2012 ANNUAL REPORT

I WOULD LIKE TO THANK OUR EMPLOYEES AND AGENTS FOR THEIR SUPPORT AND DEDICATION TO OUR CUSTOMERS

"I founded Mercury with the belief we could create a better insurance company. Today, with the help and support of the best agents and employees in the business, we have done that and more. Our products, pricing and service are second to none and I know that with your support and continued dedication to Mercury the next 50 years will be even brighter than the first 50. Thank you for your faith and belief in this great company."

George Joseph
Founder and Chairman

NUMBER OF AGENTS

MERCURY INSURANCE: 50 YEARS OF SERVICE AND SAVINGS

Developing relationships and knowing customers have helped build Mercury Insurance for 50 years.

April 1, 1962

April 1, 1962 Mercury General Corp., founded in Los Angeles by George Joseph under the principles of service, security and savings, sells its first policy.

The company began with six employees and 90 agents.

1967

Mercury receives an A+ rating from global credit rating agency A.M. Best.

Mercury continues SoCal expansion with office opening in San Diego.

1968

Mercury establishes a holding company, which acquires shares of Mercury Casualty Company and makes it a wholly-owned subsidiary of Mercury General Corp.

Mercury moves into Northern California as San Jose office opens.

1964

Mercury opens its first Orange County, CA office.

1966

Mercury opens its first offices in the San Fernando Valley.

1970

Mercury writes \$1 million in premiums during a single month.

1971

Number of Mercury agents increases to 467

San Fernando Valley, California

Since Mercury first opened its doors in 1962, it has emerged as a significant force in the insurance world, both as an agent of change and a product of it. Over the last 50 years, Mercury has grown from a small, local company of six employees and 90 agents to one of the premiere insurance companies in the nation, now with 7,700 agents across 13 states and more than \$4 billion in assets.

Despite its humble beginnings, it didn't take long for Mercury to hit its stride. By 1973, it had achieved 10 consecutive years of revenue growth, including achieving \$1 million in written premiums in a single month in 1970 and \$2 million in a single month in 1972.

Under the guidance of its founder, George Joseph, Mercury centered its business model on a vision that called for a steady hand and a personal touch, making

1972
Mercury sells its first homeowners policy.

1973
Mercury revenues increase for 10th consecutive year.
A subsidiary is formed for underwriting preferred risks; a network of independent agents ("Mercury's front-line underwriters") is governed by a 34-page manual consisting of rules written by George Joseph that results in rapid increasing of business in the nation's largest auto insurance market.

1977
Newly created Mercury Insurance Company writes its first auto policy. Mercury Insurance Company ultimately becomes largest insurance subsidiary, producing over \$1.2 billion in premiums in 2012.

1978
Mercury establishes insurance industry's first Special Investigations Unit (SIU) to fight insurance fraud.

1974
Mercury opens its first Sacramento office.

Sacramento, California

affordable insurance available to drivers of all risk types. Over the next decade, Mercury would expand its presence throughout California, targeting key markets throughout Southern and Northern California, including fast growing markets like Orange County, the San Fernando Valley, San Diego and the Bay Area.

Since day one, the mission has been to put the customer first. Mercury's expansive network of local,

independent agents ensures customers are seen as people, not policies. To this day, Mercury customers can always count on personalized service -24 hours a day, seven days a week. In 1977, the company formed a new subsidiary, Mercury Insurance Company, which would ultimately grow to become the largest insurance subsidiary, producing over \$1.2 billion in premiums in 2012.

1985

Mercury converts to public ownership and an initial public offering on NASDAQ goes at \$19 a share.

1986

Mercury board of directors issues \$.05 quarterly dividend and has increased annual dividends every year since.

1987

Professional Insurance Agent Association names George Joseph "Company Person of the Year."

Mid '80s

Mercury becomes the largest independent agency writer of private passenger auto insurance in California.

Irvine, California

In 1985, Mercury began trading public shares on the NASDAQ stock exchange. Soon after, Mercury's board issued a \$.05 quarterly dividend and has increased its annual dividend every year since. Mercury continues to be committed to providing security for its policyholders and value for its shareholders.

If the '80s were a period of internal and structural expansion for Mercury, the '90s brought significant

geographic expansion. By 1990, Mercury had literally hit the road and, for the first time, established operations in markets outside of California, including states like Georgia and Illinois. Mercury would open an office in Florida in 1998, and subsequently open offices in nine additional states over the next two decades, including in New York and Virginia. The acquisition of American Fidelity Insurance Group (renamed American

1993

Mercury expands product offerings to auto, home and umbrella coverage.

Mercury's premium volume stands at \$467 million; underwriting expenses (before commissions and taxes) are 5.8 percent of premiums, far less than the industry average of 12.1 percent.

1989

Mercury begins expansion outside California; initially in Georgia and Illinois.

1992

Mercury employee roster expands to 1,200.

1994

George Joseph predicts at shareholders meeting that Mercury's premium volume will double within three years and exceed \$1 billion by the end of 1997.

1996

Mercury acquires American Fidelity Insurance Group, which expands Mercury's operations (as American Mercury Insurance Group) into Oklahoma and Texas.

Mercury's common stock begins trading on the New York Stock Exchange (MCY).

New York, New York

Mercury Insurance Group) provided an entrée into markets in Oklahoma and Texas.

The company enjoyed tremendous growth through the '90s, including hitting the \$1 billion mark in premiums written in 1997. With an estimated 7.2 percent market share in California, Mercury was insuring more than one million vehicles statewide. The company also began trading its shares on the New York

Stock Exchange, where it trades today under the ticker symbol, MCY. At this time, Mercury began to stretch its reach across different product lines to offer policies for the home and umbrella coverage. Today, Mercury is proud to offer comprehensive insurance policies for auto, home and businesses, providing its customers broader, more cohesive protection at even more competitive rates.

1997

George Joseph's three-year growth prediction is fulfilled when Mercury doubles premium volume by the end of the year and reaches \$1.08 billion in written premiums.

With a 7.2 percent market share in California, Mercury insures more than 1 million vehicles statewide.

1998

Mercury issues its first policy in Florida.

2001

Mercury enters New York and Virginia markets.

2003

Company-wide written premiums top \$2.25 billion.

Mercury enters New Jersey market.

2004

Mercury increases market share to nine percent of the California market.

Mercury begins writing in Arizona, Michigan, Nevada and Pennsylvania.

Underwriting profits soar to \$273 million, the highest in the company's history.

2002

Mercury celebrates its 40th anniversary.

Richmond, Virginia

Soon after the turn of the century, Mercury celebrated its 40th anniversary with \$2.25 billion in premiums written and underwriting profits of \$273 million, the highest in the company's history. A new age in technology brought both challenges and opportunities. The company began exploring ways to centralize and streamline operations in order to facilitate and expedite transactions throughout its

ever-expanding network of agents and customers. More recently, Mercury launched its "Buy Button" pilot program in Georgia, recognizing the advent of a shift in consumer buying patterns. This program not only allows for an online quote but also allows consumers to purchase a policy online.

Over the last 50 years, Mercury has enjoyed a storied and distinguished history. The company has

2007

Mercury rings the opening bell on the NYSE, celebrating 10 years of listing on the exchange.

2005

Mercury's total assets exceed \$4 billion for the first time.

2006

Net Premiums written continue to grow exceeding the \$3 billion mark.

2008

Year-end stats include: \$4 billion in assets; 4,700 independent agents and brokers in 13 states; \$1.5 billion in shareholders' equity.

Web-based point of sale system (MercuryFirst) launches to simplify life for Mercury agents.

2009

Mercury becomes one of only 10 companies named to the Forbes.com list of America's Most Trustworthy Companies three years in a row (2007, 2008 and 2009).

Mercury purchases AIS (Auto Insurance Specialists), the nation's largest personal lines independent insurance agency.

2011

Mercury launches Buy Button project in Georgia, the company's first direct-to-consumer sales effort.

2010

The Mercury Insurance Open debuts as the company becomes title sponsor of the women's pro tennis tournament at La Costa Resort and Spa near San Diego.

2012

Mercury celebrates its 50th Anniversary.

Atlanta, Georgia

carried an A+ rating from A.M. Best nearly every year since its inception. It has earned the distinction of being counted among the Forbes.com list of "America's Most Trustworthy Companies" four times, including in 2012. It has been a pioneer in its unique approach to underwriting and risk management and a leader in navigating the complexities of an ever-changing industry. All the while, Mercury has stayed true to

its founding principals of offering the very best in personalized service at the most competitive rates. Year after year, decade after decade, the company has worked to earn the trust and confidence of policyholders and shareholders alike with the simple idea of delivering on its promises. As it celebrates its 50th anniversary, Mercury has much to look back on, and even more to look forward to.

For Mercury, 2012 was a milestone year as we celebrated our 50th year in business. Mercury's operations began in 1962 in a small office on Wilshire Boulevard in Los Angeles, California. Our strategy was to provide a competitively priced private passenger automobile product to California consumers by establishing valuable partnerships with agents, underwriting our business carefully, effectively managing our claims processes and providing excellent customer service. We started with six employees in our first year in business and wrote less than \$1 million in premiums.

Fifty years later, our premium volume has grown to \$2.6 billion and our product offerings have expanded to include homeowners, commercial automobile and property, and mechanical breakdown insurance. We employ 4,600 professionals and about 7,700 independent agents who offer Mercury's products in thirteen states throughout the nation. Mercury's growth from a small California startup insurer fifty years ago to a multi-billion dollar enterprise would not have been possible without the talented team of professionals that helped build this company. We would like to thank all of our past and present employees and agents for their contributions to the success of Mercury.

Our poor financial performance in 2012 is not how we envisioned celebrating our 50-year anniversary. Our operating earnings, which exclude realized gains and losses, were \$73.8 million in 2012 compared to \$153.2 million in 2011, a decrease of 52%. The decrease in operating earnings was primarily due to the deterioration in the combined ratio from 98.5% in 2011 to 102.8% in 2012. Our 2012 combined ratio was negatively impacted by a variety of factors, including \$39 million of catastrophe losses, most of which came from Hurricane Sandy, higher recorded frequency and severity and \$42 million in unfavorable loss reserve development.

Although our 2012 operating results were

disappointing, they masked several positive milestones. Total premiums written grew by 3% in 2012 and in the fourth quarter premiums written grew 5.9% compared to the same period in 2011, the highest percentage increase since the first quarter of 2006. The growth is attributable to several factors, including our California revenue neutral rating plan we implemented in December 2011, which made us more competitive for new business, as well as an increase in the number of agents selling our products.

"Total premiums written grew by 3% in 2012 and in the fourth quarter, premiums written grew 5.9% compared to the same period in 2011, the highest percentage increase since the first quarter of 2006."

California new business private passenger automobile applications increased year over year by 19%.

In addition, our results outside of California continue to improve. Excluding the impact of Hurricane Sandy, our operations outside of California posted a combined ratio under 100% in the fourth quarter and slightly over 100% for the year. Over the past few years we have taken significant rate action in most states outside of California and the impact of those rate actions is having a positive impact on our results. We believe our underlying results outside of California

COMBINED RATIO VS. INDUSTRY

(In percent)

will continue to improve as more rate increases are implemented where necessary and rate increases implemented in 2012 continue to earn-in during 2013.

In our largest market, California, increases in both frequency and severity negatively impacted our results. We believe the increase in bodily injury severity we are seeing is in part due to more severe accidents. Overall, we have experienced an increase in medical bills and medical procedures such as MRIs and epidural injections. The increase in California frequency is partially due to an increase in our new business sales as new business tends to have higher frequency as compared to renewal business.

Although we filed for a 6.9% rate increase in late 2011 for our California private passenger automobile business, we did not receive regulatory approval until late 2012, and the rate increase approved was 4%. Accordingly, the increasing loss trends were not offset by a rate increase for most of the year. Although the 4% rate increase is going to aid our results in 2013, we don't believe the 4% will result in a reasonable return. Accordingly, we recently filed for a 6.9% rate increase in our non-standard California company and a 6% increase in our preferred California company.

As loss costs rise, it is increasingly important to obtain rate increases in California in order to

achieve a reasonable return. However, the regulatory environment in California is challenging. We will continue to work with the Department of Insurance on rate filings, but, if necessary, we will exhaust all administrative and legal remedies if we are unsuccessful in obtaining the needed rate from the California Department of Insurance.

Catastrophe losses are part of this business and we experienced our share of them in 2012. We price our products to include a catastrophe load for expected catastrophe losses and in years when there are low

"In our largest market, California, increases in both frequency and severity negatively impacted our results. We believe the increase in bodily injury severity we are seeing is in part due to more severe accidents."

catastrophe losses our margins should be very good in the states and products where there is a significant catastrophe load. In years when catastrophe losses are greater than our expected catastrophe load, as happened this year with Hurricane Sandy, our margins will be negatively impacted.

In 2012, we recorded \$42 million of unfavorable reserve development primarily due to an increase in the estimated loss severity for accident years 2010 and 2011 California Bodily Injury losses. Losses for the most recent accident years for California

OPERATING LEVERAGE

(Net Premiums Written/Policyholders Surplus as ratio)

DIVIDENDS PER SHARE

(in dollars)

Bodily Injury developed at a rate significantly higher than historical averages. In addition, we experienced unfavorable development on the run-off of our California commercial taxi business and Florida homeowners business, both of which we ceased writing in 2011. For the 2012 accident year, we weighed the more recent loss trends more heavily which should reduce the potential for unfavorable reserve development in 2013.

In our California homeowners line rate filing, an administrative law judge recommended a net rate reduction of 5.5%, which the Insurance Commissioner accepted in February 2013. We strongly disagree with the administrative law judge's decision. In fact, our actual results clearly demonstrate that the judge's trend selections were significantly too low for our most popular homeowners form. Accordingly, we recently filed for a 6.9% rate increase that reflects our actual results and have filed an action in Superior Court to overturn the administrative law judge's decision. We anticipate that our Superior Court action will be decided later this year and we will continue to pursue rates that allow a fair rate of return.

We are consolidating our claims and underwriting operations located outside of California into hub locations in Florida, New Jersey and Texas. Although we expect approximately \$8 million to \$13 million (pre-tax) of office closure costs and severance related expense in the first quarter of 2013, the new structure will improve our long term profitability and will allow us to scale more efficiently as we grow our business outside of California.

Last year, we informed you that we piloted a program in Georgia that not only provides a quote on line, but allows the consumer to purchase a policy on-line. In 2012, we expanded this capability to California, our largest state. Our initial results are encouraging, although we are far from perfecting the on-line experience and are testing and making adjustments as we learn more about this process. We expect to expand this capability to other states in 2013.

We plan to implement various initiatives to help grow our business and improve our bottom line. Our priorities for 2013 include:

- Implementing improved pricing segmentation and overall rate adequacy;
- Introducing new commercial automobile products in Illinois, Pennsylvania, Virginia, and Nevada;
- Introducing an improved homeowners and dwelling fire product in California;
- Expanding the capability to sell on-line to other states;
- Continuing to invest in our technology to make it easier for our agents and customers to transact business with us;
- Increasing the number of relationships with qualified agents;
- Converting states with legacy systems to our new technology platform;
- Managing expenses prudently; and
- Continuing our Service Excellence program.

PREMIUMS WRITTEN

(in millions)

The after-tax yield on investments of 3.8% in 2012 was lower than the 4.2% obtained in 2011. The current low interest rate environment is putting downward pressure on our after-tax yield as new money is being invested at lower yields. Our investment base remained steady at about \$3 billion in invested assets for both 2012 and 2011. Going forward, there will be continued downward pressure on our after tax-yield as bonds with higher coupons mature or are called and

"We pride ourselves on having a strong balance sheet. At year-end, our Shareholders' Equity was \$1.8 billion and our underwriting leverage remains conservative, with a premium to surplus ratio of 1.8 to 1."

the reinvestment of those proceeds will most likely be made at lower after-tax yields. To offset some of this pressure, in 2012 we put more of our cash to work in dividend paying stocks.

We pride ourselves on having a strong balance sheet. At year-end, our Shareholders' Equity was \$1.8 billion and our underwriting leverage remains conservative, with a premium to surplus ratio of 1.8 to 1. In November 2012, Mercury's Board of Directors increased the dividend rate to \$0.6125 cents per share, continuing to provide a generous dividend yield based on the recent market price of our stock. Our strong capital position has allowed us to pay a dividend in years, such as 2012,

where the dividend payout ratio is above 100%. We recognize we cannot, on a long-term basis, have a payout ratio over 100%, but we also don't expect to have profitability at 2012 levels for a long period of time. Our Board will continue to evaluate our dividend policy on a quarterly basis and consider factors such as the Company's capital position, earnings, tax law changes and future prospects before a decision is made on the dividend amount.

We hope you will be able to attend our annual meeting on May 8, 2013.

Sincerely,

George Joseph
Chairman of the Board

Gabriel Tirador
President and Chief Executive Officer

PART I

Item 1. Business

General

Mercury General Corporation (“Mercury General”) and its subsidiaries (referred to herein collectively as the “Company”) are primarily engaged in writing personal automobile insurance through 13 insurance subsidiaries (referred to herein collectively as the “Insurance Companies”) in a number of states, principally California. The Company also writes homeowners, commercial automobile and property, mechanical breakdown, fire, and umbrella insurance. The direct premiums written for the years ended December 31, 2012, 2011, and 2010 by state and line of business were:

Year Ended December 31, 2012 (Amounts in thousands)

	Private Passenger Auto	Homeowners	Commercial Auto	Other Lines	Total

The Company offers automobile policyholders the following types of coverage: collision, property damage liability, bodily injury (BI) liability, comprehensive, personal injury protection (PIP), underinsured and uninsured motorist, and other hazards. The Company’s published maximum limits of liability for private passenger automobile insurance are, for BI, \$250,000 per person

and \$500,000 per accident, and for property damage, \$250,000 per accident. The combined policy limits may be as high as \$1,000,000 for vehicles written under the Company's commercial automobile program. However, the majority of the Company's automobile policies have liability limits that are equal to or less than \$100,000 per person and \$300,000 per accident for BI and \$50,000 per accident for property damage.

The principal executive offices of Mercury General are located in Los Angeles, California. The home office of the Company's California insurance subsidiaries and the Information Technology center are located in Brea, California. The Company also owns office buildings in Rancho Cucamonga and Folsom, California, which are used to support California operations and future expansion, and in St. Petersburg, Florida and in Oklahoma City, Oklahoma, which house Company employees and several third party tenants. The Company maintains branch offices in a number of locations in California; Richmond, Virginia; Latham, New York; Bridgewater, New Jersey; Vernon Hills, Illinois; Atlanta, Georgia; and Austin and San Antonio, Texas. The Company has approximately 4,600 employees. On January 22, 2013, the Company implemented a plan to consolidate its non-California office based claims and underwriting operations into hubs located in St. Petersburg, Florida; Bridgewater, New Jersey; and Austin, Texas. The Company expects that the consolidation will be completed before the end of the second quarter of 2013.

Website Access to Information

The internet address for the Company's website is www.mercuryinsurance.com. The internet address provided in this Annual Report on Form 10-K is not intended to function as a hyperlink and the information on the Company's website is not and should not be considered part of this report and is not incorporated by reference in this document. The Company makes available on its website its Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, Proxy Statements, and amendments to such reports and proxy statements (the "SEC Reports") filed with or furnished to the Securities and Exchange Commission ("SEC") pursuant to federal securities laws, as soon as reasonably practicable after each SEC Report is filed with or furnished to the SEC. In addition, copies of the SEC Reports are available, without charge, upon written request to the Company's Chief Financial Officer, Mercury General Corporation, 4484 Wilshire Boulevard, Los Angeles, California 90010.

Organization

Mercury General, an insurance holding company, is the parent of Mercury Casualty Company ("MCC"), a California automobile insurer founded in 1961 by George Joseph, the Company's Chairman of the Board of Directors. Including MCC, Mercury General has 21 subsidiaries. The Company's operations are conducted through the following subsidiaries:

<u>Insurance Companies</u>	<u>Date Formed or Acquired</u>	<u>A.M. Best Ratings</u>	<u>Primary States</u>

Auto Insurance Specialists LLC (“AIS”)	January 2009	Insurance agent
PoliSeek AIS Insurance Solutions, Inc. (“PoliSeek”)	January 2009	Insurance agent

(1) The term “California Companies” refers to MCC, MIC, CAIC, and CGU.

Production and Servicing of Business

The Company sells its policies through approximately 7,700 independent agents, of which, over 1,300 are located in each of California and Florida. The remaining agents are located in Arizona, Georgia, Illinois, Michigan, Nevada, New Jersey, New York, Oklahoma, Pennsylvania, Texas and Virginia. Over half of the Company’s agents in California have represented the Company for more than ten years. The agents are independent contractors selected and contracted by the Company and generally also represent competing insurance companies. No independent agent accounted for more than 2% of the Company’s direct premiums written during 2012, 2011, and 2010.

The Company believes that it compensates its agents above the industry average. During 2012, total commissions incurred were approximately 16% of net premiums written.

The Company’s advertising budget is allocated among television, radio, newspaper, internet, and direct mailing media with the intent to provide the best coverage available within targeted media markets. While the majority of these advertising costs are borne by the Company, a portion of these costs are reimbursed by the Company’s independent agents based upon the number of account leads generated by the advertising. The Company believes that its advertising program is important to generate leads, create brand awareness and to remain competitive in the current insurance climate. During 2012, net advertising expenditures were \$19.4 million.

Underwriting

The Company sets its own automobile insurance premium rates, subject to rating regulations issued by the Department of Insurance or similar governmental agency of each state in which it is licensed to operate (“DOI”). Each state has different rate approval requirements. See “Regulation—Department of Insurance Oversight.”

The Company offers standard, non-standard, and preferred private passenger automobile insurance. In addition, the Company offers mechanical breakdown insurance in most states; and homeowners insurance in Arizona, California, Georgia, Illinois, New Jersey, New York, Oklahoma, Texas, and Virginia. The Company completed its exit of the Florida homeowners market in 2012.

In California, “good drivers,” as defined by the California Insurance Code, accounted for approximately 82% of all California voluntary private passenger automobile policies-in-force at December 31, 2012, while higher risk categories accounted for approximately 18%. The private passenger automobile renewal rate in California (the rate of acceptance of offers to renew) averages approximately 96%.

Claims

The Company conducts the majority of claims processing without the assistance of outside adjusters. The claims staff administers all claims and manages all legal and adjustment aspects of claims processing.

Losses and Loss Adjustment Expense Reserves and Reserve Development

The Company maintains losses and loss adjustment expense reserves for both reported and unreported claims. Losses and loss adjustment expense reserves for reported claims are estimated based upon a case-by-case evaluation of the type of claim involved and the expected development of such claims. Losses and loss adjustment expense reserves for unreported claims are determined on the

basis of historical information by line of insurance. Inflation is reflected in the reserving process through analysis of cost trends and review of historical reserve settlement.

The Company's ultimate liability may be greater or less than management estimates of reported losses and loss adjustment expense reserves. Reserves are analyzed quarterly by the Company's actuarial consultants using current information on reported claims and a variety of statistical techniques. The Company does not discount to a present value that portion of losses and loss adjustment expense reserves expected to be paid in future periods. Federal tax law, however, requires the Company to discount losses and loss adjustment expense reserves for federal income tax purposes.

The following table presents the development of losses and loss adjustment expense reserves for the period 2002 through 2012. The top section of the table shows the reserves at the balance sheet date, net of reinsurance recoverable, for each of the indicated years. This amount represents the estimated net losses and loss adjustment expenses for claims arising from the current and all prior years that are unpaid at the balance sheet date, including an estimate for losses that had been incurred but not reported ("IBNR") to the Company. The second section shows the cumulative amounts paid as of successive years with respect to that reserve liability. The third section shows the re-estimated amount of the previously recorded reserves based on experience as of the end of each succeeding year, including cumulative payments made since the end of the respective year. Estimates change as more information becomes known about the frequency and severity of claims for individual years. The bottom line shows favorable (unfavorable) development that exists when the original reserve estimates are greater (less) than the re-estimated reserves at December 31, 2012.

In evaluating the cumulative development information in the table, it should be noted that each amount includes the effects of all changes in development amounts for prior periods. This table does not present accident or policy year development data. Conditions and trends that have affected development of the liability in the past may not necessarily occur in the future. Accordingly, it may not be appropriate to extrapolate future favorable or unfavorable development based on this table.

(1) Under statutory accounting principles ("SAP"), reserves are stated net of reinsurance recoverable whereas under U.S. generally accepted accounting principles ("GAAP"), reserves are stated gross of reinsurance recoverable.

The Company experienced unfavorable development of approximately \$42 million on the 2011 and prior accident years' loss and loss adjustment expense reserves due primarily to an increase in the estimated loss severity for accident years 2010 and 2011 California BI losses. In addition, the Company experienced unfavorable development on the run-off of California commercial taxi business and Florida homeowners business, both of which the Company ceased writing in 2011. See "Critical Accounting Estimates-Reserves" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations."

For the years 2008 through 2010, the Company experienced unfavorable development of approximately \$14 million to \$46 million on prior accident years' losses and loss adjustment expense reserves. The unfavorable development was primarily due to increases in the estimated loss severity for accident years 2008 through 2010 California BI losses, increases in PIP reserves in Florida resulting from court decisions that were adverse to the insurance industry, and development on 2007 and prior accident years New Jersey BI reserves that settled for more than anticipated. These were partially offset by reductions in estimates for loss adjustment expenses, particularly for the 2010 accident year, related to the transfer of a higher proportion of litigated claims to house counsel and a reduction in the estimate for Florida sinkhole claims for accident year 2010, resulting from many of those claims being denied due to the absence of sinkhole activity or structural damage to the houses.

For the years 2005 through 2007, the Company experienced unfavorable development of approximately \$110 million to \$164 million on prior accident years' losses and loss adjustment expense reserves. The unfavorable development from these years related primarily to increases in loss severity estimates and loss adjustment expense estimates for the California BI coverage as well as increases in the provision for losses in New Jersey and Florida.

For 2004, the unfavorable development related to an increase in the Company's prior accident years' loss estimates for personal automobile insurance in Florida and New Jersey. In addition, an increase in estimates for loss severity for the 2004 accident year reserves for California and New Jersey automobile lines of business contributed to the deficiencies.

For 2003, the favorable development largely related to lower inflation than originally expected on the BI coverage reserves for the California automobile line of insurance. In addition, the Company experienced a reduction in expenditures to outside legal counsel for the defense of personal automobile claims in California. This led to a reduction in the ultimate expense amount expected to be paid out and therefore favorable development in the reserves at December 31, 2003, partially offset by unfavorable development in the Florida automobile lines of business.

For 2002, the unfavorable development related to increases in the ultimate liability for BI, physical damage, and collision claims over what was originally estimated. The increases in these losses related to increased severity over what was originally recorded and were the result of inflationary trends in health care, auto parts, and body shop labor costs.

Statutory Accounting Principles

The Company's results are reported in accordance with GAAP, which differ in some respects from amounts reported under SAP prescribed by insurance regulatory authorities. Some of the significant differences under GAAP are described below:

- Policy acquisition costs such as commissions, premium taxes, and other costs that vary with and are primarily related to the successful acquisition of new and renewal insurance contracts, are capitalized and amortized on a pro rata basis over the period in which the related premiums are earned, rather than expensed as incurred, as required by SAP.
- Certain assets are included in the consolidated balance sheets whereas, under SAP, such assets are designated as "nonadmitted assets," and charged directly against statutory surplus. These assets consist primarily of premium receivables outstanding more than 90 days, deferred tax assets that do not meet statutory requirements for recognition, furniture, equipment, leasehold improvements, capitalized software, and prepaid expenses.
- Amounts related to ceded reinsurance are shown gross as prepaid reinsurance premiums and reinsurance recoverables, rather than netted against unearned premium reserves and losses and loss adjustment expenses reserves, respectively, as required by SAP.
- Fixed-maturity securities are reported at fair value rather than at amortized cost, or the lower of amortized cost or fair value, depending on the specific type of security as required by SAP.
- Goodwill is reported as the excess of cost of an acquired entity over the fair value of the underlying assets and assessed periodically for impairment. Intangible assets are amortized over their useful lives. Under SAP, goodwill is reported as the excess of cost of an acquired entity over the statutory book value and amortized over 10 years. Its carrying value is limited to 10% of adjusted surplus. Intangible assets are not recognized.
- The differing treatment of income and expense items results in a corresponding difference in federal income tax expense. Changes in deferred income taxes are reflected as an item of income tax benefit or expense, rather than recorded directly to statutory surplus as regards policyholders, as required by SAP. Admittance testing under SAP may result in a charge to unassigned surplus for non-admitted portions of deferred tax assets. Under GAAP, a valuation allowance may be recorded against the deferred tax assets and reflected as an expense.
- Certain assessments paid to regulatory agencies that are recoverable from policyholders in future periods are expensed rather than recorded as receivables under SAP.

Operating Ratios (SAP basis)

Loss and Expense Ratios

Loss and expense ratios are used to interpret the underwriting experience of property and casualty insurance companies. Under SAP, losses and loss adjustment expenses are stated as a percentage of premiums earned because losses occur over the life of a policy, while underwriting expenses are stated as a percentage of premiums written rather than premiums earned because most underwriting expenses are incurred when policies are written and are not spread over the policy period. The statutory

underwriting profit margin is the extent to which the combined loss and expense ratios are less than 100%. The Insurance Companies' loss ratio, expense ratio, combined ratio, and the private passenger automobile industry combined ratio, on a statutory basis, are shown in the following table. The Insurance Companies' ratios include lines of insurance other than private passenger automobile. Since these other lines represent only 19.4% of premiums written, the Company believes its ratios can be compared to the industry ratios included in the following table.

	Year Ended December 31,				
	2012	2011	2010	2009	2008
Loss Ratio	76.1%	71.2%	71.0%	67.8%	73.3%
Expense Ratio	26.7%	27.4%	29.1%	28.6%	28.5%
Combined Ratio	102.8%	98.6%	100.1%	96.4%	101.8%
Industry combined ratio (all writers) ⁽¹⁾	99.6% ⁽²⁾	101.6%	100.4%	100.8%	99.8%
Industry combined ratio (excluding direct writers) ⁽¹⁾	N/A	101.1%	101.1%	100.5%	100.8%

Premiums to Surplus Ratio

The following table presents, for the periods indicated, the Insurance Companies' statutory ratios of net premiums written to policyholders' surplus. Guidelines established by the National Association of Insurance Commissioners (the "NAIC") indicate that this ratio should be no greater than 3 to 1.

	Year Ended December 31,				
	2012	2011	2010	2009	2008
	(Amounts in thousands, except ratios)				
Net premiums written	\$ 2,651,731	\$ 2,575,383	\$ 2,555,481	\$ 2,589,972	\$ 2,750,226
Policyholders' surplus	\$ 1,440,973	\$ 1,497,609	\$ 1,322,270	\$ 1,517,864	\$ 1,371,095
Ratio	1.8 to 1	1.7 to 1	1.9 to 1	1.7 to 1	2.0 to 1

Investments

The Company's investments are directed by the Chief Investment Officer under the supervision of the Board of Directors. The Company's investment strategy emphasizes safety of principal and consistent income generation, within a total return framework. The investment strategy has historically focused on maximizing after-tax yield with a primary emphasis on maintaining a well diversified, investment grade, fixed income portfolio to support the underlying liabilities and achieve a return on capital and profitable growth. The Company believes that investment yield is maximized by selecting assets that perform favorably on a long-term basis and by disposing of certain assets to enhance after-tax yield and minimize the potential effect of downgrades and defaults. The Company believes that this strategy maintains the optimal investment performance necessary to sustain investment income over time. The Company's portfolio management approach utilizes a market risk and asset allocation strategy as the primary basis for the allocation of interest sensitive, liquid and credit assets as well as for monitoring credit exposure and diversification requirements. Within the ranges set by the asset allocation strategy, tactical investment decisions are made in consideration of prevailing market conditions.

Tax considerations, including the impact of the alternative minimum tax ("AMT"), are important in portfolio management. Changes in loss experience, growth rates, and profitability produce significant changes in the Company's exposure to AMT liability, requiring appropriate shifts in the investment asset mix between taxable bonds, tax-exempt bonds, and equities in order to maximize after-tax yield. The Company closely monitors the timing and recognition of capital gains and losses to maximize the realization of any deferred tax assets arising from capital losses. The Company had no capital loss carryforward at December 31, 2012.

Investment Portfolio

The following table presents the composition of the Company's total investment portfolio:

	December 31,					
	2012		2011		2010	
	Cost ⁽¹⁾	Fair Value	Cost ⁽¹⁾	Fair Value	Cost ⁽¹⁾	Fair Value
	(Amounts in thousands)					
Taxable bonds	\$ 253,175	\$ 265,671	\$ 166,295	\$ 180,257	\$ 200,468	\$ 223,017
Tax-exempt state and municipal bonds	2,017,728	2,142,683	2,179,325	2,265,332	2,417,188	2,429,263
Total fixed maturities	2,270,903	2,408,354	2,345,620	2,445,589	2,617,656	2,652,280
Equity securities	475,959	477,088	388,417	380,388	336,757	359,606
Short-term investments	294,607	294,653	236,433	236,444	143,378	143,371
 Total investments	 <u>\$ 3,041,469</u>	 <u>\$ 3,180,095</u>	 <u>\$ 2,970,470</u>	 <u>\$ 3,062,421</u>	 <u>\$ 3,097,791</u>	 <u>\$ 3,155,257</u>

(1) Fixed maturities and short-term bonds at amortized cost; and equities and other short-term investments at cost.

The Company applies the fair value option to all fixed maturity and equity securities and short-term investments at the time the eligible item is first recognized. For more detailed discussion, see "Liquidity and Capital Resources—Invested Assets" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 2 of Notes to Consolidated Financial Statements.

At December 31, 2012, 67.4% of the Company's total investment portfolio at fair value and 89.0% of its total fixed maturity investments at fair value were invested in tax-exempt state and municipal bonds. For more detailed information including credit ratings, see "Liquidity and Capital Resources—Portfolio Composition" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations."

The nominal average maturity of the overall bond portfolio was 12.2 years (11.0 years including all short-term instruments) at December 31, 2012, and is heavily weighted in investment grade tax-exempt municipal bonds. Fixed maturity investments purchased by the Company typically have call options attached, which further reduce the duration of the asset as interest rates decline. The call-adjusted average maturity of the overall bond portfolio was 3.7 years (3.3 years including all short-term instruments) related to holdings which are heavily weighted with high coupon issues that are expected to be called prior to maturity. The modified duration of the overall bond portfolio reflecting anticipated early calls was 3.1 years (2.8 years including all short-term instruments) at December 31, 2012, including collateralized mortgage obligations with a modified duration of 3.2 years and short-term bonds that carry no duration. Modified duration measures the length of time it takes, on average, to receive the present value of all the cash flows produced by a bond, including reinvestment of interest. As it measures four factors (maturity, coupon rate, yield, and call terms) which determine sensitivity to changes in interest rates, modified duration is considered a better indicator of price volatility than simple maturity alone. The longer the duration, the more sensitive the asset is to market interest rate fluctuations.

Equity holdings consist of non-redeemable preferred stocks, common stocks on which dividend income is partially tax-sheltered by the 70% corporate dividend received deduction, and a partnership interest in a private credit fund. At year end, 91.7% of short-term investments consisted of highly rated short-duration securities redeemable on a daily or weekly basis. The Company does not have any direct equity investment in subprime lenders.

Investment Results

The following table presents the investment results of the Company for the most recent five years:

	Year Ended December 31,				
	2012	2011	2010	2009	2008
	(Amounts in thousands)				
Average invested assets at cost ⁽¹⁾	\$ 3,011,143	\$ 3,004,588	\$ 3,121,366	\$ 3,196,944	\$ 3,452,803
Net investment income ⁽²⁾					
Before income taxes	\$ 131,896	\$ 140,947	\$ 143,814	\$ 144,949	\$ 151,280
After income taxes	\$ 115,359	\$ 124,708	\$ 128,888	\$ 130,070	\$ 133,721
Average annual yield on investments ⁽²⁾					
Before income taxes	4.4%	4.7%	4.6%	4.5%	4.4%
After income taxes	3.8%	4.2%	4.1%	4.1%	3.9%
Net realized investment gains (losses) after income taxes ⁽³⁾	\$ 43,147	\$ 37,958	\$ 37,108	\$ 225,189	\$ (357,838)

- (1) Fixed maturities and short-term bonds at amortized cost; and equities and other short-term investments at cost. Average invested assets at cost is based on the monthly amortized cost of the invested assets for each respective period.
- (2) Net investment income and average annual yield decreased primarily due to the maturity and replacement of higher yielding investments, purchased when market interest rates were higher, with lower yielding investments purchased during the current low interest rate environment.
- (3) Effective January 1, 2008, the Company adopted the fair value option with changes in fair value reflected in net realized investment gains or losses in the consolidated statements of operations.

Competitive Conditions

The Company operates in the highly competitive property and casualty insurance industry subject to competition on pricing, claims handling, consumer recognition, coverage offered and other product features, customer service, and geographic coverage. Some of the Company's competitors are larger and well-capitalized national companies which have broad distribution networks of employed or captive agents.

Reputation for customer service and price are the principal means by which the Company competes with other automobile insurers. In addition, the marketing efforts of independent agents can provide a competitive advantage. Based on the most recent regularly published statistical compilations of premiums written in 2012, the Company was the fifth largest writer of private passenger automobile insurance in California and the thirteenth largest in the United States.

The property and casualty insurance industry is highly cyclical, with alternating hard and soft market conditions. The Company has historically seen significant premium growth during hard markets. The Company believes that the market may be hardening as growth has begun to improve throughout 2012.

Reinsurance

The Company has reinsurance through the Florida Hurricane Catastrophe Trust Fund ("FHCF") that provides coverage equal to approximately 90 percent of \$19 million in excess of \$8 million per occurrence based on the latest information provided by FHCF. As of December 31, 2012, the Company no longer has any Florida homeowners policies-in-force and will not be renewing FHCF coverage in 2013.

The Company has reinsurance for PIP claims in Michigan through the Michigan Catastrophic Claims Association, a private non-profit unincorporated association created by the Michigan Legislature in 1978. The reinsurance covers losses in excess of \$500,000 per person and has no maximum limit. Michigan law provides for unlimited lifetime coverage for medical costs caused by automobile accidents.

For California homeowners policies, the Company has reduced its catastrophe exposure from earthquakes by placing earthquake risks directly with the California Earthquake Authority ("CEA"). However, the Company continues to have catastrophe exposure to fires following an earthquake. For more detailed discussion, see "Regulation—Insurance Assessments."

The Company carries a commercial umbrella reinsurance treaty and seeks facultative arrangements for large property risks. In addition, the Company has other reinsurance in force that is not material to the consolidated financial statements. If any reinsurers are unable to perform their obligations under a reinsurance treaty, the Company will be required, as primary insurer, to discharge all obligations to its policyholders in their entirety.

Regulation

The Insurance Companies are subject to significant regulation and supervision by insurance departments of the jurisdictions in which they are domiciled or licensed to operate business.

Department of Insurance Oversight

The powers of the DOI in each state primarily include the prior approval of insurance rates and rating factors and the establishment of capital and surplus requirements, solvency standards, restrictions on dividend payments and transactions with affiliates. DOI regulations and supervision are designed principally to benefit policyholders rather than shareholders.

California Proposition 103 requires that property and casualty insurance rates be approved by the California DOI prior to their use and that no rate be approved which is excessive, inadequate, unfairly discriminatory, or otherwise in violation of the provisions of the initiative. The proposition specifies four statutory factors required to be applied in “decreasing order of importance” in determining rates for private passenger automobile insurance: (1) the insured’s driving safety record, (2) the number of miles the insured drives annually, (3) the number of years of driving experience of the insured and (4) whatever optional factors are determined by the California DOI to have a substantial relationship to risk of loss and are adopted by regulation. The statute further provides that insurers are required to give at least a 20% discount to “good drivers,” as defined, from rates that would otherwise be charged to such drivers and that no insurer may refuse to insure a “good driver.” The Company’s rate plan operates under these rating factor regulations.

On October 26, 2012, the Company implemented the California DOI approved rate increase of approximately 4% on California private passenger automobile policies. The rate increase has not had a significant impact on the number of new and renewal policies written. In October 2012, the Company filed for a 6.9% rate increase in CAIC's private passenger automobile line of business, and plans to file for a rate increase in MIC's private passenger automobile line of business. The Company must obtain approval from the California DOI before implementing these new rates.

In May 2009, the Company filed for a 3.9% rate increase for its California homeowners line of business. In May 2011, the matter was referred to an administrative law judge for review. After extensive evidentiary hearings, the administrative law judge delivered a proposed decision on the matter to the California Insurance Commissioner in September 2012 that recommended a rate reduction of approximately 5.5%. On October 29, 2012, the Company received notice from the California Insurance Commissioner rejecting the administrative law judge's proposed decision and referred the matter back to the administrative law judge to gather more evidence. However, the California Insurance Commissioner recently issued a ruling to disregard his order to gather more evidence. The Company expects a final ruling from the California Insurance Commissioner on this matter in the near future. The Company does not agree with the proposed rate decrease and believes that recent homeowners loss trends support an increase. Consequently, the Company recently filed for a rate increase of 6.9%.

Insurance rates in Georgia, New York, New Jersey, Pennsylvania, and Nevada require prior approval from the state DOI, while insurance rates in Illinois, Texas, Virginia, Arizona, and Michigan must only be filed with the respective DOI before they are implemented. Oklahoma and Florida have a modified version of prior approval laws. In all states, the insurance code provides that rates must not be excessive, inadequate, or unfairly discriminatory.

The DOI in each state in which the Company operates is responsible for conducting periodic financial and market conduct examinations of the Insurance Companies in their states. Market conduct examinations typically review compliance with insurance statutes and regulations with respect to rating, underwriting, claims handling, billing, and other practices. The following table presents a summary of current financial and market conduct examinations:

State	Exam Type	Period Under Review	Status
NV	Market Conduct	January 2009 to December 2011	DOI terminated exam. No report to be issued.

During the course of and at the conclusion of these examinations, the examining DOI generally reports findings to the Company, and none of the findings reported to date is expected to be material to the Company’s financial position.

For a discussion of current regulatory matters in California, see “Regulatory and Legal Matters” in “Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations.”

The operations of the Company are dependent on the laws of the states in which it does business and changes in those laws can materially affect the revenue and expenses of the Company. The Company retains its own legislative advocates in California. The Company made direct financial contributions of \$237,400 and \$32,150 to officeholders and candidates in 2012 and 2011, respectively. The Company believes in supporting the political process and intends to continue to make such contributions in amounts which it determines to be appropriate.

Risk-Based Capital

The Insurance Companies must comply with minimum capital requirements under applicable state laws and regulations, and must have adequate reserves for claims. The minimum statutory capital requirements differ by state and are generally based on balances established by statute, a percentage of annualized premiums, a percentage of annualized loss, or risk-based capital (“RBC”) requirements. The RBC formula was designed to capture the widely varying elements of risks undertaken by writers of different lines of insurance having differing risk characteristics, as well as writers of similar lines where differences in risk may be related to corporate structure, investment policies, reinsurance arrangements, and a number of other factors. At December 31, 2012, each of the Insurance Companies had sufficient capital to exceed the highest level of minimum required capital.

Insurance Assessments

The California Insurance Guarantee Association (“CIGA”) was created to pay claims on behalf of insolvent property and casualty insurers. Each year, these claims are estimated by CIGA and the Company is assessed for its pro-rata share based on prior year California premiums written in the particular line. These assessments are limited to 2% of premiums written in the preceding year and are recouped through a mandated surcharge to policyholders in the year after the assessment. There were no CIGA assessments in 2012.

During 2012, the Company paid approximately \$2 million in assessments to the New Jersey Unsatisfied Claim and Judgment Fund and the New Jersey Property-Liability Insurance Guaranty Association for assessments relating to its personal automobile line of insurance. As permitted by state law, the New Jersey assessments paid during 2012 are recoupable through a surcharge to policyholders. The Company recouped a portion of these assessments in 2012 and expects to continue to recoup them in the future. It is likely that there will be additional assessments in 2013.

The CEA is a quasi-governmental organization that was established to provide a market for earthquake coverage to California homeowners. The Company places all new and renewal earthquake coverage offered with its homeowner policy directly with the CEA. The Company receives a small fee for placing business with the CEA, which is recorded as other revenue in the consolidated statements of operations. Upon the occurrence of a major seismic event, the CEA has the ability to assess participating companies for losses. These assessments are made after CEA capital has been expended and are based upon each company’s participation percentage multiplied by the amount of the total assessment. Based upon the most recent information provided by the CEA, the Company’s maximum total exposure to CEA assessments at April 1, 2012, the most recent date at which information was available, was \$52.2 million. There was no assessment made in 2012.

The Insurance Companies in other states are also subject to the provisions of similar insurance guaranty associations. There were no material assessment payments during 2012 in other states.

Holding Company Act

The California Companies are subject to California DOI regulation pursuant to the provisions of the California Insurance Holding Company System Regulatory Act (the “Holding Company Act”). The California DOI may examine the affairs of each of the California Companies at any time. The Holding Company Act requires disclosure of any material transactions among affiliates within a Holding Company System. Some transactions and dividends defined to be of an “extraordinary” type may not be made if the California DOI disapproves the transaction within 30 days after notice. Such transactions include, but are not limited to, extraordinary dividends; management agreements, service contracts, and cost-sharing arrangements; all guarantees that are not quantifiable; derivative transactions or series of derivative transactions; certain reinsurance transactions or modifications thereof in which the reinsurance premium or a change in the insurer’s liabilities equals or exceeds 5 percent of the policyholders’ surplus as of the preceding December 31; sales, purchases, exchanges, loans, and extensions of credit; and investments, in the net aggregate, involving more than the lesser of 3% of the respective California Companies’ admitted assets or 25% of statutory surplus as regards policyholders as of the preceding December 31. An extraordinary dividend is a dividend which, together with other dividends or distributions made within the preceding 12 months, exceeds the greater of 10% of the insurance company’s statutory policyholders’ surplus as of the preceding December 31 or the insurance company’s statutory net income for the preceding calendar year.

An insurance company is also required to notify the California DOI of any dividend after declaration, but prior to payment. There are similar limitations imposed by other states on the Insurance Companies' ability to pay dividends. As of December 31, 2012, the Insurance Companies are permitted to pay in 2013, without obtaining DOI approval for extraordinary dividends, \$154.6 million in dividends to Mercury General, of which \$133.9 million is payable from the California Companies.

The Holding Company Act also provides that the acquisition or change of "control" of a California domiciled insurance company or of any person who controls such an insurance company cannot be consummated without the prior approval of the California DOI. In general, a presumption of "control" arises from the ownership of voting securities and securities that are convertible into voting securities, which in the aggregate constitute 10% or more of the voting securities of a California insurance company or of a person that controls a California insurance company, such as Mercury General. A person seeking to acquire "control," directly or indirectly, of the Company must generally file with the California DOI an application for change of control containing certain information required by statute and published regulations and provide a copy of the application to the Company. The Holding Company Act also effectively restricts the Company from consummating certain reorganizations or mergers without prior regulatory approval.

Each of the Insurance Companies is subject to holding company regulations in the state in which it is domiciled. These provisions are substantially similar to those of the Holding Company Act.

Assigned Risks

Automobile liability insurers in California are required to sell BI liability, property damage liability, medical expense, and uninsured motorist coverage to a proportionate number (based on the insurer's share of the California automobile casualty insurance market) of those drivers applying for placement as "assigned risks." Drivers seek placement as assigned risks because their driving records or other relevant characteristics, as defined by Proposition 103, make them difficult to insure in the voluntary market. In 2012, assigned risks represented less than 0.1% of total automobile direct premiums written and less than 0.1% of total automobile direct premium earned. The Company attributes the low level of assignments to the competitive voluntary market. Many of the other states in which the Company conducts business offer programs similar to that of California. These programs are not a significant contributor to the business written in those states.

Executive Officers of the Company

The following table presents certain information concerning the executive officers of the Company as of February 1, 2013:

Name	Age	Position
George Joseph	91	Chairman of the Board
Gabriel Tirador	48	President and Chief Executive Officer
Allan Lubitz	54	Senior Vice President and Chief Information Officer
Joanna Y. Moore	57	Senior Vice President and Chief Claims Officer
John Sutton	65	Senior Vice President—Customer Service
Christopher Graves	47	Vice President and Chief Investment Officer
Robert Houlihan	56	Vice President and Chief Product Officer
Kenneth G. Kitzmiller	66	Vice President and Chief Underwriting Officer
Brandt N. Minnich	46	Vice President—Marketing
Theodore R. Stalick	49	Vice President and Chief Financial Officer
Charles Toney	51	Vice President and Chief Actuary
Judy A. Walters	66	Vice President—Corporate Affairs and Secretary

Mr. Joseph, Chairman of the Board of Directors, has served in this capacity since 1961. He held the position of Chief Executive Officer of the Company for 45 years from 1961 through December 2006. Mr. Joseph has more than 50 years' experience in the property and casualty insurance business.

Mr. Tirador, President and Chief Executive Officer, served as the Company's assistant controller from 1994 to 1996. In 1997 and 1998, he served as the Vice President and Controller of the Automobile Club of Southern California. He rejoined the Company in 1998 as Vice President and Chief Financial Officer. He was appointed President and Chief Operating Officer in

October 2001 and Chief Executive Officer in January 2007. Mr. Tirador has over 20 years experience in the property and casualty insurance industry and is an inactive Certified Public Accountant.

Mr. Lubitz, Senior Vice President and Chief Information Officer, joined the Company in January 2008. Prior to joining the Company, he served as Senior Vice President and Chief Information Officer of Option One Mortgage from 2003 to 2007. He held executive roles including Chief Information Officer of Ditech Mortgage and President of ANR Consulting Group from 2000 to 2003. Prior to 2000, he held several positions at TRW, Experian, and First American Corporation, most recently as a Senior Vice President and Chief Information Officer.

Ms. Moore, Senior Vice President and Chief Claims Officer, joined the Company in the claims department in 1981. She was named Vice President of Claims in 1991 and Vice President and Chief Claims Officer in 1995. She was promoted to Senior Vice President and Chief Claims Officer on January 1, 2007.

Mr. Sutton, Senior Vice President—Customer Service, joined the Company as Assistant to the Chief Executive Officer in July 2000. He was named Vice President in September 2007 and Senior Vice President in January 2008. Prior to joining the Company, he served as President and Chief Executive Officer of the Covenant Group from 1994 to 2000. Prior to 1994, he held various executive positions at Hanover Insurance Company.

Mr. Graves, Vice President and Chief Investment Officer, has been employed by the Company in the investment department since 1986. Mr. Graves was appointed Chief Investment Officer in 1998, and named Vice President in April 2001.

Mr. Houlihan, Vice President and Chief Product Officer, joined the Company in his current position in December 2007. Prior to joining the Company, he served as National Product Manager at Bristol West Insurance Group from 2005 to 2007 and Product Manager at Progressive Insurance Company from 1999 to 2005.

Mr. Kitzmiller, Vice President and Chief Underwriting Officer, has been employed by the Company in the underwriting department since 1972. Mr. Kitzmiller was appointed Vice President in 1991, and named Chief Underwriting Officer in January 2010.

Mr. Minnich, Vice President—Marketing, joined the Company as an underwriter in 1989. In 2007, he joined Superior Access Insurance Services as Director of Agency Operations and rejoined the Company as an Assistant Product Manager in 2008. In 2009, he was named Senior Director of Marketing, a role he held until appointed to his current position later in 2009. Mr. Minnich has over 20 years experience in the property and casualty insurance industry and is a Chartered Property and Casualty Underwriter.

Mr. Stalick, Vice President and Chief Financial Officer, joined the Company as Corporate Controller in 1997. In October 2000, he was named Chief Accounting Officer, a role he held until appointed to his current position in October 2001. Mr. Stalick is an inactive Certified Public Accountant.

Mr. Toney, Vice President and Chief Actuary, joined the Company in 1984 as a programmer/analyst. In 1994, he earned his Fellowship in the Casualty Actuarial Society and was appointed to his current position. Mr. Toney is Mr. Joseph's nephew.

Ms. Walters, Vice President—Corporate Affairs and Secretary, has been employed by the Company since 1967, and has served as its Secretary since 1982. Ms. Walters was named Vice President—Corporate Affairs in 1998.

Item 1A. Risk Factors

The Company's business involves various risks and uncertainties in addition to the normal risks of business, some of which are discussed in this section. It should be noted that the Company's business and that of other insurers may be adversely affected by a downturn in general economic conditions and other forces beyond the Company's control. In addition, other risks and uncertainties not presently known or that the Company currently believes to be immaterial may also adversely affect the Company's business. If any such risks or uncertainties, or any of the following risks or uncertainties, develop into actual events, there could be a materially adverse effect on the Company's business, financial condition, results of operations, or liquidity.

The information discussed below should be considered carefully with the other information contained in this Annual Report on Form 10-K and the other documents and materials filed by the Company with the SEC, as well as news releases and other information publicly disseminated by the Company from time to time.

Risks Related to the Company's Business

The Company remains highly dependent upon California and several other key states to produce revenues and operating profits.

For the year ended December 31, 2012, the Company generated 77.2% of its direct automobile insurance premiums written in California, 8.0% in Florida, 3.3% in New Jersey, and 3.2% in Texas. The Company's financial results are subject to prevailing regulatory, legal, economic, demographic, competitive, and other conditions in these states and changes in any of these conditions could negatively impact the Company's results of operations.

Mercury General is a holding company that relies on regulated subsidiaries for cash operating profits to satisfy its obligations.

As a holding company, Mercury General maintains no operations that generate revenue sufficient to pay operating expenses, shareholders' dividends, or principal or interest on its indebtedness. Consequently, Mercury General relies on the ability of the Insurance Companies, particularly the California Companies, to pay dividends for Mercury General to meet its obligations. The ability of the Insurance Companies to pay dividends is regulated by state insurance laws, which limit the amount of, and in certain circumstances may prohibit the payment of, cash dividends. Generally, these insurance regulations permit the payment of dividends only out of earned surplus in any year which, together with other dividends or distributions made within the preceding 12 months, do not exceed the greater of 10% of statutory surplus as of the end of the preceding year or the net income for the preceding year, with larger dividends payable only after receipt of prior regulatory approval. The inability of the Insurance Companies to pay dividends in an amount sufficient to enable the Company to meet its cash requirements at the holding company level could have a material adverse effect on the Company's results of operations, financial condition, and its ability to pay dividends to its shareholders.

The Company's insurance subsidiaries are subject to minimum capital and surplus requirements, and any failure to meet these requirements could subject the Company's insurance subsidiaries to regulatory action.

The Company's insurance subsidiaries are subject to risk-based capital standards and other minimum capital and surplus requirements imposed under applicable laws of their state of domicile. The risk-based capital standards, based upon the Risk-Based Capital Model Act adopted by the NAIC, require the Company's insurance subsidiaries to report their results of RBC calculations to state departments of insurance and the NAIC. If any of the Company's insurance subsidiaries fails to meet these standards and requirements, the DOI regulating such subsidiary may require specified actions by the subsidiary.

The Company's success depends on its ability to accurately underwrite risks and to charge adequate premiums to policyholders.

The Company's financial condition, results of operations, and liquidity depend on its ability to underwrite and set premiums accurately for the risks it assumes. Premium rate adequacy is necessary to generate sufficient premium to offset losses, loss adjustment expenses, and underwriting expenses and to earn a profit. In order to price its products accurately, the Company must collect and properly analyze a substantial volume of data; develop, test, and apply appropriate rating formulae; closely monitor and timely recognize changes in trends; and project both severity and frequency of losses with reasonable accuracy. The Company's ability to undertake these efforts successfully, and as a result, price accurately, is subject to a number of risks and uncertainties, including but not limited to:

- availability of sufficient reliable data;
- incorrect or incomplete analysis of available data;
- uncertainties inherent in estimates and assumptions, generally;
- selection and application of appropriate rating formulae or other pricing methodologies;
- successful innovation of new pricing strategies;
- recognition of changes in trends and in the projected severity and frequency of losses;
- the Company's ability to forecast renewals of existing policies accurately;
- unanticipated court decisions, legislation or regulatory action;
- ongoing changes in the Company's claim settlement practices;
- changes in operating expenses;
- changing driving patterns;

- extra-contractual liability arising from bad faith claims;
- weather catastrophes, including those which may be related to climate change;
- losses from sinkhole claims;
- unexpected medical inflation; and
- unanticipated inflation in auto repair costs, auto parts prices, and used car prices.

Such risks may result in the Company's pricing being based on outdated, inadequate or inaccurate data, or inappropriate analyses, assumptions or methodologies, and may cause the Company to estimate incorrectly future changes in the frequency or severity of claims. As a result, the Company could underprice risks, which would negatively affect the Company's margins, or it could overprice risks, which could reduce the Company's volume and competitiveness. In either event, the Company's financial condition, results of operations, and liquidity could be materially adversely affected.

The effects of emerging claim and coverage issues on the Company's business are uncertain and may have an adverse effect on the Company's business.

As industry practices and legal, judicial, social, and other environmental conditions change, unexpected and unintended issues related to claims and coverage may emerge. These issues may adversely affect the Company's business by either extending coverage beyond its underwriting intent or by increasing the number or size of claims. In some instances, these changes may not become apparent until sometime after the Company has issued insurance policies that are affected by the changes. As a result, the full extent of liability under the Company's insurance policies may not be known for many years after a policy is issued.

The Company's insurance rates are subject to prior approval by the departments of insurance in most of the states in which the Company operates, and to political influences.

In most of the states in which it operates, the Company must obtain the DOI's prior approval of insurance rates charged to its customers, including any increases in those rates. If the Company is unable to receive approval of the rate changes it requests, or if such approval is delayed, the Company's ability to operate its business in a profitable manner may be limited and its financial condition, results of operations, and liquidity may be adversely affected. Additionally, in California, the law allows for consumer groups to intervene in rate filings which frequently causes delays in the timeliness of rate approvals and can impact the level of rate that is ultimately approved.

From time to time, the auto insurance industry comes under pressure from state regulators, legislators, and special interest groups to reduce, freeze, or set rates at levels that do not correspond with underlying costs, in the opinion of the Company's management. The homeowners insurance business faces similar pressure, particularly as regulators in catastrophe-prone states seek an acceptable methodology to price for catastrophe exposure. In addition, various insurance underwriting and pricing criteria regularly come under attack by regulators, legislators, and special interest groups. The result could be legislation, regulations, or new interpretations of existing regulations that would adversely affect the Company's business, financial condition, and results of operations.

Loss of, or significant restriction on, the use of credit scoring in the pricing and underwriting of personal lines products could reduce the Company's future profitability.

The Company uses credit scoring as a factor in pricing and underwriting decisions where allowed by state law. Some consumer groups and regulators have questioned whether the use of credit scoring unfairly discriminates against some groups of people and are calling to prohibit or restrict the use of credit scoring in underwriting and pricing. Laws or regulations that significantly curtail or regulate the use of credit scoring, if enacted in a large number of states in which the Company operates, could impact the Company's future results of operations.

If the Company cannot maintain its A.M. Best ratings, it may not be able to maintain premium volume in its insurance operations sufficient to attain the Company's financial performance goals.

The Company's ability to retain its existing business or to attract new business in its insurance operations is affected by its rating by A.M. Best Company. A.M. Best Company currently rates all of the Company's insurance subsidiaries with sufficient operating history to be rated as either A+ (Superior) or A- (Excellent). If the Company is unable to maintain its A.M. Best ratings, the Company may not be able to grow its premium volume sufficiently to attain its financial performance goals, and if A.M. Best were to downgrade the Company's ratings, the result may adversely affect the Company's business, financial condition, and results of operations.

The Company may require additional capital in the future, which may not be available or may only be available on unfavorable terms.

The Company's future capital requirements depend on many factors, including its ability to underwrite new business successfully, its ability to establish premium rates and reserves at levels sufficient to cover losses, the success of its current expansion plans and the performance of its investment portfolio. The Company may need to raise additional funds through equity or debt financing, sales of all or a portion of its investment portfolio or curtail its growth and reduce its assets. Any equity or debt financing, if available at all, may not be available on terms that are favorable to the Company. In the case of equity financing, the Company's shareholders could experience dilution. In addition, such securities may have rights, preferences, and privileges that are senior to those of the Company's current shareholders. If the Company cannot obtain adequate capital on favorable terms or at all, its business, financial condition, and results of operations could be adversely affected.

Funding for the Company's future growth may depend upon obtaining new financing, which may be difficult to obtain given prevalent economic conditions.

To accommodate the Company's expected future growth, the Company may require funding in addition to cash provided from current operations. The Company's ability to obtain financing may be constrained by current economic conditions affecting global financial markets. Specifically, with the recent trends affecting the banking industry, many lenders and institutional investors have ceased funding even the most credit-worthy borrowers. In addition, financial strength and claims-paying ability ratings have become an increasingly important factor in the Company's ability to access capital markets. Rating agencies assign ratings based upon an evaluation of an insurance company's ability to meet its financial obligations. The Company's current financial strength rating with Fitch is A+. If the Company were to seek financing through the capital markets in the future, it may need to apply for Standard and Poor's and Moody's ratings. The ratings could limit the Company's access to the capital markets or adversely affect pricing of new debt sought in the capital markets. If the Company is unable to obtain necessary financing, it may be unable to take advantage of opportunities with potential business partners or new products or to otherwise expand its business as planned.

Changes in market interest rates or defaults may have an adverse effect on the Company's investment portfolio, which may adversely affect the Company's financial results.

The Company's results are affected, in part, by the performance of its investment portfolio. The Company's investment portfolio contains interest rate sensitive-investments, such as municipal and corporate bonds. Increases in market interest rates may have an adverse impact on the value of the investment portfolio by decreasing the value of fixed income securities. Declining market interest rates could have an adverse impact on the Company's investment income as it invests positive cash flows from operations and as it reinvests proceeds from maturing and called investments in new investments that could yield lower rates than the Company's investments have historically generated. Defaults in the Company's investment portfolio may produce operating losses and negatively impact the Company's results of operations.

Interest rates are highly sensitive to many factors, including governmental monetary policies, domestic and international economic and political conditions, and other factors beyond the Company's control. Although the Company takes measures to manage the risks of investing in a changing interest rate environment, it may not be able to mitigate interest rate sensitivity effectively. The Company's mitigation efforts include maintaining a high quality portfolio and managing the duration of the portfolio to reduce the effect of interest rate changes. Despite its mitigation efforts, a significant change in interest rates could have a material adverse effect on the Company's financial condition and results of operations.

The Company's valuation of financial instruments may include methodologies, estimations, and assumptions that are subject to differing interpretations and could result in changes to valuations that may materially adversely affect the Company's financial condition or results of operations.

The Company employs a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date using the exit price. Accordingly, when market observable data are not readily available, the Company's own assumptions are set to reflect those that market participants would be presumed to use in pricing the asset or liability at the measurement date. Assets and liabilities recorded on the consolidated balance sheets at fair value are categorized based on the level of judgment associated with the input used to measure their fair value and the level of market price observability.

During periods of market disruption, including periods of significantly changing interest rates, rapidly widening credit spreads, inactivity or illiquidity, it may be difficult to value certain of the Company's securities if trading becomes less frequent and/or market data become less observable. There may be certain asset classes in historically active markets with significant observable data that become illiquid due to changes in the financial environment. In such cases, the valuations associated with

such securities may rely more on management judgment and include inputs and assumptions that are less observable or require greater estimation as well as valuation methods, which are more sophisticated or require greater estimation. The valuations generated by such methods may be different from the value at which the investments ultimately may be sold. Further, rapidly changing and unprecedented credit and equity market conditions could materially impact the valuation of securities as reported within the Company's consolidated financial statements, and the period-to-period changes in value could vary significantly. Decreases in value may have a material adverse effect on the Company's financial condition or results of operations.

Changes in the financial strength ratings of financial guaranty insurers issuing policies on bonds held in the Company's investment portfolio may have an adverse effect on the Company's investment results.

In an effort to enhance the bond rating applicable to certain bond issues, some bond issuers purchase municipal bond insurance policies from private insurers. The insurance generally guarantees the payment of principal and interest on a bond issue if the issuer defaults. By purchasing the insurance, the financial strength ratings applicable to the bonds are based on the credit worthiness of the insurer as well as the underlying credit of the bond issuer. Several financial guaranty insurers that have issued insurance policies covering bonds held by the Company have experienced financial strength rating downgrades due to risk exposures on insurance policies that guarantee mortgage debt and related structured products. These financial guaranty insurers are subject to DOI oversight. As the financial strength ratings of these insurers are reduced, the ratings of the insured bond issues correspondingly decrease. Although the Company has determined that the financial strength rating of the underlying bond issues in its investment portfolio are within the Company's investment policy without the enhancement provided by the insurance policies, any further downgrades in the financial strength ratings of these insurance companies or any defaults on the insurance policies written by these insurance companies may reduce the fair value of the underlying bond issues and the Company's investment portfolio or may reduce the investment results generated by the Company's investment portfolio, which could have a material adverse effect on the Company's financial condition, results of operations, and liquidity.

Deterioration of the municipal bond market in general or of specific municipal bonds held by the Company may result in a material adverse effect on the Company's financial condition, results of operations, and liquidity.

At December 31, 2012, 67.4% of the Company's total investment portfolio at fair value and 89.0% of its total fixed maturity investments at fair value were invested in tax-exempt municipal bonds. With such a large percentage of the Company's investment portfolio invested in municipal bonds, the performance of the Company's investment portfolio, including the cash flows generated by the investment portfolio is significantly dependent on the performance of municipal bonds. If the value of municipal bond markets in general or any of the Company's municipal bond holdings deteriorate, the performance of the Company's investment portfolio, financial condition, results of operations, and liquidity may be materially and adversely affected.

Adoption of proposed changes in the tax exemption available for municipal bond interest will have an adverse effect on the value of the Company's municipal bond portfolio and the investment income generated by the Company.

Proposals have been made for the elimination or modification of the tax-exempt status or tax rates applicable to municipal bonds as part of significant tax reform being considered, some of which would enact such changes retroactively. Because many states adopt changes in the Internal Revenue Code as a part of the state taxation system, such changes to the federal income and/or capital gains laws may result in changes to state tax laws, resulting in a loss of or reduction in the exemption of municipal bond interest for state income tax purposes as well. Any changes in tax rates or the tax-exempt status applicable to municipal bonds actually adopted could significantly affect the demand for and supply of liquidity and marketability of such municipal bond obligations. Such changes would likely result in a decrease in the value of the Company's municipal bond portfolio and limit the ability of the Company to acquire and dispose of municipal obligations at desirable yield and price levels. Such changes may also materially reduce the after-tax income earned by the Company's investment securities.

If the Company's loss reserves are inadequate, its business and financial position could be harmed.

The process of establishing property and liability loss reserves is inherently uncertain due to a number of factors, including underwriting quality, the frequency and amount of covered losses, variations in claims settlement practices, the costs and uncertainty of litigation, and expanding theories of liability. While the Company believes that its actuarial techniques and databases are sufficient to estimate loss reserves, the Company's approach may prove to be inadequate. If any of these contingencies, many of which are beyond the Company's control, results in loss reserves that are not sufficient to cover its actual losses, the Company's financial condition, results of operations, and liquidity may be materially adversely affected.

There is uncertainty involved in the availability of reinsurance and the collectability of reinsurance recoverable.

The Company reinsures a portion of its potential losses on the policies it issues to mitigate the volatility of the losses on its financial condition and results of operations. The availability and cost of reinsurance is subject to market conditions, which are outside of the Company's control. From time to time, market conditions have limited, and in some cases prevented, insurers from

obtaining the types and amounts of reinsurance that they consider adequate for their business needs. As a result, the Company may not be able to successfully purchase reinsurance and transfer a portion of the Company's risk through reinsurance arrangements. In addition, as is customary, the Company initially pays all claims and seeks to recover the reinsured losses from its reinsurers. Although the Company reports as assets the amount of claims paid which the Company expects to recover from reinsurers, no assurance can be given that the Company will be able to collect from its reinsurers. If the amounts actually recoverable under the Company's reinsurance treaties are ultimately determined to be less than the amount it has reported as recoverable, the Company may incur a loss during the period in which that determination is made.

The failure of any of the loss limitation methods employed by the Company could have a material adverse effect on its financial condition or results of operations.

Various provisions of the Company's policies, such as limitations or exclusions from coverage which are intended to limit the Company's risks, may not be enforceable in the manner the Company intends. In addition, the Company's policies contain conditions requiring the prompt reporting of claims and the Company's right to decline coverage in the event of a violation of that condition. While the Company's insurance product exclusions and limitations reduce the Company's loss exposure and help eliminate known exposures to certain risks, it is possible that a court or regulatory authority could nullify or void an exclusion or legislation could be enacted modifying or barring the use of such endorsements and limitations in a way that would adversely affect the Company's loss experience, which could have a material adverse effect on its financial condition or results of operations.

The Company's business is vulnerable to significant catastrophic property loss, which could have an adverse effect on its financial condition and results of operations.

The Company faces a significant risk of loss in the ordinary course of its business for property damage resulting from natural disasters, man-made catastrophes and other catastrophic events, particularly hurricanes, earthquakes, hail storms, explosions, tropical storms, fires, sinkholes, war, acts of terrorism, severe winter weather and other natural and man-made disasters. Such events typically increase the frequency and severity of automobile and other property claims. Because catastrophic loss events are by their nature unpredictable, historical results of operations may not be indicative of future results of operations, and the occurrence of claims from catastrophic events may result in substantial volatility in the Company's financial condition and results of operations from period to period. Although the Company attempts to manage its exposure to such events, the occurrence of one or more major catastrophes in any given period could have a material and adverse impact on the Company's financial condition and results of operations and could result in substantial outflows of cash as losses are paid.

The Company depends on independent agents who may discontinue sales of its policies at any time.

The Company sells its insurance policies through approximately 7,700 independent agents. The Company must compete with other insurance carriers for these agents' business. Some competitors offer a larger variety of products, lower prices for insurance coverage, higher commissions, or more attractive non-cash incentives. To maintain its relationship with these independent agents, the Company must pay competitive commissions, be able to respond to their needs quickly and adequately, and create a consistently high level of customer satisfaction. If these independent agents find it preferable to do business with the Company's competitors, it would be difficult to renew the Company's existing business or attract new business. State regulations may also limit the manner in which the Company's producers are compensated or incentivized. Such developments could negatively impact the Company's relationship with these parties and ultimately reduce revenues.

The Company's expansion plans may adversely affect its future profitability.

The Company intends to continue to expand its operations in several of the states in which the Company has operations and into states in which it has not yet begun operations. The intended expansion will necessitate increased expenditures. The Company expects to fund these expenditures out of cash flow from operations. The expansion may not occur, or if it does occur, may not be successful in providing increased revenues or profitability. If the Company's cash flow from operations is insufficient to cover the increased costs of the expansion, or if the expansion does not provide the benefits anticipated, the Company's financial condition, results of operations, and ability to grow its business may be harmed.

Any inability of the Company to realize its deferred tax assets may have a material adverse effect on the Company's financial condition and results of operations.

The Company recognizes deferred tax assets and liabilities for the future tax consequences related to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, and for tax credits. The Company evaluates its deferred tax assets for recoverability based on available evidence, including assumptions about future profitability and capital gain generation. Although management believes that it is more likely than not that the deferred tax assets will be realized, some or all of the Company's deferred tax assets could expire unused if the Company is unable to generate taxable income of an appropriate character and in a sufficient amount to utilize these tax benefits in the future.

If the Company determines that it would not be able to realize all or a portion of its deferred tax assets in the future, the Company would reduce the deferred tax asset through a charge to earnings in the period in which the determination is made. This charge could have a material adverse effect on the Company's results of operations and financial condition. In addition, the assumptions used to make this determination are subject to change from period-to-period based on changes in tax laws or variances between the Company's projected operating performance and actual results. As a result, significant management judgment is required in assessing the possible need for a deferred tax asset valuation allowance. For these reasons and because changes in these assumptions and estimates can materially affect the Company's results of operations and financial condition, management has included the assessment of a deferred tax asset valuation allowance as a critical accounting estimate.

The carrying value of the Company's goodwill and other intangible assets could be subject to an impairment write-down.

At December 31, 2012, the Company's consolidated balance sheet reflected approximately \$43 million of goodwill and \$48 million of other intangible assets. The Company evaluates whether events or circumstances have occurred that suggest that the fair values of its intangible assets are below their respective carrying values. The determination that the fair value of the Company's intangible assets is less than its carrying value may result in an impairment write-down. The impairment write-down would be reflected as expense and could have a material adverse effect on the Company's results of operations during the period in which it recognizes the expense. In the future, the Company may incur impairment charges related to the goodwill and other intangible assets already recorded or arising out of future acquisitions.

The Company relies on its information technology systems to manage many aspects of its business, and any failure of these systems to function properly or any interruption in their operation could result in a material adverse effect on the Company's business, financial condition, and results of operations.

The Company depends on the accuracy, reliability, and proper functioning of its information technology systems. The Company relies on these information technology systems to effectively manage many aspects of its business, including underwriting, policy acquisition, claims processing and handling, accounting, reserving and actuarial processes and policies, and to maintain its policyholder data. The Company is developing and deploying new information technology systems that are designed to manage many of these functions across all of the states in which it operates and all of the lines of insurance it offers. See "Overview—Technology" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations." The failure of hardware or software that supports the Company's information technology systems, the loss of data contained in the systems, or any delay or failure in the full deployment of the Company's new information technology systems could disrupt its business and could result in decreased premiums, increased overhead costs, and inaccurate reporting, all of which could have a material adverse effect on the Company's business, financial condition, and results of operations.

In addition, despite system redundancy, the implementation of security measures, and the existence of a disaster recovery plan for the Company's information technology systems, these systems are vulnerable to damage or interruption from:

- earthquake, fire, flood and other natural disasters;
- terrorist attacks and attacks by computer viruses or hackers;
- power loss;
- unauthorized access; and
- computer systems, Internet, telecommunications or data network failure.

It is possible that a system failure, accident, or security breach could result in a material disruption to the Company's business. In addition, substantial costs may be incurred to remedy the damages caused by these disruptions. Following implementation of its new information technology systems, the Company may from time to time install new or upgraded business management systems. To the extent that a critical system fails or is not properly implemented and the failure cannot be corrected in a timely manner, the Company may experience disruptions to the business that could have a material adverse effect on the Company's results of operations.

Cyber security risks and the failure to maintain the confidentiality, integrity, and availability of internal or policyholder systems and data could result in damages to the Company's reputation and/or subject us to expenses, fines or lawsuits.

The Company collects and retains large volumes of internal and policyholder data, including personally identifiable information, for business purposes including underwriting, claims and billing purposes, and relies upon the various information technology systems that enter, process, summarize and report such data. The Company also maintains personally identifiable information about its employees. The confidentiality and protection of our policyholder, employee and Company data are critical

to the Company's business. The Company's policyholders and employees have a high expectation that it will adequately protect their personal information. The regulatory environment, as well as the requirements imposed by the payment card industry and insurance regulators, governing information, security and privacy laws is increasingly demanding and continues to evolve. Maintaining compliance with applicable information security and privacy regulations may increase the Company's operating costs and/or adversely impact its ability to market products and services to its policyholders. Furthermore, a penetrated or compromised information technology system or the intentional, unauthorized, inadvertent or negligent release or disclosure of data could result in theft, loss, fraudulent or unlawful use of policyholder, employee or Company data which could harm the Company's reputation or result in remedial and other expenses, fines or lawsuits.

Changes in accounting standards issued by the Financial Accounting Standards Board ("FASB") or other standard-setting bodies may adversely affect the Company's consolidated financial statements.

The Company's consolidated financial statements are subject to the application of GAAP, which is periodically revised and/or expanded. Accordingly, the Company is required to adopt new or revised accounting standards from time to time issued by recognized authoritative bodies, including the FASB. It is possible that future changes the Company is required to adopt could change the current accounting treatment that the Company applies to its consolidated financial statements and that such changes could have a material effect on the Company's financial condition and results of operations.

The Company may be required to adopt International Financial Reporting Standards ("IFRS"). The ultimate adoption of such standards could negatively impact its financial condition or results of operations.

Although not yet required, the Company could be required to adopt IFRS, which differs from GAAP, for the Company's accounting and reporting standards. The ultimate implementation and adoption of new standards could materially impact the Company's financial condition or results of operations.

The Company's disclosure controls and procedures may not prevent or detect acts of fraud.

The Company's disclosure controls and procedures are designed to reasonably assure that information required to be disclosed in reports filed or submitted under the Securities Exchange Act of 1934, as amended, is accumulated and communicated to management and is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. The Company's management, including its Chief Executive Officer and Chief Financial Officer, believe that any disclosure controls and procedures or internal controls and procedures, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Because of the inherent limitations in all control systems, the Company cannot provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been prevented or detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of a simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by an unauthorized override of the controls. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and the Company cannot assure that any design will succeed in achieving its stated goals under all potential future conditions. Accordingly, because of the inherent limitations in a cost effective control system, misstatements due to error or fraud may occur and not be detected.

Failure to maintain an effective system of internal control over financial reporting may have an adverse effect on the Company's stock price.

Section 404 of the Sarbanes-Oxley Act of 2002, as amended, and the related rules and regulations promulgated by the SEC require the Company to include in its Annual Report on Form 10-K a report by its management regarding the effectiveness of the Company's internal control over financial reporting. The report includes, among other things, an assessment of the effectiveness of the Company's internal control over financial reporting as of the end of its fiscal year, including a statement as to whether or not the Company's internal control over financial reporting is effective. This assessment must include disclosure of any material weaknesses in the Company's internal control over financial reporting identified by management. Areas of the Company's internal control over financial reporting may require improvement from time to time. If management is unable to assert that the Company's internal control over financial reporting is effective now or in any future period, or if the Company's independent auditors are unable to express an opinion on the effectiveness of those internal controls, investors may lose confidence in the accuracy and completeness of the Company's financial reports, which could have an adverse effect on the Company's stock price.

The ability of the Company to attract, develop and retain talented employees, managers and executives, and to maintain appropriate staffing levels, is critical to the Company's success.

The Company is constantly hiring and training new employees and seeking to retain current employees. An inability to attract, retain and motivate the necessary employees for the operation and expansion of the Company's business could hinder its ability to conduct its business activities successfully, develop new products and attract customers.

The Company's success also depends upon the continued contributions of its executive officers, both individually and as a group. The Company's future performance will be substantially dependent on its ability to retain and motivate its management team. The loss of the services of any of the Company's executive officers could prevent the Company from successfully implementing its business strategy, which could have a material adverse effect on the Company's business, financial condition, and results of operations.

Challenging economic conditions may negatively affect the Company's business and operating results.

Challenging economic conditions could adversely affect the Company in the form of consumer behavior and pressure on its investment portfolio. Consumer behavior could include policy cancellations, modifications, or non-renewals, which may reduce cash flows from operations and investments, may harm the Company's financial position, and may reduce the Insurance Companies' statutory surplus. Challenging economic conditions also may impair the ability of the Company's customers to pay premiums as they fall due, and as a result, the Company's bad debt reserves and write-offs could increase. It is also possible that claims fraud may increase. The recent sovereign debt crisis in Europe is leading to weaker global economic growth, heightened financial vulnerabilities and some negative rating actions. The Company's investment portfolios could be adversely affected as a result of deteriorating financial and business conditions affecting the issuers of the securities in the Company's investment portfolio. In addition, declines in the Company's profitability could result in a charge to earnings for the impairment of goodwill, which would not affect the Company's cash flow but could decrease its earnings, and its stock price could be adversely affected.

Many businesses are experiencing a slow recovery from the severe economic recession, and economic uncertainty is expected to continue due in large part to continuing political disagreements in Washington that may cause businesses and consumers to hold back spending. The Company is unable to predict the duration and severity of the current global economic conditions and their impact on the United States, and in California, where the majority of the Company's business is produced. If economic conditions do not show significant improvement, there could be an adverse impact on the Company's financial condition, results of operations, and liquidity.

The Company may be adversely affected if economic conditions result in either inflation or deflation. In an inflationary environment, established reserves may become inadequate and increase the Company's loss ratio, and market interest rates may rise and reduce the value of the Company's fixed maturity portfolio, while increasing interest expense on its LIBOR based debt. The DOIs may not approve premium rate increases in time for the Company to adequately mitigate inflated loss costs. In a deflationary environment, some fixed maturity issuers may have difficulty meeting their debt service obligations and thereby reduce the value of the Company's fixed maturity portfolio; equity investments may decrease in value; and policyholders may experience difficulties paying their premiums to the Company, which could adversely affect premium revenue.

The Company's business is vulnerable to significant losses related to sinkhole claims, which could have an adverse effect on its results of operations.

In 2011, the Company began its withdrawal from the Florida homeowners market due to the high incidence of sinkhole claims. While the Company has closed many sinkhole claims, and believes it has adequately reserved for the remaining open claims, it remains possible for legal or legislative action to require opening closed claims that could impair profitability. The Company completed its withdrawal from the Florida homeowners market in September 2012.

Risks Related to the Company's Industry

The private passenger automobile insurance industry is highly competitive, and the Company may not be able to compete effectively against larger, better-capitalized companies.

The Company competes with many property and casualty insurance companies selling private passenger automobile insurance in the states in which the Company operates. Many of these competitors are better capitalized than the Company and have higher A.M. Best ratings. The superior capitalization of the competitors may enable them to offer lower rates, to withstand larger losses, and to more effectively take advantage of new marketing opportunities. The Company's competition may also become increasingly better capitalized in the future as the traditional barriers between insurance companies and banks and other financial institutions erode and as the property and casualty industry continues to consolidate. The Company's ability to compete against these larger, better-capitalized competitors depends on its ability to deliver superior service and its strong relationships with independent agents.

The Company may undertake strategic marketing and operating initiatives to improve its competitive position and drive growth. If the Company is unable to successfully implement new strategic initiatives or if the Company's marketing campaigns do not attract new customers, the Company's competitive position may be harmed, which could adversely affect the Company's business and results of operations. Additionally, in the event of a failure of any competitor, the Company and other insurance

companies would likely be required by state law to absorb the losses of the failed insurer and would be faced with an unexpected surge in new business from the failed insurer's former policyholders.

The Company may be adversely affected by changes in the private passenger automobile insurance industry.

80.6% of the Company's direct written premiums for the year ended December 31, 2012 were generated from private passenger automobile insurance policies. Adverse developments in the market for personal automobile insurance or the personal automobile insurance industry in general, whether related to changes in competition, pricing or regulations, could cause the Company's results of operations to suffer. The property-casualty insurance industry is also exposed to the risks of severe weather conditions, such as rainstorms, snowstorms, hail and ice storms, hurricanes, tornadoes, wild fires, sinkholes, earthquakes and, to a lesser degree, explosions, terrorist attacks, and riots. The automobile insurance business is also affected by cost trends that impact profitability. Factors which negatively affect cost trends include inflation in automobile repair costs, automobile parts costs, used car prices, and medical care.

The Company cannot predict the impact that changing climate conditions, including legal, regulatory and social responses thereto, may have on its business.

Various scientists, environmentalists, international organizations, regulators and other commentators believe that global climate change has added, and will continue to add, to the unpredictability, frequency and severity of natural disasters (including, but not limited to, hurricanes, tornadoes, freezes, other storms and fires) in certain parts of the world. In response, a number of legal and regulatory measures and social initiatives have been introduced in an effort to reduce greenhouse gas and other carbon emissions that may be chief contributors to global climate change. The Company cannot predict the impact that changing climate conditions, if any, will have on its business or its customers. It is also possible that the legal, regulatory and social responses to climate change could have a negative effect on the Company's results of operations or financial condition.

The insurance industry is subject to extensive regulation, which may affect the Company's ability to execute its business plan and grow its business.

The Company is subject to comprehensive regulation and supervision by government agencies in each of the states in which its insurance subsidiaries are domiciled, sell insurance products, issue policies, or handle claims. Some states impose restrictions or require prior regulatory approval of specific corporate actions, which may adversely affect the Company's ability to operate, innovate, obtain necessary rate adjustments in a timely manner or grow its business profitably. These regulations provide safeguards for policyholders and are not intended to protect the interests of shareholders. The Company's ability to comply with these laws and regulations, and to obtain necessary regulatory action in a timely manner is, and will continue to be, critical to its success. Some of these regulations include:

Required Licensing. The Company operates under licenses issued by the DOI in the states in which the Company sells insurance. If a regulatory authority denies or delays granting a new license, the Company's ability to enter that market quickly or offer new insurance products in that market may be substantially impaired. In addition, if the DOI in any state in which the Company currently operates suspends, non-renews, or revokes an existing license, the Company would not be able to offer affected products in the state.

Transactions Between Insurance Companies and Their Affiliates. Transactions between the Insurance Companies and their affiliates (including the Company) generally must be disclosed to state regulators, and prior approval of the applicable regulator is required before any material or extraordinary transaction may be consummated. State regulators may refuse to approve or delay approval of some transactions, which may adversely affect the Company's ability to innovate or operate efficiently.

Regulation of Insurance Rates and Approval of Policy Forms. The insurance laws of most states in which the Company conducts business require insurance companies to file insurance rate schedules and insurance policy forms for review and approval. If, as permitted in some states, the Company begins using new rates before they are approved, it may be required to issue refunds or credits to the Company's policyholders if the new rates are ultimately deemed excessive or unfair and disapproved by the applicable state regulator. In other states, prior approval of rate changes is required and there may be long delays in the approval process or the rates may not be approved. Accordingly, the Company's ability to respond to market developments or increased costs in that state can be adversely affected.

Restrictions on Cancellation, Non-Renewal or Withdrawal. Most of the states in which the Company operates have laws and regulations that limit its ability to exit a market. For example, these states may limit a private passenger auto insurer's ability to cancel and non-renew policies or they may prohibit the Company from withdrawing one or more lines of insurance business from the state unless prior approval is received from the state insurance department. In some states, these regulations extend to significant reductions in the amount of insurance written, not just to a complete withdrawal. Laws and regulations that limit the

Company's ability to cancel and non-renew policies in some states or locations and that subject withdrawal plans to prior approval requirements may restrict the Company's ability to exit unprofitable markets, which may harm its business and results of operations.

Other Regulations. The Company must also comply with regulations involving, among other matters:

- the use of non-public consumer information and related privacy issues;
- the use of credit history in underwriting and rating;
- limitations on the ability to charge policy fees;
- limitations on types and amounts of investments;
- the payment of dividends;
- the acquisition or disposition of an insurance company or of any company controlling an insurance company;
- involuntary assignments of high-risk policies, participation in reinsurance facilities and underwriting associations, assessments and other governmental charges;
- reporting with respect to financial condition;
- periodic financial and market conduct examinations performed by state insurance department examiners; and
- the other regulations discussed in this Annual Report on Form 10-K.

The failure to comply with these laws and regulations may also result in regulatory actions, fines and penalties, and in extreme cases, revocation of the Company's ability to do business in that jurisdiction. In addition, the Company may face individual and class action lawsuits by insured and other parties for alleged violations of certain of these laws or regulations.

In addition, from time to time, the Company may support or oppose legislation or other amendments to insurance regulations in California or other states in which it operates. Consequently, the Company may receive negative publicity related to its support or opposition of legislative or regulatory changes that may have a material adverse effect on the Company's financial condition, results of operations, and liquidity.

Regulation may become more extensive in the future, which may adversely affect the Company's business, financial condition, and results of operations.

No assurance can be given that states will not make existing insurance-related laws and regulations more restrictive in the future or enact new restrictive laws. New or more restrictive regulation in any state in which the Company conducts business could make it more expensive for it to continue to conduct business in these states, restrict the premiums the Company is able to charge or otherwise change the way the Company does business. In such events, the Company may seek to reduce its writings in or to withdraw entirely from these states. In addition, from time to time, the United States Congress and certain federal agencies investigate the current condition of the insurance industry to determine whether federal regulation is necessary. The Company cannot predict whether and to what extent new laws and regulations that would affect its business will be adopted, the timing of any such adoption and what effects, if any, they may have on the Company's business, financial condition, and results of operations.

Assessments and other surcharges for guaranty funds, second-injury funds, catastrophe funds, and other mandatory pooling arrangements may reduce the Company's profitability.

Virtually all states require insurers licensed to do business in their state to bear a portion of the loss suffered by some insured parties as the result of impaired or insolvent insurance companies. Many states also have laws that established second-injury funds to provide compensation to injured employees for aggravation of a prior condition or injury which are funded by either assessments based on paid losses or premium surcharge mechanisms. In addition, as a condition to the ability to conduct business in various states, the insurance subsidiaries must participate in mandatory property and casualty shared market mechanisms or pooling arrangements, which provide various types of insurance coverage to individuals or other entities that otherwise are unable to purchase that coverage from private insurers. The effect of these assessments and mandatory shared-market mechanisms or changes in them could reduce the Company's profitability in any given period or limit its ability to grow its business.

The insurance industry faces risks related to litigation, which, if resolved unfavorably, could result in substantial penalties and/or monetary damages, including punitive damages. In addition, insurance companies incur material expenses in the defense of litigation and their results of operations or financial condition could be adversely affected if they fail to accurately project litigation expenses.

Insurance companies are subject to a variety of legal actions including employee benefit claims, wage and hour claims, breach of contract actions, tort claims, and fraud and misrepresentation claims. In addition, insurance companies incur and likely will continue to incur potential liability for claims related to the insurance industry in general and the Company's business in particular, such as claims by policyholders alleging failure to pay for, termination or non-renewal of coverage, interpretation of policy language, sales practices, claims related to reinsurance matters, and other matters. Such actions can also include allegations of fraud, misrepresentation, and unfair or improper business practices and can include claims for punitive damages.

Court decisions and legislative activity may increase exposures for any of the types of claims insurance companies face. There is a risk that insurance companies could incur substantial legal fees and expenses, including discovery expenses, in any of the actions companies defend in excess of amounts budgeted for defense.

The Company and its insurance subsidiaries are named as defendants in a number of lawsuits. These lawsuits are described more fully at "Overview—B. Regulatory and Legal Matters" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 16 of Notes to Consolidated Financial Statements. Litigation, by its very nature, is unpredictable and the outcome of these cases is uncertain. The precise nature of the relief that may be sought or granted in any lawsuit is uncertain and may negatively impact the manner in which the Company conducts its business and results of operations, which could materially increase the Company's legal expenses. In addition, potential litigation involving new claim, coverage, and business practice issues could adversely affect the Company's business by changing the way policies are priced, extending coverage beyond its underwriting intent, or increasing the size of claims.

Risks Related to the Company's Stock

The Company is controlled by small number of shareholders who will be able to exert significant influence over matters requiring shareholder approval, including change of control transactions.

George Joseph and Gloria Joseph collectively own more than 50% of the Company's common stock. Accordingly, George Joseph and Gloria Joseph have the ability to exert significant influence on the actions the Company may take in the future, including change of control transactions. This concentration of ownership may conflict with the interests of the Company's other shareholders and lenders.

Future sales of common stock may affect the market price of the Company's common stock and the future exercise of options and warrants will result in dilution to the Company's shareholders.

The Company may raise capital in the future through the issuance and sale of shares of its common stock. The Company cannot predict what effect, if any, such future sales will have on the market price of its common stock. Sales of substantial amounts of its common stock in the public market could adversely affect the market price of the Company's outstanding common stock, and may make it more difficult for shareholders to sell common stock at a time and price that the shareholder deems appropriate. In addition, the Company has issued options to purchase shares of its common stock. In the event that any options to purchase common stock are exercised, shareholders will suffer dilution in their investment.

Applicable insurance laws may make it difficult to effect a change of control of the Company or the sale of any of its insurance subsidiaries.

Before a person can acquire control of a U.S. insurance company or any holding company of a U.S. insurance company, prior written approval must be obtained from the DOI of the state where the insurer is domiciled. Prior to granting approval of an application to acquire control of the insurer or holding company, the state DOI will consider a number of factors relating to the acquirer and the transaction. These laws and regulations may discourage potential acquisition proposals and may delay, deter or prevent a change of control of the Company or the sale by the Company of any of its insurance subsidiaries, including transactions that some or all of the Company's shareholders might consider to be desirable.

Although the Company has consistently paid cash dividends in the past, it may not be able to pay cash dividends in the future.

The Company has paid cash dividends on a consistent basis since the public offering of its common stock in November 1985. However, future cash dividends will depend upon a variety of factors, including the Company's profitability, financial condition, capital needs, future prospects, and other factors deemed relevant by the Board of Directors. The Company's ability to pay dividends may also be limited by the ability of the Insurance Companies to make distributions to the Company, which may

be restricted by financial, regulatory or tax constraints, and by the terms of the Company's debt instruments. In addition, there can be no assurance that the Company will continue to pay dividends even if the necessary financial and regulatory conditions are met and if sufficient cash is available for distribution.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

The Company owns the following buildings which are mostly occupied by the Company's employees. Space not occupied by the Company is leased to independent third party tenants. For future expansion, the Company owns 4.2 acre and 5.9 acre parcels of land in Brea and Rancho Cucamonga, California, respectively. The Company leases all of its other office space for operations. Office location is not crucial to the Company's operations, and the Company anticipates no difficulty in extending these leases or obtaining comparable office space.

The Company's properties are well maintained, adequately meet its needs, and are being utilized for their intended purposes.

<u>Location</u>	<u>Purpose</u>	<u>Size in square feet</u>	<u>Percent occupied by the Company at December 31, 2012</u>
Brea, CA	Home office and I.T. facilities (2 buildings)	236,000	100%
Folsom, CA	Administrative and Data Center	88,000	100%
Los Angeles, CA	Executive offices	41,000	95%
Rancho Cucamonga, CA	Administrative	127,000	100%
St. Petersburg, FL	Administrative	157,000	74%
Oklahoma, OK	Administrative	100,000	77%

Item 3. Legal Proceedings

The Company is, from time to time, named as a defendant in various lawsuits or regulatory actions incidental to its insurance business. The majority of lawsuits brought against the Company relate to insurance claims that arise in the normal course of business and are reserved for through the reserving process. For a discussion of the Company's reserving methods, see "Critical Accounting Estimates" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 1 of Notes to Consolidated Financial Statements.

The Company also establishes reserves for non-insurance claims related lawsuits, regulatory actions, and other contingencies for which the Company is able to estimate its potential exposure and when the Company believes a loss is probable. For loss contingencies believed to be reasonably possible, the Company also discloses the nature of the loss contingency and an estimate of the possible loss, range of loss, or a statement that such an estimate cannot be made. While actual losses may differ from the amounts recorded and the ultimate outcome of the Company's pending actions is generally not yet determinable, the Company does not believe that the ultimate resolution of currently pending legal or regulatory proceedings, either individually or in the aggregate, will have a material adverse effect on its financial condition, results of operations, or cash flows.

In all cases, the Company vigorously defends itself unless a reasonable settlement appears appropriate. For a discussion of legal matters, see "Overview—B. Regulatory and Legal Matters" in "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 16 of Notes to Consolidated Financial Statements, which is incorporated herein by reference.

There are no environmental proceedings arising under federal, state, or local laws or regulations to be discussed.

Item 4. Mine Safety Disclosure

Not applicable.

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Market Information

The following table presents the high and low sales price per share on the New York Stock Exchange (symbol: MCY) since January 2011.

<u>2012</u>	<u>High</u>	<u>Low</u>
1st Quarter	\$ 46.76	\$ 42.65
2nd Quarter	\$ 46.04	\$ 41.00
3rd Quarter	\$ 42.32	\$ 36.01
4th Quarter	\$ 43.21	\$ 38.21
<u>2011</u>	<u>High</u>	<u>Low</u>
1st Quarter	\$ 43.94	\$ 37.29
2nd Quarter	\$ 41.92	\$ 38.06
3rd Quarter	\$ 40.43	\$ 33.81
4th Quarter	\$ 46.61	\$ 37.01

The closing price of the Company's common stock on February 1, 2013 was \$40.34.

Holders

As of February 1, 2013, there were approximately 143 holders of record of the Company's common stock.

Dividends

Since the public offering of its common stock in November 1985, the Company has paid regular quarterly dividends on its common stock. During 2012 and 2011, the Company paid dividends on its common stock of \$2.4425 and \$2.41 per share, respectively. On February 1, 2013, the Board of Directors declared a \$0.6125 quarterly dividend payable on March 28, 2013 to shareholders of record on March 14, 2013.

For financial statement purposes, the Company records dividends on the declaration date. The Company expects to continue paying quarterly dividends; however, the continued payment and amount of cash dividends will depend upon the Company's operating results, overall financial condition, capital requirements, and general business conditions.

Holding Company Act

The California Companies are subject to California DOI regulation pursuant to the provisions of the Holding Company Act. The Holding Company Act requires disclosure of any material transactions among affiliates within a Holding Company System. Certain transactions and dividends defined to be of an "extraordinary" type may not occur if the California DOI disapproves the transaction within 30 days after notice. An extraordinary dividend is a dividend which, together with other dividends or distributions made within the preceding 12 months, exceeds the greater of 10% of the insurance company's statutory policyholders' surplus as of the preceding December 31 or the insurance company's statutory net income for the preceding calendar year.

The Insurance Companies are required to notify the California DOI of any dividend after declaration, but prior to payment. There are similar limitations imposed by other states on the Insurance Companies' ability to pay dividends. As of December 31, 2012, the Insurance Companies are permitted to pay in 2013, without obtaining DOI approval for extraordinary dividends, \$154.6 million in dividends to Mercury General, of which \$133.9 million is payable from the California Companies.

For a discussion of certain restrictions on the payment of dividends to Mercury General by some of its insurance subsidiaries, see Note 11 of Notes to Consolidated Financial Statements.

Performance Graph

The following graph compares the cumulative total shareholder returns on the Company's Common Stock (Symbol: MCY) with the cumulative total returns on the Standard and Poor's 500 Composite Stock Price Index ("S&P 500 Index") and the Company's

industry peer group over the last five years. The graph assumes that \$100 was invested on December 31, 2007 in each of the Company's Common Stock, the S&P 500 Index and the industry peer group and the reinvestment of all dividends.

**Comparative Five-Year Cumulative Total Returns
Stock Price Plus Reinvested Dividends**

	2007	2008	2009	2010	2011	2012
Mercury General	\$ 100.00	\$ 96.96	\$ 88.89	\$ 102.98	\$ 115.95	\$ 106.87
Industry Peer Group	100.00	71.95	75.77	91.18	90.50	107.04
S&P 500 Index	100.00	62.99	79.65	91.64	93.57	108.55

The industry peer group consists of Ace Limited, Alleghany Corporation, Allstate Corporation, American Financial Group, Berkshire Hathaway, Chubb Corporation, Cincinnati Financial Corporation, CNA Financial Corporation, Erie Indemnity Company, Hanover Insurance Group, HCC Insurance Holdings, Markel Corporation, Old Republic International, PMI Group, Inc., Progressive Corporation, RLI Corporation, Selective Insurance Group, Travelers Companies, Inc., W.R. Berkley Corporation and XL Capital, Ltd.

Recent Sales of Unregistered Securities

None.

Share Repurchases

The Company has had a stock repurchase program since 1998. The Company's Board of Directors authorized a \$200 million stock repurchase on July 27, 2012, and the authorization will expire in July 2013. The Company may repurchase shares of its common stock under the program in open market transactions at the discretion of management. The Company will use dividends received from the Insurance Companies to fund the share repurchases. Since the inception of the program, the Company has purchased and retired 1,266,100 shares of common stock at an average price of \$31.36. No stock has been purchased since 2000.

Item 6. Selected Financial Data

The following selected financial and operating data are derived from the Company's audited consolidated financial statements. The selected financial and operating data should be read in conjunction with "Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations" and the consolidated financial statements and notes thereto contained elsewhere in this Annual Report on Form 10-K.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Cautionary Statements

Certain statements in this Annual Report on Form 10-K or in other materials the Company has filed or will file with the SEC (as well as information included in oral statements or other written statements made or to be made by the Company) contain or may contain “forward-looking statements” within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. These forward-looking statements may address, among other things, the Company’s strategy for growth, business development, regulatory approvals, market position, expenditures, financial results, and reserves. Forward-looking statements are not guarantees of performance and are subject to important factors and events that could cause the Company’s actual business, prospects, and results of operations to differ materially from the historical information contained in this Annual Report on Form 10-K and from those that may be expressed or implied by the forward-looking statements contained in this Annual Report on Form 10-K and in other reports or public statements made by the Company.

Factors that could cause or contribute to such differences include, among others: the competition currently existing in the automobile insurance markets in California and the other states in which the Company operates; the cyclical and generally competitive nature of the property and casualty insurance industry and general uncertainties regarding loss reserves or other estimates; the accuracy and adequacy of the Company’s pricing methodologies; the Company’s success in managing its business in states outside of California; the impact of potential third party “bad-faith” legislation, changes in laws, regulations or new interpretations of existing laws and regulations, tax position challenges by the California Franchise Tax Board (“FTB”), and decisions of courts, regulators and governmental bodies, particularly in California; the Company’s ability to obtain and the timing of required regulatory approvals of premium rate changes for insurance policies issued in states where the Company operates; the Company’s reliance on independent agents to market and distribute its policies; the investment yields the Company is able to obtain with its investments and the market risks associated with the Company’s investment portfolio; the effect government policies may have on market interest rates; uncertainties related to assumptions and projections generally, inflation and changes in economic conditions; changes in driving patterns and loss trends; acts of war and terrorist activities; court decisions, trends in litigation, and health care and auto repair costs; adverse weather conditions or natural disasters, including those which may be related to climate change, in the markets served by the Company; the stability of the Company’s information technology systems and the ability of the Company to execute on its information technology initiatives; the Company’s ability to realize current deferred tax assets or to hold certain securities with current loss positions to recovery or maturity; and other uncertainties, all of which are difficult to predict and many of which are beyond the Company’s control. GAAP prescribes when a Company may reserve for particular risks including litigation exposures. Accordingly, results for a given reporting period could be significantly affected if and when a reserve is established for a major contingency. Reported results may therefore appear to be volatile in certain periods.

From time to time, forward-looking statements are also included in the Company’s quarterly reports on Form 10-Q and current reports on Form 8-K, in press releases, in presentations, on its web site, and in other materials released to the public. The Company undertakes no obligation to publicly update any forward-looking statements, whether as a result of new information or future events or otherwise. Investors are cautioned not to place undue reliance on any forward-looking statements, which speak only as of the date of this Annual Report on Form 10-K or, in the case of any document the Company incorporates by reference, any other report filed with the SEC or any other public statement made by the Company, the date of the document, report or statement. Investors should also understand that it is not possible to predict or identify all factors and should not consider the risks set forth above to be a complete statement of all potential risks and uncertainties. If the expectations or assumptions underlying the Company’s forward-looking statements prove inaccurate or if risks or uncertainties arise, actual results could differ materially from those predicted in any forward-looking statements. The factors identified above are believed to be some, but not all, of the important factors that could cause actual events and results to be significantly different from those that may be expressed or implied in any forward-looking statements.

OVERVIEW

A. General

The operating results of property and casualty insurance companies are subject to significant quarter-to-quarter and year-to-year fluctuations due to the effect of competition on pricing, the frequency and severity of losses, the effect of weather and natural disasters on losses, general economic conditions, the general regulatory environment in states in which an insurer operates, state regulation of premium rates, changes in fair value of investments, and other factors such as changes in tax laws. The property and casualty industry has been highly cyclical, with periods of high premium rates and shortages of underwriting capacity followed by periods of severe price competition and excess capacity. These cycles can have a large impact on the Company’s ability to grow and retain business.

The Company is headquartered in Los Angeles, California and operates primarily as a personal automobile insurer selling policies through a network of independent agents in thirteen states. The Company also offers homeowners, commercial automobile and property, mechanical breakdown, fire, and umbrella insurance. Private passenger automobile lines of insurance accounted for 80.6% of the \$2.7 billion of the Company's direct premiums written in 2012. 78.0% of the private passenger automobile premiums were written in California. The Company also operates in Arizona, Florida, Georgia, Illinois, Michigan, Nevada, New Jersey, New York, Oklahoma, Pennsylvania, Texas, and Virginia.

The Company expects to continue its growth by expanding into new states in the future to achieve greater geographic diversification. There are challenges and risks involved in entering each new state, including establishing adequate rates without any operating history in the state, working with a new regulatory regime, hiring and training competent personnel, building adequate systems, and finding qualified agents to represent the Company. The Company does not expect to enter into any new states during 2013.

This section discusses some of the relevant factors that management considers in evaluating the Company's performance, prospects, and risks. It is not all-inclusive and is meant to be read in conjunction with the entirety of management's discussion and analysis, the Company's consolidated financial statements and notes thereto, and all other items contained within this Annual Report on Form 10-K.

2012 Financial Performance Summary

The Company's net income for the year ended December 31, 2012 decreased to \$116.9 million, or \$2.13 per diluted share, from \$191.2 million, or \$3.49 per diluted share, for the same period in 2011. Approximately \$132 million in pre-tax investment income was generated during 2012 on a portfolio of approximately \$3.2 billion at fair value at December 31, 2012, compared to \$141 million pre-tax investment income during 2011 on a portfolio of approximately \$3.1 billion at fair value at December 31, 2011. Included in net income are net realized investment gains of \$66.4 million and \$58.4 million in 2012 and 2011, respectively. Net realized investment gains include gains of \$45.5 million and \$31.3 million in 2012 and 2011, respectively, due to changes in the fair value of total investments pursuant to application of the fair value accounting option.

During 2012, the Company continued its marketing efforts to enhance name recognition and lead generation. The Company believes that its marketing efforts, combined with its ability to maintain relatively low prices and a strong reputation, make the Company very competitive in California and in other states.

The Company believes its thorough underwriting process gives it an advantage over competitors. The Company views its agent relationships and underwriting process as one of its primary competitive advantages because it allows the Company to charge lower rates yet realize better margins than many competitors.

The Company's operating results and growth have allowed it to consistently generate positive cash flow from operations, which was approximately \$148 million and \$159 million in 2012 and 2011, respectively. Cash flow from operations has been used to pay shareholder dividends and help support growth.

Economic and Industry Wide Factors

- **Regulatory Uncertainty**—The insurance industry is subject to strict state regulation and oversight and is governed by the laws of each state in which each insurance company operates. State regulators generally have substantial power and authority over insurance companies including, in some states, approving rate changes and rating factors, and establishing minimum capital and surplus requirements. In many states, insurance commissioners may emphasize different agendas or interpret existing regulations differently than previous commissioners. There is no certainty that current or future regulations and the interpretation of those regulations by insurance commissioners and the courts will not have an adverse impact on the Company.
- **Cost Uncertainty**—Because insurance companies pay claims after premiums are collected, the ultimate cost of an insurance policy is not known until well after the policy revenues are earned. Consequently, significant assumptions are made when establishing insurance rates and loss reserves. While insurance companies use sophisticated models and experienced actuaries to assist in setting rates and establishing loss reserves, there can be no assurance that current rates or current reserve estimates will be adequate. Furthermore, there can be no assurance that insurance regulators will approve rate increases when the Company's actuarial analysis shows that they are needed.
- **Economic Conditions**—Many businesses are experiencing a slow recovery from the severe economic recession, and economic uncertainty is expected to continue in 2013 due in large part to continuing political disagreements in Washington that may cause businesses and consumers to hold back spending. Further, the sovereign debt crisis in Europe continues to lead to weaker global economic growth, heightened financial vulnerabilities and some negative

rating actions. The Company is unable to predict the duration and severity of current global economic conditions and their impact on the United States, and California, where the majority of the Company's business is produced. If economic conditions do not show improvement, there could be an adverse impact on the Company's financial condition, results of operations, and liquidity.

- Inflation—The largest cost component for automobile insurers is losses, which include medical costs, replacement automobile parts, and labor costs. There can be significant variation in the overall increases in medical cost inflation, and it is often a year or more after the respective fiscal period ends before sufficient claims have closed for the inflation rate to be known with a reasonable degree of certainty. Therefore, it can be difficult to establish reserves and set premium rates, particularly when actual inflation rates may be higher or lower than anticipated.
- Loss Frequency—Another component of overall loss costs is loss frequency, which is the number of claims per risk insured. There has been a long-term trend of declining loss frequency in the personal automobile insurance industry. However, in recent years, the trend has shown increasing loss frequency, and the Company may not be able to accurately predict the trend of loss frequency in the future.
- Underwriting Cycle and Competition—The property and casualty insurance industry is highly cyclical, with alternating hard and soft market conditions. The Company has historically seen significant premium growth during hard markets. The Company believes that the market may be hardening as growth has begun to improve throughout 2012.

Technology

In 2012, the Company continued to enhance its internet agency portal, Mercury First. Mercury First is a single entry point for agents providing a broad suite of capabilities. One of its most powerful tools is a point of sale (POS) system that allows agents to easily obtain and compare quotes and write new business. Mercury First is designed as an easy-to-use agency portal that provides a customized work queue for each agency user showing new business leads, underwriting requests and other pertinent customer information in real time. Agents can also assist customers with processing payments, reporting claims or updating their records. The system enables quick access to documents and forms and empowers the agents with several self-service capabilities.

The NextGen system is designed to be a multi-state, multi-line system. NextGen serves as the primary platform for all underwriting, billing, claims, and commission functions supporting the private passenger auto line in seven states (Virginia, New York, Florida, California, Georgia, Illinois, and Texas).

During 2010, the Company launched Guidewire, a commercially available software solution, to replace legacy platforms and implemented it for the Nevada homeowners line. In 2011, the Company expanded the Guidewire implementation to Texas, Georgia, Illinois, Pennsylvania, and Oklahoma for the homeowners line of business and for the Texas commercial auto line of business. In 2012, the Company continued to expand the Guidewire implementation to California, Oklahoma, Georgia, and Arizona for the commercial auto line and to Michigan and Nevada for the private passenger automobile line. The Company plans to expand Guidewire to other states and lines of business during 2013.

In 2012, as part of its continuing commitment to service excellence, the Company enhanced the web capability for customers in California and Georgia to bind and pay for new policies online. These policies are serviced by the Company's agents. The Company plans to expand this capability to other states in the future.

B. Regulatory and Legal Matters

The process for implementing rate changes varies by state, with California, Georgia, New York, New Jersey, Pennsylvania, and Nevada requiring prior approval from the respective DOI before a rate change may be implemented. Illinois, Texas, Virginia, Arizona, and Michigan only require that rates be filed with the DOI. Oklahoma and Florida have a modified version of prior approval laws. In all states, the insurance code provides that rates must not be excessive, inadequate, or unfairly discriminatory. For the Company's two largest lines of business, private passenger automobile and homeowners, the Company filed rate increases in thirteen states during 2012.

The California DOI uses rating factor regulations requiring automobile insurance rates to be determined in decreasing order of importance by (1) driving safety record, (2) miles driven per year, (3) years of driving experience, and (4) other factors as determined by the California DOI to have a substantial relationship to the risk of loss and adopted by regulation.

On October 26, 2012, the Company implemented the California DOI approved rate increase of approximately 4% on California private passenger automobile policies. The rate increase has not had a significant impact on the number of new and renewal policies written. In October 2012, the Company filed for a 6.9% rate increase in CAIC's private passenger automobile

line of business, and plans to file for a rate increase in MIC's private passenger automobile line of business. The Company must obtain approval from the California DOI before implementing these new rates.

In May 2009, the Company filed for a 3.9% rate increase for its California homeowners line of business. In May 2011, the matter was referred to an administrative law judge for review. After extensive evidentiary hearings, the administrative law judge delivered a proposed decision on the matter to the California Insurance Commissioner in September 2012 that recommended a rate reduction of approximately 5.5%. On October 29, 2012, the Company received notice from the California Insurance Commissioner rejecting the administrative law judge's proposed decision and referred the matter back to the administrative law judge to gather more evidence. However, the California Insurance Commissioner recently issued a ruling to disregard his order to gather more evidence. The Company expects a final ruling from the California Insurance Commissioner on this matter in the near future. The Company does not agree with the proposed rate decrease and believes that recent homeowners loss trends support an increase. Consequently, the Company recently filed for a rate increase of 6.9%.

In January 2013, the California DOI approved auto body repair regulation to strengthen consumer protection. This regulation builds on existing protection by requiring insurers to settle automobile insurance claims using repair standards described by the regulation and not by the insurers' own standards. The new ruling will become effective in March 2013. The full extent of the impact is currently unknown.

In April 2010, the California DOI issued a Notice of Non-Compliance ("2010 NNC") to Mercury Insurance Company ("MIC"), Mercury Casualty Company ("MCC"), and California Automobile Insurance Company ("CAIC") based on a Report of Examination of the Rating and Underwriting Practices of these companies issued by the California DOI in February 2010. The 2010 NNC includes allegations of 35 instances of noncompliance with applicable California insurance law and seeks to require that each of MIC, MCC, and CAIC change its rating and underwriting practices to rectify the alleged noncompliance and may also seek monetary penalties. In April 2010, the Company submitted a Statement of Compliance and Notice of Defense to the 2010 NNC, in which it denied the allegations contained in the 2010 NNC and provided specific defenses to each allegation. The Company also requested a hearing in the event that the Statement of Compliance and Notice of Defense does not establish to the satisfaction of the California DOI that the alleged noncompliance does not exist, and the matters described in the 2010 NNC are not otherwise able to be resolved informally with the California DOI. However, no assurance can be given that efforts to resolve the 2010 NNC informally will be successful.

In March 2006, the California DOI issued an Amended Notice of Non-Compliance to a Notice of Non-Compliance originally issued in February 2004 (as amended, "2004 NNC") alleging that the Company charged rates in violation of the California Insurance Code, willfully permitted its agents to charge broker fees in violation of California law, and willfully misrepresented the actual price insurance consumers could expect to pay for insurance by the amount of a fee charged by the consumer's insurance broker. The California DOI seeks to impose a fine for each policy in which the Company allegedly permitted an agent to charge a broker fee and a penalty for each on which the Company allegedly used a misleading advertisement and to suspend certificates of authority for a period of one year. In January 2012, the administrative law judge bifurcated the 2004 NNC between (a) the California DOI's order to show cause, in which the California DOI asserts the false advertising allegations and accusation, and (b) the California DOI's notice of noncompliance, in which the California DOI asserts the unlawful rate allegations. In February 2012, the administrative law judge submitted a proposed decision dismissing the California DOI's 2004 NNC. In March 2012, the California Insurance Commissioner rejected the administrative law judge's proposed decision. The Company challenged the rejection in Los Angeles Superior Court in April 2012, and the California Insurance Commissioner filed a demurrer to the Company's petition. Following a hearing, the trial court sustained the California Insurance Commissioner's demurrer without leave to amend because it found the Company must first exhaust its administrative remedies. The Company has appealed the trial court's decision and on January 3, 2013, filed a petition to stay the administrative proceeding pending a determination of its appeal. The Court of Appeal did not stay the administrative proceeding but has allowed the appeal to continue. The Company has filed its opening appellate brief, and the court granted the Company's request for an expedited appeal. On January 15, 2013, the administrative law judge heard various pending motions that had originally been filed by the Company in June 2011. The administrative law judge has not yet ruled on the motions.

The Company denies the allegations in the 2004 and 2010 NNC matters, and believes that no monetary penalties are warranted, and the Company intends to defend itself against the allegations vigorously. The Company has been subject to fines and penalties by the California DOI in the past due to alleged violations of the California Insurance Code. The largest and most recent of these was settled in 2008 for \$300,000. However, prior settlement amounts are not necessarily indicative of the potential results in the current notice of non-compliance matters. Based upon its understanding of the facts and the California Insurance Code, the Company does not expect that the ultimate resolution of the 2004 and 2010 NNC matters will be material to the Company's financial position, results of operations, or cash flow. The Company has accrued a liability for the estimated cost to defend itself in the notice of non-compliance matters.

The Company is, from time to time, named as a defendant in various lawsuits or regulatory actions incidental to its insurance business. The majority of lawsuits brought against the Company relate to insurance claims that arise in the normal course of business and are reserved for through the reserving process. For a discussion of the Company's reserving methods, see "Critical Accounting Estimates" and Note 1 of Notes to Consolidated Financial Statements.

The Company also establishes reserves for non-insurance claims related lawsuits, regulatory actions, and other contingencies for which the Company is able to estimate its potential exposure and when the Company believes a loss is probable. For loss contingencies believed to be reasonably possible, the Company also discloses the nature of the loss contingency and an estimate of the possible loss, range of loss, or a statement that such an estimate cannot be made. While actual losses may differ from the amounts recorded and the ultimate outcome of the Company's pending actions is generally not yet determinable, the Company does not believe that the ultimate resolution of currently pending legal or regulatory proceedings, either individually or in the aggregate, will have a material adverse effect on its financial condition, results of operations, or cash flows.

In all cases, the Company vigorously defends itself unless a reasonable settlement appears appropriate. For a discussion of legal matters, see Note 16 of Notes to Consolidated Financial Statements—Commitments and Contingencies—Litigation.

C. Critical Accounting Estimates

Reserves

Preparation of the Company's consolidated financial statements requires judgment and estimates. The most significant is the estimate of loss reserves. Estimating loss reserves is a difficult process as many factors can ultimately affect the final settlement of a claim and, therefore, the reserve that is required. Changes in the regulatory and legal environment, results of litigation, medical costs, the cost of repair materials, and labor rates, among other factors, can impact ultimate claim costs. In addition, time can be a critical part of reserving determinations since the longer the span between the incidence of a loss and the payment or settlement of a claim, the more variable the ultimate settlement amount could be. Accordingly, short-tail claims, such as property damage claims, tend to be more reasonably predictable than long-tail liability claims.

The Company calculates a point estimate rather than a range of loss reserve estimate. There is inherent uncertainty with estimates and this is particularly true with estimates for loss reserves. This uncertainty comes from many factors which may include changes in claims reporting and settlement patterns, changes in the regulatory or legal environment, uncertainty over inflation rates and uncertainty for unknown items. The Company does not make specific provisions for these uncertainties, rather it considers them in establishing its reserve by looking at historical patterns and trends and projecting these out to current reserves. The underlying factors and assumptions that serve as the basis for preparing the reserve estimate include paid and incurred loss development factors, expected average costs per claim, inflation trends, expected loss ratios, industry data, and other relevant information.

The Company also engages an independent actuarial consultant to review the Company's reserves and to provide the annual actuarial opinions required under state statutory accounting requirements. The Company does not rely on the actuarial consultant for GAAP reporting or periodic report disclosure purposes. The Company analyzes loss reserves quarterly primarily using the incurred loss, claim count development, and average severity methods described below. The Company also uses the paid loss development method to analyze loss adjustment expense reserves as part of its reserve analysis. When deciding among methods to use, the Company evaluates the credibility of each method based on the maturity of the data available and the claims settlement practices for each particular line of business or coverage within a line of business. When establishing the reserve, the Company will generally analyze the results from all of the methods used rather than relying on a single method. While these methods are designed to determine the ultimate losses on claims under the Company's policies, there is inherent uncertainty in all actuarial models since they use historical data to project outcomes. The Company believes that the techniques it uses provide a reasonable basis in estimating loss reserves.

- The *incurred loss development method* analyzes historical incurred case loss (case reserves plus paid losses) development to estimate ultimate losses. The Company applies development factors against current case incurred losses by accident period to calculate ultimate expected losses. The Company believes that the *incurred loss development method* provides a reasonable basis for evaluating ultimate losses, particularly in the Company's larger, more established lines of business which have a long operating history.
- The *average severity method* analyzes historical loss payments and/or incurred losses divided by closed claims and/or total claims to calculate an estimated average cost per claim. From this, the expected ultimate average cost per claim can be estimated. The *average severity method* coupled with the *claim count development method* provide meaningful information regarding inflation and frequency trends that the Company believes is useful in establishing reserves. The *claim count development method* analyzes historical claim count development to estimate future incurred claim count

development for current claims. The Company applies these development factors against current claim counts by accident period to calculate ultimate expected claim counts.

- The *paid loss development method* analyzes historical payment patterns to estimate the amount of losses yet to be paid. The Company uses this method for losses and loss adjustment expenses.

The Company analyzes catastrophe losses separately from non-catastrophe losses. For catastrophe losses, the Company determines claim counts based on claims reported and development expectations from previous catastrophes and applies an average expected loss per claim based on reserves established by adjusters and average losses on previous similar catastrophes.

There are many factors that can cause variability between the ultimate expected loss and the actual developed loss. While there are certainly other factors, the Company believes that the following three items tend to create the most variability between expected losses and actual losses.

(1) Inflation

For the Company's California automobile lines of business, total reserves are comprised of the following:

- BI reserves—approximately 60% of total reserves
- Material damage (MD) reserves, including collision and comprehensive property damage—approximately 20% of total reserves
- Loss adjustment expenses reserves—approximately 20% of total reserves.

Loss development on MD reserves is generally insignificant because MD claims are generally settled in a shorter period than BI claims. The majority of the loss adjustment expense reserves are estimated costs to defend BI claims, which tend to require longer periods of time to settle as compared to MD claims.

BI loss reserves are generally the most difficult to estimate because they take longer to close than other coverages. BI coverage in the Company's policies includes injuries sustained by any person other than the insured, except in the case of uninsured or underinsured motorist BI coverage, which covers damages to the insured for BI caused by uninsured or underinsured motorists. BI payments are primarily for medical costs and general damages.

The following table presents the typical closure patterns of BI claims in the California automobile insurance coverage:

	% of Total	
	Claims Closed	Dollars Paid
BI claims closed in the accident year reported	40%	12%
BI claims closed one year after the accident year reported	80%	52%
BI claims closed two years after the accident year reported	95%	82%
BI claims closed three years after the accident year reported	99%	95%

BI claims closed in the accident year reported are generally the smaller and less complex claims that settle for approximately \$2,500 to \$3,000, on average, whereas the total average settlement, once all claims are closed in a particular accident year, is approximately \$8,500 to \$10,000. The Company creates incurred and paid loss triangles to estimate ultimate losses utilizing historical payment and reserving patterns and evaluates the results of this analysis against its frequency and severity analysis to establish BI reserves. The Company adjusts development factors to account for inflation trends it sees in loss severity. As a larger proportion of claims from an accident year are settled, there becomes a higher degree of certainty for the reserves established for that accident year. Consequently, there is a decreasing likelihood of reserve development on any particular accident year, as those periods age. At December 31, 2012, the Company believes that the accident years that are most likely to develop are the 2010 through 2012 accident years; however, it is possible that older accident years could develop as well.

In general, the Company expects that historical claims trends will continue with costs tending to increase, which is generally consistent with historical data, and therefore the Company believes that it is reasonable to expect inflation to continue. The Company is experiencing inflation at a rate that is higher than in recent years. Many potential factors can affect the BI inflation rate, including changes in: claims handling process, statutes and regulations, the number of litigated files, increased use of medical procedures such as MRIs and epidural injections, general economic factors, timeliness of claims adjudication, vehicle safety, weather patterns, and gasoline prices, among other factors; however, the magnitude of such impact on the inflation rate is unknown.

It is a common practice in the insurance industry for companies to provide small settlement offers at the inception of a claim to BI claimants who have minor injuries. These claims are settled quickly, reducing the likelihood that BI claimants require larger settlements later on. It also results in some claimants receiving payments that would not have received any payments if an extended adjudication of the claim had occurred. When a large percentage of the total claims are small dollar value claims resulting from this practice, it has the effect of lowering the total average cost for all claims (severity) but increasing the total number of claims (frequency). Mercury has historically used this approach to handle its BI claims.

Beginning late in 2008 and continuing through the end of 2009, the Company changed its claims handling procedures and discontinued the practice of providing small settlement offers to BI claimants at the inception of the claim. This had the effect of increasing loss severity and decreasing loss frequency for the 2009 accident year. The prior practice was reinstated in 2010, which resulted in decreased loss severity and increased loss frequency in 2010 compared to 2009. The Company has continued this practice with even greater emphasis on settling small claims quickly.

The Company believes that it is reasonably possible that the California automobile BI severity could vary from recorded amounts by as much as 10%, 5%, and 3% for 2012, 2011, and 2010, respectively. For example, at December 31, 2012, the loss severity for the amounts recorded at December 31, 2011 increased by 7.0%, 2.5%, and 0.3% for the 2011, 2010, and 2009 accident years, respectively. The following table presents the effects on the 2012, 2011, and 2010 accident year California BI loss reserves based on possible variations in the severity recorded; however, the variation could be more or less than these amounts.

California Bodily Injury Inflation Reserve Sensitivity Analysis

Accident Year	Number of Claims Expected	Actual Recorded Severity at 12/31/12	Implied Inflation Rate ⁽¹⁾ Recorded	(A) Pro-forma severity if actual severity is lower by 10% for 2012, 5% for 2011, and 3% for 2010	(B) Pro-forma severity if actual severity is higher by 10% for 2012, 5% for 2011, and 3% for 2010	Favorable loss development if actual severity is less than recorded (Column A)	Unfavorable loss development if actual severity is more than recorded (Column B)
2012	28,671	\$ 9,992	10.5 %	\$ 8,993	\$ 10,991	\$ 28,642,000	\$ (28,642,000)
2011	27,092	\$ 9,045	2.3 %	\$ 8,593	\$ 9,497	\$ 12,246,000	\$ (12,246,000)
2010	27,052	\$ 8,845	(1.2)%	\$ 8,580	\$ 9,110	\$ 7,169,000	\$ (7,169,000)
2009	25,521	\$ 8,956	—	—	—	—	—
Total Loss Development—Favorable (Unfavorable)						\$ 48,057,000	\$ (48,057,000)

- (1) Implied inflation rate is calculated by dividing the difference between current and prior year actual recorded severity by the prior year actual recorded severity. The change in the implied inflation rate in 2010 and 2009 is skewed by the change in claims handling process noted above. The 10.5% inflation rate estimated for 2012 reflects the consideration of recent trends experienced on 2012 accident year claims that closed in 2012. While these claims represent just 12% of the ultimate dollars expected to be paid, they serve as an early indicator of inflation. The higher inflation may result from an increase in medical procedures and an increased prevalence of large losses.

(2) Claim Count Development

The Company generally estimates ultimate claim counts for an accident period based on development of claim counts in prior accident periods. Since 2006, for California automobile BI claims, the Company has experienced that approximately 2% to 8% additional claims will be reported in the year subsequent to an accident year. However, such late reported claims could be more or less than the Company's expectations. Typically, almost every claim is reported within one year following the end of an accident year and at that point the Company has a high degree of certainty as to what the ultimate claim count will be.

There are many other potential factors that can affect the number of claims reported after a period end. These factors include changes in weather patterns, a change in the number of litigated files, the number of automobiles insured, and whether the last day of the year falls on a weekday or a weekend. However, the Company is unable to determine which, if any, of the factors actually impact the number of claims reported and, if so, by what magnitude.

At December 31, 2012, there were 26,757 BI claims reported for the 2012 accident year and the Company estimates that these are expected to ultimately grow by approximately 7%. The Company believes that while actual development in recent years has ranged between approximately 2% and 8%, it is reasonable to expect that the range could be as great as between 0% and 10%. Actual development may be more or less than the expected range. The following table presents the effect on loss development based on different claim count within the broader possible range at December 31, 2012:

California Bodily Injury Claim Count Reserve Sensitivity Analysis

<u>2012 Accident Year</u>	<u>Claims Reported</u>	<u>Amount Recorded at 12/31/12 at 7% Claim Count Development</u>	<u>Total Expected Amount If Claim Count Development is 0%</u>	<u>Total Expected Amount If Claim Count Development is 10%</u>
Claim count	26,757	28,671	26,757	29,432
Approximate average cost per claim	Not meaningful	\$ 9,992	\$ 9,992	\$ 9,992
Total dollars	Not meaningful	\$ 286,480,000	\$ 267,356,000	\$ 294,085,000
Total Loss Development—Favorable (Unfavorable)			\$ 19,124,000	\$ (7,605,000)

(3) Unexpected Large Losses From Older Accident Periods

Unexpected large losses are generally not provided for in the current reserve because they are not known or expected and tend to be unquantifiable. Once known, the Company establishes a provision for the losses, but it is not possible to provide any meaningful sensitivity analysis as to the potential size of any unexpected losses. These losses can be caused by many factors, including unexpected legal interpretations of coverage, ineffective claims handling, regulation extending claims reporting periods, assumption of unexpected or unknown risks, adverse court decisions as well as many unknown factors.

Unexpected large losses are fairly infrequent but can have a large impact on the Company's losses. To mitigate this risk, the Company has established claims handling and review procedures. However, it is still possible that these procedures will not prove entirely effective, and the Company may have material unexpected large losses in future periods. It is also possible that the Company has not identified and established a sufficient reserve for all unexpected large losses occurring in the older accident years, even though a comprehensive claims file review was undertaken. The Company may experience additional development on these reserves.

Discussion of losses and loss reserves and prior period loss development at December 31, 2012

At December 31, 2012 and 2011, the Company recorded its point estimate of approximately \$1,036 million and \$985 million, respectively, in losses and loss adjustment expense liabilities which include approximately \$409 million and \$344 million, respectively, of IBNR loss reserves. IBNR includes estimates, based upon past experience, of ultimate developed costs, which may differ from case estimates, unreported claims that occurred on or prior to December 31, 2012 and estimated future payments for reopened claims. Management believes that the liability for losses and loss adjustment expenses is adequate to cover the ultimate net cost of losses and loss adjustment expenses incurred to date; however, since the provisions are necessarily based upon estimates, the ultimate liability may be more or less than such provisions.

During 2012, the Company experienced severe losses due to Hurricane Sandy which made landfall in New Jersey on October 29, 2012 and caused significant damage to large portions of the Northeastern United States. The Company's total losses from Hurricane Sandy are estimated to be approximately \$28 million. The Company also recognized catastrophe losses due to wind and hail storms in the Midwest region totaling \$10 million.

The Company evaluates its reserves quarterly. When management determines that the estimated ultimate claim cost requires a decrease for previously reported accident years, favorable development occurs and a reduction in losses and loss adjustment expenses is reported in the current period. If the estimated ultimate claim cost requires an increase for previously reported accident years, unfavorable development occurs and an increase in losses and loss adjustment expenses is reported in the current period. For 2012, the Company reported unfavorable development of approximately \$42 million on the 2011 and prior accident years' losses and loss adjustment expense reserves, which at December 31, 2011 totaled approximately \$985 million. The unfavorable development in 2012 is largely the result of re-estimates of California BI losses that have experienced both higher average severities and more late reported claims (claim count development) than originally estimated at December 31, 2011.

Premiums

The Company's insurance premiums are recognized as income ratably over the term of the policies and in proportion to the amount of insurance protection provided. Unearned premiums are carried as a liability on the balance sheet and are computed on a monthly pro-rata basis. The Company evaluates its unearned premiums periodically for premium deficiencies by comparing the sum of expected claim costs, unamortized acquisition costs, and maintenance costs partially offset by investment income to related unearned premiums. To the extent that any of the Company's lines of business become unprofitable, a premium deficiency reserve may be required.

Investments

The Company's fixed maturity and equity investments are classified as "trading" and carried at fair value as required when applying the fair value option, with changes in fair value reflected in net realized investment gains or losses in the consolidated statements of operations. The majority of equity holdings, including non-redeemable fund preferred stocks, is actively traded on national exchanges or trading markets, and is valued at the last transaction price on the balance sheet dates.

Fair Value of Financial Instruments

The financial instruments recorded in the consolidated balance sheets include investments, receivables, interest rate swap agreements, accounts payable, equity contracts, and secured notes payable. The fair value of a financial instrument is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Due to their short-term maturity, the carrying values of receivables and accounts payable approximate their fair market values. All investments are carried on the consolidated balance sheets at fair value, as disclosed in Note 1 of Notes to Consolidated Financial Statements.

The Company's financial instruments include securities issued by the U.S. government and its agencies, securities issued by states and municipal governments and agencies, certain corporate and other debt securities, equity securities, and exchange traded funds. Approximately 98% of the fair value of the financial instruments held at December 31, 2012 is based on observable market prices, observable market parameters, or is derived from such prices or parameters. The availability of observable market prices and pricing parameters can vary by financial instrument. Observable market prices and pricing parameters of a financial instrument, or a related financial instrument, are used to derive a price without requiring significant judgment.

The Company may hold or acquire financial instruments that lack observable market prices or market parameters currently or in future periods because they are less actively traded. The fair value of such instruments is determined using techniques appropriate for each particular financial instrument. These techniques may involve some degree of judgment. The price transparency of the particular financial instrument will determine the degree of judgment involved in determining the fair value of the Company's financial instruments. Price transparency is affected by a wide variety of factors, including, for example, the type of financial instrument, whether it is a new financial instrument and not yet established in the marketplace, and the characteristics particular to the transaction. Financial instruments for which actively quoted prices or pricing parameters are available or for which fair value is derived from actively quoted prices or pricing parameters will generally have a higher degree of price transparency. By contrast, financial instruments that are thinly traded or not quoted will generally have diminished price transparency. Even in normally active markets, the price transparency for actively quoted instruments may be reduced from time to time during periods of market dislocation. Alternatively, in thinly quoted markets, the participation of market makers willing to purchase and sell a financial instrument provides a source of transparency for products that are otherwise not actively quoted. For a further discussion, see Note 3 of Notes to Consolidated Financial Statements.

Income Taxes

At December 31, 2012, the Company's deferred income taxes were in a net liability position materially due to deferred tax liabilities generated by deferred acquisition costs and unrealized gains on securities held. These deferred tax liabilities were substantially offset by deferred tax assets resulting from unearned premiums, expense accruals, loss reserve discounting, and AMT and other tax credit carryforwards. The Company assesses the likelihood that its deferred tax assets will be realized and, to the extent management does not believe these assets are more likely than not to be realized, a valuation allowance is established. Management's recoverability assessment of its deferred tax assets which are ordinary in character takes into consideration the Company's strong history of generating ordinary taxable income and a reasonable expectation that it will continue to generate ordinary taxable income in the future. Further, the Company has the capacity to recoup its ordinary deferred tax assets through tax loss carryback claims for taxes paid in prior years. Finally, the Company has various deferred tax liabilities which represent sources of future ordinary taxable income.

Management's recoverability assessment with regard to its capital deferred tax assets is based on estimates of anticipated capital gains and tax-planning strategies available to generate future taxable capital gains, both of which would contribute to the realization of deferred tax benefits. The Company expects to hold certain quantities of debt securities, which are currently in loss positions, to recovery or maturity. Management believes unrealized losses related to these debt securities, which represent a portion of the unrealized loss positions at period end, are fully realizable at maturity. Management believes its long-term time horizon for holding these securities allows it to avoid any forced sales prior to maturity. The Company also has unrealized gains in its investment portfolio which could be realized through asset dispositions, at management's discretion. Further, the Company has the capability to generate additional realized capital gains by entering into a sale-leaseback transaction using one or more of its appreciated real estate holdings.

The Company has the capability to implement tax planning strategies as it has a steady history of generating positive cash flow from operations, as well as the reasonable expectation that its cash flow needs can be met in future periods without the forced sale of its investments. This capability assists management in controlling the timing and amount of realized losses it generates during future periods. By prudent utilization of some or all of these strategies, management believes that it has the ability and intent to generate capital gains, and minimize tax losses, in a manner sufficient to avoid losing the benefits of its deferred tax assets. Management will continue to assess the need for a valuation allowance on a quarterly basis. Although realization is not assured, management believes it is more likely than not that the Company's deferred tax assets will be realized.

The Company's effective income tax rate can be affected by several factors. These generally include tax exempt investment income, non-deductible expenses, and periodically, non-routine tax items such as adjustments to unrecognized tax benefits related to tax uncertainties. The effective tax rate for 2012 was 13.6%, compared to 22.0% for 2011. The decrease in the effective tax rate is mainly due to a decrease in taxable income relative to tax exempt investment income. The Company's effective tax rate for the year ended December 31, 2012 was lower than the statutory tax rate primarily as a result of tax exempt investment income earned.

Goodwill and Other Intangible Assets

Goodwill and other intangible assets arise from business acquisitions and consist of the excess of the cost of the acquisitions over the tangible and intangible assets acquired and liabilities assumed and identifiable intangible assets acquired. The Company annually evaluates goodwill and other intangible assets for impairment. The Company also reviews its goodwill and other intangible assets for impairment whenever events or changes in circumstances indicate that it is more likely than not that the carrying amount of goodwill and other intangible assets may exceed the implied fair value. As of December 31, 2012, the fair value of the Company's reporting units exceeded their carrying value.

Contingent Liabilities

The Company has known, and may have unknown, potential liabilities which include claims, assessments, lawsuits, or regulatory fines and penalties relating to the Company's business. The Company continually evaluates these potential liabilities and accrues for them and/or discloses them in the notes to the consolidated financial statements where required. The Company does not believe that the ultimate resolution of currently pending legal or regulatory proceedings, either individually or in the aggregate, will have a material adverse effect on its financial condition, results of operations, or cash flows. See also "Regulatory and Legal Matters" and Note 16 of Notes to Consolidated Financial Statements.

For a discussion of recently issued accounting standards, see Note 1 of Notes to Consolidated Financial Statements.

RESULTS OF OPERATIONS

Year Ended December 31, 2012 Compared to Year Ended December 31, 2011

Revenues

Net premiums earned and net premiums written in 2012 increased 0.3% and 3.0%, respectively, from 2011. Net premiums written by the Company's California operations and non-California operations increased by \$73.3 million and \$3.1 million, respectively, from 2011. The increase in net premiums written is primarily due to an increase in the number of policies-in-force and slightly higher average premiums per policy. The increase in average premiums per policy partially reflects a modest shift for the California personal automobile line from six-month policies to twelve-month policies. Premiums on twelve-month policies are typically twice that of six-month policies. For 2012, fewer than 5% of California personal automobile policies were written on a twelve-month basis and more than 95% were written on a six-month basis, whereas in 2011, fewer than 1% of the California personal automobile policies were written on a twelve-month basis and over 99% were written on a six-month basis. In addition, the Company increased private passenger automobile insurance rates in twelve states outside California and grew its homeowners business in several states outside of California during 2012.

Net premiums written is a non-GAAP financial measure which represents the premiums charged on policies issued during a fiscal period less any applicable reinsurance. Net premiums written is a statutory measure designed to determine production levels. Net premiums earned, the most directly comparable GAAP measure, represents the portion of net premiums written that is recognized as revenue in the financial statements for the period presented and earned on a pro-rata basis over the term of the policies. The following is a reconciliation of total net premiums written to net premiums earned:

	2012	2011
	(Amounts in thousands)	
Net premiums written	\$ 2,651,731	\$ 2,575,383
Change in net unearned premium	(76,811)	(9,326)
Net premiums earned	<u>\$ 2,574,920</u>	<u>\$ 2,566,057</u>

Expenses

Loss and expense ratios are used to interpret the underwriting experience of property and casualty insurance companies. The following table presents the Company's consolidated loss, expense, and combined ratios determined in accordance with GAAP:

	2012	2011
Loss ratio	76.2%	71.3%
Expense ratio	26.6%	27.2%
Combined ratio	<u>102.8%</u>	<u>98.5%</u>

Loss ratio is calculated by dividing losses and loss adjustment expenses by net premiums earned. The Company's loss ratio was affected by unfavorable development of approximately \$42 million and \$18 million on prior accident years' losses and loss adjustment expense reserves for the years ended December 31, 2012 and 2011, respectively. The unfavorable development in 2012 is largely the result of re-estimates of California BI losses which have experienced both higher average severities and more late reported claims (claim count development) than originally estimated at December 31, 2011. The 2012 loss ratio was also negatively impacted by a total of \$39 million of catastrophe losses mostly due to Hurricane Sandy and wind and hail storms in the Midwest region during 2012. In addition, the 2012 loss ratio was negatively impacted by rising loss frequency and increasing severity on the California private passenger automobile line of business. The 2011 loss ratio was negatively impacted by a total of \$18 million of catastrophe losses due to California winter storms, Hurricane Irene, and Georgia tornadoes during 2011.

Expense ratio is calculated by dividing the sum of policy acquisition costs plus other operating expenses by net premiums earned. The improvement in the expense ratio in 2012 was mainly due to ongoing cost reduction efforts and lower profitability related expenses.

Combined ratio is the key measure of underwriting performance traditionally used in the property and casualty insurance industry. A combined ratio under 100% generally reflects profitable underwriting results; and a combined ratio over 100% generally reflects unprofitable underwriting results.

Income tax expenses were \$18.4 million and \$53.9 million for the years ended December 31, 2012 and 2011, respectively. The decrease in income tax expense resulted from decreased taxable income in 2012.

Investments

The following table presents the investment results of the Company:

	2012	2011
	(Amounts in thousands)	
Average invested assets at cost ⁽¹⁾	\$ 3,011,143	\$ 3,004,588
Net investment income ⁽²⁾		
Before income taxes	\$ 131,896	\$ 140,947
After income taxes	\$ 115,359	\$ 124,708
Average annual yield on investments ⁽²⁾		
Before income taxes	4.4%	4.7%
After income taxes	3.8%	4.2%
Net realized investment gains	\$ 66,380	\$ 58,397

(1) Fixed maturities and short-term bonds at amortized cost; and equities and other short-term investments at cost. Average invested assets at cost is based on the monthly amortized cost of the invested assets for each respective period.

- (2) Net investment income and average annual yield decreased primarily due to the maturity and replacement of higher yielding investments, purchased when market interest rates were higher, with lower yielding investments purchased during the current low interest rate environment.

Included in net income are net realized investment gains of \$66.4 million and \$58.4 million in 2012 and 2011, respectively. Net realized investment gains include gains of \$45.5 million and \$31.3 million in 2012 and 2011, respectively, due to changes in the fair value of total investments pursuant to application of the fair value accounting option. The net gains during 2012 arise from \$36.3 million and \$9.2 million increases in the market value of the Company's fixed maturity and equity securities, respectively. The Company's municipal bond holdings represent the majority of the fixed maturity portfolio, which was positively affected by the overall municipal market improvement for 2012. The primary cause of the increase in the value of the Company's equity securities was the overall improvement in the equity markets for 2012. The net gains during 2011 arise from a \$62.1 million increase in the market value of the Company's fixed maturity securities offset by a \$30.9 million decline in the market value of the Company's equity securities.

Net Income

Net income was \$116.9 million or \$2.13 per diluted share and \$191.2 million or \$3.49 per diluted share in 2012 and 2011, respectively. Diluted per share results were based on a weighted average of 54.9 million and 54.8 million shares in 2012 and 2011, respectively. Basic per share results were \$2.13 and \$3.49 in 2012 and 2011, respectively. Included in net income per share were net realized investment gains, net of income taxes, of \$0.79 and \$0.69 per share (basic and diluted) in 2012 and 2011, respectively.

Year Ended December 31, 2011 Compared to Year Ended December 31, 2010

Revenues

Net premiums earned in 2011 were essentially the same as 2010 while net premiums written in 2011 increased by approximately \$20 million from 2010. Net premiums written by the Company's California operations were approximately \$2 billion in 2011, a 0.4% decrease from 2010. Net premiums written by the Company's non-California operations were approximately \$632 million in 2011, a 4.5% increase from 2010. Growth outside of California resulted from expanded and improved product offerings and higher average premiums per policy.

The following is a reconciliation of total net premiums written to net premiums earned:

	<u>2011</u>	<u>2010</u>
	<u>(Amounts in thousands)</u>	
Net premiums written	\$ 2,575,383	\$ 2,555,481
Change in net unearned premium	(9,326)	11,204
Net premiums earned	<u>\$ 2,566,057</u>	<u>\$ 2,566,685</u>

Expenses

The following table presents the Company's consolidated loss, expense, and combined ratios determined in accordance with GAAP:

	<u>2011</u>	<u>2010</u>
Loss ratio	71.3%	71.1%
Expense ratio	27.2%	29.6%
Combined ratio	<u>98.5%</u>	<u>100.7%</u>

The loss ratio for 2011 was generally consistent with the 2010 loss ratio. The loss ratio was affected by unfavorable development of approximately \$18 million and favorable development of approximately \$13 million on prior accident years' losses and loss adjustment expense reserves for the years ended December 31, 2011 and 2010, respectively. The unfavorable development in 2011 is largely the result of re-estimates of California BI losses which have experienced higher average severities than originally estimated at December 31, 2010. The 2011 loss ratio was also negatively impacted by a total of \$18 million of catastrophe losses due to California winter storms, Hurricane Irene, and Georgia tornadoes during 2011. The 2010 loss ratio was impacted by severe rainstorms in California and homeowner's losses in Florida as a result of sinkhole claims during 2010.

The expense ratio for 2010 was impacted by contributions made in support of a California legislative initiative totaling \$12.1 million and would have been 29.1% without those financial contributions. The 2011 expense ratio decreased as a result of decreased agent contingent commissions, consulting, advertising, and information technology expenditures.

Income tax expenses were \$53.9 million and \$30.2 million for the years ended December 31, 2011 and 2010, respectively. The increase in income tax expense resulted from increased taxable income in 2011.

Investments

The following table presents the investment results of the Company:

	<u>2011</u>	<u>2010</u>
	(Amounts in thousands)	
Average invested assets at cost ⁽¹⁾	\$ 3,004,588	\$ 3,121,366
Net investment income:		
Before income taxes	\$ 140,947	\$ 143,814
After income taxes	\$ 124,708	\$ 128,888
Average annual yield on investments:		
Before income taxes	4.7%	4.6%
After income taxes	4.2%	4.1%
Net realized investment gains	\$ 58,397	\$ 57,089

(1) Fixed maturities and short-term bonds at amortized cost; and equities and other short-term investments at cost. Average invested assets at cost is based on the monthly amortized cost of the invested assets for each respective period.

Included in net income are net realized investment gains of \$58.4 million and \$57.1 million in 2011 and 2010, respectively. Net realized investment gains include gains of \$31.3 million and \$46.6 million in 2011 and 2010, respectively, due to changes in the fair value of total investments pursuant to the application of the fair value accounting option. The net gains during 2011 arise from a \$62.1 million increase in the market value of the Company's fixed maturity securities offset by a \$30.9 million decline in the market value of the Company's equity securities. The Company's municipal bond holdings represent the majority of its fixed maturity portfolio, which was positively affected by the overall municipal market improvement for 2011. The primary cause of the losses on the Company's equity securities was the overall decline in the equity markets occurring primarily in the third quarter of 2011. The net gains during 2010 arise from \$1.0 million and \$45.7 million increases in the market value of the Company's fixed maturity and equity securities, respectively. The primary cause of the gains on the Company's equity securities for 2010 was the overall improvement in the equity market.

Net Income

Net income was \$191.2 million or \$3.49 per diluted share and \$152.2 million or \$2.78 per diluted share in 2011 and 2010, respectively. Diluted per share results were based on a weighted average of 54.8 million shares in 2011 and 2010. Basic per share results were \$3.49 and \$2.78 in 2011 and 2010, respectively. Included in net income per share were net realized investment gains, net of income taxes, of \$0.69 and \$0.68 per share (basic and diluted) in 2011 and 2010, respectively.

LIQUIDITY AND CAPITAL RESOURCES

A. General

The Company is largely dependent upon dividends received from its insurance subsidiaries to pay debt service costs and to make distributions to its shareholders. Under current insurance law, the Insurance Companies are entitled to pay ordinary dividends of approximately \$155 million in 2013 to Mercury General. The Insurance Companies paid Mercury General ordinary dividends of approximately \$145 million during 2012. As of December 31, 2012, Mercury General had approximately \$85 million in investments and cash that could be utilized to satisfy its direct holding company obligations.

The principal sources of funds for the Insurance Companies are premiums, sales and maturity of invested assets, and dividend and interest income from invested assets. The principal uses of funds for the Insurance Companies are the payment of claims and related expenses, operating expenses, dividends to Mercury General, payment of debt, and the purchase of investments.

B. Cash Flows

The Company has generated positive cash flow from operations for over twenty consecutive years. Because of the Company's long track record of positive operating cash flows, it does not attempt to match the duration and timing of asset maturities with those of liabilities. Rather, the Company manages its portfolio with a view towards maximizing total return with an emphasis on

after-tax income. With combined cash and short-term investments of \$452.8 million at December 31, 2012, the Company believes its cash flow from operations is adequate to satisfy its liquidity requirements without the forced sale of investments. Investment maturities are also available to meet the Company's liquidity needs. However, the Company operates in a rapidly evolving and often unpredictable business environment that may change the timing or amount of expected future cash receipts and expenditures. Accordingly, there can be no assurance that the Company's sources of funds will be sufficient to meet its liquidity needs or that the Company will not be required to raise additional funds to meet those needs or for future business expansion, through the sale of equity or debt securities or from credit facilities with lending institutions.

Net cash provided by operating activities in 2012 was \$148.1 million, a decrease of \$10.5 million compared to 2011. The decrease was primarily due to the increased payment of income taxes and losses and lower investment income as a result of the lower interest rate environment, partially offset by increased premiums collected. The Company utilized the cash provided by operating activities primarily for the payment of dividends to its shareholders. Funds derived from the sale, redemption or maturity of fixed maturity investments of \$668.7 million were primarily reinvested by the Company in high grade fixed maturity securities.

The following table presents the estimated fair value of fixed maturity securities at December 31, 2012 by contractual maturity in the next five years.

	Fixed Maturity Securities	
	(Amounts in thousands)	
Due in one year or less	\$	79,344
Due after one year through two years		99,603
Due after two years through three years		68,617
Due after three years through four years		76,072
Due after four years through five years		88,350
	\$	411,986

See "D. Debt" for cash flow related to outstanding debts.

C. Invested Assets

Portfolio Composition

An important component of the Company's financial results is the return on its investment portfolio. The Company's investment strategy emphasizes safety of principal and consistent income generation, within a total return framework. The investment strategy has historically focused on maximizing after-tax yield with a primary emphasis on maintaining a well diversified, investment grade, fixed income portfolio to support the underlying liabilities and achieve return on capital and profitable growth. The Company believes that investment yield is maximized by selecting assets that perform favorably on a long-term basis and by disposing of certain assets to enhance after-tax yield and minimize the potential effect of downgrades and defaults. The Company continues to believe that this strategy maintains the optimal investment performance necessary to sustain investment income over time. The Company's portfolio management approach utilizes a market risk and consistent asset allocation strategy as the primary basis for the allocation of interest sensitive, liquid and credit assets as well as for determining overall below investment grade exposure and diversification requirements. Within the ranges set by the asset allocation strategy, tactical investment decisions are made in consideration of prevailing market conditions.

The following table presents the composition of the total investment portfolio of the Company at December 31, 2012:

	Cost ⁽¹⁾	Fair Value
	(Amounts in thousands)	
Fixed maturity securities:		
U.S. government bonds and agencies	\$ 13,999	\$ 14,204
Municipal securities	2,040,537	2,165,095
Mortgage-backed securities	27,786	30,703
Corporate securities	151,019	155,551
Collateralized debt obligations	37,562	42,801
	<u>2,270,903</u>	<u>2,408,354</u>
Equity securities:		
Common stock:		
Public utilities	82,474	85,106
Banks, trusts and insurance companies	19,701	22,166
Energy and other	352,889	346,809
Non-redeemable preferred stock	10,895	11,701
Partnership interest in a private credit fund	10,000	11,306
	<u>475,959</u>	<u>477,088</u>
Short-term investments	<u>294,607</u>	<u>294,653</u>
Total investments	<u>\$ 3,041,469</u>	<u>\$ 3,180,095</u>

(1) Fixed maturities and short-term bonds at amortized cost and equities and other short-term investments at cost.

At December 31, 2012, 67.4% of the Company's total investment portfolio at fair value and 89.0% of its total fixed maturity investments at fair value were invested in tax-exempt state and municipal bonds. Equity holdings consist of non-redeemable preferred stocks, dividend-bearing common stocks on which dividend income is partially tax-sheltered by the 70% corporate dividend received deduction, and a partnership interest in a private credit fund. At December 31, 2012, 91.7% of short-term investments consisted of highly rated short-duration securities redeemable on a daily or weekly basis. The Company does not have any direct investment in subprime lenders.

During 2012, the Company recognized \$66.4 million in net realized investment gains, which included gains of \$47.7 million and \$16.7 million related to fixed maturity and equity securities, respectively. Included in the gains were \$36.3 million and \$9.2 million in gains due to changes in the fair value of the Company's fixed maturity and equity security portfolio, respectively, as a result of applying the fair value option.

During 2011, the Company recognized \$58.4 million in net realized investment gains, which included gains of \$54.1 million related to fixed maturity securities and losses of \$4.9 million related to equity securities. Included in the gains and losses were \$62.1 million in gains due to changes in the fair value of the Company's fixed maturity portfolio and \$30.9 million in losses due to changes in the fair value of the Company's equity security portfolio, as a result of applying the fair value option.

Fixed Maturity Securities

Fixed maturity securities include debt securities, which may have fixed or variable principal payment schedules, may be held for indefinite periods of time, and may be used as a part of the Company's asset/liability strategy or sold in response to changes in interest rates, anticipated prepayments, risk/reward characteristics, liquidity needs, tax planning considerations, or other economic factors. Short-term investments include money market accounts, options, and short-term bonds that are highly rated short duration securities and redeemable within one year.

A primary exposure for the fixed maturity securities is interest rate risk. The longer the duration, the more sensitive the asset is to market interest rate fluctuations. As assets with longer maturity dates tend to produce higher current yields, the Company's historical investment philosophy has resulted in a portfolio with a moderate duration. The nominal average maturities of the overall bond portfolio were 12.2 years and 11.8 years (11.0 years and 10.8 years including all short-term instruments) at December 31, 2012 and 2011, respectively. The portfolio is heavily weighted in investment grade tax-exempt municipal bonds. Fixed maturity investments purchased by the Company typically have call options attached, which further reduce the duration of the asset as interest rates decline. The call-adjusted average maturities of the overall bond portfolio were 3.7 years and 4.5 years (3.3 years

and 4.1 years including all short-term instruments) at December 31, 2012 and 2011, respectively, related to holdings which are heavily weighted with high coupon issues that are expected to be called prior to maturity. The modified durations of the overall bond portfolio reflecting anticipated early calls were 3.1 years and 3.7 years, (2.8 years and 3.3 years including all short-term instruments), including collateralized mortgage obligations with a modified duration of 3.2 years and 2.4 years at December 31, 2012 and 2011, respectively, and short-term bonds that carry no duration. Modified duration measures the length of time it takes, on average, to receive the present value of all the cash flows produced by a bond, including reinvestment of interest. As it measures four factors (maturity, coupon rate, yield, and call terms) which determine sensitivity to changes in interest rates, modified duration is considered a better indicator of price volatility than simple maturity alone.

Another exposure related to the fixed maturity securities is credit risk, which is managed by maintaining a weighted-average portfolio credit quality rating of AA-, at fair value, consistent with the average rating at December 31, 2011. To calculate the weighted-average credit quality ratings as disclosed throughout this Annual Report on Form 10-K, individual securities were weighted based on fair value and a credit quality numeric score that was assigned to each rating grade. Tax-exempt bond holdings are broadly diversified geographically. Taxable holdings consist principally of investment grade issues. At December 31, 2012, fixed maturity holdings rated below investment grade and non-rated bonds totaled \$41.4 million and \$47.4 million, respectively, at fair value, and represented 1.7% and 2.0%, respectively, of total fixed maturity securities. At December 31, 2011, below investment grade and non-rated fixed maturity holdings totaled \$95.8 million and \$17.2 million, respectively, at fair value, and represented 3.9% and 0.7%, respectively, of total fixed maturity securities.

The following table presents the credit quality ratings of the Company's fixed maturity portfolio by security type at December 31, 2012 at fair value. The Company's estimated credit quality ratings are based on the average of ratings assigned by nationally recognized securities rating organizations. Credit ratings for the Company's fixed maturity portfolio were stable as compared to the prior year, with 81.2% of fixed maturity securities at fair value experiencing no change in their overall rating. 14.2% of fixed maturity securities at fair value experienced upgrades, partially offset by 4.5% in credit downgrades. The majority of the downgrades were slight and still within the investment grade portfolio, except for \$8.8 million at fair value that were downgraded to below investment grade during 2012.

(1) Intermediate ratings are offered at each level (e.g., AA includes AA+, AA and AA-).

The Company had \$25.2 million, 1.0% of its fixed maturity portfolio, at fair value in U.S. government bonds and agencies and mortgage-backed securities (Agencies). In August 2011, Standard and Poor's downgraded the U.S. government's long-term sovereign credit rating from AAA to AA+. This downgrade has triggered significant volatility in prices for a variety of investments. While Moody's and Fitch affirmed their AAA ratings, they placed a negative outlook in November 2011 and warned of a potential downgrade if no long-term deficit agreement was reached over the next two years. The negative outlook reflects these rating agencies' declining confidence that timely fiscal measures will be forthcoming to place U.S. public finances on a sustainable path and secure the AAA ratings. Standard and Poor's affirmed the U.S. Treasury's short-term credit rating of AAA indicating that the short-term capacity of the U.S. to meet its financial commitment on its outstanding obligations is strong. The Company understands

that market participants continue to use rates of return on U.S. government debt as a risk-free rate. In addition, since the downgrade, market participants continued to invest in U.S. Treasury securities and the current yields on U.S. Treasury securities are lower than before the downgrade.

(1) Municipal Securities

The Company had \$2.2 billion at fair value (\$2.0 billion at amortized cost) in municipal bonds at December 31, 2012, of which \$1.1 billion were insured by bond insurers. For insured municipal bonds that have underlying ratings, the average underlying rating was A+ at December 31, 2012.

At December 31, 2012, the bond insurers providing credit enhancement were Assured Guaranty Corporation and National Public Finance Guarantee Corporation, which covered approximately 18% of the insured municipal securities. The average rating of the Company's insured municipal bonds by these bond insurers was A+, with an underlying rating of A-. 9.1% of the remaining insured bonds are non-rated or below investment grade, and the Company does not believe that these insurers provide credit enhancement to the municipal bonds that they insure.

The Company considers the strength of the underlying credit as a buffer against potential market value declines which may result from future rating downgrades of the bond insurers. In addition, the Company has a long-term time horizon for its municipal bond holdings which generally allows it to recover the full principal amounts upon maturity and avoid forced sales prior to maturity of bonds that have declined in market value due to the bond insurers' rating downgrades. Based on the uncertainty surrounding the financial condition of these insurers, it is possible that there will be additional downgrades to below investment grade ratings by the rating agencies in the future, and such downgrades could impact the fair value of municipal bonds.

(2) Mortgage-Backed Securities

The mortgage-backed securities portfolio is categorized as loans to "prime" borrowers except for \$8.2 million and \$9.8 million (\$7.3 million and \$8.3 million at amortized cost) of Alt-A mortgages at December 31, 2012 and 2011, respectively. Alt-A mortgage backed securities are at fixed or variable rates and include certain securities that are collateralized by residential mortgage loans issued to borrowers with stronger credit profiles than sub-prime borrowers, but do not qualify for prime financing terms due to high loan-to-value ratios or limited supporting documentation. The Company had holdings of \$4.3 million (\$4.2 million at amortized cost) and \$0 in commercial mortgage-backed securities at December 31, 2012 and 2011, respectively.

The weighted-average rating of the Company's Alt-A mortgage-backed securities was B+ and the weighted-average rating of the entire mortgage backed securities portfolio was A- as of December 31, 2012.

(3) Corporate Securities

Included in fixed maturity securities are \$155.6 million and \$75.1 million of fixed rate corporate securities, which had durations of 1.8 and 3.6 years, at December 31, 2012 and 2011, respectively. The weighted-average rating was BBB+ as of December 31, 2012 and 2011.

(4) Collateralized Debt Obligations

Included in fixed maturities securities are collateralized debt obligations of \$42.8 million and \$47.5 million, which represent 1.3% and 1.6% of the total investment portfolio and had durations of 0.5 years and 1.1 years, at December 31, 2012 and 2011, respectively.

Equity Securities

Equity holdings consist of non-redeemable preferred stocks, common stocks on which dividend income is partially tax-sheltered by the 70% corporate dividend received deduction, and a partnership interest in a private credit fund. The net gains in 2012 due to changes in fair value of the Company's equity portfolio were \$9.2 million. The primary cause of the gains on the Company's equity securities was the overall increase in the equity markets.

The Company's common stock allocation is intended to enhance the return of and provide diversification for the total portfolio. At December 31, 2012, 15.0% of the total investment portfolio at fair value was held in equity securities, compared to 12.4% at December 31, 2011. The following table presents the equity security portfolio by industry sector for 2012 and 2011:

	December 31,			
	2012		2011	
	Cost	Fair Value	Cost	Fair Value
	(Amounts in thousands)			
Equity securities:				
Basic materials	\$ 37,407	\$ 32,862	\$ 32,719	\$ 27,139
Communications	8,970	10,428	7,692	7,347
Consumer—cyclical	8,337	7,658	12,985	11,986
Consumer—non-cyclical	9,498	10,162	4,310	4,197

Technology	10,567	8,635	8,548	6,875
Utilities	87,705	90,292	23,012	26,383
	<u>\$ 475,959</u>	<u>\$ 477,088</u>	<u>\$ 388,417</u>	<u>\$ 380,388</u>

Short-Term Investments

At December 31, 2012, short-term investments include money market accounts, options, and short-term bonds which are highly rated short duration securities and redeemable within one year.

D. Debt

Effective August 4, 2011, the Company extended the maturity date of the \$120 million Bank of America credit facility from January 1, 2012 to January 2, 2015 with interest payable at a floating rate of LIBOR rate plus 40 basis points.

On October 4, 2011, the Company refinanced its Bank of America \$18 million LIBOR plus 50 basis points loan that was scheduled to mature on March 1, 2013 with a Union Bank \$20 million LIBOR plus 40 basis points loan that matures on January 2, 2015.

Both the \$120 million credit facility and the \$20 million bank loan contain financial covenants pertaining to minimum statutory surplus, debt to capital ratio, and risk based capital ratio. The Company was in compliance with all of its loan covenants at December 31, 2012.

For a further discussion, see Notes 6 and 7 of Notes to Consolidated Financial Statements.

E. Capital Expenditures

In 2012, the Company made capital expenditures, including capitalized software, of approximately \$15 million primarily related to Information Technology.

F. Regulatory Capital Requirement

The Insurance Companies must comply with minimum capital requirements under applicable state laws and regulations, and must have adequate reserves for claims. The minimum statutory capital requirements differ by state and are generally based on balances established by statute, a percentage of annualized premiums, a percentage of annualized loss, or RBC requirements. The RBC requirements are based on guidelines established by the NAIC. The RBC formula was designed to capture the widely varying elements of risks undertaken by writers of different lines of insurance having differing risk characteristics, as well as writers of similar lines where differences in risk may be related to corporate structure, investment policies, reinsurance arrangements, and a number of other factors. At December 31, 2012, each of the Insurance Companies had sufficient capital to exceed the highest level of minimum required capital.

Among other considerations, industry and regulatory guidelines suggest that the ratio of a property and casualty insurer's annual net premiums written to statutory policyholders' surplus should not exceed 3.0 to 1. Based on the combined surplus of all the Insurance Companies of \$1.4 billion at December 31, 2012, and net premiums written of \$2.7 billion, the ratio of premiums written to surplus was 1.8 to 1.

OFF-BALANCE SHEET ARRANGEMENTS

As of December 31, 2012, the Company had no off-balance sheet arrangements as defined under Regulation S-K 303(a) (4) and the instructions thereto.

CONTRACTUAL OBLIGATIONS

The Company's significant contractual obligations at December 31, 2012 are summarized as follows:

<u>Contractual Obligations</u>	<u>Total</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>	<u>2016</u>	<u>2017</u>	<u>Thereafter</u>
	(Amounts in thousands)						
Debt (including interest) ⁽¹⁾	\$ 141,904	\$ 1,014	\$ 890	\$ 140,000	\$ 0	\$ 0	\$ 0
Lease obligations ⁽²⁾	41,724	14,224	10,069	6,985	5,658	3,843	945
Losses and loss adjustment expenses ⁽³⁾	1,036,123	595,847	252,302	117,971	44,699	25,304	0
Total Contractual Obligations	<u>\$1,219,751</u>	<u>\$ 611,085</u>	<u>\$ 263,261</u>	<u>\$ 264,956</u>	<u>\$ 50,357</u>	<u>\$ 29,147</u>	<u>\$ 945</u>

- (1) The Company's debt contains various terms, conditions and covenants which, if violated by the Company, would result in a default and could result in the acceleration of the Company's payment obligations. Amounts differ from the balance presented on the consolidated balance sheets as of December 31, 2012 because the debt amounts above include interest.
- (2) The Company is obligated under various non-cancellable lease agreements providing for office space, automobiles, and office equipment that expire at various dates through the year 2019.
- (3) Reserve for losses and loss adjustment expenses is an estimate of amounts necessary to settle all outstanding claims, including IBNR as of December 31, 2012. The Company has estimated the timing of these payments based on its historical experience and expectation of future payment patterns. However, the timing of these payments may vary significantly from the amounts shown above. The ultimate cost of losses may vary materially from recorded amounts which are the Company's best estimates.
- (4) The table excludes liabilities of \$3.5 million related to uncertainty in tax settlements as the Company is unable to reasonably estimate the timing and amount of related future payments.

Item 7A. Quantitative and Qualitative Disclosures about Market Risks

The Company is subject to various market risk exposures primarily due to its investing and borrowing activities. Primary market risk exposures are changes in interest rates, equity prices, and credit risk. Adverse changes to these rates and prices may occur due to changes in the liquidity of a market, or to changes in market perceptions of creditworthiness and risk tolerance. The following disclosure reflects estimates of future performance and economic conditions. Actual results may differ.

Overview

The Company's investment policies define the overall framework for managing market and investment risks, including accountability and controls over risk management activities, and specify the investment limits and strategies that are appropriate given the liquidity, surplus, product profile, and regulatory requirements of the subsidiaries. Executive oversight of investment activities is conducted primarily through the Company's investment committee. The Company's investment committee focuses on strategies to enhance after-tax yields, mitigate market risks, and optimize capital to improve profitability and returns.

The Company manages exposures to market risk through the use of asset allocation, duration, and credit ratings. Asset allocation limits place restrictions on the total funds that may be invested within an asset class. Duration limits on the fixed maturities portfolio place restrictions on the amount of interest rate risk that may be taken. Comprehensive day-to-day management of market risk within defined tolerance ranges occurs as portfolio managers buy and sell within their respective markets based upon the acceptable boundaries established by investment policies.

Credit risk

Credit risk is due to uncertainty in a counterparty's ability to meet its obligations. Credit risk is managed by maintaining a high credit quality fixed maturities portfolio. As of December 31, 2012, the estimated weighted-average credit quality rating of the fixed maturities portfolio was AA-, at fair value, consistent with the average rating at December 31, 2011. Historically, the ten-year default rate per Moody's for AA rated municipal bonds has been less than 1%. The Company's municipal bond holdings, which represent 89.9% of its fixed maturity portfolio at December 31, 2012, at fair value, are broadly diversified geographically.

99.0% of municipal bond holdings are tax-exempt. The following table presents municipal bond holdings by state in descending order of holdings at fair value at December 31, 2012:

<u>States</u>	<u>Fair Value</u>	<u>Average Rating</u>
	<u>(Amounts in thousands)</u>	
Texas	\$ 339,023	AA
California	285,554	A+
Florida	183,081	A+
Illinois	140,574	A+
Indiana	104,924	AA-
Other states	1,111,939	A+
Total	<u>\$ 2,165,095</u>	

The portfolio is broadly diversified among the states and the largest holdings are in populous states such as Texas and California. These holdings are further diversified primarily among cities, counties, schools, public works, hospitals and state general obligations. The Company has no holdings in the three California municipalities that recently declared bankruptcy: Stockton, Mammoth Lakes, and San Bernardino. The Company seeks to minimize overall credit risk and ensure diversification by limiting exposure to any particular issuer.

Taxable fixed maturity securities represented 11.0% of the Company's fixed maturity portfolio. 9.5% of the Company's taxable fixed maturity securities were comprised of U.S. government bonds and agencies and mortgage-backed securities (agencies), which were rated AAA at December 31, 2012. 8.5% of the Company's taxable fixed maturity securities, representing 0.9% of the total fixed maturity portfolio, were rated below investment grade. Below investment grade issues are considered "watch list" items by the Company, and their status is evaluated within the context of the Company's overall portfolio and its investment policy on an aggregate risk management basis, as well as their ability to recover their investment on an individual issue basis.

Equity price risk

Equity price risk is the risk that the Company will incur losses due to adverse changes in the equity markets.

At December 31, 2012, the Company's primary objective for common equity investments was current income. The fair value of the equity investments consists of \$454.1 million in common stocks, \$11.7 million in non-redeemable preferred stocks, and \$11.3 million in a partnership interest in a private credit fund. Common stock equity assets are typically valued for future economic prospects as perceived by the market. The Company invests more of its portfolio in the energy and utility sector than what is represented in the S&P 500 Index.

Common stocks represented 14.3% of total investments at fair value. Beta is a measure of a security's systematic (non-diversifiable) risk, which is the percentage change in an individual security's return for a 1% change in the return of the market. The average Beta for the Company's common stock holdings was 1.06 at December 31, 2012. Based on a hypothetical 25% or 50% reduction in the overall value of the stock market, the Company estimates that the fair value of the common stock portfolio would decrease by \$120.3 million or \$240.6 million, respectively.

Interest rate risk

Interest rate risk is the risk that the Company will incur a loss due to adverse changes in interest rates relative to the interest rate characteristics of interest bearing assets and liabilities. The Company faces interest rate risk, as it invests substantial funds in interest sensitive assets and issues interest sensitive liabilities. Interest rate risk includes risks related to changes in U.S. Treasury yields and other key benchmarks, as well as changes in interest rates resulting from the widening credit spreads and credit exposure to collateralized securities.

The value of the fixed maturity portfolio, which represented 75.7% of total investment at fair value, is subject to interest rate risk. As market interest rates decrease, the value of the portfolio increases and vice versa. A common measure of the interest sensitivity of fixed maturity assets is modified duration, a calculation that utilizes maturity, coupon rate, yield and call terms to calculate an average age of the expected cash flows. The longer the duration, the more sensitive the asset is to market interest rate fluctuations.

The Company has historically invested in fixed maturity investments with a goal of maximizing after-tax yields and holding assets to the maturity or call date. Since assets with longer maturity dates tend to produce higher current yields, the Company's

historical investment philosophy resulted in a portfolio with a moderate duration. Bond investments made by the Company typically have call options attached, which further reduce the duration of the asset as interest rates decline. The decrease in municipal bond credit spreads in 2012 caused overall interest rates to decrease, which resulted in a decrease in the duration of the Company's portfolio. Consequently, the modified duration of the bond portfolio reflecting anticipated early calls was 3.1 years at December 31, 2012 compared to 3.7 years and 4.7 years at December 31, 2011 and 2010, respectively. Given a hypothetical parallel increase of 100 or 200 basis points in interest rates, the Company estimates that the fair value of its bond portfolio at December 31, 2012 would decrease by \$75.4 million or \$150.8 million, respectively. Conversely, if interest rates were to decrease, the fair value of the Company's bond portfolio would rise, and it may cause a higher number of the Company's bonds to be called away. The proceeds from the called bonds would likely be reinvested at lower yields which would result in lower overall investment income for the Company.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Mercury General Corporation:

We have audited the accompanying consolidated balance sheets of Mercury General Corporation and subsidiaries (the Company) as of December 31, 2012 and 2011, and the related consolidated statements of operations, comprehensive income, shareholders' equity, and cash flows for each of the years in the three-year period ended December 31, 2012. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Mercury General Corporation and subsidiaries as of December 31, 2012 and 2011, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2012, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Mercury General Corporation's internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated February 11, 2013 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

/s/ KPMG LLP

Los Angeles, California
February 11, 2013

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Mercury General Corporation:

We have audited Mercury General Corporation's (the Company) internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Mercury General Corporation's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Mercury General Corporation maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Mercury General Corporation and subsidiaries as of December 31, 2012 and 2011, and the related consolidated statements of operations, comprehensive income, shareholders' equity, and cash flows for each of the years in the three-year period ended December 31, 2012, and our report dated February 11, 2013 expressed an unqualified opinion on those consolidated financial statements.

MERCURY GENERAL CORPORATION AND SUBSIDIARIES
NOTES STATEMENTS TO CONSOLIDATED FINANCIAL

1. Summary of Significant Accounting Policies

General

Mercury General Corporation and its subsidiaries (referred to herein collectively as the “Company”) are engaged primarily in writing personal automobile insurance through 13 Insurance Companies in a number of states, principally California. The Company also writes homeowners, commercial automobile and property, mechanical breakdown, fire, and umbrella insurance. The private passenger automobile lines of insurance exceeded 80% of the Company’s direct premiums written in 2012, 2011, and 2010, with approximately 78%, 77%, and 77% of the private passenger automobile premiums written in California during 2012, 2011, and 2010, respectively. Premiums written represents the premiums charged on policies issued during a fiscal period, which is a statutory measure designed to determine production levels.

Consolidation and Basis of Presentation

The consolidated financial statements include the accounts of Mercury General Corporation and its 100% owned subsidiaries. The subsidiaries are as follows:

Insurance Companies

Mercury Casualty Company	Mercury National Insurance Company
Mercury Insurance Company	American Mercury Insurance Company
California Automobile Insurance Company	American Mercury Lloyds Insurance Company ⁽¹⁾
California General Underwriters Insurance Company, Inc.	Mercury County Mutual Insurance Company ⁽²⁾
Mercury Insurance Company of Illinois	Mercury Insurance Company of Florida
Mercury Insurance Company of Georgia	Mercury Indemnity Company of America
Mercury Indemnity Company of Georgia	

Non-Insurance Companies

Mercury Select Management Company, Inc.	Mercury Group, Inc. ⁽³⁾
American Mercury MGA, Inc. ⁽³⁾	AIS Management LLC
Concord Insurance Services, Inc.	Auto Insurance Specialists LLC
Mercury Insurance Services LLC	PoliSeek AIS Insurance Solutions, Inc.

- (1) American Mercury Lloyds Insurance Company is not owned but is controlled by the Company through its attorney-in-fact, Mercury Select Management Company, Inc.
- (2) Mercury County Mutual Insurance Company is not owned but is controlled by the Company through a management contract.
- (3) Inactive companies dissolved in December 2012.

The consolidated financial statements have been prepared in conformity with GAAP, which differ in some respects from those filed in reports to insurance regulatory authorities. All intercompany transactions and balances have been eliminated.

Use of Estimates

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosures of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenue and expenses during the reporting period. These estimates require the Company to apply complex assumptions and judgments, and often the Company must make estimates about effects of matters that are inherently uncertain and will likely change in subsequent periods. The most significant assumptions in the preparation of these consolidated financial statements relate to reserves for losses and loss adjustment expenses. Actual results could differ from those estimates.

Investments

The Company applies the fair value option to all fixed maturities and equity securities and short-term investments at the time an eligible item is first recognized. The cost of investments sold is determined on a first-in and first-out method and realized gains and losses are included in net realized investment gains. Gains and losses due to changes in fair value for items measured at fair value pursuant to application of the fair value option are included in net realized investment gains in the Company's consolidated statements of operations, while interest and dividend income on the investment holdings are recognized on an accrual basis on each measurement date and are included in net investment income in the Company's consolidated statements of operations. The primary reasons for electing the fair value option were simplification and cost-benefit considerations as well as fair value measurement use consistent with the long-term measurement objectives of the FASB for accounting for financial instruments. See Note 2 for additional information regarding the fair value option.

Fixed maturity securities include debt securities, which may have fixed or variable principal payment schedules and may be used as a part of the Company's asset/liability strategy or sold in response to changes in interest rates, anticipated prepayments, risk/reward characteristics, liquidity needs, tax planning considerations, or other economic factors. Premiums and discounts on fixed maturities are amortized using first call date and are adjusted for anticipated prepayments. Premiums and discounts on mortgage-backed securities are adjusted for anticipated prepayment using the retrospective method, with the exception of some beneficial interests in securitized financial assets, which are accounted for using the prospective method.

Equity securities consist of non-redeemable preferred stocks, common stocks on which dividend income is partially tax-sheltered by the 70% corporate dividend received deduction, and a partnership interest in a private credit fund.

Short-term investments include money market accounts, options, and short-term bonds which are highly rated short duration securities and redeemable within one year.

The Company writes covered call options through listed and over-the-counter exchanges. When the Company writes an option, an amount equal to the premium received by the Company is recorded as a liability and is subsequently adjusted to the current fair value of the option written. Premiums received from writing options that expire unexercised are treated by the Company on the expiration date as realized gains from investments. If a call option is exercised, the premium is added to the proceeds from the sale of the underlying security or currency in determining whether the Company has realized a gain or loss. The Company, as writer of an option, bears the market risk of an unfavorable change in the price of the security underlying the written option. Liabilities for covered call options of \$0.2 million and \$0.7 million were included in other liabilities at December 31, 2012 and 2011, respectively.

Fair Value of Financial Instruments

The financial instruments recorded in the consolidated balance sheets include investments, receivables, interest rate swap agreements, accounts payable, equity contracts, and secured notes payable. As discussed above, all investments are carried at fair value on the consolidated balance sheets, including \$42.8 million and \$11.3 million of fixed maturities and equity securities, respectively, which are valued based on broker quotes for underlying debt and credit instruments and an estimated benchmark spread for similar assets in active markets. The fair value of the Company's \$120 million and \$20 million secured notes, classified as Level 2 in the fair value hierarchy described in Note 3, is estimated based on assumptions and inputs, such as reset rates and the market value for underlying collateral, for similarly termed notes that are observable in the market. See Note 3 for methods and assumptions used in estimating fair values of interest rate swap agreements and equity contracts. Due to their short-term maturity, the carrying values of receivables and accounts payable approximate their fair market values. The following table presents estimated fair values of financial instruments at December 31, 2012 and 2011.

	December 31,	
	2012	2011
	(Amounts in thousands)	
Assets		
Investments	\$ 3,180,095	\$ 3,062,421
Liabilities		
Interest rate swap agreements	\$ 103	\$ 670
Equity contracts	\$ 175	\$ 655
Secured notes	\$ 140,000	\$ 140,000

Securities on Deposit

The Company has securities deposited by the Insurance Companies with various DOIs as required by statute with fair values of approximately \$16 million and \$18 million at December 31, 2012 and 2011, respectively.

Deferred Policy Acquisition Costs

In October 2010, the FASB issued a new standard to address diversity in practice regarding the interpretation of which costs relating to the acquisition of new or renewal insurance contracts qualify for deferral. The new standard defines acquisition costs as those related directly to the successful acquisition of new or renewal insurance contracts. Effective January 1, 2012, the Company adopted the new standard using the prospective method. Deferred policy acquisition costs consist of commissions paid to outside agents, premium taxes, salaries, and certain other underwriting costs that are incremental or directly related to the successful acquisition of new and renewal insurance contracts and are amortized over the life of the related policy in proportion to premiums earned. Deferred policy acquisition costs are limited to the amount that will remain after deducting from unearned premiums and anticipated investment income, the estimated losses and loss adjustment expenses, and the servicing costs that will be incurred as premiums are earned. Under the new standard, the Company's deferred policy acquisition costs are further limited by excluding those costs not directly related to the successful acquisition of insurance contracts. The adoption of the new standard did not have a material impact on the Company's consolidated financial statements. Deferred policy acquisition cost amortization was \$477.8 million, \$481.7 million, and \$505.6 million during the years ended December 31, 2012, 2011, and 2010, respectively. The Company does not defer advertising expenses but expenses them as incurred. The Company recorded net advertising expenses of approximately \$19 million, \$21 million, and \$30 million during the years ended December 31, 2012, 2011, and 2010, respectively.

Fixed Assets

Fixed assets are stated at historical cost less accumulated depreciation and amortization. The useful life for buildings is 30 to 40 years. Furniture, equipment, and purchased software are depreciated on a combination of straight-line and accelerated methods over 3 to 7 years. The Company has capitalized certain consulting costs, payroll, and payroll-related costs for employees related to computer software developed for internal use, which are amortized on a straight-line method over the estimated useful life of the software, generally not exceeding 5 years. In accordance with applicable accounting standards, capitalization ceases no later than the point at which a computer software project is substantially complete and ready for its intended use. Leasehold improvements are amortized over the shorter of the useful life of the assets or the life of the associated lease.

The Company periodically assesses long-lived assets or asset groups including building and equipment, for recoverability when events or changes in circumstances indicate that their carrying amount may not be recoverable. If the Company identifies an indicator of impairment, the Company assesses recoverability by comparing the carrying amount of the asset to the sum of the undiscounted cash flows expected to result from the use and the eventual disposal of the asset. An impairment loss is recognized when the carrying amount is not recoverable and is measured as the excess of carrying value over fair value. The Company recorded no impairment charges during the three years ended December 31, 2012.

Goodwill and Other Intangible Assets

Goodwill and other intangible assets arise as a result of business acquisitions and consist of the excess of the cost of the acquisitions over the tangible and intangible assets acquired and liabilities assumed and identifiable intangible assets acquired. Identifiable intangible assets consist of the value of customer relationships, trade names, software and technology, and favorable leases, which are all subject to amortization.

The Company annually evaluates goodwill and other intangible assets for impairment. The Company also reviews its goodwill and other intangible assets for impairment whenever events or changes in circumstances indicate that it is more likely than not that the carrying amount of goodwill may exceed its implied fair value. The Company adopted the new standard issued in September 2011 which does not require the two-step goodwill impairment test if the Company qualitatively determines that, more likely than not, the fair value exceeds the carrying amount of a reporting unit. There are numerous assumptions and estimates underlying the qualitative assessments including future earnings, long-term strategies, and the Company's annual planning and forecasting process. If these planned initiatives do not accomplish the targeted objectives, the assumptions and estimates underlying the qualitative assessments could be adversely affected and have a material effect upon the Company's financial condition and results of operations. As of December 31, 2012 and 2011, goodwill impairment assessments indicated that there was no impairment.

Premium Revenue Recognition

Premium revenue is recognized on a pro-rata basis over the term of the policies in proportion to the amount of insurance protection provided. Premium revenue includes installment and other fees for services which are recognized in the periods the services are rendered. Unearned premiums represent the portion of the premium related to the unexpired policy term. Unearned

premiums are predominantly computed on a monthly pro-rata basis and are stated gross of reinsurance deductions, with the reinsurance deduction recorded in other receivables. Net premiums written, a statutory measure designed to determine production levels, were \$2.65 billion, \$2.58 billion, and \$2.56 billion in 2012, 2011, and 2010, respectively.

No independent agent accounted for more than 2% of the Company's direct premiums written during 2012, 2011, and 2010.

Losses and Loss Adjustment Expenses

Unpaid losses and loss adjustment expenses are determined in amounts estimated to cover incurred losses and loss adjustment expenses and established based upon the Company's assessment of claims pending and the development of prior years' loss liabilities. These amounts include liabilities based upon individual case estimates for reported losses and loss adjustment expenses and estimates of such amounts that are IBNR. Changes in the estimated liability are charged or credited to operations as the losses and loss adjustment expenses are reestimated. The liability is stated net of anticipated salvage and subrogation recoveries. The amount of reinsurance recoverable is included in other receivables.

Estimating loss reserves is a difficult process as many factors can ultimately affect the final settlement of a claim and, therefore, the reserve that is required. Changes in the regulatory and legal environment, results of litigation, medical costs, the cost of repair materials, and labor rates, among other factors, can impact ultimate claim costs. In addition, time can be a critical part of reserving determinations since the longer the span between the incidence of a loss and the payment or settlement of a claim, the more variable the ultimate settlement amount could be. Accordingly, short-tail claims, such as property damage claims, tend to be more reasonably predictable than long-tail liability claims, such as those involving the Company's BI coverages. Management believes that the liability for losses and loss adjustment expenses is adequate to cover the ultimate net cost of losses and loss adjustment expenses incurred to date. Since the provisions for loss reserves are necessarily based upon estimates, the ultimate liability may be more or less than such provisions.

The Company analyzes loss reserves quarterly primarily using the incurred loss, claim count development, and average severity methods described below. The Company also uses the paid loss development method to analyze loss adjustment expense reserves as part of its reserve analysis. When deciding among methods to use, the Company evaluates the credibility of each method based on the maturity of the data available and the claims settlement practices for each particular line of business or coverage within a line of business. When establishing the reserve, the Company will generally analyze the results from all of the methods used rather than relying on a single method. While these methods are designed to determine the ultimate losses on claims under the Company's policies, there is inherent uncertainty in all actuarial models since they use historical data to project outcomes. The Company believes that the techniques it uses provide a reasonable basis in estimating loss reserves.

- The *incurred loss development method* analyzes historical incurred case loss (case reserves plus paid losses) development to estimate ultimate losses. The Company applies development factors against current case incurred losses by accident period to calculate ultimate expected losses. The Company believes that the *incurred loss development method* provides a reasonable basis for evaluating ultimate losses, particularly in the Company's larger, more established lines of business which have a long operating history.
- The *average severity method* analyzes historical loss payments and/or incurred losses divided by closed claims and/or total claims to calculate an estimated average cost per claim. From this, the expected ultimate average cost per claim can be estimated. The *average severity method* coupled with the *claim count development method* provide meaningful information regarding inflation and frequency trends that the Company believes is useful in establishing reserves. The *claim count development method* analyzes historical claim count development to estimate future incurred claim count development for current claims. The Company applies these development factors against current claim counts by accident period to calculate ultimate expected claim counts.
- The *paid loss development method* analyzes historical payment patterns to estimate the amount of losses yet to be paid. The Company uses this method for losses and loss adjustment expenses.

The Company analyzes catastrophe losses separately from non-catastrophe losses. For catastrophe losses, the Company determines claim counts based on claims reported and development expectations from previous catastrophes and applies an average expected loss per claim based on reserves established by adjusters and average losses on previous similar catastrophes.

Derivative Financial Instruments

The Company accounts for all derivative instruments, other than those that meet the normal purchases and sales exception, as either an asset or liability measured at fair value, which is based on information obtained from independent parties. In addition, changes in fair value are recognized in earnings unless specific hedge accounting criteria are met. The Company's derivative instruments include interest rate swap agreements and were used to hedge the exposure to:

- Changes in fair value of an asset or liability (fair value hedge); and
- Variable cash flows of a forecasted transaction (cash flow hedge).

Derivatives designated as hedges are evaluated based on established criteria to determine the effectiveness of their correlation to and ability to reduce the designated risk of specific securities or transactions. Effectiveness is reassessed on a quarterly basis. Hedges that are deemed to be effective are accounted for as follows:

- *Fair value hedge*: changes in fair value of the hedging instrument, as well as the hedged item, are recognized in earnings in the period of change.
- *Cash flow hedge*: changes in fair value of the hedging instrument are reported as a component of accumulated other comprehensive income and subsequently amortized into earnings over the life of the hedged transactions.

If a hedge is deemed to become ineffective, it is accounted for as follows:

- *Fair value hedge*: changes in fair value of the hedging instrument are recognized in earnings in the period of change.
- *Cash flow hedge*: changes in fair value of the hedging instrument are reported in earnings for the current period. If it is determined that a hedging instrument no longer meets the Company's risk reduction and correlation criteria, or if the hedging instrument expires, any accumulated balance in other comprehensive income is recognized in earnings in the period of determination.

Earnings Per Share

Basic earnings per share excludes dilution and reflects net income divided by the weighted average shares of common stock outstanding during the period presented. Diluted earnings per share is based on the weighted average shares of common stock and potential dilutive common stock outstanding during the period presented. At December 31, 2012 and 2011, potential dilutive common stocks consist of outstanding stock options. Note 15 contains the required disclosures relating to the calculation of basic and diluted earnings per share.

Segment Reporting

Operating segments are components of an enterprise about which separate financial information is available that is evaluated regularly by the chief operating decision maker in deciding how to allocate resources and assessing performance. The Company does not have any operations that require separate disclosure as reportable operating segments for the periods presented.

The annual direct premiums written attributable to private passenger automobile, homeowners, commercial automobile, and other lines of insurance were as follows:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Private passenger automobile	\$ 2,140,531	\$ 2,105,602	\$ 2,115,763
Homeowners	318,295	285,188	261,560
Commercial automobile	74,655	75,642	84,503
Other lines	122,239	113,251	96,999
Total	<u>\$ 2,655,720</u>	<u>\$ 2,579,683</u>	<u>\$ 2,558,825</u>

Income Taxes

Deferred tax assets and liabilities are recognized for the estimated future tax consequences attributable to differences between the financial reporting basis and the respective tax basis of the Company's assets and liabilities, and expected benefits of utilizing net operating loss, capital loss, and tax-credit carryforwards. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates or laws is recognized in earnings in the period that includes the enactment date.

At December 31, 2012, the Company's deferred income taxes were in a net liability position which included a combination of ordinary and capital deferred tax benefits. In assessing the realization of deferred tax assets, management considers whether it is more likely than not that some portion or all of the deferred tax assets will not be realized. The ultimate realization of deferred

tax assets is dependent upon generating sufficient taxable income of the appropriate character within the carryback and carryforward periods available under the tax law. Management considers the reversal of deferred tax liabilities, projected future taxable income of an appropriate nature, and tax-planning strategies in making this assessment. The Company believes that through the use of prudent tax planning strategies and the generation of capital gains, sufficient income will be realized in order to maximize the full benefits of its deferred tax assets. Although realization is not assured, management believes that it is more likely than not that the Company's deferred tax assets will be realized.

Reinsurance

Liabilities for unearned premiums and unpaid losses are stated in the accompanying consolidated financial statements before deductions for ceded reinsurance. The ceded amounts are immaterial and are carried in other receivables. Earned premiums are stated net of deductions for ceded reinsurance.

The Insurance Companies, as primary insurers, are required to pay losses to the extent reinsurers are unable to discharge their obligations under the reinsurance agreements.

Share-Based Compensation

Share-based compensation expense for all share-based payment awards granted or modified is based on the estimated grant-date fair value. The Company recognizes these compensation costs on a straight-line basis over the requisite service period of the award, which is the option vesting term of four or five years for options granted prior to 2008 and four years for options granted subsequent to January 1, 2008, for only those shares expected to vest. The fair value of stock option awards is estimated using the Black-Scholes option pricing model with the grant-date assumptions and weighted-average fair values.

Under its 2005 Incentive Award Plan (the "2005 Plan"), the Compensation Committee of the Company's Board of Directors granted performance vesting restricted stock units to the Company's senior management and key employees as follows:

	Grant Year		
	2012	2011	2010
Three-year performance period ending December 31,	2014	2013	2012
Vesting shares, target ⁽¹⁾	89,000	80,000	55,000
Vesting shares, maximum ⁽¹⁾	200,250	120,000	55,000

(1) 2010 grant includes 10,000 shares of restricted stock.

The restricted stock units vest at the end of a three-year performance period beginning with the year of the grant, and then only if, and to the extent that, the Company's cumulative underwriting income, and with respect to the 2012 grants only, target level of growth in net premiums written during such three-year period achieves the threshold performance levels established by the Compensation Committee of the Company's Board of Directors.

The fair value of each restricted share grant was determined based on the market price on the date of grant. Compensation cost has been recognized based on management's best estimate that performance goals will be achieved. If such goals are not met, no compensation cost would be recognized and any recognized compensation cost would be reversed. For the 2012, 2011, and 2010 grants, the achievement of the performance condition set by the Compensation Committee was no longer considered probable, and previously recognized compensation costs were reversed as of December 31, 2012. See Note 14 for additional disclosures.

Recently Issued Accounting Standards

In June 2011, the FASB issued a new standard which revises the manner in which entities present comprehensive income in their financial statements. The new standard removes the presentation options and requires entities to report components of comprehensive income in either a continuous statement of comprehensive income or two separate but consecutive statements. The new standard does not change the items that must be reported in other comprehensive income. The Company adopted the new standard which became effective for the interim period ended March 31, 2012. The adoption of the new standard did not have a material impact on the Company's consolidated financial statements. In December 2011, the FASB issued a new standard which indefinitely defers certain provisions of this standard. One of this standard's provisions required entities to present reclassification adjustments out of accumulated other comprehensive income by component in both the statement in which net income is presented and the statement in which other comprehensive income is presented. Accordingly, this requirement is indefinitely deferred and will be further deliberated by the FASB at a future date.

In May 2011, the FASB issued a new standard which develops a single and converged guidance on how to measure fair value and on required disclosures about fair value measurements. While the new standard is largely consistent with existing fair value measurement principles, it expands existing disclosure requirements for fair value measurements and makes other amendments. The Company adopted the new standard which became effective for the interim period ended March 31, 2012. The adoption of the new standard did not have a material impact on the Company's consolidated financial statements.

2. Investments

The following table presents gains (losses) due to changes in fair value of investments that are measured at fair value pursuant to application of the fair value option:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Fixed maturity securities	\$ 36,317	\$ 62,149	\$ 967
Equity securities	9,158	(30,879)	45,659
Short-term investments	34	19	(46)
Total	<u>\$ 45,509</u>	<u>\$ 31,289</u>	<u>\$ 46,580</u>

A summary of net realized investment gains is as follows:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Net realized gains (losses) from investments and other liabilities:			
Fixed maturity securities	\$ 47,707	\$ 54,112	\$ 5,909
Equity securities	16,679	(4,854)	46,547
Short-term investments	(686)	139	18
Options	2,680	9,000	4,615
Total	<u>\$ 66,380</u>	<u>\$ 58,397</u>	<u>\$ 57,089</u>

Gross gains and losses realized on the sales of investments, excluding options, are shown below:

	Year Ended December 31,								
	2012			2011			2010		
	(Amounts in thousands)								
	Gross Realized Gains	Gross Realized Losses	Net	Gross Realized Gains	Gross Realized Losses	Net	Gross Realized Gains	Gross Realized Losses	Net
Fixed maturity securities	\$ 11,473	\$ (83)	\$ 11,390	\$ 2,675	\$ (10,712)	\$ (8,037)	\$ 8,754	\$ (3,812)	\$ 4,942
Equity securities	19,538	(12,017)	7,521	41,872	(15,847)	26,025	16,793	(15,905)	888
Short-term investments	2	(722)	(720)	120	0	120	64	0	64

Contractual Maturity

At December 31, 2012, fixed maturity holdings rated below investment grade and non-rated comprised 2.8% of total investments at fair value. Additionally, the Company owns securities that are credit enhanced by financial guarantors that are subject to uncertainty related to market perception of the guarantors' ability to perform. Determining the estimated fair value of municipal bonds could become more difficult should markets for these securities become illiquid. The estimated fair values at December 31, 2012 by contractual maturity are shown below. Expected maturities will differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment penalties.

	<u>Estimated Fair Value</u> (Amounts in thousands)
Fixed maturity securities:	
Due in one year or less	\$ 79,344
Due after one year through five years	332,642
Due after five years through ten years	529,997
Due after ten years	1,466,371
Total	<u>\$ 2,408,354</u>

Investment Income

A summary of net investment income is shown in the following table:

	<u>Year Ended December 31,</u>		
	<u>2012</u>	<u>2011</u>	<u>2010</u>
	(Amounts in thousands)		
Fixed maturity securities	\$ 117,557	\$ 130,895	\$ 136,345
Equity securities	15,831	10,869	8,435
Short-term investments	2,073	1,747	1,413
Total investment income	<u>\$ 135,461</u>	<u>\$ 143,511</u>	<u>\$ 146,193</u>
Less: investment expense	(3,565)	(2,564)	(2,379)
Net investment income	<u>\$ 131,896</u>	<u>\$ 140,947</u>	<u>\$ 143,814</u>

3. Fair Value Measurements

The Company employs a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The fair value of a financial instrument is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date using the exit price. Accordingly, when market observable data are not readily available, the Company's own assumptions are set to reflect those that market participants would be presumed to use in pricing the asset or liability at the measurement date. Assets and liabilities recorded on the consolidated balance sheets at fair value are categorized based on the level of judgment associated with inputs used to measure their fair value and the level of market price observability, as follows:

- Level 1** Unadjusted quoted prices are available in active markets for identical assets or liabilities as of the reporting date.
- Level 2** Pricing inputs are other than quoted prices in active markets, which are based on the following:
- Quoted prices for similar assets or liabilities in active markets;
 - Quoted prices for identical or similar assets or liabilities in non-active markets; or
 - Either directly or indirectly observable inputs as of the reporting date.
- Level 3** Pricing inputs are unobservable and significant to the overall fair value measurement, and the determination of fair value requires significant management judgment or estimation.

In certain cases, inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement in its entirety falls has been determined based on the lowest level input that is significant to the fair value measurement in its entirety. Thus, a Level 3 fair value measurement may include inputs that are observable (Level 1 or Level 2) and unobservable (Level 3). The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment and consideration of factors specific to the asset or liability.

The Company uses prices and inputs that are current as of the measurement date, including during periods of market disruption. In periods of market disruption, the ability to observe prices and inputs may be reduced for many instruments. This condition could cause an instrument to be reclassified from Level 1 to Level 2, or from Level 2 to Level 3. The Company recognizes transfers between levels at either the actual date of the event or a change in circumstances that caused the transfer.

Summary of Significant Valuation Techniques for Financial Assets and Financial Liabilities

The Company's fair value measurements are based on the market approach, which utilizes market transaction data for the same or similar instruments.

The Company obtained unadjusted fair values on approximately 98% of its portfolio from an independent pricing service. For approximately 2% of its portfolio, classified as Level 3, the Company obtained specific unadjusted broker quotes based on net fund value and, less significantly, unobservable inputs from at least one knowledgeable outside security broker to determine the fair value as of December 31, 2012.

Level 1 Measurements—Fair values of financial assets and financial liabilities are obtained from an independent pricing service, and are based on unadjusted quoted prices for identical assets or liabilities in active markets. Additional pricing services and closing exchange values are used as a comparison to ensure that reasonable fair values are used in pricing the investment portfolio.

U.S. government bonds and agencies: Valued using unadjusted quoted market prices for identical assets in active markets.

Common stock: Comprised of actively traded, exchange listed U.S. and international equity securities and valued based on unadjusted quoted prices for identical assets in active markets.

Money market instruments: Valued based on unadjusted quoted prices for identical assets.

Equity contracts: Comprised of free-standing exchange listed derivatives that are actively traded and valued based on quoted prices for identical instruments in active markets.

Level 2 Measurements—Fair values of financial assets and financial liabilities are obtained from an independent pricing service or outside brokers, and are based on prices for similar assets or liabilities in active markets or valuation models whose inputs are observable, directly or indirectly, for substantially the full term of the asset or liability. Additional pricing services are used as a comparison to ensure reliable fair values are used in pricing the investment portfolio.

Municipal securities: Valued based on models or matrices using inputs, such as quoted prices for identical or similar assets in active markets.

Mortgage-backed securities: Comprised of securities that are collateralized by residential mortgage loans and valued based on models or matrices using multiple observable inputs, such as benchmark yields, reported trades and broker/dealer quotes, for identical or similar assets in active markets. The Company had holdings of \$4.3 million and \$0 at December 31, 2012 and 2011, respectively, in commercial mortgage-backed securities.

Corporate securities/Short-term bonds: Valued based on a multi-dimensional model using multiple observable inputs, such as benchmark yields, reported trades, broker/dealer quotes and issue spreads, for identical or similar assets in active markets.

Non-redeemable preferred stock: Valued based on observable inputs, such as underlying and common stock of same issuer and appropriate spread over a comparable U.S. Treasury security, for identical or similar assets in active markets.

Interest rate swap agreements: Valued based on models using inputs, such as interest rate yield curves, observable for substantially the full term of the contract.

Level 3 Measurements—Fair values of financial assets are based on inputs that are both unobservable and significant to the overall fair value measurement, including any items in which the evaluated prices obtained elsewhere were deemed to be of a distressed trading level.

Collateralized debt obligations/Partnership interest in a private credit fund: Valued based on underlying debt and credit instruments and the appropriate benchmark spread for similar assets in active markets; taking into consideration unobservable inputs related to liquidity assumptions.

The Company's financial instruments, at fair value, are reflected in the consolidated balance sheets on a trade-date basis. Related unrealized gains or losses are recognized in net realized investment gains in the consolidated statements of operations. Fair value measurements are not adjusted for transaction costs.

The following tables present information about the Company's assets and liabilities measured at fair value on a recurring basis as of December 31, 2012 and 2011, and indicate the fair value hierarchy of the valuation techniques utilized by the Company to determine such fair value:

December 31, 2012

	Level 1	Level 2	Level 3	Total

The following table presents a summary of changes in fair value of Level 3 financial assets and financial liabilities held at fair value at December 31:

	2012			2011	
	Collateralized Debt Obligations	Partnership Interest in a Private Credit Fund	Municipal Securities	Collateralized Debt Obligations	Partnership Interest in a Private Credit Fund
	(Amounts in thousands)				
Beginning Balance	\$ 47,503	\$ 10,008	\$ 1,624	\$ 55,692	\$ 0
Realized gains (losses) included in earnings	7,975	1,298	39	(9,300)	8
Purchase	25,000	0	0	0	10,000
Sales	(37,677)	0	(1,663)	0	0
Settlements	0	0	0	1,111	0
Ending Balance	<u>\$ 42,801</u>	<u>\$ 11,306</u>	<u>\$ 0</u>	<u>\$ 47,503</u>	<u>\$ 10,008</u>
The amount of total (losses) gains for the period included in earnings attributable to assets still held at December 31	<u>\$ (3,017)</u>	<u>\$ 1,298</u>	<u>\$ 0</u>	<u>\$ (8,189)</u>	<u>\$ 8</u>

There were no transfers between Levels 1, 2, and 3 of the fair value hierarchy in 2012 and 2011.

At December 31, 2012, the Company did not have any nonrecurring fair value measurements of nonfinancial assets or nonfinancial liabilities.

4. Fixed Assets

Fixed assets consist of the following:

	December 31,	
	2012	2011
	(Amounts in thousands)	
Land	\$ 26,770	\$ 26,770
Buildings and improvements	126,726	125,837
Furniture and equipment	106,788	113,628
Capitalized software	133,477	123,356
Leasehold improvements	7,593	7,354
	<u>401,354</u>	<u>396,945</u>
Less accumulated depreciation and amortization	(239,414)	(219,185)
Fixed assets, net	<u>\$ 161,940</u>	<u>\$ 177,760</u>

Depreciation expense including amortization of leasehold improvements was \$30.8 million, \$34.3 million, and \$33.9 million during 2012, 2011, and 2010, respectively.

5. Deferred Policy Acquisition Costs

Deferred policy acquisition costs are as follows:

	December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Balance, beginning of year	\$ 171,430	\$ 170,579	\$ 175,866
Policy acquisition costs deferred	492,268	482,572	500,278
Amortization	(477,788)	(481,721)	(505,565)
Balance, end of year	<u>\$ 185,910</u>	<u>\$ 171,430</u>	<u>\$ 170,579</u>

6. Notes Payable

Notes payable consists of two secured notes of \$120 million and \$20 million at both December 31, 2012 and 2011.

The \$120 million credit facility is secured by municipal bonds held as collateral. The credit facility calls for the collateral requirement to be greater than the loan amount. The collateral requirement is calculated as the fair market value of the municipal bonds held as collateral multiplied by the advance rates, which vary based on the credit quality and duration of the assets held and range between 75% and 100% of the fair value of each bond. Effective August 4, 2011, the Company extended the maturity date of the \$120 million credit facility from January 1, 2012 to January 2, 2015 with interest payable at a floating rate of LIBOR plus 40 basis points.

On October 4, 2011, the Company refinanced its Bank of America \$18 million LIBOR plus 50 basis points loan that was scheduled to mature on March 1, 2013 with a Union Bank \$20 million LIBOR plus 40 basis points loan that matures on January 2, 2015. The \$20 million loan has collateral requirements similar to those of the \$120 million credit facility.

Both the \$120 million credit facility and the \$20 million bank loan contain financial covenants pertaining to minimum statutory surplus, debt to capital ratio, and risk based capital ratio. The Company was in compliance with all of its loan covenants at December 31, 2012.

The Company retired all of its \$125 million 7.25% senior notes on their August 15, 2011 maturity date by using a portion of the proceeds from the extraordinary dividend paid by MCC to Mercury General.

The aggregated maturities for notes payable are \$140 million in 2015.

For additional disclosures regarding methods and assumptions used in estimating fair values of interest rate swap agreements associated with the Company's loans listed above, see Note 7.

7. Derivative Financial Instruments

The Company is exposed to certain risks relating to its ongoing business operations. The primary risks managed by using derivative instruments are equity price risk and interest rate risk. Equity contracts on various equity securities are intended to manage the price risk associated with forecasted purchases or sales of such securities. Interest rate swaps are intended to manage the interest rate risk associated with the Company's debts with fixed or floating rates.

On February 6, 2009, the Company entered into an interest rate swap of its floating LIBOR rate on a \$120 million credit facility for a fixed rate of 1.93% that matured on January 3, 2012. The purpose of the swap was to offset the variability of cash flows resulting from the variable interest rate. The swap was not designated as a hedge and changes in the fair value were adjusted through the consolidated statement of operations in the period of change.

On March 3, 2008, the Company entered into an interest rate swap of its floating LIBOR rate on the \$18 million bank loan for a fixed rate of 4.25%. The swap was designated as a cash flow hedge and the fair market value of the interest rate swap was reported as a component of other comprehensive income and amortized into earnings over the term of the hedged transaction. On October 4, 2011, the Company refinanced its Bank of America \$18 million LIBOR plus 50 basis points loan that was scheduled to mature on March 1, 2013 with a Union Bank \$20 million LIBOR plus 40 basis points loan that matures on January 2, 2015. The related interest rate swap was deemed to become ineffective and is no longer designated as a hedge. Changes in the fair value are adjusted through the consolidated statement of operations in the period of change. The fair market value of the interest rate swap was approximately \$103,000 and \$670,000 as of December 31, 2012 and 2011, respectively. The swap matures on March 1, 2013.

Fair value amounts, and gains and losses on derivative instruments

The following tables present the location and amounts of derivative fair values in the consolidated balance sheets and derivative gains and losses in the consolidated statements of operations:

	Asset Derivatives		Liability Derivatives	
	December 31, 2012	December 31, 2011	December 31, 2012	December 31, 2011
	(Amounts in thousands)			
Non-hedging derivatives				
Interest rate contracts—Other liabilities	\$ 0	\$ 0	\$ (103)	\$ (670)
Equity contracts—Short-term investments (Other liabilities)	0	0	(175)	(655)
Total derivatives	\$ 0	\$ 0	\$ (278)	\$ (1,325)

	Gain (Loss) Recognized in Comprehensive Income		
	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Derivatives Contracts for Cash Flow Hedges			
Interest rate contracts—Other comprehensive income (loss)	\$ 0	\$ 1,139	\$ (220)

	Gain (Loss) Recognized in Income		
	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Derivatives Not Designated as Hedging Instruments			
Interest rate contract—Other revenue (expense)	\$ 567	\$ 1,232	\$ (457)
Equity contracts—Net realized investment gains	2,680	9,000	4,615
Total	\$ 3,247	\$ 10,232	\$ 4,158

Most equity contracts consist of covered calls. The Company writes covered calls on underlying equity positions held as an enhanced income strategy that is permitted for the Company's insurance subsidiaries under statutory regulations. The Company manages the risk associated with covered calls through strict capital limitations and asset diversification throughout various industries.

8. Goodwill and Other Intangible Assets

Goodwill

There was a slight change in the carrying amount of goodwill due to the dissolution of AMMGA for the year ended December 31, 2012. Goodwill is reviewed for impairment on an annual basis and more frequently if potential impairment indicators exist. No impairment indications were identified during any of the periods presented.

Other Intangible Assets

The following table presents the components of other intangible assets as of December 31, 2012 and 2011.

	Gross Carrying Amount	Accumulated Amortization	Net Carrying Amount	Useful Lives
	(Amounts in thousands)			(in years)
As of December 31, 2012:				
Customer relationships	\$ 51,755	\$ (19,585)	\$ 32,170	11
Trade names	15,400	(2,567)	12,833	24
Technology	4,300	(1,720)	2,580	10
Favorable leases	1,725	(1,719)	6	3
Software	550	(550)	0	2
Total intangible assets, net	<u>\$ 73,730</u>	<u>\$ (26,141)</u>	<u>\$ 47,589</u>	
As of December 31, 2011:				
Customer relationships	\$ 51,755	\$ (14,676)	\$ 37,079	11
Trade names	15,400	(1,925)	13,475	24
Technology	4,300	(1,290)	3,010	10
Favorable leases	1,725	(1,540)	185	3
Software	550	(550)	0	2
Total intangible assets, net	<u>\$ 73,730</u>	<u>\$ (19,981)</u>	<u>\$ 53,749</u>	

Intangible assets are amortized on a straight-line basis over their useful lives. Intangible assets amortization expenses were \$6.2 million, \$6.4 million, and \$6.8 million during 2012, 2011, and 2010, respectively. None of the intangible assets are anticipated to have a residual value. The following table presents the estimated future amortization expense related to intangible assets as of December 31, 2012:

<u>Year Ending December 31,</u>	<u>Amortization Expense</u> (Amounts in thousands)
2013	\$ 5,986
2014	5,980
2015	5,980
2016	5,980
2017	5,253
Thereafter	18,410
Total	<u>\$ 47,589</u>

9. Income Taxes

Income tax provision

The Company and its subsidiaries file a consolidated federal income tax return. The provision for income tax expense consists of the following components:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Federal			
Current	\$ 9,340	\$ 31,390	\$ 23,699
Deferred	6,238	20,518	9,964
	<u>\$ 15,578</u>	<u>\$ 51,908</u>	<u>\$ 33,663</u>
State			
Current	\$ 2,079	\$ 2,934	\$ (3,225)
Deferred	742	(907)	(246)
	<u>\$ 2,821</u>	<u>\$ 2,027</u>	<u>\$ (3,471)</u>
Total			
Current	\$ 11,419	\$ 34,324	\$ 20,474
Deferred	6,980	19,611	9,718
Total	<u>\$ 18,399</u>	<u>\$ 53,935</u>	<u>\$ 30,192</u>

The income tax provision reflected in the consolidated statements of operations is reconciled to the federal income tax on income before income taxes based on a statutory rate of 35% as shown in the table below:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Computed tax expense at 35%	\$ 47,359	\$ 85,785	\$ 63,837
Tax-exempt interest income	(27,789)	(31,414)	(33,966)
Dividends received deduction	(1,482)	(1,704)	(1,463)
State tax expense (benefit)	1,918	1,299	(3,580)
Other, net	(1,607)	(31)	5,364
Income tax expense	<u>\$ 18,399</u>	<u>\$ 53,935</u>	<u>\$ 30,192</u>

Deferred Income Taxes

Deferred income taxes reflect the net tax effects of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for income tax purposes. Realization of deferred tax assets is dependent on generating sufficient taxable income of an appropriate character prior to their expiration. The Company believes it has the ability and intent, through the use of prudent tax planning strategies and the generation of capital gains, to generate income sufficient to avoid losing the benefits of its deferred tax assets. Significant components of the Company's net deferred tax assets and liabilities are as follows:

	December 31,	
	2012	2011
	(Amounts in thousands)	
Deferred tax assets:		
20% of net unearned premium	\$ 66,353	\$ 61,039
Capital loss carryforward	0	7,108
Discounting of loss reserves and salvage and subrogation recoverable for tax purposes	15,019	15,034
Write-down of impaired investments	1,723	4,638
Tax credit carryforward	37,557	20,060
Expense accruals	10,910	11,632
Other deferred tax assets	4,860	3,568
Total gross deferred tax assets	136,422	123,079
Deferred tax liabilities:		
Deferred acquisition costs	(65,069)	(60,000)
Tax liability on net unrealized gain on securities carried at fair value	(48,483)	(31,997)
Tax depreciation in excess of book depreciation	(10,191)	(15,164)
Undistributed earnings of insurance subsidiaries	(4,499)	(3,962)
Tax amortization in excess of book amortization	(914)	(442)
Other deferred tax liabilities	(7,711)	(5,003)
Total gross deferred tax liabilities	(136,867)	(116,568)
Net deferred tax (liabilities) assets	\$ (445)	\$ 6,511

Uncertainty in Income Taxes

The Company recognizes tax benefits related to positions taken, or expected to be taken, on a tax return once a “more-likely-than-not” threshold has been met. For a tax position that meets the recognition threshold, the largest amount of tax benefit that is greater than 50% likely of being realized upon ultimate settlement is recognized in the financial statements.

There were no material changes to the total amount of unrecognized tax benefits related to tax uncertainties during 2012. The Company does not expect any changes in such unrecognized tax benefits to have a significant impact on its consolidated financial statements within the next 12 months.

The Company and its subsidiaries file income tax returns in the U.S. federal jurisdiction and various states. Tax years that remain subject to examination by major taxing jurisdictions are 2009 through 2011 for federal taxes and 2003 through 2011 for California state taxes. Tax year 2010 is currently under examination by the Internal Revenue Service. The Company is currently under examination by the California Franchise Tax Board (“FTB”) for tax years 2003 through 2010. The FTB has issued Notices of Proposed Assessments to the Company for tax years 2003 through 2006. The Company has filed protests with the FTB in response to these assessments and presented its case in a hearing before the FTB. No assessments have been received for tax years 2007 through 2010. Management believes that the resolution of these examinations and assessments will not have a material impact on the consolidated financial statements.

A reconciliation of the beginning and ending balances of unrecognized tax benefits is as follows:

	2012	2011
	(Amounts in thousands)	
Balance at January 1	\$ 4,567	\$ 3,823
Additions based on tax positions related to:		
Current year	330	1,011
Prior years	1,539	0
Reductions based on tax positions related to prior years	(308)	(267)
Reductions as a result of lapse of the applicable statute of limitations	(202)	0
Balance at December 31	\$ 5,926	\$ 4,567

As presented above, the balances of unrecognized tax benefits were \$5.9 million and \$4.6 million at December 31, 2012 and 2011, respectively. Of these totals, \$3.5 million and \$3.6 million represent unrecognized tax benefits, net of federal tax benefit and accrued interest expense which, if recognized, would impact the Company's effective tax rate.

Management does not expect the Company's total amount of unrecognized tax benefits to materially increase within the next twelve months related to its ongoing California state tax apportionment factor issues.

The Company recognizes interest and penalties related to unrecognized tax benefits as a part of income taxes. During the years ended December 31, 2012, 2011, and 2010, the Company recognized net interest and penalty expense or (benefit), excluding refunds, of \$111,000, \$106,000, and (\$872,000), respectively. The Company carried an accrued interest and penalty balance of \$945,000 and \$834,000 at December 31, 2012 and 2011, respectively.

10. Losses and Loss Adjustment Expenses

Activity in the reserves for losses and loss adjustment expenses is summarized as follows:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Gross reserves at January 1	\$ 985,279	\$ 1,034,205	\$ 1,053,334
Less reinsurance recoverable	(7,921)	(6,805)	(7,748)
Net reserves at January 1	977,358	1,027,400	1,045,586
Incurred losses and loss adjustment expenses related to:			
Current year	1,919,116	1,810,711	1,838,824
Prior years	42,332	18,494	(13,058)
Total incurred losses and loss adjustment expenses	1,961,448	1,829,205	1,825,766
Loss and loss adjustment expense payments related to:			
Current year	1,314,748	1,265,188	1,240,696
Prior years	600,090	614,059	603,256
Total payments	1,914,838	1,879,247	1,843,952
Net reserves at year-end	1,023,968	977,358	1,027,400
Reinsurance recoverable	12,155	7,921	6,805
Gross reserves at year-end	\$ 1,036,123	\$ 985,279	\$ 1,034,205

The increase in the provision for insured events of prior years in 2012 of approximately \$42 million primarily resulted from the re-estimate of accident years 2010 and 2011 California BI losses which have experienced higher average severities and more late reported claims than were originally estimated at December 31, 2011. Additionally, the Company experienced unfavorable development on the run-off of California commercial taxi business and Florida homeowners business, both of which the Company ceased writing in 2011. 2012 accident year losses were also impacted by higher loss severity and frequency on the California private passenger automobile line of business.

The increase in the provision for insured events of prior years in 2011 of approximately \$18 million primarily resulted from the re-estimate of accident years 2008 through 2010 California BI losses which have experienced higher average severities than were originally estimated at December 31, 2010. Partially offsetting this increase was favorable development on loss adjustment expenses reflecting cost savings from the transition of a large portion of litigated cases from outside counsel to in-house counsel.

The decrease in the provision for insured events of prior years in 2010 of approximately \$13 million primarily resulted from the re-estimate of accident year 2009 California BI losses. In addition, the Company experienced favorable development on New Jersey personal automobile reserves, resulting from more aggressive handling of litigated claims, which includes a high percentage of favorable results in cases brought to trial. The favorable development was partially offset by unfavorable development on Florida reserves, which included approximately \$3 million of unfavorable development on the homeowners line of business, primarily related to sinkhole claims.

The Company experienced estimated pre-tax losses from severe weather events of \$39 million, \$18 million, and \$25 million in 2012, 2011, and 2010, respectively. The losses in 2012 were primarily due to Hurricane Sandy and wind and hail storms in the Midwest region. The losses in 2011 related to California wind storms, Hurricane Irene, and Georgia tornadoes. The losses in 2010 primarily related to California rainstorms.

11. Dividends

The following table presents shareholder dividends paid in total and per share:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands, except per share data)		
Total paid	\$ 134,105	\$ 132,142	\$ 129,863
Per share	\$ 2.4425	\$ 2.41	\$ 2.37

The Insurance Companies are subject to the financial capacity guidelines established by their domiciliary states. The payment of dividends from statutory unassigned surplus of the Insurance Companies is restricted, subject to certain statutory limitations. For 2013, the insurance subsidiaries of the Company are permitted to pay approximately \$155 million in dividends to Mercury General without the prior approval of the DOI of domiciliary states. The above statutory regulations may have the effect of indirectly limiting the ability of the Company to pay shareholder dividends. During 2012, 2011, and 2010, the Insurance Companies paid the Company ordinary dividends of \$145 million, \$0, and \$128 million, respectively, and extraordinary dividends of \$0 million, \$270 million, and \$0, respectively.

On February 1, 2013, the Board of Directors declared a \$0.6125 quarterly dividend payable on March 28, 2013 to shareholders of record on March 14, 2013.

12. Statutory Balances and Accounting Practices

The Insurance Companies prepare their statutory-basis financial statements in conformity with accounting practices prescribed or permitted by the insurance departments of their domiciliary states. Prescribed statutory accounting practices primarily include those published as statements of SAP by the NAIC, as well as state laws, regulations, and general administrative rules. Permitted statutory accounting practices encompass all accounting practices not so prescribed. As of December 31, 2012, there were no material permitted statutory accounting practices utilized by the Insurance Companies.

The following table presents the statutory net income and capital and surplus of the Insurance Companies, as reported to regulatory authorities:

	Year Ended December 31,		
	2012	2011	2010
	(Amounts in thousands)		
Statutory net income ⁽¹⁾	\$ 63,365	\$ 223,447	\$ 142,981
Statutory capital and surplus	1,440,973	1,497,609	1,322,270

(1) Statutory net income excludes changes in the fair value of the investment portfolio as a result of the application of fair value option.

The statutory capital and surplus of each of the Insurance Companies exceeded the highest level of minimum regulatory required capital.

13. Profit Sharing Plan

The Company's employees are eligible to become members of the Profit Sharing Plan (the "Plan"). The Company, at the option of the Board of Directors, may make annual contributions to the Plan, and the contributions are not to exceed the greater of the Company's net income for the plan year or its retained earnings at that date. In addition, the annual contributions may not exceed an amount equal to 15% of the compensation paid or accrued during the year to all participants under the Plan. No contributions were made in the past three years.

The Plan includes an option for employees to make salary deferrals under Section 401(k) of the Internal Revenue Code. The matching contributions, at a rate set by the Board of Directors, totaled \$7.2 million, \$7.2 million, and \$7.0 million for 2012, 2011, and 2010, respectively.

The Plan also includes an employee stock ownership plan that covers substantially all employees. The Board of Directors authorized the Plan to purchase approximately \$0, \$0, and \$1.2 million of the Company's common stock in the open market for

allocation to the Plan participants in 2012, 2011, and 2010, respectively. The Company recognized compensation expense equal to such amounts.

14. Share-Based Compensation

In May 2005, the Company adopted the 2005 Plan which succeeded a prior plan. A maximum of 4,957,250 shares of common stock under the 2005 Plan are authorized for issuance upon exercise of options, stock appreciation rights and other awards, or upon vesting of restricted or deferred stock awards. As of December 31, 2012, only options and restricted stock awards have been granted under these plans. Beginning January 1, 2008, options granted, for which the Company has recognized share-based compensation expense become exercisable at a rate of 25% per year beginning one year from the date granted, are granted at the market price on the date of grant, and expire after 10 years. Prior to January 1, 2008, shares became exercisable at a rate of 20% per year.

Cash received from option exercises was \$2,492,000, \$1,951,000, and \$733,000 during 2012, 2011, and 2010, respectively. Total compensation costs were \$168,000, \$439,000, and \$651,000 during 2012, 2011, and 2010, respectively. The excess tax benefit realized for the tax deduction from option exercises of the share-based payment awards totaled \$86,000, \$56,000, and \$132,000 during 2012, 2011, and 2010, respectively. No stock options were awarded in the past three years.

A summary of the stock option activity under the Company's plans as of December 31, 2012 and changes during the year then ended is presented below:

	Shares	Weighted-Average Exercise Price	Weighted-Average Remaining Contractual Term (Years)	Aggregate Intrinsic Value (in 000's)
Outstanding at January 1, 2012	544,225	\$ 46.09		
Granted	0			
Exercised	(65,450)	\$ 38.07		
Canceled or expired	(27,750)			
Outstanding at December 31, 2012	<u>451,025</u>	\$ 47.22	4.5	\$ 724
Exercisable at December 31, 2012	<u>408,775</u>	\$ 48.59	4.3	\$ 479

The aggregate intrinsic value in the table above represents the total pre-tax intrinsic value (the difference between the Company's closing stock price and the exercise price, multiplied by the number of in-the-money options) that would have been received by the option holders had all options been exercised on December 31, 2012. The aggregate intrinsic value of stock options exercised was \$392,000, \$262,000, and \$431,000 during 2012, 2011, and 2010, respectively. The total fair value of options vested was \$407,000, \$467,000, and \$498,000 during 2012, 2011, and 2010, respectively.

The following table presents information regarding stock options outstanding at December 31, 2012:

<u>Range of Exercise Prices</u>	<u>Options Outstanding</u>			<u>Options Exercisable</u>	
	Number of Options	Weighted-Avg. Remaining Contractual Life (Years)	Weighted-Avg. Exercise Price	Number of Options	Weighted-Avg. Exercise Price
\$33.61-40.53	131,525	6.1	\$ 34.21	89,275	\$ 34.36
\$47.61-51.51	166,000	4.6	\$ 49.64	166,000	\$ 49.64
\$52.13-58.83	153,500	2.9	\$ 55.73	153,500	\$ 55.73

As of December 31, 2012, \$42,000 of total unrecognized compensation cost related to non-vested stock options is expected to be recognized over a weighted-average period of 0.4 years.

Under the 2005 Plan, the Compensation Committee of the Company's Board of Directors granted performance vesting restricted stock units to the Company's senior management and key employees. See Note 1 for grants summary. A summary of the restricted stock and restricted stock units activity as of December 31, 2012 and 2011, and changes during the years then ended is as follows:

	2012		2011		2010	
	Shares	Weighted-Average Fair Value per Share	Shares	Weighted-Average Fair Value per Share	Shares	Weighted-Average Fair Value per Share
Outstanding at January 1	135,000	\$ 40.70	55,000	\$ 41.40	0	\$ 0.00
Granted	92,000	44.01	80,000	40.22	55,000	\$ 41.40
Vested	0		0		0	
Forfeited/Canceled	(3,000)		0		0	
Expired	(55,000)		0		0	
Outstanding at December 31	<u>169,000</u>	\$ 42.22	<u>135,000</u>	\$ 40.70	<u>55,000</u>	\$ 41.40

15. Earnings Per Share

A reconciliation of the numerators and denominators of the basic and diluted earnings per share calculation for income from operations is presented below:

	2012			2011			2010		
	Income (Numerator)	Weighted Shares (Denominator)	Per-Share Amount	Income (Numerator)	Weighted Shares (Denominator)	Per-Share Amount	Income (Numerator)	Weighted Shares (Denominator)	Per-Share Amount
(Amounts and numbers in thousands, except per-share data)									
Basic EPS									
Income available to common stockholders	\$ 116,911	54,899	\$ 2.13	\$ 191,164	54,825	\$ 3.49	\$ 152,198	54,792	\$ 2.78
Effect of dilutive securities:									
Options	0	23		0	20		0	34	
Diluted EPS									
Income available to common stockholders after assumed conversions	<u>\$ 116,911</u>	<u>54,922</u>	\$ 2.13	<u>\$ 191,164</u>	<u>54,845</u>	\$ 3.49	<u>\$ 152,198</u>	<u>54,826</u>	\$ 2.78

Incremental shares of 415,000, 504,000, and 448,000 for 2012, 2011, and 2010, respectively, were excluded from the computation of the diluted earnings per common shares due to their anti-dilutive effect. Potentially dilutive securities representing approximately 80,000, 103,000, and 93,000 shares of common stock for 2012, 2011, and 2010, respectively, were also excluded from the computation of diluted earnings per common share because their effect would have been anti-dilutive.

16. Commitments and Contingencies

Operating Leases

The Company is obligated under various non-cancellable lease agreements providing for office space, automobiles, and office equipment that expire at various dates through the year 2019. For leases that contain predetermined escalations of the minimum rentals, the Company recognizes the related rent expense on a straight-line basis and records the difference between the recognized rental expense and amounts payable under the leases as deferred rent in other liabilities. This liability amounted to \$2.2 million and \$1.6 million at December 31, 2012 and 2011, respectively. Total rent expense under these lease agreements was \$17.7 million, \$18.2 million, and \$17.1 million for 2012, 2011, and 2010, respectively.

The following table presents future minimum commitments for operating leases as of December 31, 2012:

<u>Year Ending December 31,</u>	<u>Operating Leases</u>
	(Amounts in thousands)
2013	\$ 14,224
2014	10,069
2015	6,985
2016	5,658
2017	3,843
Thereafter	945

California Earthquake Authority (“CEA”)

The CEA is a quasi-governmental organization that was established to provide a market for earthquake coverage to California homeowners. The Company places all new and renewal earthquake coverage offered with its homeowners policies directly with the CEA. The Company receives a small fee for placing business with the CEA, which is recorded as other income in the consolidated statements of operations. Upon the occurrence of a major seismic event, the CEA has the ability to assess participating companies for losses. These assessments are made after CEA capital has been expended and are based upon each company’s participation percentage multiplied by the amount of the total assessment. Based upon the most recent information provided by the CEA, the Company’s maximum total exposure to CEA assessments at April 1, 2012, the most recent date at which information was available, was approximately \$52.2 million. There was no assessment made in 2012.

Regulatory Matters

In April 2010, the California DOI issued a Notice of Non-Compliance (“2010 NNC”) to Mercury Insurance Company (“MIC”), Mercury Casualty Company (“MCC”), and California Automobile Insurance Company (“CAIC”) based on a Report of Examination of the Rating and Underwriting Practices of these companies issued by the California DOI in February 2010. The 2010 NNC includes allegations of 35 instances of noncompliance with applicable California insurance law and seeks to require that each of MIC, MCC, and CAIC change its rating and underwriting practices to rectify the alleged noncompliance and may also seek monetary penalties. In April 2010, the Company submitted a Statement of Compliance and Notice of Defense to the 2010 NNC, in which it denied the allegations contained in the 2010 NNC and provided specific defenses to each allegation. The Company also requested a hearing in the event that the Statement of Compliance and Notice of Defense does not establish to the satisfaction of the California DOI that the alleged noncompliance does not exist, and the matters described in the 2010 NNC are not otherwise able to be resolved informally with the California DOI. However, no assurance can be given that efforts to resolve the 2010 NNC informally will be successful.

In March 2006, the California DOI issued an Amended Notice of Non-Compliance to a Notice of Non-Compliance originally issued in February 2004 (as amended, “2004 NNC”) alleging that the Company charged rates in violation of the California Insurance Code, willfully permitted its agents to charge broker fees in violation of California law, and willfully misrepresented the actual price insurance consumers could expect to pay for insurance by the amount of a fee charged by the consumer's insurance broker. The California DOI seeks to impose a fine for each policy in which the Company allegedly permitted an agent to charge a broker fee and a penalty for each on which the Company allegedly used a misleading advertisement and to suspend certificates of authority for a period of one year. In January 2012, the administrative law judge bifurcated the 2004 NNC between (a) the California DOI’s order to show cause, in which the California DOI asserts the false advertising allegations and accusation, and (b) the California DOI’s notice of noncompliance, in which the California DOI asserts the unlawful rate allegations. In February 2012, the administrative law judge submitted a proposed decision dismissing the California DOI’s 2004 NNC. In March 2012, the California Insurance Commissioner rejected the administrative law judge’s proposed decision. The Company challenged the rejection in Los Angeles Superior Court in April 2012, and the California Insurance Commissioner filed a demurrer to the Company's petition. Following a hearing, the trial court sustained the California Insurance Commissioner’s demurrer without leave to amend because it found the Company must first exhaust its administrative remedies. The Company has appealed the trial court’s decision and on January 3, 2013, filed a petition to stay the administrative proceeding pending a determination of its appeal. The Court of Appeal did not stay the administrative proceeding but has allowed the appeal to continue. The Company has filed its opening appellate brief, and the court granted the Company's request for an expedited appeal. On January 15, 2013, the administrative law judge heard various pending motions that had originally been filed by the Company in June 2011. The administrative law judge has not yet ruled on the motions.

The Company denies the allegations in the 2004 and 2010 NNC matters, and believes that no monetary penalties are warranted, and the Company intends to defend itself against the allegations vigorously. The Company has been subject to fines and penalties by the California DOI in the past due to alleged violations of the California Insurance Code. The largest and most recent of these was settled in 2008 for \$300,000. However, prior settlement amounts are not necessarily indicative of the potential results in the current notice of non-compliance matters. Based upon its understanding of the facts and the California Insurance Code, the Company does not expect that the ultimate resolution of the 2004 and 2010 NNC matters will be material to the Company’s financial position. The Company has accrued a liability for the estimated cost to defend itself in the notice of non-compliance matters.

Litigation

The Company is, from time to time, named as a defendant in various lawsuits or regulatory actions incidental to its insurance business. The majority of lawsuits brought against the Company relate to insurance claims that arise in the normal course of business and are reserved for through the reserving process. For a discussion of the Company’s reserving methods, see Note 1.

The Company also establishes reserves for non-insurance claims related lawsuits, regulatory actions, and other contingencies for which the Company is able to estimate its potential exposure and when the Company believes a loss is probable. For loss contingencies believed to be reasonably possible, the Company also discloses the nature of the loss contingency and an estimate of the possible loss, range of loss, or a statement that such an estimate cannot be made. While actual losses may differ from the amounts recorded and the ultimate outcome of the Company's pending actions is generally not yet determinable, the Company does not believe that the ultimate resolution of currently pending legal or regulatory proceedings, either individually or in the aggregate, will have a material adverse effect on its financial condition, results of operations, or cash flows.

In all cases, the Company vigorously defends itself unless a reasonable settlement appears appropriate.

The Company is also involved in proceedings relating to assessments and rulings made by the FTB. See Note 9.

17. Risks and Uncertainties

Many businesses are experiencing a slow recovery from the severe economic recession, and economic uncertainty is expected to continue in 2013 due in large part to continuing political disagreements in Washington that may cause businesses and consumers to hold back spending. Further, the sovereign debt crisis in Europe continues to lead to weaker global economic growth, heightened financial vulnerabilities and some negative rating actions. The Company is unable to predict the duration and severity of current global economic conditions and their impact on the United States, and California, where the majority of the Company's business is produced. If economic conditions do not show improvement, there could be an adverse impact on the Company's financial condition, results of operations, and liquidity.

The Company applies the fair value option to its investment portfolio. Rapidly changing and unprecedented credit and equity market conditions could materially impact the valuation of securities as reported within the Company's financial statements, and the period-to-period changes in value could vary significantly. Decreases in market value may have a material adverse effect on the Company's financial condition or results of operations.

The Company is taking steps to align expenses with revenues; however, not all expenses can be effectively reduced and if premium volumes decline, it could lead to higher expense ratios. The impact from the recession would also affect the capital and surplus of the Insurance Companies, which could indirectly impact the ability and capacity to pay shareholder dividends.

18. Quarterly Financial Information (Unaudited)

Summarized quarterly financial data for 2012 and 2011 are as follows:

	Quarter Ended			
	March 31	June 30	September 30	December 31
	(Amounts in thousands, except per share data)			
2012				
Net premiums earned	\$ 635,812	\$ 637,247	\$ 646,084	\$ 655,777
Change in fair value of investments pursuant to the fair value option	\$ 49,343	\$ (24,788)	\$ 44,783	\$ (23,829)
Income (loss) before income taxes	\$ 101,994	\$ (18,853)	\$ 91,330	\$ (39,161)
Net income (loss)	\$ 73,356	\$ (5,264)	\$ 66,201	\$ (17,382)
Basic earnings per share	\$ 1.34	\$ (0.10)	\$ 1.21	\$ (0.32)
Diluted earnings per share	\$ 1.34	\$ (0.10) ⁽¹⁾	\$ 1.21	\$ (0.32) ⁽¹⁾
Dividends paid per share	\$ 0.61	\$ 0.61	\$ 0.61	\$ 0.6125
2011				
Net premiums earned	\$ 638,487	\$ 642,331	\$ 643,626	\$ 641,613
Change in fair value of investments pursuant to the fair value option	\$ 20,904	\$ 20,597	\$ (64,312)	\$ 54,100
Income (loss) before income taxes	\$ 76,911	\$ 75,613	\$ (18,118)	\$ 110,693
Net income (loss)	\$ 58,226	\$ 57,251	\$ (3,782)	\$ 79,469
Basic earnings per share	\$ 1.06	\$ 1.04	\$ (0.07)	\$ 1.45
Diluted earnings per share	\$ 1.06	\$ 1.04	\$ (0.07) ⁽¹⁾	\$ 1.45
Dividends paid per share	\$ 0.60	\$ 0.60	\$ 0.60	\$ 0.61

(1) The dilutive impact of incremental shares is excluded from loss position in accordance with GAAP.

Net income during 2012 was primarily affected by slightly higher net premiums earned and lower operating expenses, offset by unfavorable development on loss reserves, catastrophe related losses, and higher loss frequency and severity on the California private passenger automobile line of business. The decrease in operating expenses in 2012 was primarily due to ongoing cost reduction efforts and lower profitability related expenses. The unfavorable development of loss reserves is largely the result of re-estimates of California BI losses. The primary causes of the net loss during the second quarter of 2012 were driven by unfavorable development on loss reserves, catastrophic losses in the Midwest region, and declines in the fair value of the Company's equity securities due to the overall decline in the equity markets. The net loss during the fourth quarter of 2012 was primarily due to increased losses resulting from catastrophe losses from Hurricane Sandy, high seasonal frequency in California, and declines in the fair value of the Company's municipal and equity securities due to the overall decline in the municipal and equity markets.

Net income during 2011 was mainly affected by lower policy acquisition costs and operating expenses, offset by unfavorable development on loss reserves. The lower policy acquisition costs are due to the lower premium deficiency reserve and declines in other underwriting costs including agent contingent commissions. The operating expenses in 2011 decreased as a result of decreased consulting, advertising, and information technology expenditures. The unfavorable development of loss reserves is largely the result of re-estimates of California BI losses. The primary causes of the net loss during the third quarter of 2011 were driven by declines in the fair value of the Company's equity securities due to the overall decline in the equity markets.

19. Subsequent Events

During January 2013, the Company announced a net workforce reduction of approximately 135 employees, representing less than 3% of the total workforce, resulting from the consolidation of its claims and underwriting operations located outside of California into hub locations in Florida, New Jersey, and Texas. Approximately \$8 million to \$13 million (pre-tax) of office closure costs and severance related expense will be recognized during the first quarter of 2013.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

The Company maintains disclosure controls and procedures designed to ensure that information required to be disclosed in the Company's reports filed under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized, and reported within the time periods specified in the Securities and Exchange Commission rules and forms, and that such information is accumulated and communicated to the Company's management, including its Chief Executive Officer and Chief Financial Officer, as appropriate, to allow for timely decisions regarding required disclosure. In designing and evaluating the disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management necessarily was required to apply its judgment in evaluating the cost benefit relationship of possible controls and procedures.

As required by Securities and Exchange Commission Rule 13a-15(b), the Company carried out an evaluation, under the supervision and with the participation of the Company's management, including its Chief Executive Officer and Chief Financial Officer, of the effectiveness of the design and operation of the Company's disclosure controls and procedures as of the end of the period covered by this Annual Report on Form 10-K. Based on the foregoing, the Company's Chief Executive Officer and Chief Financial Officer concluded that the Company's disclosure controls and procedures were effective at the reasonable assurance level.

Management's Report on Internal Control Over Financial Reporting

The management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control system was designed to provide reasonable assurance to the Company's management and Board of Directors regarding the preparation and fair presentation of published financial statements.

All internal control systems, no matter how well designed, have inherent limitations. Therefore, even those systems determined to be effective can provide only reasonable assurance with respect to financial statement preparation and presentation.

The Company's management assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2012. In making this assessment, it used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control—Integrated Framework*. Based upon its assessment, the Company's management believes that, as of December 31, 2012, the Company's internal control over financial reporting is effective based on these criteria.

KPMG LLP, the independent registered public accounting firm that audited the consolidated financial statements included in this 2012 Annual Report on Form 10-K, has issued an audit report on the effectiveness of the Company's internal control over financial reporting as of December 31, 2012, which is included herein.

Changes in Internal Control over Financial Reporting

There has been no change in the Company's internal control over financial reporting during the Company's most recent fiscal quarter that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting. The Company's process for evaluating controls and procedures is continuous and encompasses constant improvement of the design and effectiveness of established controls and procedures and the remediation of any deficiencies which may be identified during this process.

Item 9B. Other Information

None

PART III

- Item 10. Directors, Executive Officers, and Corporate Governance**
- Item 11. Executive Compensation**
- Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters**

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Mercury General Corporation:

Under date of February 11, 2013, we reported on the consolidated balance sheets of Mercury General Corporation and subsidiaries (the Company) as of December 31, 2012 and 2011, and the related consolidated statements of operations, comprehensive income, shareholders' equity, and cash flows for each of the years in the three-year period ended December 31, 2012, as contained in the Annual Report on Form 10-K for the year 2012. In connection with our audits of the aforementioned consolidated financial statements, we also audited the related financial statement schedules in the accompanying index. These financial statement schedules are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statement schedules based on our audits.

In our opinion, such financial statement schedules, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

MERCURY GENERAL CORPORATION
CONDENSED FINANCIAL INFORMATION OF REGISTRANT
NOTES TO CONDENSED FINANCIAL INFORMATION

The accompanying condensed financial information should be read in conjunction with the Consolidated Financial Statements and Notes to Consolidated Financial Statements included in this report.

Dividends

Dividends of \$145,000,000, \$270,000,000, and \$128,000,000 were received by the Company from its 100% owned subsidiaries in 2012, 2011, and 2010, respectively, and are recorded as a reduction to investment in subsidiaries.

Capitalization of Subsidiaries

Mercury General made capital contributions to its insurance subsidiaries of \$125,000 in each of 2012, 2011, and 2010.

Guarantees

The borrowings by MCC, a subsidiary, under the \$120 million credit facility and \$20 million bank loan are secured by approximately \$182 million of municipal bonds owned by MCC, at fair value, held as collateral. The total borrowings of \$140 million are guaranteed by the Company.

Federal Income Taxes

The Company files a consolidated federal income tax return with the following subsidiaries:

Mercury Casualty Company	Mercury Insurance Company of Florida
Mercury Insurance Company	Mercury Indemnity Company of America
California Automobile Insurance Company	Mercury Select Management Company, Inc.
California General Underwriters Insurance Company, Inc.	American Mercury MGA, Inc.
Mercury Insurance Company of Illinois	Concord Insurance Services, Inc.
Mercury Insurance Company of Georgia	Mercury Insurance Services LLC
Mercury Indemnity Company of Georgia	Mercury Group, Inc.
Mercury National Insurance Company	AIS Management LLC
American Mercury Insurance Company	Auto Insurance Specialists LLC
American Mercury Lloyds Insurance Company	PoliSeek AIS Insurance Solutions, Inc.
Mercury County Mutual Insurance Company	

The method of allocation between the companies is subject to an agreement approved by the Board of Directors. Allocation is based upon separate return calculations with current credit for net losses incurred by the insurance subsidiaries to the extent it can be used in the current consolidated return.
