## GOLD RESULTS REPORTED FROM GLOBEX ROYALTY PROPERTY BY ROCMEC AT RUSSIAN KID (ROCMEC 1) MINE, QUEBEC

SUPL

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1M – Frankfurt, Stuttgart, Berlin, Munich, Xetra Stock Exchanges and GLBXF – OTCQX International) is pleased to inform shareholders that Rocmec Mining Inc. has announced gold assay results from the first drill hole (RS-01-09) of the recently started drill campaign at the Russian Kid (Rocmec 1) mine in Dasserat Township Quebec.

Rocmec reported in their press release issued today that four gold zones were intersected. Intersections include **18.96 g/t Au over 0.96 m, 10.33 g/t Au over 0.49 m, 28.26 g/t Au over 0.07 m and 38.40 g/t Au over 0.05 m.** The mineralization occurs in shear zones and narrow quartz-calcite veins typical of the mineralization intersected in previous drilling and reported by Rocmec in their NI 43-101 technical report of March 19, 2007.

The samples were analyzed for gold at SGS Lakefield's laboratory at Lakefield, Ontario.

Rocmec acquired the Russian Kid property from Globex in order to test and use their patented narrow vein mining method. A large bulk sample has already been mined from the property utilizing this method and a small mill has been installed underground to process material recovered from narrow high grade gold bearing veins.

Please see Rocmec's press release of today's date for details and additional information on the drill program.

**Globex maintains a 5% Gross Metal Royalty on the first 25,000 ounces of gold produced from the Russian Kid mine (Rocmec 1) and a 3% Gross Metal Royalty on all production thereafter.**

PRESS RELEASE

Ref.: File no. 82-4025

December 10, 2009

## HIGH GRADE GOLD VALUES – LAKE COLNET PROPERTY, QUEBEC

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1M – Frankfurt, Stuttgart, Berlin, Munich, Xetra Stock Exchanges and GLBXF – OTCQX International) is pleased to update shareholders on work undertaken on Globex's 100% owned Lake Colnet Property in Montbray Township, Quebec, 27 kilometres west of Rouyn-Noranda.

Over the last several months, an exploration program has been carried out on the property. Initial work consisted of line cutting and prospecting which was followed by mapping and rock sampling of mineralization encountered during the prospecting and mapping phases of the exploration program.

The results of the sampling of most economic interest are listed below. Samples are grab samples unless otherwise indicated.

Sample Type	Assays	Sample Type	Assays
Gold Assays	Au (g/t)	Zinc Assays	Zn (%)
Outcrop	11.00	Outcrop	6.72
Outcrop	2.13	Trench rubble	1.21
Outcrop	2.57	Trench rubble	2.73
Outcrop	13.48	Outcrop	1.49
Outcrop	2.30	Outcrop (channel sample 1.27m)	2.88
Outcrop	5.28	Outcrop (channel sample 1.47m)	2.12
Outcrop	5.01		
Outcrop	2.43		
Outcrop	2.81		
Outcrop (average 2 assays)	11.69		
Boulder (2 to 3 metres diameter) Average 4 assays	17.78		
Boulder (2 to 3 metres diameter) Average 4 assays	10.37		

Considering the elevated gold and zinc values found at several separate locations on the property, it was decided that magnetometer and induced polarization surveys should be undertaken.

Survey results have now been received and indicate geophysical anomalies in at least two of the areas of gold and zinc mineralization. Additional work is planned based upon the results to date.

### Delivery and Sample Preparation

All samples were delivered to Expert Laboratories Inc., located at 127 Boulevard Industriel, Rouyn-Noranda, Quebec. The laboratory conducted all aspects of the sample preparation. Samples were dried and crushed to pass a -100 mesh screen. A 300-gram subsample was taken for pulverization to a nominal -200 mesh with the remaining crushed rejects being retained.

## Gold Assaying

A 29.166-gram sub-sample of this pulp (1 assay-ton) was taken and was fused following the standard procedures used in a fire assay method. The gold content of all samples was determined using Atomic Absorption Spectroscopy (Method Code: Au FA-GEO, lower detection limit 5 ppb). Any samples found to contain greater than 1 g/t Au were to be subjected to a re-assay, whereby the gold content was determined using a gravimetric fire assay method.

## GLOBEX'S NORDEAU ROYALTY PROPERTY SIGNIFICANT GOLD INTERSECTIONS

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1M – Frankfurt, Stuttgart, Berlin, Munich, Xetra Stock Exchanges and GLBXF – OTCQX International) is pleased to inform shareholders that Plato Gold Corp. (PGC-TSX-V) has reported two intersections of significant gold mineralization at the Nordeau Gold Property, optioned from Globex.

Nordeau's press release of today's date reports the following intersections spaced 150 meters apart.

Hole #	Interval Length (m)	Au (g/t)
NE 09-01	5.50	14.35
NE 09-02	6.70	8.01

Assays are pending from several additional drill holes.

Globex retains a 2% Gross Metal Royalty (i.e. two percent of any gold produced with no charges whatsoever) and a 10% Net Profit Interest on any mineral production from the property. In addition, 1.5 million Plato shares are due to Globex over the next 2 years and cash payment of \$125,000, \$75,000 and \$100,000 on December 31<sup>st</sup>, 2009, 2010 and 2011 respectively.

Shareholders are directed to Plato's press release of today's date for further details.

Assaying was done by ALS-Chemex Laboratories Ltd. of Val D'Or, Quebec, an accredited laboratory.

This press release was written by Jack Stoch, P. Geo. President and CEO of Globex in his capacity as a Qualified Person (Q.P.) under NI 43-101.
