

Dear Ms. Countryman:

I am writing you as a shareholder who is in favor of approving the Form 19b-4 that NYSE Arca filed with you to convert Grayscale Bitcoin Trust (OTCQX:GBTC) into a Bitcoin Spot ETF.

GBTC is currently trading at a discount to its NAV, which means the price of GBTC is less than the price of the physical asset, Bitcoin. One of the benefits of converting GBTC into an ETF is it would allow for simultaneous creations and redemptions – a core feature of the ETF wrapper. This would cause the shares trading at a discount to better reflect NAV, and thus protect the hundreds of thousands of investors currently holding GBTC.

Importantly and impressively, in 2021 you approved several futures-based Bitcoin ETF's. This is significant because to the extent the SEC had previously been concerned over the fraud or manipulation in pricing of the underlying spot/cash Bitcoin markets, that concern would have to permeate across both spot-based and futures ETF's since both types of products are priced based on the underlying spot/cash Bitcoin markets. However, following approval of several future-based Bitcoin ETF's, you subsequently disapproved several spot-based Bitcoin ETF's.

This inconsistency creates an unlevel playing field for Bitcoin ETF's without reasonable basis for different treatment. To that point, Grayscale's attorneys at Davis Polk have filed a letter in the context of this comment letter period arguing that the approval of Bitcoin Futures ETF's but not Bitcoin Spot ETF's, like what GBTC would be, is "arbitrary and capricious," and therefore a potential violation of the Administrative Procedure Act. Per the above, I strongly agree with this new argument.

The SEC should approve GBTC for conversion to an ETF and allow investors a choice over which product best meets their investment needs. To do otherwise would go against the SEC's core mission of protecting investors.

Thank you for your time and consideration.

Sincerely,
