NOTE 6. FAIR VALUE

The Company's security assets are recorded at fair value. Fair value is defined as the price that would be paid to transfer the asset between market participants in an orderly transaction on the measurement date. The market in which the reporting entity would transfer the liability with the greatest volume and level of activity for the liability is known as the principal market. When no principal market exists, the most advantageous market is used. This is the market in which the reporting entity would transfer the asset with the price that maximizes the amount that would be received. Fair value is based on assumptions market participants would make in pricing the asset. Generally, fair value is based on observable quoted market prices or derived from observable market data when such market prices or data are available. When such prices or inputs are not available, the reporting entity should use valuation models.

The Company's asset is recorded at fair value and is categorized based on the priority of the inputs used to measure fair value. The inputs used in measuring fair value are categorized into three levels, as follows:

- Level 1 - Inputs that are based upon quoted prices for identical instruments traded in active markets.
- Level 2 - Inputs that are based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar investments in markets that are not active, or models based on valuation techniques for which all significant assumptions are observable in the market or can be corroborated by observable market data for substantially the full term of the investment.

- Level 3 - Inputs that are generally unobservable and typically reflect management's estimates of assumptions that market participants would use in pricing the asset. The fair value is therefore determined using model-based techniques that include option pricing models and similar techniques.

The following describes the valuation methodology the Company uses to measure its financial asset at fair value.

Common stock: Valued based on the services provided.

The Company's financial instruments approximate fair value.

As of December 31, 2015				
Description	Assets	Fair Value Hierarchy Level		
	Measured			
	At Fair Value	Level 1	Level 2	Level 3
Common Stock	\$ 819			\$ 819
Total	\$ 819	\$ -	\$ -	\$ 819
