	\$ 3.87*	\$ 44.60	\$ 5.71	\$ 95.98	\$ 6.80
Well-head reserve prices	\$ 53.59	\$ 2.52	\$ 32.74	\$ 4.44	\$ 83.23	\$ 5.88

* On December 31, 2008, the SEC issued final rules amending its oil and gas reserve reporting requirements effective for years ended on or after December 31, 2009. The final rule changes the use of prices at the end of each reporting period to prices that are an average of the first day of the month for the preceding twelve months held constant for the life of production. Previously, the rule required the use of the spot price on the last day of the reporting period, held constant for the life of production.

Reserve additions totaled 3.5 Bcfe, replacing 29% of production. The addition is a result of the development drilling in North Dakota, Montana and New Mexico. Drilling in North Dakota (Bakken Shale) and New Mexico (San Jose) accounted for 3.3 Bcfe of the additions. North Dakota drilling may resume in 2010. Capital spending in 2009 was reduced significantly relative to prior years in response to low product prices. Future capital spending rates are anticipated to increase with improved product prices, resulting in higher anticipated production replacement ratios.

The overall downward revision to reserves totaled 57.8 Bcfe with 95% of this revision, or 54.9 Bcfe, due to lower crude oil and natural gas prices. A reduction in lease operating costs on our operated properties resulted in a positive revision of 2 Bcf. Performance related revisions were a negative 4.9 Bcfe (approximately 4.1% of year-end 2009 reserve total). We experienced downward revisions in the San Juan basin by eliminating PUD locations and adjusting existing wells after removing well site compressors that were uneconomic at prevailing prices. Additionally, there were minor adjustments downward in Colorado, Wyoming, Montana and New Mexico. Offsetting some of these downward revisions were better than expected results from our late 2008 drilling program in North Dakota (Bakken Shale).

The SEC adopted new guidelines for reporting reserves in 2009 which amended existing reporting requirements as follows:

- The pricing used to determine reserves must be an average of the first-of-the-month prices over twelve-months instead of a one-day price at the end of the reporting period. This change had a negative impact on our 2009 reserves as follows:

	Oil \$/BBL	Gas \$/Mcf
Currently required twelve-month 2009 average pricing	\$ 53.69	\$ 2.52
Previously required one-day end-of-period December 31, 2009 pricing (non-GAAP)	\$ 69.98	\$ 4.92

	Oil (Mbbbl)	Gas (MMcf)	PV10 (in thousands)
Currently required twelve-month 2009 average pricing	5,274	87,660	\$ 134,322
Previously required one-day end-of-period December 31, 2009 pricing (non-GAAP)	5,407	147,876	\$ 275,946

- The SEC established a new definition of "reliable technology" which broadens the technology that a company may use to establish reserves and categories. The new definition permits the use of any reliable technology to establish reserve volumes in addition to those established by production and flow test data. This new definition eliminates previous restrictions limiting allowable PUDs to be booked only one location away from a producing well. We elected to continue with our existing methodology for 2009.
- Companies are now permitted but not required to disclose probable and possible reserves. We have elected not to report on these additional reserve categories for 2009.
- Companies are required to include a narrative disclosure of the total quantity of PUDs at year end, any material changes in PUDs during the year, and investment and progress made in converting the PUDs during the year commencing prospectively from 2009. We have 107 gross PUD locations as of December 31, 2009 located in five states. Consistent with the new SEC guidance, these PUD locations will be monitored and reported each year until they are drilled or revised.

Capitalized Costs

Following is information concerning capitalized costs for the years ended December 31, (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Unproved oil and gas properties	\$ 29,351	\$ 31,507	\$ 37,459
Proved oil and gas properties	582,276	561,779	475,061
	<u>611,627</u>	<u>593,286</u>	<u>512,520</u>
Accumulated depreciation, depletion and amortization and valuation allowances	(335,605)	(267,893)	(141,780)
Net capitalized costs	<u>\$ 276,022</u>	<u>\$ 325,393</u>	<u>\$ 370,740</u>

Results of Operations

Following is a summary of results of operations for producing activities for the years ended December 31, (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Revenues			
Sales	\$ 70,214	\$ 106,019	\$ 101,286
Production costs	24,192	34,198	28,824
Depreciation, depletion & amortization and valuation provisions*	69,329	126,980	31,212
	<u>93,521</u>	<u>161,178</u>	<u>60,036</u>
	(23,307)	(55,159)	41,250
Income tax benefit (expense)	8,041	19,306	(14,273)
Results of operations from producing activities (excluding general and administrative costs and interest costs)	<u>\$ (15,266)</u>	<u>\$ (35,853)</u>	<u>\$ 26,977</u>

* Includes pre-tax ceiling test impairment charges of \$43.3 million and \$91.8 million in 2009 and 2008, respectively.

Standardized Measure of Discounted Future Net Cash Flows

Following is a summary of the standardized measure of discounted future net cash flows and changes relating to proved oil and gas reserves for the years ended December 31, (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Future cash inflows	\$ 519,867	\$ 875,926	\$ 1,544,175
Future production costs	(207,783)	(309,169)	(438,314)
Future development costs	(34,961)	(130,632)	(140,118)
Future income tax expense	(51,287)	(100,791)	(284,678)
Future net cash flows	<u>225,836</u>	<u>335,334</u>	<u>681,065</u>
10% annual discount for estimated timing of cash flows	(96,728)	(156,108)	(358,167)
Standardized measure of discounted future net cash flows	<u>\$ 129,108</u>	<u>\$ 179,226</u>	<u>\$ 322,898</u>

The following are the principal sources of change in the standardized measure of discounted future net cash flows during the years ended December 31, (in thousands):

	<u>2009</u>	<u>2008</u>	<u>2007</u>
Standardized measure - beginning of year	\$ 179,226	\$ 322,898	\$ 267,525
Sales and transfers of oil and gas produced, net of production costs	(26,836)	(78,342)	(63,659)
Net changes in prices and production costs	(40,786)	(191,784)	107,920
Extensions, discoveries and improved recovery, less related costs	3,324	7,961	34,771
Net changes in future development costs	87,620	26,062	45,127
Revisions of previous quantity estimates, changes in production rates, changes in timing and other	(104,556)	(41,861)	(71,685)
Accretion of discount	19,596	42,485	33,852
Net change in income taxes	11,520	85,218	(30,953)
Purchases of reserves	-	6,592	-
Sales of reserves	-	(3)	-
Standardized measure - end of year	<u>\$ 129,108</u>	<u>\$ 179,226</u>	<u>\$ 322,898</u>

Changes in the standardized measure from "revisions of previous quantity estimates, changes in production rates, changes in timing and other," are driven by reserve revisions, modifications of production profiles and timing of future development. For all years presented, we had minimal net reserve revisions to prior estimates. Production forecast modifications are generally made at the well level each year through the reserve review process. These production profile modifications are based on incorporation of the most recent production information and applicable technical studies. Timing of future development investments are reviewed each year and are often modified in response to current market conditions for items such as permitting, service availability, etc.

(22) DISCONTINUED OPERATIONS

Results of operations and the related charges for discontinued operations have been classified as Income (loss) from discontinued operations, net of income taxes in the accompanying Consolidated Statements of Income. Assets and liabilities of the discontinued operations have been reclassified and reflected on the accompanying Consolidated Balance Sheets as Assets of discontinued operations and Liabilities of discontinued operations. For comparative purposes, all prior periods presented have been restated to reflect the reclassifications on a consistent basis.

IPP Transaction

On April 29, 2008, we entered into a definitive agreement to sell seven IPP plants to affiliates of Hastings and IIF for \$840 million, subject to certain working capital adjustments. The transaction was completed July 11, 2008. Under the agreement, we received net pre-tax cash proceeds of \$756 million, including the effects of estimated working capital adjustments and other costs and our required payoff of approximately \$67.5 million of associated project level debt. The after-tax gain recorded on the asset sale was approximately \$142.2 million of which \$2.4 million was recorded in 2009 and \$139.7 million was recorded in 2008 in discontinued operations. For business segment reporting purposes, results were previously included in the Power Generation segment.

Revenues and net income from the discontinued operations associated with the divested IPP plants at December 31 were as follows (in thousands):

	<u>2009</u>	<u>2008 *</u>	<u>2007</u>
Operating revenues	\$ -	\$ 59,572	\$ 121,076
Pre-tax income from discontinued operations	1,190	27,140	38,057
Gain on sale	-	233,599	-
Income tax benefit (expense)	1,249	(103,758)	(13,214)
Net income from discontinued operations	<u>\$ 2,439</u>	<u>\$ 156,981</u>	<u>\$ 24,843</u>

* In accordance with GAAP, during the second quarter of 2008, the Company ceased recording depreciation and amortization expense on the IPP facilities.

The indirect corporate costs and inter-segment interest expense related to the IPP assets sold and not reclassified to discontinued operations were \$0 million, \$11.8 million and \$19.0 million for the years ended 2009, 2008 and 2007, respectively. These allocated costs remain in the Power Generation segment.

Interest expense included within the operations of the discontinued entities was recorded pursuant to accounting standards for discontinued operations and included interest expense on debt which was required to be repaid as a result of the sale transaction. Interest expense was allocated to discontinued operations based on the ratio of the assets sold to total Company net assets, excluding the known debt repayment. For the years ended December 31, 2009, 2008 and 2007, interest expense allocated to discontinued operations was \$0 million, \$4.7 million and \$11.3 million, respectively.

Net assets associated with the divested IPP plants were as follows (in thousands):

	<u>December 31, 2007</u>
Current assets	\$ 34,112
Property, plant and equipment, net of accumulated depreciation	485,286
Goodwill	18,095
Intangible assets (net of accumulated amortization of \$27,363)	21,023
Other non-current assets	13,163
Current liabilities	(15,615)
Long-term debt	(73,928)
Other non-current liabilities	(139)
Net assets	<u>\$ 481,997</u>

(23) ACQUISITIONS

Aquila Transaction

In February 2007, we entered into a definitive agreement with Aquila to acquire its regulated electric utility in Colorado and its regulated gas utilities in Colorado, Kansas, Nebraska and Iowa for \$940 million, subject to customary closing adjustments. Based on working capital, capital expenditure and other adjustments, we paid \$908.8 million in cash to Aquila and completed the acquisition on July 14, 2008. Additionally, approximately \$29.6 million of fees and other costs were capitalized as part of the purchase price. The purchase price was financed through our Acquisition Facility and from cash proceeds generated from the IPP Transaction.

The acquisition of the Aquila assets has been accounted for under purchase accounting, whereby the purchase price of the transaction was allocated to identifiable assets acquired and liabilities assumed based upon their fair values. The estimates of the fair values recorded were determined based on accounting standards for fair value and reflect significant assumptions and judgments. We comply with the accounting standards for regulated operations and thus the assets and settlement of liabilities are subject to cost-based regulatory rate-setting processes. Accordingly, the historical carrying values of a majority of our assets and liabilities were deemed to represent fair values. In accordance with accounting standards for business combinations, adjustments to the purchase price allocation and subsequently goodwill occurred through July 14, 2009.

Adjustments to the purchase price allocation during 2009 included working capital and tax adjustments of \$5.4 million. Allocation of the purchase price is as follows (in thousands):

Current assets	\$	113,486
Property, plant and equipment		542,094
Derivative assets		4,695
Goodwill ^(a)		339,028
Intangible assets ^(b)		4,884
Deferred assets		76,143
	\$	<u>1,080,330</u>
Current liabilities	\$	95,257
Deferred credits and other liabilities		54,550
	\$	<u>149,807</u>
Net assets	\$	<u>930,523</u>

(a) \$245.1 million and \$93.9 million of goodwill was allocated to the regulated Electric Utilities and to the regulated Gas Utilities, respectively. All of this goodwill is expected to be fully tax deductible.

(b) Intangible assets include \$3.9 million of easements and right-of-ways and \$1.0 million of trademark and trade names. This amount is being amortized on a straight-line basis over 20 years.

The results of operations of the acquired regulated utilities have been included in the accompanying Consolidated Financial Statements since the acquisition date.

The following unaudited pro-forma consolidated results of operations have been prepared as if the acquisition of the regulated utilities had occurred on January 1, 2008 and 2007, respectively (in thousands, except per share amounts):

	December 31, <u>2008</u>	December 31, <u>2007</u>
Operating revenues	\$ 1,548,688	\$ 1,389,838
Income (loss) from continuing operations	(27,640)	108,089
Net income	129,477	130,238
(Loss) earnings per share -		
Basic:		
Continuing operations	\$ (0.73)	\$ 2.92
Total	\$ 3.39	\$ 3.53
Diluted:		
Continuing operations	\$ (0.73)	\$ 2.89
Total	\$ 3.39	\$ 3.49

The above pro-forma information is presented for informational purposes only and is not necessarily indicative of the results of operations that would have been achieved had the acquisition been consummated at that time; nor is it intended to be a projection of future results.

(24) QUARTERLY HISTORICAL DATA (Unaudited)

The Company operates on a calendar year basis. The following tables set forth selected unaudited historical operating results and market data for each quarter of 2009 and 2008. All periods presented are adjusted to reflect the IPP Transaction as Discontinued operations.

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
(in thousands, except per share amounts, dividends and common stock prices)				
<u>2009</u>				
Operating revenues	\$ 437,943	\$ 257,349	\$ 225,799	\$ 348,487
Operating income ^(a)	33,469	25,814	16,909	50,640
Income (loss) from continuing operations ^{(a)(b)}	25,625	24,581	(3,853)	32,403
Income from discontinued operations, net of taxes	766	-	1,673	360
Net income (loss) available for common stock	26,391	24,581	(2,180)	32,763
Earnings (loss) per common share:				
Basic -				
Continuing operations	\$ 0.67	\$ 0.64	\$ (0.10)	\$ 0.83
Discontinued operations	0.02	-	0.04	0.01

Certain items related to 2007 through 2005 have been restated from prior year presentation to reflect the classification of the 2008 IPP Transaction as discontinued operations and non-controlling interest (see Notes 1 and 22 of the Notes to the Consolidated Financial Statements in this Annual Report).

- (1) Includes a \$27.8 million after-tax ceiling test impairment charge to our crude oil and natural gas properties taken in 2009 and a \$16.9 million after-tax gain on sale of 23.5% ownership interest in Wygen I.
- (2) Includes a \$36.2 million after-tax unrealized mark-to-market gain related to interest rate swaps.
- (3) Includes a \$59.0 million after-tax ceiling test impairment charge to our crude oil and natural gas properties taken in 2008.
- (4) Includes a \$61.4 million after-tax unrealized mark-to-market loss related to interest rate swaps.
- (5) 2008 includes a \$139.7 million after-tax gain on the IPP Transaction and 2005 includes long-lived asset impairment charges of approximately \$33.9 million after-tax.
- (6) In February 2007, we issued 4.2 million shares of common stock, which dilutes our earnings per share in subsequent periods.
- (7) Includes 825 MW in 2007, 2006 and 2005, which have been reported as "Discontinued operations."
- (8) Includes regulated electric and gas utilities acquired on July 14, 2008.
- (9) Excludes Cheyenne Light.
- (10) Represents crude oil marketing activities in the Rocky Mountain region, which began May 1, 2006.

For additional information on our business segments see - Management's Discussion and Analysis of Financial Condition and Results of Operations, Quantitative and Qualitative Disclosures about Market Risk and Note 17 to the Consolidated Financial Statements in this Annual Report.

2010 Annual Meeting

The Annual Meeting of Shareholders will be held at The Dahl Arts Center, 713 Seventh Street, Rapid City, South Dakota, at 9:30 a.m. local time on May 25, 2010. Prior to the meeting, formal notice, proxy statement and proxy will be mailed to shareholders.

Market for Equity Securities

The Company's Common Stock (\$1 par value) is traded on the New York Stock Exchange (NYSE). Quotations for the Common Stock are reported under the symbol BKH. The continued interest and support of equity owners are appreciated. The Company has declared Common Stock dividends payable in each year since its incorporation in 1941. Regular quarterly dividends when declared are normally payable on March 1, June 1, September 1 and December 1.

Internet Account Access

Registered shareholders can access their accounts electronically at www.shareowneronline.com. Shareowner Online allows shareholders to view their account balance, dividend information, reinvestment details and much more. The transfer agent maintains stockholder account access.

Direct Deposit of Dividends

We encourage you to consider the direct deposit of your dividends. With direct deposit, your quarterly dividend payment can be automatically transferred on the dividend payment date to the bank, savings and loan, or credit union of your choice. Direct deposit assures payments are credited to shareholders' accounts without delay. A form is attached to your dividend check where you can request information about this method of payment. Questions regarding direct deposit should be directed to Wells Fargo Shareowner Services.

Dividend Reinvestment and Direct Stock Purchase Plan

A Dividend Reinvestment and Direct Stock Purchase Plan provides interested investors the opportunity to purchase shares of the Company's Common Stock and to reinvest all or a percentage of their dividends. For complete details, including enrollment, contact the transfer agent, Wells Fargo Shareowner Services. Plan information is also available at www.wellsfargo.com/shareownerservices.

Web Site Access to Reports

The reports we file with the SEC are available free of charge at our web site www.blackhillscorp.com as soon as reasonably practicable after they are filed. In addition, the charters of our Audit, Governance and Compensation Committees are located on our web site along with our Code of Business Conduct, Code of Ethics for our Chief Executive Officer and Senior Finance Officer, Corporate Governance Guidelines of our Board of Directors and Policy for Independent Directors.
