Globex's Rare Earth Property Returns Significant Assays

Rouyn-Noranda, Quebec, Canada. GLOBEX MINING ENTERPRISES INC. (GMX – Toronto Stock Exchange, G1M – Frankfurt, Stuttgart, Berlin, Munich, Xetra Stock Exchanges and GLBXF – International OTCQX) is pleased to provide shareholders with assay results from surface grab sampling of outcrops and possibly large boulders for rare earth elements on our 100% owned Turner Falls property in Villedieu Township, Quebec approximately 45 kilometres east of Kipawa.

Fifteen (15) rock samples were analysed for, among other things, trace elements including rare earths. Many of the assays are anomalous and two are very anomalous in Heavy and Light Rare Earths and Yttrium as indicated in the table below:

	Sample 12375	Sample 29469
TREO+Y	4.57%	3.60%
HREO+Y	1.58%	0.53%
Ratio: HREO+Y/TREO+Y	34.6%	14.7%

Note: TREO+Y=Total Rare Earth Oxides plus Yttrium Oxide
HREO+Y=Heavy Rare Earth Oxides plus Yttrium Oxide

SUPL

When evaluating rare earth assays, the higher the ratio of heavy rare earth oxides to the total rare earth oxide content, the better the potential of the prospect. The ratios of the two samples above, indicate positive exploration potential. In addition, the two samples assayed **5.62% and 4.09% Zirconium Oxide (ZrO₂)** respectively and the first sample contained **1.15% Niobium Oxide (Nb₂O₅)**.

The Turner Falls area was prospected in the 1950's and a showing of rare earths, niobium oxide and uranium was discovered in Grenville rocks. Reports in Quebec Government files indicate an average of **8.05% Rare Earths Oxides** and **2.04% Niobium Oxide** in 4 samples (GM6623-A) taken over a strike length of at least 400 meters (GM 43492).

The Turner Falls Property is part of the over 20,000 hectare Hunter's Point Property where a number of showings of uranium and gold have produced assays of up to **7.7% U₃O₈** and **1.1 oz/ton gold**. In addition, recent work has located showings of anomalous and high grade rare earth values on the property in areas other than the Turner Falls showing.

Below are tables reporting in parts per million (ppm) the abundance of rare earths elements in the 15 samples (1000 ppm= 1 g/t).

Light Rare Earths					
Sample #	Lanthanum (La)	Cerium (Ce)	Praseodymium (Pr)	Neodymium (Nd)	Samarium (Sm)
12370	39.9	163	10.6	38.9	10.1
12371	14.1	37.6	4.73	21	7.2
12372	3.1	26	1.59	7.9	4
12373	82.4	285	20.7	65.9	11.4
12374	2.6	8.8	0.92	3.7	2
12375	4980	11900	1510	5720	1450
29468	81.8	1190	27.8	102	31.6
29469	6770	12800	1440	4400	850
29470	183	385	43.3	147	25.8
29471	122	321	31.1	108	24.1
29472	57.9	146	14.8	52.4	11.7
29473	3.8	15.3	1.02	3.7	1.4
29474	16.9	86	6.53	30.4	11.5
29475	26.8	50.8	5.83	20.4	4.3
29476	9.6	19.5	2.64	10.7	2.6

29476	16	72	1.7	0.9	0.7

Sample preparation was done by Laboratoires Expert located at 127 Industrial Boulevard, Rouyn-Noranda, Quebec. Pulps were sent to Activation Laboratories Ltd. At 1336 Sandhill Drive, Ancaster, Ontario for fusion and analysis. Fused samples are diluted and analyzed by Perkin Elmer Sciex ELAN 9000 ICP/MS. Three blanks and five controls (three before sample group and two after) are analyzed per group of samples. Duplicates are fused and analyzed every 15 samples. The instrument is recalibrated every 40 samples.

Forward Looking Statements

Except for historical information this News Release may contain certain "forward looking statements". These statements may involve a number of known and unknown risks and uncertainties and other factors that may cause the actual results, level of activity and performance to be materially different from the Companies expectations and projections. A more detailed discussion of the risks is available in the "Annual Information Form" filed by the Company on SEDAR at www.sedar.com
