A second key programmatic benefit of regulatory reporting is that it would aid the Commission in detecting and taking appropriate action against market abuse. With comprehensive data on transaction volumes and prices involving U.S. persons, the Commission could help ensure that all market participants are able to benefit from the risk-sharing afforded by the security-based swap market on fair terms.

Finally, security-based swap transaction data reported to registered SDRs would aid the Commission and other relevant authorities in enforcing other Title VII rules and deter noncompliance. For example, the Cross-Border Adopting Release set forth de minimis levels of activity and exposures above which market participants would have to either register as security-based swap dealers or as major security-based swap participants.[1300] Regulatory reporting could help deter participants that engage in high transaction volume with counterparties that are expected to have a significant portion of their financial and legal relationships exist within the United States from avoiding the obligation to register with the Commission when their activity surpasses these thresholds.

Rule 908(a)(2) determines the scope of transactions subject to public dissemination requirements. A security-based swap must be publicly disseminated if there is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction, or if the transaction is submitted to a clearing agency having its principal place of business in the United States. Certain of the programmatic benefits of public dissemination are similar to those of regulatory reporting. For instance, public dissemination of transaction prices will enable U.S. persons to compare a quote provided by a registered security-based swap dealer against recent transaction prices for security-based swaps referencing the same or similar underlying entities. In addition, market participants will be able to analyze whether the price they paid for credit protection is commensurate with prices revealed by transaction activity immediately following their transaction. In both of these cases, public dissemination enables market participants to evaluate the quality of the prices that dealers offer, providing registered security-based swap dealers with additional incentives to quote narrower spreads.

[1300] See Cross-Border Adopting Release, 79 FR at 47301.

Rule 908(c) provides that the Title VII requirements relating to regulatory reporting and public dissemination of security-based swaps may be satisfied by compliance with the rules of a foreign jurisdiction if the Commission determines that the jurisdiction has requirements that are comparable to those of Regulation SBSR. In addition, to the extent that a market participant is able to take advantage of a substituted compliance determination made under Rule 908(c), the Commission does believe some cost reduction may be realized. If a market participant does not report to an SDR registered with the Commission, such market participant (whether it be a reporting side or not) would be able to avoid those costs detailed in this adopting release. A market participant evaluating whether or not to take advantage of substituted compliance would consider these potential cost reductions along with the costs it would incur in assessing the feasibility of substituted compliance and meeting any conditions attached to a substituted compliance determination by the Commission.[1301] While, the Commission is, at this time, unable to estimate the net savings—as no substituted compliance determinations have been made—the highest level of savings possible for a reporting side that avails itself of substituted compliance is the aggregate cost of regulatory reporting under the final rules.[1302]

b. Programmatic Costs

Rules 908(a)(1) and (2) require regulatory reporting of transactions that involve U.S. person counterparties, are submitted to U.S. clearing agencies, or that involve registered security-based swap dealers or registered major security-based swap participants.

Other jurisdictions are developing rules relating to post-trade transparency for security-based swaps at different paces. The Commission is mindful that, in the near term and until full

---

[1301] See Cross-Border Proposing Release, 78 FR at 31202.

[1302] See supra Section XXII(C)(1) (discussing the quantifiable costs of regulatory reporting).

implementation of post-trade transparency requirements in the other jurisdictions that are comparable to those in Regulation SBSR, Rule 908(a)(1) may intensify incentives for non-U.S. market participants to avoid contact with U.S. counterparties (whether acting directly or as guarantors of non-U.S. persons) in an effort to avoid the public dissemination requirements. This could result in reduced liquidity for U.S. market participants.[1303]

The Commission cannot readily quantify the costs that might result from reduced market access for U.S. persons or counterparties whose security-based swap activities benefit from recourse to U.S. persons because the Commission does not know what rules other jurisdictions may implement or the times at which they may implement their rules. However, while the Commission has not quantified these costs, it assessed them qualitatively and considered them in formulating the scope for requirements under the final rules.[1304]

As discussed in Section XXII(C)(5), supra, the Commission believes that most of the costs related to the cross-border application of Regulation SBSR are subsumed in the costs of Rules 901 and 902, with one exception. Specifically, requests for a substituted compliance determination would result in costs of preparing such requests. The Commission estimates the costs of submitting a request pursuant to Rule 908(c) would be approximately $110,000.[1305] The

---

1303 The efficiency implications for public dissemination of cross-border activity is discussed in Section XXII(D)(4)(b), infra.

1304 See Cross-Border Adopting Release, 79 FR at 47278-372 (discussing recourse guarantees).

1305 This estimate is based on information indicating that the average costs associated with preparing and submitting an application to the Commission for an order for exemptive relief under Section 36 of the Exchange Act in accordance with the procedures set forth in Rule 0-12 under the Exchange Act, 17 CFR 240.0-12. A substituted compliance request contemplated by Rule 908(c) would be made under Rule 0-13 under the Exchange Act, which sets forth procedures similar to those used by the Commission in considering exemptive order applications under Section 36. The Commission estimates that preparation of a request would require approximately 80 hours of in-house counsel

Commission further estimates that it will receive 10 requests in the first year and two requests each subsequent year, for a total cost in the first year of $1,100,000 and a total cost in each subsequent year of $220,000. Once such request is made, however, other market participants in the same jurisdiction that wish to rely on substituted compliance with respect to regulatory reporting and public dissemination would be able to rely on the Commission's substituted compliance determination. Accordingly, the assessment costs would only need to be incurred once with respect to the same area of a foreign regulatory system.

c. Assessment Costs

The Commission believes that the assessment costs associated with determining the status of counterparties and the location of transactions should be primarily one-time costs of establishing a practice or compliance procedure. As discussed in the Cross-Border Proposing Release,[1306] the assessment costs associated with the substituted compliance would, in part, flow from the assessment of whether the counterparties to a security-based swap transaction satisfy the conditions of Rule 908(a). This assessment may be done by an in-house counsel reviewing

---

time and 200 hours of outside counsel time. Such estimate takes into account the time required to prepare supporting documents necessary for the Commission to make a substituted compliance determination, including, without limitation, information regarding applicable requirements established by the foreign financial regulatory authority or authorities, as well as the methods used by the foreign financial regulatory authority or authorities to monitor compliance with these rules. Based upon data from SIFMA's Management & Professional Earnings in the Securities Industry 2013 (modified by the SEC staff to account for an 1,800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead), the Commission estimates that the average national hourly rate for an in-house attorney is $380. The Commission estimates the costs for outside legal services to be $400 per hour. Accordingly, the Commission estimates the total cost to submit a request for a substituted compliance determination to be approximately $110,000 ($30,400 (based on 80 hours of in-house counsel time x $380) + $80,000 (based on 200 hours of outside counsel time x $400)).

1306 See Cross-Border Proposing Release, 78 FR at 31202.

readily ascertainable information. The Commission believes that the cost involved in making such assessment should not exceed one hour of in-house counsel's time or $380.[1307]

The Commission believes that market participants will likely incur costs arising from the need to identify and maintain records concerning the status of their counterparties and the location of any clearing agency used. The Commission anticipates that potential applicants for substituted compliance are likely to request representations from their transaction counterparties to determine the counterparties' status. The Commission believes that the assessment costs associated with determining the status of counterparties should be primarily one-time costs of establishing a practice or compliance procedure of requesting and collecting representations from trading counterparties and maintaining the representations collected as part of the recordkeeping procedures and limited ongoing costs associated with requesting and collecting representations.[1308] As discussed in the Cross-Border Proposing Release, the Commission believes that such one-time costs would be approximately $15,160.[1309] The Commission believes that requesting and collecting representations would be part of the standardized transaction process reflected in the policies and procedures regarding security-based swap sales and trading practices and should not result in separate assessment costs.[1310] To the extent that market participants have incurred costs relating to similar or same assessments for other Title VII requirements, their assessment costs with respect to substituted compliance may be less.

6. Other Programmatic Effects of Regulation SBSR

1307 See id., note 1954.

1308 See id. at 31203.

1309 See id.

1310 See id., note 1957.

a. Operating Hours of Registered SDRs—Rule 904

Paragraphs (c) to (e) of Rule 904 specify requirements for receiving, handling, and disseminating reported data during a registered SDR's normal and special closing hours. The Commission believes that these provisions will provide benefits in that they clarify how security-based swaps executed while a registered SDR is in normal or special closing hours would be reported and disseminated. The Commission believes that the costs of requirements under these rules will be related to providing notice to participants of its normal and special closing hours and to provide notice to participants that the SDR is available to accept transaction data after its system is unavailable.

One commenter asserted that the proposed requirement for a registered SDR to receive and hold in the queue the data required to be reported during its closing hours "exceeds the capabilities of currently-existing reporting infrastructures."[1311] However, the Commission notes that this comment was submitted in January 2011; since the receipt of this comment, swap data repositories that are provisionally registered with the CFTC that are likely also to register as SDRs with the Commission appear to have developed the capability of receiving and holding data in queue during their closing hours.[1312] Thus, the Commission continues to believe that requiring registered SDRs to hold data in queue during their closing hours would not create a significant burden for registered SDRs.

Rule 904, as adopted, requires a registered SDR to have systems in place to receive and disseminate information regarding security-based swap data on a near-continuous basis, except during "normal closing hours" and "special closing hours." A registered SDR will be permitted

---

1311 Markit I at 4.

1312 See supra note 668.

to establish "normal closing hours," which may occur only when, in the estimation of the registered SDR, the U.S. markets and other major markets are inactive. In addition, a registered SDR will be permitted to declare, on an ad hoc basis, special closing hours to perform routine system maintenance, subject to certain requirements. The re-proposal of Regulation SBSR in the Cross-Border Proposing Release only made minor technical changes to Rule 904.

The Commission continues to believe that a registered SDR will not incur significant costs in connection with Rule 904. The requirement for a registered SDR to provide reasonable advance notice to participants and to the public of its normal and special closing hours, and to provide notice to participants that the SDR is available to accept transaction data after its system was unavailable will likely entail only a modest annual cost. The Commission estimates that the ongoing aggregate annual cost would be $45,000, which corresponds to $4,500 per registered SDR.[1313]

The Commission does not believe there are significant one-time costs related to Rule 904. The Commission believes that, other than the costs related to the notice provisions cited above, any additional costs are subsumed in the costs associated with Rules 901 and 902. For example, the requirement for reporting sides to report information to the registered SDR upon receiving a notice that the registered SDR has resumed its normal operations would be part of the reporting sides' reporting obligations under Rule 901. The requirement to disseminate transaction reports held in queue should not present any costs in addition to those already contained in Rule 902. The Commission believes that the systems of the SDR would already have to account for system upgrades and maintenance, power outages, system overloads or other malfunctions or

---

[1313] The Commission derived this number as follows: [(Operations Specialist (36 hours) at $125 per hour) x (10 registered SDRs)] = $45,000, which corresponds to $4,500 per registered SDR.

contingencies and as a result there would not be any additional quantifiable costs to also account for normal closing hours. Furthermore, to the extent that market participants have already expended resources in anticipation of the adoption of Regulation SBSR, the costs could be significantly lower. As a result, the Commission's estimates should be viewed as an upper bound of the potential costs of Regulation SBSR.

After reviewing comment letters received in response to the Regulation SBSR Proposing Release and the Cross-Border Proposing Release, the Commission continues to believe that these cost estimates pertaining to Rule 904, as adopted, remain valid. The Commission has received no comments to the contrary.

b. Error Reporting—Rule 905

Rule 905 requires any counterparty to a security-based swap that discovers an error in previously-reported information to take action to ensure that corrected information is provided to the registered SDR to which the initial transaction was reported. The rule also requires a registered SDR to verify any error reports that it receives and correct and, if necessary, publicly disseminate a corrected transaction report. This rule should enhance the overall reliability of security-based swap transaction data that must be maintained by registered SDRs. For registered SDRs, the ability to verify disputed information, process a transaction report cancellation, accept a new security-based swap transaction report, and update relevant records are all capabilities that the registered SDR must implement to comply with its obligations under Regulation SBSR. Likewise, to comply with Rule 905, a registered SDR must disseminate a corrected transaction report in instances where the initial report included erroneous primary trade information. This will allow market observers to receive updated transaction information from the same source that publicly disseminated the original transaction and allow them to integrate updated transaction information into their understanding of the security-based swap market.

Requiring participants to promptly correct erroneous transaction information should help ensure that the Commission and other relevant authorities have an accurate view of risks in the security-based swap market. Correcting inaccurate security-based swap transaction data held by a registered SDR also could benefit market participants by helping them to accurately value the security-based swaps they carry on their books.

The Commission believes that the costs of requirements under these rules will be related to developing and publicly providing the necessary protocols for carrying out error correction and reporting.

Rule 905(a), as adopted, establishes procedures for correcting errors in reported and disseminated security-based swap information, recognizing that that any system for transaction reporting must accommodate for the possibility that certain data elements may be incorrectly reported. Rule 905(b), as adopted, sets forth the duties of a registered SDR to verify disputed information and make necessary corrections. If the registered SDR either discovers an error in a transaction on its system or receives notice of an error from a counterparty, Rule 905(b)(1) requires the registered SDR to verify the accuracy of the terms of the security-based swap and, following such verification, promptly correct the erroneous information contained in its system. Rule 905(b)(2) will further require that, if the erroneous transaction information contained any data that fall into the categories enumerated in Rule 901(c) as information required to be reported, the registered SDR would be required to publicly disseminate a corrected transaction report of the security-based swap promptly following verification of the trade by the counterparties to the security-based swap.

The Commission continues to believe that promptly submitting an amended transaction report to the appropriate registered SDR after discovery of an error as required under Rule 905(a)(2) will impose costs on reporting sides. Likewise, the Commission continues to believes that promptly notifying the relevant reporting side after discovery of an error as required under Rule 905(a)(1) will impose costs on non-reporting-party participants.

With respect to reporting side, the Commission continues to believe that Rule 905(a) will impose an initial, one-time cost associated with designing and building the reporting entity's reporting system to be capable of submitting amended security-based swap transactions to a registered SDR. In addition, reporting sides will face ongoing costs associated with supporting and maintaining the error reporting function.[1314]

The Commission continues to believe that designing and building appropriate reporting system functionality to comply with Rule 905(a)(2) will be a component of, and represent an incremental "add-on" to, the cost to build a reporting system and develop a compliance function as required under Rule 901.

The Commission estimates this incremental burden to be equal to 5% of the one-time and annual costs associated with designing and building a reporting system that is in compliance with Rule 901,[1315] plus 10% of the corresponding one-time and annual costs associated with developing the reporting side's overall compliance program required under Rule 901.[1316] Thus,

---

1314 The Commission continues to believe that the actual submission of amended transaction reports required under Rule 905(a)(2) would not result in material, independent costs because this would be done electronically though the reporting system that the reporting party must develop and maintain to comply with Rule 901. The costs associated with such a reporting system are addressed in the Commission's analysis of Rule 901. See supra Section XXII(C)(1)(b).

1315 See Regulation SBSR Proposing Release, 75 FR at 75271-72.

1316 See id.

for reporting sides, the Commission estimates that Rule 905(a) will impose an initial (first-year) aggregate cost of $3,547,500, which is approximately $11,825 per reporting side,[1317] and an ongoing aggregate annual cost of $1,192,500, which is approximately $4,000 per reporting side.[1318]

With regard to participants who are not assigned the duty to report a particular transaction, the Commission believes that Rule 905(a) will impose an initial and ongoing cost associated with promptly notifying the relevant reporting side after discovery of an error as required under Rule 905(a)(1). The Commission estimates that such annual cost will be approximately $64,000,000, which corresponds to approximately $13,000 per participant.[1319] This figure is based on the Commission's estimates of (1) 4,800 participants; and (2) 1.14 transactions per day per participant.[1320]

Rule 905 also imposes duties on security-based swap counterparties and registered SDRs to correct errors in reported and disseminated information.

1317 This figure is calculated as follows: [((($49,000 one-time reporting system development costs) x (0.05)) + (($2,500 annual maintenance of reporting system) x (0.05)) + (($54,000 one-time compliance program development) x (0.1)) + (($38,500 annual support of compliance program) x (0.1))) x (300 reporting sides)] = $3,547,500, or $11,825 per reporting side.

1318 This figure is calculated as follows: [((($2,500 annual maintenance of reporting system) x (0.05)) + ((38,500 annual support of compliance program) x (0.1))) x (300 reporting sides)] = $1,192,500, or approximately $4,000 per reporting side.

1319 This figure is based on the following: [(1.14 error notifications per non-reporting-side participant per day) x (365 days/year) x (Compliance Clerk (0.5 hours/report) at $64 per hour) x (4,800 participants)] = $63,912,960, or approximately $64,000,000, which corresponds to approximately $13,000 per participant.

1320 This figure is based on the following: [((2 million estimated annual security-based swap transactions) / (4,800 participants)) / (365 days/year)] = 1.14 transactions per day.

The costs associated with establishing these capabilities, including systems development, support, and maintenance, are largely addressed in the Commission's analysis of those rules.[1321] The Commission estimates that to develop and publicly provide the necessary protocols for carrying out these functions would impose on each registered SDR a cost of approximately $200,000.[1322] The Commission estimates that to review and update such protocols will impose an annual cost on each registered SDR of $400,000.[1323]

Accordingly, the Commission estimates that the initial aggregate annual cost on registered SDRs under Rule 905, as adopted, will be approximately $6,000,000, which corresponds to approximately $600,000 for each registered SDR.[1324] The Commission further estimates that the ongoing aggregate annual cost on registered SDRs under Rule 905, as adopted, will be approximately $4,000,000, which corresponds to approximately $400,000 for each registered SDR.

c. Other Participants' Duties—Rule 906

Rule 906(a) requires a registered SDR to send a notice to security-based swap counterparties that are participants of that SDR about any UIC information missing from

---

1321 See SDR Adopting Release, Sections VIII and IX.

1322 This figure is based on the following: [(Sr. Programmer (80 hours) at $303 per hour) + (Compliance Manager (160 hours) at $283 per hour) + (Compliance Attorney (250 hours) at $334 per hour) + (Compliance Clerk (120 hours) at $64 per hour) + (Sr. Systems Analyst (80 hours) at $260 per hour) + (Director of Compliance (40 hours) at $446 per hour) = $199,340, or approximately $200,000 per registered SDR.

1323 This figure is based on the following: [(Sr. Programmer (160 hours) at $303 per hour) + (Compliance Manager (320 hours) at $283 per hour) + (Compliance Attorney (500 hours) at $334 per hour) + (Compliance Clerk (240 hours) at $64 per hour) + (Sr. Systems Analyst (160 hours) at $260 per hour) + (Director of Compliance (80 hours) at $446 per hour)] = $398,680, or approximately $400,000 per registered SDR.

1324 This figure is based on the following: [($199,340 to develop protocols) + ($398,680 for annual support)) x (10 registered SDRs)] = $5,980,200, or approximately $6,000,000, which corresponds to approximately $600,000 per registered SDR.

transaction reports. Rule 906(a) also obligates such participants to provide the missing UIC information to the registered SDR upon receipt of such notice. Rule 906(a) is designed to enable a registered SDR to obtain a complete record of the necessary information for each security-based swap transaction and thereby enable the Commission and other relevant authorities to obtain a comprehensive picture of security-based swap transactions, which will facilitate surveillance and supervision of the security-based swap markets. More complete security-based swap records may provide the Commission necessary information to investigate specific transactions and market participants.

Rule 906(b) is designed to enhance the Commission's ability to monitor and surveil the security-based swap markets by requiring each participant of a registered SDR to report the identity of its ultimate parent and any affiliates that also are participants of that registered SDR. Obtaining this ultimate parent and affiliate information will be helpful for understanding the risk exposures of not only individual participants, but also for related participants operating within a larger financial group. The Commission expects these costs of requiring participants to provide ultimate parent and affiliate information to registered SDRs will be modest and, in any event, believes that the costs of providing this information are justified. Having information on the ultimate parent and affiliate would enhance the ability of the Commission to monitor security-based swap exposures within ownership groups, allowing it to better assess the overall risk exposure of these groups. The Commission is also attempting to reduce these burdens by requiring participants to report the identity only of their ultimate parent(s) but not any intermediate parent(s). The Commission further notes that a participant is not required to provide any information about an affiliate, other than its counterparty ID.[1325] The participant is not required to provide any transaction or other information on the affiliate's behalf.

Rule 906(c) is designed to enhance the overall reliability security-based swap transaction data that is required to be reported to a registered SDR pursuant to Rule 901 by requiring registered security-based swap dealers and registered major security-based swap participants to establish, maintain, and enforce written policies and procedures addressing compliance with Regulation SBSR. Rule 901(a) should result in reliable reporting of security-based swap transaction data by requiring key participants to focus internal procedures on the reporting function. Reliable reporting would benefit counterparties, relevant authorities, and the market generally, by reducing the likelihood of errors in regulatory and publicly disseminated data. This could allow relevant authorities and the public to have confidence in the data and minimize the need to make corrections in the future.

The Commission believes that the costs of requirements under these rules will be related to developing the written policies and procedures necessary to satisfy Rule 901's reporting requirements. Once development is complete, SDRs will face ongoing costs associated with maintaining and enforcing these policies and procedures.

Rule 906(a) requires a registered SDR, once a day, to send a report to each participant identifying, for each security-based swap to which that participant is a counterparty, any security-based swap(s) for which the registered SDR lacks counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID. Rule 906(a) requires a participant that receives such a

1325 The Commission does not believe that the change in Rule 906(b) from "participant ID" to "counterparty ID" will result in any change in the cost to participants. The information to be provided is similar in scope and will, in the Commission's estimation, better accomplish the objective of ensuring that a registered SDR can identify each counterparty to a security-based swap.

report to provide the missing information to the registered SDR within 24 hours. Rule 906(b) requires participants to provide a registered SDR with information identifying the participant's affiliate(s) that are also participants of the registered SDR, as well as its ultimate parent(s). Additionally, under Rule 906(b), participants are required to promptly notify the registered SDR of any changes to the information previously provided. Rule 906(c) requires a participant that is a registered security-based swap dealer or registered major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation SBSR.

Rule 906(a) requires a participant that receives a daily report from a registered SDR to provide the missing UICs to the registered SDR within 24 hours. The Commission believes that Rule 906(a) will result in an initial and ongoing aggregate annual cost for all participants since even participants that are the reporting side for some transactions will be the non-reporting side for other transactions. The Commission estimates that Rule 906(a) will result in an initial and ongoing aggregate annual cost for participants of approximately $12,800,000, which corresponds to a cost of approximately $2,700 per participant.[1326] This figure was based on the Commission's preliminary estimates of (1) 4,800 participants and (2) 1.14 transactions per day per participant.[1327]

1326 This figure is based on the following: [(1.14 missing information reports per participant per day) x (365 days/year) x (Compliance Clerk (0.1 hours) at $64 per hour) x (4,800 participants)] = $12,782,592, or approximately $12,800,000, which corresponds to approximately $2,700 per participant.

1327 This figure is based on the following: [((2 million estimated annual security-based swap transactions) / (4,800 participants)) / (365 days/year)] = 1.14 transactions per day. See supra Section XXI.

Rule 906(b) requires every participant to provide a registered SDR an initial parent/affiliate report, using ultimate parent IDs and counterparty IDs, and updating that information, as necessary. The Commission continues to believe that the cost for each participant to submit an initial or update report will be $32.[1328] The Commission estimates that each participant will submit two reports each year.[1329] In addition, the Commission estimates that there may be 4,800 security-based swap participants and that each one may connect to two registered SDRs. Accordingly, the Commission estimates that the initial and ongoing aggregate annual cost associated with Rule 906(b) will be $614,400, which corresponds to $128 per participant.[1330]

Rule 906(c) requires each participant of a registered SDR that is a registered security-based swap dealer or registered major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation SBSR.[1331] Rule 906(c) also requires the review and updating of such policies and procedures at least annually. The Commission continues to estimate that developing and implementing written policies and procedures as required under the Rule 906 could result in a one-time initial cost to

---

1328 This figure is based on the following: [(Compliance Clerk (0.5 hours) at $64 per hour) x (1 report)] = $32.

1329 During the first year, the Commission believes each participant would submit its initial report and one update report. In subsequent years, the Commission estimates that each participant would submit two update reports.

1330 This figure is based on the following: [($32/report) x (2 reports/year/registered SDR connection) x (2 registered SDR connections/participant) x (4,800 participants)] = $614,400, which corresponds to $128 per participant.

1331 As is explained in the Paperwork Reduction Act discussion, the Commission estimates that there will be approximately 50 registered security-based swap dealers and 5 registered major security-based swap participants for a total of 55 respondents. See supra Section XXII(C)(1)(b)(i).

each registered security-based swap dealer or registered major security-based swap participant of approximately $58,000.[1332] This figure includes the estimated cost to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing.[1333] In addition, the Commission estimates that the annual cost to maintain such policies and procedures, including a full review at least annually, as required under the adopted rule, will be approximately $34,000 for each registered security-based swap dealer or registered major security-based swap participant.[1334] This figure is based on an estimate of the cost to review existing policies and procedures, make any necessary updates, conduct ongoing training, maintain relevant systems and internal controls systems, and perform necessary testing.

Accordingly, the Commission estimates that the initial aggregate annual cost associated with Rule 906(c) would be approximately $5,060,000, which corresponds to $92,000 per covered participant.[1335] The Commission further estimates that the ongoing aggregate annual cost

1332 The Commission derived its estimate from the following: [(Sr. Programmer (40 hours) at $303 per hour) + (Compliance Manager (40 hours) at $283 per hour) + (Compliance Attorney (40 hours) at $334 per hour) + (Compliance Clerk (40 hours) at $64 per hour) + (Sr. Systems Analyst (32 hours) at $260 per hour) + (Director of Compliance (24 hours) at $446 per hour)] = $58,384, or approximately $58,000 per covered participant.

1333 See Cross-Border Proposing Release, 78 FR at 30994, note 256.

1334 The Commission derived its estimate from the following: [(Sr. Programmer (8 hours) at $303 per hour) + (Compliance Manager (24 hours) at $283 per hour) + (Compliance Attorney (24 hours) at $334 per hour) + (Compliance Clerk (24 hours) at $64 per hour) + (Sr. Systems Analyst (16 hours) at $260 per hour) + (Director of Compliance (24 hours) at $446 per hour)] = $33,632, or approximately $34,000 per covered participant.

1335 The Commission derived its estimate from the following: [($58,000 + $34,000) x (55 covered participants)] = $5,060,000, or approximately $92,000 per covered participant.

associated with Rule 906(c) will be approximately $1,870,000, which corresponds to $34,000 per covered participant.[1336]

Rule 906(a) requires a registered SDR, once a day, to send a report to each participant identifying, for each security-based swap to which that participant is a counterparty, the security-based swap(s) for which the registered SDR lacks counterparty ID and (if applicable) broker ID, branch ID, execution agent ID, trading desk ID, and trader ID. Under Rule 906(a), a participant that receives such a report will be required to provide the missing ID information to the registered SDR within 24 hours.

The Commission believes that each registered SDR would face a one-time, initial cost of approximately $33,000 to create a report template and develop the necessary systems and processes to produce a daily report required by Rule 906(a).[1337] The Commission further believes that there will be an ongoing annual cost for a registered SDR to generate and issue the daily reports, and to enter into its systems the ID information supplied by participants in response to the daily reports, of approximately $30,000.[1338]

The Commission continues to estimate that the initial aggregate annual cost for registered SDRs associated with Rule 906(a) would be approximately $630,000, which corresponds to

---

1336 The Commission derived its estimate from the following: [($34,000) x (55 covered participants)] = $1,870,000.

1337 The Commission derived its estimate from the following: [(Senior Systems Analyst (40 hours) at $260 per hour) + (Sr. Programmer (40 hours) at $303 per hour) + (Compliance Manager (16 hours) at $283 per hour) + (Director of Compliance (8 hours) at $446 per hour) + (Compliance Attorney (8 hours) at $334)] = $33,288, or approximately $33,000 per registered SDR.

1338 The Commission derived its estimate from the following: [(Senior Systems Analyst (24 hours) at $260 per hour) + (Sr. Programmer (24 hours) at $303 per hour) + (Compliance Clerk (260 hours) at $64 per hour)] = $30,152, or approximately $30,000 per registered SDR.

$63,000 per registered SDR.[1339] The Commission estimates that the ongoing aggregate annual cost for registered SDRs associated with Rule 906(a) will be approximately $300,000, which corresponds to $30,000 per for registered SDR.

d. Registered SDR Policies and Procedures—Rule 907

Rule 907(a) requires a registered SDR to establish and maintain written policies and procedures with respect to the receipt, reporting, and dissemination of security-based swap transaction data pursuant to Regulation SBSR. Under Rules 907(a)(1) and (2), a registered SDR's policies and procedures must specify the data elements of a security-based swap that must be reported and the reporting format that must be used for submitting information. Under Rule 907(a)(3), the registered SDR's policies and procedures must specify procedures for reporting life cycle events and corrections to previously submitted information. Rule 907(a)(4) requires policies and procedures for flagging transactions having special characteristics. Rules 907(a)(5) requires policies and procedures for assigning UICs in a manner consistent with Rule 903. Rule 907(a)(6) requires policies and procedures for periodically obtaining from each of its participants the ultimate parent and affiliate information required to be submitted to the SDR by Rule 906(b).

By requiring SDRs to establish and maintain policies and procedures pursuant to Rule 907(a)(1), SDRs likely will have to consult with their participants in devising flexible and efficient methods of obtaining high quality transaction data from market participants. This rule allows SDRs to adjust their policies and procedures as market conventions and technologies change. For example, registered SDRs will have the flexibility to incorporate new reporting methodologies more quickly. In addition, Rule 907(a)(1) should reduce the likelihood that

1339 The Commission derived its estimate from the following: [($33,288 + $30,152) x (10 registered SDRs)] = $634,400, or approximately $630,000, which corresponds to $63,440, or approximately $63,000 per registered SDR.

financial innovation that leads to a new security-based swap products will disrupt regulatory reporting and public dissemination of transaction information related to the new product.

At the same time, the Commission believes that there are benefits to enforcing minimum standards for reporting transaction information, standards that will be established as a result of the requirement that SDRs develop policies and procedures in accordance with Rule 907. As noted in Section XXII(B)(1)(a)(iii), the Commission anticipates that a small number of registered SDRs will serve the security-based swap market. These SDRs may enjoy market power relative to their participants, and we believe that imposing minimum standards on them is reasonable to mitigate the risk that imperfect competition leads to low quality data collection.

Further, the requirement in Rule 907(c) that a registered SDR make publicly available on its website the policies and procedures required by Regulation SBSR will allow the public to better understand and interpret the data publicly disseminated by SDRs. For example, under Rule 907(a)(4)(i), a registered SDR will have policies and procedures that identify the characteristics of a security-based swap that could, in the fair and reasonable estimation of the registered SDR, cause a person without knowledge of these characteristics to receive a distorted view of the market. Making publicly available a description of the flags that it requires will allow the public to interpret the flags they observe in publicly disseminated data. Rule 907(d) requires registered SDRs to review, and update as necessary, the policies and procedures required by Regulation SBSR at least annually, and indicate the date on which they were last reviewed.

Finally, Rule 907(e) requires a registered SDR to provide to the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to the registered SDR pursuant to Regulation SBSR and the registered SDR's policies and procedures established thereunder. Rule 907(e) will assist the Commission in examining for compliance with Regulation SBSR and in bringing enforcement or other administrative actions as necessary or appropriate. Required data submissions that are untimely, inaccurate, or incomplete could diminish the value of publicly disseminated reports that are designed to promote transparency and price discovery.

The Commission believes that the costs of requirements under Rule 907(a) are related to developing policies and procedures. Rules 907(c) and 907(d) require a registered SDR to update its policies and procedures as necessary and to post these policies and procedures on its website. Rule 907(e) requires a registered SDR to provide the Commission with information related to the timeliness, accuracy, and completeness of data reported to it pursuant to Regulation SBSR and the registered SDR's policies and procedures established thereunder.

Under Regulation SBSR, registered SDRs have the flexibility to determine the precise means through which they will accept reports of security-based swap transaction data. Rather than setting—by rule—a fixed schedule of data elements that must be reported as well as the specific reporting language or reporting protocols that must be used, Regulation SBSR instead requires registered SDRs to establish and maintain policies and procedures that detail these requirements. Persons seeking to register as SDRs may have ongoing discussions with their participants—both before and after registration—about the appropriate means of permitting reporting in a manner that captures all the elements required by Rule 901 while minimizing the administrative burden on reporting sides. Also, the data elements necessary to understand a trade could evolve over time as new contracts are developed, or that the most efficient means of reporting also could evolve as new technologies or reporting languages are devised. In light of these considerations, the Commission believes that registered SDRs and, to the extent that SDRs seek discussion with them, market participants will be in a better position to define the necessary reporting elements over time as the security-based swap market evolves.

As discussed above in Section IV, the Commission considered the alternative of requiring reporting parties to use a single reporting language or protocol in submitting data to registered SDRs, and three commenters encouraged the use of the FpML standard.[1340]

While specifying a single, acceptable standard would remove any ambiguity surrounding data formats that reporting parties could use for transaction reports, the Commission has chosen not to adopt such an approach, for three reasons. First, market participants may have preferences over the different open-source structured data formats available. By allowing registered SDRs to choose from among formats widely used by participants, the adopted approach allows SDRs to coordinate with their participants to select standards that allow reporting parties to efficiently carry out their obligations under Rule 901. Second, allowing SDRs flexibility in the formats they accept should help ensure that they can accommodate innovations in the security-based swap market that lead to changes in data elements that must be reported under Rule 901. Third, the Commission believes that, so long as registered SDRs can make security-based swap transaction data accessible to the Commission using a uniform format and taxonomy, it may not be necessary to require reporting sides to report transaction data to registered SDRs using a single format or taxonomy. This approach gives a registered SDR the opportunity to differentiate its services by offering reporting sides the ability to report using different formats and taxonomies, if the SDR can convert these transaction reports into the uniform format and taxonomy pursuant to which the Commission will require the SDR to make transaction data accessible to the Commission.

1340 See DTCC II at 16; ISDA I at 4; ISDA/SIFMA I at 8.

The Commission believes that ten registered SDRs will be subject to Rule 907, and that developing and implementing written policies and procedures as required under Rule 907, will result in an initial, one-time cost to each registered SDR of approximately $4,100,000.[1341] This figure includes the estimated cost to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, perform necessary testing, monitor participants, and compile data. In addition, the Commission believes that its estimate for maintaining such policies and procedures, including a full review at least annually; making its policies and procedures publicly available on its website; and providing the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to it pursuant to Regulation SBSR, and the registered SDR's policies and procedures is reasonable. As a result, the Commission believes its preliminary estimate of approximately $8,200,000 for each registered SDR is valid.[1342] This figure is based on an estimate of the cost to review existing policies and procedures, make necessary updates,

---

1341 The Commission derived its estimate from the following: [(Sr. Programmer (1,667 hours) at $303 per hour) + (Compliance Manager (3,333 hours) at $283 per hour) + (Compliance Attorney (5,000 hours) at $334 per hour) + (Compliance Clerk (2,500 hours) at $64 per hour) + (Sr. Systems Analyst (1,667 hours) at $260 per hour) + (Director of Compliance (833 hours) at $446 per hour)] = $4,083,278, or approximately $4,100,000 per registered SDR. The Commission believes that potential SDRs that have similar policies and procedures in place may find that these costs would be lower, while potential SDRs that do not have similar policies and procedures in place may find that the potential costs would be higher.

1342 The Commission derived its estimate from the following: [(Sr. Programmer (3,333 hours) at $303 per hour) + (Compliance Manager (6,667 hours) at $283 per hour) + (Compliance Attorney (10,000 hours) at $334 per hour) + Compliance Clerk (5,000 hours) at $64 per hour) + (Sr. Systems Analyst (3,333 hours) at $260 per hour) + (Director of Compliance (1,667 hours) at $446 per hour)] = $8,166,722, or approximately $8,200,000 per registered SDR. The Commission believes that potential SDRs that have similar policies and procedures in place may find that these costs would be lower, while potential SDRs that do not have similar policies and procedures in place may find that the potential costs would be higher.

conduct ongoing training, maintain relevant systems and internal controls systems, perform necessary testing, monitor participants, and collect data.[1343] Accordingly, the Commission estimates that the initial annual cost associated with Rule 907 will be approximately $12,250,000 per registered SDR, which corresponds to an initial annual aggregate cost of approximately $122,500,000.[1344] The Commission estimates that the ongoing annual cost associated with Rule 907 will be approximately $8,200,000 per registered SDR, which corresponds to an ongoing annual aggregate cost of approximately $82,000,000.[1345] These figures are based, in part, on the Commission's experience with other rules that require entities to establish and maintain compliance with policies and procedures.[1346]

Finally, the Commission continues to believe that the Rule 907(e) requirement that a registered SDR must provide to the Commission, upon request, such information as the Commission determines necessary or appropriate for the Commission to perform the duties of the Commission, registered SDRs will incur costs. The Commission notes, however, that any such costs are already covered by rules governing SDRs adopted in the SDR Adopting Release

---

1343 In the Regulation SBSR Proposing Release, the Commission also included "calculate and publish block trade thresholds" as one of the items in the list of items that an SDR would need to undertake on an ongoing basis with respect to its policies and procedures under Rule 907. See Regulation SBSR Proposing Release, 75 FR at 75276-77. Although the Commission is not adopting Rule 907(b) at this time, the costs discussed herein pertain to all of the policies and procedures of a registered SDR. The Commission does not believe that not adopting Rule 907(b), which applies only to policies and procedures relating to block trades, would have had a measureable impact on the costs related to developing the policies and procedures of the registered SDR. As a result, the Commission believes that its cost estimate continues to be valid.

1344 The Commission derived its estimate from the following: [((4,083,278) + ($8,166,722)) x (10 registered SDRs)] = $122,500,000, or approximately $123,000,000.

1345 The Commission derived its estimate from the following: [($8,166,722) x (10 registered SDRs)] = $81,667,220, or approximately $82,000,000.

1346 See Cross-Border Proposing Release, 78 FR at 30994, note 256.

and, thus, do not need to be separately considered here. Specifically, Rule 13n-5(b) requires a registered SDR to establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the SDR is complete and accurate, and also to ensure that the transaction data and positions that it maintains are complete and accurate.[1347] The Commission further believes that these capabilities will enable a registered SDR to provide the Commission information or reports as may be requested pursuant to Rule 907(e). The Commission believes that Rule 907(e) will not impose any costs on a registered SDR beyond those imposed by Rule 13n-5(b). Furthermore, to the extent that market participants have already expended resources in anticipation of the adoption of Regulation SBSR, the costs could be significantly lower. As a result, the Commission's estimates should be viewed as an upper bound of the potential costs of Regulation SBSR.

After reviewing comment letters received in response to the Regulation SBSR Proposing Release and the Cross-Border Proposing Release, as well as evaluating the most recent data available to the Commission, the Commission continues to believe that these cost estimates related to Rule 907, as adopted, remain valid.

e. SIP Registration by Registered SDRs—Rule 909

Rule 909 requires a registered SDR to register with the Commission as a SIP. SIP registration of a registered SDR will help ensure fair access to important security-based swap transaction data reported to and publicly disseminated by the registered SDR. Specifically, requiring a registered SDR to register with the Commission as a SIP will subject it to Section 11A(b)(5) of the Exchange Act,[1348] which provides that a registered SIP must notify the

[1347] See SDR Adopting Release, Rules 13n-5(b)(1)(iii) and 13n-5(b)(3).

[1348] 15 U.S.C. 78k-1(b)(5).

Commission whenever it prohibits or limits any person's access to its services. If the Commission finds that the person has been discriminated against unfairly, the Commission can require the SIP to provide access to that person.[1349] Section 11A(b)(6) of the Exchange Act[1350] also provides the Commission authority to take certain regulatory action as may be necessary or appropriate against a registered SIP.[1351] Potential users of security-based swap market data will benefit from the Commission having the additional authority over a registered SDR/SIP provided by Sections 11A(b)(5) and 11A(b)(6) to help ensure that these persons offer their security-based swap market data on terms that are fair and reasonable and not unreasonably discriminatory.

Because the Commission is adopting a revised Form SDR that incorporates certain requests for information derived from Form SIP and will not require submission of a separate Form SIP, all programmatic costs of completing Form SDR are included in the Commission's SDR Adopting Release.[1352] As proposed and re-proposed, Regulation SBSR would have required the use of a separate form, existing Form SIP, for this purpose. In response to comments, however, the Commission is adopting a revised Form SDR that incorporates certain requests for information derived from Form SIP, and will not require submission of a separate Form SIP. All programmatic costs of completing Form SDR are scored in the SDR Adopting Release.[1353] Therefore, final Rule 909 itself imposes no programmatic costs on registered SDRs.

[1349] See 15 U.S.C. 78k-1(b)(5)(B).

[1350] 15 U.S.C. 78k-1(b)(6).

[1351] See supra note 994.

[1352] See SDR Adopting Release, Section VIII(D)(1).

[1353] See id.

7. Definitions—Rule 900

The Commission believes that Rule 900 will not entail any material costs to market participants. Rule 900 defines terms used in Regulation SBSR and does not, in itself, impose any obligations or duties. To the extent that the scope of a particular definition subjects a person to one or more provisions of Regulation SBSR, the costs and benefits of that rule are assessed (and, where feasible, calculated) in light of the scope of persons affected. With respect to the definition of "U.S. person," the Commission believes that the Commission's Title VII rules would benefit from having the same terms throughout and could, therefore, reduce assessment costs for market participants that might be subject to these rules.

D. Effects on Efficiency, Competition, and Capital Formation

1. Introduction

Section 3(f) of the Exchange Act[1354] requires the Commission, whenever it engages in rulemaking and is required to consider or determine whether an action is necessary or appropriate in the public interest, also to consider, in addition to the protection of investors, whether the action would promote efficiency, competition, and capital formation ("ECCF"). In addition, Section 23(a)(2) of the Exchange Act[1355] requires the Commission, when making rules under the Exchange Act, to consider the impact of such rules on competition. Section 23(a)(2) also prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.

Regulation SBSR's effects on efficiency, competition, and capital formation are often closely related to one another, and it is difficult to distinguish between the effects of the final

---

1354 15 U.S.C. 78c(f).

1355 15 U.S.C. 78w(a)(2).

rules on each of these elements. For example, elements of a security-based swap market structure that foster competition between liquidity suppliers may result in narrower spreads and higher trading volume, eventually resulting in greater price efficiency. Similarly, a security-based swap market that provides low-cost opportunities for firms to hedge commercial and financial risks as a result of low implicit transaction costs may encourage capital formation by allowing these firms to share risks with market participants that are better able to bear them, thereby reducing their need to engage in precautionary savings. However, as the last example indicates, the final rules' effects on capital formation often arise indirectly through their effects on efficiency and competition.

The following discussion of the effects of Regulation SBSR on efficiency, competition, and capital formation considers the regime that Regulation SBSR establishes for regulatory reporting and public dissemination as well as the particular means of implementation that the Commission has chosen, relative to alternative means of implementation considered. Because the various elements of these rules will affect the behavior of counterparties, infrastructure providers, and market participants in general, the Commission has considered the economic effects at each of these levels, including cases in which policy alternatives that may be privately efficient for individual actors, may nevertheless fail to be efficient for the overall market.

Regulation SBSR establishes a regime for regulatory reporting and public dissemination of security-based swap transaction data. Under the final rules, the Commission and other relevant authorities will have access to detailed information about security-based swap transaction activity and about the risk exposures of security-based swap counterparties to both reference entities and to each other. At the same time, the public will enjoy unprecedented access to pricing and volume data of security-based swap transactions. Post-trade transparency in the security-based swap market will reduce information asymmetries, thereby allowing even small counterparties to base their trading decisions on information about activity in the broader market, which they would not be able to observe without post-trade transparency. Moreover, public dissemination of security-based swap transactions could be used as an input to economic decisions in other markets (e.g., the corporate equity or bond markets).

2. Regulatory Reporting

As a result of the final rules, the Commission and other relevant authorities will have access, through registered SDRs, to comprehensive information about the security-based swap market. This information should improve relevant authorities' ability to oversee the security-based swap market both for systemic risk purposes and to detect, deter, and address market abuse.

Regulatory access to security-based swap data will facilitate monitoring of risk exposures with implications for financial stability that market participants do not internalize. For example, Regulation SBSR will provide relevant authorities with visibility into the security-based swap positions of a participant's ultimate parent. Regulation SBSR also will allow relevant authorities to detect unusual activity at a very granular level, by trading desk or even individual trader. Similarly, by filtering exposures to single-name CDS via the product ID, relevant authorities will be able to better understand any potential risk to financial stability that could arise if a corporate default triggers CDS payouts between counterparties. Information about the activity and exposures of security-based swap market participants could allow the Commission or other relevant authorities to take actions that reduce the likelihood of disruption to the smooth functioning of financial markets or to reduce the magnitude of such disruptions when they do occur.[1356] If such disruptions also impair capital formation by reducing the ability or willingness of financial intermediaries or other market participants to borrow or lend, then market oversight that reduces financial instability may also facilitate capital formation.

The opacity of the security-based swap market can contribute to uncertainty during periods of financial crisis. In the absence of information about the outstanding obligations between counterparties to security-based swaps, financial market participants may face uncertainty over the extent to which large financial institutions are exposed to each other's credit risk. This environment may create incentives for financial market participants to reduce risk exposures and seek safer assets (such as cash or Treasury securities), which could lead to a significant reduction in investment in capital goods.[1357] Under a robust regime of regulatory reporting, the Commission and other relevant authorities will have greater means to identify the extent of the relevant exposures and the interrelatedness of risks in the security-based swap market, which could be particularly important in times of financial stress. Providing relevant authorities access to information about outstanding obligations that result from security-based swap activity could allow these authorities to assist in the event of counterparty default. This knowledge could reduce market participants' uncertainty in times of stress, if, for example, it suggests to them a more orderly wind-down of risk exposures of the defaulting counterparty. To the extent that reduced uncertainty results in more efficient risk-sharing it may reduce market participants' demand for safe assets, as described above, and hence may improve the environment for capital formation.

1356 See supra Section XXII(B)(1)(d) (describing current state of efficiency in the security-based swap market).

1357 If financial market participants invest their money in cash or Treasury securities, rather than riskier assets such as stocks or corporate bonds, this may make it more difficult for companies to raise capital and invest in capital goods.

Regulatory reporting will also enable the Commission and other relevant authorities to improve their monitoring of market practices. This could have direct effects on competition in the security-based swap market. Absent regulation by the Commission and other relevant authorities, potential market participants may consider the potential costs of market abuse to be a barrier that discourages their entry into the security-based swap market. The knowledge that the Commission and other relevant authorities are able to conduct surveillance on the basis of regulatory reporting may lower their barriers to entry since surveillance and the resulting increased probability of detection may deter potential market abuse in the security-based swap market. This could result in broader participation and improved efficiency, competition, and capital formation due to the availability of more risk-sharing opportunities between market participants.

3. Public Dissemination

Regulation SBSR establishes a requirement for public dissemination of security-based swap transaction information. Currently, public access to security-based swap transaction information is limited to aggregate pricing and volume data made available by clearing agencies and DTCC-TIW, as well as infrequent reporting by large multilateral organizations. There is no comprehensive or widely available source of transaction-by-transaction pricing and volume information.

The Commission believes that public availability of pricing and volume data for individual security-based swaps, as required by Title VII, should promote efficiency and competition by enabling information produced by activity in the security-based swap markets to be used as an input to myriad economic decisions, when currently limited transaction information is generally available only to large dealers who observe customer order flow.[1358] Thus, smaller market participants, being able to view all security-based swap transactions disseminated by registered SDRs, can observe from recently executed prices whether there may be profitable opportunities to enter the market, thereby increasing competition. In addition, a firm may use information about the pricing of CDS written on its debt to decide on the appropriate opportunity cost of capital to apply to the cash flows of new investment projects, thereby promoting efficiency. Similarly, a lender may use information about credit risk embedded in the pricing of CDS written on a borrower's existing debt to inform the lender's decision of whether or not to extend additional financing, thereby also promoting efficiency.

As discussed in Section XXII(C)(2)(a), public dissemination of security-based swap transactions also may promote better valuation of underlying and related assets by allowing for the inclusion of last-sale information into valuation models. Models without the input of last-sale information could be imprecise or be based on assumptions subject to the evaluator's discretion without having last-sale information to help identify or correct flawed assumptions. As a result, otherwise identical market participants holding the same asset but using different valuation models might arrive at significantly different valuations. This could result in these market participants developing very different views of their risk exposures, resulting in inefficient economic decisions. The Commission anticipates that market observers will incorporate last-sale information that is publicly disseminated by registered SDRs into their valuation models for the same and related assets. Such last-sale information will assist them in developing and validating their pricing models and improve the accuracy of the valuations that

[1358] See supra Section XXII(B)(1)(d) (discussing sources of security-based swap information and efficiency in the current security-based swap market).

they use for a variety of purposes, such as making new investment decisions or managing the risk of existing positions. Efficient allocation of capital relies on accurate valuation of asset prices. Overvaluation of assets could result in a misallocation of capital, as investors seek to purchase or hold an asset that cannot deliver the anticipated risk-adjusted return. By the same token, undervalued assets represent investment opportunities that might go unpursued, because investors do not realize that a more attractive risk-adjusted return may be available. To the extent that post-trade transparency enables asset valuations to move closer to their fundamental values, capital should be more efficiently allocated.

Information revealed through public dissemination of security-based swap transaction details takes on two key characteristics. First, use of a piece of information by one economic agent does not necessarily preclude use of the same information by another. Second, once information is made public under Regulation SBSR, it is, by definition, non-excludable. Dissemination cannot be limited only to those that have direct access to the information (such as dealers who observe significant order flow) or to larger market participants who are willing to pay for the information. These characteristics make it difficult for parties who report transaction data to capture the value that market participants and market observers may gain from receipt of publicly disseminated security-based swap data. As a result, public dissemination of security-based swap transaction information is prone to inefficient supply—for example, parties have an incentive to make incomplete reports of their activity. By establishing minimum requirements for what is reported and publicly disseminated, the Commission believes that Regulation SBSR will limit the degree of this inefficient supply.

Public dissemination will also likely affect efficiency and competition within the security-based market. A primary economic effect of the final rules on public dissemination of transaction information is to reduce the degree of information asymmetry between market participants. Information asymmetries are currently endemic in the security-based swap market. Large dealers can observe a significant amount of order flow provided by their customers and know the prices at which their various customers have traded with them. Other market participants, including the customers of large dealers, generally do not know the prices that other market participants have paid or would be willing to pay for particular security-based swaps, what products are being transacted, or in what volumes. Large dealers collectively, who are able to observe their customers' orders and executions, may be able use this information to adjust the prices that they quote to extract profits at the expense of their customers.[1359] Customers, with very limited ability to obtain information about the prices or sizes of others' transactions, are in an inferior bargaining position to the dealers that they face. To the extent that dealer private information counters the incentives for market participants to efficiently share risks using security-based swaps, it represents a dead-weight loss and not a simple reallocation of gains from trade between dealers and their customers.[1360] Post-trade transparency increases the bargaining power of customers because knowledge of last-sale prices in the same or similar instruments allows them to establish a baseline for negotiations with any dealer.

Post-trade transparency in other financial markets has been shown to improve competition and efficiency by decreasing implicit transaction costs and improving the bargaining power of investors and other non-dealers. For example, a number of studies of the corporate

---

1359 See, e.g., Bessembinder et al., supra note 1259.

1360 A dead-weight loss means that the economy in aggregate is worse off. If market participants do not share risks efficiently as a result of their inferior bargaining position relative to dealers, then risks are not transferred to those market participants who are in the best position to bear them. A dead-weight loss results when the benefits that accrue to dealers as a result of their private information are less than the costs of inefficient risk sharing, or when dealers do not benefit at the equal expense of other market participants.

bond market have found that post-trade transparency, resulting from the introduction of FINRA's TRACE system, reduced implicit transaction costs.[1361] Reduced implicit transaction costs could encourage market entry, particularly of smaller dealers and non-dealers, and potentially increase risk sharing and price competition, thereby promoting efficiency. To the extent that the current security-based swap market is similar to the corporate bond market prior to the introduction of TRACE, post-trade transparency could have similar effects in the security-based swap market.[1362]

Regulation SBSR will permit all market observers for the first time to see last-sale information of security-based swap transactions, thereby reducing the information asymmetry between dealers and non-dealers.[1363] Non-dealers may be able to use publicly disseminated information to negotiate more favorable prices from dealers or to decline to enter into security-based swaps offered at unfavorable prices, thereby improving the efficiency of risk sharing in the security-based swap market. Additionally, public dissemination could assist dealers in deriving better quotations, as knowledge of the prices and volumes at which other market participants have executed transactions could serve as a valuable input for quotations in the same or similar instruments.[1364] As a result, dealers will have a better sense of the market and may not need to build large margins into their quotations to compensate for uncertainty in providing quotations. Increased competition from new entrants and quotations that more accurately reflect fundamental

---

1361 See Edwards, et al., supra note 1223.

1362 In the Regulation SBSR Proposing Release, the Commission requested comment on whether post-trade transparency would have a similar effect on the security-based swap market as it has in other securities markets—and if not, why not. See 75 FR at 75226. No commenters responded to the Commission's request.

1363 A similar information asymmetry, but to a lesser and varying degree, exists between larger and smaller dealers, and it would also be reduced.

1364 See supra Section XXII(B)(2)(a) (discussing the benefits of improved valuation).

value could lead to lower implicit transaction costs for security-based swaps, which will encourage efficient risk sharing and promote price efficiency.[1365]

The Commission recognizes, however, that the final rules will not eliminate entirely the informational advantage of large intermediaries. These market participants will still have the advantage of seeing order flows or inquiries that are not ultimately executed and disseminated. They also will be able to see their completed transactions against customers in real time, while market observers who consume the transaction data that is publicly disseminated by registered SDRs might not—during the interim phase of Regulation SBSR—learn of these transactions until up to 24 hours after they are executed. In addition, an executing intermediary may derive an informational advantage from knowing the identities of both its counterparties and other customers who submit orders or make inquiries about liquidity.

The Commission also acknowledges that implementing post-trade transparency in the security-based swap market could cause some market participants to execute fewer security-based swaps in the U.S. market or to exit the U.S. market completely and execute their transactions in foreign markets instead. To the extent that such events occur, these could be viewed as costs of the final rules that could have a detrimental impact on efficiency, competition, and capital formation. For example, certain market participants that are currently active in the market might not find it desirable for information about their security-based swaps to be publicly known. If market participants respond to the final rules by reducing their trading activity or exiting the market, or if the final rules raise barriers to entry, the result could be reduced competition between the remaining market participants. Besides reduced price competition, exit by certain participants from the market also could result in a less efficient allocation of credit

[1365] See Edwards, et al., supra note 1223.

risk. This could have implications for capital formation if market participants engage in precautionary savings and self-insurance rather than hedging their risks by using capital resources offered by third parties through security-based swaps.[1366]

Public dissemination of security-based swap transactions also may promote efficient valuation of various financial instruments. As a result of the final rules, all market participants and market observers will have the benefit of knowing how counterparties to a particular security-based swap valued the security-based swap at a specific moment in the recent past, and can incorporate this last-sale information into their own valuations for that security-based swap, as well as any related or underlying instrument.[1367] To the extent that last-sale information results in valuations that are more informationally efficient, they may help improve financial stability by making risk management by financial institutions more efficient. This in turn could enhance the ability of market participants to accurately measure financial exposures to each of their counterparties.

Public dissemination of security-based swap transaction information could improve the efficiency of the security-based swap market through more efficient deployment of assets used as collateral for security-based swap transactions. Appropriate collateral allocation is dependent on accurate valuation of security-based swaps. As the value of a security-based swap changes, the likelihood of one party having to make a payout to the other party also changes, which could impact the amount of collateral that one counterparty owes to the other. Hence, misvaluation of

---

1366 The Commission notes there are also plausible cases in which Regulation SBSR might increase the efficiency of risk allocation while also reducing transaction volume. Market participants might determine, as a result of observing publicly disseminated price and volume data, that engaging in a security-based swap transaction is an inefficient means of managing financial or commercial risks.

1367 See supra Section XXII(C)(2).

a security-based swap contract could lead to inefficient allocation of collateral across counterparties. To the extent that public dissemination of security-based swap transactions will help enable better valuations, instances of overcollateralization or undercollateralization should decrease. Furthermore, the better investors can judge the performance of collective investment vehicles because of better valuations, the more efficiently they can allocate their investment capital among available funds.

Post-trade transparency of security-based swaps should promote more efficient valuation of securities on which security-based swaps are based. A clear example of this is the market for single-name CDS, where post-trade transparency may lead to better estimates of the creditworthiness of debt issuers. All other things being equal, CDS protection on a more creditworthy issuer costs less than CDS protection on a less creditworthy issuer. Furthermore, the cost of CDS protection on a single issuer may change over time, reflecting, in part, the financial position of the issuer. Mandatory post-trade transparency of CDS transactions will offer market participants and market observers the ability to dynamically assess the market's view of the creditworthiness of the reference entities that underlie CDS contracts, thus promoting efficiency in the market for cash bonds. For example, public dissemination of transactions in CDS on reference entities that issue TRACE-eligible debt securities will help reinforce the pricing signals derived from individual transactions in debt securities generated by TRACE. Market participants can arbitrage disparities in prices reflected in TRACE and as suggested in last-sale information of related CDS, helping create more overall efficiency in the market for credit. Similarly, public dissemination of transactions in single-name CDS should reinforce the pricing signals derived from public dissemination of index CDS transactions. Post-trade transparency of security-based swap CDS under Regulation SBSR could indirectly bring greater transparency into the market for debt instruments (such as sovereign debt securities) that are not subject to mandatory public dissemination through TRACE or any other means.

Finally, business owners and managers can use information gleaned from the publicly disseminated security-based swap transaction data to make more-informed investment decisions in physical assets and capital goods, as opposed to investment in financial assets, thereby promoting efficient resource allocation and capital formation in the real economy. Transparent security-based swap prices may also make it easier for firms to obtain new financing for business opportunities, by providing information and reducing uncertainty about the value and profitability of a firm's investments.[1368]

4. Implementation of Regulatory Reporting and Public Dissemination

a. Role of Registered SDRs

In adopting Regulation SBSR, the Commission has attempted to design the duties of registered SDRs to promote efficiency of the reporting and public dissemination requirements and thereby minimize any adverse impacts on competition and capital formation. At the same time, the Commission acknowledges that, to the extent that the final rules place regulatory obligations on registered SDRs, these obligations may constitute a barrier to entry that, at the margin, reduces competition between registered SDRs. Regulation SBSR requires a registered SDR to publicly disseminate specified information about reported security-based swap transactions immediately upon receipt. The Commission believes that this requirement will help promote an efficient allocation of public dissemination responsibilities for a number of reasons. First, registered SDRs—because of their role in the regulatory reporting function—already possess all of the information necessary to carry out public dissemination and would not have to

1368 See Bond, et al., note 1258, supra.

collect additional information from other parties. Second, placing the duty to publicly disseminate on registered SDRs eliminates the need for the development of other infrastructure and mechanisms for public dissemination of security-base swap transaction information in addition to the infrastructure that is required to support regulatory reporting.[1369] Third, users of publicly disseminated security-based swap data will be required to consolidate transaction data from only a small number of registered SDRs, rather than a potentially larger number of dissemination agents that might exist under an alternative regime. Under Rules 907(a)(1) and 907(a)(2), registered SDRs have the flexibility to determine the precise means through which they will accept reports of security-based swap transaction data. This degree of flexibility has implications for the efficiency of data collection. Registered SDRs could choose to innovate and adopt new reporting formats that could lower costs to market participants while maintaining the required level of information and data integrity. Moreover, in an effort to attract business, registered SDRs could decide to accept data from market participants in a wide variety of formats, taking on additional data management and systems burdens. Indeed, such an outcome could represent an efficient allocation of the costs of data management, in which a handful of registered SDRs invest in technologies to transform data rather than approximately 300 reporting sides making similar changes to their systems in an effort to provide identical reports to each SDR. The Commission acknowledges, however, that the same features that support a market structure that yields only a handful of registered SDRs could temper the incentives of these registered SDRs to compete on reporting efficiency. For example, registered SDRs could decide to accept data from customers in only one specific format. The Commission further anticipates efficiency gains if data elements necessary to understand a trade evolve over time as new

[1369] See supra Section XXII(C)(2)(c).

security-based swap contracts are developed. Additionally, this approach may support competition among security-based swap counterparties by maintaining low barriers to entry with respect to reporting obligations under Regulation SBSR.

Further, the final rules do not presume a market structure for registered SDRs. On one hand, this means that market participants, the Commission, and other relevant authorities cannot rely on efficiency gains from receiving security-based swap transaction data from a single, consolidated source, but must instead consolidate fragmented data from multiple SDRs. On the other hand, a monopoly in the market for SDR services could preclude innovations that may lead to higher quality outputs or lower costs for reporting parties, SDR participants more generally, the Commission, and other relevant authorities.

b. Interim Phase of Reporting Requirements and Block Rules

As discussed above in Section VII, the Commission is adopting rules for regulatory reporting and public dissemination of security-based swaps that are intended only as the interim phase of implementation of these Title VII requirements. At a later date, the Commission anticipates seeking additional comment on potential block thresholds and associated block rules (such as the time delay for disseminating block trades and the time period for the mandatory reporting and public dissemination of non-block trades).

Immediately implementing a complete regime that includes block trade thresholds and final reporting timeframes could improve efficiency, competition, and capital formation by increasing price transparency in the security-based swap market sooner. Several commenters, however, argued that requiring post-trade transparency for security-based swaps with incorrectly designed block trade thresholds could significantly damage the market,[1370] and the Commission is concerned that disruptions to the market that could result from establishing block trading rules without the benefit of comprehensive data analysis could cause certain market participants to limit their security-based swap activity or to withdraw from the market entirely. This in turn could lead to reduced competition, higher prices, and inefficient allocations of risk and capital.

Currently, there are no data that can be used to directly assess the impact of mandated post-trade transparency of security-based swap transactions on market behavior, because there is no widely available post-trade data to which the security-based swap market can react.[1371] The Commission anticipates that the initial phase of Regulation SBSR will yield at least some useful data about how much time market participants believe they need to hedge transactions and how other market participants react when they see transactions of different sizes with different delays after the time of execution. The phased approach is designed to introduce mandatory post-trade transparency in the security-based swap market while allowing the Commission sufficient time to gather and analyze data regarding potential block thresholds and dissemination delays.

The Commission acknowledges that allowing up to 24 hours for reporting a security-based swap means that market participants not involved in that particular transaction, and other market observers, will not have access to information about the transactions for up to 24 hours after the initial execution, depending upon the specific time when the transaction is reported. This delay could impact the development of more vigorous price competition in the security-based swap market because market participants who are involved in transactions would have

---

1370 See supra note 486.

1371 The Commission's economic analysis of the effects of post-trade transparency on the security-based swap market has included indirect evidence from the swap market and from the security-based swap market. See Analysis of Post-Trade Transparency; Hedging Analysis.

access to potentially market-moving information up to 24 hours before those who are not. The Commission believes, however, that allowing up to 24 hours for transactions to be reported and publicly disseminated still represents a significant improvement over the status quo, where market participants report transactions to data repositories only on a voluntary basis and information about transaction is not publicly disseminated.

c. Use of UICs and Rule 903

Regulation SBSR requires the use of several UICs in the reporting of security-based swap transactions. Use of UICs improves efficiency of data intake by registered SDRs and data analysis by relevant authorities and other users of data, as the reported security-based swap transaction information can be readily aggregated by UIC along several dimensions (e.g., product ID, trading desk ID, or trader ID). The efficiency gain in aggregation applies primarily at the SDR level in cases where the SDR uses its own UICs that are not otherwise applied at other SDRs (assuming that no IRSS exists to provide such UICs). To the extent that multiple SDRs were to use the same UICs—because they use UICs provided by an IRSS, such as the GLEIS, or because SDRs agree to recognize UICs assigned by another SDR[1372]—the efficiency gain would extend to aggregation across SDRs, although this is not required under Regulation SBSR. The efficiency gains described in this section may be limited to regulatory reporting and only extend to public dissemination to the extent that the relevant information is being publicly disseminated. Additionally, minimizing the operational risks arising from inconsistent

1372 For example, assume that a person becomes a participant of a registered SDR and obtains UICs for its trading desks and individual traders from that SDR. Later, that person becomes a participant at a second registered SDR. The second SDR could issue its own set of UICs for this person's trading desks and individual traders, or it could recognize and permit use of the same UICs that had been assigned by the first registered SDR.

identification of persons, units of persons, products, or transactions by counterparties and market infrastructure providers would enhance efficiency.

Under Rule 903(b), as adopted, a registered SDR may permit information to be reported to it, and may publicly disseminate information, using codes in place of certain data elements only if the information necessary to interpret such codes is widely available to users of the information on a non-fee basis. If information to understand embedded codes is not widely available on a non-fee basis, information asymmetries would likely continue to exist between large market participants who pay for the codes and other market participants. Rents paid for the use of codes could decrease transparency and increase barriers to entry to the security-based swap market, because the cost of necessary licenses may reduce the incentives for smaller potential market participants to enter the market. Preventing this barrier to entry from forming should help promote competition by facilitating the entry of new market participants.

One commenter suggested that alternatives could be developed to the status quo of using fee-based codes in security-based swap market data.[1373] The Commission welcomes the development of such alternatives, and believes that Rule 903(b), as adopted, may encourage such development.

d. Rules Assigning the Duty to Report

Rule 901(a) assigns the reporting obligation for security-based swaps other than clearing transactions and platform-executed transactions that are submitted to clearing. The reporting hierarchy in Rule 901(a) is designed to increase efficiency for market participants, as well as the Commission and other relevant authorities, by locating the duty to report with counterparties

[1373] See Bloomberg Letter at 2 (stating that it would be possible to develop a public domain symbology for security-based swap reference entities that relied on products in the public domain to "provide an unchanging, unique, global and inexpensive identifier").

who are most likely to have the resources and who are best able to support the reporting function. Furthermore, Rule 901(a) seeks to increase efficiency by leveraging existing infrastructure to support security-based swap reporting, where practicable.

The Commission anticipates that the majority of security-based swaps covered by Rule 901(a), as adopted, will include a registered security-based swap dealer or registered major security-based swap participant on at least one side. Many of the entities that are likely to register as security-based swap dealers or major security-based swap participants already have committed time and resources building the infrastructure to support reporting security-based swaps and some reporting to DTCC-TIW is occurring on a voluntary basis.[1374] Moreover, many such entities currently report swaps pursuant to the CFTC's swap data reporting rules. Rule 901(a) is designed, as much as practicable, to allow these market participants to use these existing reporting capabilities and to minimize the chance that a market participant with limited involvement in the security-based swaps market might incur the duty to report. This approach could lead to lower barriers to entry into the market compared to the approach contemplated in the SBSR Proposing Release.[1375] Also, by reducing infrastructure costs imposed on smaller market participants, this approach also could promote competition by reducing the likelihood that these smaller entrants without existing reporting capabilities would be required to incur fixed costs necessary to develop reporting capabilities. Finally, to the extent that non-registered persons are not required to devote resources to support transaction reporting—because reporting is carried out instead by registered security-based swap dealers and registered major security-

1374 As discussed in Section XXII(B)(1), supra, the data in DTCC-TIW are self-reported and the vast majority of trades involves at least one dealer as a counterparty. Further, both transaction counterparties submit records for confirmation, covering all likely registrants.

1375 See Cross-Border Proposing Release, 78 FR at 31194.

based swap participants who, due to economies of scale and the presence of existing reporting capabilities, are likely to face relatively lower costs of reporting—such resources could be put to more efficient uses.[1376]

The Commission recognizes that this approach puts smaller market participants on the same rung of the hierarchy with entities that likely meet the definition of "security-based swap dealer" and will have to register with the Commission as such in the future. In theory, this could force these smaller market participants into a negotiation with the "likely dealers," because Rule 901(a)(2)(ii)(E)(1) requires both sides to select the reporting side. The Commission believes that this outcome will be unlikely in practice. The Commission understands that voluntary reporting practices in the security-based swap market are broadly consistent with the principle behind the reporting hierarchy in Rule 901(a)(2)(ii): that the more sophisticated market participant should report the transaction. Moreover, market participants who are active in the security-based swap market are likely also to be active in the swap market, where CFTC rules have established a reporting hierarchy that assigns the heaviest reporting duties to swap dealers and major swap participants.[1377] Because practices have already been established for larger market participants to assume reporting duties, it is likely that these practices will be applied in the security-based swap market even before the Commission adopts registration rules for security-based swap dealers and major security-based swap participants.

One of the general principles underlying Rule 901(a) is that, if a person has the duty to report information under Regulation SBSR, it should also have the ability to choose the registered SDR to which it reports. The Commission believes that this approach will promote

---

1376 See supra Section XXII(C) (discussing the costs that reporting sides are likely to incur).

1377 See 17 CFR 45.8 (providing a hierarchy for regulatory reporting of swaps); 17 CFR 43.3(a).

efficiency and competition, because it enables each person with a duty to report a security-based swap to connect and report transactions to the registered SDR (or SDRs) that offer it the highest quality services and/or the lowest fees to the extent that there is more than one SDR. Two commenters believed that the Commission could promote competition by allowing a counterparty to a security-based swap—typically a security-based swap dealer—to choose the registered SDR that receives information reported under Regulation SBSR.[1378] The Commission agrees with the views of the commenters that allowing a counterparty to choose the registered SDR that received information reported under Regulation SBSR could promote competition. Rule 901(a), as adopted, reflects this approach by allowing the person with the duty to report to choose the registered SDR to which it reports.

Finally, the Commission believes that, if Rule 901(a) affects capital formation at all, it would be in only a limited and indirect way. The Commission does not see—and no commenter has presented any evidence to suggest—that the economic considerations of how, where, and by whom security-based swap transactions will be reported to registered SDRs will have any direct bearing on how, how often, and at what prices market participants might be willing to transact. As mentioned above, by placing the reporting duty on the person with the most direct access to required information, Rule 901(a) is designed to minimize reporting burdens, which could facilitate a more efficient allocation of capital by reducing expenditures on security-based swap reporting infrastructure.

e. Embargo Rule

Rule 902(d), the Embargo Rule, prohibits the release of security-based swap transaction information to persons (other than a counterparty or post-trade processor) until that information

---

[1378] See DTCC VI at 8-9; DTCC VIII; MarkitSERV III at 4-5.

has been transmitted to a registered SDR. The Embargo Rule is designed to promote competition among market participants in the security-based swap market by prohibiting persons who obtain knowledge of a security-based swap transaction shortly after execution from providing information about that transaction to third parties before that information is provided to a registered SDR so that it can be publicly disseminated. In the absence of the Embargo Rule, selected third parties who are told about executions could obtain an informational advantage relative to other market participants, reducing the ability of these other market participants to compete in the market. The potential benefits of Regulation SBSR with respect to competition would suffer in the absence of the Embargo Rule, because market participants who gain earlier access to information could maintain a high degree of information asymmetry in the market.

Rule 902(d), as adopted, includes a carve-out for post-trade processors, such as entities involved in comparing or clearing transactions. This carve-out is designed to promote efficiency in the processing of security-based swap transactions by recognizing that the policy goals of the Embargo Rule are not served by impeding the ability of security-based swap counterparties to obtain post-trade processing services. Post-trade processors must obtain information about a transaction to carry out their functions, even if the transaction has not yet been reported to a registered SDR. In the absence of the carve-out, efficiency could be harmed if post-trade processors were barred from obtaining information about the transaction until it had been publicly disseminated by a registered SDR. Without this carve-out, Regulation SBSR could cause the services and functions provided by post-trade processors to be delayed. This could result in a disruption of current market practices, where post-trade processors provide a variety of services to security-based swap counterparties, and thus a reduction in security-based swap market efficiency.

5. Impact of Cross-Border Aspects of Regulation SBSR

a. General Considerations

The security-based swap market is global in nature, and dealers and other market participants are highly interconnected within this global market. This interconnectedness provides a myriad of paths for liquidity and risk to move throughout the financial system and makes it difficult, in many cases, to precisely identify the impact of a particular entity's activity on financial stability or liquidity. As a corollary to this, it is difficult to isolate risk and liquidity problems to one geographical segment of the market. Further, as we noted in Section XXII(B)(1), security-based swap market participants in one jurisdiction can conduct activity through branches or subsidiaries located in another. These features of the market form the basis of the Commission's analysis of the effects of rule 908 on competition, efficiency and capital formation.

b. Regulatory Reporting and Public Dissemination

Rule 908(a) generally applies regulatory reporting and public dissemination requirements depending on the characteristics of the counterparties involved in a transaction. The regulatory reporting requirement allows the Commission and other relevant authorities the ability to monitor risk and conduct market surveillance. Because the security-based swap market represents a conduit through which financial risks from foreign markets can manifest themselves in the United States, the Commission believes that it is appropriate to focus on those transactions that are likely to serve as routes for risk transmission to the United States, either because a direct or indirect counterparty is a U.S. person, is registered with the Commission as a security-based swap dealer or major security-based swap participant, or if the transaction is submitted to a clearing agency having its principal place of business within the United States. A regulatory reporting requirement that did not include within its scope such transactions would provide the Commission with such an incomplete view of transaction activity with potential to undermine the stability of U.S. financial markets that it would likely undermine the beneficial effects of a regulatory requirement on efficiency, competition and capital formation.

Under Regulation SBSR, as adopted, many of the provisions of Regulation SBSR will apply to a cross-border security-based swap if one of the direct counterparties, even if a non-U.S. person, is guaranteed by a U.S. person. For example, Rule 908(a)(1)(i) requires regulatory reporting of a security-based swap if there is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction. Because guarantees extended by U.S. persons on transactions executed abroad can nevertheless import risk into the United States, regulatory reporting of security-based swaps should extend to any security-based swap transaction having an indirect counterparty (i.e., a guarantor) that is a U.S. person. This will improve the Commission's ability to monitor risks posed by activity guaranteed by U.S. persons and, as a result, reduce any adverse impacts on efficiency, competition, and capital formation that might arise without this ability or that might arise from attempts by certain market participants to shift activity into guaranteed foreign subsidiaries in order to evade Regulation SBSR.

Under the approach taken in this release, market participants could avoid regulatory reporting and public dissemination requirements by shifting activity into unguaranteed foreign subsidiaries, assuming there was no other basis for Regulation SBSR to apply, such as the direct counterparty being a U.S. person. Thus, the Commission's action in distinguishing between guaranteed and unguaranteed foreign subsidiaries of U.S. parent entities could affect how these parent entities allocate capital across the organization. For example, a U.S. parent could separately capitalize a foreign subsidiary to engage in transactions with non-U.S. persons. If the

U.S. parent takes such action solely as a response to Title VII regulation, it is unlikely that such a move would improve the efficiency with which the parent allocates its capital.

The primary economic effects of public dissemination of transaction information are related to improving market transparency. Rule 908(a) defines a scope of transactions subject to this requirement in the cross-border context that considers the benefits of public dissemination, including effects on efficiency, competition, and capital formation. The scope defined by Rule 908(a) also considers the potential costs that market participants could incur if counterparties restructure their operations so that their activity falls outside of the scope of Regulation SBSR and continues in a more opaque market. Such a response could result in lessened competition in the security-based swap market within the United States, less efficient risk-sharing and pricing, and impaired capital formation.

The public dissemination requirements under Regulation SBSR could affect the behavior of foreign market participants in ways that reduce market access for U.S. persons. For example, some non-U.S. persons might seek to minimize their contact with U.S. persons in an effort to avoid having their transactions publicly disseminated. Moreover, to the extent that the Commission's rules treat the foreign business of U.S. persons and non-U.S. persons differently from their respective U.S. business, market participants could perceive an incentive to restructure their business to separate their foreign and U.S. operations.

Programmatic benefits of this scope, beyond those already noted as benefits of regulatory reporting, are related to the ability of market observers to condition their beliefs about the security-based swap market on realized transaction prices.[1379] Post-trade transparency in the U.S. security-based swap market could have spillover benefits in foreign markets, even if those foreign markets impose no (or only limited) post-trade transparency requirements.[1380] Post-trade transparency provided by Regulation SBSR will make transaction data available to any market observer in the world. These data will also allow global market observers to use security-based swap prices as an input for valuation models and trading decisions for the same or related instruments, thereby improving the efficiency of these processes.[1381]

Relevant authorities in other jurisdictions are currently engaged in implementing their own regulatory reforms of the OTC derivatives markets that could apply to participants in those foreign markets. Regulatory differences among jurisdictions in the global security-based swap markets could create incentives for business restructuring. To the extent that such restructuring results from regulatory incentives rather than economic fundamentals, efficiency in the real economy could be reduced. Conflicting regulations or unnecessary duplication of regulation also might lead to fragmented markets.[1382]

1379 The effects of public dissemination are discussed more generally in Section XXII(C)(2); the economic effects of Rule 908 that relate to efficiency, competition, and capital formation are examined in Section XXII(D)(4)(i).

1380 See Edwards, et al., supra note 1223. (presenting a model implying, and finding empirical evidence in TRACE data for, what the authors term a "liquidity externality," i.e., improved market quality in certain securities that were not yet TRACE-eligible, when related securities had become subject to TRACE post-trade transparency).

1381 See supra Section XXII(C)(2)(a) (discussing the benefits of improved valuation).

1382 See, e.g., Arnoud W.A. Boot, Silva Dezelan, and Todd T. Milbourn, "Regulatory Distortions in a Competitive Financial Services Industry," Journal of Financial Services Research, Vol. 17, No. 1 (2000) (showing that, in a simple industrial organization model of bank lending, a change in the cost of capital resulting from regulation results in a greater loss of profits when regulated banks face competition from non-regulated banks than when regulations apply equally to all competitors); Victor Fleischer, "Regulatory Arbitrage," 89 Texas Law Review 227 (March 4, 2010) (discussing how, when certain

Even if the substance of statutory and regulatory efforts across jurisdictions is comparable, different jurisdictions may impose new regulatory requirements on different timelines. To the extent that these timelines or the underlying requirements differ, market participants might have the opportunity to take advantage of these differences by making strategic choices, at least in the short term, with respect to their transaction counterparties and business models. For example, at a larger scale, firms may choose whether to participate in or withdraw from the U.S. security-based swap market. As a result of exits, registered security-based swap dealers that are U.S. persons might have less access to foreign markets, unless they were to restructure their business to conduct foreign transactions through unguaranteed foreign subsidiaries whose transactions with non-U.S. persons would not be subject to the regulatory reporting and public dissemination under Regulation SBSR.

These potential restructurings could impact competition in the U.S. market. On one hand, the ability to restructure one's business rather than exit the U.S. market entirely to avoid application of Title VII to an entity's non-U.S. operations could reduce the number of entities that exit the market, thus mitigating the negative effects on competition described above. On the other hand, non-registered U.S. persons may find that the only non-U.S. person registered security-based swap dealers that are willing to deal with them are those whose security-based swap business is sufficiently large to afford the compliance costs associated with regulatory reporting and public dissemination requirements. To the extent that smaller dealers have an incentive to exit the market, the overall level of competition in the market could decline.

---

firms are able to choose their regulatory structure, regulatory burdens are shifted onto those entities that cannot engage in regulatory arbitrage).

The Commission is mindful that, in the near term and until full implementation of comparable requirements for regulatory reporting and public dissemination of security-based swaps in other jurisdictions, the rules may generate incentives for market participants to restructure and reduce contact with U.S. market participants. As a result, for example, U.S. market participants seeking to hedge risk could face higher prices for hedging or fewer opportunities to hedge at all, which could impede capital formation. Another result could be inefficiency in risk allocation, because those market participants who are best placed to take on risks shared through security-based swap activity might be discouraged from doing so because of perceived necessity to avoid regulatory reporting and public dissemination requirements under Title VII. Furthermore, U.S. market participants that are able to restructure their business across national boundaries to avoid regulation are likely to be the largest financial institutions that can bear the greatest risks. The remaining firms will likely be smaller and have less capital with which to offer liquidity to the market.

Restructuring of business lines to take advantage of low-transparency regimes also would impede transparency, as fewer transactions would be subject to public dissemination under Regulation SBSR. Market participants who had relocated abroad would still be able to free-ride on price formation generated by the public dissemination of others' transactions in the same or similar instruments while not contributing any transactions of their own. The value of regulatory reporting and public dissemination in the U.S. market would be reduced to the extent that liquidity migrates to jurisdictions that are less-transparent.[1383]

1383 By the same token, regulatory reporting and public dissemination in the U.S. security-based swap market could have spillover benefits in foreign markets that trade the same or similar instruments as the U.S. market, even if those foreign markets impose no (or only limited) requirements. See supra note 1259.

c. Substituted Compliance

Rule 908(c) provides that the Title VII requirements relating to regulatory reporting and public dissemination of security-based swaps may be satisfied by compliance with the rules of a foreign jurisdiction if the Commission issues an order determining that the jurisdiction has requirements that comparable to those of Regulation SBSR. Rule 908(c) is designed to promote efficiency, competition, and capital formation in the security-based swap market, to the extent practical, given the state of regulatory reform of the OTC derivatives market being applied by specific foreign jurisdictions.

The Commission believes a regulatory regime that allows for substituted compliance under comparable foreign rules promotes efficiency by reducing the need for certain market participants to double report security-based swaps (i.e., once to a foreign trade repository or foreign regulatory authority and again to a registered SDR). Substituted compliance also has the potential to improve market and price efficiency by reducing or even eliminating instances of the same transaction being publicly disseminated under two separate systems. The Commission assumes that market observers will obtain and utilize last-sale information about security-based swaps from any available sources around the globe. Without substituted compliance, a security-based swap that met the jurisdictional requirements of Rule 908(a)(2) of Regulation SBSR as well as the public dissemination rules of a foreign jurisdiction would be publicly disseminated in both jurisdictions. It might be difficult or impossible for market observers to understand that the two trade reports represent the same transaction, which would thus distort their view of the market. If the Commission were to issue a substituted compliance order with respect to that jurisdiction, market observers would see only a single report (emanating from the foreign jurisdiction) of that transaction.

While the rules governing substituted compliance are not designed to promote efficiency at the regulatory level, they are designed at least to minimize detractions from regulatory efficiency. Under substituted compliance, certain cross-border transactions that otherwise would be reported to an SEC-registered SDR would instead be reported to a foreign trade repository or foreign regulatory authority. Final Rule 908(c) requires, among other things, direct electronic access to the foreign security-based swap data in order to make a substituted compliance determination. However, there could be some difficulties in normalizing and aggregating the data from SEC-registered SDRs with the data from the foreign trade repositories or foreign regulatory authorities.

Overall, the Commission believes that, on balance, there will be certain positive impacts on efficiency from allowing substituted compliance. The principle behind this approach is that the Commission would grant substituted compliance with respect to regulatory reporting and public dissemination of security-based swaps in another jurisdiction only if the requirements of that jurisdiction are comparable to otherwise applicable requirements in Regulation SBSR. If a foreign jurisdiction does not have a comparable regime for regulatory reporting and public dissemination of security-based swaps, allowing the possibility of substituted compliance could, on balance, erode any impacts of Regulation SBSR on efficiency, to the extent that the foreign jurisdiction's regulatory outcomes for regulatory reporting and public dissemination differ from those under Regulation SBSR. This result could be viewed as privately efficient by market participants who might otherwise restructure their activities to avoid public dissemination. However, the result also would be that many transactions with significant connections to the U.S. market would remain opaque, thus reducing opportunities for greater price competition and price discovery. Moreover, granting substituted compliance in such cases could provide incentives for foreign jurisdictions to impose lower regulatory standards for security-based swaps than those mandated by Title VII. Under the rules, as adopted, the Commission may not grant substituted compliance unless the foreign jurisdiction's rules are comparable to otherwise applicable requirements.

Under Rule 908(c), the Commission could make a determination of comparability for regulatory reporting and public dissemination either separately or together. A few commenters argued that the Commission should separate them, which would, for example, permit substituted compliance for regulatory reporting for a foreign jurisdiction, but not for public dissemination.[1384] The Commission agrees with the commenter's suggestions and has determined to take such an approach. Permitting substituted compliance for regulatory reporting but not for public dissemination might be privately efficient for firms, who would be obligated to report transactions to a foreign jurisdiction for regulatory purposes, but would be obligated to only report to a registered SDR only those data elements necessary for public dissemination under Regulation SBSR. The Commission could, for instance, permit transactions to be reported into a foreign jurisdiction with no or only limited public dissemination requirements.

One commenter correctly pointed out that there are a few classes of security-based swap for which Regulation SBSR requires regulatory reporting but not public dissemination and argued, therefore, that the Commission should permit itself to grant substituted compliance for regulatory reporting only (and not public dissemination) for these classes.[1385] The Commission agrees with the commenter and is adopting Rule 908(c) with certain revisions that will allow the Commission to issue a substituted compliance order with respect to regulatory reporting but not

---

1384 See supra note 917.

1385 See IIB Letter at 25. See also Rule 902(c).

public dissemination in such cases.[1386] This revision should increase the scope of transactions that may enjoy the efficiency benefits of substituted compliance discussed above.

E. Aggregate Quantifiable Total Costs

Based on the foregoing, the Commission estimates that Regulation SBSR will impose an initial one-time cost of approximately $194,500,000 on all entities.[1387] The Commission estimates that Regulation SBSR will impose a total ongoing annual aggregate cost of approximately $275,500,000 for all entities.[1388] With regard to registered SDRs, the Commission estimates that Regulation SBSR will impose an initial aggregate one-time cost of

---

1386 See supra Section XV(E)(6).

1387 The Commission derived its estimate from the following: [($360,000 (Rule 901 one-time costs on registered SDRs)) + ($20,000,000 (Rule 902 one-time costs on registered SDRs)) + ($2,000,000 (Rule 905 one-time costs on registered SDRs)) + ($330,000 (Rule 906 one-time costs on registered SDRs)) + ($41,000,000 (Rule 907 one-time costs on registered SDRs)) + ($3,190,000 (Rule 906 one-time costs on covered participants) + ($121,800,000 (Rule 901 one-time costs on reporting sides) + ($720,200 (Rule 903 one-time costs on SDR participants)) + ($3,547,500 (Rule 905 one-time costs on reporting sides) + ($1,540,000 (Rule 908(c) one-time costs on requesting entities)] = $194,487,700, or approximately $194,500,000.

1388 The Commission derived its estimate from the following: [($455,000 (Rule 901 ongoing annual costs on registered SDRs)) + ($12,000,000 (Rule 902 ongoing annual costs on registered SDRs)) + ($45,000 (Rule 904 ongoing annual costs on registered SDRs)) + ($4,000,000 (Rule 905 ongoing annual costs on registered SDRs)) + ($300,000 (Rule 906 ongoing annual costs on registered SDRs)) + ($82,000,000 (Rule 907 ongoing annual costs on registered SDRs)) + ($1,870,000 (Rule 906 ongoing annual costs on covered participants)) + ($95,700,000 (Rule 901 ongoing annual costs on reporting sides)) + ($2,352,000 (Rule 903 one-time costs on SDR participants)) + ($1,192,500 (Rule 905 ongoing annual costs on reporting sides)) + ($64,000,000 (Rule 905 ongoing annual costs on non-reporting sides)) + ($13,400,000 (Rule 906 ongoing annual costs on all participants)) + ($1,540,000 (Rule 908(c) costs of requests in the first year)] = $275,444,500 or approximately $275,500,000.

approximately $63,700,000,[1389] and an ongoing aggregate annual cost of approximately $98,800,000.[1390]

XXIII. Regulatory Flexibility Act Certification

The Regulatory Flexibility Act ("RFA") requires federal agencies, in promulgating rules, to consider the impact of those rules on small entities. Section 603(a) of the Administrative Procedure Act,[1391] as amended by the RFA, generally requires the Commission to undertake a regulatory flexibility analysis of all proposed rules, or proposed rule amendments, to determine the impact of such rulemaking on "small entities."[1392] Section 605(b) of the RFA[1393] states that this requirement shall not apply to any proposed rule or proposed rule amendment which, if adopted, would not have a significant economic impact on a substantial number of small entities.

In developing the final rules contained in Regulation SBSR, the Commission has considered their potential impact on small entities. For purposes of Commission rulemaking in

---

1389 The Commission derived its estimate from the following: [($360,000 (Rule 901 one-time costs on registered SDRs)) + ($20,000,000 (Rule 902 one-time costs on registered SDRs)) + ($2,000,000 (Rule 905 one-time costs on registered SDRs)) + ($330,000 (Rule 906 one-time costs on registered SDRs)) + ($41,000,000 (Rule 907 one-time costs on registered SDRs))] = $63,690,000 or approximately $63,700,000.

1390 The Commission derived its estimate from the following: [($455,000 (Rule 901 ongoing annual costs on registered SDRs)) + ($1,000,000 (Rule 902 ongoing annual costs on registered SDRs)) + ($45,000 (Rule 904 ongoing annual costs on registered SDRs)) + ($4,000,000 (Rule 905 ongoing annual costs on registered SDRs)) + ($300,000 (Rule 906 ongoing annual costs on registered SDRs)) + ($82,000,000 (Rule 907 ongoing annual costs on registered SDRs))] = $98,800,000.

1391 5 U.S.C. 603(a).

1392 Although Section 601(b) of the RFA defines the term "small entity," the statute permits agencies to formulate their own definitions. The Commission has adopted definitions for the term "small entity" for the purposes of Commission rulemaking in accordance with the RFA. Those definitions, as relevant to this proposed rulemaking, are set forth in Rule 0-10 under the Exchange Act, 17 CFR 240.0-10. See Securities Exchange Act Release No. 18451 (January 28, 1982), 47 FR 5215 (February 4, 1982) (File No. AS-305).

1393 5 U.S.C. 605(b).

connection with the RFA, a small entity includes: (1) when used with reference to an "issuer" or a "person," other than an investment company, an "issuer" or "person" that, on the last day of its most recent fiscal year, had total assets of $5 million or less;[1394] or (2) a broker-dealer with total capital (net worth plus subordinated liabilities) of less than $500,000 on the date in the prior fiscal year as of which its audited financial statements were prepared pursuant to Rule 17a-5(d) under the Exchange Act,[1395] or, if not required to file such statements, a broker-dealer with total capital (net worth plus subordinated liabilities) of less than $500,000 on the last day of the preceding fiscal year (or in the time that it has been in business, if shorter); and is not affiliated with any person (other than a natural person) that is not a small business or small organization.[1396]

The Regulation SBSR Proposing Release stated that, based on input from security-based swap market participants and its own information, the Commission preliminarily believed that the majority of security-based swap transactions have at least one counterparty that is either a security-based swap dealer or major security-based swap participant, and that these entities, whether registered broker-dealers or not, would exceed the thresholds defining "small entities" set out above.[1397] Thus, the Commission noted that it preliminarily believed that neither of these types of entities would likely qualify as small entities for purposes of the RFA.[1398] Moreover, in the Regulation SBSR Proposing Release, the Commission noted that, even in cases where one of the counterparties to a security-based swap was outside of the categories of security-based swap

---

1397 See Regulation SBSR Proposing Release, 75 FR at 75282.

1398 See id.

dealer or major security-based swap participant, the Commission preliminarily did not believe any such entities would be "small entities" as defined in Commission Rule 0-10.[1399] In this regard, the Commission noted that feedback from industry participants and the Commission's own information about the security-based swap market (including a survey conducted by the Office of the Comptroller of the Currency) indicated that only persons or entities with assets significantly in excess of $5 million participate in the security-based swap market.[1400] As a result, the Commission stated its preliminarily belief that the vast majority of, if not all, security-based swap transactions are between large entities for purposes of the RFA.[1401]

Similarly, in the Regulation SBSR Proposing Release, the Commission stated its preliminarily belief that the entities likely to register as SDRs would not be small entities.[1402] Based on input from security-based swap market participants and its own information, the Commission stated its preliminarily belief that most if not all the registered SDRs would be part of large business entities, and that all registered SDRs would have assets exceeding $5 million and total capital exceeding $500,000.[1403] On this basis, the Commission preliminarily believed that the number of security-based swap transactions involving a small entity as that term is defined for purposes of the RFA would be de minimis and that no aspect of proposed Regulation SBSR would be likely to alter the type of counterparties presently engaging in security-based

---

1399 See id. at 75283.

1400 See id.

1401 See id.

1402 See id.

1403 See id.

swap transactions.[1404] Therefore, the Commission preliminarily did not believe that proposed Regulation SBSR would impact any small entities.[1405]

As a result, in the Regulation SBSR Proposing Release, the Commission certified that Regulation SBSR would not have a significant economic impact on a substantial number of small entities for purposes of the RFA and requested written comments regarding this certification.[1406] Specifically, the Commission requested that commenters describe the nature of any impact on small entities, indicate whether they believe that participants and registered SDRs are unlikely to be small entities, and provide empirical data to support their responses.[1407] The Commission did not receive any comments contrary to its conclusion.

The Commission continues to believe that few if any security-based swap counterparties that would incur duties under Regulation SBSR, as adopted, are "small entities" as defined in Commission Rule 0-10. Feedback from industry participants and the Commission's own information about the security-based swap market indicate that only persons or entities with assets significantly in excess of $5 million participate in the security-based swap market.[1408] The Commission continues to believe that the vast majority of, if not all, security-based swap transactions are between large entities for purposes of the RFA.

Based on input from security-based swap market participants and its own information, the Commission continues to believe that registered SDRs would be part of large business entities, and that all registered SDRs would have assets exceeding $5 million and total capital

1405 See id.

1406 See id.

1407 See id.

1408 See id. See also Cross-Border Proposing Release, 78 FR at 31205.

exceeding $500,000. Therefore, the Commission continues to believe that none of the registered SDRs would be small entities.

The Commission believes that the number of security-based swap transactions involving a small entity as that term is defined for purposes of the RFA would be de minimis. Moreover, the Commission does not believe that any aspect of Regulation SBSR would be likely to alter the type of counterparties presently engaging in security-based swap transactions. Therefore, the Commission does not believe that Regulation SBSR would impact any small entities.

For the foregoing reasons, the Commission certifies that Regulation SBSR would not have a significant economic impact on a substantial number of small entities for purposes of the RFA.

XXIV. Statutory Basis and Text of Final Rules

Pursuant to the Exchange Act, 15 U.S.C. 78a et seq., and particularly Sections 3C(e), 11A(b), 13(m)(1), 13A(a), 23(a)(1), 30(c), and 36(a), 15 U.S.C. §§ 78c-3(e), 78k-1(b), 78m(m)(1), 78m-1(a), 78w(a)(1), 78dd(c), and 78mm(a) thereof, the Commission is adopting Rules 900, 901, 902, 903, 904, 905, 906, 907, 908, and 909 under the Exchange Act.

List of Subjects in 17 CFR Part 242

Brokers, Reporting and recordkeeping requirements, Securities.

In accordance with the foregoing, Title 17, Chapter II of the Code of Federal Regulations is amended as follows:

PART 242—REGULATIONS M, SHO, ATS, AC, NMS, AND SBSR AND CUSTOMER MARGIN REQUIREMENTS FOR SECURITY FUTURES

1. The authority citation for part 242 continues to read as follows:

Authority: 15 U.S.C. 77g, 77q(a), 77s(a), 78b, 78c, 78g(c)(2), 78i(a), 78j, 78k-l(c), 78*l*, 78m, 78n, 78o(b), 78o(c), 78o(g), 78q(a), 78q(b), 78q(h), 78w(a), 78dd-1, 78mm, 80a-23, 80a-29, and 80a-37, unless otherwise noted.

2. The part heading for part 242 is revised as set forth above.

3. Add §§ 242.900, 242.901, 242.902, 242.903, 242.904, 242.905, 242.906, 242.907, 242.908, and 242.909 to read as follows:

Regulation SBSR—Regulatory Reporting and Public Dissemination of Security-Based Swap Information

Sec.

§ 242.900 Definitions.

Terms used in §§ 242.900 through 242.909 that appear in Section 3 of the Exchange Act (15 U.S.C. 78c) have the same meaning as in Section 3 of the Exchange Act and the rules or regulations thereunder. In addition, for purposes of Regulation SBSR (§§ 242.900 through 242.909), the following definitions shall apply:

(a) Affiliate means any person that, directly or indirectly, controls, is controlled by, or is under common control with, a person.

(b) Asset class means those security-based swaps in a particular broad category, including, but not limited to, credit derivatives and equity derivatives.

(c) [Reserved].

(d) Branch ID means the UIC assigned to a branch or other unincorporated office of a participant.

(e) Broker ID means the UIC assigned to a person acting as a broker for a participant.

(f) Business day means a day, based on U.S. Eastern Time, other than a Saturday, Sunday, or a U.S. federal holiday.

(g) Clearing transaction means a security-based swap that has a registered clearing agency as a direct counterparty.

(h) Control means, for purposes of §§ 242.900 through 242.909, the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise. A person is presumed to control another person if the person:

(1) Is a director, general partner or officer exercising executive responsibility (or having similar status or functions);

(2) Directly or indirectly has the right to vote 25 percent or more of a class of voting securities or has the power to sell or direct the sale of 25 percent or more of a class of voting securities; or

(3) In the case of a partnership, has the right to receive, upon dissolution, or has contributed, 25 percent or more of the capital.

(i) Counterparty means a person that is a direct counterparty or indirect counterparty of a security-based swap.

(j) Counterparty ID means the UIC assigned to a counterparty to a security-based swap.

(k) Direct counterparty means a person that is a primary obligor on a security-based swap.

(l) Direct electronic access has the same meaning as in § 240.13n-4(a)(5) of this chapter.

(m) Exchange Act means the Securities Exchange Act of 1934 (15 U.S.C. 78a et seq.), as amended.

(n) Execution agent ID means the UIC assigned to any person other than a broker or trader that facilitates the execution of a security-based swap on behalf of a direct counterparty.

(o) Foreign branch has the same meaning as in § 240.3a71-3(a)(1) of this chapter.

(p) Indirect counterparty means a guarantor of a direct counterparty's performance of any obligation under a security-based swap such that the direct counterparty on the other side can exercise rights of recourse against the indirect counterparty in connection with the security-based swap; for these purposes a direct counterparty has rights of recourse against a guarantor on the other side if the direct counterparty has a conditional or unconditional legally enforceable right, in whole or in part, to receive payments from, or otherwise collect from, the guarantor in connection with the security-based swap.

(q) Life cycle event means, with respect to a security-based swap, any event that would result in a change in the information reported to a registered security-based swap data repository under § 242.901(c), (d), or (i), including: an assignment or novation of the security-based swap; a partial or full termination of the security-based swap; a change in the cash flows originally reported; for a security-based swap that is not a clearing transaction, any change to the title or date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract; or a corporate action affecting a security or securities on which the security-based swap is based (e.g., a merger, dividend, stock split, or bankruptcy). Notwithstanding the above, a life cycle event shall not include the scheduled expiration of the security-based swap, a previously described and anticipated interest rate adjustment (such as a quarterly interest rate adjustment), or other event that does not result in any change to the contractual terms of the security-based swap.

(r) Non-mandatory report means any information provided to a registered security-based swap data repository by or on behalf of a counterparty other than as required by §§ 242.900 through 242.909.

(s) Non-U.S. person means a person that is not a U.S. person.

(t) Parent means a legal person that controls a participant.

(u) Participant, with respect to a registered security-based swap data repository, means a counterparty, that meets the criteria of § 242.908(b), of a security-based swap that is reported to that registered security-based swap data repository to satisfy an obligation under § 242.901(a).

(v) Platform means a national securities exchange or security-based swap execution facility that is registered or exempt from registration.

(w) Platform ID means the UIC assigned to a platform on which a security-based swap is executed.

(x) Post-trade processor means any person that provides affirmation, confirmation, matching, reporting, or clearing services for a security-based swap transaction.

(y) Pre-enactment security-based swap means any security-based swap executed before July 21, 2010 (the date of enactment of the Dodd-Frank Act (Pub. L. No. 111-203, H.R. 4173)), the terms of which had not expired as of that date.

(z) Price means the price of a security-based swap transaction, expressed in terms of the commercial conventions used in that asset class.

(aa) Product means a group of security-based swap contracts each having the same material economic terms except those relating to price and size.

(bb) Product ID means the UIC assigned to a product.

(cc) Publicly disseminate means to make available through the Internet or other electronic data feed that is widely accessible and in machine-readable electronic format.

(dd) [Reserved].

(ee) Registered clearing agency means a person that is registered with the Commission as a clearing agency pursuant to section 17A of the Exchange Act (15 U.S.C. 78q-1) and any rules or regulations thereunder.

(ff) Registered security-based swap data repository means a person that is registered with the Commission as a security-based swap data repository pursuant to section 13(n) of the Exchange Act (15 U.S.C. 78m(n)) and any rules or regulations thereunder.

(gg) Reporting side means the side of a security-based swap identified by § 242.901(a)(2).

(hh) Side means a direct counterparty and any guarantor of that direct counterparty's performance who meets the definition of indirect counterparty in connection with the security-based swap.

(ii) Time of execution means the point at which the counterparties to a security-based swap become irrevocably bound under applicable law.

(jj) Trader ID means the UIC assigned to a natural person who executes one or more security-based swaps on behalf of a direct counterparty.

(kk) Trading desk means, with respect to a counterparty, the smallest discrete unit of organization of the participant that purchases or sells security-based swaps for the account of the participant or an affiliate thereof.

(ll) Trading desk ID means the UIC assigned to the trading desk of a participant.

(mm) Transaction ID means the UIC assigned to a specific security-based swap transaction.

(nn) Transitional security-based swap means a security-based swap executed on or after July 21, 2010, and before the first date on which trade-by-trade reporting of security-based swaps in that asset class to a registered security-based swap data repository is required pursuant to §§ 242.900 through 242.909.

(oo) Ultimate parent means a legal person that controls a participant and that itself has no parent.

(pp) Ultimate parent ID means the UIC assigned to an ultimate parent of a participant.

(qq) Unique Identification Code or UIC means a unique identification code assigned to a person, unit of a person, product, or transaction.

(rr) United States has the same meaning as in § 240.3a71-3(a)(5) of this chapter.

(ss) U.S. person has the same meaning as in § 240.3a71-3(a)(4) of this chapter.

§ 242.901 Reporting obligations.

(a) Assigning reporting duties. A security-based swap, including a security-based swap that results from the allocation, termination, novation, or assignment of another security-based swap, shall be reported as follows:

(1) [Reserved].

(2) All other security-based swaps. For all security-based swaps other than platform-executed security-based swaps that will be submitted to clearing, the reporting side shall provide the information required by §§ 242.900 through 242.909 to a registered security-based swap data repository. The reporting side shall be determined as follows:

(i) [Reserved].

(ii) Security-based swaps other than clearing transactions.

(A) If both sides of the security-based swap include a registered security-based swap dealer, the sides shall select the reporting side.

(B) If only one side of the security-based swap includes a registered security-based swap dealer, that side shall be the reporting side.

(C) If both sides of the security-based swap include a registered major security-based swap participant, the sides shall select the reporting side.

(D) If one side of the security-based swap includes a registered major security-based swap participant and the other side includes neither a registered security-based swap dealer nor a registered major security-based swap participant, the side including the registered major security-based swap participant shall be the reporting side.

(E) If neither side of the security-based swap includes a registered security-based swap dealer or registered major security-based swap participant:

(I) If both sides include a U.S. person, the sides shall select the reporting side.

(II) [Reserved].

(b) Alternate recipient of security-based swap information. If there is no registered security-based swap data repository that will accept the report required by § 242.901(a), the person required to make such report shall instead provide the required information to the Commission.

(c) Primary trade information. The reporting side shall report the following information within the timeframe specified in paragraph (j) of this section:

(1) The product ID, if available. If the security-based swap has no product ID, or if the product ID does not include the following information, the reporting side shall report:

(i) Information that identifies the security-based swap, including the asset class of the security-based swap and the specific underlying reference asset(s), reference issuer(s), or reference index;

(ii) The effective date;

(iii) The scheduled termination date;

(iv) The terms of any standardized fixed or floating rate payments, and the frequency of any such payments; and

(v) If the security-based swap is customized to the extent that the information provided in paragraphs (c)(1)(i) through (c)(1)(iv) of this section does not provide all of the material information necessary to identify such customized security-based swap or does not contain the data elements necessary to calculate the price, a flag to that effect;

(2) The date and time, to the second, of execution, expressed using Coordinated Universal Time (UTC);

(3) The price, including the currency in which the price is expressed and the amount(s) and currenc(ies) of any up-front payments;

(4) The notional amount(s) and the currenc(ies) in which the notional amount(s) is expressed;

(5) If both sides of the security-based swap include a registered security-based swap dealer, an indication to that effect;

(6) Whether the direct counterparties intend that the security-based swap will be submitted to clearing; and

(7) If applicable, any flags pertaining to the transaction that are specified in the policies and procedures of the registered security-based swap data repository to which the transaction will be reported.

(d) Secondary trade information. In addition to the information required under paragraph (c) of this section, for each security-based swap for which it is the reporting side, the reporting side shall report the following information within the timeframe specified in paragraph (j) of this section:

(1) The counterparty ID or the execution agent ID of each counterparty, as applicable;

(2) As applicable, the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID of the direct counterparty on the reporting side;

(3) To the extent not provided pursuant to paragraph (c)(1), the terms of any fixed or floating rate payments, or otherwise customized or non-standard payment streams, including the frequency and contingencies of any such payments;

(4) For a security-based swap that is not a clearing transaction, the title and date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract;

(5) To the extent not provided pursuant to paragraph (c) or other provisions of this paragraph (d), any additional data elements included in the agreement between the counterparties that are necessary for a person to determine the market value of the transaction;

(6) If applicable, and to the extent not provided pursuant to paragraph (c), the name of the clearing agency to which the security-based swap will be submitted for clearing;

(7) If the direct counterparties do not intend to submit the security-based swap to clearing, whether they have invoked the exception in Section 3C(g) of the Exchange Act (15 U.S.C. 78c-3(g));

(8) To the extent not provided pursuant to the other provisions of this paragraph (d), if the direct counterparties do not submit the security-based swap to clearing, a description of the settlement terms, including whether the security-based swap is cash-settled or physically settled, and the method for determining the settlement value; and

(9) The platform ID, if applicable.

(10) If the security-based swap arises from the allocation, termination, novation, or assignment of one or more existing security-based swaps, the transaction ID of the allocated, terminated, assigned, or novated security-based swap(s), except in the case of a clearing transaction that results from the netting or compression of other clearing transactions.

(e) Reporting of life cycle events.

(1) (i) Generally. A life cycle event, and any adjustment due to a life cycle event, that results in a change to information previously reported pursuant to paragraph (c), (d), or (i) of this section shall be reported by the reporting side, except that the reporting side shall not report whether or not a security-based swap has been accepted for clearing.

(ii) [Reserved]

(2) All reports of life cycle events and adjustments due to life cycle events shall, within the timeframe specified in paragraph (j) of this section, be reported to the entity to which the

original security-based swap transaction was reported and shall include the transaction ID of the original transaction.

(f) Time stamping incoming information. A registered security-based swap data repository shall time stamp, to the second, its receipt of any information submitted to it pursuant to paragraph (c), (d), (e), or (i) of this section.

(g) Assigning transaction ID. A registered security-based swap data repository shall assign a transaction ID to each security-based swap, or establish or endorse a methodology for transaction IDs to be assigned by third parties.

(h) Format of reported information. A reporting side shall electronically transmit the information required under this section in a format required by the registered security-based swap data repository to which it reports.

(i) Reporting of pre-enactment and transitional security-based swaps. With respect to any pre-enactment security-based swap or transitional security-based swap in a particular asset class, and to the extent that information about such transaction is available, the reporting side shall report all of the information required by paragraphs (c) and (d) of this section to a registered security-based swap data repository that accepts security-based swaps in that asset class and indicate whether the security-based swap was open as of the date of such report.

(j) Interim timeframe for reporting. The reporting timeframe for paragraphs (c) and (d) of this section shall be 24 hours after the time of execution (or acceptance for clearing in the case of a security-based swap that is subject to regulatory reporting and public dissemination solely by operation of § 242.908(a)(1)(ii)), or, if 24 hours after the time of execution or acceptance, as applicable, would fall on a day that is not a business day, by the same time on the next day that is a business day. The reporting timeframe for paragraph (e) of this section shall be 24 hours after the occurrence of the life cycle event or the adjustment due to the life cycle event.

§ 240.901A Reports regarding the establishment of block thresholds and reporting delays for regulatory reporting of security-based swap transaction data. (Appendix A to 17 CFR § 240.901)

Appendix A to § 240.901 sets forth guidelines applicable to reports that the Commission has directed its staff to make in connection with the determination of block thresholds and reporting delays for security-based swap transaction data. The Commission intends to use these reports to inform its specification of (i) the criteria for determining what constitutes a large notional security-based swap transaction (block trade) for particular markets and contracts; and (ii) the appropriate time delay for reporting large notional security-based swap transactions (block trades) to the public in order to implement regulatory requirements under Section 13 of the Act (15 U.S.C. 78m). In producing these reports, the staff shall consider security-based swap data collected by the Commission pursuant to other Title VII rules, as well as any other applicable information as the staff may determine to be appropriate for its analysis.

(a) Report topics. As appropriate, based on the availability of data and information, the reports should address the following topics for each asset class:

(1) Price impact. In connection with the Commission's obligation to specify criteria for determining what constitutes a block trade and the appropriate reporting delay for block trades, the report generally should assess the effect of notional amount and observed reporting delay on price impact of trades in the security-based swap market.

(2) Hedging. In connection with the Commission's obligation to specify criteria for determining what constitutes a block trade and the appropriate reporting delay for block trades, the report generally should consider potential relationships between observed reporting delays

and the incidence and cost of hedging large trades in the security-based swap market, and whether these relationships differ for interdealer trades and dealer to customer trades.

(3) Price efficiency. In connection with the Commission's obligation to specify criteria for determining what constitutes a block trade and the appropriate reporting delay for block trades, the report generally should assess the relationship between reporting delays and the speed with which transaction information is impounded into market prices, estimating this relationship for trades of different notional amounts.

(4) Other topics. Any other analysis of security-based swap data and information, such as security-based swap market liquidity and price volatility, that the Commission or the staff deem relevant to the specification of (i) the criteria for determining what constitutes a large notional security-based swap transaction (block trade) for particular markets and contracts; and (ii) the appropriate time delay for reporting large notional security-based swap transactions (block trades).

(b) Timing of reports. Each report shall be complete no later than two years following the initiation of public dissemination of security-based swap transaction data by the first registered SDR in that asset class.

(c) Public comment on the report. Following completion of the report, the report shall be published in the Federal Register for public comment.

§ 242.902 Public dissemination of transaction reports.

(a) General. Except as provided in paragraph (c), a registered security-based swap data repository shall publicly disseminate a transaction report of a security-based swap, or a life cycle event or adjustment due to a life cycle event, immediately upon receipt of information about the security-based swap, or upon re-opening following a period when the registered security-based swap data repository was closed. The transaction report shall consist of all the information reported pursuant to § 242.901(c), plus any condition flags contemplated by the registered security-based swap data repository's policies and procedures that are required by § 242.907.

(b) [Reserved].

(c) Non-disseminated information. A registered security-based swap data repository shall not disseminate:

(1) The identity of any counterparty to a security-based swap;

(2) With respect to a security-based swap that is not cleared at a registered clearing agency and that is reported to the registered security-based swap data repository, any information disclosing the business transactions and market positions of any person;

(3) Any information regarding a security-based swap reported pursuant to § 242.901(i);

(4) Any non-mandatory report;

(5) Any information regarding a security-based swap that is required to be reported pursuant to §§ 242.901 and 242.908(a)(1) but is not required to be publicly disseminated pursuant to § 242.908(a)(2);

(6) Any information regarding a clearing transaction that arises from the acceptance of a security-based swap for clearing by a registered clearing agency or that results from netting other clearing transactions; or

(7) Any information regarding the allocation of a security-based swap.

(d) Temporary restriction on other market data sources. No person shall make available to one or more persons (other than a counterparty or a post-trade processor) transaction information relating to a security-based swap before the primary trade information about the security-based swap is sent to a registered security-based swap data repository.

§ 242.903 Coded information.

(a) If an internationally recognized standards-setting system that imposes fees and usage restrictions on persons that obtain UICs for their own usage that are fair and reasonable and not unreasonably discriminatory and that meets the criteria of paragraph (b) of this section is recognized by the Commission and has assigned a UIC to a person, unit of a person, or product (or has endorsed a methodology for assigning transaction IDs), the registered security-based swap data repository shall employ that UIC (or methodology for assigning transaction IDs). If no such system has been recognized by the Commission, or a recognized system has not assigned a UIC to a particular person, unit of a person, or product (or has not endorsed a methodology for assigning transaction IDs), the registered security-based swap data repository shall assign a UIC to that person, unit of person, or product using its own methodology (or endorse a methodology for assigning transaction IDs). If the Commission has recognized such a system that assigns UICs to persons, each participant of a registered security-based swap data repository shall obtain a UIC from or through that system for identifying itself, and each participant that acts as a guarantor of a direct counterparty's performance of any obligation under a security-based swap that is subject to § 242.908(a) shall, if the direct counterparty has not already done so, obtain a UIC for identifying the direct counterparty from or through that system, if that system permits third-party registration without a requirement to obtain prior permission of the direct counterparty.

(b) A registered security-based swap data repository may permit information to be reported pursuant to § 242.901, and may publicly disseminate that information pursuant to § 242.902, using codes in place of certain data elements, provided that the information necessary to interpret such codes is widely available to users of the information on a non-fee basis.

§ 242.904 Operating hours of registered security-based swap data repositories.

A registered security-based swap data repository shall have systems in place to continuously receive and disseminate information regarding security-based swaps pursuant to §§ 242.900 through 242.909, subject to the following exceptions:

(a) A registered security-based swap data repository may establish normal closing hours during periods when, in its estimation, the U.S. market and major foreign markets are inactive. A registered security-based swap data repository shall provide reasonable advance notice to participants and to the public of its normal closing hours.

(b) A registered security-based swap data repository may declare, on an ad hoc basis, special closing hours to perform system maintenance that cannot wait until normal closing hours. A registered security-based swap data repository shall, to the extent reasonably possible under the circumstances, avoid scheduling special closing hours during periods when, in its estimation, the U.S. market and major foreign markets are most active; and provide reasonable advance notice of its special closing hours to participants and to the public.

(c) During normal closing hours, and to the extent reasonably practicable during special closing hours, a registered security-based swap data repository shall have the capability to receive and hold in queue information regarding security-based swaps that has been reported pursuant to §§ 242.900 through 242.909.

(d) When a registered security-based swap data repository re-opens following normal closing hours or special closing hours, it shall disseminate transaction reports of security-based swaps held in queue, in accordance with the requirements of § 242.902.

(e) If a registered security-based swap data repository could not receive and hold in queue transaction information that was required to be reported pursuant to §§ 242.900 through 242.909, it must immediately upon re-opening send a message to all participants that it has resumed normal operations. Thereafter, any participant that had an obligation to report information to the registered security-based swap data repository pursuant to §§ 242.900 through 242.909, but could not do so because of the registered security-based swap data repository's inability to receive and hold in queue data, must promptly report the information to the registered security-based swap data repository.

§ 242.905 Correction of errors in security-based swap information.

(a) Duty to correct. Any counterparty to a security-based swap that discovers an error in information previously reported pursuant to §§ 242.900 through 242.909 shall correct such error in accordance with the following procedures:

(1) If a side that was not the reporting side for a security-based swap transaction discovers an error in the information reported with respect to such security-based swap, the counterparty shall promptly notify the reporting side of the error; and

(2) If the reporting side discovers an error in the information reported with respect to a security-based swap, or receives notification from its counterparty of an error, the reporting side shall promptly submit to the entity to which the security-based swap was originally reported an amended report pertaining to the original transaction report. If the reporting side reported the initial transaction to a registered security-based swap data repository, the reporting side shall submit an amended report to the registered security-based swap data repository in a manner consistent with the policies and procedures contemplated by § 242.907(a)(3).

(b) Duty of security-based swap data repository to correct. A registered security-based swap data repository shall:

(1) Upon discovery of an error or receipt of a notice of an error, verify the accuracy of the terms of the security-based swap and, following such verification, promptly correct the erroneous information regarding such security-based swap contained in its system; and

(2) If such erroneous information relates to a security-based swap that the registered security-based swap data repository previously disseminated and falls into any of the categories of information enumerated in § 242.901(c), publicly disseminate a corrected transaction report of the security-based swap promptly following verification of the trade by the counterparties to the security-based swap, with an indication that the report relates to a previously disseminated transaction.

§ 242.906 Other duties of participants and guarantors.

(a) Identifying missing UIC information. A registered security-based swap data repository shall identify any security-based swap reported to it for which the registered security-based swap data repository does not have the counterparty ID and (if applicable) the broker ID, branch ID, execution agent ID, trading desk ID, and trader ID of each direct counterparty. Once a day, the registered security-based swap data repository shall send a report to each participant of the registered security-based swap data repository or, if applicable, an execution agent, identifying, for each security-based swap to which that participant is a counterparty, the security-based swap(s) for which the registered security-based swap data repository lacks counterparty ID and (if applicable) broker ID, branch ID, execution agent ID, desk ID, and trader ID. A participant of a registered security-based swap data repository that receives such a report shall provide the missing information with respect to its side of each security-based swap referenced in the report to the registered security-based swap data repository within 24 hours.

(b) Duty to provide ultimate parent and affiliate information. Each participant of a registered security-based swap data repository shall provide to the registered security-based swap data repository information sufficient to identify its ultimate parent(s) and any affiliate(s) of the participant that also are participants of the registered security-based swap data repository, using ultimate parent IDs and counterparty IDs. Any such participant shall promptly notify the registered security-based swap data repository of any changes to that information.

(c) Policies and procedures of registered security-based swap dealers and registered major security-based swap participants. Each participant of a registered security-based swap data repository that is a registered security-based swap dealer or registered major security-based swap participant shall establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure that it complies with any obligations to report information to a registered security-based swap data repository in a manner consistent with §§ 242.900 through 242.909. Each such participant shall review and update its policies and procedures at least annually.

§ 242.907 Policies and procedures of registered security-based swap data repositories.

(a) General policies and procedures. With respect to the receipt, reporting, and dissemination of data pursuant to §§ 242.900 through 242.909, a registered security-based swap data repository shall establish and maintain written policies and procedures:

(1) That enumerate the specific data elements of a security-based swap that must be reported, which shall include, at a minimum, the data elements specified in § 242.901(c) and (d);

(2) That specify one or more acceptable data formats (each of which must be an open-source structured data format that is widely used by participants), connectivity requirements, and other protocols for submitting information;

(3) For specifying procedures for reporting life cycle events and corrections to previously submitted information, making corresponding updates or corrections to transaction records, and applying an appropriate flag to the transaction report to indicate that the report (i) is an error correction required to be disseminated by § 242.905(b)(2); or (ii) is a life cycle event, or any adjustment due to a life cycle event, required to be disseminated by § 242.902(a);

(4) For:

(i) Identifying characteristic(s) of a security-based swap, or circumstances associated with the execution or reporting of the security-based swap, that could, in the fair and reasonable estimation of the registered security-based swap data repository, cause a person without knowledge of these characteristic(s) or circumstance(s), to receive a distorted view of the market;

(ii) Establishing flags to denote such characteristic(s) or circumstance(s);

(iii) Directing participants that report security-based swaps to apply such flags, as appropriate, in their reports to the registered security-based swap data repository; and

(iv) Applying such flags (A) to disseminated reports to help to prevent a distorted view of the market or, (B) in the case of a transaction referenced in § 242.902(c), to suppress the report from public dissemination entirely, as appropriate;

(5) For assigning UICs in a manner consistent with § 242.903; and

(6) For periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any participant(s) with which the participant is affiliated, using ultimate parent IDs and counterparty IDs.

(b) [Reserved].

(c) Public availability of policies and procedures. A registered security-based swap data repository shall make the policies and procedures required by §§ 242.900 through 242.909 publicly available on its website.

(d) Updating of policies and procedures. A registered security-based swap data repository shall review, and update as necessary, the policies and procedures required by §§ 242.900 through 242.909 at least annually. Such policies and procedures shall indicate the date on which they were last reviewed.

(e) A registered security-based swap data repository shall provide to the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to it pursuant to §§ 242.900 through 242.909 and the registered security-based swap data repository's policies and procedures thereunder.

§ 242.908 Cross-border matters.

(a) Application of Regulation SBSR to cross-border transactions.

(1) A security-based swap shall be subject to regulatory reporting and public dissemination if:

(i) There is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction; or

(ii) The security-based swap is accepted for clearing by a clearing agency having its principal place of business in the United States.

(2) A security-based swap that is not included within paragraph (a)(1) of this section shall be subject to regulatory reporting but not public dissemination if there is a direct or indirect counterparty on either or both sides of the transaction that is a registered security-based swap dealer or a registered major security-based swap participant.

(b) Limitation on obligations. Notwithstanding any other provision of §§ 242.900 through 242.909, a person shall not incur any obligation under §§ 242.900 through 242.909 unless it is:

(1) A U.S. person; or

(2) A registered security-based swap dealer or registered major security-based swap participant.

(c) Substituted compliance.

(1) General. Compliance with the regulatory reporting and public dissemination requirements in sections 13(m) and 13A of the Act (15 U.S.C. 78m(m) and 78m-1), and the rules and regulations thereunder, may be satisfied by compliance with the rules of a foreign jurisdiction that is the subject of a Commission order described in paragraph (c)(2) of this section, provided that at least one of the direct counterparties to the security-based swap is either a non-U.S. person or a foreign branch.

(2) Procedure. (i) The Commission may, conditionally or unconditionally, by order, make a substituted compliance determination regarding regulatory reporting and public dissemination of security-based swaps with respect to a foreign jurisdiction if that jurisdiction's requirements for the regulatory reporting and public dissemination of security-based swaps are comparable to otherwise applicable requirements. The Commission may, conditionally or unconditionally, by order, make a substituted compliance determination regarding regulatory reporting of security-based swaps that are subject to § 242.908(a)(2) with respect to a foreign jurisdiction if that jurisdiction's requirements for the regulatory reporting of security-based swaps are comparable to otherwise applicable requirements.

(ii) A party that potentially would comply with requirements under §§ 242.900 through 242.909 pursuant to a substituted compliance order or any foreign financial regulatory authority or authorities supervising such a person's security-based swap activities may file an application, pursuant to the procedures set forth in § 240.0-13 of this chapter, requesting that the Commission make a substituted compliance determination regarding regulatory reporting and public dissemination with respect to a foreign jurisdiction the rules of which also would require reporting and public dissemination of those security-based swaps.

(iii) In making such a substituted compliance determination, the Commission shall take into account such factors as the Commission determines are appropriate, such as the scope and objectives of the relevant foreign regulatory requirements, as well as the effectiveness of the supervisory compliance program administered, and the enforcement authority exercised, by the foreign financial regulatory authority to support oversight of its regulatory reporting and public dissemination system for security-based swaps. The Commission shall not make such a substituted compliance determination unless it finds that:

(A) The data elements that are required to be reported pursuant to the rules of the foreign jurisdiction are comparable to those required to be reported pursuant to § 242.901;

(B) The rules of the foreign jurisdiction require the security-based swap to be reported and publicly disseminated in a manner and a timeframe comparable to those required by §§ 242.900 through 242.909 (or, in the case of transactions that are subject to § 242.908(a)(2) but not to § 242.908(a)(1), the rules of the foreign jurisdiction require the security-based swap to be reported in a manner and a timeframe comparable to those required by §§ 242.900 through 242.909);

(C) The Commission has direct electronic access to the security-based swap data held by a trade repository or foreign regulatory authority to which security-based swaps are reported pursuant to the rules of that foreign jurisdiction; and

(D) Any trade repository or foreign regulatory authority in the foreign jurisdiction that receives and maintains required transaction reports of security-based swaps pursuant to the laws of that foreign jurisdiction is subject to requirements regarding data collection and maintenance; systems capacity, integrity, resiliency, availability, and security; and recordkeeping that are comparable to the requirements imposed on security-based swap data repositories by the Commission's rules and regulations.

(iv) Before issuing a substituted compliance order pursuant to this section, the Commission shall have entered into memoranda of understanding and/or other arrangements with the relevant foreign financial regulatory authority or authorities under such foreign financial regulatory system addressing supervisory and enforcement cooperation and other matters arising under the substituted compliance determination.

(v) The Commission may, on its own initiative, modify or withdraw such order at any time, after appropriate notice and opportunity for comment.

§ 242.909 Registration of security-based swap data repository as a securities information processor.

A registered security-based swap data repository shall also register with the Commission as a securities information processor on Form SDR (§ 249.1500 of this chapter).

By the Commission.

Brent J. Fields
Secretary

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 242

Release No. 34-74245; File No. S7-03-15

RIN 3235-AL71

Regulation SBSR—Reporting and Dissemination of Security-Based Swap Information

AGENCY: Securities and Exchange Commission.

ACTION: Proposed rules, rule amendments, and guidance.

SUMMARY: The Securities and Exchange Commission ("SEC" or "Commission") is proposing certain new rules and rule amendments to Regulation SBSR—Reporting and Dissemination of Security-Based Swap Information ("Regulation SBSR"). Specifically, proposed Rule 901(a)(1) of Regulation SBSR would require a platform (i.e., a national securities exchange or security-based swap execution facility ("SB SEF") that is registered with the Commission or exempt from registration) to report to a registered security-based swap data repository ("registered SDR") a security-based swap executed on such platform that will be submitted to clearing. Proposed Rule 901(a)(2)(i) of Regulation SBSR would require a registered clearing agency to report to a registered SDR any security-based swap to which it is a counterparty. The Commission also is proposing certain conforming changes to other provisions of Regulation SBSR in light the proposed amendments to Rule 901(a), and a new rule that would prohibit registered SDRs from charging fees for or imposing usage restrictions on the users of the security-based swap transaction data that they are required to publicly disseminate. In addition, the Commission is explaining the application of Regulation SBSR to prime brokerage transactions and proposing guidance for the reporting and public dissemination of allocations of cleared security-based swaps. Finally, the Commission is proposing a new compliance schedule

for the portions of Regulation SBSR for which the Commission has not specified a compliance date.

DATES: Comments should be received on or before [insert date 45 days after publication in Federal Register].

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic comments:

- Use the Commission's Internet comment form (http://www.sec.gov/rules/proposed.shtml); or
- Send an e-mail to rule-comments@sec.gov. Please include File Number S7-03-15 on the subject line; or
- Use the Federal eRulemaking Portal (http://www.regulations.gov). Follow the instructions for submitting comments.

Paper Comments:

- Send paper comments to Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090.

All submissions should refer to File Number S7-03-15. This file number should be included on the subject line if e-mail is used. To help us process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet website (http://www.sec.gov/rules/proposed.shtml). Comments are also available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

Studies, memoranda, or other substantive items may be added by the Commission or staff to the comment file during this rulemaking. A notification of the inclusion in the comment file of any such materials will be made available on the SEC's website. To ensure direct electronic receipt of such notifications, sign up through the "Stay Connected" option at www.sec.gov to receive notifications by e-mail.

FOR FURTHER INFORMATION CONTACT: Michael Gaw, Assistant Director, at (202) 551-5602; Yvonne Fraticelli, Special Counsel, at (202) 551-5654; George Gilbert, Special Counsel, at (202) 551-5677; David Michehl, Special Counsel, at (202) 551-5627; Geoffrey Pemble, Special Counsel, at (202) 551-5628; all of the Division of Trading and Markets, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-7010.

   D. Request for Comment

VIII. Economic Analysis
   A. Broad Economic Considerations
      1. Security-Based Swap Market Infrastructure
      2. Competition Among Security-Based swap Service Providers
   B. Baseline
      1. Current Security-Based Swap Market
      2. Clearing Activity in Single-Name Credit Default Swaps
      3. Execution Methods in the Security-Based Swap Market

I. Introduction

Section 13A(a)(1) of the Exchange Act[1] provides that each security-based swap that is not accepted for clearing by any clearing agency or derivatives clearing organization shall be subject to regulatory reporting. Section 13(m)(1)(G) of the Exchange Act[2] provides that each security-based swap (whether cleared or uncleared) shall be reported to a registered SDR, and Section 13(m)(1)(C) of the Exchange Act[3] generally provides that transaction, volume, and pricing data of security-based swaps shall be publically disseminated in real time, except in the case of block trades.[4]

In a separate release, the Commission is adopting Regulation SBSR,[5] which contains several rules relating to regulatory reporting and public dissemination of security-based swap transactions. The Commission initially proposed Regulation SBSR in November 2010.[6] In May 2013, the Commission re-proposed the entirety of Regulation SBSR as part of the Cross-Border Proposing Release, which proposed rules and interpretations regarding the application of Title

---

1 15 U.S.C. 78m-1(a)(1). All references in this release to the Exchange Act refer to the Securities Exchange Act of 1934.

2 15 U.S.C. 78m(m)(1)(G).

3 15 U.S.C. 78m(m)(1)(C).

4 Section 13(m)(1)(E) of the Exchange Act, 15 U.S.C. 78m(m)(1)(E), provides that, with respect to cleared security-based swaps, the rule promulgated by the Commission related to public dissemination shall contain provisions, among others, that "specify the criteria for determining what constitutes a large notional security-based swap transaction (block trade) for particular markets and contracts" and "specify the appropriate time delay for reporting large notional security-based swap transactions (block trades) to the public."

5 Securities Exchange Act Release No. 74244 (February 11, 2015) (no Federal Register publication yet) ("Regulation SBSR Adopting Release").

6 See Securities Exchange Act Release No. 63346 (November 19, 2010), 75 FR 75207 (December 2, 2010) ("Regulation SBSR Proposing Release").

VII of the Dodd-Frank Act to cross-border security-based swap activities.[7] In this release, the Commission is proposing certain new rules of Regulation SBSR as well as amendments to, and guidance regarding Regulation SBSR, as adopted. The Commission also is proposing a compliance schedule for Regulation SBSR. The Commission seeks comment on all of the rules, rule amendments, and guidance proposed in this release.[8]

II. Reporting by Registered Clearing Agencies and Platforms—Proposed Amendments to Rule 901(a) and Conforming Changes

Section 13(m)(1)(F) of the Exchange Act[9] provides that parties to a security-based swap (including agents of parties to a security-based swap) shall be responsible for reporting security-based swap transaction information to the appropriate registered entity in a timely manner as may be prescribed by the Commission. Section 13(m)(1)(G) of the Exchange Act[10] provides that each security-based swap (whether cleared or uncleared) shall be reported to a registered SDR.

---

7 See Securities Exchange Act Release No. 69490 (May 1, 2013), 78 FR 30967 (May 23, 2013) ("Cross-Border Proposing Release").

8 With these proposed rules, rule amendments, and guidance, the Commission is not re-opening comment on the rules adopted in Regulation SBSR Adopting Release. The Commission received 86 comments that were specifically directed to the comment file (File No. S7-34-10) for the Regulation SBSR Proposing Release, of which 38 were comments submitted in response to the re-opening of the comment period. Of the comments directed to the comment file (File No. S7-02-13) for the Cross-Border Proposing Release, six referenced Regulation SBSR specifically, while many others addressed cross-border issues generally, without specifically referring to Regulation SBSR. As discussed in the Regulation SBSR Adopting Release, the Commission also has considered other comments that are relevant to regulatory reporting and/or public dissemination of security-based swaps that were submitted in other contexts. The comments discussed in this release are listed in Appendix A. For ease of reference, this release identifies commenters using the same naming convention as the Regulation SBSR Adopting Release, although it does not discuss all of the comment letters included in the Regulation SBSR Adopting Release. For example, this release refers to a letter identified as "ISDA IV," but does not discuss ISDA I, ISDA II, or ISDA III because those letters are not relevant to the current release.

9 15 U.S.C. 78m(m)(1)(F).

10 15 U.S.C. 78m(m)(1)(G).

Section 13A(a)(3) of the Exchange Act[11] specifies the party obligated to report a security-based swap that is not accepted for clearing by any clearing agency or derivatives clearing organization. Consistent with these statutory provisions, Rule 901(a) of Regulation SBSR, as adopted, assigns the duty to report "covered transactions," which include all security-based swaps except: (1) clearing transactions;[12] (2) security-based swaps that are executed on a platform and that will be submitted to clearing; (3) transactions where there is no U.S. person, registered security-based swap dealer, or registered major security-based swap participant on either side; and (4) transactions where there is no registered security-based swap dealer or registered major security-based swap participant on either side and there is a U.S. person on only one side. This release proposes to assign the duty to report security-based swaps in categories (1) and (2) above. The Commission anticipates seeking additional public comment in the future on the reporting obligations for security-based swaps in categories (3) and (4) above.

Rule 901(a), as proposed and re-proposed, would have used a hierarchy to assign reporting obligations for all security-based swaps—including those in the four non-covered categories noted above—without regard to whether a particular security-based swap was cleared or uncleared. In the Regulation SBSR Proposing Release, the Commission expressed a preliminary view that cleared and uncleared security-based swaps should be subject to the same

---

11 15 U.S.C. 78m-1(a)(3).

12 Rule 900(g), as adopted, defines "clearing transaction" as "a security-based swap that has a registered clearing agency as a direct counterparty." This definition describes security-based swaps that arise when a registered clearing agency accepts a security-based swap for clearing as well as security-based swaps that arise as part of a clearing agency's internal processes, such as security-based swaps used to establish prices for cleared products and security-based swaps that result from netting other clearing transactions of the same product in the same account into an open position. See Regulation SBSR Adopting Release, Section V(B)(2).

reporting hierarchy.[13] In addition, Rule 901(a), as proposed and as re-proposed, did not differentiate between security-based swaps that are executed on a platform and other security-based swaps. The Commission preliminarily believed that security-based swap dealers and major security-based swap participants generally should be responsible for reporting security-based swap transactions of all types, because they would be more likely than other persons to have appropriate systems in place to facilitate reporting.[14]

The Commission requested comment on a range of issues related to Rule 901(a), as proposed and as re-proposed. In particular, the Commission sought comment on whether platforms or clearing agencies should be required to report security-based swaps.[15] The Commission also asked whether counterparties to a security-based swap executed anonymously on a platform and subsequently cleared would have the information necessary to know which counterparty would incur the reporting obligation under Rule 901(a).[16] The comments that the Commission received in response are discussed below.

In light of comments received and upon additional consideration of the issues, the Commission is proposing two amendments to Rule 901(a) of Regulation SBSR. First, the Commission is proposing a new subparagraph (1) of Rule 901(a), which would provide that, if a security-based swap is executed on a platform and will be submitted to clearing, the platform on which the transaction was executed shall have the duty to report the transaction to a registered SDR. Second, the Commission is proposing a new subparagraph (2)(i) of Rule 901(a), which would assign the reporting duty for a clearing transaction to the registered clearing agency that is

14 See id.

15 See id. at 75212.

16 See id.

a counterparty to the security-based swap. In connection with these proposed rules, the Commission also is proposing several conforming rule amendments to Regulation SBSR. The Commission describes each of these proposed rules and rule amendments in more detail below, following a description of the process for central clearing of security-based swap transactions.

A. Clearing Process for Security-Based Swaps

As discussed in Section V of the Regulation SBSR Adopting Release, two models of clearing—an agency model and a principal model—are currently used in the swap markets. In the agency model, which predominates in the U.S. swap market, a swap that is accepted for clearing—often referred to in the industry as an "alpha"—is terminated and replaced with two new swaps, known as "beta" and "gamma." The Commission understands that, under the agency model, one of the direct counterparties to the alpha becomes a direct counterparty to the beta, and the other direct counterparty to the alpha becomes a direct counterparty to the gamma. The clearing agency would be a direct counterparty to each of the beta and the gamma.[17] This release uses the terms "alpha," "beta," and "gamma" in the same way that they are used in the agency

---

17 If both direct counterparties to the alpha are clearing members, the direct counterparties would submit the transaction to the clearing agency directly and the resulting beta would be between the clearing agency and one clearing member, and the gamma would be between the clearing agency and the other clearing member. The Commission understands, however, that, if the direct counterparties to the alpha are a clearing member and a non-clearing member (a "customer"), the customer's side of the trade would be submitted for clearing by a clearing member acting on behalf of the customer. When the clearing agency accepts the alpha for clearing, one of the resulting swaps—in this case, assume the beta—would be between the clearing agency and the customer, with the customer's clearing member acting as guarantor for the customer's trade. The other resulting swap—the gamma—would be between the clearing agency and the clearing member that was a direct counterparty to the alpha. See, e.g., Byungkwon Lim and Aaron J. Levy, "Contractual Framework for Cleared Derivatives: The Master Netting Agreement Between a Clearing Customer Bank and a Central Counterparty," 10 Pratt's J. of Bankr. Law 509, 515-517 (LexisNexis A.S. Pratt) (describing the clearing model for swaps in the United States).

model of clearing in the U.S. swap market.[18] The Commission notes that, under Regulation SBSR, an alpha is not a "clearing transaction," even though it is submitted for clearing, because it does not have a registered clearing agency as a direct counterparty.[19]

B. Summary of the Proposed Amendments to Rule 901(a) and Conforming Changes

In a separate release, the Commission is adopting Regulation SBSR under the Exchange Act. In light of comments received in response to both the Regulation SBSR Proposing Release and the Cross-Border Proposing Release (which re-proposed Regulation SBSR in its entirety), the Commission in this release is proposing to amend Rule 901(a) of Regulation SBSR to assign reporting duties for: (1) platform-executed security-based swaps that will be submitted to clearing; and (2) clearing transactions.

---

18 In the principal model of clearing, which the Commission understands is used in certain foreign swap markets, a customer is not a direct counterparty of the clearing agency. Under this model, a clearing member would clear a swap for a customer by entering into a back-to-back swap with the clearing agency: the clearing member would become a direct counterparty to a swap with the customer, and then would become a counterparty to an offsetting swap with the clearing agency. In this circumstance, unlike in the agency model of clearing, the swap between the direct counterparties might not terminate upon acceptance for clearing. The Commission notes that one commenter recommended that Regulation SBSR should clarify the applicable reporting requirements under each of the agency and principal clearing models. See ISDA IV at 6. Although this release focuses on the agency model of clearing, which predominates in the United States, the Commission is requesting comment regarding the application of the principal model.

19 This release does not address the application of Section 5 of the Securities Act of 1933, 15 U.S.C. 77a et seq. ("Securities Act"), to security-based swap transactions that are intended to be submitted to clearing (e.g., alphas, in the agency model of clearing). Rule 239 under the Securities Act, 17 CFR 230.239, provides an exemption for certain security-based swap transactions involving an eligible clearing agency from all provisions of the Securities Act, other than the Section 17(a) anti-fraud provisions. This exemption does not apply to security-based swap transactions not involving an eligible clearing agency, including a transaction that is intended to be submitted to clearing, regardless of whether the security-based swaps subsequently are cleared by an eligible clearing agency. See Exemptions for Security-Based Swaps Issued By Certain Clearing Agencies, Securities Act Release No. 33-9308 (March 30, 2012), 77 FR 20536 (April 5, 2012).

1. Proposed Rule 901(a)(1)—Reporting by Platforms

The Commission is proposing a new subparagraph (1) of Rule 901(a), which would require a platform to report to a registered SDR any security-based swap that is executed on that platform and that will be submitted to clearing (i.e., any alpha executed on the platform).[20] As the person with the duty to report the transaction, the platform would be able to select the registered SDR to which it reports.[21]

2. Proposed Reporting Obligations of Registered Clearing Agencies

The Commission is proposing a new subparagraph (2)(i) of Rule 901(a), which would designate a registered clearing agency as the reporting side for all clearing transactions to which it is a counterparty. In its capacity as the reporting side, the registered clearing agency would be permitted to select the registered SDR to which it reports a clearing transaction.

The Commission also is proposing certain rules to address reporting requirements for life cycle events arising from the clearing process. Subparagraph (i) of Rule 901(e)(1), as adopted, provides that the reporting side for a security-based swap must generally report a life cycle event of that swap, "except that the reporting side shall not report whether or not a security-based swap has been accepted for clearing." The Commission is proposing a new subparagraph (ii) of Rule

20 If the execution occurs otherwise than on a platform, or if the security-based swap is executed on a platform but will not be submitted to clearing, the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, will apply to the transaction.

21 This is consistent with the Commission's guidance in Section V(B) of the Regulation SBSR Adopting Release that, for transactions subject to Rule 901(a)(2)(ii), the reporting side may choose the registered SDR to which it makes the report required by Rule 901: "The reporting side may select the registered SDR to which it makes the required report. However, with respect to any particular transaction, all information required to be reported by Rule 901(a)(2)(ii), as adopted, must be reported to the same registered SDR."

901(e)(1), which would require a registered clearing agency to report whether or not it has accepted an alpha security-based swap for clearing.[22]

Rule 901(e)(2), as adopted, requires a life cycle event to be reported "to the entity to which the original security-based swap transaction will be or has been reported." Thus, proposed Rule 901(e)(1)(ii) would require a registered clearing agency to report to the registered SDR that received or will receive the transaction report of the alpha (the "alpha SDR") whether or not it has accepted the alpha for clearing. As discussed in Section II(C)(3), infra, the Commission is proposing that this obligation to report whether or not it has accepted the alpha for clearing would cause the registered clearing agency to become a participant of the alpha SDR.

If the registered clearing agency does not know the identity of the alpha SDR, the registered clearing agency would be unable to report to the alpha SDR whether or not it accepted the alpha transaction for clearing, as would be required by proposed Rule 901(e)(1)(ii). Therefore, the Commission is proposing a new subparagraph (3) of Rule 901(a), which would require a platform or reporting side for a security-based swap that has been submitted to clearing to promptly provide the relevant registered clearing agency with the identity of the alpha SDR and the transaction ID of the alpha transaction that has been submitted to clearing.

C. Discussion of Comments and Further Explanation of the Proposal

The Commission requested and received comment on a wide range of issues related to Rules 901(a) and 901(e), as initially proposed in the Regulation SBSR Proposing Release and as re-proposed in the Cross-Border Proposing Release. For example, in the Regulation SBSR

22 If the alpha security-based swap is not required to be reported to a registered SDR—which could occur if Rule 901(a) does not assign a reporting obligation for the transaction or if the person assigned under Rule 901(a) is not enumerated in Rule 908(b)—the registered clearing agency would have no duty to report whether or not it has accepted the alpha for clearing.

Proposing Release, the Commission asked commenters about the types of entities that should have the duty to report security-based swaps and the practicability of the proposed reporting hierarchy in certain cases where the counterparties might not know each other's identities.[23]

1. Reporting Clearing Transactions

Six commenters addressed the Commission's proposal to treat cleared security-based swaps the same as uncleared security-based swaps for purposes of assigning reporting obligations under Rule 901(a). Two commenters generally supported the Commission's proposal, noting that it would allow security-based swap counterparties, rather than clearing agencies, to choose the registered SDR that receives data about their security-based swaps.[24] However, three other commenters objected to the proposal on statutory or operational grounds.[25] One commenter argued that Title VII's security-based swap reporting provisions and Regulation SBSR should not extend to clearing transactions.[26] Two commenters stated that the reporting hierarchy in Regulation SBSR is appropriate for OTC bilateral markets, but that it should not be applied to cleared transactions because the clearing model substantially differs from OTC bilateral markets.[27] These commenters argued that, in the alternative, if the Commission requires clearing transactions to be reported to a registered SDR, the clearing agency that clears the alpha should have the duty to report the associated clearing transactions to a registered SDR of its

23 See 75 FR at 75212.

24 See DTCC VI at 8-9; MarkitSERV III at 3-5.

25 See CME/ICE Letter at 2-4; ICE Letter at 2-5; CME II at 4; ISDA IV at 5-6.

26 See CME II at 5 (stating that "a choice by the Commission to require that data on cleared SBS be reported to a third-party SDR would impose substantial costs on market participants which greatly outweigh the benefits (if any). . . . The Commission already has access to this data via the clearing agency.")

27 See ICE Letter at 2; CME/ICE Letter at 2.

choice.[28] Another commenter expressed the view that a clearing agency is best-positioned to report cleared security-based swaps.[29]

a. Requirements for Reporting of Clearing Transactions to a Registered SDR

Two commenters argued that the Exchange Act does not require data on clearing transactions to be reported to a registered SDR for regulatory reporting purposes.[30] They noted that Section 13A(a)(1) of the Exchange Act[31] provides that "[e]ach security-based swap that is not accepted for clearing by any clearing agency or derivatives clearing organization shall be reported" to a registered SDR or the Commission. In the view of these commenters, Section 13A(a)(1) is intended to ensure that the Commission has access to data for uncleared security-based swaps. Section 13A(a)(1) does not, according to these commenters, apply to clearing transactions, because complete data for these security-based swaps already would be collected, maintained, and made available to the Commission by the relevant clearing agency.[32] Accordingly, these commenters contend that "any system that would require a Clearing Agency to make duplicative reports to an outside third party regarding [security-based swaps] it clears would be costly and unnecessary."[33]

The Commission does not agree with the commenters' reading of the Exchange Act.

---

28 See CME II at 4-5; CME/ICE Letter at 2-4; ICE Letter at 2-3.

29 ISDA IV at 5 (stating further that ..."[I]f the Commission assigns responsibility to clearing agencies for the reporting of cleared [security-based swaps], the clearing agency should be the sole party responsible for reporting all the trade data for cleared swaps.") See also ICE Letter at 2-3 (stating that "The Clearing Agency is best positioned to have the sole responsibility to report . . . required swap data, including valuation data").

30 See CME/ICE Letter at 4; CME II at 4.

31 15 U.S.C. 78m-1(a)(1).

32 See CME/ICE Letter at 2, 4; CME II at 4.

33 CME/ICE Letter at 4.

While Section 13A(a) of the Exchange Act requires all uncleared security-based swaps to be reported to a registered SDR and specifies who must report an uncleared security-based swap, it does not address whether cleared security-based swaps must be reported to a registered SDR. However, Section 13(m)(1)(G) of the Exchange Act[34] provides that "[e]ach security-based swap (whether cleared or uncleared) shall be reported to a registered security-based swap data repository." This section explicitly requires reporting of each security-based swap to a registered SDR, including a security-based swap that is a clearing transaction, because all security-based swaps necessarily are either cleared or uncleared.

Furthermore, the Commission preliminarily believes that having data for all security-based swaps reported to registered SDRs will provide the Commission and other relevant authorities with the most efficient access to security-based swap information.[35] If data for clearing transactions were not reported to registered SDRs, the Commission would have to obtain transaction information from multiple types of registered entities—i.e., registered clearing agencies as well as registered SDRs—to obtain a complete picture of the security-based swap market. Obtaining transaction data separately from additional types of registrants would exacerbate concerns about fragmentation of the data that could be reduced by requiring all security-based swap transactions to be reported to registered SDRs. For example, registered clearing agencies might store, maintain, and furnish data to the Commission in a format different from the data provided by registered SDRs, which would force the Commission to expend

34 15 U.S.C. 78m(m)(1)(G).

35 Section 13(n)(5)(G) of the Exchange Act, 15 U.S.C. 78m(n)(5)(G), provides specified authorities other than the Commission with access to security-based swap data held by SDRs, but does not grant similar access to security-based swap data held by registered clearing agencies. If the Commission relied exclusively on registered clearing agencies to store data for clearing transactions, the ability of other relevant authorities to access the information could be impaired.

greater resources harmonizing the data sets.

b. Determining the Reporting Side for Clearing Transactions

Two commenters supported the Commission's original proposal to assign reporting obligations for all security-based swaps, including clearing transactions, through the reporting hierarchy in all circumstances.[36] One of these commenters expressed the view that counterparty choice would "ensure that a party to the transaction (instead of a platform or clearinghouse) can chose [sic] the most efficient manner of performing its reporting across all of the regions and asset classes that it is active in."[37] This commenter further stated that permitting a platform or clearing agency to report security-based swaps would impose costs on market participants by obligating them to establish connectivity to multiple trade repositories.[38]

Three other commenters objected to this aspect of Regulation SBSR, as proposed and re-proposed. Two of these commenters argued that, if clearing transactions are subject to Regulation SBSR, they should be reported by the clearing agency that clears the alpha: "in contrast to uncleared [security-based swaps], the Clearing Agency is the sole party who holds the complete and accurate record of transactions and positions for cleared [security-based swaps] and in fact is the only entity capable of providing accurate and useful positional information on cleared [security-based swaps] for systemic risk monitoring purposes."[39] The other commenter stated that the clearing agency is best positioned to report cleared security-based swaps timely and accurately as an extension of the clearing process, and that the clearing agency should be the

---

36 See DTCC VI at 8-9; DTCC VIII (recommending that the Commission should not assign reporting obligations to clearing agencies because Regulation SBSR, as proposed and re-proposed, would not have required reporting by clearing agencies); MarkitSERV III at 4.

37 MarkitSERV III at 4.

38 See id.

39 CME/ICE Letter at 3-4.

sole party responsible for reporting all the trade data for cleared swaps, including valuation data.[40]

After careful consideration of the comments, the Commission now preliminarily believes that a registered clearing agency should have the duty to report any clearing transaction to which it is a counterparty. The Commission believes that, because the registered clearing agency creates the clearing transactions to which it is a counterparty, the registered clearing agency is in the best position to provide complete and accurate information for the clearing transactions resulting from the security-based swaps that it clears.[41]

The Commission understands that certain registered clearing agencies that offer central clearing in swaps currently report their clearing transactions to swap data repositories that are

---

40 ISDA IV at 5. The Commission notes that Regulation SBSR as adopted does not require the reporting of the market value of a security-based swap. See Regulation SBSR Adopting Release, Section II(B)(3)(e) and Section II(B)(3)(k).

41 One commenter urged the Commission to be clear which party is responsible for reporting a clearing transaction in the event that reporting commences before security-based swap clearing agencies are required to register with the Commission or in the event that a security-based swap is cleared through a clearing agency that is not required to register, exempted from registration, or granted relief. See ISDA IV at 6. This commenter further recommended that the reporting requirement for a clearing agency should apply equally to clearing agencies required to register and those that may be exempted from the requirement but which clear security-based swaps subject to reporting. See id. The Commission believes that the proposed rules are clear as to which side would have the responsibility for reporting a clearing transaction. The Commission notes that proposed Rule 901(a)(2)(i) would impose the duty to report clearing transactions on registered clearing agencies. It is possible that a non-U.S. person could register with the Commission as a clearing agency under Section 17A of the Exchange Act, 15 U.S.C. 78q-1. The Commission generally believes that, if a person registers with the Commission as a clearing agency, it should assume the same obligations as all other persons that register as clearing agencies. Proposed Rule 901(a)(2)(i) would not apply to unregistered clearing agencies (i.e., persons that act as clearing agencies outside the United States that are not required to, and choose not to, register with the Commission). If in the future the Commission contemplates a process for exempting clearing agencies from registration or considers an application for relief from clearing agency registration requirements, the Commission could at that time consider the issue of whether to extend the duty to report clearing transactions to an exempt clearing agency.

provisionally registered with the CFTC. These registered clearing agencies have adopted rules stating that they will comply with the CFTC's swap data reporting rules by reporting beta and gamma swaps to a swap data repository that is an affiliate or business unit of the registered clearing agency. These current swap market practices evidence the ability of registered clearing agencies to report clearing transactions. The Commission's proposal to assign to registered clearing agencies the duty to report clearing transactions is intended, in part, to promote efficiency in the reporting process under Regulation SBSR by leveraging these existing workflows.

The Commission has considered the following alternatives to proposed Rule 901(a)(2)(i):

(1) Utilize the reporting hierarchy in Regulation SBSR, as re-proposed. Under this approach, a registered clearing agency would occupy the lowest spot in the hierarchy, along with other persons who are neither registered security-based swap dealers nor registered major security-based swap participants. Thus, in the case of a beta or gamma transaction between a registered security-based swap dealer or registered major security-based swap participant and a registered clearing agency, the registered security-based swap dealer or registered major security-based swap participant would be the reporting side. In the case of a beta or gamma transaction between a non-registered person and a registered clearing agency, the outcome would depend on whether the non-clearing agency direct counterparty is guaranteed by a registered security-based swap dealer or registered major security-based swap participant. If the non-clearing agency direct counterparty is guaranteed by a registered security-based swap dealer or registered major security-based swap participant, that side would be the reporting side. If the non-clearing agency direct counterparty has no guarantor or is guaranteed by a person who is not a registered security-based swap dealer or registered major security-based swap participant, there

would be a tie and the sides would be required to select the reporting side.

(2) Modify the re-proposed hierarchy to place registered clearing agencies above other non-registered persons but below registered security-based swap dealers and registered major security-based swap participants. Thus, in a transaction between a registered clearing agency and a registered security-based swap dealer (or a transaction between a registered clearing agency and a non-registered person who is guaranteed by a registered security-based swap dealer), the outcome would be the same as in Alternative 1: the side with the registered security-based swap dealer would have the duty to report. However, the outcome would be different from Alternative 1 in the case of a beta or gamma transaction between a registered clearing agency and a non-registered person who is not guaranteed by a registered security-based swap dealer or registered major security-based swap participant: instead of the sides choosing, the registered clearing agency would have the duty to report.

(3) Require the reporting side of the alpha to report both the beta and gamma transaction. Under this approach, the reporting side of the alpha transaction also would be the reporting side for the beta and gamma transactions. Under this approach, the beta and gamma could be viewed as life cycle events of the alpha, and thus should be treated like other life cycle events of the alpha, which the reporting side of the alpha has the duty to report.

The Commission preliminarily believes that each of these three alternatives for assigning the reporting duty for clearing transactions would be less efficient and could result in less reliable reporting than assigning to registered clearing agencies the duty to report all clearing transactions. Two commenters have asserted that a clearing agency is the only party that has complete information about clearing transactions immediately upon their creation.[42] Each of the three alternatives could require a person who does not have information about the clearing transaction at the time of its creation to report that transaction. The only way such a person could discharge its reporting duty would be to obtain the information from the registered clearing agency or from the counterparty to the registered clearing agency. This extra and unnecessary step could introduce more opportunities for data discrepancies, errors, or delays in reporting. The Commission preliminarily believes instead that a more efficient way to obtain a regulatory report of each clearing transaction would be to require the registered clearing agency to report each clearing transaction to a registered SDR directly.

Under Alternative 1, applying the reporting hierarchy to a transaction between a registered clearing agency and a registered security-based swap dealer or registered major security-based swap participant would result in the side opposite the clearing agency being the reporting side for the security-based swap. This approach would comport with the suggestion of commenters who opposed placing reporting obligations on registered clearing agencies.[43] As discussed above, however, the Commission believes that it would be more efficient to require the registered clearing agency to report the transaction. Furthermore, applying the reporting hierarchy to a transaction between a registered clearing agency and another non-registered person (assuming it is not guaranteed by a registered security-based swap dealer or major security-based swap participant) would require the sides to select the reporting side. While it is likely that the counterparties in this case would select the registered clearing agency as the

---

42 See CME/ICE Letter at 3-4. Even the commenters who opposed reporting by clearing agencies did not suggest that a clearing agency lacks adequate information to report the beta and the gamma.

43 See DTCC VI at 8-9; DTCC VIII (noting that Regulation SBSR, as proposed and re-proposed, would not have required reporting by clearing agencies); MarkitSERV III at 4.

reporting side, the Commission preliminarily believes that it would be more efficient to obviate the need for registered clearing agencies and non-registered persons to negotiate reporting duties. As discussed in the Regulation SBSR Adopting Release, the Commission designed Rule 901(a), in part, to minimize the possibility of reporting obligations being imposed on non-registered counterparties.[44]

Alternative 2 would assign the reporting obligation to a registered security-based swap dealer or registered major security-based swap participant when it is a counterparty to a registered clearing agency, while avoiding the need for non-registered persons to negotiate reporting obligations with registered clearing agencies. The Commission preliminarily believes, however, that this alternative—like Alternatives 1 and 3—would be less efficient than requiring the registered clearing agency to report the transaction information directly to a registered SDR, because the registered clearing agency is the only person who has complete information about a clearing transaction immediately upon its creation.

Under Alternative 3, the reporting side for the alpha also would be the reporting side for the beta and gamma. Alternative 3 would require the reporting side for the alpha also to report information about a security-based swap—the clearing transaction between the registered clearing agency and the non-reporting side of the alpha—to which it is not a counterparty. The Commission could require the non-reporting side of the alpha to transmit information about its clearing transaction to the reporting side of the alpha. In theory, this would allow the reporting side of the alpha to report both the beta and the gamma. The Commission believes, however,

44 See Regulation SBSR Adopting Release, Section V. See also Vanguard Letter at 6 (noting that clearing agencies, platforms, security-based swap dealers, and major security-based swap participants would be better situated to report security-based swaps than other types of market participants, such as buy-side firms).

that this result could be difficult to achieve operationally and, in any event, could create confidentiality concerns, as an alpha counterparty may not wish to reveal information about its clearing transactions except to the registered clearing agency (and, if applicable, its clearing member). Moreover, all other things being equal, having more steps in the reporting process—e.g., more data transfers between execution and reporting—introduces greater opportunity for data discrepancies and delays than having fewer steps. Also, because the reporting side of the alpha would have the duty to report the beta and gamma, Alternative 3 is premised on the view that the beta and gamma are life cycle events of the alpha. The Commission, however, considered and rejected this approach in the Regulation SBSR Adopting Release.[45]

In sum, having considered these alternatives, the Commission preliminarily believes that the most direct and efficient way of reporting clearing transactions to a registered SDR is to assign to a registered clearing agency the duty to report all clearing transactions to which it is a counterparty. Therefore, the Commission is proposing new subparagraph (i) of Rule 901(a)(2) to achieve this result. A registered clearing agency has complete information about all clearing transactions to which it is a counterparty, including betas and gammas that arise from clearing alpha security-based swaps. The alternative reporting regimes discussed above could result in less efficiencies in reporting, and thus greater costs, because persons that are less likely to have established infrastructure for reporting or that do not possess the same degree of direct and complete access to the relevant data as the registered clearing agency could have the duty to

---

45 See Regulation SBSR Adopting Release, Section V(B)(2) at note 267 ("Under Rule 900(g), a security-based swap that results from clearing is an independent security-based swap and not a life cycle event of a security-based swap that is submitted to clearing. Thus, Rule 901(e), which addresses the reporting of life cycle events, does not address what person has the duty to report the clearing transactions that arise when a security-based swap is accepted for clearing").

report. Furthermore, these non-clearing agency counterparties would first have to obtain information about executed clearing transactions from the registered clearing agency before they, in turn, could provide the transaction information to a registered SDR. This extra step in reporting could result in delays, or create opportunities for errors that could lead to a loss of data integrity. The Commission preliminarily believes that data discrepancies, errors, and delays are less likely to occur if the duty to report information about clearing transactions were assigned to registered clearing agencies directly.

c. Choice of Registered SDR for Clearing Transactions

The Commission has carefully considered how registered clearing agencies would fulfill their reporting obligations under proposed Rule 901(a)(2)(i), including whether registered clearing agencies could choose the registered SDR to which they report or whether they should be required to report clearing transactions to the registered SDR that received the report of the associated alpha transaction. Regulation SBSR allows the reporting side to choose the registered SDR to which it reports, subject to the requirement that reports of life cycle events must be made to the same registered SDR that received the initial report of the security-based swap.[46]

As noted in the Regulation SBSR Adopting Release, a clearing transaction is an independent security-based swap and not a life cycle event of an alpha security-based swap that is submitted to clearing.[47] As discussed in the Regulation SBSR Adopting Release, the Commission believes that, in general, the person with the duty to report a security-based swap

46 See Regulation SBSR Adopting Release, Section V(B)(2) ("The reporting side may select the registered SDR to which it makes the required report").

47 See Regulation SBSR Adopting Release, Section V(B). However, the determination by a registered clearing agency of whether or not to accept the alpha for clearing is a life cycle event of the alpha. Proposed Rule 901(e)(1)(ii) would require registered clearing agencies to report these life cycle events to the alpha SDR.

under Rule 901(a) should be permitted to discharge this duty by reporting to a registered SDR of its choice.[48] This approach is designed to promote efficiency by allowing the person with the reporting duty to select the registered SDR that offers it the greatest ease of use or the lowest fees. Under proposed Rule 901(a)(2)(i), a registered clearing agency would be the reporting side for all clearing transactions to which it is a counterparty; because the registered clearing agency would have the duty to report, it also would have the ability to choose the registered SDR. The Commission considered proposing that reports of betas and gammas go to the same registered SDR that received the report of the associated alpha, but has declined to do so, for the reasons discussed below.

If Regulation SBSR were to require registered clearing agencies to report betas and gammas to the registered SDR that received the report of the associated alpha, the registered clearing agency would be required to report to a registered SDR that might not offer it the greatest ease of use or the lowest fees. As such, this result could be less efficient for the registered clearing agency than the alternative approach of permitting the registered clearing agency to choose the registered SDR to which it reports the beta and gamma. Moreover, the Commission preliminarily believes that it would have sufficient tools to be able to track related transactions across SDRs,[49] and thus that it would be appropriate to allow a registered clearing agency to choose where to report the beta and gamma, even if it chooses to report to a registered SDR other than the alpha SDR.

One commenter asserted that allowing a registered clearing agency to report betas and

---

48 See Regulation SBSR Adopting Release, Section V(B).

49 See Regulation SBSR Adopting Release, Section II(B)(3)(j) (explaining that Rule 901(d)(10), as adopted, will facilitate the Commission's ability to link transactions using the transaction ID); Regulation SBSR Adopting Release, Section VIII (further describing the ability of the Commission to link related transactions using the transaction ID).

gammas to a registered SDR of the clearing agency's choice, rather than to the alpha SDR, would impose substantial costs on security-based swap counterparties because the non-clearing agency counterparties would have to establish connectivity to multiple SDRs.[50] This comment appears premised on the idea that non-clearing agency counterparties would have ongoing obligations to report subsequent information—such as life cycle events or a daily mark of the security-based swap—to registered SDRs not of their choosing, which could force them to establish connections to multiple registered SDRs. However, proposed Rule 901(a)(2)(ii) would assign the reporting duty for a clearing transaction to the registered clearing agency, and Regulation SBSR, as adopted, does not impose any duty on a non-reporting side to report life cycle events or a daily mark.[51] Therefore, the Commission does not believe that any duty under Regulation SBSR, as adopted, or the amendments to Regulation SBSR proposed herein, would cause non-clearing agency counterparties to incur significant costs resulting from the ability of a registered clearing agency to select the registered SDR to which it reports clearing transactions.[52]

d. Reporting Whether an Alpha Transaction is Accepted for Clearing

One commenter expressed the view that a clearing agency would be well-positioned to issue a termination report for the alpha and subsequently report the beta, gamma, and, if

50 See MarkitSERV III at 4, n. 11.

51 Nor does Regulation SBSR require a non-reporting side to alert a registered SDR if it becomes aware that any security-based swap information has been reported erroneously. Under the proposed amendments to Rule 905(a) discussed below, if an error is discovered by a person other than the person having the duty to report a security-based swap, the person who discovered the error would report such error to the person who had the duty to report the transaction, rather than to the registered SDR directly.

52 Non-clearing agency counterparties to clearing transactions might incur modest costs associated with reporting certain unique identification code ("UIC") information required by Rule 906(a), e.g., their branch ID, broker ID, trader ID, and trading desk ID, as applicable. See Regulation SBSR Adopting Release, Section XXII(C)(6)(c) (discussing the costs of complying with Rule 906(a), as adopted).

necessary, open positions to a registered SDR.[53] The Commission agrees with this commenter and is therefore proposing a new subparagraph (ii) of Rule 901(e)(1), which would require a registered clearing agency to report to the alpha SDR whether or not it has accepted the alpha for clearing. Rule 901(e)(1)(i), as adopted, requires the reporting side of a security-based swap to report—to the same entity to which it reported the original transaction—any life cycle event (or adjustment due to a life cycle event) except for whether or not the security-based swap has been accepted for clearing. Proposed Rule 901(e)(1)(ii) would address the reporting of whether or not the security-based swap has been accepted for clearing, and would assign that duty to the registered clearing agency to which the transaction is submitted for clearing, rather than to the reporting side of the original transaction. Proposed Rule 901(e)(1)(ii) would ensure that all potential life cycle events (and adjustments due to life cycle events) would be subject to regulatory reporting, and that Regulation SBSR would specify the person who has the duty to report each kind of life cycle event (or adjustment).

When an alpha is submitted for clearing, the registered clearing agency will review the trade and decide whether or not to accept it. Acceptance for clearing can result in the termination of the alpha and the creation of the beta and gamma. Furthermore, rejection from clearing is an important event in the life of the alpha—because rejection could result in the voiding of the transaction or the activation of credit support provisions that would alter the character of the transaction—and thus is the kind of event that Rule 901(e) is designed to capture for regulatory purposes. Accordingly, proposed Rule 901(e)(1)(ii) would require a registered clearing agency to report whether or not it has accepted a security-based swap for clearing.

53 See ICE Letter at 2-5.

The Commission preliminarily believes that requiring a registered clearing agency, rather than the reporting side of the alpha, to report whether or not the registered clearing agency has accepted an alpha for clearing is consistent with the Commission's approach of assigning reporting obligations to the person with the most complete and efficient access to the required information. The registered clearing agency would have the most complete and efficient access to information about whether a particular alpha has been accepted for clearing because the registered clearing agency determines whether to accept a submitted alpha and knows the precise moment when the transaction is cleared. Although it would be possible for the reporting side for the alpha transaction to report whether a registered clearing agency has accepted the alpha for clearing, the reporting side would need to learn this information from the clearing agency. The Commission preliminarily believes it is more efficient to require the registered clearing agency to report to the alpha SDR whether or not the registered clearing agency has accepted the alpha for clearing.

Rule 901(e)(2), as adopted, requires whoever has the duty to report a life cycle event to include in the report of the life cycle event the transaction ID of the original transaction. If the Commission ultimately adopts proposed Rule 901(e)(1)(ii), a registered clearing agency that accepts or rejects an alpha transaction from clearing would incur this duty under existing Rule 901(e)(2). The transaction ID of the alpha transaction is information that the registered clearing agency might not have, because the registered clearing agency is not involved in the execution or reporting to a registered SDR of the alpha transaction. Therefore, the Commission also is proposing a new subparagraph (3) of Rule 901(a), which would provide that "a person who, under [Rule 901(a)(1) or 901(a)(2)(ii)] has a duty to report a security-based swap that has been submitted to clearing at a registered clearing agency shall promptly provide that registered clearing agency with the transaction ID of the submitted security-based swap and the identity of the registered security-based swap data repository to which the transaction will be reported or has been reported." Proposed Rule 901(a)(3) would ensure that the registered clearing agency knows the identity of the alpha SDR and the transaction ID of the alpha, so that the registered clearing agency knows where to report whether or not it accepts the alpha for clearing—as required under existing Rule 901(e)(2)—and so that this report can be linked to the alpha report.

The Commission recognizes the potential for proposed Rules 901(e)(1)(ii) and 901(a)(3) to result in the registered clearing agency reporting whether or not it accepted the alpha for clearing to the alpha SDR before the alpha transaction itself has been reported to the alpha SDR. This could occur during the interim phase for regulatory reporting and public dissemination, which the Commission discussed in Section VII of the Regulation SBSR Adopting Release. Rule 901(j), as adopted, generally permits the person with the duty to report a security-based swap up to 24 hours after the time of execution to report to a registered SDR the transaction information required by Rules 901(c) and 901(d). Accordingly, an alpha could be submitted for clearing immediately after execution, but not reported to a registered SDR for up to 24 hours (or, if 24 hours after the time of execution would fall on a day that is not a business day, by the same time on the next day that is a business day). If the registered clearing agency accepts the alpha for clearing, the registered clearing agency might, pursuant to proposed Rule 901(e)(1)(ii), submit a report of this life cycle event to the alpha SDR before the alpha SDR has received the transaction report of the alpha transaction itself.[54]

---

[54] To submit the report contemplated by proposed Rule 901(e)(1)(ii), the registered clearing agency would need to know the transaction ID of the alpha. The person with the duty to report the alpha might know the transaction ID of the alpha before it reports the transaction to a registered SDR. Under Rules 903(a) and 907(a)(5), as adopted, there is

To account for this possibility, the Commission is proposing a minor amendment to Rule 901(e)(2). Rule 901(e)(2), as adopted, states in relevant part that a life cycle event must be reported "to the entity to which the original security-based swap transaction was reported" (emphasis added). Under the proposed amendment to Rule 901(e)(2), a life cycle event would have to be reported "to the entity to which the original security-based swap transaction will be reported or has been reported." This amendment mirrors the language in proposed Rule 901(a)(3), which would require a person who reports an alpha to provide the registered clearing agency to which the alpha is submitted the transaction ID of the alpha and the identity of the registered SDR to which the alpha "will be reported or has been reported."

A registered SDR should consider—in formulating its policies and procedures under Rule 907(a), as adopted—whether those policies and procedures should address the situation where it receives a report from a registered clearing agency stating whether or not it has accepted an alpha (with a particular transaction ID) for clearing before the registered SDR has received a transaction report of the alpha. For example, the policies and procedures could provide that the registered SDR would hold a report from a registered clearing agency that it accepted the alpha for clearing in a pending state until it receives the transaction report of the alpha, and then

---

no requirement that a registered SDR itself assign a transaction ID. Under those rules, a registered SDR may allow third parties—such as reporting sides or platforms—to assign a transaction ID using a methodology endorsed by the registered SDR. If the registered SDR allows third parties to assign the transaction ID, the reporting side or platform could tell the registered clearing agency the transaction ID, which in turn could allow the registered clearing agency to report to the alpha SDR whether or not the alpha has been accepted for clearing before the alpha has been reported to the registered SDR. If, however, the person with the duty to report the alpha does not obtain the transaction ID until it reports the alpha to a registered SDR, the person could not provide the transaction ID of the alpha to the registered clearing agency, and the registered clearing agency could not report whether or not it accepts the alpha for clearing until after it received alpha's transaction ID.

disseminate the security-based swap transaction information and the fact that the alpha has been terminated as a single report.

2. Reporting by a Platform

Some commenters, responding to Rule 901(a) as initially proposed, suggested that the Commission require a platform to report security-based swaps executed on or through its facilities.[55] One of these commenters stated that a platform would have the technology to report a security-based swap executed on its facilities and would be in the best position to ensure that the transaction was reported accurately and on a real-time basis.[56] This commenter also stated that the counterparties to a transaction executed on a platform should be relieved of any reporting obligations because they would not be in a position to control or confirm the accuracy of the information reported or to control the timing of the platform's reporting.[57] Another commenter expressed the view that having platforms report security-based swaps would facilitate economies in the marketplace because fewer entities, including end users, would be required to build the systems necessary to support security-based swap reporting.[58] Four commenters, however, raised concerns about imposing reporting requirements on platforms.[59]

---

55 See ICI I at 5; Tradeweb Letter at 3-4; Vanguard Letter at 2, 7.

56 See Tradeweb Letter at 3.

57 See id. at 3-4. The commenter also noted that the CFTC's proposed swap data reporting rules would require a SEF or designated contract market to report a swap executed on its facilities. See id. at 4. The CFTC has subsequently adopted a final rule that requires SEFs and designated contract markets to report swaps executed on their facilities. See 17 CFR 45.3.

58 See Vanguard Letter at 7; ICI I at 5 (arguing that because investment funds would need to spend significant time and resources to build security-based swap reporting systems, platforms and security-based swap dealers should be obligated to report security-based swap data).

59 See ISDA/SIFMA I at 18; ISDA IV at 7; MarkitSERV III at 4; WMBAA II at 6.

After carefully considering these comments, the Commission is proposing to require a platform to report any security-based swap that is executed on the platform, but only if the security-based swap will be submitted to clearing. Proposed Rule 901(a)(1) provides that, if a security-based swap is executed on a platform and will be submitted to clearing, the platform on which the transaction was executed shall report to a registered SDR the information required by Rules 901(c) (the primary trade information), 901(d)(1) (the participant ID or execution agent ID for each counterparty, as applicable), and 901(d)(9) (the platform ID). If the security-based swap will not be submitted to clearing, the platform would have no reporting obligations under Regulation SBSR. Instead, the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, will determine which side is the reporting side for such a platform-executed transaction.[60] As discussed below, proposed subparagraph (1) of Rule 901(a) is intended to maximize the accuracy and completeness of data reported to registered SDRs, while continuing to align the reporting duty with persons that are best able to carry it out.

The Commission understands that each counterparty to a platform-executed transaction that will be submitted to clearing intends to assume the credit risk of the clearing agency rather than any of the other platform participants, so there is no need to have credit and other documentation in place between itself and its counterparty. Thus, such a transaction could be executed anonymously, as there might be no mechanism by which one counterparty would learn the identity of the other.[61] The direct counterparties to such an alpha might not know which side

60 See Regulation SBSR Adopting Release, Section V.

61 The Commission notes that the offer and sale of security-based swaps, even if affected anonymously on a platform, must either be registered under the Securities Act or be made pursuant to an exemption from registration. The registration exemption in Section 4(a)(2) of the Securities Act, 15 U.S.C. 77d(a)(2), generally is available for transactions by an issuer not involving any public offering. One factor in determining the availability

would be the reporting side (if the hierarchy in Rule 901(a)(2), as adopted, applied) and there might be no mechanism for them to learn this information because they would not be assuming each other's credit risk.[62] Even if the direct counterparties could agree that one side—for example, the side selling protection in a single-name credit default swap—would report the trade, the reporting side might not learn the identity of its counterparty even though Rule 901(d)(1), as adopted, requires the reporting side to report all counterparty IDs.[63]

Although some platform-executed transactions that will be submitted to clearing might not be executed anonymously, the Commission preliminarily believes that it would be more efficient to require the platform to report all security-based swaps executed on that platform that will be submitted to clearing, regardless of whether the counterparties are, in fact, anonymous to each other. The Commission preliminarily believes that assigning the duty to report to the platform minimizes the number of reporting steps and thus minimizes the possibility of data

---

of the Section 4(a)(2) exemption is that the purchasers of the securities in the transaction must be sophisticated investors. As previously noted by the Commission, Congress determined that eligible contract participants are sophisticated investors for purposes of security-based swap transactions. See Exemptions for Security-Based Swaps Issued By Certain Clearing Agencies, Securities Act Release No. 9308 (March 30, 2012), 77 FR 20536 (April 5, 2012); Exemptions for Security-Based Swaps, Securities Act Release No. 9231 (July 1, 2011), 76 FR 40605 (July 11, 2011). The Commission believes that Congressional determination of eligible contract participants as sophisticated investors for purposes of security-based swap transactions applies as well for purposes of Section 4(a)(2) of the Securities Act. In addition, the exemption in Rule 240 under the Securities Act, 17 CFR 230.240, also may be available for security-based swap transactions involving eligible contract participants, to the extent applicable.

62 Cf. Cross-Border Adopting Release, 79 FR at 47325 (creating an exception, from having to be counted against the de minimis thresholds, for certain security-based swap transactions that a non-U.S. person enters into anonymously on a platform and that are cleared through a clearing agency, because each counterparty would not be in a position to know whether the other is a U.S. person).

63 Rule 901(d)(1) requires the reporting side to provide the counterparty ID or execution agent ID for each counterparty, as applicable. If the execution occurs anonymously, neither side would know the counterparty ID or execution agent ID of the other side.

corruption and delays in reporting the transaction to a registered SDR. Thus, the Commission preliminarily believes that all platform-executed transactions that will be submitted to clearing should be reported by the platform. This approach would be more efficient than if the platform had to assess on a transaction-by-transaction basis whether or not the counterparties are in fact unknown to each other.

As noted above,[64] four commenters generally opposed assigning to platforms the duty to report security-based swap transactions. One commenter stated generally that "the reporting party should be able to choose which SDR to report to, while being allowed to delegate the actual reporting to qualified third parties where it sees fit."[65] The commenter appeared to suggest that a platform could be a qualified third party acting as an agent for a reporting side.[66] The Commission agrees with the commenter that the platform is well-placed to carry out the act of reporting, but, unlike the commenter, the Commission preliminarily believes that the platform itself should have the legal duty to report for the reasons discussed above.

Three other commenters argued generally that platforms should not be assigned the duty to report because they lack certain information that would have to be reported. One of these commenters stated, for example, that "the SB SEF or national securities exchange may not itself have access to all of the information required, such as whether the trade has been accepted for clearing."[67] The other commenter argued that "[t]he SB SEF would likely not be privy to all of

---

64 See supra note 59.

65 MarkitSERV III at 4.

66 See id. (stating that counterparties should be able to choose the registered SDR "regardless of whether the transaction is executed on a SEF").

67 ISDA/SIFMA I at 18. See also ISDA IV at 7 (stating that the clearing agency should be responsible for reporting the alpha trade once it is has been accepted for clearing, and that one of the counterparties should be responsible per the reporting hierarchy for reporting a

the terms required to be reported in accordance with proposed Regulation SBSR, such as, but not limited to: (i) contingencies of the payment streams of each counterparty to the other; (ii) the title of any master agreement or other agreement governing the transaction; (iii) data elements necessary to calculate the market value of the transaction; and (iv) other details not typically provided to the SB SEF by the customer, such as the actual desk on whose behalf the transaction is entered. Moreover, and quite critical, an SB SEF would not be in a position or necessarily have the capabilities to report life cycle event information. Indeed, even if an SB SEF were required to report the transaction details as the proposed regulation requires, something we do not think advisable, it would likely take at least 30 minutes to gather and confirm the accuracy of that information."[68]

The Commission shares the commenters' concern that it would not be appropriate to require platforms to report information that they do not have or that would be impractical to obtain. However, a close examination of the data elements that must be reported under Rules 901(c) and 901(d), as adopted, suggests that a platform would not be put in this position:

- Rule 901(c)(1) requires reporting of the product ID, if available, or else other information that identifies the security-based swap. Proposed Rule 901(a)(1) would apply only to platform-executed security-based swaps submitted to clearing, which suggests that these

---

bilateral transaction that is not intended for clearing). The last commenter also stated that certain aspects of the CFTC regime for reporting bilateral swaps executed on a facility have been challenging due to the difficulty for SEFs to know and report certain trade data that is not essential to trade execution, and because of the shared responsibility for reporting since the SEF/DCM is responsible for the initial creation data reporting and the SD/MSP is responsible for continuation data reporting. See id. The Commission notes that Regulation SBSR, as adopted, applies the reporting hierarchy in Rule 901(a) to a security-based swap executed on a platform that is not intended to be cleared. See Regulation SBSR Adopting Release, Section V(C)(4).

68 WMBAA II at 6.

are products that would have a product ID. Even if these security-based swaps did not have a product ID, the platform would have sufficient information to identify a security-based swap traded on its facilities to allow its subscribers to trade it; this same information would be sufficient for the platform to report the information required by Rule 901(c)(1) to a registered SDR.

- Rules 901(c)(2), 901(c)(3), and 901(c)(4) require reporting of the date and time of execution, the price, and the notional amount, respectively, of the security-based swap. The platform will know these data elements because they were determined on the platform's facilities.
- Rule 901(c)(5) requires reporting of whether both sides of the transaction include a registered security-based swap dealer. The Commission anticipates that this information will be publicly available, or the platform could easily obtain it from a platform participant.
- Rule 901(c)(6) requires reporting of whether the direct counterparties intend that the security-based swap will be submitted to clearing. Rule 901(d)(6) requires reporting of the name of the clearing agency to which the security-based swap will be submitted to clearing. The fact that the transaction is intended to be cleared may be implicit in the product ID (e.g., if the security-based swap traded has a product ID of a "made available to trade" product). Alternatively, the counterparties may inform the platform that the security-based swap will be submitted to clearing; in some cases, the platform may provide the mechanism for reporting the transaction to a clearing agency. The Commission presumes that, if the platform knows that the security-based swap will be submitted to clearing, the platform will also know the name of the clearing agency. If the

platform has no knowledge that the transaction will be submitted to clearing, the platform would have no duty to report it under proposed Rule 901(a)(1).

- Rule 901(c)(7) requires reporting, if applicable, of any flags pertaining to the transaction that are specified in the policies and procedures of the registered SDR to which the transaction will be reported. The Commission preliminarily believes that, because the transaction occurs on the platform's facilities, the platform would have knowledge of any circumstances that would require application of a flag.
- Rule 901(d)(1) requires reporting of the counterparty ID or the execution agent ID of each counterparty, as applicable. A platform will know the identity of each direct counterparty or the execution agent for each direct counterparty because those market participants will be using the platform's facilities to execute the alpha transaction. To the extent that such alphas have an indirect counterparty, the Commission presumes that the platform will be able to obtain this information from the participant that is a direct counterparty to the alpha.
- Rule 901(d)(2) requires <u>the reporting side</u> to report the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID "of the direct counterparty on the reporting side." Regardless of whether a platform has these UICs for the counterparties to a security-based swap executed on its facilities, the platform would not be the reporting side for such a transaction because it is not a counterparty to the security-based swap.[69] Thus, when a platform has the duty to report a transaction, there is no reporting side, and the registered SDR to which the platform reports the security-based swap would be

69 Under Rule 900(hh), as adopted, the sides are counterparties to the security-based swap. Thus, the platform would not be one of the sides (except possibly in unusual circumstances) and thus could not be the reporting side.

required to obtain the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID, as applicable, from each direct counterparty using the process in Rule 906(a), as adopted.[70]

- Rules 901(d)(3) and 901(d)(5) require reporting of the terms of any fixed or floating rate payments and any other elements included in the agreement necessary to calculate the value of the contract, respectively, but only "[t]o the extent not provided pursuant to [Rule 901(c)]." The Commission believes that all of the identifying information would be contained in the product ID or otherwise available to the platform and reported by the platform pursuant to Rule 901(c).[71] Therefore, the Commission preliminarily believes that the information required under Rules 901(d)(3) and 901(d)(5) would be a null set for a transaction executed on a platform that is submitted to clearing.

---

70 See Regulation SBSR Adopting Release, Section XIII (describing Rule 906(a), as adopted). The Commission preliminarily believes that relying on the Rule 906(a) process to obtain UIC information from both sides to a platform-executed security-based swap that will be submitted to clearing would not cause counterparties to such transactions to incur significant additional costs. See Regulation SBSR Adopting Release, Section XXII(C)(6)(c) (estimating the costs of complying with Rule 906(a), as adopted, for reporting sides). As noted above, assigning the reporting duty to the platform should minimize the number of reporting steps and thus the possibility of data corruption and delays in reporting the transaction to a registered SDR because a platform will have superior access to the economic terms of security-based swaps that are executed on its facilities and will be submitted to clearing. The Commission further notes that the platform could report the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID, as applicable, as agent for a direct counterparty, if the direct counterparty provided this information to the platform. See Regulation SBSR Adopting Release, Section V(C)(2) (discussing use of agents to carry out reporting duties).

71 For a platform to make a security-based swap eligible for trading on its facilities, it must display a product in specific enough detail for the platform participants to reach a meeting of the minds about what they are trading. In other words, the platform must provide information that identifies the security-based swap, the effective date, the scheduled termination date, and the terms of any standardized fixed or floating rate payments and the frequency of such payments. The platform would be required to report these elements, or a product ID that incorporates these elements, to a registered SDR pursuant to Rule 901(c).

- Rule 901(d)(4) requires reporting of the titles and dates of agreements that are "incorporated by reference into the security-based swap contract." The terms of the alpha security-based swap will be established according to the rules of the platform and, potentially, the rules of the registered clearing agency to which the security-based swap will be submitted, and likely will not be written. Therefore, the Commission presumes that there will be no agreements incorporated by reference to such contracts, and the information required under Rule 901(d)(4) would be a null set for a transaction executed on a platform that will be submitted to clearing.
- Rule 901(d)(7) would apply only if the direct counterparties do not intend to submit the security-based swap to clearing. Rule 901(d)(8) would apply only if the transaction is not submitted to clearing. Because a platform would be required to report a security-based swap executed on its facilities only if the transaction will be submitted to clearing, Rules 901(d)(7) and 901(d)(8) would not be applicable.
- Rule 901(d)(9) requires reporting of the platform ID. The platform can provide this information.
- Rule 901(d)(10) would apply only if the security-based swap arises from the allocation, termination, novation, or assignment of one or more existing security-based swaps. To the extent that platforms facilitate allocations, terminations, novations, or assignments of existing security-based swaps, the platform participants engaging in such exercises could provide the platform with the transaction IDs of those existing security-based swaps,[72] which the platform would need to report pursuant to Rule 901(d)(10).

---

72 For a platform to facilitate allocations, terminations, novations, or assignments of existing security-based swaps, the platform participants necessarily must provide a significant

Two commenters who raised general issues about platforms having the duty to report questioned, in particular, a platform's ability to report subsequent events affecting the initial alpha transaction. One commenter stated that "an SB SEF would not be in a position or necessarily have the capabilities to report life cycle event information."[73] The second commenter noted that "the SB SEF or national securities exchange may not itself have access to . . . whether the trade has been accepted for clearing."[74] This commenter further noted that "the relevant clearing agency . . . could report the missing data in parallel."[75] The Commission broadly agrees with that suggestion and therefore is proposing a new subparagraph (ii) of Rule 901(e)(1), which would require a registered clearing agency to report whether or not it has accepted a security-based swap for clearing. Proposed Rule 901(e)(1)(ii) reflects the Commission's preliminary view that the registered clearing agency—and not a platform or any other person—has the most direct access to that information and, therefore, should have the duty to report it to the alpha SDR.[76] Similarly, the Commission generally agrees with the first commenter that a platform is not in a good position to know about life cycle events of security-based swaps executed on their facilities. However, the Commission preliminarily believes that the only life cycle event of a platform-executed security-based swap that will be submitted to clearing will be whether the security-based swap is accepted for clearing. Proposed Rule

---

amount of information to the platform regarding those existing security-based swaps. Given that the platform participants must provide a significant amount of information about the existing transactions to the platform, the Commission preliminarily believes that the platform participants also could provide the platform with the transaction IDs of those existing security-based swaps.

73 WMBAA II at 6.

74 ISDA/SIFMA I at 18.

75 Id.

76 See supra Section II(C)(2)(d).

901(e)(1)(ii) would require the registered clearing agency to report that information, not the platform.

The Commission notes that proposed Rule 901(a)(1) would require a platform to report a security-based swap only if the security-based swap will be submitted to clearing. If the platform-executed transaction will not be submitted to clearing, Rule 901(a)(2)(ii), as adopted, already requires the counterparties to apply the reporting hierarchy to determine which side will have the duty to report the transaction, as well as any life cycle event of that transaction. This result is consistent with Section 13A(a)(3) of the Exchange Act,[77] which sets out a reporting hierarchy under which one of the counterparties, but not a platform, will have the duty to report a security-based swap that is not accepted by any clearing agency.

3. Additional Amendments to Account for Platforms and Registered Clearing Agencies Incurring Duties to Report

Under Rule 901(h), as adopted, "a reporting side" must electronically transmit the information required by Rule 901 in a format required by the registered SDR.[78] The Commission is now proposing to replace the term "reporting side" in Rule 901(h) with the phrase "person having a duty to report" because, under the proposed amendments to Rule 901(a), platforms and registered clearing agencies would have duties to report certain transaction information, in addition to reporting sides. The Commission believes that all persons who have a duty to report under Regulation SBSR—i.e., platforms, registered clearing agencies, and reporting sides—should electronically transmit the information required by Rule 901 in a format required by the registered SDR.

---

77 15 U.S.C. 78mA(a)(3).

78 Rule 907, as adopted, requires a registered SDR to establish and maintain written policies and procedures to govern various aspects of the registered SDR's operations, including the manner and format in which the registered SDR will accept data from its participants.

Under Rule 900(u), as adopted, platforms and registered clearing agencies would not be participants of registered SDRs solely as a result of reporting security-based swap transaction information pursuant to proposed Rule 901(a)(1) or 901(e)(1)(ii), respectively.[79] However, consistent with the proposed amendment to Rule 901(h) described immediately above, the Commission believes that platforms and registered clearing agencies should be participants of any registered SDR to which they report security-based swap transaction information. Imposing participant status on platforms and registered clearing agencies would explicitly require those entities to report security-based swap transaction information to a registered SDR in a format required by that registered SDR. If platforms and registered clearing agencies were not participants of the registered SDR and were permitted to report data in a format of their own choosing, it could be difficult or impossible for the registered SDR to understand individual transaction reports or aggregate them with other reports in a meaningful way. This could adversely affect the ability of the Commission and other relevant authorities to carry out their oversight responsibilities and could interfere with the ability of a registered SDR to publicly disseminate security-based swap transaction information as required by Rule 902, as adopted. Therefore, the Commission is proposing to amend the definition of "participant" in Rule 900(u) to mean: (1) a person that is a counterparty to a security-based swap, provided that the security-based swap is subject to regulatory reporting under Regulation SBSR and is reported to a registered SDR pursuant to Regulation SBSR; (2) a platform that is required to report a security-

---

79 Rule 900(u), as adopted, provides that a "[p]articipant, with respect to a registered security-based swap data repository, means a counterparty, that meets the criteria of [Rule 908(b)], of a security-based swap that is reported to that registered security-based swap data repository to satisfy an obligation under [Rule 901(a)]."

based swap pursuant to Rule 901(a)(1); or (3) a registered clearing agency that is required to report a life cycle event pursuant to Rule 901(e).[80]

4. Examples

The following examples illustrate the proposed reporting process for alpha, beta, and gamma security-based swaps, assuming an agency model of clearing under which a non-clearing member counterparty becomes a direct counterparty to a clearing transaction:[81]

- Example 1. A registered security-based swap dealer enters into a security-based swap with a private fund. The transaction is not executed on a platform. The counterparties intend to clear the transaction (i.e., the transaction is an alpha). Neither side has a guarantor with respect to the alpha, and both direct counterparties are U.S. persons.
    - The registered security-based swap dealer is the reporting side under Rule 901(a)(2)(ii), as adopted, and must report this alpha transaction to a registered SDR (and may choose the registered SDR).
    - Proposed Rule 901(a)(3) would require the registered security-based swap dealer, as the reporting side of the alpha transaction, to promptly provide to the registered clearing agency the transaction ID of the alpha and the identity of the alpha SDR.

80 A registered clearing agency that is required to report a clearing transaction pursuant to proposed Rule 901(a)(2)(i) would be a counterparty to a security-based swap and covered by the first prong of the proposed definition of "participant."

81 As noted in Section II(A), supra, because clearing of security-based swaps in the United States is still evolving, other models of clearing might emerge where customers would not become direct counterparties of a registered clearing agency.

- If the registered clearing agency accepts the alpha for clearing and terminates the alpha, two clearing transactions—a beta (between the registered security-based swap dealer and the registered clearing agency) and a gamma (between the registered clearing agency and the private fund)—take its place.
- Proposed Rule 901(e)(1)(ii) would require the registered clearing agency to report to the alpha SDR that it accepted the transaction for clearing.
- Under proposed Rule 901(a)(2)(i), the registered clearing agency would be the reporting side for each of the beta and the gamma. Therefore, the registered clearing agency would be required to report the beta and gamma to a registered SDR and could choose the registered SDR to which it reports the beta and gamma. The report for each of the beta and the gamma must include the transaction ID of the alpha, as required by Rule 901(d)(10), as adopted.

- Example 2. Same facts as Example 1, except that the private fund and the registered security-based swap dealer transact on a SB SEF.
  - Proposed Rule 901(a)(1) would require the SB SEF to report the alpha transaction (and allow the SB SEF to choose the registered SDR).
  - Upon submission of the alpha for clearing, proposed Rule 901(a)(3) would require the SB SEF to promptly report to the registered clearing agency the transaction ID of the alpha and the identity of the alpha SDR.
  - Once the alpha is submitted to clearing, the reporting workflows are the same as in Example 1.

D. Request for Comment

The Commission requests comment on all aspects of the proposed new Rules 901(a)(1), 901(a)(2)(i), and 901(a)(3), as well as the proposed amendment to Rule 901(e).

1. Is the Commission's discussion of how Regulation SBSR—under the amendments proposed in this release—would apply to different steps or actions in the clearing process under the agency model sufficiently clear and complete? If not, please provide detail about the operation of the agency model of clearing (e.g., particular steps or actions in the clearing process) that you believe the Commission has not adequately addressed and how you believe they should be treated under Regulation SBSR.

2. Do you believe that the principal model of clearing is or is likely to become sufficiently prevalent in the U.S. market that the Commission should address how Regulation SBSR would apply to different steps in the clearing process under the principal model? If so, do you think that further guidance is necessary to apply Regulation SBSR effectively to the principal model? What aspects of the principal model should the Commission focus on for purposes of providing further guidance?

3. At the time that a security-based swap is accepted for clearing, will any person other than the registered clearing agency have complete information about the beta and the gamma that result from clearing?

4. Do you agree with the Commission's preliminary assessment of the data elements under Rules 901(c) and 901(d) that will be available to a platform and required to be reported for a platform-executed security-based swap that will be submitted to

clearing? If not, what information would the platform find difficult to obtain? For example, could a platform be reasonably be expected to know of guarantors of direct counterparties transacting on its facilities (if the guarantors are clearing members who guarantee platform participants who are not themselves direct members of the clearing agency)?

5. If the Commission were to adopt the basic requirement that a platform must report transactions executed on its facilities that are submitted to clearing but, as discussed above, would not require the platform to report certain data elements in Rule 901(c) or 901(d), what data elements should be excepted? Can you suggest an alternate mechanism—besides requiring the platform to report—for such data elements to be reported to the registered SDR?

6. Would a platform have knowledge of any special circumstances of a transaction executed on its facilities that might have to be flagged pursuant to the policies and procedures of the registered SDR to which the platform reports the transaction? Are there any special circumstances that it would be difficult or impossible for a platform to know? If so, please discuss and suggest how the transaction could be appropriately flagged if the platform does not do so.

7. Are there any potential life cycle events of a platform-executed security-based swap that will be submitted to clearing, other than acceptance or rejection from clearing? If so, what are they and who do you think should have the duty of reporting such life cycle events to a registered SDR? Why?

8. What costs might platforms incur to report security-based swap transactions pursuant to proposed Rule 901(a)(1)? Could other market participants report

these transactions more efficiently or cost effectively?

9. Would a registered clearing agency have the information necessary to report a platform-executed alpha that will be submitted to clearing? If so, should the registered clearing agency, rather than the platform, be required to report the transaction? Why or why not? How long does it typically take between the execution of a security-based swap on a platform and submission to clearing? How long does it typically take between submission to clearing and when the registered clearing agency determines whether to accept or reject the transaction?

10. Rule 901(d)(2), as adopted, requires the reporting side to report—"as applicable"— the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID with respect to the direct counterparty on the reporting side. As described above, the Commission is proposing that the registered clearing agency would be the reporting side for all clearing transactions to which it is a counterparty. Would the branch ID, broker ID, execution agent ID, trader ID, or trading desk ID ever be applicable to a registered clearing agency? Why or why not?

11. Rule 906(a), as adopted, provides a mechanism for a registered SDR to obtain the branch ID, broker ID, execution agent ID, trading ID, and trading desk ID—"as applicable"—for the non-reporting side of a security-based swap. Thus, mechanisms exist under Regulation SBSR, as adopted, for the Commission to learn the UICs, as applicable, for both sides of the alpha transaction. Would these UICs be applicable to the non-clearing agency side of a clearing transaction? Why or why not? If not, do you believe that the Commission should provide

guidance that there is no requirement under Rule 906(a) to report the UICs for the non-clearing agency counterparty of a clearing transaction?

12. Will registered clearing agencies be able to leverage existing reporting processes to report data to registered SDRs? What additional reporting processes might registered clearing agencies need to develop to ensure accurate reporting in accordance with the proposed amendments to Rule 901? What costs might registered clearing agencies incur to adopt these processes?

13. Would other market participants be able to report clearing transactions or terminations of transactions submitted to clearing more efficiently or cost effectively than the registered clearing agency? What costs might counterparties incur if one of the sides of the alpha were assigned the duty to report a clearing transaction rather than the registered clearing agency?

14. Should the proposed reporting requirements for registered clearing agencies apply only to registered clearing agencies having their principal place of business in the United States rather than to all registered clearing agencies (which could include registered clearing agencies having their principal place of business outside the United States)? Why or why not? Would U.S. persons, registered security-based swap dealers, and registered major security-based swap participants be in a better position to report transactions with non-U.S. person registered clearing agencies? Why or why not?

15. Under proposed Rule 901(e)(1)(ii), a registered clearing agency would be required to report whether or not it has accepted a security-based swap for clearing. Should this information be required to be reported to the same

registered SDR that receives the transaction report of the alpha? If not, how would the Commission and other relevant authorities be able to ascertain whether or not the alpha had been cleared? If so, what costs would be imposed on registered clearing agencies for having to report this transaction information to a registered SDR not of their choosing?

16. Is it appropriate to require a registered clearing agency to become a participant of the alpha SDR solely as a result of reporting whether or not it has accepted an alpha for clearing? What costs would be imposed on registered clearing agencies as a result of this requirement? If a registered clearing agency did not become a participant of the alpha SDR solely by virtue of reporting the disposition of an alpha, in what other way should the registered clearing agency be required to report the disposition of an alpha such that the systems of the alpha SDR can accept and understand that report?

17. What costs might platforms and reporting sides incur to comply with proposed Rule 901(a)(3), which would require the person with the duty to report a security-based swap that has been submitted to clearing at a registered clearing agency to promptly provide that registered clearing agency with the transaction ID of the submitted security-based swap and the identity of the alpha SDR? Is there a more efficient way of ensuring that registered clearing agencies know the transaction ID of the alpha and the identity of the alpha SDR? If so, please discuss.

18. Should platforms and registered clearing agencies be participants of the registered SDRs to which they report? If not, how would a registered SDR ensure that these persons provide data in a format required by the registered SDR?

19. How might the policies and procedures of a registered SDR address the circumstance where the registered SDR receives a termination report of an alpha pursuant to proposed Rule 901(e)(1)(ii) before it receives the initial report of the alpha? What costs would registered SDRs incur to implement policies and procedures addressing this scenario?

20. Can anonymous trading occur on any other type of trading venue besides a platform? If so, please describe where and how such activity occurs and provide your view as to how Regulation SBSR should, if necessary, be amended to require reporting of such transactions.

III. Reporting and Public Dissemination of Security-Based Swaps Involving Allocation

The Regulation SBSR Adopting Release provides guidance for the reporting of certain security-based swaps executed by an asset manager on behalf of multiple clients—transactions involving what are sometimes referred to as "bunched orders."[82] Specifically, the Regulation SBSR Adopting Release explains how Regulation SBSR applies to executed bunched orders that are reported pursuant to the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, including bunched order alphas. That release also explains how Regulation SBSR applies to the security-based swaps that result from allocation of that executed bunched order, if the resulting security-

---

82 See Regulation SBSR Adopting Release, Section VIII. The Commission recognizes that market participants may use a variety of other terms to refer to such transactions, including "blocks," "parent/child" transactions, and "splits." The Commission has determined to use a single term, "bunched orders," for purposes of this release, as this appears to be a widely accepted term. See, e.g., "Bunched orders challenge SEFs," MarketsMedia (March 25, 2014), available at http://marketsmedia.com/bunched-orders-challenge-sefs/, (last visited September 22, 2014); "Cleared bunched trades could become mandatory rule," Futures and Options World (October 31, 2013), available at http://www.fow.com/3273356/Cleared-bunched-trades-could-become-mandatory-rule.html, (last visited September 22, 2014).

based swaps are uncleared. This section explains how the Commission preliminarily believes Regulation SBSR, as adopted and as proposed to be amended by this release, would apply to a platform-executed bunched order that will be submitted to clearing, and the security-based swaps that result from the allocation of any bunched order execution, if the resulting security-based swaps are cleared.

As described in the Regulation SBSR Adopting Release, to execute a bunched order, an asset manager negotiates and executes a security-based swap with a counterparty, typically a security-based swap dealer, on behalf of multiple clients. The bunched order could be executed on- or off-platform. After execution of the bunched order, the asset manager would allocate a fractional amount of the aggregate notional amount of the transaction to each of several clients, thereby creating several new security-based swaps and terminating the bunched order execution.[83] By executing a bunched order, the asset manager avoids having to negotiate the client-level transactions individually, and obtains exposure for each client on the same terms (except, perhaps, for size).

In the Regulation SBSR Adopting Release, the Commission explained that a bunched order execution and the security-based swaps resulting from the allocation of the bunched order execution, if they are not cleared, must be reported like other security-based swaps. Regulation SBSR provides that the registered SDR to which the initial bunched order execution is reported must disseminate a report of the bunched order execution, including the full notional amount of the transaction. The Commission observed that publicly disseminating bunched order executions in this manner would allow the public to "know the full size of the bunched order execution and

[83] In aggregate, the notional amount of the security-based swaps that result from the allocation is the same as the notional amount of the executed bunched order.

that this size was negotiated at a single price."[84] Rule 902(c)(7), as adopted, provides that the registered SDR shall not publicly disseminate any information regarding the allocation of a bunched order execution, which would include the smaller security-based swaps resulting from the allocation of the initial transaction as well as the fact that the initial transaction is terminated following this allocation.

A. Examples

The following examples illustrate how Regulation SBSR would apply to platform-executed bunched order alphas, and security-based swaps that result from allocation of bunched order alphas, if the resulting security-based swaps are cleared. The examples specify which actions are addressed by Regulation SBSR, as adopted, and which actions would be addressed by the new provisions of Regulation SBSR that are being proposed in this release. The Commission notes that the proposed amendments to Rule 901(a) and the conforming changes discussed in Section II, supra, would not affect the examples describing the reporting of bunched orders and the security-based swaps that result from their allocation that the Commission provided in the Regulation SBSR Adopting Release. Furthermore, the examples assume that the bunched order alpha would be cleared using the agency model of clearing.[85] In the case of a bunched order alpha, the final placement of risk will take the form of clearing transactions between: (1) the client accounts of the asset manager and the registered clearing agency that clears the bunched order alpha; and (2) the registered security-based swap dealer and the registered clearing agency.

The Commission understands that market participants may use a variety of workflows for allocating a bunched order alpha. Regulation SBSR, as adopted, provides that, regardless of the

---

[84] Regulation SBSR Adopting Release, Section VIII.

[85] As noted in Section II(A), supra, the agency model of clearing predominates in the United States.

workflow employed, a bunched order alpha that is executed off-platform shall be reported and publicly disseminated as a single transaction, showing the full notional amount.[86] The proposed interpretation discussed below would take the same approach to bunched order alphas that are executed on a platform. Regulation SBSR, as adopted, further provides that the security-based swaps that result from allocation of a bunched order execution are subject to regulatory reporting but not public dissemination, if these resulting security-based swaps are uncleared. The proposed interpretation discussed below would take the same approach to cleared security-based swaps that result from the allocation of a bunched order alpha.[87]

1. Example 1: Off-Platform Cleared Transaction

Assume that an asset manager, acting on behalf of several advised accounts, executes a bunched order alpha with a registered security-based swap dealer. The execution does not occur on a platform, and there are no indirect counterparties on either side of the bunched order alpha. The transaction is submitted to a registered clearing agency.

a. Reporting the Bunched Order Alpha

The reporting hierarchy of Rule 901(a)(2)(ii), as adopted, applies to the bunched order alpha because the execution does not occur on a platform and the bunched order alpha is not a clearing transaction. Under Rule 901(a)(2)(ii)(B), as adopted, the registered security-based swap dealer is the reporting side for the bunched order alpha because its side includes the only registered security-based swap dealer. As the reporting side, the registered security-based swap dealer must report the primary and secondary trade information for the bunched order alpha to a registered SDR (the "alpha SDR") of its choice within 24 hours after the time of execution. Rule

86 See Regulation SBSR Adopting Release, Section VIII(A).

87 See ISDA IV at 10 (recommending that bunched order executions be subject to public dissemination instead of the transactions resulting from the allocation).

902(a), as adopted, requires the alpha SDR to publicly disseminate a transaction report of the bunched order alpha immediately upon receiving the report from the registered security-based swap dealer.[88]

When the registered security-based swap dealer submits the bunched order alpha to a registered clearing agency for clearing, proposed Rule 901(a)(3) would require the registered security-based swap dealer promptly to provide the registered clearing agency with the transaction ID of the bunched order alpha and the identity of the alpha SDR. This requirement would facilitate the registered clearing agency's ability to report whether or not it accepts the bunched order alpha for clearing pursuant to proposed Rule 901(e)(1)(ii).

b. Reporting the Security-Based Swaps Resulting From Allocation

Proposed Rule 901(a)(2)(i) would require the registered clearing agency to report all clearing transactions that arise as a result of clearing the bunched order alpha, regardless of the workflows used to clear the bunched order alpha.[89]

If the asset manager provides allocation instructions prior to or contemporaneous with the clearing of the bunched order alpha, clearing could result in the creation of a beta (i.e., the clearing transaction between the registered clearing agency and the security-based swap dealer) and a "gamma series" (i.e., the gammas between the registered clearing agency and each of the client funds selected by the asset manager to receive a portion of the initial notional amount).

---

88 Pursuant to Rule 906(a), as adopted, the registered SDR also would be required to obtain any missing UICs from the counterparties.

89 Like other clearing transactions that arise from the acceptance of a security-based swap for clearing, these security-based swaps would not be subject to public dissemination. See Rule 902(c)(6). See also Rule 902(c)(7) (exempting from public dissemination any "information regarding the allocation of a security-based swap"); Regulation SBSR Adopting Release, Section VI(D)(1) (describing final Rule 902(c)(7)).

The beta and each security-based swap that comprises the gamma series would not be treated differently under Regulation SBSR than any other clearing transactions.[90]

If the asset manager does not provide allocation instructions until after the bunched order alpha is cleared, clearing could result in the creation of a beta (i.e., the clearing transaction between the registered clearing agency and the security-based swap dealer) and an "intermediate gamma" (i.e., the clearing transaction between the clearing agency and the side representing the clients of the asset manager). The beta would be the same—and would be treated the same—as any other clearing transaction, while the intermediate gamma would continue to exist until the registered clearing agency receives the allocation information, which could come from the asset manager or its clearing member and would allow for the creation of the gamma series. As the registered clearing agency receives the allocation information, it would terminate the intermediate gamma and create new security-based swaps as part of the gamma series. The partial terminations of the intermediate gamma would be life cycle events of the intermediate gamma that the registered clearing agency must report under Rule 901(e)(1)(i), as adopted. Rule 901(e)(2), as adopted, would require the registered clearing agency to report these life cycle events to the same registered SDR to which it reported the intermediate gamma. Under proposed Rule 901(a)(2)(i), the registered clearing agency also would be required to report to a registered SDR each new security-based swap comprising part of the gamma series. Because these security-based swaps arise from the termination (or partial termination) of an existing security-based swap (i.e., the gamma series), Rule 901(d)(10), as adopted, requires the registered clearing agency to link each new transaction in the gamma series to the intermediate gamma by including

90 See supra Section II(C)(1) (explaining the reporting process for clearing transactions).

the transaction ID of the intermediate gamma as part of the report of each new security-based swap in the gamma series.

2. Example 2: Cleared Platform Transaction

Assume the same facts as Example 1, except that the registered security-based swap dealer and asset manager execute the bunched order alpha on a SB SEF.

a. Reporting the Bunched Order Alpha

Because the initial transaction is executed on a platform and will be submitted to clearing, the platform would have the duty, under proposed Rule 901(a)(1), to report the bunched order alpha to a registered SDR. To satisfy this reporting obligation, the platform would be required to provide all of the applicable information required by proposed Rule 901(a)(1). Commission staff understands from discussions with market participants that, even if the platform does not know and thus cannot report the counterparty IDs of each account that will receive an allocation, the platform would know the identity of the execution agent who executed the bunched order alpha on behalf of its advised accounts. The platform, therefore, could report the execution agent ID of the execution agent, even though it might not know the intended counterparties of the security-based swaps that will result from the allocation.[91] Rule 902(a), as adopted, requires the registered SDR that receives the report of the bunched order alpha from the platform to publicly disseminate a report of the bunched order alpha. Then, pursuant to Rule

91 See Rule 901(d)(1) (requiring reporting of the counterparty ID "or the execution agent ID of each counterparty, if applicable"). If the counterparties—i.e., the specific accounts who will receive allocations—are not yet known, the requirement to report the execution agent ID instead of the counterparty ID would apply. Similarly, if the asset manager uses an execution agent to access the platform, the platform would report the identity of the asset manager's execution agent.

906(a), as adopted, the registered SDR would be required to obtain any missing UICs from its participants.

b. Reporting the Security-Based Swaps Resulting From Allocation

If the asset manager provides allocation instructions prior to or contemporaneous with the clearing of the bunched order alpha, clearing would (under the agency model of clearing) result in the creation of a beta (i.e., the clearing transaction between the registered clearing agency and the registered security-based swap dealer) and a "gamma series" (i.e., the gammas between the clearing agency and each of the asset manager's clients). The beta and each security-based swap that comprises the gamma series would be no different—and would not be treated differently under Regulation SBSR—from other clearing transactions.[92]

If the asset manager does not provide allocation instructions until after the bunched order alpha is cleared, clearing (under the agency model) would result in the creation of a beta (between the registered clearing agency and the security-based swap dealer) and an intermediate gamma (between the registered clearing agency and the side representing the clients of the asset manager). The registered clearing agency would then be required to report the termination of the bunched order alpha and the creation of the beta and intermediate gamma, pursuant to proposed Rules 901(e)(1)(ii) and 901(a)(2)(i), respectively. From this point on, the beta would be treated the same as any other clearing transaction, while the intermediate gamma would be decremented and replaced by the gamma series, as described in Example 1.

B. Request for Comment

The Commission requests comment on all aspects of its preliminary views regarding how the proposed amendments to Regulation SBSR would apply to various allocation scenarios

---

92 See supra Section II(C)(1) (explaining the reporting process for clearing transactions).

involving cleared security-based swaps.

21. Is the Commission's discussion of how Regulation SBSR—under the amendments proposed in this release—would apply to different steps in the process for reporting the betas and gammas that result from clearing a bunched order alpha sufficiently clear and complete? If not, please provide detail about particular steps that you believe the Commission has not adequately addressed and how you believe they should be treated under Regulation SBSR.

22. Are there additional processes or workflows related to the clearing of bunched order alphas for which market participants need guidance? If so, please describe these situations and your recommendation for how Regulation SBSR should address them.

23. Do asset managers identify the clients that will receive allocations from a bunched order alpha before the bunched order alpha is submitted to clearing? If so, when is allocation of the bunched order alpha complete? If the bunched order alpha is allocated prior to clearing, would the information provided to the registered clearing agency allow the registered clearing agency to recognize that it is clearing a bunched order alpha? If a registered clearing agency is unable to recognize that it is clearing a bunched order alpha, would the registered clearing agency be able to fulfill its reporting duties under the proposed amendments to Regulation SBSR?

IV. Reporting and Public Dissemination of Prime Brokerage Transactions

Commission staff understands from discussions with market participants that, under a prime brokerage arrangement, a customer of a prime broker will negotiate and agree to the economic terms of a security-based swap with a registered security-based swap dealer (the "executing dealer") but both the customer and the executing dealer ultimately will face the prime broker, rather than each other.[93] Before negotiating with one or more executing dealers, the customer will first enter into a prime brokerage arrangement with a prime broker.[94] The terms of this arrangement typically will, among other things, set out the types of transactions eligible for prime brokerage treatment, enumerate the executing dealers with whom the customer may negotiate, and establish terms for the credit support and other transaction-related services provided by the prime broker to the customer. A prime brokerage arrangement allows a customer to negotiate transactions with a range of executing dealers without having to negotiate credit documentation with each dealer individually. This is because both the customer and the executing dealer know that the transaction between them will be replaced by separate transactions between each of them and the prime broker, thus obviating the need for credit documentation between the two original counterparties.[95]

---

93 See The Financial Markets Lawyers Group, CFTC No-Action Letter No. 12-53 at 2-3 (December 17, 2012) ("CFTC NAL No. 12-53"); Division of Swap Dealer and Intermediary Oversight, CFTC No-Action Letter at 3-4 (April 30, 2013) ("CFTC NAL No. 13-11"). These no-action letters describe the CFTC's understanding of prime brokerage arrangements in the swap market. It is the Commission's understanding that prime brokerage arrangements in the security-based swap market are similar to those in the swap market.

94 For purposes of this release, the Commission assumes that both the prime broker and the executing dealer would be registered security-based swap dealers.

95 The agreement between the customer and the executing dealer would constitute a contract for the sale of a security for purposes of the federal securities laws. See Securities Offering Reform, Securities Act Release No. 33-8591 (July 19, 2005), 70 FR 44722, 44767 (August 3, 2005) (discussing the determination of the time of sale with respect to a contract of sale for securities and noting that "a contract of sale under the federal securities laws can occur before there is an unconditional bilateral contract under state law").

Through the prime brokerage arrangement, the prime broker permits the customer to negotiate and agree to the terms of security-based swaps with approved executing dealers, subject to specified limits and parameters.[96] If the terms of the transaction agreed to by the customer and the executing dealer are within those parameters, the prime broker would replace the initial transaction between the customer and the executing dealer with two separate transactions—one between the prime broker and the customer and the second between the prime broker and the executing dealer—having substantially the same terms as the original transaction between the customer and the executing dealer. Thus, a prime brokerage arrangement in the security-based swap market typically results in the following three transactions:

- Transaction 1. The customer and the executing dealer negotiate and agree to the terms of a security-based swap transaction (the "customer/executing dealer transaction") and notify the prime broker of these terms.
- Transaction 2. The prime broker will accept the transaction and face the executing dealer in a security-based swap with the same economic terms agreed to by the executing dealer and the customer, if the terms are within the parameters established by the prime brokerage arrangement (the "prime broker/executing dealer transaction").
- Transaction 3. Upon executing the security-based swap with the executing dealer, the prime broker will enter into an offsetting security-based swap with the customer (the "prime broker/customer transaction").[97]

---

96 See ISDA, 2005 Master Give-Up Agreement (providing standard terms that market participants can use to document prime brokerage arrangements). See also CFTC NAL No. 12-53, supra note 93, at 2-3 (describing a typical prime brokerage arrangement in the swap market).

97 See CFTC NAL No. 12-53, supra note 93, at 2-3; CFTC NAL No. 13-11, supra note 93, at 3-4 (describing typical prime brokerage arrangements in the swap market).

A. Application of Regulation SBSR as Adopted to Prime Brokerage Transactions

The Commission understands that prime brokerage arrangements involve credit intermediation offered by the prime broker, rather than a registered clearing agency. Thus, prime brokerage transactions are not cleared. Therefore, Rule 901(a)(2)(ii), as adopted, assigns the reporting duty for Transaction 1, because Transaction 1 is not a clearing transaction.

If the prime broker determines that Transaction 1 meets the terms of the prime brokerage arrangement, the prime broker would initiate Transactions 2 and 3, which would have the effect of terminating Transaction 1. The termination would be a life cycle event of Transaction 1, and the reporting side for Transaction 1 (likely the executing dealer) would be required by Rule 901(e)(i), as adopted, to report the life cycle event to the same SDR to which it reported the transaction initially.[98] If the reporting side for Transaction1 did not report whether Transaction 1 was terminated, the Commission and market observers might incorrectly conclude that the counterparties to Transaction 1 (the customer and executing dealer) continue to have exposure to each other.

Transactions 2 and 3 (i.e., the prime broker/executing dealer transaction and the prime broker/customer transaction, respectively) also are security-based swaps that must be reported

98 If the prime broker determines that Transaction 1 does not meet the terms of the prime brokerage arrangement, the executing dealer also would be required to report this fact to the registered SDR to which it reported the transaction initially pursuant to Rule 901(e)(2), as adopted. Rule 901(e)(2) requires, in relevant part, reporting a life cycle event to the entity to which the original security-based swap was reported. Pursuant to commonly used industry documentation for prime brokerage trades, the rejection by the prime broker could cause the initial transaction to be void or, in some cases, the customer and executing dealer could agree to revise their initial agreement and preserve their contract without the involvement of the prime broker. See ISDA, 2005 ISDA Compensation Agreement, at Section 2. In either case, a life cycle event of Transaction 1 would result, because the terms of Transaction 1 would change.

pursuant to Rule 901(a)(2)(ii), as adopted. Because both sides of Transaction 2 likely include a registered security-based swap dealer, the sides are required to select the reporting side. In the case of Transaction 3, however, the prime broker is likely to be the only registered security-based swap dealer involved in the transaction, in which case the prime broker would be the reporting side.[99] Furthermore, because each of these transactions is a security-based swap that arises from the termination of another security-based swap (i.e., the Transaction 1), Rule 901(d)(10), as adopted, requires the reporting of Transaction 1's transaction ID as part of the secondary trade information for both Transaction 2 and Transaction 3. As the Commission stated in the Regulation SBSR Adopting Release, Rule 901(d)(10) is designed to ensure that the Commission and other relevant authorities have an accurate picture of counterparty exposures. In the case of prime brokerage transactions, Rule 901(d)(10) should enable the Commission and other relevant authorities to link the three prime brokerage transactions together for surveillance purposes and to identify the parties that ultimately assume the risks of these transactions.

Rule 902(a), as adopted, requires public dissemination of each security-based swap, unless it falls within a category enumerated in Rule 902(c). Each prime brokerage transaction (i.e., the customer/executing dealer transaction, the prime broker/executing dealer transaction,

99 If, however, both sides of Transaction 3 include a registered security-based swap dealer, the sides would be required to select the reporting side. One commenter recommended that, in accordance with current industry practice under the CFTC rules, Regulation SBSR assign the reporting duty for the prime broker/executing broker transaction (Transaction 2) to the executing broker, and responsibility for reporting the prime broker/client transaction (Transaction 3) to the prime broker. See ISDA IV at 5. Under the application of the rules as adopted, as just discussed, if both sides of the prime broker/executing broker transaction include a registered security-based swap dealer, the sides are required to choose who has the reporting duty and can choose the executing broker. Likewise, with respect to the prime broker/client transaction, it is likely that the prime broker is the only registered security-based swap dealer involved in the transaction, and thus application of the reporting hierarchy would result in the side with the prime broker being the reporting side.

and the prime broker/customer transaction) is subject to Rule 902(a). The statutory provisions relating to the reporting of security-based swap transactions state that "each" security-based swap shall be reported; these statutory provisions do not by their terms limit the reporting requirement to transactions having particular characteristics,[100] and Rule 902(c), as adopted, does not contain an exclusion from public dissemination for prime brokerage transactions.

One commenter requested that the Commission exempt the prime broker/customer leg of a prime broker transaction from public dissemination, stating its belief that dissemination of this transaction would not increase price transparency, and a concern that dissemination of this transaction may confuse the market and undermine the value of the data made public.[101] The Commission believes that publicly disseminating reports of prime brokerage transactions could provide market observers with useful information about the cost of the prime broker's credit intermediation services, because prime brokers may charge for these services by pricing Transaction 2 or 3 differently than Transaction 1. This differentiates Transactions 2 and 3 from clearing transactions that are excepted from public dissemination under Rule 902(c)(6), because a registered clearing agency is compensated for its credit intermediation services through clearing fees that are publicly disclosed. With prime brokerage transactions, however, the only mechanism for ascertaining the charge for the credit intermediation service offered by the prime broker would be to compare the prices of Transaction 1 with the prices of the two subsequent transactions. Thus, market observers could discern useful information by comparing reports of the related prime brokerage transactions, and the Commission does not believe at this time that an exception from public dissemination is warranted for any prime brokerage transactions. If a

---

100 See Section 13(m)(1)(G) of the Exchange Act, 15 U.S.C. 78m(m)(1)(G).

101 See ISDA IV at 13.

report of each prime brokerage transaction is publicly disseminated, price discovery would be enhanced. The published transaction reports would be required to consist of all the information reported pursuant to Rule 901(c), as adopted, plus any condition flags required by the registered SDR's policies and procedures, such as a flag indicating that the three transactions are related.

Rule 907(a)(4), as adopted, requires each registered SDR to establish and maintain written policies and procedures for, among other things, establishing flags to denote special characteristics of a security-based swap, or special circumstances associated with the execution or reporting of a security-based swap. Rules 907(a)(4)(i) and (ii) require the registered SDR to identify those characteristics or circumstances that could, in the fair and reasonable estimation of the registered SDR, cause a person without knowledge of those characteristic(s) or circumstance(s), to receive a distorted view of the market and establish flags to denote such characteristic(s) or circumstance(s). In the Regulation SBSR Adopting Release, the Commission noted several conditions that registered SDRs generally should consider including in their list of condition flags.[102] The fact that all three transactions in a prime brokerage arrangement are related, the Commission generally believes, is a special circumstance of the type that registered SDRs should consider in developing the condition flags required by Rule 907(a)(4). Absent such flags, market observers might interpret the three transaction reports as three separate pricing events and incorrectly infer the existence of more market activity than actually exists, which could distort their view of the market.

B. Example of Application of the Adopted Rules

The following example explains how Regulation SBSR, as adopted, would apply to the steps in a prime brokerage transaction described above. For purposes of this example, assume

---

[102] See Regulation SBSR Adopting Release, Section VII(G).

that the customer is a private fund and both the executing dealer and the prime broker are registered security-based swap dealers.[103]

Transaction 1: The Customer/Executing Dealer Transaction

- The executing dealer would be the reporting side under Rule 901(a)(2)(ii) and would be required to report the customer/executing dealer transaction (Transaction 1) to a registered SDR.[104]
- The executing dealer would have up to 24 hours after the time of execution to report to the registered SDR the applicable primary and secondary trade information of Transaction 1.
- Immediately upon receiving the report of Transaction 1, the registered SDR would be required to publicly disseminate a transaction report with all the information required by Rule 902(a).
- When the customer and the executing dealer agree to the terms of Transaction 1, each party would typically report the terms to the prime broker. The Commission understands that, if the terms of Transaction 1 fall within the prime brokerage arrangement, the prime broker would be obligated to face the executing dealer

103 One commenter requested that Regulation SBSR specify that the time of execution for the prime broker/executing dealer transaction is the time of commitment to economic terms with the prime broker's client, and that for the prime broker/customer transaction, the prime broker may use the time of acceptance as the time of execution for reporting purposes. See ISDA IV at 9. The Commission notes that the time of execution for all security-based swaps is defined in Rule 900(ii), as adopted, as the point at which the counterparties to a security-based swap become irrevocably bound under applicable law. See Regulation SBSR Adopting Release, Section II(A)(2)(c). The Commission sees no reason at this time to have a different standard for prime brokerage transactions.

104 See Rule 901(a)(2)(ii)(B) ("If only one side of the security-based swap includes a registered security-based swap dealer, that side shall be the reporting side").

with substantially the same terms agreed upon by the customer and the executing dealer in Transaction 1.

- If the prime broker determines that Transaction 1 meets the terms of the prime brokerage arrangement and accepts the transaction, Transaction 1 would terminate. The executing dealer, as the reporting side for Transaction 1, would be required to report this life cycle event pursuant to Rule 901(e), as adopted, to the same registered SDR that received the initial report of Transaction 1. Immediately upon receiving this report, the registered SDR would be required to publicly disseminate the termination information.
- If the prime broker does not accept the terms agreed to by the customer and executing dealer, the executing dealer, in its capacity as reporting side for Transaction 1, would notify the registered SDR that the prime broker had rejected the transaction pursuant to Rule 901(e)(1)(i), as adopted.

<u>Transaction 2: The Prime Broker/Executing Dealer Transaction</u>

- The executing dealer and prime broker would enter into a prime broker/executing dealer transaction (Transaction 2).
- The prime broker and executing dealer would be required by Rule 901(a)(2)(ii)(A), as adopted, to select the side that would be the reporting side for Transaction 2.
- The reporting side of Transaction 2 would have up to 24 hours after the time of execution to report to the registered SDR the applicable primary and secondary trade information of the transaction. Because Transaction 2 arises from the termination, novation, or assignment of Transaction 1, the reporting side of

Transaction 2 would need to report the transaction ID of Transaction 1 pursuant to Rule 901(d)(10), as adopted.[105]

- Immediately upon receiving the report of Transaction 2, the registered SDR would be required to publicly disseminate a transaction report with all the information required by Rule 902(a) and with any flags required by the registered SDR's policies and procedures under Rule 907.

Transaction 3: The Prime Broker/Customer Transaction

- The prime broker would execute the prime broker/customer transaction (Transaction 3) to "step into" the position that the executing dealer established against the customer in Transaction 1.
- The prime broker would be the reporting side for Transaction 3 under Rule 901(a)(2)(ii), as adopted.[106]
- The prime broker would have up to 24 hours after the time of execution to report to the registered SDR the applicable primary and secondary trade information of Transaction 3. Because Transaction 3 arises from the termination, novation, or assignment of Transaction 1, the prime broker would need to report the

---

105 If the executing dealer is the reporting side for both Transaction 1 and Transaction 2, the executing dealer will know the transaction ID of Transaction 1 and can include it in the report of Transaction 2. However, if the prime broker is the reporting side for Transaction 2, the Commission anticipates that the prime broker will obtain from the executing dealer the transaction ID of Transaction 1, along with all of the other information regarding Transaction 1 that will permit the prime broker to determine whether to accept Transaction 1.

106 See Rule 901(a)(2)(ii)(B) ("If only one side of the security-based swap includes a registered security-based swap dealer, that side shall be the reporting side").

transaction ID of Transaction 1 as part of the report of Transaction 3, pursuant to Rule 901(d)(10), as adopted.[107]

- Immediately upon receiving the report of Transaction 3, the registered SDR would be required to publicly disseminate a transaction report with all the information required by Rule 902(a) and with any flags required by the registered SDR's policies and procedures under Rule 907.

C. Request for Comment

The Commission requests comment on its discussion above of the application of Regulation SBSR to security-based swaps that are part of a prime brokerage arrangement. In particular:

24. Does the description of prime brokerage arrangements above adequately describe prime brokerage arrangements in the security-based swap market? Do market participants employ other types of prime brokerage arrangements? If so, how do these prime brokerage arrangements differ from the arrangements discussed above?

25. Should the prime broker/customer and/or prime broker/executing dealer transactions be exempted from public dissemination? Why or why not?

26. Would market observers benefit from being able to observe any difference in price between the customer/executing dealer transaction and the prime broker/customer and prime broker/executing dealer transactions?

27. Should public reports of related prime brokerage transactions include condition

107 The Commission anticipates that the prime broker (the reporting side for Transaction 3) will obtain the transaction ID of Transaction 1 from the executing dealer. See supra note 104 and associated text.

flags to indicate a relationship between the transactions? Would a market participant receive a distorted view of the market if condition flags are not used? Why or why not?

28. Rule 901(e), as adopted, requires the executing dealer to report the termination of the customer/executing dealer transaction, because the executing dealer was the reporting side of that transaction. Should the duty to report the termination of the customer/executing dealer transaction be shifted to the prime broker? Why or why not? As between the executing dealer and the prime broker, which person do you believe is better placed to report the termination? Why?

29. Should the time of execution for any leg of a prime brokerage transaction be defined differently than as provided for in Rule 900(ii)? If so, why?

V. Additional Proposed Amendments

A. Amendments to Rule 905(a)

Rule 905(a), as adopted, establishes a mechanism for reporting corrections of previously submitted security-based swap transaction information. Rule 905(a) applies to any counterparty to a security-based swap that discovers an error in the information reported with respect to that security-based swap. Under Rule 905(a)(1), as adopted, if the non-reporting side discovers the error, the non-reporting side must promptly notify the reporting side of the error. Under Rule 905(a)(2), as adopted, once the reporting side receives notification of the error from the non-reporting side, or if the reporting side discovers the error on its own, the reporting side must promptly submit an amended report—containing the corrected information—to the registered SDR that received the erroneous transaction report. The reporting side must submit the report required by Rule 905(a) in a manner consistent with the policies and procedures of the registered SDR.

As discussed in Section II, supra, the Commission is proposing to amend Rule 901(a) to require a platform to report a security-based swap that is executed on the platform and that will be submitted to clearing. Accordingly, to preserve the principle in adopted Rule 905(a) that the person responsible for reporting a security-based swap also should be responsible for submitting a correction if it discovers an error, the Commission is proposing a conforming amendment to Rule 905(a) to account for the possibility that a person who is not a counterparty and is thus not on either side[108] of the transaction (i.e., a platform) could have the original duty to report the transaction. Thus, under the proposed amendment to Rule 905(a)(1), a non-reporting side that discovers an error in the information reported with respect to a security-based swap would be required to promptly notify "the person having the duty to report" that security-based swap of the error. The Commission is proposing a similar change to Rule 905(a)(2). Under the proposed amendment to Rule 905(a)(2), the person having the duty to report a security-based swap, whether a side or a platform, would be required to correct previously reported erroneous information with respect to that security-based swap if it discovers an error or if it receives notification of an error from a counterparty.

B. Amendments to Rules 906(b) and 907(a)(6)

---

108 Under Rule 900(hh), as adopted, a "side" is a direct counterparty and any guarantor of that direct counterparty's performance who meets the definition of "indirect counterparty" in connection with the security-based swap. Under the proposed amendments described above, there would be no "reporting side" for a security-based swap for a platform-executed security-based swap that is submitted to clearing. While the platform would have the duty to report, it would not be a counterparty to the security-based swap and thus would not be a side. Furthermore, neither side would have the duty to report, and thus both sides would be non-reporting sides.

Under the proposed amendment to Rule 900(u) described above,[109] the definition of "participant" would be expanded to include platforms that are required to report platform-executed security-based swaps that are submitted to clearing and registered clearing agencies that are required to report whether or not an alpha is accepted for clearing. Rule 906(b), as adopted, requires each participant of a registered SDR to provide the registered SDR information sufficient to identify any affiliate(s) of the participant that also are participants of the registered SDR and any ultimate parent(s) of the participant.[110] By itself, the proposed amendment to Rule 900(u) would subject platforms and registered clearing agencies that are required to report whether or not they accept alpha transactions for clearing to the requirements of Rule 906(b).[111]

The Commission preliminarily believes that the purposes of Rule 906(b)—namely, facilitating the Commission's ability to measure derivatives exposure within the same ownership group—would not be advanced by requiring platforms and registered clearing agencies to report parent and affiliate information to a registered SDR. To the extent that a platform has an affiliate that transacts in security-based swaps, the positions of any such affiliate can be derived from other transaction reports indicating that affiliate as a counterparty.. There would be no need for the Commission to aggregate the platform's positions with those of its affiliates, because a

---

109 See supra Section II(B)(3).

110 See Regulation SBSR Adopting Release, Section XIII(B).

111 The Commission notes that proposed Rule 901(a)(2)(i) and the proposed amendment to Rule 908(b) would have the effect of making a registered clearing agency a participant—under Rule 900(u), as adopted—of any registered SDR to which it reports clearing transactions. Under Rule 900(u), as adopted, a counterparty of a security-based swap that is reported to a registered SDR becomes a participant of that registered SDR (assuming that the counterparty also falls within Rule 908(b), as adopted). The proposed amendment to the definition of "participant" also would make a registered clearing agency a participant of any alpha SDR to which it would be required to report whether it had accepted the alpha for clearing.

platform would not assume any position in security-based swaps executed on its facilities. Furthermore, the risk management of a registered clearing agency is directly overseen by the Commission, and the Commission believes that it has adequate tools to carry out this function without subjecting the registered clearing agency to Rule 906(b). Accordingly, the Commission proposes to amend Rule 906(b) to state that reporting obligations under Rule 906(b) do not apply to participants that are platforms or registered clearing agencies.

The Commission proposes to make a similar amendment to Rule 907(a)(6). This rule, as adopted, requires a registered SDR to have policies and procedures "[f]or periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any participant(s) with which the participant is affiliated, using ultimate parent IDs and counterparty IDs." The Commission proposes to amend Rule 907(a)(6) to require a registered SDR to obtain this information only from a participant that is not a platform or a registered clearing agency. Thus, under the proposed amendment, Rule 907(a)(6) would require registered SDR to have policies and procedures "[f]or periodically obtaining from each participant other than a platform or a registered clearing agency information that identifies the participant's ultimate parent(s) and any participant(s) with which the participant is affiliated, using ultimate parent IDs and counterparty IDs."[112]

C. Extending the Applicability of Rule 906(c)

Rule 906(c), as adopted, requires each participant of a registered SDR that is a registered security-based swap dealer or registered major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure that

[112] The Commission notes that, once a participant reports parent and affiliate information to a registered SDR, Rule 906(b) requires the participant to "promptly notify the registered [SDR] of any changes" to its parent and affiliate information.

the participant complies with any obligations to report information to a registered SDR in a manner consistent with Regulation SBSR. As the Commission stated in the Regulation SBSR Adopting Release, the policies and procedures required by Rule 906(c) are intended to promote complete and accurate reporting of security-based swap information by SDR participants that are registered security-based swap dealers or registered major security-based swap participants.[113] Rule 906(c) also requires each registered security-based swap dealer and registered major security-based swap participant to review and update its policies and procedures at least annually.

Because the Commission is proposing amendments to Rule 901(a) to assign reporting obligations to platforms and registered clearing agencies, the Commission preliminarily believes that such registered clearing agencies and platforms, like registered security-based swap dealers and major security-based swap participants, should be required to establish and maintain written policies and procedures designed to promote compliance with their reporting obligations. Accordingly, the Commission proposes to amend Rule 906(c) to extend the requirements of Rule 906(c) to registered clearing agencies and platforms that are participants of a registered SDR.

The Commission preliminarily believes that the proposed amendment to Rule 906(c) should result in greater accuracy and completeness of the security-based swap transaction data reported to registered SDRs. Without written policies and procedures, compliance with reporting obligations might depend too heavily on key individuals or unreliable processes. For example, if knowledge of the reporting function was not reflected in written policies and procedures but existed solely in the memories of one or a few individuals, compliance with applicable reporting requirements by the firm might suffer if these key individuals depart the firm. The Commission

113 See Regulation SBSR Adopting Release, Section XIII(C).

preliminarily believes, therefore, that requiring participants that are platforms and registered clearing agencies to establish, maintain, and enforce written policies and procedures should promote clear, reliable reporting that can continue independent of any specific individuals. The Commission further believes that requiring such participants to establish, maintain, and enforce written policies and procedures relevant to their reporting responsibilities, as would be required by the proposed amendment to Rule 906(c), would help to improve the degree and quality of overall compliance with the reporting requirements of Regulation SBSR.

D. Rule 908(b)—Limitations on Counterparty Reporting Obligations

Rule 908(b) is designed to help further the cross-border application of Regulation SBSR by specifying what types of counterparties would and would not be subject to any duties under Regulation SBSR. Rule 908(b), as adopted, provides that "[n]otwithstanding any other provision of [Regulation SBSR], a person shall not incur any obligation under [Regulation SBSR] unless it is: (1) A U.S. person; or (2) A registered security-based swap dealer or registered major security-based swap participant." Thus, unregistered non-U.S. persons are not among the kinds of persons listed in Rule 908(b) as having any duties under Regulation SBSR.[114]

Under the proposed amendments described above, platforms and registered clearing agencies would have the duty to report security-based swap transactions to registered SDRs in certain circumstances. Under Rule 908(b), as adopted, U.S. persons are among the types of persons that may incur duties under Regulation SBSR. Therefore, platforms and registered

---

114 In the Regulation SBSR Adopting Release, however, the Commission stated that it anticipates soliciting additional public comment on whether regulatory reporting and/or public dissemination requirements should be extended to transactions occurring within the United States between non-U.S. persons and which non-U.S. persons should incur reporting duties under Regulation SBSR. See Regulation SBSR Adopting Release, Section XV(D).

clearing agencies that are U.S. persons already fall within Rule 908(b). The Commission preliminarily believes that all platforms and registered clearing agencies should incur the duties specified in the proposed amendments to Rule 901(a),[115] even if they are not U.S. persons. If the Commission does not propose to amend Rule 908(b) to include all platforms and registered clearing agencies, non-U.S.-person platforms and registered clearing agencies would be able to avoid duties to which U.S.-person platforms and registered clearing agencies would be subject. Therefore, the Commission proposes to amend Rule 908(b) to specifically include platforms and registered clearing agencies as entities that may incur duties under Regulation SBSR. Rule 908(b), as amended, would provide: "Notwithstanding any other provision of [Regulation SBSR], a person shall not incur any obligation under [Regulation SBSR] unless it is: (1) A U.S. person; (2) A registered security-based swap dealer or registered major security-based swap participant; (3) A platform; or (4) A registered clearing agency."

E. Request for Comment

The Commission requests comment on all aspects of the proposed amendments to Rules 905, 906(b), 906(c), 907(a)(6), and 908 described above. In particular:

30. Do you believe that Rule 905(a) should be amended to include platforms? Why or why not? Would any other conforming changes to Rule 905 be advisable on account of the proposal to extend reporting duties to platforms?

31. Do you agree with the Commission's proposal to exclude platforms and registered clearing agencies from Rule 906(b)? Why or why not?

32. Should Rule 906(c) be expanded to include platforms and registered clearing agencies? Why or why not?

---

115 See supra Section II(B).

33. Do you agree with the proposed conforming amendment to Rule 908(b) to include platforms and registered clearing agencies? Why or why not?

34. Do you believe any other conforming amendments to Regulation SBSR are necessary or desirable in light of the Commission's proposal to extend reporting duties to platforms and registered clearing agencies as discussed above? If so, please describe.

VI. Proposed Rule Prohibiting a Registered SDR from Charging Fees for or Imposing Usage Restrictions on Publicly Disseminated Data

A. Background

In addition to implementing the Title VII mandate for regulatory reporting of all security-based swaps, Regulation SBSR also implements the Title VII mandate for public dissemination of all security-based swaps. Section 13(m)(1)(B) of the Exchange Act[116] authorizes the Commission "to make security-based swap transaction and pricing data available to the public in such form and at such times as the Commission determines appropriate to enhance price discovery." Section 13(m)(1)(C) of the Exchange Act[117] identifies four categories of security-based swaps and directs the Commission to require "real-time public reporting" of transaction, volume, and pricing data for each category. Section 13(m)(1)(D) of the Exchange Act[118] authorizes the Commission to require registered entities (such as registered SDRs) to publicly disseminate the security-based swap transaction and pricing data required to be reported under Section 13(m) of the Exchange Act. Finally, Section 13(n)(5)(D)(ii) of the Exchange Act[119]

---

116 15 U.S.C. 78m(m)(1)(B).

117 15 U.S.C. 78m(m)(1)(C).

118 15 U.S.C. 78m(m)(1)(D).

119 15 U.S.C. 78m(n)(5)(D)(ii).

requires SDRs to provide security-based swap information "in such form and at such frequency as the Commission may require to comply with public reporting requirements."

Accordingly, Rule 902(a), as adopted, requires a registered SDR to publicly disseminate a transaction report of a security-based swap, or a life cycle event or adjustment due to a life cycle event, immediately upon receipt of information about the security-based swap, with certain exceptions noted in Rule 902(c). Rule 900(cc), as adopted, defines "publicly disseminate" to mean "to make available through the Internet or other electronic data feed that is widely accessible and in machine-readable electronic format."

Four commenters on Regulation SBSR, as originally proposed, raised issues that bear on whether—and, if so, under what terms—a registered SDR would be able to charge for the security-based swap data that Regulation SBSR requires it to publicly disseminate.[120] One of these commenters stated that security-based swap transaction data "should be made available on reasonable commercial terms."[121] Another commenter, which currently operates a trade repository, believed that registered SDRs should make "data available to value added providers on a non-discriminatory basis" and that the public utility function of an SDR should be separated from potential commercial use of the data.[122] A third commenter stated that, consistent with

120 See Better Markets II at 2; DTCC II at 27; DTCC III at 2; Markit I at 2; WMBAA II at 8.

121 Markit I at 2.

122 DTCC II at 27 (also stating that it is "good public policy that the aggregating entity not itself use the data for commercial purposes, particularly where data is required to be reported to an aggregator serving a regulatory purpose, and make such data available to value added providers on a non-discriminatory basis, consistent with restrictions placed on the data by the data contributors themselves"); DTCC III at 2 (stating that the mandatory reporting regime "creates an opportunity for the SDR to improperly commercialize the information it receives" and that it is "important that regulators ensure that the public utility function of SDRs, which … support regulatory oversight and supervisory functions, as well as regulator-mandated public reporting, is separated from potential commercial uses of the data").

reporting practices in other markets, "the reporting of SBS transaction information to a registered SDR should not bestow the SDR with the authority to use the security-based swap transaction data for any purpose other than those explicitly enumerated in the Commission's regulations."[123] A fourth commenter believed that "market information must be made available… on an equal basis, in terms of time of availability and content, to all market participants."[124] Finally, a fifth commenter, responding to Regulation SBSR as re-proposed, stated that publicly disseminated data "should be freely available and readily accessible to the public."[125]

In adopting its own rules for public dissemination of swap transactions, the CFTC addressed the issue of whether a swap data repository could charge for its publicly disseminated data. In Section 43.2 of those rules,[126] the CFTC defined "public dissemination" and "publicly disseminate" to mean "to publish and make available swap transaction and pricing data in a non-discriminatory manner, through the Internet or other electronic data feed that is widely published and in machine-readable electronic format." The CFTC also defined "widely published" to mean "to publish and make available through electronic means and <u>in a manner that is freely available and readily accessible to the public</u>."[127] Furthermore, the CFTC adopted Section 43.3(d)(2), which provides: "Data that is publicly disseminated . . . shall be available from an Internet Web site in a format that is freely available and readily accessible to the public." In doing so, the CFTC noted that "implicit in this mandate [of public dissemination] is the requirement that the

124 Better Markets II at 2.

125 ISDA IV at 17.

126 17 CFR 43.2.

127 <u>Id.</u> (emphasis added).

data be made available to the public at no cost"[128] and that "Section 43.3(d)(2) reflects the [CFTC]'s belief that data must be made freely available to market participants and the public, on a nondiscriminatory basis."[129] However, the CFTC's rules permit a swap data repository to offer, for a fee, value-added data products derived from the freely available regulatorily mandated public data and to charge fair and reasonable fees to providers of swap transaction and pricing data.[130]

After consideration of the comments received and the CFTC's requirement that swap data repositories must publish and make available swap transaction data through electronic means and in a manner that is freely available and readily accessible to the public, the Commission now preliminarily believes that a registered SDR should not be permitted to charge fees for the security-based swap transaction data that it is required to publicly disseminate pursuant to Regulation SBSR. Therefore, the Commission is proposing new Rule 900(tt), which would define the term "widely accessible" as used in the definition of "publicly disseminate" in Rule 900(cc), as adopted, to mean "widely available to users of the information on a non-fee basis." As discussed below, this proposed definition would have the effect of prohibiting a registered SDR from charging fees for, or imposing usage restrictions on, the security-based swap transaction data that it is required to publicly disseminate under Regulation SBSR.

Title VII contains numerous provisions directing the Commission to establish a regime for post-trade transparency in the security-based swap market, which will allow the public to

128 Commodity Futures Trading Commission, Real-Time Public Reporting of Swap Transaction Data (Final Rule), 77 FR 1182, 1207 (January 9, 2012) (emphasis added).

129 Id. at 1202.

130 See id.

obtain pricing, volume, and other relevant information about all executed transactions.[131] In the Commission's preliminary view, the statutory requirement to make this transaction information publicly available would be frustrated if third parties could charge members of the public for the right to access that disseminated data.

The Commission furthermore believes that Title VII's public dissemination requirements should be interpreted in light of the current structure of the security-based swap market, which developed as an over-the-counter market without transparent volume and pricing information.[132] In the current market, large dealers and certain other large market participants are able to observe their own order flow and executions to develop a better view of the market than smaller market participants. Because of this greater amount of private order flow, larger market participants are better able to assess current market values and have a negotiating advantage over smaller, less informed counterparties. The Commission is concerned that, to the extent that the amount or structure of the fee deters use by smaller market participants, information asymmetries in the security-based swap market would persist and there would be less efficiency and competition in the market than if pricing and volume data were available to all market participants for free.

The Commission has considered the alternative of allowing registered SDRs to charge users fees, on a cost-recovery basis, for receiving the security-based swap transaction data that the registered SDR is required to publicly disseminate. However, the Commission is not proposing that alternative. A person that registers with the Commission as an SDR is also likely to be registered with the CFTC as a swap data repository. A dually registered SDR would likely use the same infrastructure to support public dissemination of swap transaction data as well as

---

131 See supra notes 116 to 119 and accompanying text.

132 See Cross-Border Proposing Release, 78 FR at 31126.

security-based swap transaction data. The Commission preliminarily believes that it would be difficult if not impossible to allocate the overhead and ongoing costs of a dually registered SDR to support mandated public dissemination between its swap-related functions and security-based-swap-related functions. As a result, it is unlikely that any such fee imposed on users by the SDR would go exclusively to offsetting the costs of publicly disseminating the regulatorily mandated security-based swap transaction data, rather than the costs associated with publicly disseminating swap data or other SDR functions. Therefore, the Commission preliminarily believes that permitting SEC-registered SDRs to impose fees on users for receiving the security-based swap transaction data that the SDR is required to publicly disseminate, even on a cost-recovery basis, while the CFTC prohibits swap data repositories from doing the same could result in a cross-subsidy for the public dissemination of swap data.

The Commission recognizes that establishing and operating registered SDRs so that they can carry out the duties assigned to them under Title VII entails various costs. However, the Commission preliminarily believes that prohibiting registered SDRs from imposing fees on users for receiving the security-based swap transaction data that the SDR is required to publicly disseminate would not impede their ability to carry out their functions. Another means exists for registered SDRs to obtain funds for their operations that the Commission preliminarily believes is more appropriate: imposing fees on those persons who are required to report transactions. Under such an approach, fees imposed by a registered SDR for reporting would increase in direct proportion to the number of transactions that a market participant is required to report. The Commission notes that CFTC-registered swap data repositories, some of which are likely to apply for registration with the Commission as SDRs for security-based swaps, currently disseminate regulatorily mandated public swap data for free pursuant to the CFTC's rules, and obtain funds for their operations through other means, including reporting fees.[133] Thus, the Commission preliminarily believes that—the proposed definition of "widely accessible" notwithstanding—SEC-registered SDRs would have adequate sources for their funding even if they are prohibited from charging users fees for receiving the security-based swap transaction data that the SDR is required to publicly disseminate.

In addition, the Commission preliminarily believes that it is necessary to prohibit a registered SDR from charging users of regulatorily mandated security-based swap transaction data for public dissemination of the data to reinforce Rule 903(b), as adopted. Rule 903(b) provides that a registered SDR may disseminate information using UICs (such as product IDs or other codes—e.g., reference entity identifiers—embedded within the product IDs) or permit UICs to be used for reporting by its participants only if the information necessary to interpret such UICs is widely available on a non-fee basis. The Commission is concerned that a registered SDR that wished to charge (or allow others to charge) users for the information necessary to understand these UICs—but could not, because of Rule 903(b)—might seek to do so indirectly by recharacterizing the charge as being for public dissemination. Under these circumstances, the economic benefit to the registered SDR would be the same, but how the registered SDR characterizes the fee—i.e., whether as a charge to users for public dissemination or as a charge of accessing the UICs within the publicly disseminated data—would be the difference between the

133 See BSDR Fee Schedule at http://www.bloombergsdr.com/assets/img/BSDR%20-%20Exhibit%20O%20(Fees).pdf (last visited on October 24, 2014); CME Swap Data Repository Fee Schedule at http://www.cmegroup.com/market-data/files/cme-repository-service-fee-schedule.pdf (last visited on October 24, 2014); DTCC Derivatives Repository US Fee Schedule at http://www.dtcc.com/~/media/Files/Downloads/Data-and-Repository-Services/GTR/US-DDR/DDR_Fees.pdf (last visited on October 24, 2014); ICE Trade Vault Service and Pricing Schedule at https://www.theice.com/publicdocs/ICE_Trade_Vault_Fee_Schedule.pdf (last visited on October 24 2014).

fee being permissible or impermissible under Rule 903(b). Thus, permitting a registered SDR to charge users for receiving the publicly disseminated transaction data could undermine the purpose of Rule 903(b). Accordingly, the Commission is proposing a definition of "widely accessible" to mean "widely available to users of the information on a non-fee basis." The language of the proposed definition echoes the language of Rule 903(b), as adopted, which requires a registered SDR to permit information to be reported or publicly disseminated using codes in place of certain data elements only if the information necessary to interpret such codes is "widely available to users of the information on a non-fee basis."

Similar to the Commission's statement regarding Rule 903(b) in the Regulation SBSR Adopting Release,[134] the proposed requirement that information be "widely available to users of the information on a non-fee basis" necessarily implies that a registered SDR would not be permitted to impose—or allow to be imposed—any usage restrictions on the security-based swap transaction information that it is required to publicly disseminate, including restrictions on access to or further distribution of the regulatorily mandated public security-based swap data. Market data usage restrictions typically take the form of an agreement between the provider and the users of the data. If a registered SDR could deny or limit access to a user based solely on the user's violation of a usage restriction, the registered SDR would not be in compliance with Rule 902(a), which requires the registered SDR to publicly disseminate the information in a manner that is "widely available." The Commission preliminarily believes that public dissemination would not satisfy the "widely available" standard if the registered SDR could deny access to

---

134 See Regulation SBSR Adopting Release, Section X(B)(3) (noting that the "Commission does not believe that access to [publicly disseminated] information should be impeded by having to pay fees or agree to usage restrictions in order to understand any coded information that might be contained in the transaction data").

users who do not agree to limit their use of the data in any manner directed by the registered SDR. Here, the Commission notes the asymmetric bargaining strength of the parties: a registered SDR might effectively have a monopoly position over the security-based swap transaction data that the registered SDR is required to publicly disseminate. If a registered SDR could impose usage restrictions with which a user does not wish to comply, there would be no other source from which the user could freely obtain these transaction data.

The proposed prohibition on usage restrictions would have the effect of prohibiting a restriction on bulk redistribution by third parties of the regulatorily mandated transaction data that the registered SDR publicly disseminates. The Commission preliminarily believes that it could prove useful to the public for intermediaries to collect, consolidate, and redistribute the regulatorily mandated transaction data to the public. Users of the data might, instead of obtaining data directly from each of several SDRs, find it preferable to obtain the data from a single person who itself obtains the data directly from the multiple registered SDRs and consolidates it. The Commission preliminarily believes that allowing unencumbered redistribution would be more consistent with the policy goals of wide availability of the data and minimization of information asymmetries in the security-based swap market. If the Commission prohibits registered SDRs from imposing a restriction on bulk redistribution, third parties would be able to take in the full data set and scrub, reconfigure, aggregate, analyze, repurpose, or otherwise add value to those data, and potentially sell that value-added product to others.

Rule 902(a), as adopted, and the proposed definition of "widely available" would not prohibit a registered SDR from creating and charging fees for a value-added data product that incorporates the regulatorily mandated transaction data, provided that the registered SDR has first satisfied its duty under Rule 902(a) and effected public dissemination of each security-based swap transaction in accordance with the proposed definition of "widely available."[135] In other words, a registered SDR could make publicly available both a regulatorily mandated and value-added data product. However, to comply with Rule 902(a), as adopted, a registered SDR is required to publicly disseminate a transaction report of a security-based swap (assuming that the transaction does not fall within Rule 902(c), as adopted) immediately upon receipt of information about the security-based swap. Thus, the registered SDR could not make the value-added product available before it publicly disseminated the regulatorily mandated transaction report. If a registered SDR makes a fee-based, value-added product available more quickly than the required transaction report, the registered SDR would not be acting consistent with Rule 902(a) because it would not be disseminating the required transaction report immediately.

This approach is consistent with parallel requirements under CFTC rules that require regulatorily mandated data be freely available to the public, but do not prohibit a CFTC-registered swap data repository from making commercial use of such data subsequent to its public dissemination.[136] This approach also is designed to promote competition in the market for value-added security-based swap data products. Other potential competitors in this market will necessarily have to obtain the regulatorily mandated transaction information from a registered SDR, because the SDR has a monopoly on this information until it is made widely accessible to the public. Potential competitors could be at a disadvantage if, needing to obtain the raw material for their own services, they had to purchase a value-added data product from the registered SDR or could obtain the regulatorily mandated transaction data only on a delayed

---

135. The SDR Adopting Release discusses generally the commercial use of security-based swap data. See SDR Adopting Release, Section VI(D)(3)(c)(iii).

136 See "Real-Time Public Reporting of Swap Transaction Data" (December 20, 2011), 77 FR at 1182, 1207 (January 9, 2012) (adopting rules for the public dissemination of swaps).

basis. The Commission believes that the transparency goals of Title VII will be furthered by reducing impediments to competition in the market for value-added post-trade data products relating to security-based swaps.

B. Request for Comment

The Commission requests comment on the proposed definition of "widely accessible" as applied to the public dissemination requirement of Rule 902(a), as adopted. In particular:

35. Do you believe that registered SDRs should be prohibited from charging users fees for or imposing usage restrictions on the security-based swap transaction information that registered SDRs are required to publicly disseminate under Rule 902(a)? Why or why not?

36. What effects would result if registered SDRs were permitted to charge users fees for regulatorily mandated public dissemination even though CFTC-registered SDRs are prohibited from doing so?

37. Do means exist for registered SDRs to recoup their operating costs other than by imposing fees on users for receiving and using the publicly disseminated transaction data? If so, please describe those means.

38. Should a registered SDR be prohibited from imposing any usage restrictions on the regulatorily mandated security-based swap transaction data that it publicly disseminates? Why or why not? What kinds of usage restrictions are typically included in user agreements for other types of market data? What would be the effect of prohibiting such usage restrictions from being imposed on the regulatorily mandated security-based swap transaction information that is publicly disseminated by registered SDRs?

39. Should a registered SDR be permitted to impose a prohibition against bulk re-

dissemination of the regulatorily mandated transaction data that it publicly disseminates? Why or why not?

40. Do you believe that the proposed definition of "widely accessible" as applied to the public dissemination requirement of Rule 902(a), as adopted, would impact the market for value-added post-trade data products in the security-based swap market? Why or why not? If so, how would it affect the market?

VII. Proposed Compliance Schedule for Regulation SBSR

In the Regulation SBSR Proposing Release, the Commission proposed Rule 910, which would have set forth various compliance dates under Regulation SBSR and, in general, was designed to clarify the implementation process. The Commission did not adopt Rule 910 in the Regulation SBSR Adopting Release. Although the Commission received comment on its proposed compliance schedule, the Commission now believes that a new compliance schedule for most of the rules in Regulation SBSR should be proposed in light of the fact that industry infrastructure and capabilities have changed since the initial proposal. Most notably, the CFTC regime for swap data reporting and dissemination is operational. The Commission understands that persons who are likely to apply for registration with the Commission as SDRs are already CFTC-registered swap data repositories, and many swap market participants are also active in the security-based swap market. Thus, these SDRs and many security-based swap market participants already have made substantial investments in compliance and reporting systems that will likely also be utilized to support Regulation SBSR compliance.

Finally, the Commission now believes that it is not necessary to include compliance dates within the text of Regulation SBSR.[137] Not including a compliance schedule in the text of Regulation SBSR would prevent portions of Regulation SBSR from becoming obsolete soon after adoption while still providing affected persons with guidance about when they are required to comply with the various provisions of Regulation SBSR.

A. Initial Proposal

1. Rule 910

In the Regulation SBSR Proposing Release, the Commission proposed Rule 910 to provide clarity as to security-based swap reporting and dissemination timelines and to establish a phased-in compliance schedule for Regulation SBSR.[138] As initially proposed, Rule 910 would have required reporting of pre-enactment security-based swaps by January 12, 2012, and would have implemented a compliance schedule for Regulation SBSR in four phases. Each registered SDR and its participants would have been required to comply with the requirements of each phase by set periods of time measured from the registration date of that registered SDR, as described in more detail below:

- Phase 1, six months after the registration date: (1) reporting parties would have been required to report any transitional security-based swaps to the registered SDR; (2)

---

137 Therefore, the Commission did not adopt the defined terms "effective reporting date," "phase-in period," and "registration date" that were included in Rule 900, as originally proposed, which terms appeared only in proposed Rule 910.

138 As part of the Cross-Border Proposing Release, the Commission re-proposed Rule 910 with only minor changes. Rule 910(b)(4) was re-proposed to reflect that certain cross-border security-based swaps would be subject to regulatory reporting but not public dissemination. See Cross-Border Proposing Release, 78 FR at 31067. As originally proposed, Rule 910(b)(4) would have provided that all security-based swaps reported to a registered SDR would be subject to real-time public dissemination as specified in Rule 902. See Regulation SBSR Proposing Release, 75 FR at 75244. The Commission also replaced the term "reporting party" with "reporting side" in re-proposed Rule 910.

reporting parties would have been required to report all newly executed security-based swaps to the registered SDR; (3) participants and the registered SDR would have been required to comply with the error reporting rule (except with respect to dissemination) and the requirements of Rules 906(a) and 906(b); and (4) security-based swap dealers and major security-based swap participants would have been required to comply with Rule 906(c).

- Phase 2, nine months after the registration date: the registered SDR would have been required to disseminate transaction reports and corrected transaction reports for 50 security-based swap instruments.
- Phase 3, 12 months after the registration date: the registered SDR would have been required to disseminate transaction reports and corrected transaction reports for an additional 200 security-based swap instruments.
- Phase 4, 18 months after the registration date: the registered SDR would have been required to disseminate transaction reports and corrected transaction reports for all security-based swaps reported to the registered SDR.

2. Rule 911

The Regulation SBSR Proposing Release included proposed Rule 911, which was designed to prevent evasion of the public dissemination requirement during a period when two or more SDRs had registered with the Commission but were operating under different compliance dates. Rule 911, as re-proposed, would have provided that a reporting side shall not report a security-based swap to a registered SDR in a phase-in period described in Rule 910 during which the registered SDR is not yet required to publicly disseminate transaction reports for that security-based swap instrument unless: (1) the security-based swap also is reported to a registered SDR that is disseminating transaction reports for that security-based swap instrument, consistent with proposed Rule 902; or (2) no other registered SDR is able to receive, hold, and publicly disseminate transaction reports regarding that security-based swap instrument.

B. New Proposed Compliance Schedule

The Commission is proposing a new compliance schedule for Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR[139] that is designed to provide affected persons, especially registered SDRs and persons with a duty to report security-based swap transactions to registered SDRs, with time to develop, test, and implement reporting and dissemination systems.[140] The proposed compliance schedule is tied to the commencement of operations of a registered SDR in an asset class.[141] Registered SDRs will need time to make the necessary technological and other

---

139 For Rules 900, 907, and 909 of Regulation SBSR, the compliance date is the effective date of Regulation SBSR. See Regulation SBSR Adopting Release, Section I(F).

140 As discussed in the Cross-Border Proposing Release, re-proposed Rule 908(a) would have provided an exception to public dissemination for transactions executed by a non-U.S. person who is guaranteed by a U.S. person, where there is no U.S. person or security-based swap dealer on the other side and the transaction is not cleared through a clearing agency having its principal place of business in the United States. As discussed in the Regulation SBSR Adopting Release, the Commission did not adopt this proposed exception. Rather, Rule 908(a)(1), as adopted, requires public dissemination of a security-based swap if one side consists of a non-U.S.-person direct counterparty and a U.S.-person guarantor, where neither is a registered security-based swap dealer or registered major security-based swap participant, and the other side includes no counterparties that are U.S. persons, registered security-based swap dealers, or registered major security-based swap participants (a "covered cross-border transaction"). See Cross-Border Proposing Release, 78 FR at 31062-63. The Commission anticipates seeking additional comment on whether or not to except covered cross-border transactions from public dissemination. Therefore, the Commission also is proposing to defer the compliance date for Rule 908(a)(1)(i) with respect to the public dissemination of covered cross-border transactions until such time as the Commission receives and considers public comment on such an exception or establishes a separate compliance date for these transactions.

141 Rule 13n-1(c)(3) under the Exchange Act provides that the Commission shall grant registration of an SDR if "the Commission finds that such security-based swap data repository is so organized, and has the capacity, to be able to assure the prompt, accurate,

preparations needed, including implementing policies and procedures,[142] to begin receiving and disseminating security-based swap information. Persons with a duty to report transactions will need time to analyze the policies and procedures of registered SDRs to which they wish to connect, make necessary changes to their internal systems, policies and procedures, and processes to conform to the requirements of the SDR's policies and procedures, and establish and test their linkages to the SDRs.

In light of these activities that must occur before full compliance with Regulation SBSR can be expected, the Commission is proposing the following phased-in compliance schedule for Regulation SBSR:

1. Proposed Compliance Date 1

Proposed Compliance Date 1 relates to the regulatory reporting of newly executed security-based swaps as well pre-enactment and transitional security-based swaps. On the date

---

and reliable performance of its functions as a security-based swap data repository, comply with any applicable provision of the federal securities laws and the rules and regulations thereunder, and carry out its functions in a manner consistent with the purposes of Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder." Although a registered SDR will have demonstrated its operational capability during the registration process, a registered SDR is not required to and likely will not formally commence operations as a registered SDR on the same day that it is approved for registration.

142 As part of the SDR registration process, a potential registrant must provide all of the policies and procedures required by Rule 907; the Commission will review those policies and procedures in assessing whether to approve the registration. See Form SDR (requiring applicants to attach as Exhibit GG all of the policies and procedures required under Regulation SBSR). In connection with its registration as an SDR, the potential registrant also must register as a securities information processor ("SIP") as required by Rule 909. Rule 907 provides, among other things, that a registered SDR must establish certain policies and procedures relating to the receipt, reporting, and dissemination of security-based swap data. Rule 909, as adopted, provides that a registered SDR must also register with the Commission as a SIP. The compliance date for Rules 907 and 909 will be 60 days after publication of the Regulation SBSR Adopting Release in the Federal Register. See Regulation SBSR Adopting Release, Section I(F).

six months after the first registered SDR that accepts reports of security-based swaps in a particular asset class commences operations as a registered SDR, persons with a duty to report security-based swaps under Regulation SBSR would be required to report all newly executed security-based swaps in that asset class to a registered SDR. Furthermore, after Compliance Date 1, persons with a duty to report security-based swaps also would have a duty to report any life cycle events of any security-based swaps that previously had been required to be reported.

The Commission recognizes that market participants will need adequate time to analyze and understand the policies and procedures of registered SDRs, to establish reporting connections to registered SDRs, and to develop new systems for capturing and reporting transaction information. The Commission preliminarily believes that this time period is an appropriate amount of time for market participants to do so. Any registered SDR that has commenced operations will have established policies and procedures that are consistent with Rule 907. Therefore, six months should allow adequate time for market participants to make the preparations necessary to connect with and report to a registered SDR, including analyzing and complying with the policies and procedures of the registered SDR and performing systems testing.

Also, by proposed Compliance Date 1, to the extent the information is available, persons with a duty to report pre-enactment security-based swaps and transitional security-based swaps in the relevant asset class would be required to report these transactions, in accordance with Rule 901(i), to a registered SDR that accepts reports of security-based swap transactions in that asset class.[143] The Commission is proposing to require that all historical security-based swaps in that

143 The Commission notes that, for some transitional security-based swaps, there might be only a short period between the date of execution and the date on which they must be

asset class be reported by Compliance Date 1, not on Compliance Date 1. Thus, a registered SDR that has commenced operations and that accepts reports of transactions in that asset class could allow persons with a duty to report to report such transactions on a rolling basis before Compliance Date 1. However, if it does so, the registered SDR would then be required to comply with the requirements of Regulation SBSR that are not subject to the phased compliance (i.e., those requirements that are immediately effective). Therefore, a registered SDR would need to comply with Rule 901(f) and time stamp, to the second, any security-based swap data that it receives pursuant to Rule 901(i). The registered SDR also would be required to comply with Rule 901(g) and assign a transaction ID to each historical security-based swap that is reported to it on or before proposed Compliance Date 1.

As participants begin reporting historical security-based swaps to a registered SDR in the days leading up to Compliance Date 1, participants and registered SDRs would be required to comply with Rules 901(e) and 905 (except with respect to public dissemination) regarding any historical security-based swaps that are so reported. Thus, if historical security-based swap X is reported to a registered SDR 30 days before Compliance Date 1, the counterparties to transaction X and the registered SDR that holds the mandatory report of transaction X would immediately become subject to the life cycle event reporting and error-correction requirements of Rules 901(e) and 905, respectively with respect to transaction X. However, if transaction Y has not yet been reported to a registered SDR (and assuming that Compliance Date 1 has not yet arrived),

---

reported to a registered SDR. For example, assume that Compliance Date 1 with respect to a particular asset class is July 14, 2016; if a security-based swap in that asset class is executed on July 10, 2016, the person with the duty to report that transaction would be required to report it to a registered SDR within four days of execution (i.e., on or before July 14, 2016).

the counterparties and the registered SDR would not yet incur any duties under Rules 901(e) or 905 with respect to transaction Y.

Finally, by proposed Compliance Date 1, registered security-based swap dealers, registered major security-based swap participants, registered clearing agencies, and platforms would be required to comply with Rule 906(c); participants (except for platforms and registered clearing agencies) would be required to comply with Rules 906(a) and 906(b); and registered SDRs also would be required to comply with Rule 906(a).

The Commission preliminarily believes that a six-month compliance phase-in would provide sufficient time for registered security-based swap dealers, registered major security-based swap participants, registered clearing agencies, and platforms to establish their own policies and procedures for reporting transactions in a particular asset class and to implement the systems changes needed to comply with Regulation SBSR. Participants would not be required to report to the first SDR that accepts security-based swaps in that asset class that registers with the Commission; participants could report to any SDR that accepts transactions in that asset class that has been registered by the Commission and has commenced operations by Compliance Date 1. Registered SDRs would not be required to publicly disseminate any transaction reports until Compliance Date 2, as described below.

Registered SDRs also would be required to comply with Rule 904 beginning on proposed Compliance Date 1, with the exception of Rule 904(d). Rule 904 requires a registered SDR to have systems in place to continuously receive and disseminate security-based swap information, with certain exceptions. Under final Rule 904(a), a "registered SDR may establish normal closing hours when, in its estimation, the U.S. market and major foreign markets are inactive." Under final Rule 904(b), a registered SDR "may declare, on an ad hoc basis, special closing hours to perform system maintenance that cannot wait until normal closing hours." In each case, the registered SDR must provide participants and the public with reasonable advance notice of its normal closing hours and special closing hours. Rule 904 also requires a registered SDR to have the ability to hold in queue any transaction data that it receives during normal and special closing hours or, if the registered SDR does not have the ability to received and hold data in queue, the registered SDR must immediately notify participants that it has resumed operations and any participant with a duty to report would be required to promptly re-report security-based swap information to the registered SDR.

Also beginning on proposed Compliance Date 1, registered SDRs would be required to comply with the requirement in Rule 906(a) to provide to each participant a report of any missing UICs, and any participant receiving such a report would be required to comply with the requirement in Rule 906(a) to provide the missing UICs to the registered SDR. The registered SDR and its participants also would be subject to the error correction requirements of Rule 905, except that the registered SDR would not yet be required to publicly disseminate any corrected transaction reports (because it would not yet be required to publicly disseminate a report of the initial transaction). Participants (except for platforms and registered clearing agencies) also would be required to comply with the requirement in Rule 906(b) to provide the registered SDR information sufficient to identity its ultimate parent(s) and any affiliate(s) that also are participants of the registered SDR. The Commission preliminarily believes that these requirements will facilitate accurate and complete reporting of transaction information.

2. Proposed Compliance Date 2

Proposed Compliance Date 2 relates to the public dissemination of security-based swap transaction data. Within nine months after the first registered SDR that accepts security-based swaps in a particular asset class commences operations as a registered SDR (i.e., three months after Compliance Date 1), each registered SDR in that asset class that has registered and commenced operation would be required to comply with Rules 902 (regarding public dissemination), 904(d) (requiring dissemination of transaction reports held in queue during normal or special closing hours), and 905 (with respect to public dissemination of corrected transaction reports) for all security-based swaps in that asset class—except for "covered cross-border transactions," as that term is described in the immediately following section. The Commission preliminarily believes that nine months after the first registered SDR that accepts security-based swaps in a particular asset class commences operations as a registered SDR is a sufficient amount of time for registered SDRs to begin disseminating security-based swap transaction data, including corrected transaction reports. This will allow registered SDRs a period of three months after they begin receiving reports of individual security-based swap transactions to identify and resolve any issues related to trade-by-trade reporting by participants and further test their data dissemination systems.

3. Effect of Registration of Additional SDRs

As discussed immediately above, the first SDR that is registered by the Commission and commences operations as a registered SDR starts the countdown to proposed Compliance Dates 1 and 2 for any asset class in which that SDR chooses to accept transaction reports. A subsequent SDR that is approved by the Commission, can accept reports of security-based swaps in that asset class, and commences operations would be subject to the same proposed Compliance Dates, as shown in the following examples:

- Example 1. SDR A registers with the Commission and, subsequently, commences operations as a registered SDR on June 1, 2015. Therefore, Compliance Date 1 (with respect to transactions in any asset class that can be accepted by SDR A) is December 1, 2015. SDR B, which accepts security-based swaps in the same asset class, registers and subsequently commences operations as a registered SDR on November 2, 2015. Mandatory transaction-by-transaction reporting pursuant to Rule 901 still begins on December 1, 2015. However, persons with the duty to report may report to either SDR A or SDR B, even though SDR B would have been registered for less than one month.

- Example 2. Again, SDR A registers with the Commission and, subsequently, commences operations as a registered SDR on June 1, 2015. Therefore, Compliance Date 1 (with respect to transactions in any asset class that can be accepted by SDR A) is December 1, 2015, and Compliance Date 2 is March 1, 2016. SDR C registers and, subsequently, commences operations as a registered SDR on February 15, 2016. (There is no SDR B in this example.) Mandatory transaction-by-transaction reporting pursuant to Rule 901 began on December 1, 2015. As of the first day on which it operates, SDR C must be prepared to accept transaction-by-transaction reports, as required by Rule 901. Both SDR A and SDR C must begin publicly disseminating last-sale reports, as required by Rule 902, on March 1, 2016.
- Example 3. Again, SDR A registers with the Commission and, subsequently, commences operations as a registered SDR on June 1, 2015. Therefore, Compliance Date 1 (with respect to transactions in any asset class that can be accepted by SDR A) is December 1, 2015, and Compliance Date 2 is March 1, 2016. SDR D registers and, subsequently, commences operations as a registered

SDR on June 15, 2017. SDR D must be prepared to accept transaction-by-transaction reports, as required by Rule 901, and to publicly disseminate last-sale reports, as required by Rule 902, as of the first day on which it operates as a registered SDR. SDR D's registration would not create a new set of compliance timeframes.

4. Proposed Changes to Certain Exemptions Related to the Proposed Compliance Schedule

In connection with Compliance Date 1, the Commission is also proposing to extend its exemption related to the reporting of pre-enactment security-based swaps in order to ensure consistency between the proposed compliance schedule and the exemption. In June 2011, the Commission exercised its authority under Section 36 of the Exchange Act[144] to exempt any person from having to report any pre-enactment security-based swaps pursuant to Section 3C(e)(1) of the Exchange Act[145] until six months after an SDR that is capable of receiving security-based swaps in that asset class is registered by the Commission.[146] At the time, the Commission noted that the exemption was consistent with Rule 910, as proposed.[147] Because Compliance Date 1 is tied to the commencement of operations of a registered SDR and because some time may elapse between the date on which the Commission approves an SDR's registration and the date on which it commences operations as a registered SDR, the Commission is proposing to modify the reporting exemption to harmonize it with the proposed compliance

144 15 U.S.C. 78mm.

145 15 U.S.C. 78c-3(e)(1).

146 See Securities Exchange Act Release No. 64678 (June 15, 2011), 76 FR 36287, 36291 (June 22, 2011) (Temporary Exemptions and Other Temporary Relief, Together With Information on Compliance Dates for New Provisions of the Securities Exchange Act of 1934 Applicable to Security-Based Swaps) ("Effective Date Release").

147 See id.

schedule. The Commission is therefore proposing to exercise its authority under Section 36 of the Exchange Act to exempt any person from having to report any pre-enactment security-based swaps pursuant to Section 3C(e)(1) of the Exchange Act until six months after an SDR that is capable of receiving security-based swaps in that asset class is registered by the Commission and has commenced operations as a registered SDR.[148] The Commission preliminarily believes that this exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors because such action would prevent the existing exemption from expiring before persons with a duty to report pre-enactment security-based swaps can report them to a registered SDR, taking into account that an SDR may require some time between the date on which the Commission approves its registration and the date on which it is able to commence operations as a registered SDR with respect to a particular asset class.

In addition, in the Effective Date Release, the Commission also exercised its authority under Section 36 of the Exchange Act to temporarily exempt any security-based swap contract entered into on or after July 16, 2011, from being void or considered voidable by reason of Section 29(b) of the Exchange Act,[149] because any person that is a party to the security-based swap contract violated a provision of the Exchange Act that was amended or added by Subtitle B of Title VII of the Dodd Frank Act and for which the Commission has taken the view that compliance will be triggered by registration of a person or by adoption of final rules by the

[148] Thus, as proposed, this exemption would expire on proposed Compliance Date 1 with respect to persons having a duty to report pre-enactment security-based swap transactions in the asset class of the first SDR to register with the Commission and commence operations as a registered SDR with respect to that asset class. For persons having a duty to report pre-enactment security-based swaps in any other asset class, the exemption would remain in force until six months after the first registered SDR that can accept reports of security-based swaps in that asset class has commenced operations as a registered SDR with respect to that asset class.

[149] 15 U.S.C. 78cc(b).

Commission, or for which the Commission has provided an exception or exemptive relief, until such date as the Commission specifies.[150] In relevant part, Section 29(b) of the Exchange Act provides that "[e]very contract made in violation of any provision of this title or of any rule or regulation thereunder, and every contract . . . heretofore or hereafter made, the performance of which involves the violation of, or the continuance of any relationship or practice in violation of, any provision of this title or any rule or regulation thereunder, shall be void (1) as regards the rights of any person who, in violation of any such provision, rule, or regulation, shall have made or engaged in the performance of any such contract, and (2) as regards the rights of any person who, not being a party to such contract, shall have acquired any right thereunder with actual knowledge of the facts by reason of much the making or performance of such contract was in violation of any such provision rule or regulation . . ."[151] The Commission is proposing that, with respect to security-based swaps in a particular asset class, the exemption from Section 29(b) of the Exchange Act, in connection with Section 3C(e)(1), would terminate on proposed Compliance Date 1 (i.e., six months after the first registered SDR in that asset class commences operations with respect to that asset class).

C. Discussion of Comments Received in Response to the Initial Proposal

Commenters responding to the Regulation SBSR Proposing Release generally recommended that the Commission implement Regulation SBSR in phases, but their detailed suggestions varied.[152] Several commenters emphasized the need to provide adequate time for the

development and implementation of reporting and compliance systems and procedures.[153] One of these commenters stated, for example, that "virtually all existing systems would have to be significantly overhauled to satisfy the real-time reporting obligations" of Regulation SBSR.[154] Another commenter emphasized that "market infrastructure must be in place prior to requiring market participant compliance" and that many financial entities that are not swap dealers or major swap participants may need additional time to comply.[155] A third commenter noted that requiring reporting prior to the registration of security-based swap dealers and major security-based swap participants would complicate reporting and the determination of the reporting counterparty because "parties entering into security-based swaps . . . may be expected . . . to report ahead of the point their obligation becomes certain."[156] A fourth commenter stated that any implementation timeline "must recognize the practical challenges that security-based swap data repositories and market participants will face in defining and implementing industry-wide collection and dissemination mechanisms and internal data collection systems, respectively."[157] A fifth commenter stated that, although much of the existing infrastructure of DTCC's Trade Information Warehouse could form the core of the processes required by Regulation SBSR, substantial new industry-wide processes requiring significant coordination, testing, and

development would have to be implemented, particularly around real-time reporting.[158] One commenter believed that, given the complexity and novelty of the proposed reporting framework, a pilot program would allow the Commissions to evaluate the operational integrity of the infrastructure implementing the reporting rules.[159] One commenter recommended a "relatively thorough phase-in period" during which only regulators would receive security-based swap information because of the potential for disseminating misleading real-time pricing information, which potentially could result in market disruptions and economic damage.[160]

One commenter also noted that a phased-in implementation would allow regulators to assess the impact of transparency on the security-based swap market and make adjustments, if necessary, to the timing of dissemination and the data that is disseminated.[161] Other commenters echoed the belief that a phased-in approach would allow the Commission to assess the impact of public dissemination on liquidity in the security-based swap market, monitor changes in the market, and adjust the reporting rules, if necessary.[162] One of these commenters believed that, without staged implementation, the new security-based swap transparency requirements could cause market disruptions if some dealers withhold capital until they were able to determine

---

158 See DTCC II at 25.

159 See Cleary I at 20.

160 DTCC IV at 9. This commenter also stated that a phased-in implementation of Regulation SBSR would allow time for extensive testing and preparation needed to avoid systemic risk and the dissemination of inaccurate information. See DTCC I at 2.

161 See FINRA Letter at 5. See also ISDA/SIFMA Block Trade Study at 2 (stating that phased-in implementation would provide regulators with time to test and refine preliminary standards).

162 See CCMR I at 2; Cleary I at 19; ISDA/SIFMA Block Trade Study at 2; UBS Letter at 2. Another commenter believed that the reporting requirements could apply first to products that are cleared and executed on a trading platform, then to products that are cleared, but not executed on a trading platform, and finally to uncleared products. See Morgan Stanley Letter at 6.

whether the reporting requirements would adversely impact their ability to manage risk.[163] Another commenter agreed with the phased-in approach initially proposed by the Commission and believed that the obligations on affected parties were clear, sufficient, and achievable.[164] Another commenter recommended the adoption of an incremental approach to reporting that would begin with "macro" reporting followed by more comprehensive reporting at a later time.[165]

Several commenters also recommended that the Commission utilize a gradual implementation approach similar to that of the TRACE trade reporting system. One commenter—the Financial Industry Regulatory Association ("FINRA"), which operates the TRACE trade reporting system for fixed income securities—supported proposed Rule 910's approach of staggered implementation of various requirements under Regulation SBSR, noting that it had implemented TRACE reporting in phases based on product liquidity, beginning with the largest and most liquid issues.[166] FINRA stated that phased-in implementation would facilitate a more orderly transition that minimizes the likelihood of market disruptions and an unintended loss of liquidity, and would provide market participants with time to adjust to a market in which security-based swap transaction data were publicly known.[167] Other

---

163 See CCMR I at 2.

164 See Barnard I at 4. The commenter also believed that the suggested numbers of security-based swaps included in each of the initially proposed phases of implementation were reasonable. See id.

165 See Roundtable Letter at 4 (stating that market participants could prepare reports indicating the aggregate notional amount of swaps outstanding, subdivided by major category, and the identity of any counterparty representing 5% or more of their open positions by notional amount in that major category).

166 See FINRA Letter at 4.

167 See id. at 5.

commenters also expressed the view that TRACE is a useful model of a phased-in approach to implementation.[168] One of these commenters stated, for example, that the "TRACE experience demonstrates the length of time required to study, review and assess the effects of real-time reporting on market liquidity, as well as the need to provide adequate lead time for market participants to build a common infrastructure for reporting."[169] Another commenter believed that Regulation SBSR would require, at a minimum, an implementation period similar to the four years required to implement TRACE, "given that the swap markets are significantly more complex and varied and less developed infrastructurally than the corporate bond markets."[170]

While one participant at the Implementation Roundtable suggested that certain asset classes could need less than six months for implementation,[171] several others stated that the time needed for implementation depended on the complexity of the asset class and believed that more time than the implementation schedule in Regulation SBSR, as initially proposed, would likely be necessary.[172] Another participant believed that it could take up to two years following the adoption of final rules to implement the new rules because of "the substantial effort required to conduct the renegotiation of tens of thousands of contracts between customers and

170 Cleary I at 20. See also ISDA/SIFMA I at 10 (stating that the reporting requirements for security-based swaps are significantly more complex than for TRACE, and the phase-in should reflect this degree of complexity); CCMR I at 2 (noting that TRACE took a "cautious approach" to implementation, even though it was implemented initially for a single asset class, corporate bonds).

171 See Implementation Roundtable, Day 2 at 170-71 (Cummings).

172 See Implementation Roundtable, Day 1 at 299, 301 (Gooch); Implementation Roundtable, Day 2 at 177-8 (Joachim).

counterparties."[173] However, several participants at the Implementation Roundtable suggested that six to nine months would be needed for implementation following adoption of final rules by the SEC and CFTC.[174] Similarly, two commenters indicated that market participants would require an implementation period of at least six months following the adoption of final rules.[175]

Several commenters also discussed general and specific implementation issues that might arise in the context of implementing Regulation SBSR. Some commenters,[176] along with several participants at the Implementation Roundtable,[177] supported phasing in implementation by asset class. Because different asset classes use different and often incompatible booking systems, one commenter recommended that both reporting to SDRs and public dissemination be phased in by asset class to allow market participants to work within the current market set-up.[178] Other Roundtable participants did not specify the amount of time that they believed would be required

---

173 Institutional Investors Letter at 3. See also Roundtable Letter at 4 (stating that there could be a "'bottleneck' both in the document negotiation process and in the move to clearing").

174 See Implementation Roundtable, Day 1 at 264 (Levi), 298 (Gooch); Implementation Roundtable, Day 2 at 174-8 (Collazo, Cummings, Joachim).

175 See DTCC II at 24 ("A six month period seems appropriate"); ISDA IV at 2 (expressing support for a six-month implementation period, provided that Regulation SBSR aligns closely with the CFTC's swap data reporting rules and requesting a nine-month implementation period if Regulation SBSR deviates from the CFTC's swap data reporting rules).

176 See DTCC II at 25 (noting that because credit products' operational processes are more highly automated, credit products are more reporting-ready than equities products); SIFMA II at 5; UBS Letter at 2 (stating that the initial phase of public security-based swap reporting for single-name CDS be limited to CDS on the top 125 most actively traded reference entities).

177 See Implementation Roundtable, Day 1 at 32 (unidentified speaker), 43 (Thompson). See also Implementation Roundtable, Day 2 at 168, 173 (Collazo) (suggesting implementation in the following order: CDS, interest rate swaps, FX swaps, equity swaps, then commodity-based swaps).

178 See Barclays I at 4.

for implementation and instead noted various implementation concerns.[179] One commenter stated that the CFTC and SEC should synchronize compliance dates for their respective reporting rules as much as possible.[180] Another commenter, noting that the CFTC and the Commission are undertaking a Dodd-Frank mandated study regarding the feasibility of standardized computer-readable algorithmic descriptions for derivatives, believed that it would be premature to adopt reporting rules before the completion of this study and consideration of its results.[181] One Roundtable participant recommended setting an implementation date and establishing consequences for failure to meet the implementation date.[182]

The Commission notes the concerns about implementation expressed by commenters. However, it is the Commission's understanding that the industry has made considerable progress in improving reporting capability, which will facilitate compliance with Regulation SBSR. The CFTC already has adopted final rules for swap data repository registration, regulatory reporting, and public dissemination of swaps, and market participants have been reporting to CFTC-registered SDRs since year-end 2012.[183] The Commission preliminarily believes that much of

179 See Implementation Roundtable, Day 2 at 159 (Okochi) (stating that implementation will vary based on clearing of trades, customization of trades based on the business segment they are in, asset class, and volume); 183-84 (Thum) (stating that reporting by non-dealers will require additional work), 192-94 (Gooch) (stating that inclusion of timestamps, place of execution, subfund allocations will require additional configurations to existing systems and processes to support real-time reporting).

180 See Implementation Roundtable, Day 1 at 77 (Olesky).

181 See Cleary I at 20. The Commission notes that the referenced study was completed on April 7, 2011. See Securities Exchange Act Release No. 63423 (December 2, 2010), 75 FR 76706 (December 9, 2010). See also http://www.sec.gov/news/studies/2011/719b-study.pdf (noting that current technology is capable of representing derivatives using a common set of computer-readable descriptions).

182 See Implementation Roundtable, Day 1 at 51 (Cawley).

183 The CFTC phased in compliance requirements for swap data reporting (depending on the reporting party and asset class) beginning on December 31, 2012. See CFTC Division of

the established infrastructure that supports swap reporting and dissemination can be modified to support security-based swap reporting and dissemination. At the same time, the Commission recognizes that there are certain differences in the reporting requirements of the SEC and the CFTC; therefore, entities subject to Regulation SBSR will need time to meet the regulation's specific requirements.

The Commission preliminarily agrees with those commenters who suggested that the Commission generally model the implementation of Regulation SBSR after the implementation of TRACE, and has designed the newly proposed compliance schedule to allow participants and registered SDRs the benefit of phased-in compliance. The Commission also is aware of the need for extensive testing and preparation in the implementation of the systems necessary to meet the requirements of Regulation SBSR and has developed the proposed compliance schedule with such needs in mind. The proposed schedule, discussed above, provides for a six-month period from the date on which the first registered SDR that accepts security-based swaps in a particular asset class commences operations as a registered SDR. By the end of that six-month period, to the extent such information is available, all pre-enactment and transitional security-based swaps in that asset class would be required to be reported.[184] Furthermore, market participants would

---

Market Oversight Advisory (March 8, 2013) at 2-3, available at http://www.cftc.gov/ucm/groups/public/@newsroom/documents/file/dmoadvisory030813.pdf (last visited on October 30, 2014).

184 One commenter recommended that pre-enactment and transitional security-based swaps should be reported on the same timeline, as firms' systems cannot easily distinguish between the two categories. See ISDA IV at 18. The Commission notes that the proposed compliance schedule would provide for this outcome. This commenter further stated that reporting entities have found it practical to report "live" historical security-based swaps in advance of the effective reporting date applicable to new transactions and life cycle reporting, and recommended an aligned reporting effective date for historical security-based swaps that are still live, or expected to be live, as of the reporting effective date. However, the commenter recommended that historical security-based swaps that

have six months from the commencement of operations of the first registered SDR that can accept security-based swaps in a particular asset class as a registered SDR before reporting of newly executed transactions in that asset class would be required. Although a registered SDR may already be operational as swap data repository under CFTC rules, to the extent there is a gap between the Commission's grant of registration and the SDR's commencement of operations as a registered SDR, the Commission wants to ensure that reporting parties have six months after a registered SDR commences operations as a registered SDR in a particular asset class to further test and implement processes for reporting security-based swap transaction information in that asset class. The Commission preliminarily believes that six months would provide affected persons with sufficient time to resolve any potential issues related to the reporting of security-based swap transactions on an individual basis. Under the proposed compliance schedule, there would then be an additional three months before transactions must be publicly disseminated. This period is designed to give registered SDRs and persons having a duty to report an opportunity to resolve any reporting issues before transactions must be publicly disseminated.

Although several commenters advocated for longer timeframes, the Commission preliminarily believes that six months between the commencement of operations of the first registered SDR in an asset class as a registered SDR and the commencement of mandated trade-by-trade reporting is sufficient. The Commission bases this view on the existence of market

---

are no longer live should have a later reporting effective date than reporting for other security-based swaps, and recommends a year delay. See id. Under the proposed compliance schedule, all historical security-based swaps in an asset class would be required to be reported in the same timeframe as for new security-based swaps going forward—i.e., by six months from the date of operation of the first registered SDR that can accept security-based swaps in the asset class. The Commission is not proposing a longer reporting period for historical security-based swaps that are not "live," but requests comment on the issue.

infrastructure that supports swap data reporting pursuant to CFTC rules. Several commenters noted that challenges related to the implementation of the reporting and dissemination requirements of proposed Regulation SBSR were related to lack of appropriate industry infrastructure and processes.[185] As noted above, the Commission understands that persons seeking to register as SDRs are likely to be registered and operating as swap data repositories under CFTC rules, and that many swap market participants subject to CFTC reporting rules may also be security-based swap market participants. Therefore, the Commission preliminarily believes that these persons and market participants would be able to leverage existing infrastructure to report and disseminate security-based swap data.

The Commission also preliminarily believes that it is unnecessary to delay the implementation of Regulation SBSR until registration requirements take effect for security-based swap dealers and major security-based swap participants, as suggested by one commenter.[186] As described in Section V(B)(1) of the Regulation SBSR Adopting Release, the Commission has adopted a modified version of the security-based swap reporting hierarchy in Rule 901(a)(2) to ensure that no person will need to evaluate whether it meets the definition of "security-based swap dealer" or "major security-based swap participant" solely in connection with identifying

185 See Institutional Investors Letter at 3 ("market infrastructure must be in place prior to requiring market participant compliance"); Cleary I at 19 (any implementation timeline "must recognize the practical challenges that security-based swap data repositories and market participants will face in defining and implementing industry-wide collection and dissemination mechanisms and internal data collection systems, respectively."); DTCC II at 25 (noting that although much of the existing infrastructure of DTCC's Trade Information Warehouse could form the core of the processes required by Regulation SBSR, substantial new industry-wide processes requiring significant coordination, testing, and development would have to be implemented, particularly around real-time reporting).

186 See ISDA IV at 2-3.

which counterparty must report a security-based swap under Regulation SBSR.[187] Under the reporting hierarchy as adopted, until registration requirements come into effect, there will be no registered security-based swap dealers or major security-based swap participants, so the sides will be required to select the reporting side. The Commission preliminarily believes that having the sides choose who reports should not complicate reporting.

The Commission preliminarily believes that it is not necessary or appropriate to establish multiple or phased compliance dates for reporting security-based swaps within the same asset class to registered SDRs.[188] Preliminarily, the Commission seeks to have all regulatory reports of security-based swaps reported to registered SDRs in the manner set forth in Regulation SBSR at the earliest practicable date. This information would greatly increase relevant authorities' understanding of the security-based swap market, help them perform their regulatory duties, and provide more and better data to support the Commission's additional Title VII rulemakings. For example, with required regulatory reporting of all security-based swaps in an asset class, the Commission and other relevant authorities would be able to more easily determine the positions of security-based swap dealers, giving them greater visibility into possible systemic risks. Phased compliance within a security-based swap class would not provide a holistic view of

---

187 In the Cross-Border Adopting Release, the Commission estimated the assessment costs for making such evaluations. See Cross-Border Adopting Release, 79 FR at 47330-34. The Commission's approach in Regulation SBSR is consistent with the approach described in the Cross-Border Adopting Release, where the Commission noted that security-based swap dealers and major security-based swap participants "will not be subject to the requirements applicable to those dealers and major participants until the dates provided in the applicable final rules." 79 FR at 47368. See also Intermediary Definitions Adopting Release, 77 FR at 30700.

188 See Roundtable Letter at 4 (stating that market participants could initially prepare reports indicating the aggregate notional amount of swaps outstanding, subdivided by major category, and the identity of any counterparty representing 5% or more of their open positions by notional amount in that major category).

dealer positions until the final security-based swaps in that asset class were required to be reported.

However, the Commission is proposing a separate compliance date (proposed Compliance Date 2) for public dissemination. The three-month delay between the date on which persons with a duty to report must begin reporting new security-based swaps to a registered SDR and the date on which the registered SDR must publicly disseminate transaction reports is designed to provide ample time for registered SDRs and market participants to identify and address any problems with trade-by-trade reporting to registered SDRs before registered SDRs are required to publicly disseminate newly executed transactions.[189]

One commenter agreed with the requirements of proposed Rule 911[190] and believed that they were sufficient to prevent the evasion of reporting.[191] The Commission continues to be concerned with potential efforts to evade public dissemination, but believes that Rule 911 is not necessary in light of the proposed new compliance timeframes. Another commenter believed that the Commission should delay the implementation of Regulation SBSR until more than one SDR is registered because, absent such a delay, the first SDR to register would have a monopoly on security-based swap reporting and a competitive advantage over new entrants.[192] The

---

189 This timeframe generally comports with the recommendation of several of the participants at the Implementation Roundtable, who suggested that six to nine months would be needed for implementation following adoption of final rules by the SEC and CFTC. See Implementation Roundtable, Day 1 at 264 (Levi), 298 (Gooch); Implementation Roundtable, Day 2 at 174-8 (Collazo, Cummings, Joachim).

190 Rule 911, as proposed, was designed to prevent evasion of the public dissemination requirement during a period when two or more SDRs had registered with the Commission and were operating under different compliance dates.

191 See Barnard I at 4.

192 See MFA I at 6 (also arguing that a diverse range of options for reporting security-based swap data would benefit the market and market participants). See also ISDA IV at 3

Commission preliminarily believes instead that a delay in implementation to permit additional registrations would be inconsistent with the objectives of Title VII. Title VII closed major gaps in the regulation of security-based swaps and provided the Commission and other relevant authorities with new regulatory tools to oversee the OTC derivatives markets, which are large and are capable of affecting significant sectors of the U.S. economy. The primary goals of Title VII include increasing transparency in the security-based swap markets and reducing the potential for counterparty and systemic risk.[193]

Furthermore, other Commission rules are designed to minimize the potential that any a "first mover" or monopoly advantage that the first SDR might burden users of SDR services. All SDRs, even the only SDR that can accept transactions in a particular asset class, must offer fair, open, and not unreasonably discriminatory access to users of its services,[194] and any fees that it charges must be fair and reasonable and not unreasonably discriminatory.[195] The Commission preliminarily believes that basing the compliance schedule on the date that the first registered SDR commences operations as a registered SDR would encourage all potential SDRs to file complete applications for registration to the Commission and develop their systems and

---

(recommending that the Commission have a single registration date for all SDRs that will be approved ahead of the effective reporting date to "ensure that all market participants have equal time to build to their chosen [SDR]").

193 See, e.g., S. Comm. on Banking, Hous., & Urban Affairs, The Restoring American Financial Stability Act of 2010, S. Rep. No. 111-176, at 32 ("As a key element of reducing systemic risk and protecting taxpayers in the future, protections must include comprehensive regulation and rules for how the OTC derivatives market operates. Increasing the use of central clearinghouses, exchanges, appropriate margining, capital requirements, and reporting will provide safeguards for American taxpayers and the financial system as a whole").

194 See Rule 13n-4(c)(1)(iii) under the Exchange Act, discussed in the SDR Adopting Release.

195 See Rule 13n-4(c)(1)(i) under the Exchange Act, discussed in the SDR Adopting Release.

procedures for accepting and maintaining security-based swap data as expeditiously as possible, which will in turn more quickly allow regulators and the public the benefit of increased transparency in the security-based swap market and allow them to better monitor systemic risk.

Given these potential benefits, the Commission preliminarily believes that the compliance schedule should begin even if only one registered SDR that can receive reports of transactions in a particular asset class has commenced operations. The Commission preliminarily believes that it is not necessary or appropriate to wait for multiple SDRs to register and commence operations as registered SDRs before beginning the proposed six-month countdown to proposed Compliance Date 1.[196] The Commission seeks to ensure that registration of new SDRs not delay post-trade transparency for security-based swaps. This could occur if the Commission were to phase in compliance on an SDR-by-SDR basis. If each registered SDR had its own phase-in period, the first registered SDR could be in a phase where public dissemination was required where the second registered SDR may not be. This could create an incentive for persons with a duty to report to choose to report to later-registering SDRs in order to avoid having their transactions publicly disseminated.

D. Request for Comment

The Commission requests comment on all aspects of the proposed compliance dates for Regulation SBSR. In particular:

---

196 However, as the Commission noted in the SDR Adopting Release: "In considering initial applications for registration on Form SDR filed contemporaneously with the Commission, the Commission intends to process such applications for multiple SDRs accepting [security-based swap] transaction data from the same asset classes within the same period of time so as to address competition concerns that could arise if such SDRs were granted registration at different times." SDR Adopting Release, Section VI(A)(2)(c). The Commission also noted that certain unexpected events that raise compliance concerns could affect the Commission's ability to process these applications within the same time period. See id.

41. Would the proposed compliance timeline allow reporting parties and registered SDRs sufficient time to implement the requirements of Regulation SBSR? Why or why not? If not, why not and what alternative time period(s) of time would be sufficient?

42. Do you generally agree with the Commission's proposed approach to calculating the compliance dates based on the first registered SDR to accept security-based swaps in a particular asset class commencing operations as a registered SDR? If not, how should the Commission calculate compliance dates? If the Commission used an alternative method for calculating compliance dates, how could the Commission prevent or minimize evasion of the public dissemination requirement?

43. Do you believe that the proposed implementation schedule and SDR registration process would minimize potential "first mover" advantages for the first SDR to register? Why or why not? How could the Commission further minimize any potential "first mover" advantage?

44. Do you agree that the current infrastructure that supports swap reporting also can be used to support security-based swap reporting? Why or why not? If so, how much time would be necessary for participants and registered SDRs to make necessary changes to report security-based swaps to registered SDRs? If not, how much time would be needed to create the necessary infrastructure?

45. Do you believe that registered SDRs would be able to satisfy their obligations by proposed Compliance Date 1? Why or why not? If six months after the first registered SDR that accepts security-based swaps in a particular asset class

commences operations as a registered SDR is not a sufficient amount of time to comply, what amount of time would be sufficient? In particular, do you believe that six months after the first registered SDR that accepts security-based swaps in an asset class commences operations is a sufficient amount of time to have reported all historical security-based swaps that are no longer "live," as discussed by one commenter?[197] Why or why not? If not, by when do you believe that such security-based swaps should be reported, and why?

46. Do you believe that persons with the duty to report would be able to satisfy their obligations by proposed Compliance Date 1? Why or why not? If six months after the first registered SDR that accepts security-based swaps in a particular asset class commences operations as a registered SDR is not a sufficient amount of time to comply, what amount of time would be sufficient? Would persons with the duty to report require additional time to comply with certain requirements by proposed Compliance Date 1? If so, which requirement(s), and what additional amount of time would be necessary?

47. Do you agree with the Commission's proposal to extend the exemption for the reporting of pre-enactment security-based swaps until six months after an SDR that is capable of receiving security-based swaps in that asset class is registered by the Commission and has commenced operations as a registered SDR? Why or why not?

48. Do you agree with the Commission's proposal to terminate the exemption from Section 29(b) of the Exchange Act in connection with Section 3C(e)(1) on

[197] See ISDA IV at 18 and supra note 184.

proposed Compliance Date 1? Why or why not? If not, when should the Section 29(b) exemption terminate?

49. Do you believe that registered SDRs will be able to time stamp and assign transaction IDs to pre-enactment and transitional security-based swaps even if they are reported prior to Compliance Date 1? Why or why not? If not, would registered SDRs require additional time to comply with the requirements to time stamp and/or assign transaction IDs?

50. Do you believe that registered security-based swap dealers, registered major security-based swap participants, registered clearing agencies, and platforms would be able to satisfy their obligations to establish policies and procedures for carrying out their reporting obligations by proposed Compliance Date 1? Why or why not? If six months after the first registered SDR that accepts security-based swaps in a particular asset class commences operations as a registered SDR is not a sufficient amount of time to comply, what amount of time would be sufficient?

51. Do you believe that registered SDRs would be able to satisfy their obligations by proposed Compliance Date 2? Why or why not? If nine months after the first registered SDR that accepts security-based swaps in a particular asset class commences operations as a registered SDR is not a sufficient amount of time to comply, what amount of time would be sufficient?

52. Do commenters agree with the Commission's preliminary belief that persons likely to apply for registration as SDRs with the Commission would already be registered with the CFTC as swap data repositories? If so, how easily and how

quickly could the systems and processes that support swap data dissemination be configured to support security-based swap data dissemination? Would this process will take more or less than the 3 months that is proposed? Why or why not?

53. Registered clearing agencies may be required to modify their rules to address their reporting obligations under Regulation SBSR, as proposed to be modified in this release. Would the implementation timeframe described above provide registered clearing agencies sufficient time to implement any rule changes that may be required by Regulation SBSR? How would the timing be affected if the registered clearing agency also intends to register as an SDR or is affiliated with a person that intends to register as an SDR?

VIII. Economic Analysis

The Dodd-Frank Act amended the Exchange Act to require the reporting of security-based swap transactions to registered SDRs. Regulation SBSR, as adopted, implements this mandate and assigns the reporting obligation for covered transactions.[198] In addition, Regulation SBSR requires registered SDRs, with a handful of exceptions, to publicly disseminate a subset of the reported transaction information immediately upon receipt.

The proposed amendments to Rule 901(a) would assign to a platform the duty to report security-based swaps executed on its facilities and submitted for clearing, and would assign the duty to report any transactions to which a registered clearing agency is a counterparty to that clearing agency. In addition, this release proposes guidance for how Regulation SBSR would apply to security-based swaps executed in connection with prime brokerage arrangements, which

---

198 See supra notes 15 and 16 and accompanying text.

involve an executing broker, a customer, and a prime broker who offers credit intermediation services to the customer. This release also proposes a definition of "widely accessible" in Rule 900(tt), which would have the effect of prohibiting registered SDRs from charging users fees or imposing usage restrictions on the security-based swap transaction data that they are required to publicly disseminate. Finally, this release proposes new compliance dates for the rules in Regulation SBSR for which the Commission has not specified a compliance date.

The Commission is sensitive to the economic consequences and effects, including costs and benefits, of its rules. Some of these costs and benefits stem from statutory mandates, while others are affected by the discretion exercised in implementing these mandates. The following economic analysis seeks to identify and consider the benefits and costs—including the effects on efficiency, competition, and capital formation—that would result from the proposed rules and rule amendments. The costs and benefits considered in relation to these proposed rules and rule amendments have informed the policy choices described throughout this release.

A. Broad Economic Considerations

In the Regulation SBSR Adopting Release, the Commission highlighted certain overarching effects on the security-based swap markets that it believes will result from the adoption of Regulation SBSR. These benefits could include, generally, improved market quality, improved risk management, greater efficiency, and improved oversight by the Commission and other relevant authorities.[199] Regulation SBSR, as adopted, requires market participants to make infrastructure investments in order to report security-based swap transactions to registered SDRs and, as is most relevant for these proposed rules and amendments, for SDRs to make investments

[199] See Regulation SBSR Adopting Release, Section XXII.

in order to receive transaction data from market participants and to publicly disseminate a subset of that transaction information.

The rules, amendments, and guidance proposed in this release are focused on the requirements relevant to the reporting of certain information regarding cleared security-based swaps, which will affect the platforms, registered clearing agencies, and registered SDRs that constitute an infrastructure for the security-based swap market and provide services to counterparties who participate in security-based swap transactions. In particular, the Commission preliminarily believes that the proposed rules and amendments could affect the manner in which firms that provide these services compete with one another and exercise market power over security-based swap counterparties. In turn, there could be implications for the counterparties who are customers of these infrastructure providers and the security-based swap market generally.

1. Security-Based Swap Market Infrastructure

Title VII requires the Commission to create a new regulatory regime for the security-based swap market that includes trade execution, central clearing, and reporting requirements aimed at increasing transparency and customer protection as well as mitigating the risk of financial contagion.[200] These new requirements, once implemented, will oblige market participants, who may have previously engaged in bilateral transaction activity without any need to engage third-party service providers, to interface with platforms, registered clearing agencies, and registered SDRs.

As a general matter, rules that require regulated parties to obtain services can have a material impact on the prices of those services in the absence of a competitive market for those

[200] See Cross-Border Adopting Release, 79 FR at 47285.

services. In particular, if service providers are monopolists or otherwise have market power, requiring market participants to obtain their services can potentially allow the service providers to increase the profits they earn from providing the required services.[201] Because Title VII requires the Commission to implement rules requiring market participants to use the services provided by platforms, registered clearing agencies, and registered SDRs, these requirements could reduce the sensitivity of demand to changes in prices or quality of the services of firms that create and develop security-based swap market infrastructure.[202] As such, should security-based swap infrastructure providers—such as platforms, registered clearing agencies, and registered SDRs—enjoy market power, they might be able to change their prices or service quality without a significant effect on demand for their services. In turn, these changes in prices or quality could have effects on activity in the security-based swap market.

As discussed below, the proposed rules, amendments, and guidance proposed herein could have an impact on the level of competition among suppliers of trade reporting services and affect the relative bargaining power of suppliers and consumers in determining the prices of those services. In particular, when the supply of trade reporting services is concentrated among a small number of firms, consumers of these services have few alternative suppliers from which to choose. Such an outcome could limit the incentives to produce more efficient trade reporting processes and services and could, in certain circumstances, result in less security-based swap transaction activity than would otherwise be optimal. In the case of security-based swap

---

201 These effects, as they relate specifically to the proposed rules and amendments, as well as alternative approaches, are discussed in in Section VIII(D), infra.

202 These requirements might reduce the price elasticity of demand for the services provided by platforms, registered clearing agencies, and registered SDRs.

transaction activity, these welfare losses could result from higher costs to counterparties for hedging financial or commercial risks.

2. Competition Among Security-Based Swap Infrastructure Providers

The Commission's economic analysis of the proposed rules, amendments, and guidance considers how the competitive landscape for platforms, registered clearing agencies, and registered SDRs might affect the market power of these entities and hence the level and allocation of costs related to regulatory requirements. Some of the factors that may influence this competitive landscape have to do with the nature of the trade reporting and are unrelated to regulation, while others may be a result of, or influenced by, the rules that we are proposing. To the extent that the proposed rules inhibit competition among infrastructure providers, this could result in fees charged to counterparties that deviate from the underlying costs of providing the services.

As a general matter, and for reasons unrelated to the regulation of the security-based swap market, trade execution, clearing, and reporting services are likely to be concentrated among a small number of providers. For example, SDRs and clearing agencies must make significant infrastructure and human capital investments to enter their respective markets, but once these start-up costs are incurred, the addition of data management or transaction clearing services is likely to occur at low marginal costs. As a result, the average cost to provide infrastructure services quickly falls for SDRs and clearing agencies as their customer base grows, because they are able to amortize the fixed costs associated with serving counterparties over a larger number of transactions. These economies of scale should favor incumbent service providers who can leverage their market position to discourage entry by potential new competitors that face significant fixed costs to enter the market. As a result, the markets for clearing services and SDR services are likely to be dominated by a small number of firms that each have large market share, which is borne out in the current security-based swap market.[203]

Competition among registered clearing agencies and registered SDRs could also be influenced by the fact that security-based swap market participants incur up-front costs for each connection that they establish with an SDR or clearing agency. If these costs are sufficiently high, an SDR or clearing agency could establish itself as an industry leader by "locking-in" customers who are unwilling or unable to make a similar investment for establishing a connection with a competitor.[204] An SDR or clearing agency attempting to enter the market or increase market share would have to provide services valuable enough, or set fees low enough, to offset the costs of switching from a competitor. In this way, costs to security-based swap market participants of interfacing with market infrastructure could serve as a barrier to entry for firms that would like to provide market infrastructure services provided by SDRs and clearing agencies.

The proposed rules, amendments, and guidance might also influence the competitive landscape for firms that provide security-based swap market infrastructure. Fundamentally, requiring the reporting of security-based swap transactions creates an inelastic demand for the service that would not be present if not for regulation. This necessarily reduces a counterparty's

---

203 See infra Section IX(B).

204 See Joseph Farrell and Paul Klemperer, "Coordination and Lock-in: Competition with Switching Costs and Network Effects," in Handbook of Industrial Organization, Mark Armstrong and Robert Porter (ed.) (2007), at 1,972. The authors describe how switching costs affect entry, noting that, on one hand, "switching costs hamper forms of entry that must persuade customers to pay those costs" while, on the other hand, if incumbents must set a single price for both new and old customers, a large incumbent might focus on harvesting its existing customer base, ceding new customers to the entrant. In this case, a competitive market outcome would be characterized by prices for services that equal the marginal costs associated with providing services to market participants.

ability to bargain with infrastructure service providers over price or service because the option of not reporting is unavailable. Moreover, infrastructure requirements imposed by Title VII regulation will increase the fixed costs of an SDR operating in the security-based swap market and increase the barriers to entry into the market, potentially discouraging firms from entering the market for SDR services. For example, under Rule 907, as adopted, registered SDRs are required to establish and maintain certain written policies and procedures. The Commission estimated that this requirement will impose initial costs on each registered SDR of approximately \$12,250,000.[205]

The proposed rules, amendments, and guidance might also affect the competitive landscape by increasing the incentives for security-based swap infrastructure service providers to integrate horizontally or vertically. As a general matter, firms engage in horizontal integration when they expand their product offerings to include similar goods and services or acquire competitors. For example, SDRs that presently serve the swap market might horizontally integrate by offering similar services in the security-based swap market. Firms vertically integrate by entering into businesses that supply the market that they occupy ("backward vertical integration") or by entering into businesses that they supply ("forward vertical integration").

As discussed in more detail in Section VIII(D)(1), infra, while proposing a reporting methodology that assigns reporting responsibilities to registered clearing agencies, who will hold the most complete and accurate information for cleared transactions, could minimize potential data discrepancies and errors, rules that give registered clearing agencies discretion over where to report transaction data could provide incentives for registered clearing agencies to create affiliate SDRs and compete with other registered SDRs for post-trade reporting services. The

205 See Regulation SBSR Adopting Release at note 1250.

cost to a clearing agency of entering the market for SDR services is likely to be low, given that many of the infrastructure requirements for entrant SDRs are shared by clearing agencies. Clearing agencies already have the infrastructure necessary for capturing transaction records from clearing members and might be able to leverage that pre-existing infrastructure to provide services as an SDR at low incremental cost. Because all clearing transactions, like all other security-based swaps, must be reported to a registered SDR, there would be a set of potentially captive transactions that clearing agencies could initially use to vertically integrate into SDR services.[206]

Entry into the SDR market by registered clearing agencies could potentially lower the cost of SDR services if clearing agencies are able to transmit data to an affiliated SDR at a lower cost relative to transmitting the same data to an independent SDR. The Commission preliminarily believes that this is likely to be true for clearing transactions, given that the clearing agency and affiliate SDR would have greater control over the reporting process relative to sending to an unaffiliated SDR. Even if registered clearing agencies did not enter the market for SDR services, their ability to pursue a vertical integration strategy could motivate incumbent SDRs to offer service models that are sufficiently competitive to discourage entry by registered clearing agencies.

However, the Commission recognizes that the entry of clearing agency-affiliated SDRs might not necessarily result in increased competition among SDRs or result in lower costs for SDR services. In an environment where registered clearing agencies with affiliated SDRs have

---

206 A registered clearing agency expanding to provide SDR services is an example of forward vertical integration. In the context of these proposed rules and amendments, SDRs "consume" the data supplied by registered clearing agencies. Clearing agencies engage in forward vertical integration by creating or acquiring the SDRs that consume the data that they produce as a result of their clearing business.

discretion to send their clearing transaction data to their affiliates, security-based swap market participants who wish to submit their transactions to clearing may have reduced ability to direct the reporting of the clearing transaction to an unaffiliated SDR. As a result, clearing agency-affiliated SDRs would not directly compete with unaffiliated SDRs on the basis of price or quality, because they inherit their clearing agency affiliate's market share. This might allow clearing agency incumbents to exercise market power through their affiliate SDRs relative to stand-alone SDRs.

In summary, the Commission's economic analysis of these proposed rules and amendments considers the features of the market for infrastructure services that support security-based swap market participants. The Commission acknowledges that the allocation of reporting obligations that result from these proposed rules and amendments could affect the balance of competition between different providers of infrastructure. As discussed below, the effect of these proposed rules and amendments on competition between infrastructure providers could ultimately affect security-based swap counterparties.

B. Baseline

The Commission's analysis of the economic effects of the proposed rules, amendments, and guidance includes in its baseline the effects of Regulation SBSR, as adopted, and the SDR core principles and registration rules, as adopted in the SDR Adopting Release. Hence, the Commission's analysis of the potential impacts of the proposed rules, amendments, and guidance takes into account the anticipated effects of the adoption of Regulation SBSR and the SDR rules as described in those releases.

Furthermore, the overall Title VII regulatory framework will have consequences for the transaction activity addressed by this proposal. For example, the scope of future mandatory clearing requirements will affect the overall costs borne by registered clearing agencies, which under the proposal would be obligated to report security-based swap transactions that arise as a consequence of clearing. Similarly, the scope of future mandatory trade execution requirements will affect the volume of transactions that take place on platforms, and ultimately the number of transactions that platforms would be obligated to report under this proposal. Finally, as noted in the Cross-Border Adopting Release,[207] the market for security-based swaps is global in nature and regulatory requirements may differ across jurisdictions. To the extent that the costs of regulatory requirements differ, certain market participants may have incentives to restructure their operations to avoid regulation under Title VII, which generally would reduce the number of transactions affected by this proposal.

The following sections provide an overview of aspects of the security-based swap market that are likely to be most affected by the proposal, as well as elements of the current market structure, such as central clearing and platform trading, that are likely to determine the scope of transactions that will be covered by the proposed rules, amendments, and guidance.[208]

1. Current Security-Based Swap Market

The Commission's analysis of the current state of the security-based swap market is based on data obtained from DTCC-TIW, especially data regarding the activity of market participants in the single-name credit default swap ("CDS") market during the period 2008 to 2013.[209] While other trade repositories may collect data on equity security-based swaps, the

---

207 See 79 FR at 47280.

208 See Regulation SBSR Adopting Release, Section XXIII(B) (providing additional information regarding the OTC derivatives market generally, and counterparties specifically).

209 The data available from DTCC-TIW do not encompass CDS transactions (1) based on non-U.S. reference entities and (ii) where neither counterparty is a U.S. person.

Commission currently has no access to detailed data about these products (or other products that are security-based swaps). As such, the Commission is unable to analyze security-based swaps other than single-name CDS. However, the Commission believes that the single-name CDS data are representative of the overall security-based swap market and therefore can directly inform the Commission's analysis of the security-based swap market.[210]

2. Clearing Activity in Single-Name Credit Default Swaps

Currently, there is no regulatory requirement in the United States to clear security-based swaps. Clearing for certain single-name CDS products occurs on a voluntary basis. Voluntary clearing activity in single-name CDS has steadily increased alongside the Title VII rulemaking

---

Commission staff quantified the proportion of transaction activity included in the DTCC-TIW transaction data. In 2013, DTCC-TIW reported on its website new trades in single-name CDSs with gross notional of $12.0 trillion. DTCC-TIW provided to the Commission data that included only transactions with a U.S. counterparty or a U.S. reference entity. During the same period, these data included new trades with gross notional equaling $9.3 trillion, or 77% of the total reported by DTCC-TIW. Hence, the Commission believes that the DTCC-TIW data provide sufficient information to identify the types of market participants active in the security-based swap market and the general pattern of dealing within that market.

210 According to data published by BIS, the global notional amount outstanding in equity forwards and swaps as of December 2013 was $2.28 trillion. The notional amount outstanding in single-name CDS was approximately $11.32 trillion, in multi-name index CDS was approximately $8.75 trillion, and in multi-name, non-index CDS was approximately $950 billion. See Semi-annual OTC derivatives statistics at end-December 2013 (June 2014), Table 19, available at http://www.bis.org/statistics/dt1920a.pdf. For the purposes of this analysis, the Commission assumes that multi-name index CDS are not narrow-based index CDS and, therefore, do not fall within the "security-based swap" definition. See Section 3(a)(68)(A) of the Exchange Act; Product Definitions Adopting Release, 77 FR 48208. The Commission also assumes that all instruments reported as equity forwards and swaps are security-based swaps, potentially resulting in underestimation of the proportion of the security-based swap market represented by single-name CDS. Based on those assumptions, single-name CDS appear to constitute roughly 78% of the security-based swap market. Although the BIS data reflect the global OTC derivatives market and not just the U.S. market, the Commission has no reason to believe that these ratios differ significantly in the U.S. market.

process. As a result, any rule that would allocate reporting obligations for clearing transactions would affect the accessibility of data related to a large number of security-based swap transactions. In addition, the size of this part of the market would affect the magnitude of the regulatory reporting burdens. As of the end of 2013, ICE Clear Credit accepted for clearing security-based swap products based on a total of 161 North American corporate reference entities, 121 European corporate reference entities, and six individual sovereign (nation-state) reference entities.

Figure 1, below, shows characteristics of new trades in single-name CDS that reference North American standard corporate ISDA documentation. In particular, the figure documents that about half of all clearable transactions are cleared. Moreover, over the sample period, transaction volume accepted for clearing increased as a fraction of total volume in these products. Analysis of trade activity from July 2012 to December 2013 indicates that, out of $938 billion of notional amount traded in North American corporate single-name CDS products that are accepted for clearing during the 18 months ending December 2013, approximately 71%, or $666 billion, had characteristics making them suitable for clearing by ICE Clear Credit and represented trades between two ICE Clear Credit clearing members. Approximately 79% of this notional value, or $525 billion, was cleared through ICE Clear Credit, or 56% of the total volume of new trade activity. As of the end of 2013, ICE Clear Europe accepted for clearing single-name CDS products referencing a total of 136 European corporate reference entities. Analysis of new trade activity from July 2012 to December 2013 indicates that, out of €531 billion of notional amount traded in European corporate single-name CDS products that are accepted for clearing during the 18 months ending December 2013, approximately 70%, or €372 billion had characteristics making them suitable for clearing by ICE Clear Europe and represented trades between two ICE Clear Europe clearing members. Approximately 51% of this notional amount, or €191 billion. was cleared through ICE Clear Europe, or 36% of the total volume of new trade activity.[211]

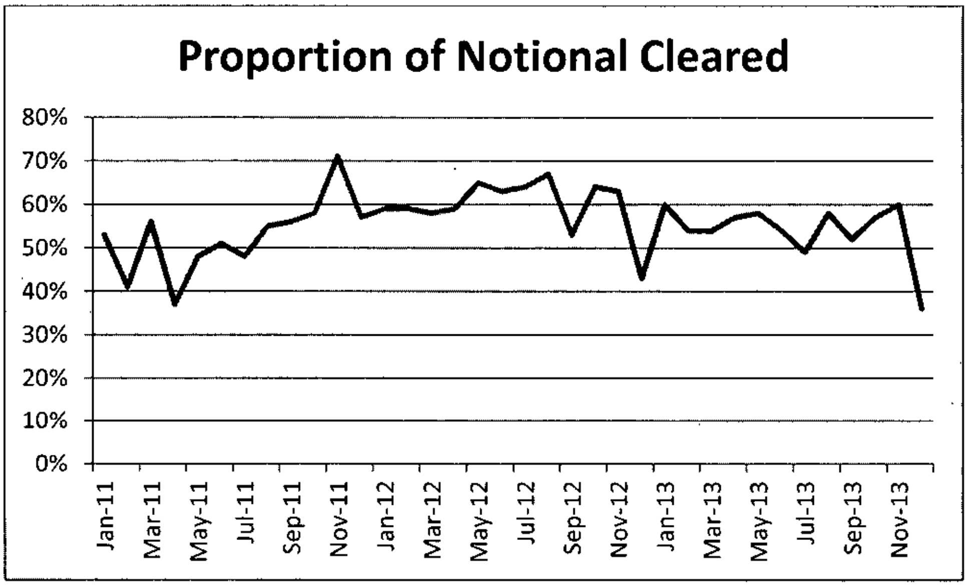

Figure 1: The fraction of total gross notional amount of new trades and assign-entries in North American single-name CDS products that were accepted for clearing by ICE Clear Credit and were cleared within 14 days of the initial transaction.[212]

3. Execution Methods in the Security-Based Swap Market

The proposed rules and amendments address regulatory reporting obligations for, among others, security-based swap transactions executed on platforms and submitted to clearing. While trading in security-based swaps is currently dominated by bilateral negotiation and the use of

211 These numbers do not include transactions in European corporate single-name CDS that were cleared by ICE Clear Credit. However, during the sample period, there was only one day (December 20, 2013) on which there were transactions in European corporate single-name CDS that were cleared by ICE Clear Credit, and the traded notional of these transactions was de minimis. For historical data, see https://www.theice.com/marketdata/reports/99.

212 The Commission preliminarily believes that it is reasonable to assume that, when clearing occurs within 14 days of execution, counterparties made the decision to clear at the time of execution and not as a result of information arriving after execution.

interdealer brokers, the Commission anticipates that future rulemaking will address mandatory trade execution requirements that will likely result in increased incidence of trading on platforms.[213]

4. Current Market Structure for Security-Based Swap Infrastructure

a. Exchanges and SB SEFs

The proposed rules and amendments would address how transactions conducted on platforms (i.e., national securities exchanges and SB SEFs) would be required to be reported under Regulation SBSR. Currently, there are no SB SEFs registered with the Commission, and as a result, there is no registered SB SEF trading activity to report. There are, however, currently 24 SEFs that are either temporarily registered with the CFTC or whose temporary registrations are pending with the CFTC and currently are exempt from registration with the Commission.[214] As the Commission noted in the Cross-Border Adopting Release, the cash flows of security-based swaps and other swaps are closely related and many participants in the swap market also participate in the security-based swap market.[215] Likewise, the Commission preliminarily believes that many entities that currently act as swap execution facilities are likely to also register with the Commission as SB SEFs. The Commission anticipates that, owing to the

---

213 See Securities Exchange Act Release No. 67177 (June 11, 2012), 77 FR at 35640 (June 14, 2012) ("General Policy on Sequencing").

214 See Effective Date Release, 76 FR at 36306 (exempting persons that operate a facility for the trading or processing of security-based swaps that is not currently registered as a national securities exchange or that cannot yet register as an SB SEF because final rules for such registration have not yet been adopted from the requirements of Section 3D(a)(1) of the Exchange Act until the earliest compliance date set forth in any of the final rules regarding registration of SB SEFs). A list of SEFs that are either temporarily registered with the CFTC or whose temporary registrations are pending with the CFTC is available at http://sirt.cftc.gov/SIRT/SIRT.aspx?Topic=SwapExecutionFacilities (last visited November 3, 2014).

215 See Cross-Border Adopting Release, 79 FR at 47300.

smaller size of the security-based swap market, there will be fewer platforms for executing transactions in security-based swaps than the 24 SEFs reported within the CFTC's jurisdiction. Under proposed Rule 901(a)(1), a platform would be required to report to a registered SDR any security-based swap transactions executed on its facilities and submitted to clearing.

b. Clearing Agencies

The market for clearing services and data reporting services in the security-based swap market is currently concentrated among a handful of firms. **Table 1** lists the firms that currently clear index and single-name CDS and identifies the segments of the market each firm serves. While there may be limited choices available to participants interested in cleared index CDS transactions, only two firms (albeit with the same parent) clear sovereign single-name CDS and only a single firm serves the market for North American single-name CDS. Concentration of clearing services within a limited set of clearing agencies can be explained, in part, by the existence of strong economies of scale in central clearing.[216]

Table 1: Clearing agencies currently clearing index and single-name CDS.

	North American	European	Sovereign	Index
ICE Clear Credit[217]	X	X	X	X
ICE Clear Europe[218]		X	X	X

216 See Securities Exchange Act Release No. 68080 (October 22, 2012), 77 FR at 66265 (November 2, 2012) (noting that economies of scale can result in natural monopolies). See also Craig Pirrong, "The Industrial Organization of Execution, Clearing and Settlement in Financial Markets," Working Paper (2007), available at http://www.bauer.uh.edu/spirrong/Clearing_silos.pdf (last visited November 2, 2014) (discussing the presence of economies of scale in central clearing).

CME[219]				X
LCH.Clearnet[220]		X		X

c. SDRs

The market for data services has evolved along similar lines. While there is currently no mandatory reporting requirement for the single-name CDS market, virtually all transactions are voluntarily reported to DTCC-TIW, which maintains a legal record of transactions.[221] That there currently is a single dominant provider of record-keeping services for security-based swaps is consistent with the presence of a natural monopoly for a service that involves a predominantly fixed cost investment with low marginal costs of operation.

There are currently no SDRs registered with the Commission. Registration requirements are part of the new rules discussed in the SDR Adopting Release. In the absence of SEC-registered SDRs, the analysis of the economic effects of the proposed rules and amendments discussed in this release on SDRs is informed by the experience of the CFTC-registered SDRs that operate in the swap market. The CFTC has provisionally registered four SDRs to accept

218 A current list of single-name and index CDS cleared by ICE Clear Europe is available at: https://www.theice.com/publicdocs/clear_europe/ICE_Clear_Europe_Cleared_Products_List.xls (last visited November 3, 2014).

219 A current list of products cleared by CME is available at: http://www.cmegroup.com/trading/otc/files/otc-cds-product-scope.pdf (last visited November 3, 2014).

220 A current list of single-name and index CDS cleared by LCH.Clearnet is available at: http://www.lchclearnet.com/documents/731485/762470/cdsclear+clearable+product+list+%28october+2014%29.xlsx/b0f514f2-d876-4aa4-9e6b-5b4c76985fb8 (last visited November 3, 2014).

221 See http://www.isdacdsmarketplace.com/exposures_and_activity (last visited September 22, 2014) (describing the function and coverage of DTCC-TIW).

transactions in swap credit derivatives.[222]

It is reasonable to estimate that a similar number of persons provisionally registered with the CFTC to service the equity and credit swap markets might seek to register with the Commission as SDRs, and that other persons could seek to register with both the CFTC and the Commission as SDRs. There are economic incentives for the dual registration attributed to the fact that many of the market participants in the security-based swap market also participate in the swap market. Moreover, once an SDR is registered with the CFTC and the required infrastructure for regulatory reporting and public dissemination is in place, the marginal costs for an SDR to also register with the Commission, adding products and databases and implementing modifications to account for difference between Commission and CFTC rules, will likely to be lower than the initial cost of registration with the CFTC.

d. Vertical Integration of Security-Based Swap Market Infrastructure

The Commission has already observed vertical integration of swap market infrastructure: clearing agencies have entered the market for record-keeping services for swaps by provisionally registering themselves, or their affiliates, as SDRs with the CFTC. Under the CFTC swap reporting regime, two provisionally registered SDRs are, or are affiliated with, clearing agencies that clear swaps. These clearing agencies have adopted rules providing that they will satisfy their CFTC swap reporting obligations by reporting to their own, or their affiliated, SDR.[223] As a result, beta and gamma transactions and subsequent netting transactions that arise from the clearing process are reported by each of these clearing agencies to their associated SDRs.

---

222 A list of SDRs provisionally registered with the CFTC is available at http://sirt.cftc.gov/sirt/sirt.aspx?Topic=DataRepositories (last visited November 13, 2014).

223 See CME Clearing Rule 1001 (Regulatory Reporting of Swap Data); ICE Clear Credit Clearing Rule 211 (Regulatory Reporting of Swap Data).

C. Programmatic Costs of Proposed Amendments to Regulation SBSR

1. Proposed Amendments to Rule 901

Proposed Rule 901(a)(2)(i) would provide that the reporting side for a clearing transaction is the clearing agency that is a counterparty to the clearing transaction. Rule 901(a)(3) would require any person that has a duty to report a security-based swap that has been submitted to clearing at a registered clearing agency to promptly provide that registered clearing agency with the transaction ID of the submitted security-based swap and the identity of the registered SDR to which the transaction will be reported or has been reported.

These proposed amendments to Rule 901 would impose initial and ongoing costs on platforms, clearing agencies, and reporting sides. The Commission preliminarily believes that certain of these costs would be a function of the number of reportable events and the data elements required to be submitted for each reportable event. The discussion below first highlights those burdens and costs related to proposed Rule 901(a)(2)(i), followed by burdens and costs related to proposed Rule 901(a)(3).

a. For Platforms and registered Clearing Agencies—Rule 901(a)(1) and Rule 901(a)(2)(i)

The Commission preliminarily believes that platforms and registered clearing agencies would face the same costs that reporting sides face. Specifically, platforms and registered clearing agencies would have to: (1) develop transaction processing systems; (2) implement a reporting mechanism; and (3) establish an appropriate compliance program and support for the operation of the transaction processing system. The Commission also preliminarily believes that, once a platform or registered clearing agency's reporting infrastructure and compliance systems are in place, the burden of reporting each individual reportable event would represent a small fraction of the burdens of establishing the reporting infrastructure and compliance systems. The

Commission preliminarily believes that all reportable events, for which platforms and registered clearing agencies would be responsible for reporting, would be reported through electronic means. The Commission preliminarily believes that there would be ten platforms and four registered clearing agencies that would incur duties to report security-based swap transactions under the proposed amendments to Rule 901.

The Commission preliminarily estimates that transaction processing system related to Rule 901 and applicable to platforms and registered clearing agencies would result in initial one-time aggregate costs of approximately $1,428,000, which corresponds to $102,000 for each platform or registered clearing agency.[224] The Commission estimates that the cost to establish and maintain connectivity to a registered SDR to facilitate the reporting required by Rule 901 would impose an annual (first-year and ongoing) aggregate cost of approximately $2,800,000, which corresponds to $200,000 for each platform or registered clearing agency.[225] The Commission estimates, as a result of having to establish a reporting mechanism for security-based swap transactions, platforms and registered clearing agencies would experience certain

---

224 This estimate is based on the following: [((Sr. Programmer (160 hours) at $303 per hour) + (Sr. Systems Analyst (160 hours) at $260 per hour) + (Compliance Manager (10 hours) at $283 per hour) + (Director of Compliance (5 hours) at $446 per hour) + (Compliance Attorney (20 hours) at $334 per hour)) x 14 platforms and registered clearing agencies)] = approximately $1,428,000, or $102,000 per platform or registered clearing agency. All hourly cost figures are based upon data from SIFMA's Management & Professional Earnings in the Securities Industry 2013 (modified by Commission staff to account for an 1,800-hour-work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead). See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

225 The Commission derived the total estimated expense from the following: ($100,000 hardware- and software-related expenses, including necessary backup and redundancy, per SDR connection) x (2 SDR connections per platform or registered clearing agency) x (14 platforms or registered clearing agencies) = $2,800,000, or $200,000 per platform or registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

development, testing, and supports costs. Such costs would amount to an initial one-time aggregate cost of approximately $686,000, which corresponds to an initial one-time cost of $49,000 for each platform or registered clearing agency.[226] The Commission preliminarily estimates that order management costs related to the proposed amendments to Rule 901 would impose ongoing annual aggregate costs of approximately $1,078,000, which corresponds to $77,000 per platform or registered clearing agency.[227] In addition, the Commission estimates that platforms and registered clearing agencies would incur an initial and ongoing aggregate annual cost of $14,000, which corresponds to $1,000 for each platform or registered clearing agency.[228] The Commission estimates that designing and implementing an appropriate compliance and support program will impose an initial one-time aggregate cost of approximately $756,000, which corresponds to a cost of approximately $54,000 for each platform or registered clearing agency.[229] The Commission estimates that maintaining its compliance and support

226 This figure is calculated as follows: [((Sr. Programmer (80 hours) at $303 per hour) + (Sr. Systems Analyst (80 hours) at $260 per hour) + (Compliance Manager (5 hours) at $283 per hour) + (Director of Compliance (2 hours) at $446 per hour) + (Compliance Attorney (5 hours) at $334 per hour) x (14 platforms or registered clearing agencies)] = approximately $686,000, which equates to $49,000 per platform or registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

227 This estimate is based on the following: [((Sr. Programmer (32 hours) at $303 per hour) + (Sr. Systems Analyst (32 hours) at $260 per hour) + (Compliance Manager (60 hours) at $283 per hour) + (Compliance Clerk (240 hours) at $64 per hour) + (Director of Compliance (24 hours) at $446 per hour) + (Compliance Attorney (48 hours) at $334 per hour)) x 14 platforms and registered clearing agencies)] = approximately $1,078,000, or $77,000 per platform or registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

228 This estimate is calculated as follows: [$250/gigabyte of storage capacity x (4 gigabytes of storage) x (14 platforms or registered clearing agencies)] = $14,000, or $1,000 per platform or registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

229 This figure is based on discussions with various market participants and is calculated as follows: [((Sr. Programmer (100 hours) at $303 per hour) + (Sr. Systems Analyst (40

program would impose an ongoing annual aggregate cost of approximately $539,000, which corresponds to a cost of approximately $38,500 for each platform or registered clearing agency.[230]

In the Regulation SBSR Adopting Release, the Commission revised its previous estimates of the number of reportable events associated with security-based swap transactions per year.[231] These revised estimates were a result of the Commission obtaining additional, more recent, and more granular data regarding participation in the security-based swap market from DTCC-TIW. In the Regulation SBSR Adopting Release, the Commission estimated that there will be approximately 3 million reportable events per year under Rule 901, an estimate that the Commission continues to believe is valid for the purposes of this release.[232] The Commission

---

hours) at $260 per hour) + (Compliance Manager (20 hours) at $283 per hour) + (Director of Compliance (10 hours) at $446 per hour) + (Compliance Attorney (10 hours) at $334 per hour) x (14 platforms and registered clearing agencies)] = approximately $756,000, or $54,000 per platform or registered clearing agency.

230 This figure is based on discussions with various market participants and is calculated as follows: [((Sr. Programmer (16 hours) at $303 per hour) + (Sr. Systems Analyst (16 hours) at $260 per hour) + (Compliance Manager (30 hours) at $283 per hour) + (Compliance Clerk (120 hours) at $64 per hour) + (Director of Compliance (12 hours) at $446 per hour) + (Compliance Attorney (24 hours) at $334 per hour) x (14 platforms and registered clearing agencies)] = approximately $539,000, or $38,500 per platform or registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

231 See Regulation SBSR Adopting Release, Section XXI.

232 The Commission originally estimated that there would be 15.5 million reportable events per year under Regulation SBSR. See Regulation SBSR Proposing Release, 75 FR at 75247-48. In the Cross-Border Proposing Release, the Commission updated its estimate of the number of reportable events to approximately 5 million per year. The Commission noted that the change in the estimate of the number of reportable events per year was due to better and more precise data available from the industry on the scope, size, and composition of the security-based swap market. See Cross-Border Proposing Release, 78 FR at 31114-15. For these same reasons, the Commission has further updated its estimate of the number of reportable events to approximately 3 million per year. See infra note 233.

estimated in the Regulation SBSR Adopting Release that Rule 901(a), as adopted, will result in approximately 2 million reportable events related to covered transactions.[233]

The Commission preliminarily estimates that 1 million of the 3 million total reportable events would result from the proposed amendments to Rule 901.[234] This estimate of 1 million reportable events would include the initial reporting of the security-based swaps by platforms and registered clearing agencies as well as any life cycle events of such transactions. Specifically, the Commission preliminarily estimates that, of the 1 million reportable events, approximately 370,000 would involve the reporting of new security-based swap transactions and

---

233 The Commission now estimates that there were approximately 2.26 million single-name CDS transactions in 2013. The data studied by the Commission cover single-name CDS transactions, which the Commission continues to believe account for approximately 80-90% of the security-based swap market. The Commission continues to use 78% as its measure of CDS as a percentage of the entire security-based swap market, resulting in a revised estimate of 3 million security-based swap transactions (i.e., 2,260,000/0.78 = 2,897,436 reportable events). See Regulation SBSR Adopting Release, Section XXI(B)(4)(b).

234 The Commission is proposing to amend Rule 901(a)(2) to require a clearing agency to be the reporting side for clearing transactions to which it is a counterparty. The Commission is further proposing to amend Rule 901(e)(1) to provide that a "clearing agency shall report whether or not it has accepted a security-based swap for clearing." Pursuant to Rule 901(e)(1), a registered clearing agency would be required to report whether or not it has accepted a security-based swap for clearing. Proposed Rule 901(a)(2)(i), discussed above, would require clearing agencies to report security-based swap transaction information for clearing transactions. These reportable events have been included in the Commission's estimates of the number of reportable events for the purposes of Rule 901.

In arriving at the Commission's estimate of 1 million reportable events, the Commission has included the following: (1) the termination of the original or "alpha" security-based swap; (2) the creation of beta and gamma security-based swaps; (3) the termination of beta, gamma, and any previous open positions during each netting cycle; and (4) any other transactions that are entered into by the registered clearing agency, arriving at 645,000 observations. Inflating this figure by 0.78, the Commission's measure of CDS as a percentage of the entire security-based swap market, is 645,000/0.78 = 826,923 or approximately 1 million reportable events.

approximately 630,000 would involve the reporting of life cycle events under Rule 901(e).[235] As a result, the Commission preliminarily estimates that platforms would be responsible for the reporting of approximately 120,000 security-based swaps,[236] at an annual cost of approximately $45,300 or $4,530 per platform.[237] The Commission preliminarily estimates that registered clearing agencies would be responsible for the reporting of approximately 250,000 security-based swaps, at an annual cost of approximately $94,375 or $23,593.75 per registered clearing agency.[238] The Commission preliminarily estimates that the proposed amendments to Rule

---

235 Commission staff arrived at this estimate by summing the number of beta and gamma transactions that would result from observed termination of alphas by a registered clearing agency (197,798) and the number of other betas and gammas for which terminations were not available due to same-day clearing (88,935) to arrive at 286,733 total transactions. Inflating this figure by 0.78, the Commission's measure of CDS as a percentage of the entire security-based swap market, results in an estimate of 286,733/0.78, or approximately 370,000 reportable events.

236 As discussed in Section II(C)(2), supra, proposed Rule 901(a)(1) would require a platform to report any security-based swap executed on its facilities that will be submitted to clearing. Platforms, however, would not be responsible for reporting life cycle events of such security-based swaps. The Commission preliminarily believes that the only life cycle event of a platform-executed security-based swap that is submitted to clearing will be whether the security-based swap is accepted for clearing. Proposed Rule 901(e)(1)(ii) would require the registered clearing agency to report that information, not the platform. The Commission estimates that platforms would be responsible only for the reporting of approximately one third of the 370,000 security-based swaps (or about 120,000 security-based swaps) and registered clearing agencies (as a result of the creation of new security-based swaps during the clearing process) would be responsible for the reporting of the remaining two-thirds of security-based swaps (or 250,000 security-based swaps).

237 The Commission estimates: ((120,000 x 0.005 hours per transaction) / (10 platforms)) = 60 hours per platform, or 600 total hours. The Commission further estimates the total cost to be: [((Compliance Clerk (30 hours) at $64 per hour) + (Sr. Computer Operator (30 hours) at $87 per hour)) x (10 platforms)] = approximately $45,300, or $4,530 per platform. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

238 The Commission estimates: ((250,000 x 0.005 hours per transaction) / (4 registered clearing agencies)) = 312.5 hours per registered clearing agency, or 1,250 total hours. The Commission further estimates the total cost to be: [((Compliance Clerk (156.25 hours) at $64 per hour) + (Sr. Computer Operator (156.25 hours) at $87 per hour)) x (4

901(a) would result in registered clearing agencies having to report a significant number of life cycle events under Rule 901(e) over the course of a year—consisting primarily of terminations of clearing transactions occurring as part of the netting process—at an annual cost of approximately $237,825 or $59,456.25 per registered clearing agency.[239] The Commission preliminarily believes that all reportable events that would be reported by platforms and registered clearing agencies pursuant to these proposed amendments would be reported through electronic means.

In the Cross-Border Proposing Release, the Commission stated that, to the extent that security-based swaps become more standardized and trade more frequently on electronic platforms (rather than manually), the act of reporting transactions to a registered SDR should become less costly.[240] Together, these trends are likely to reduce the number of transactions that would necessitate the manual capture of bespoke data elements, which is likely to take more time and be more expensive than electronic capture.

b. For Platforms and Reporting Sides of Alphas—Rule 901(a)(3)

Pursuant to proposed Rule 901(a)(3), a person—either the platform upon which the security-based swap was executed or the reporting side for those security-based swaps other than clearing transactions—to report, for those security-based swaps submitted to a registered clearing

---

registered clearing agencies)] = $94,375, or $23,593.75 per registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

239 The Commission estimates: ((630,000 x 0.005 hours per transaction) / (4 registered clearing agencies)) = 787.5 hours per registered clearing agency, or 3,150 total hours. The Commission further estimates the total cost to be: [((Compliance Clerk (393.75 hours) at $64 per hour) + (Sr. Computer Operator (393.75 hours) at $87 per hour)) x (4 registered clearing agencies)] = approximately $237,825, or $59,456.25 per registered clearing agency. See also Regulation SBSR Adopting Release, Section XXII(C)(2)(b).

240 See Cross-Border Proposing Release, 78 FR at 31198.

agency, the transaction ID of the submitted security-based swap and the identity of the registered SDR to which the transaction will be or has been reported.

Rule 901(a)(3) requires certain information (transaction ID and the identity of the registered SDR) to be reported to a registered clearing agency only if such security-based swap has been submitted to a registered clearing agency for clearing. As a result, platforms and reporting sides required to report transaction IDs and the identity of a registered SDR will already have put into place any infrastructure needed to report these security-based swaps to a registered clearing agency. However, requiring the person who has the duty to report the alpha transaction to a registered SDR to provide these data elements to the registered clearing agency to which the alpha has been submitted would result in certain additional development and maintenance costs. Specifically, the Commission preliminarily believes that the additional one-time cost related to the development of the ability to capture the relevant transaction information would be $2,815, and the additional one-time burden related to the implementation of a reporting mechanism for these two data elements would be $1,689 per platform or reporting side.[241] The Commission preliminarily believes that the additional ongoing cost related to the development of the ability to capture the relevant transaction information would be $2,815 and the additional

[241] The Commission estimates that the addition burdens would be: [(Sr. Programmer (5 hours at $303 per hour) + Sr. Systems Analyst (5 hours) at $260 per hour) = 10 burden hours (development of the ability to capture transaction information) = $2,815 per platform or reporting side; (Sr. Programmer (3 hours) at $303 per hour + Sr. Systems Analyst (3 hours) at $260 per hour) = $1689 per platform or reporting side (implementation of reporting mechanism)]. The total one-time cost associated with proposed Rule 901(a)(3) would be $4,504 per platform or reporting side for a total one-time cost $1,396,240 ($4,504 x 310 (300 reporting sides + 10 platforms)).

ongoing burden related to the maintenance of the reporting mechanism would be $563, per platform or reporting side.[242]

c. Total Costs of Platforms, Registered Clearing Agencies, and Reporting Sides Relating to Proposed Amendments to Rule 901

Summing these costs, the Commission preliminarily estimates that the initial, first-year cost of complying with the proposed amendments to Rule 901 (including the initial reporting and the reporting of any life cycle events) would be $5,288,450, which corresponds to 528,845 per platform.[243] The Commission estimates that the ongoing aggregate annual costs, after the first year, of complying with the proposed amendments to Rule 901 (including the initial reporting and the reporting of any life cycle events) would be $3,215,930, which corresponds to $321,593 per platform.[244] The Commission estimates that the initial, first-year cost of complying with the proposed amendments to Rule 901 (including the initial reporting and the reporting of any life cycle events) would be $2,418,200, which corresponds to $604,550 per registered clearing agency.[245] The Commission preliminarily estimates that the ongoing aggregate annual costs, after the first year, of complying with the proposed amendments to Rule 901 (including the

---

242 The Commission estimates that the additional burdens would be: [(Sr. Programmer (5 hours) + Sr. Systems Analyst (5 hours)) = 10 burden hours (maintenance of transaction capture system); (Sr. Programmer (1 hour) + Sr. Systems Analyst (1 hour)) = 2 burden hours (maintenance of reporting mechanism)]. The total ongoing burden associated with the amendments to 901(a) would be 12 burden hours per platform and reporting side for a total ongoing burden of 3720 hours (12 x 310 (300 reporting sides + 10 platforms)).

243 This estimate is based on the following: (($102,000 + $200,000 + $49,000 +$77,000 + $54,000 + $1,000 + $38,500 + $4,530 + $2,815) x (10 platforms)) = $5,288,450, which corresponds to $528,845 per platform.

244 This estimate is based on the following: (($200,000 + $77,000 + $1,000 + $38,500 + $4,530 + $563) x (10 platforms)) = $3,215,930, or $321,593 per platform.

245 This estimate is based on the following: (($102,000 + $200,000 + $49,000 +$77,000 + $54,000 + $1,000 + $38,500 + $23,593.75 + $59,456.25) x (4 registered clearing agencies)) = $2,418,200, which corresponds to $604,550 per registered clearing agency.

initial reporting and the reporting of any life cycle events) would be $1,598,200, which corresponds to $399,550 per registered clearing agency.[246] The Commission estimates that the initial, first-year cost of complying with proposed Rule 901(a)(3) would be $844,500, which corresponds to $2,815 per reporting side.[247] The Commission preliminarily estimates that the ongoing aggregate annual costs, after the first year, of complying with proposed Rule 901(a)(3) would be $168,900, which corresponds to $563 per reporting side.[248]

2. Proposed Amendment to Rule 905(a)

In the Regulation SBSR Adopting Release, the Commission estimated that Rule 905(a), as adopted, will impose an initial, one-time burden associated with designing and building a reporting side's reporting system to be capable of submitting amended security-based swap transaction information to a registered SDR.[249] The Commission stated its belief that designing and building appropriate reporting system functionality to comply with Rule 905(a)(2) will be a component of, and represent an incremental "add-on" to, the cost to build a reporting system and develop a compliance function as required under Rule 901, as adopted.[250] Specifically, the Commission estimated that, based on discussions with industry participants, the incremental burden would be equal to 5% of the one-time and annual burdens associated with designing and building a reporting system that is in compliance with Rule 901, plus 10% of the corresponding

246 This estimate is based on the following: (($200,000 + $77,000 + $1,000 + $38,500 + $23,593.75 + $59,456.25) x (4 registered clearing agencies)) = $1,598,200, or $399,550 per registered clearing agency.

247 This estimate is based on the following: ($2,815 x (300 reporting sides)) = $844,500, which corresponds to $2,815 per reporting side.

248 This estimate is based on the following: ($563 x 300 reporting sides) = $168,900, or $563 per reporting side.

249 See Regulation SBSR Adopting Release, Section XXII(C)(6).

250 See id.

one-time and annual burdens associated with developing the reporting side's overall compliance program required under Rule 901.[251] This estimate was based on similar calculations contained in the Regulation SBSR Proposing Release,[252] updated to reflect new estimates relating to the number of reportable events and the number of reporting sides.[253]

The Commission preliminarily believes that the above methodology is applicable to error reporting by platforms under the proposed amendment to Rule 905(a). Thus, for platforms, the Commission preliminarily estimates that the proposed amendment to Rule 905(a) would impose an initial (first-year) aggregate cost of $118,250, or $11,825 per platform,[254] and an ongoing aggregate annualized cost of $39,750, which is $3,975 per platform.[255]

3. Proposed Amendments to Rule 906(c)

For Registered Clearing Agencies and Platforms. Rule 906(c), as adopted, requires each participant of a registered SDR that is a registered security-based swap dealer and registered major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation SBSR. Rule 906(c), as

---

251 See id.

252 See 75 FR at 75254.

253 See Regulation SBSR Adopting Release, Section XXII(C)(1).

254 See Regulation SBSR Proposing Release, 75 FR at 75254-55. This figure is calculated as follows: [((($49,000 for one-time development of reporting system) x (0.05)) + (($2,500 annual maintenance of reporting system) x (0.05)) + (($54,000 one-time compliance program development) x (0.1)) + (($38,500 annual support of compliance program) x (0.1))) x (10 platforms)] = $118,250, which is $11,825 per platform.

255 See Regulation SBSR Proposing Release, 75 FR at 75254-55. This figure is calculated as follows: [(($2,500 annual maintenance of reporting system) x (0.05)) + (($38,500 annual support of compliance program) x (0.1))) x (10 platforms)] = $39,750, which is $3,975 per platform.

adopted, also requires such participants to review and update the required policies and procedures at least annually.

The proposed amendment to Rule 906(c) would extend these same requirements to participants of a registered SDR that are platforms or registered clearing agencies. The Commission preliminarily estimates that the one-time, initial burden for each registered clearing agency or platform to adopt written policies and procedures as required under the proposed amendment would be similar to the Rule 906(c) burdens discussed in the Regulation SBSR Adopting Release for registered security-based swap dealers and registered major security-based swap participants. As a result, the Commission preliminarily estimates that the first year cost of complying with the proposed amendment to Rule 906(c) would be approximately $58,000 per registered clearing agency or platform.[256] As discussed in the Regulation SBSR Proposing Release,[257] this figure is based on the estimated cost to develop written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing. In addition, the Commission preliminarily estimates the cost of maintaining such policies and procedures, including a full review at least annually—as would be required by the proposed amendment to Rule 906(c)—would be approximately $34,000 per registered clearing agency or platform.[258] This figure includes an estimate of the cost related to reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining internal controls systems, and performing necessary testing.

D. Economic Effects and Effects on Efficiency, Competition, and Capital Formation

[256] See Regulation SBSR Adopting Release, note 1238.

[257] See Regulation SBSR Proposing Release, 75 FR at 75257.

[258] See Regulation SBSR Adopting Release, note 1240.

Section 3(f) of the Exchange Act[259] requires the Commission, whenever it engages in rulemaking and is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. In addition, Section 23(a)(2) of the Exchange Act[260] requires the Commission, when making rules under the Exchange Act, to consider the impact of such rules on competition. Section 23(a)(2) also prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.

The Commission preliminarily believes that this proposal will result in further progress towards the goals identified in the Regulation SBSR Adopting Release: providing a means for the Commission and other relevant authorities to gain a better understanding of the aggregate risk exposures and trading behaviors of participants in the security-based swap market; facilitating public dissemination of security-based swap transaction information, thus promoting price discovery and competition by improving the level of information to all market participants; and improving risk management by security-based swap counterparties, which would need to capture and store their transactions in security-based swaps to facilitate reporting.[261]

The economic effects of the proposed rules, amendments, and guidance on firms that provide services to security-based swap counterparties and the security-based swap market are discussed in detail below. The Commission also considered the effects that the proposed rules, amendments, and guidance might have on competition, efficiency, and capital formation. The

---

[259] 15 U.S.C. 78c(f).

[260] 15 U.S.C. 78w(a)(2).

[261] See Regulation SBSR Adopting Release, Section XXII(D).

Commission preliminarily believes that the proposal is likely to affect competition between firms that provide services to security-based swap counterparties and affect efficiency as a result of the way that the proposed rules and amendments allocate regulatory burdens. The Commission preliminarily believes that most of the effects of the proposal on capital formation would be indirect and would be related to the way in which the proposed rules and amendments result in efficient delivery of services by registered clearing agencies and registered SDRs, reducing transactions costs and freeing resources for investment.[262]

This analysis has been informed by the relationships among regulation, competition, and market power discussed in Section VIII(A), supra. An environment in which there is limited competition in SDR services could impose certain costs on the security-based swap market, including higher prices or lower quality services from SDRs. For example, a registered SDR might be able to extract monopoly profits from reporting sides when there are few competitors, if reporting sides cannot identify a competing SDR offering prices close enough to marginal cost to make changing service providers privately efficient for the reporting side. However, it is also possible that limited competition in the market for SDR services could yield certain benefits for both regulatory authorities and the public. In particular, a small set of registered SDRs could make it simpler for relevant authorities to build a complete picture of transaction activity and outstanding risk exposures in the security-based swap market, and could limit the need for users of publicly disseminated transaction data to merge these data from multiple sources before using it as an input to economic decisions.

---

262 These transactions costs would include both implicit and explicit costs. Implicit transactions costs are the spread between transaction prices and the fundamental value of the assets being traded. Explicit transactions costs, by contrast, are commissions and other fees paid by counterparties to access the security-based swap market.

1. Reporting of Clearing Transactions

Proposed Rule 901(a)(2)(i) would assign the duty to report all security-based swaps that have a registered clearing agency as a direct counterparty to that registered clearing agency. Regulation SBSR, as adopted, does not assign reporting obligations for any clearing transactions; thus, in the absence of proposed Rule 901(a)(2)(i), these transactions would not be subject to any regulatory reporting requirement. Without these data, the ability of the Commission and other relevant authorities to carry out their market oversight functions would be limited. For example, while the Commission would have access to uncleared transactions that are reported to a registered SDR, the Commission—in the absence of proposed Rule 901(a)(2)(i)—would not be able to obtain from registered SDRs information about changes to the open positions of the relevant counterparties after alpha transactions are cleared. Without access to this information from registered SDRs, the Commission would be unable to easily observe risk exposures in the security-based swap market, because information about the net open positions in cleared security-based swaps would not be held in registered SDRs. Ensuring that clearing transactions are reported to registered SDRs and delineating reporting responsibilities for these transactions is particularly important given the level of voluntary clearing activity in the market as well as the mandatory clearing determinations required under Title VII.[263]

The Commission preliminarily believes that the costs associated with required reporting pursuant to the proposed amendments could represent a barrier to entry for new, smaller clearing agencies that might not have the ability to comply with the proposed reporting requirements or for whom the expected benefits of compliance might not justify the costs of compliance. To the extent that the proposed rules and amendments might deter new clearing agencies from entering

---

263 See General Policy on Sequencing, 77 FR at 35636.

the security-based swap market, this could negatively impact competition between registered clearing agencies.

A registered clearing agency is responsible for executing each of the clearing transactions to which it is a counterparty and, thus, is well-situated to report the resulting transaction information. By proposing to assign the reporting responsibility to registered clearing agencies, the Commission intends to eliminate additional steps in the reporting process that would be needed if another market participant were assigned the duty to report a clearing transaction or if the duty were to remain unassigned.[264] By proposing a reporting methodology with as few steps as possible, the Commission intends to minimize potential data discrepancies and errors by assigning reporting responsibilities to persons that hold the most complete and accurate information for cleared security-based swaps.[265] Inaccurate information would negatively impact the ability of the Commission and other relevant authorities to understand and act on the transaction information reported; accurate information should positively affect their ability to oversee the security-based swap market.

Proposed Rule 901(a)(1)(i) would place the obligation for reporting all clearing transactions on registered clearing agencies and allow them to choose the registered SDR to which they submit transaction data. As noted in Section VIII(A), supra, the Commission preliminarily believes that, because many of the infrastructure requirements for entrant SDRs are shared by registered clearing agencies, registered clearing agencies might pursue vertical

---

264 If, for example, the non-clearing agency counterparty had the duty to report a clearing transaction, the registered clearing agency would first have to convey the transaction information to the counterparty—and the counterparty might have to reconfigure the transaction data into the format required by a registered SDR—before the counterparty could report it to a registered SDR.

265 See CME/ICE Letter at 3-4.

integration into the market for SDR services at a lower cost relative to potential entrants from unrelated markets. If the costs of reporting to affiliated SDRs are lower than the costs of reporting to unaffiliated SDRs, then one likely response to the proposed rules and amendments is that registered clearing agencies will choose to report clearing transactions to an affiliated SDR. Such vertical integration of security-based swap clearing and reporting could be beneficial to other market participants if they ultimately share in these efficiency gains. For example, efficiency gains due to straight-through processing from execution to reporting could lower transactions costs for market participants and reduce the likelihood of data discrepancies and delays.

The Commission is also aware of the potential costs of placing the duty on registered clearing agencies to report transactions and allowing them to choose the registered SDR to which they report, as such clearing agencies would likely select their affiliated SDRs. If proposed Rule 901(a)(1)(i) would encourage the formation of affiliate SDRs that would not otherwise emerge, then the aggregate number of registered SDRs might reflect an inefficient level of service provision. As noted in Section VIII(A)(2), supra, economies of scale exist in the market for SDR services from the ability to amortize the fixed costs associated with infrastructure over a large volume of transactions. As a result, the entry of clearing agency-affiliated SDRs could indicate that, in aggregate, transaction data is processed at a higher average cost than if there were fewer SDRs. Inefficiencies could be introduced by the Commission and the public receiving security-based swap transaction data from a larger number of registered SDRs. Connecting to a larger number of SDRs and merging transaction data with potentially different data formats and schema could be costly and could lead to losses in data integrity.

The potential for efficiency gains through vertical integration of registered clearing agencies and registered SDRs could foreclose entry into the market for SDR services except by those firms that are willing to simultaneously enter the market for clearing services. The Commission preliminarily believes that registered clearing agencies are more likely to benefit from these efficiencies in shared infrastructure than stand-alone SDRs, given that it is likely to be more difficult for a registered SDR to enter into clearing activity than for a registered clearing agency to enter into SDR activity. Moreover, to the extent that an affiliate SDR is not as cost-effective as a competing unaffiliated SDR, the registered clearing agency could subsidize the operation of its affiliate SDR to provide a competitive advantage in its cost structure over SDRs unaffiliated with a registered clearing agency. Even if the registered clearing agency does not provide a subsidy to its affiliate SDR, and the resulting service is not as price competitive as an unaffiliated SDR, counterparties have less recourse in choosing alternative reporting venues because the duty to report would reside with the registered clearing agency.

Hence, providing registered clearing agencies with the discretion to report transaction information to the registered SDR of their choice could provide a competitive advantage for clearing agency-affiliated SDRs relative to unaffiliated SDRs. This could also have implications for the reporting of uncleared swaps. In particular, a clearing agency-affiliated SDR could leverage its repository activity for cleared transactions by offering SDR services to clearing members for uncleared swaps. If security-based swap counterparties who clear transactions prefer to have their transaction records consolidated in a single database, then a clearing agency-affiliated SDR would be able to offer these counterparties recordkeeping and cost saving benefits by also recording their uncleared transactions. By contrast, to the extent that an unaffiliated SDR is unable to compete with a clearing agency's affiliated SDR for cleared transactions, it would not be able to offer a consolidated record of a counterparty's trade activity. This then provides a unique advantage to clearing agency-affiliated SDRs.

Alternatively, a clearing member seeking to consolidate its transactions at an unaffiliated SDR might contract with the registered clearing agency, for a fee, to transmit data for clearing transactions to an SDR of the clearing member's choice, either as a duplicate report or as a required report by Regulation SBSR. This would allow the registered clearing agency to satisfy its obligations while permitting the clearing member to maintain access to centralized data. However, in this case, the registered clearing agency could choose a fee schedule that encourages the clearing member to report its uncleared bilateral transactions to the affiliate SDR. Such a fee schedule might involve the clearing agency offering to terminate alpha transactions reported to its affiliate SDR for a lower price than alpha transactions at a third-party SDR.

As discussed in Section VIII(C)(1)(a), supra, the Commission has estimated the annual and on-going costs associated with requiring registered clearing agencies to establish connections to registered SDRs. The Commission preliminarily believes that, for a given registered clearing agency, these costs may be lower for connections to affiliate SDRs than for connections to unaffiliated SDRs. Because the registered clearing agency might have been involved in developing its affiliated SDR's systems, the clearing agency might, as a result, avoid costs related to translating or reformatting data due to incompatibilities between data reporting by the registered clearing agency and data intake by the SDR.

2. Reporting of Clearing Transactions Involving Allocation

This release explains the Commission's preliminary view of the application of Regulation SBSR to allocations of bunched order executions that are submitted to clearing. The final placement of risk of a bunched order alpha is the series of clearing transactions—the "gamma series"—that results from clearing the bunched order alpha and is economically relevant to risk monitoring and market surveillance. This proposed interpretation would not create any new duties under Regulation SBSR but rather would explain the application of Regulation SBSR to events that occur as part of the allocation process.[266] Additionally, because the proposed interpretation explains how Regulation SBSR, as adopted and as proposed to be amended by this release, would apply to a platform-executed bunched order that will be submitted to clearing, and the security-based swaps that result from the allocation of any bunched order execution, if the resulting security-based swaps are cleared, the Commission preliminarily believes that the proposed interpretation is not likely to have consequences for efficiency, competition, or capital formation beyond those stemming from allocating transaction reporting obligations to platforms and registered clearing agencies discussed in Section VIII(D)(1), supra, and in Section VIII(D)(4), infra.

The proposed interpretation discusses the manner in which the bunched order alpha and the security-based swaps resulting from its allocation would be reported to a registered SDR. This proposed interpretation is designed to accommodate the various workflows that market participants employ to execute and allocate bunched order alphas. For example, in a case where a registered clearing agency receives allocation instructions only subsequent to clearing, the registered clearing agency would decrement the size of the "intermediate gamma" until it eventually reached zero and would novate all of the security-based swaps in a "gamma series."[267] Under proposed Rule 901(a)(2)(i), the registered clearing agency would have the duty to report

---

266 The Commission's estimates of events reportable under these proposed rules and amendments includes observable allocation by clearing agencies in the DTCC-TIW data. Therefore, the costs associated with clearing transactions involving allocation are included in our estimate of the programmatic costs of proposed Rules 901(a)(1) and 901(a)(2)(i).

267 See supra Section III(A) (providing additional examples of workflows for allocation of security-based swaps that are cleared).

each new security-based swap that it creates as part of the gamma series. Pursuant to Rule 901(d)(10), as adopted, the registered clearing agency also would be responsible for including the transaction ID of the bunched order alpha in the transaction report of each new security-based swap in the gamma series that results from the termination of the bunched order alpha. The benefit of regulatory reporting of clearing transactions is that relevant authorities would be able to observe allocations at the level of client accounts, facilitating more granular monitoring of risk and market abuse.[268]

3. Alternative Approaches to Reporting Clearing Transactions

As part of the economic analysis of these proposed rules and amendments, the Commission has considered the market power that providers of security-based swap market infrastructure might be able to exercise in pricing the services that they offer counterparties to security-based swaps and/or shifting regulatory burdens onto their customers. The Commission recognizes that the treatment of clearing transactions in this proposal might influence the market power of certain providers of these services by imposing the reporting duty on registered clearing agencies. The Commission considered three alternative allocations of reporting obligations for clearing transactions, each of which implies different allocations of costs across market participants along with different effects on efficiency and competition, and, indirectly, capital formation.

a. Apply the Re-Proposed Reporting Hierarchy

The first alternative to the proposed approach is to apply the reporting hierarchy in Regulation SBSR, as re-proposed. Under this approach, a registered clearing agency would occupy the lowest spot in the hierarchy, along with other persons who are neither registered

268 See Regulation SBSR Adopting Release, Section VIII.

security-based swap dealers nor registered major security-based swap participants. Under this alternative, when one of the sides of the transaction included a security-based swap dealer or major security-based swap participant and the other side did not, the side including the security-based swap dealer or major security-based swap participant would have the duty to report any resulting clearing transactions, as well as the choice of which registered SDR to which to report. As described in more detail below, placing the duty to report with non-clearing agency reporting sides would likely leave them in a position to either request transaction information from registered clearing agencies to re-transmit that information to registered SDRs, or request that the registered clearing agency report to a registered SDR on their behalf. To the extent that each transmission of data introduces some possibility for error or delay, the additional step of requesting data from a registered clearing agency could result in security-based swap data that are marginally less reliable than under our proposed approach. Alternatively, having the registered clearing agency report clearing transactions would require fewer processing steps and would result in the same outcome for data integrity as the proposed rules.

Under this alternative, one of the sides of the initial alpha transaction would report the resulting clearing transactions according to the hierarchy originally proposed in the Regulation SBSR Proposing Release. For the beta, gamma, and any subsequent clearing transactions (resulting from netting and compression of multiple betas and gammas), the non-clearing agency counterparties could obtain the information needed for regulatory reporting from the registered clearing agency and transmit this information to the registered SDR of its choice.

The Commission preliminarily believes that it is unlikely that non-clearing agency counterparties would be subject to significant additional costs associated with building infrastructure to support regulatory reporting for clearing transactions under this alternative.

This is for two reasons. First, to the extent that market participants that submit security-based swaps to clearing also engage in uncleared transactions and fall high on the reporting hierarchy, they likely already have the required infrastructure in place to support regulatory reporting of alphas and uncleared transactions. The Commission anticipates that, as a result, there might be only marginal additional costs for reporting sides to report clearing transactions, if the Commission selected this alternative. Moreover, the Commission anticipates that, once infrastructure is built, the per-transaction cost of data transmission would not vary substantially between registered clearing agencies, who would be required to report pursuant to proposed Rule 901(a)(1)(i), and reporting sides, who would be required to report under this alternative.

Second, counterparties (who are not themselves a registered clearing agency), particularly those who engage solely in cleared trades or who are not high on the Regulation SBSR reporting hierarchy, may enter into an agreement under which the registered clearing agency would submit the information to a registered SDR on their behalf. This service could be bundled as part of the other clearing services purchased, and would result in an outcome substantially similar to giving the registered clearing agency the duty to report. One difference, however, is that the customer of the registered clearing agency could, under this alternative, request that the information be submitted to a registered SDR unaffiliated with the registered clearing agency, a choice that would, under the proposed approach, be at the discretion of the registered clearing agency. Nevertheless, the Commission preliminarily believes that, to the extent that it is economically efficient for the registered clearing agency to report the details of cleared transactions on behalf of its counterparties, this alternative would likely result in ongoing costs of data transmission for market participants and infrastructure providers that are, in the aggregate, similar to the Commission's approach in proposed Rule 901(a)(2)(i).

If registered clearing agencies reporting to registered SDRs on behalf of counterparties is not available under this alternative, then some counterparties would be required to build infrastructure to support regulatory reporting for clearing transactions. Analysis of single-name CDS transactions in 2013 in which a clearing agency was a direct counterparty shows approximately 10 market participants that are not likely to register as security-based swap dealers or major security-based swap participants, and therefore might be required to build infrastructure to support regulatory reporting for clearing transactions in order to maintain current trading practices in the security-based swap market.[269]

Under this alternative, non-clearing agency counterparties would have the ability to choose which registered SDR receives their reports. Because non-clearing agency counterparties would have this choice, registered SDRs under the alternative approach might have additional incentive to provide high levels of service to attract this reporting business by, for example, providing such counterparties with convenient access to reports submitted to the registered SDR or by supporting the counterparties' efforts at data validation and error correction. Additionally, ensuring that these counterparties have discretion over which registered SDR receives their data could allow them to consolidate their security-based swap transactions into a single SDR for record-keeping purposes, or for operational reasons, though only to the extent that they can identify a registered SDR that accepts reports for all relevant asset classes.

---

269 To arrive at this estimate, Commission staff used single-name CDS transaction data for 2013 to produce a list of all direct counterparties to a clearing agency and removed those persons likely to register as security-based swap dealers or major security-based swap participants. The list of likely registrants was constructed using the methodology described in the Cross-Border Adopting Release. See Cross-Border Adopting Release, 79 FR at 47296, note 150 (describing the methodology employed by the Commission to estimate the number of potential security-based swap dealers); id. at 47297, note 153 (describing the methodology employed by the Commission to estimate the number of potential major security-based swap participants).

In assessing this alternative, the Commission recognizes that registered clearing agencies have a comparative advantage in processing and preparing data for reporting cleared transactions to a registered SDR. Registered clearing agencies terminate alpha transactions, as well as create beta and gamma transactions and all subsequent netting transactions, and so already possess all of the relevant information to report these transaction events to a registered SDR. Moreover, the volume of transactions at registered clearing agencies means that they can amortize the fixed costs of establishing and maintaining connections to a registered SDR over a large quantity of reportable activity, potentially allowing them to report transactions at a lower average cost per transaction than many other market participants, particularly non-registered persons.

The Commission preliminarily believes that, given this comparative advantage, applying to clearing transactions the same reporting hierarchy that it has adopted for uncleared transactions would result in registered clearing agencies reporting the transaction data to registered SDRs as a service to the non-clearing agency counterparties to clearing transactions. In this respect, the outcome would be the same as with proposed Rule 901(a)(2)(i), which would assign this duty to registered clearing agencies. The key difference is that the non-clearing agency counterparty would generate this responsibility through private contract and could terminate the agreement and assume the reporting responsibility, should it perceive the fee or service terms as unreasonable. The ability to terminate such an agreement could diminish the potential bargaining power that the registered clearing agency would otherwise have if the registered clearing agency were assigned the duty to report. However, because the non-clearing agency counterparty might still have to rely on assistance from the clearing agency to satisfy the reporting obligations—particularly for any subsequent clearing transactions resulting from netting and compression of multiple betas and gammas—the reduction in clearing agency bargaining power might not be substantial. A registered clearing agency that supplies this information and converts it into the formats prescribed by the counterparties' chosen SDRs so that a non-clearing agency counterparty can fulfill their reporting requirement could still have significant bargaining power with respect to providing that information.

The Commission preliminarily believes that the proposed rules are generally consistent with the outcome under this alternative in a number of key respects. Under both approaches to reporting—one in which the Commission assigns the reporting responsibility for clearing transactions to registered clearing agencies, and the other in which the market allocated the reporting responsibility in the same way—registered clearing agencies would report clearing transactions to their affiliated SDRs.[270] Under an approach in which the Commission does not assign any reporting duties to registered clearing agencies, counterparties would likely be assessed an explicit fee by registered clearing agencies for submitting reports on the counterparties' behalf. Under proposed Rule 901(a)(1)(i), the fees associated with these services would likely be part of the total fees associated with clearing security-based swaps. Under this alternative and under the proposed approach, efficiency gains stemming from consolidation of the reporting function within registered clearing agencies would be split between such clearing agencies and security-based swap counterparties. The difference between these two regulatory approaches turn on how these gains are split.

The Commission preliminarily believes that this alternative would not necessarily restrict the ability of registered clearing agencies to exercise market power in ways that may allow them

270 Unless it preferred a particular registered SDR for operational reasons discussed above, a non-clearing agency counterparty to a clearing transaction would likely contract with the clearing agency to report clearing transactions to the registered SDR that offers the lowest price, most likely the clearing agency affiliate.

to capture the bulk of any efficiency gains. First, while a counterparty to a registered clearing agency could contract with the clearing agency to receive the information about netting and compression transactions that would enable re-transmission to a registered SDR, depending on the policies and procedures of the registered clearing agency, these data might not be in the format that is required for submission to the counterparty's SDR of choice. As a result, counterparties to registered clearing agencies would bear the costs associated with restructuring the data that they receive from registered clearing agencies before submitting transaction reports to a registered SDR. Such costs could limit the feasibility of assuming the reporting responsibility rather than contracting to have the registered clearing agency to perform the duty.

Second, in an environment where reporting obligations for clearing transactions rest with counterparties and there is limited competition among registered clearing agencies, registered clearing agencies might be able to charge high fees to counterparties who must rely on them to provide information necessary to make required reports to registered SDRs. A registered clearing agency could otherwise impair the ability of its counterparties to perform their own reporting if the clearing agency does not provide sufficient support or access to clearing transaction data. In particular, the clearing agency might have incentives to underinvest in the infrastructure necessary to provide clearing transaction data to its counterparties unless the Commission, by rule, established minimum standards for communication of clearing transactions data from registered clearing agencies to their counterparties. The result could be greater difficulties faced by counterparties in reporting data and an increased likelihood of incomplete, inaccurate, or untimely data being submitted to registered SDRs.

Third, under this alternative the registered clearing agency that also is party to the transaction potentially has weaker incentives to provide high-quality regulatory data to the counterparty with a duty to report, which could reduce the quality of regulatory data collected by registered SDRs. The person with the duty to report a transaction has strong incentives to ensure that the transaction details are transmitted in a well-structured format with data fields clearly defined, and that contain data elements that are validated and free of errors because, pursuant to Regulation SBSR, this person is responsible for making accurate reports and, if necessary, making corrections to previously submitted data. Not only would the registered clearing agency have no duty under Regulation SBSR to provide information to its counterparty, but additionally, market forces might not provide sufficient motivation to the registered clearing agency to provide data to the counterparty in a manner that would minimize the counterparty's reporting burden. If registered clearing agencies exercise their market power against counterparties, the counterparties might have limited ability to demand high-quality data reporting services from registered clearing agencies. The Commission notes, however, that it could, by imposing minimum standards on data services provided by registered clearing agencies and regulating the fees associated with data transmission by registered clearing agencies, mitigate some of the effects of market frictions under these alternatives.

The Commission preliminarily believes, however, that despite a similarity in ultimate outcomes, and any benefits that might flow from enabling registered SDRs to compete for clearing transaction business, this alternative does not compare favorably to the proposed approach.

b. Move Registered Clearing Agencies Within the Regulation SBSR Reporting Hierarchy

A second, closely related alternative would involve placing registered clearing agencies within the Regulation SBSR reporting hierarchy below registered security-based swap dealers and registered major security-based swap participants but above counterparties that are not registered with the Commission. This alternative would assign the reporting obligation to a registered security-based swap dealer or registered major security-based swap participant when it is a counterparty to a registered clearing agency, while avoiding the need for non-registered persons to negotiate reporting obligations with registered clearing agencies.

As with the previous alternative of maintaining the reporting hierarchy in Regulation SBSR, as adopted, this alternative potentially results in additional reporting steps and could marginally reduce the quality of regulatory data relative to the proposed approach. A key difference, however, is that this alternative would reduce the likelihood of reporting obligations falling on unregistered persons, who would likely have less market power in negotiations with registered clearing agencies over the terms of reporting to a registered SDR. Larger counterparties, i.e., those with greater transaction flow, are likely to be better able to negotiate the terms of reporting transactions on their behalf or access to the clearing data so that they can perform their own reporting.

Above, the Commission noted three particular ways in which limited competition among registered clearing agencies could result in poorer outcomes for non-clearing agency counterparties. First, when these counterparties obtain clearing data from a registered clearing agency, they would likely incur any costs related to reformatting the data for submission to a registered SDR. Second, registered clearing agencies might charge these counterparties high fees for access to regulatory data that counterparties are required to submit to registered SDRs. Third, registered clearing agencies might have weak incentives to ensure that the data that they supply to reporting sides are of high quality, since the non-clearing agency counterparties would bear the costs of error correction.

Limiting the extent to which registered clearing agencies can exercise the market power from limited competition over their counterparties may reduce some of the drawbacks to the first alternative. In particular, registered clearing agencies may be less likely to exercise market power in negotiations with larger market participants, particularly when these market participants are also clearing members. Clearing members play key roles in the governance and operation of registered clearing agencies, often contributing members to the board of directors. Moreover, clearing members contribute to risk management at registered clearing agencies by, for example, contributing to clearing funds that mutualize counterparty risk.[271] Nevertheless, the Commission preliminarily believes that this alternative does not fully address frictions that arise from limited competition between registered clearing agencies, such as high clearing fees or low quality services. The Commission preliminarily believes that this alternative would be less efficient than requiring the registered clearing agency to report the transaction information directly to a registered SDR, because the registered clearing agency is the only person who has complete information about a clearing transaction immediately upon its creation.

c. Require the Reporting Side for an Alpha to Also Report the Beta and Gamma Transactions

The Commission also considered a third alternative that would make the reporting side for the alpha responsible for reporting both the beta and gamma. This alternative would require the reporting side for the alpha also to report information about a security-based swap—the clearing transaction between the registered clearing agency and the non-reporting side of the alpha—to which it is not a counterparty. The Commission could require the non-reporting side

271 See Securities Exchange Act Release No. 34-68080 (October 22, 2013), 77 FR 66220, 66267 (November 2, 2012) ("Clearing Agency Standards Adopting Release") (discussing financial resources of clearing agencies).

of the alpha to transmit information about its clearing transaction to the reporting side of the alpha. In theory, this would allow the reporting side of the alpha to report both the beta and the gamma. The Commission believes, however, that this result could be difficult to achieve operationally and, in any event, could create confidentiality concerns, as an alpha counterparty may not wish to reveal information about its clearing transactions except to the registered clearing agency (and, if applicable, its clearing member). This alternative also would require reporting sides to negotiate with registered clearing agencies to obtain transaction data and to bear the costs of reformatting these data and correcting errors in these data, exposing them to the market power exercised by registered clearing agencies. Moreover, all other things being equal, having more steps in the reporting process—e.g., more data transfers between execution and reporting—introduces greater opportunity for data discrepancies and delays than having fewer steps. Also, because the reporting side of the alpha would report the beta and gamma, this alternative is premised on the view that the beta and gamma are life cycle events of the alpha. The Commission, however, considered and rejected this approach in the Regulation SBSR Adopting Release.[272]

In addition, this alternative could result in incomplete regulatory data because it could raise questions about who would report clearing transactions associated with the compression and netting of beta or gamma transactions. For example, suppose a non-dealer clears two standard contracts on the same reference entity using a single registered clearing agency, each

---

272 See Regulation SBSR Adopting Release, Section V(B)(2) at note 267 ("Under Rule 900(g), a security-based swap that results from clearing is an independent security-based swap and not a life cycle event of a security-based swap that is submitted to clearing. Thus, Rule 901(e), which addresses the reporting of life cycle events, does not address what person has the duty to report the clearing transactions that arise when a security-based swap is accepted for clearing").

contract having a different registered security-based swap dealer as counterparty. Under this alternative to the proposed approach, each dealer would be responsible for reporting a gamma security-based swap between the non-dealer and the registered clearing agency. However, this alternative does not specify which of four potential persons would be required to report the contract that results from netting of the two gamma security-based swaps between the non-dealer and the registered clearing agency.

4. Reporting by Platforms

With the ability to clear trades, it is possible for two counterparties to trade anonymously on an SB SEF or an exchange. In an anonymous trade, because neither counterparty would be aware of the name or registration status of the other, it might not be possible for either counterparty to use the reporting hierarchy in Rule 901(a)(1)(i), as adopted, to determine who must report this initial alpha transaction to a registered SDR.[273] Therefore, because the platform would be the only entity at the time of execution, before the transaction is submitted for clearing, who is certain to know the identity of both transaction sides, the Commission proposes to assign to the platform the duty to report all alpha transactions executed on the platform that will be submitted to clearing.

As discussed above in the context of reporting obligations for registered clearing agencies, the Commission preliminarily believes that the costs associated with required reporting pursuant to the proposed amendments could represent a barrier to entry for new, smaller trading platforms that might not have the ability to comply with the proposed reporting requirements or for whom the expected benefits of compliance might not justify the costs of compliance. To the

273 Some commenters specifically pointed out this fact and argued that SB SEFs and exchanges should therefore incur the duty to report. See supra note 55.

extent that the proposed rules and amendments might deter new trading platforms from entering the security-based swap market, this could negatively impact competition.

Requiring the execution platform to report information associated with anonymous transactions, preserves counterparties' anonymity and reduces the number of data transmission steps between execution and reporting to a registered SDR. The Commission, however, proposes having the platform report all alpha transactions that will be submitted to clearing, even those that are not anonymous.

Under proposed Rule 901(a)(1), platforms would be required to report all transactions occurring on their facilities that are submitted to clearing. A platform that matches orders and executes transactions will possess all of the primary and secondary trade information necessary to be reported to a registered SDR, and proposed Rule 901(a)(1) would make it unnecessary for counterparties to report these transactions. This approach is designed to result in a more efficient reporting process for platform-executed trades that are submitted to clearing. By reducing the number of steps between the generation of transaction data and reporting to a registered SDR, the Commission preliminarily believes that proposed Rule 901(a)(1) would minimize the possibility of data discrepancies and delays.

At the same time, the Commission recognizes that, because anonymous transactions executed on platforms must be cleared, the platforms that support anonymous trading will more than likely select the registered clearing agency at which to clear a trade. Moreover, because only platforms know the identities of counterparties to anonymous transactions, they will be responsible for submitting these transactions for clearing. If the infrastructure necessary for submitting transactions for clearing is similar to that required to report transactions to clearing agency-affiliated SDRs, then these platforms may prefer to use clearing-agency affiliated SDRs for all of their transaction reports. This is particularly true if the fixed costs to platforms of submitting transactions for clearing and regulatory reporting are high because platforms could avoid interfacing separately with clearing agencies and unaffiliated SDRs. As a result, the proposed rules for platform-executed trades subsequently submitted to clearing might disadvantage registered SDRs that are not affiliated with registered clearing agencies.

While the level of security-based swap activity that currently takes place on platforms and is subsequently submitted for clearing is currently low, future rulemaking under Title VII could cause platform volumes to increase. The Commission has proposed, but not adopted, rules governing the registration and operation of SB SEFs and anticipates considering rules to determine which security-based swaps are subject to mandatory trade execution on national securities exchanges or registered or exempt SB SEFs.[274]

5. Alternative Approaches to Reporting Platform-Executed Transactions

For platform-executed transactions that are submitted to clearing but are not anonymous, a reasonable alternative would be for the Commission to require these transactions to be reported to a registered SDR using the reporting hierarchy in Rule 901(a)(2)(ii), as adopted. Under such an alternative, a platform would have to determine which of the trades it executed were anonymous and which were not, performing due diligence to ensure that transaction reports it sends to its participants do not violate the anonymity of counterparties.[275] The Commission preliminarily believes that it is likely that the platform would pass these costs to counterparties, or, alternatively, offer to report on behalf of the reporting side, for a fee. Counterparties who

274 See General Policy on Sequencing, 77 FR at 35640.

275 The Commission is aware that certain market structures could result in situations where a single security-based swap transaction results in a split trade where one portion is anonymously executed and another portion is not anonymously executed. This could complicate separation of anonymous and non-anonymous executions.

trade on a platform would have to determine who among them is responsible for reporting their trade and would incur the costs of reporting to a registered SDR. Moreover, such an alternative would exhibit many of the shortcomings of the alternative to proposed Rule 901(a)(1)(i) discussed in Section XI(C)(3), even though it would allow the reporting counterparty to choose the SDR that receives transaction information.

A second alternative would be to assign the reporting duty for all platform-executed transactions that are submitted to clearing to the registered clearing agency. While the registered clearing agency receiving information about a platform-executed alpha will likely have the information necessary for reporting—because the registered clearing agency will need much of the same information about the alpha transaction to clear it—the Commission preliminarily believes that it would be more appropriate to assign the reporting duty to the platform. This approach would imply a more direct flow of information from the point of execution on the platform to the registered SDR, thus minimizing opportunities for data discrepancies or delays. This approach would also reduce the need for registered clearing agencies to invest resources in systems to receive data elements from platforms beyond what is already required for clearing.

6. Application of Regulation SBSR to Prime Brokerage Transactions

This release proposes interpretive guidance for how Regulation SBSR should be applied to prime brokerage transactions. As this guidance would not create any new duties—but instead would merely explain how the series of related transactions under a prime brokerage arrangement would have to be reported and publicly disseminated under Regulation SBSR, as adopted—there would be no additional costs or benefits beyond those already considered in the

Regulation SBSR Adopting Release.[276]

Prime brokerage transactions involve a reallocation of counterparty risk when the prime broker interposes itself between the counterparties to the original transaction (a customer of the prime broker and a third-party executing dealer). Regulatory reporting of this activity would allow relevant authorities to more accurately conduct market surveillance and monitor counterparty risk. As a result of public dissemination of all three related transactions, market observers would have access to information of the transaction between the two original counterparties and the subsequent two transactions with the prime broker, thereby allowing them to compare the prices and conditions of these transactions. This would allow users of publicly disseminated data to infer from these disseminated reports the fees that the prime broker charges for its credit intermediation service and separate these fees from the transaction price of the security-based swap.

7. Proposed Prohibition on Fees for Public Dissemination

The Commission is proposing new Rule 900(tt), which would define the term "widely accessible" as used in the definition of "publicly disseminate" in Rule 900(cc), as adopted, to mean "widely available to users of the information on a non-fee basis." This proposed definition would have the effect of prohibiting a registered SDR from charging fees for or imposing usage restrictions on the security-based swap transaction data that it is required to publicly disseminate under Regulation SBSR.

---

276 See Regulation SBSR Adopting Release, Section XXII(C)(1). The Commission's estimates in that release of the number of reportable events included all legs of prime brokerage transactions.

Allowing access to transaction information without cost or restriction allows it to be quickly incorporated into security-based swap prices by market participants, leading to increased informational efficiency of these prices and prices in related financial markets. Free and unrestricted access to transaction prices and volumes facilitates a more level playing field for market participants, particularly those that otherwise have less access to security-based swap order flow information, potentially enhancing competition between market participants..[277] Finally, unburdened access to security-based swap market data also could benefit non-security-based swap financial market participants who may use data from the security-based swap market as input for their decision making, potentially improving the efficiency of capital allocation and indirectly improving the environment for capital formation.[278] For instance, if a single-name CDS on a reference entity trades more often than the underlying bonds, single-name CDS transaction prices may help investors in evaluating whether the prices of the underlying bonds incorporate available information about the credit risk of the issuer.[279]

The proposed prohibition on a registered SDR charging fees for public dissemination of the regulatorily mandated security-based swap transaction data also is consistent with the

277 See Regulation SBSR Adopting Release, Section XXII(D)(3).

278 See Philip Bond, Alex Edmans, and Itay Goldstein, "The Real Effects of Financial Markets," Annual Review of Financial Economics, Vol. 4 (October 2012) (reviewing the theoretical literature on the feedback between financial market price and the real economy).

279 See Sugato Chakravarty, Huseyin Gulen, and Stewart Mayhew, "Informed Trading in Stock and Option Markets," Journal of Finance, Vol. 59, No. 3 (2004) (estimating that the proportion of information about underlying stocks revealed first in option markets ranges from 10% to 20%); Gary Gorton, "Are Naked Credit Default Swaps Too Revealing?" (June 4, 2010), available at http://faculty.som.yale.edu/garygorton/documents/NakedCDSTooRevealingIDDJune2010.pdf (last visited October 2, 2014) (discussing how the introduction of CDS contracts may increase the information sensitivity of underlying bonds).

CFTC's current prohibition on CFTC-registered SDRs charging for public dissemination of regulatorily mandated swap transaction data. Such consistency lessens the incentives for SDRs registered with the CFTC to enter the security-based swap market and also register with the Commission and charge for public dissemination of security-based swap market data.[280] Entering the security-based swap market would allow them to charge for public dissemination of security-based swap market data and use those revenues from this business to subsidize their operations in the swap market, in which they are not permitted to charge for public dissemination of swap market data. If an SEC-registered SDR charges fees for security-based swap data in order to subsidize its reporting activity in the CFTC regime, then security-based swap market participants reporting to this SDR could face higher costs than those it would face if the SDR participated only in the security-based swap market.

The Commission notes two ways in which market forces may limit the extent of cross-subsidization by registered SDRs that also publicly disseminate swap data. First, if SDRs compete for customers of raw security-based swap data, then SDRs operating in both regimes who choose to subsidize their activities in the swap market by charging higher fees for security-based swap data will likely find themselves at a disadvantage relative to SDRs that operate only in the security-based swap regime who can afford to offer lower fees since they, by definition, do not cross-subsidize because they do not participate in both markets. However, this result depends significantly on the assumption of a competitive market for security-based swap data, which is less likely to exist when the number of registered of SDRs is small. Second, it is possible that there are synergies available to SDRs that operate in both regimes. These synergies

280 Dual registration is likely to occur independent of the ability to charge for public dissemination of data in the security-based swap market. However, the ability to charge for public dissemination would add an additional incentive to do so.

would lower the average cost of public dissemination by these SDRs and reduce the level of subsidies needed to cover these costs. As a result, these synergies could limit the size of the subsidy that users of security-based swap data would pay to users of swap data.

Additionally, the Commission preliminarily believes that requiring free and unrestricted access to publicly-disseminated data will reinforce the economic effects of Rule 903(b). Rule 903(b), as adopted, provides that a registered SDR may disseminate information using UICs (such as product IDs or other codes—e.g., reference entity identifiers—embedded within the product IDs) or permit UICs to be used for reporting by its participants only if the information necessary to interpret such UICs is widely available on a non-fee basis. In the absence of a prohibition on fees for or restricted access to publicly-disseminated data, the Commission is concerned that a registered SDR that wished to charge (or allow others to charge) users for the information necessary to understand these UICs—but could not, because of Rule 903(b)—might seek to do so indirectly by recharacterizing the charge as being for public dissemination. The Commission preliminarily believes that this could reduce the economic benefits of Rule 903(b).

The Commission acknowledges that receiving data from market participants; cleaning, processing, and storing these data; and making these data available to the Commission and the public are costly services for registered SDRs to provide. If charging fees for raw security-based swap data is prohibited, registered SDRs could employ a number of alternative measures to ensure they have sufficient resources to comply with the statutory and regulatory requirements imposed on registered SDRs. Some of these measures may have negative consequences for market participants, reducing the benefits of publicly-disseminated data. For example, registered SDRs could charge fees to recipients of value-added data and services. Registered SDRs that provide such data and services for a fee may have incentives to limit the usefulness of transaction information through free public feeds, particularly in form and manner in which it is made available, to push market participants towards the fee-based services. Such an outcome could hinder the transparency goals of the reporting regime because those market participants with resources sufficient to buy value added data and services would continue to have an informational advantage over those without.

Registered SDRs also could pass the costs of publicly disseminating security-based swap data through to the reporting parties who report transaction data to the registered SDR. Direct fees imposed on market participants would likely be in proportion to the number of transactions they execute, with more active market participants, who contribute more to the production of transaction information, paying a larger share of the costs of disseminating that information. These costs of SDR reporting would likely be passed through to non-dealers as a component of transactions costs. Non-security-based swap market participants, by contrast, would not bear any of the costs. This could have the effect of security-based swap market participants subsidizing other users of the raw security-based swap data through free public feeds.

8. Proposed Compliance Schedule for Regulation SBSR

The compliance schedule proposed in this release is designed to provide affected persons, especially registered SDRs and persons with a duty to report security-based swap transactions to registered SDRs, with time to develop, test, and implement reporting and dissemination systems. The new proposed compliance schedule takes into consideration the fact that the CFTC's regulatory reporting and public dissemination rules are now in effect. As a result, several SDRs have registered and are operating under the CFTC regime in the swap market, and swap market participants have developed substantial infrastructure to support swap transaction reporting.[281] It is likely that much of the infrastructure implemented in the swap market can be repurposed for the security-based swap market, and if so, would enable more efficient implementation of the Commission's regime for security-based swap reporting.

In the newly proposed compliance schedule, the two compliance dates, with respect to security-based swaps in a particular asset class, are based on the date that the first registered SDR that can accept security-based swaps in that asset class commences operations. This approach is designed to prevent regulatory reporting and public dissemination of security-based swap transaction data from being delayed while additional SDRs register with the Commission and commence operations, while still offering time for SDRs and market participants to develop the necessary policies, procedures, and infrastructure to become operational. For example, while reporting to a registered SDR on a transaction-by-transaction basis would be required on the date six months after the first registered SDR in an asset class commences operations (i.e., proposed Compliance Date 1), public dissemination would not be required for an additional three months (i.e., on proposed Compliance Date 2). This three-month period is designed to allow registered SDRs to evaluate compliance with the SDRs' requirements for transaction reports being submitted on a mandatory basis beginning on Compliance Date 1, and to allow persons having the duty to report—which, as a result of the amendments proposed herein, would include platforms, registered clearing agencies, and reporting sides—to make any necessary adjustments to the transaction records that they submit. Registered SDRs also would have time to test that

281 See Sec. Indus. & Fin. Mkts. Ass'n v. CFTC, Civil Action No. 13-1916 (PLF), slip op. at 89 (D.D.C., September 16, 2014) (noting that "the plaintiffs' associations' members' declarants have made clear that the members (or their foreign affiliates) already have come into compliance with the [CFTC] Rules as they apply extraterritorially").

the appropriate subset of information provided in the regulatory report will be publicly disseminated, with flags as required by the registered SDR's policies and procedures.[282]

There are potential drawbacks to the proposed compliance schedule as well. First, new entrants into the SDR market might be at a competitive disadvantage since they would have to adhere to compliance dates that were set based on registration of the first SDR in that asset class that commences operations. This would be true particularly if persons with a duty to report face high switching costs between SDRs and could be locked in to the first registered SDR with which they engage. Second, the proposed compliance schedule hinges on a person registering and then commencing operations as an SDR. As a result, reporting to an SDR, and the associated public dissemination, might not occur for an extended period of time.

The Commission preliminarily believes, however, that most persons that have the desire and ability to operate as SEC-registered SDRs are already operational in the swaps market as CFTC-registered SDRs, and each should have a strong incentive to submit applications to register with the Commission quickly. Thus, there is less likelihood of multiple applications arriving over an extended period of time, which could have been the case when the Commission originally proposed Rules 910 and 911 in the Regulation SBSR Proposing Release in 2010, before the CFTC had finalized its rules and SDRs were registered by the CFTC. The newly proposed compliance schedule could give added incentive to avoid delaying the submission of an application for registration, and to commence operation as an SEC-registered SDR as quickly as possible. This result would help the Commission and other relevant authorities obtain more complete information about the security-based swap market for oversight purposes as quickly as

---

282 See Rules 907(a)(3) and 907(a)(4), as adopted.

possible, and also allow the public to obtain price, volume, and transaction information about all security-based swaps as quickly as possible.

IX. Paperwork Reduction Act

Certain provisions of these proposed amendments to Regulation SBSR contain "collection of information requirements" within the meaning of the Paperwork Reduction Act of 1995 ("PRA").[283] As discussed in Section I, supra, these proposed amendments to Regulation SBSR would impact Rules 900, 901, 905, 906, and 908. This release also proposes guidance for complying with certain aspects of Regulation SBSR and proposes new compliance dates for the rules in Regulation SBSR for which the Commission has not specified a compliance date. The titles of the collections for Regulation SBSR are: (1) Rule 901—Reporting Obligations—For Reporting Sides; (2) Rule 901—Reporting Obligations—For Registered SDRs; (3) Rule 902—Public Dissemination of Transaction Reports; (4) Rule 904—Operating Hours of Registered Security-Based Swap Data Repositories; (5) Rule 905—Correction of Errors in Security-Based Swap Information—For Reporting Sides; (6) Rule 905—Correction of Errors in Security-Based Swap Information—Non-Reporting Sides; (7) Rule 906(a)—Other Duties of All Participants—For Registered SDRs; (8) Rule 906(a)—Other Duties of All Participants—For Non-Reporting Sides; (9) Rule 906(b)—Other Duties of All Participants—For All Participants; (10) Rule 906(c)—Other Duties of All Participants—For Covered Participants; (11) Rule 907—Policies and Procedures of Registered Security-Based Swap Data Repositories; and (12) Rule 908(c)—Substituted Compliance (OMB Control No. 3235-0718). The estimated collection of information burdens for Regulation SBSR are contained in the Regulation SBSR Adopting

283 44 U.S.C. 3501 et seq.

Release.[284] The estimated changes to these burdens and costs that would result from the proposed rules and amendments are discussed below. Compliance with these collections of information requirements is mandatory. The Commission is submitting these collections of information to the Office of Management and Budget ("OMB") for review in accordance with 44 U.S.C. 3507(d) and 5 CFR 1320.11. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the agency displays a currently valid control number.

A. Definitions—Rule 900

Rule 900 sets forth definitions of various terms used in Regulation SBSR. In this release, the Commission is proposing to amend the definition of "participant" in Rule 900(u) and to create a new defined term "widely accessible"—in proposed Rule 900(tt)—that is used in the definition of "publicly disseminate" in Rule 900(cc), as adopted. The proposed definition of "widely accessible" would have to effect of prohibiting a registered SDR from charging fees for or imposing usage restrictions on the security-based swap transaction data that it is required to publicly disseminate under Regulation SBSR.

Although the Commission discusses certain costs associated with these proposed definitions in this Section, the Commission does not believe that these changes themselves would result in a "collection of information" within the meaning of the PRA.

B. Reporting Obligations—Rule 901

1. Rule 901—As Adopted

Rule 901, as adopted, specifies, with respect to each reportable event pertaining to covered transactions, who is required to report, what data must be reported, when it must be

---

[284] See Regulation SBSR Adopting Release, Section XXI.

reported, where it must be reported, and how it must be reported. Rule 901(a), as adopted, establishes a "reporting hierarchy" that specifies the side that has the duty to report a security-based swap that is a covered transaction. Pursuant to Rule 901(b), as adopted, if there is no registered SDR that will accept the report required by Rule 901(a), the person required to make the report must report the transaction to the Commission. Rule 901(c) sets forth the primary trade information and Rule 901(d) sets forth the secondary trade information that must be reported. Rule 901(e) requires the reporting of life cycle events and adjustments due to life cycle events, which pursuant to Rule 901(j) must be reported within 24 hours of the time of occurrence, to the entity to which the original transaction was reported. Rule 901(f) requires a registered SDR to timestamp, to the second, any information submitted to it pursuant to Rule 901, and Rule 901(g) requires a registered SDR to assign a transaction ID to each security-based swap, or establish or endorse a methodology for transaction IDs to be assigned by third parties. Rule 901(h) requires reporting sides to electronically transmit the information required by Rule 901 in a format required by the registered SDR. Rule 901(i) requires reporting of pre-enactment security-based swaps and transitional security-based swaps to the extent that information about such transactions is available.

For Reporting Sides. The Commission estimated that Rule 901, as adopted, will impose an estimated total first-year burden of approximately 1,394 hours[285] per reporting side for a total

285 See Regulation SBSR Adopting Release, Section XXI(B). The Commission derived its estimate from the following: (355 hours (one-time hourly burden for establishing and OMS) + 172 hours (one-time hourly burden for establishing security-based swap reporting mechanisms) + 180 hours (one-time hourly burden for compliance and ongoing support) = 707 hours (one-time total hourly burden). See Regulation SBSR Proposing Release, 75 FR at 75248-50, notes 186, 194, and 201. (436 hours (annual-ongoing hourly burden for internal order management) + 33.3 hours (revised annual-ongoing hourly burden for security-based swap reporting mechanisms) + 218 hours (annual-ongoing

first-year burden of 418,200 hours for all reporting sides.[286] The Commission estimated that Rule 901, as adopted, will impose ongoing annualized aggregate burdens of approximately 687 hours[287] per reporting side for a total aggregate annualized cost of 206,100 hours for all reporting sides.[288] The Commission further estimated that Rule 901, as adopted, will impose initial and ongoing annualized dollar cost burdens of $201,000 per reporting side, for total aggregate initial and ongoing annualized dollar cost burdens of $60,300,000.[289]

For Registered SDRs. The Commission estimated that the first-year aggregate annualized burden on registered SDRs associated with Rules 901(f) and 901(g) will be 2,820 burden hours, which corresponds to 282 burden hours per registered SDR.[290] The Commission also estimated that the ongoing aggregate annualized burden associated with Rules 901(f) and

---

hourly burden for compliance and ongoing support) = 687.3 hours (one-time total hourly burden. See id. at 75248-50, notes 187 and 201 (707 one-time hourly burden + 687 revised annual-ongoing hourly burden = 1,394 total first-year hourly burden).

286 See Regulation SBSR Adopting Release, Section XXI(B). The Commission derived its estimate from the following: (1,394 hours per reporting side x 300 reporting sides) = 418,200 hours.

287 See Regulation SBSR Adopting Release, Section XXI(B). See Cross-Border Proposing Release, 78 FR at 31112-15.

288 See Regulation SBSR Adopting Release, Section XXI(B). The Commission derived its estimate from the following: (687 hours per reporting side x 300 reporting sides) = 206,100 hours.

289 See Regulation SBSR Adopting Release, Section XXI(B). The Commission derived its estimate from the following: ($201,000 per reporting side x 300 reporting sides) = $60,300,000. See Cross-Border Proposing Release, 78 FR at 31113-15. The Commission originally estimated this burden based on discussions with various market participants. See Regulation SBSR Proposing Release, 75 FR at 75247-50.

290 See Regulation SBSR Adopting Release, Section XXI(B). See Regulation SBSR Proposing Release, 75 FR at 75250. This figure is based on the following: [(1,200) + (1,520)] = 2,720 burden hours, which corresponds to 272 burden hours per registered SDR.

901(g) will be 1,520 burden hours, which corresponds to 152 burden hours per registered SDR.[291]

2. Rule 901—Proposed Amendments

The proposed amendments to Rule 901 would establish certain requirements relating to the reporting of security-based swap transactions to a registered SDR. Rule 901 of Regulation SBSR, as adopted, contained "collection of information requirements" within the meaning of the PRA, and the proposed amendments to Rule 901 contain additional "collection of information requirements" within the meaning of the PRA, which are discussed below. The title of this collection is "Rule 901—Reporting Obligations for Platforms and Clearing Agencies."

a. Summary of Collection of Information

The Commission is proposing reporting obligations for those security-based swaps that are clearing transactions or that are executed on a platform and will be submitted to clearing. In order to facilitate such reporting, the Commission is proposing Rules 901(a)(1), 901(a)(2)(i), and 901(a)(3). Pursuant to new subparagraph (1) of Rule 901(a), if a security-based swap is executed on a platform and will be submitted to clearing, the platform on which the transaction was executed shall have the duty to report the transaction to a registered SDR. The Commission also is proposing a new subparagraph (2)(i) of Rule 901(a) that would assign the reporting duty for a clearing transaction to the registered clearing agency that is a counterparty to the security-based swap.

The Commission also is proposing to add a new subparagraph (3) to Rule 901(a) that would require any person that has a duty to report a security-based swap that is submitted to clearing—which would be a platform or a reporting side—to provide the registered clearing

291 See Regulation SBSR Adopting Release, Section XXI(B).

agency with the transaction ID of the alpha and the identity of the registered SDR to which the alpha will be reported or has been reported.

b. Proposed Use of Information

The security-based swap transaction information that would be required by the proposed amendments to Rule 901 would be used by registered SDRs, market participants, the Commission, and other relevant authorities. The information reported by platforms and registered clearing agencies pursuant to Rule 901 would be used by registered SDRs to publicly disseminate reports of security-based swap transactions, as well as to offer a resource for the Commission and other relevant authorities to obtain detailed information about the security-based swap market. Market participants also would use the information about these transactions that is publicly disseminated, among other things, to assess the current market for security-based swaps and any underlying securities and to assist in the valuation of their own positions. The Commission and other relevant authorities would use information about security-based swap transactions reported to and held by registered SDRs to monitor and assess systemic risks, as well as to examine for and consider whether to take enforcement action against potentially abusive trading behavior, as appropriate.

c. Respondents

In the Regulation SBSR Adopting Release, the Commission estimated 300 reporting side respondents and that, among the 300 reporting sides, approximately 50 are likely to be required to register with the Commission as security-based swap dealers and approximately five are likely to register as major security-based swap participants.[292] The Commission noted that these 55 reporting sides likely will account for the vast majority of recent security-based swap

292 See Regulation SBSR Adopting Release, Section XXI(B)(3).

transactions and reports and that there are only a limited number of security-based swap transactions that do not include at least one of these larger counterparties on either side.[293] Finally, the Commission estimated that the number of registered SDRs would not exceed ten.[294]

Proposed Rules 901(a)(1) and 901(a)(2)(i) would assign reporting duties for security-based swap transactions, in certain enumerated cases set forth in these rules, to platforms and registered clearing agencies, respectively. The Commission preliminarily believes that these proposed amendments to Rule 901(a) would result in 14 additional respondents incurring the duty to report under Regulation SBSR. Specifically, the Commission believes that there would be ten platforms (exchanges and SB SEFs) and four registered clearing agencies that would incur such duties. Proposed Rule 901(a)(3) would require a person—either the platform upon which the security-based swap was executed or the reporting side for those security-based swaps other than clearing transactions—to report, for those security-bases swaps submitted to a registered clearing agency, the transaction ID of the submitted security-based swap and the identity of the registered SDR to which the transaction will be or has been reported. The Commission preliminarily believes that proposed Rule 901(a)(3) would place reporting obligations on 300 reporting sides and 10 platforms.

d. Total Initial and Annual Reporting and Recordkeeping Burdens

i. Platforms and Registered Clearing Agencies

Pursuant to Rule 901, all security-based swap transactions must be reported to a registered SDR or to the Commission. Together, paragraphs (a), (b), (c), (d), (e), (h), and (j) of Rule 901 set forth the parameters that reporting entities must follow to report security-based

293 See id.

294 See id.

swap transactions. Because platforms and registered clearing agencies now would have the duty to report, initial and ongoing burdens would be placed on these entities. The Commission preliminarily believes that these burdens will be a function of, among other things, the number of reportable events and the data elements required to be reported for each such event.

In the Regulation SBSR Adopting Release, the Commission estimated that respondents would face three categories of burdens to comply with Rule 901.[295] The Commission preliminarily believes that platforms and registered clearing agencies would face the same categories of burdens as those identified in the Regulation SBSR Adopting Release for other types of respondents. First, each platform and registered clearing agency would likely have to develop the ability to capture the relevant transaction information.[296] Second, each platform and registered clearing agency would have to implement a reporting mechanism. Third, each platform and registered clearing agency would have to establish an appropriate compliance program and support for the operation of any system related to the capture and reporting of transaction information. The Commission preliminarily believes that platforms and registered clearing agencies would need to develop capabilities similar to those highlighted in the Regulation SBSR Adopting Release in order to be able to capture and report security-based swap transactions. The Commission also preliminarily believes that, once a platform or registered

[295] See Regulation SBSR Adopting Release, Section XXI(B)(4).

[296] In the Regulation SBSR Adopting Release, the Commission discussed the development, by reporting sides, of an internal order and trade management system. The Commission believes that the costs of developing a transaction processing system are comparable to the costs discussed therein. Although the actual reporting infrastructure needed by platforms and registered clearing agencies could have some attributes that differ from the attributes of an internal order and trade management system, the Commission nonetheless preliminarily believes that the cost of implementing a transaction processing system, and establishing an appropriate compliance program and support for the operation of the system, will be similar to the costs for reporting sides discussed in the Regulation SBSR Adopting Release.

clearing agency's reporting infrastructure and compliance systems are in place, the burden of reporting each individual reportable event will be small when compared to the burdens of establishing the reporting infrastructure and compliance systems.[297] The Commission preliminarily believes that all of the reportable events, for which platforms and registered clearing agencies would be responsible for reporting, will be reported through electronic means.

The Commission estimates that the total burden placed upon reporting sides as a result of Rule 901 would be approximately 1,361 hours[298] per reporting side during the first year.[299] The Commission preliminarily believes that this per-entity cost would be the same for platforms and registered clearing agencies, resulting in a total first-year burden of 19,054 hours for all platforms and registered clearing agencies under the proposed amendments to Rule 901.[300] The Commission estimates that the proposed amendments to Rule 901 would impose ongoing annualized aggregate burdens of approximately 654 hours[301] per reporting entity for a total

---

297 In the Regulation SBSR Adopting Release, the Commission reiterated its belief that reporting specific security-based swap transactions to a registered SDR—separate from the establishing of infrastructure and compliance systems that support reporting—would impose an annual aggregate cost of approximately $5,400,000. See Regulation SBSR Adopting Release, Section XXI(B)(4).

298 The Commission derived its estimate from the following: (355 hours (one-time hourly burden for establishing and OMS) + 172 hours (one-time hourly burden for establishing security-based swap reporting mechanisms) + 180 hours (one-time hourly burden for compliance and ongoing support) = 707 hours (one-time total hourly burden). See Regulation SBSR Proposing Release, 75 FR at 75248-50, notes 186, 194, and 201. (436 hours (annual-ongoing hourly burden for order management) + 218 hours (annual-ongoing hourly burden for compliance and ongoing support) = 654 hours (one-time total hourly burden. See id. at 75248-50, notes 187 and 201 (707 one-time hourly burden + 654 revised annual-ongoing hourly burden = 1,361 total first-year hourly burden).

299 See Regulation SBSR Adopting Release, Section XXI(B)(4).

300 The Commission derived its estimate from the following: (1,361 hours per reporting entity x 14 platforms and registered clearing agencies) = 19,054 hours.

301 See supra note 298.

aggregate annualized cost of 9,156 hours for all platforms and registered clearing agencies.[302] The Commission further preliminarily estimates that the proposed amendments to Rule 901 would impose initial and ongoing annualized dollar cost burdens of $201,000 per reporting entity,[303] for total aggregate initial and ongoing annualized dollar cost burdens of $2,814,000.[304]

In the Regulation SBSR Adopting Release, the Commission revised its previous estimates of the number of reportable events associated with security-based swap transactions to approximately 3 million reportable events per year under Rule 901, an estimate that the Commission continues to believe is valid for the purposes of the Regulation SBSR Proposed Amendments.[305] The Commission estimated in the Regulation SBSR Adopting Release that Rule 901(a), as adopted in that release, will result in approximately 2 million reportable events related to covered transactions.[306]

The Commission preliminarily estimates that 1 million of the 3 million total reportable events would be reported as a result of the proposed amendments to Rule 901.[307] The

302 The Commission derived its estimate from the following: (654 hours per reporting entity x 14 platforms and registered clearing agencies) = 9,156 hours.

303 This figure is based on the sum of per-reporting entity estimates for connectivity to SDRs for data reporting, as follows: [($100,000 hardware- and software-related expenses, including necessary back-up and redundancy, per SDR connection) x (2 SDR connections per reporting entity)] + [($250/gigabyte of storage capacity) x (4 gigabytes of storage capacity)] = $201,000. See Regulation SBSR Proposing Release, 75 FR at 75248-49, notes 188 and 193.

304 The Commission derived its estimate from the following: ($201,000 per reporting side x 14 reporting sides) = $2,814,000. See also Cross-Border Proposing Release, 78 FR at 31112-15.

305 See Regulation SBSR Adopting Release, Section XXI(B)(4)(b).

306 See id.

307 The Commission is proposing to amend Rule 901(a)(2) to require a registered clearing agency to be the reporting side for clearing transactions to which it is a counterparty. The Commission is further proposing to amend Rule 901(e)(1) to provide that a "registered

Commission believes that these 1 million reportable events would include the initial reporting of the security-based swap by platforms and clearing agencies as well as the reporting of any life cycle events. The Commission preliminarily estimates that of the 1 million reportable events, approximately 370,000 would involve the reporting of new security-based swap transactions, and approximately 630,000 would involve the reporting of life cycle events under Rule 901(e).[308] As a result, the Commission preliminarily estimates that platforms will be responsible for the reporting of approximately 120,000 security-based swaps.[309] The Commission preliminarily estimates that the proposed amendments to Rule 901(a) would result in platforms having a total burden of 600 hours attributable to the reporting of security-based swaps by platform to registered SDRs under Rules 901(c) and 901(d) over the course of a year.[310] The Commission

---

clearing agency shall report whether or not it has accepted a security-based swap for clearing." Proposed Rule 901(a)(2)(i), discussed above, would require registered clearing agencies to report security-based swap transaction information for clearing transactions. These reportable events have been included in the Commission's estimates of the number of reportable events for the purposes of Rule 901. In arriving at the of 1 million reporting events, the Commission has included the following: (1) the termination of the original or "alpha" security-based swap; (2) the creation of beta and gamma security-based swaps; (3) the termination of beta, gamma, and any previous open positions during each netting cycle; and (4) any other transactions that are entered into by the registered clearing agency.

308 See supra note 235.

309 The Commission preliminarily believes that platforms will be responsible only for the reporting of any initial security-based swaps that are executed on their facilities. Since only platform-executed security-based swaps that will be submitted to a registered clearing agency for clearing are subject to this proposal, platforms would not be responsible for any life cycle event reporting under Rule 901(e). The Commission estimates that platforms would be responsible for reporting only approximately one third of the 360,000 security-based swaps (or 120,000 security-based swaps) and registered clearing agencies (as a result of the creation of new security-based swaps during the clearing process) would be responsible for the reporting of the remaining two-thirds of security-based swaps (or 250,000 security-based swaps).

310 See Regulation SBSR Adopting Release, Section XXI(B)(4). In the Regulation SBSR Proposing Release, the Commission estimated that it would take approximately 0.005

preliminarily estimates that the proposed amendments to Rule 901(a) would result in registered clearing agencies having a total burden of 1,250 hours attributable to the reporting of security-based swaps to registered SDRs over the course of a year.[311] The Commission preliminarily estimates that the proposed amendments to Rule 901(a) would result in registered clearing agencies having a total burden of 3,150 hours attributable to the reporting of life cycle events to registered SDRs under Rule 901(e) over the course of a year.[312] The Commission preliminarily believes that the proposed amendments would result in a total reporting burden for registered clearing agencies under Rules 901(c) and (d) along with the reporting of life cycle events under Rule 901(e) of 4,400 burden hours.[313] The Commission believes that all reportable events that

---

hours for each security-based swap transaction to be reported. See 75 FR at 75249, note 195. The Commission calculates the following: ((120,000 x 0.005) / (10 platforms)) = 60 burden hours per platform or 600 total burden hours attributable to the reporting of security-based swaps.

311 See Regulation SBSR Adopting Release, Section XXI(B)(4). In the Regulation SBSR Proposing Release, the Commission estimated that it would take approximately 0.005 hours for each security-based swap transaction to be reported. See 75 FR at 75249, note 195. The Commission calculates the following: ((250,000 x 0.005) / (4 registered clearing agencies)) = 312.5 burden hours per registered clearing agency or 1,250 total burden hours attributable to the reporting of security-based swaps.

312 See Regulation SBSR Adopting Release, Section XXI(B)(4). In the Regulation SBSR Proposing Release, the Commission estimated that it would take approximately 0.005 hours for each security-based swap transaction to be reported. See 75 FR at 75249, note 195. The Commission calculates the following: ((630,000 x 0.005) / (4 registered clearing agencies)) = 787.5 burden hours per registered clearing agency or 3,150 total burden hours attributable to the reporting of life cycle events under Rule 901(e).

313 As is discussed immediately above, the Commission preliminarily believes that registered clearing agencies would incur a burden of 1,250 hours attributable to the reporting of security-based swaps pursuant to proposed Rule 901(a)(2)(i) along with a burden of 3,150 hours attributable to the reporting of life cycle events under Rule 901(e). As discussed in note 309, supra, platforms would not be responsible for the reporting of any life cycle events of any platform-executed security-based swap that will be submitted to clearing.

would be reported by platforms and registered clearing agencies pursuant to these proposed amendments would be reported through electronic means.

The Commission recognizes that some entities that would qualify as platforms or registered clearing agencies may have already spent time and resources building the infrastructure that will support their eventual reporting of security-based swaps. The Commission notes that, as a result, the burdens and costs estimated herein could be greater than those actually incurred by affected parties as a result of compliance with the proposed amendments to Rule 901(a). Nonetheless, the Commission believes that its estimates represent a reasonable upper bound of the actual burdens and costs required to comply with the paperwork burdens associated with the proposed amendments to Rule 901(a).

ii. Platforms and Reporting Sides

Proposed Rule 901(a)(3) would require a person, either the platform upon which the security-based swap was executed or the reporting side for those security-based swaps other than clearing transactions, to report, for those security-bases swaps submitted to a registered clearing agency, the transaction ID of the submitted security-based swap and the identity of the registered SDR to which the transaction will be or has been reported.

Rule 901(a)(3) would require certain information (transaction ID and the identity of the registered SDR) to be reported to a registered clearing agency only if such security-based swap has been submitted to a registered clearing agency for clearing. As a result, platforms and reporting sides required to report transaction IDs and the identity of a registered SDR will already have put into place any infrastructure needed to report these security-based swaps to a registered clearing agency.[314] However, the Commission does believe that including these items would result in additional development and maintenance burdens. Specifically, the Commission preliminarily believes that the additional one-time burden related to the development of the ability to capture the additional specific data elements required by proposed Rule 901(a)(3) would be 10 burden hours and the additional one-time burden related to the implementation of a reporting mechanism would be 6 burden hours, per platform and reporting side.[315] The Commission preliminarily believes that the additional ongoing burden related to the ability to capture the additional specific data elements required by proposed Rule 901(a)(3) would be 10 burden hours and the additional ongoing burden related to the maintenance of the reporting mechanism would be 2 burden hours, per platform and reporting side.[316]

iii. Bunched Order Executions and Allocations

---

314 The required infrastructure for platforms and related burdens and costs are discussed in Section IX(B)(2)(d)(i), supra. For reporting sides, the required infrastructure and related burdens and costs are already accounted for in the Regulation SBSR Adopting Release, Section XXI(B)(4). The additional burdens discussed in this paragraph related to the ability to capture the additional specific data elements, as would be required by proposed Rule 901(a)(3), would be incremental burdens that are in addition to the previously established infrastructure burdens and costs.

315 The Commission preliminarily estimates that the additional burdens would be: [(Sr. Programmer (5 hours) + Sr. Systems Analyst (5 hours)) = 10 burden hours (development of the ability to capture transaction information); (Sr. Programmer (3 hours) + Sr. Systems Analyst (3 hours)) = 6 burden hours (implementation of reporting mechanism)]. The total one-time burden associated with the amendments to 901(a) would be 16 burden hours per platform and reporting side for a total one-time burden of 4960 hours (16 x 310 (300 reporting sides + 10 platforms)).

316 The Commission preliminarily estimates that the additional burdens would be: [(Sr. Programmer (5 hours) + Sr. Systems Analyst (5 hours)) = 10 burden hours (maintenance of transaction capture system); (Sr. Programmer (1 hour) + Sr. Systems Analyst (1 hour)) = 2 burden hours (maintenance of reporting mechanism)]. The total ongoing burden associated with the proposed amendments to Rule 901(a) would be 12 burden hours per platform and reporting side for a total ongoing burden of 3,720 hours (12 x 310 (300 reporting sides + 10 platforms)).

As explained in Section VIII of the Regulation SBSR Adopting Release and Section III, supra, bunched order executions and allocations must be reported to a registered SDR pursuant to Rule 901(a). The Regulation SBSR Adopting Release explains how Regulation SBSR applies to executed bunched orders that are reported pursuant to the reporting hierarchy in Rule 901(a)(2)(ii), as adopted. That release also explains how Regulation SBSR applies to the security-based swaps that result from allocation of an executed bunched order, if the resulting security-based swaps are uncleared. In Section III, supra, the Commission explained how Regulation SBSR, as adopted and as proposed to be amended by this release, would apply to a platform-executed bunched order that will be submitted to clearing, and the security-based swaps that result from the allocation of any bunched order execution, if the resulting security-based swaps are cleared. The Commission included in its estimates of the number of reportable events in the Regulation SBSR Adopting Release security-based swaps that result from the allocation of bunched order executions that would be submitted to clearing, if the resulting security-based swaps are cleared. Thus, there is no burden associated with bunched order executions and allocations that has not already been taken into account.

iv. Prime Brokerage Transactions

The Commission preliminarily believes that in a prime brokerage transaction the customer/executing dealer transaction is a security-based swap that must be reported pursuant to Rule 901(a)(2)(ii), as adopted. The Commission further preliminarily believes that the prime broker/customer and prime broker/executing dealer transactions also are security-based swaps that must be reported pursuant to Rule 901(a)(2)(ii). In this release, the Commission clarifies that prime brokerage transactions were included in the estimates of security-based swap transactions that are required to be reported, and as a result, do not represent any new burdens.[317]

e. Recordkeeping Requirements

Apart from the duty to report certain transaction information to a registered SDR, the Commission does not believe that Rule 901 would result in any recordkeeping requirement for platform and reporting sides. As is stated in the SDR Adopting Release, Rule 13n-5(b)(4) under the Exchange Act requires an SDR to maintain the transaction data and related identifying information that it collects for not less than five years after the applicable security-based swap expires, and historical positions for not less than five years.[318] Accordingly, security-based swap transaction reports received by a registered SDR pursuant to Rule 901 would be required to be retained by the registered SDR for not less than five years after the applicable security-based swap expires. The Commission does not believe that reporting of security-based swap transactions by platforms or registered clearing agencies—or the inclusion of two additional data elements—would have any impact on the PRA burdens of registered SDRs as detailed in the SDR Adopting Release.

f. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

g. Confidentiality of Responses to Collection of Information

---

317 As is discussed in Section VIII(D)(6), supra, the Commission does not believe that the interpretive guidance would create any new duties. As a result, the Commission does not believe that there would be any burdens or any additional costs or benefits beyond those already considered in the Regulation SBSR Adopting Release. The Commission's estimates of the number of reportable events included all legs of prime brokerage transactions. See supra note 276.

318 See SDR Adopting Release, Section VI(E)(4).

A registered SDR, pursuant to Sections 13(n)(5) of the Exchange Act and Rules 13n-4(b)(8) and 13n-9 thereunder, is required to maintain the privacy of the security-based swap information it receives. For the majority of security-based swap transactions, the information collected pursuant to Rule 901(c) by a registered SDR will be publicly disseminated. However, certain security-based swaps are not subject to Rule 902's public dissemination requirement; therefore, information about these transactions will not be publicly available. In addition, for all security-based swaps, the information collected pursuant to Rule 901(d) is for regulatory purposes only and will not be widely available to the public. To the extent that the Commission receives confidential information pursuant to this collection of information, such information would be kept confidential, subject to the provisions of applicable law.

3. Rule 901—Aggregate Total PRA Burdens and Costs

Based on the foregoing, the Commission estimates the following aggregate total PRA burdens and costs, by category of entity, resulting from Rule 901, as adopted and as proposed to be amended herein.

a. For Platforms

As discussed above, the Regulation SBSR Adopting Release, the Commission estimated burdens and costs for reporting sides under Rule 901. The Commission estimated that Rule 901, as adopted, will impose an estimated total first-year burden of approximately 1,394 hours[319] per reporting side for a total first-year burden of 418,200 hours for all reporting sides.[320] The Commission estimated that Rule 901, as adopted, will impose ongoing annualized aggregate

[319] See Regulation SBSR Adopting Release, Section XXI(B).

[320] See id.

burdens of approximately 687 hours[321] per reporting side for a total aggregate annualized cost of 206,100 hours for all reporting sides.[322] The Commission further estimated that Rule 901, as adopted, will impose initial and ongoing annualized dollar cost burdens of $201,000 per reporting side, for total aggregate initial and ongoing annualized dollar cost burdens of $60,300,000.[323]

The Commission preliminarily believes that platforms would have a first-year burden of 1,361 hours per platform, for a total first-year burden of 13,610 hours under proposed Rule 901(a)(1).[324] The Commission also preliminarily estimates that proposed Rule 901(a)(1) would impose ongoing annualized aggregate burdens of approximately 654 hours[325] per platform for a total aggregate annualized burden of 6,540 hours for all platforms.[326] The Commission further preliminarily estimates that the proposed Rule 901(a)(1) would impose initial and ongoing annualized dollar cost burdens of $201,000 per platform,[327] for total aggregate initial and ongoing annualized dollar cost burdens of $2,010,000.[328]

---

321 See id.

322 See id.

323 See id.

324 The Commission derived its estimate from the following: (1,361 hours per platform x 10 platforms) = 13,610 hours.

325 See Cross-Border Proposing Release, 78 FR at 31112-15.

326 The Commission derived its estimate from the following: (654 hours per platform x 10 platforms) = 6,540 hours.

327 This figure is based on the sum of per-entity estimates for connectivity to SDRs for data reporting, as follows: [($100,000 hardware- and software-related expenses, including necessary back-up and redundancy, per SDR connection) x (2 SDR connections per platform)] + [($250/gigabyte of storage capacity) x (4 gigabytes of storage capacity)] = $201,000.

328 The Commission derived its estimate from the following: ($201,000 per platform x 10 platforms) = $2,010,000. See also Cross-Border Proposing Release, 78 FR at 31112-15.

The Commission preliminarily estimates that the proposed amendments to Rule 901(a) would result in platforms having a total burden of 600 hours attributable to the reporting of security-based swaps to registered SDRs over the course of a year, or 60 hours per platform.

The Commission preliminarily believes that the additional one-time burden related to the development of the ability to capture the relevant transaction information, required by proposed Rule 901(a)(3), would be 10 burden hours and the additional one-time burden related to the implementation of a reporting mechanism would be 6 burden hours, per platform. The Commission preliminarily believes that the additional ongoing burden related to the development of the ability to capture the relevant transaction information would be 10 burden hours and the additional ongoing burden related to the maintenance of the reporting mechanism would be 2 burden hours, per platform. As a result, the Commission estimates that the total first-year burden would be 28 hours and the ongoing annual burden would be 12 hours.

As a result of these proposed requirements, the Commission preliminarily estimates that platforms would have a total first-year burden of 14,490 hours, or 1,449 hours per platform.[329] In addition, the Commission preliminarily estimates that platforms would have an ongoing annual burden of 7,260 hours, or 726 hours per platform.[330] The Commission also preliminarily estimates that each platform would have connectivity costs of $201,000 in the first year and each year thereafter.

b. For Registered Clearing Agencies

329 The Commission derived its estimate from the following: ((1,361 hours + 60 hours + 28) per platform x 10 platforms) = 14,490 hours.

330 The Commission derived its estimate from the following: ((654 hours + 60 hours + 12 hours) per platform x 10 platforms) = 7,260 hours.

The Commission preliminarily believes that registered clearing agencies would have a first-year burden of 1,361 hours per registered clearing agency, for a total first-year burden of 5,444 hours under Rule 901 (before including the burdens related to the reporting of individual security-based swap transactions).[331] The Commission also preliminarily estimates that Rule 901 would impose ongoing annualized aggregate burdens of approximately 654 hours[332] per registered clearing agency for a total aggregate annualized burden of 2,616 hours for all registered clearing agencies.[333] The Commission further preliminarily estimates that the proposed Rule 901(a)(2)(i) would impose initial and ongoing annualized dollar cost burdens of $201,000 per registered clearing agency,[334] for total aggregate initial and ongoing annualized dollar cost burdens of $804,000.[335]

The Commission preliminarily estimates that the proposed Rule 901(a)(2)(i) would result in registered clearing agencies having a total burden of 1,250 hours attributable to the initial reporting of security-based swaps to registered SDRs over the course of a year, or 312.5 hours per registered clearing agency. The Commission preliminarily estimates that the proposed amendments to Rule 901(a) would result in registered clearing agencies having a total burden of

---

331 The Commission derived its estimate from the following: (1,361 hours per registered clearing agency x 4 registered clearing agencies) = 5,444 hours.

332 See supra note 302

333 The Commission derived its estimate from the following: (654 hours per reporting entity x 4 registered clearing agencies) = 2,616 hours.

334 This figure is based on the sum of per-reporting entity estimates for connectivity to SDRs for data reporting, as follows: [($100,000 hardware- and software-related expenses, including necessary back-up and redundancy, per SDR connection) x (2 SDR connections per reporting entity)] + [($250/gigabyte of storage capacity) x (4 gigabytes of storage capacity)] = $201,000.

335 The Commission derived its estimate from the following: ($201,000 per reporting side x 4 registered clearing agencies) = $804,000. See also Cross-Border Proposing Release, 78 FR at 31112-15.

3,150 hours attributable to the reporting of life cycle events by registered clearing agencies to registered SDRs under Rule 901(e) over the course of a year, or 787.5 hours per registered clearing agency. The Commission preliminarily believes that the proposed amendments would result in a total annual burden on registered clearing agencies to report security-based swaps and life cycle events of 4,400 burden hours, or 1,100 hours per registered clearing agency.

The Commission preliminarily estimates that, as a result of these proposed requirements, registered clearing agencies would have a total first-year burden of 9,844 hours, or 2,461 hours per registered clearing agency.[336] In addition, the Commission preliminarily estimates that registered clearing agencies would have an ongoing annual burden of 7,328 hours, or 1,754 hours per registered clearing agency.[337] The Commission also preliminarily estimates that each registered clearing agency would have connectivity costs of $201,000 in the first year and each year thereafter.[338]

c. For Reporting Sides

The Commission preliminarily believes that, as a result of proposed Rule 901(a)(3), reporting sides would have a first-year burden of 1,394 hours per reporting side, for a total first-year burden of 418,200 hours.[339] The Commission also preliminarily estimates that proposed Rule 901(a)(3) would impose ongoing annualized aggregate burdens of approximately 687

---

336 The Commission derived its estimate from the following: ((1,361 hours + 312.5 hours + 787.5 hours) per registered clearing agency x 4 registered clearing agencies) = 9,844 hours.

337 The Commission derived its estimate from the following: ((654 hours + 312.5 hours + 787.5 hours) per registered clearing agency x 4 registered clearing agencies) = 7,016 hours.

338 See supra note 334.

339 The Commission derived its estimate from the following: (1,394 hours per reporting side x 300 reporting sides) = 418,200 hours.

hours[340] per reporting side, for a total aggregate annualized burden of 206,100 hours for all reporting sides.[341] The Commission further preliminarily estimates that the proposed Rule 901(a)(3) would impose initial and ongoing annualized dollar cost burdens of $201,000 per registered clearing agency,[342] for total aggregate initial and ongoing annualized dollar cost burdens of $60,300,000.[343]

As discussed above, the Commission estimated that Rule 901(a), as previously adopted, will result in reporting sides having a total burden of 2,500 hours attributable to the reporting of security-based swaps to registered SDRs under Rules 901(c) and 901(d) over the course of a year, or 8.33 hours per reporting side. The Commission further estimated that Rule 901(a), as previously adopted, would result in reporting sides having a total burden of 7,500 hours attributable to the reporting of life cycle events to registered SDRs under Rule 901(e) over the course of a year, or 25 hours per reporting side. As a result, the Commission stated its belief that the total burden associated with the reporting of security-based swaps under Rules 901(c) and 901(d), along with the reporting of life cycle events under Rule 901(e), would be 10,000 hours, or 33.33 hours per reporting side.

340 See Cross-Border Proposing Release, 78 FR at 31112-15.

341 The Commission derived its estimate from the following: (687 hours per reporting side x 300 reporting sides) = 206,100 hours.

342 This figure is based on the sum of per-reporting side estimates for connectivity to SDRs for data reporting, as follows: [($100,000 hardware- and software-related expenses, including necessary back-up and redundancy, per SDR connection) x (2 SDR connections per reporting side)] + [($250/gigabyte of storage capacity) x (4 gigabytes of storage capacity)] = $201,000.

343 The Commission derived its estimate from the following: ($201,000 per reporting side x 300 reporting sides) = $60,300,000. See also Cross-Border Proposing Release, 78 FR at 31112-15.

The Commission preliminarily believes that the additional one-time burden related to the development of the ability to capture the relevant transaction information, required by proposed Rule 901(a)(3), would be 10 burden hours and the additional one-time burden related to the implementation of a reporting mechanism would be 6 burden hours, per reporting side. The Commission preliminarily believes that the additional ongoing burden related to the development of the ability to capture the relevant transaction information would be 10 burden hours and the additional ongoing burden related to the maintenance of the reporting mechanism would be 2 burden hours, per reporting side. As a result, the Commission estimates that the total first-year burden would be 28 hours and the ongoing annual burden would be 12 hours.

As a result of these proposed requirements, the Commission preliminarily estimates that reporting sides would have a total first-year burden of 436,599 hours, or 1,455.33 hours per reporting side.[344] In addition, the Commission preliminarily estimates that reporting sides would have an ongoing annual burden of 219,699 hours, or 732.33 hours per reporting side.[345] The Commission also preliminarily estimates that each reporting side would have connectivity costs of $201,000 in the first year and each year thereafter.

C. Correction of Errors in Security-Based Swap Information—Rule 905

1. Rule 905—As Adopted

Rule 905, as adopted, establishes procedures for correcting errors in reported and disseminated security-based swap information. Under Rule 905(a)(1), where a side that was not the reporting side for a security-based swap transaction discovers an error in the information

344 The Commission derived its estimate from the following: ((1,394 hours + 33.33 hours + 28) per reporting sides x 300 reporting sides) = 436,599 hours.

345 The Commission derived its estimate from the following: ((687 hours + 33.33 hours + 12 hours) per reporting side x 300 reporting sides) = 219,699 hours.

reported with respect to such security-based swap, the counterparty must promptly notify the reporting side of the error. Under Rule 905(a)(2), as adopted, where a reporting side for a security-based swap transaction discovers an error in the information reported with respect to a security-based swap, or receives notification from its counterparty of an error, the reporting side must promptly submit to the entity to which the security-based swap was originally reported an amended report pertaining to the original transaction. The amended report must be submitted to the registered SDR in a manner consistent with the policies and procedures of the registered SDR required pursuant to Rule 907(a)(3).

Rule 905(b), as adopted, sets forth the duties of a registered SDR relating to corrections. If the registered SDR either discovers an error in a transaction on its system or receives notice of an error from a reporting side, Rule 905(b)(1) requires the registered SDR to verify the accuracy of the terms of the security-based swap and, following such verification, promptly correct the erroneous information contained in its system. Rule 905(b)(2) further requires that, if such erroneous information relates to a security-based swap that the registered SDR previously disseminated and falls into any of the categories of information enumerated in Rule 901(c), the registered SDR must publicly disseminate a corrected transaction report of the security-based swap promptly following verification of the trade by the counterparties to the security-based swap, with an indication that the report relates to a previously disseminated transaction. .

In the Regulation SBSR Adopting Release, the Commission stated its belief that, with respect to reporting sides, Rule 905(a) will impose an initial, one-time burden associated with designing and building the reporting side's reporting system to be capable of submitting amended security-based swap transactions to a registered SDR. In the Regulation SBSR Adopting Release, for reporting sides, the Commission estimated that Rule 905(a) will impose an initial (first-year) aggregate burden of 15,015 hours, which is 50.0 burden hours per reporting side,[346] and an ongoing aggregate annualized burden of 7,035 hours, which is 23.5 burden hours per reporting side.[347]

With respect to the actual submission of amended transaction reports required under Rule 905(a)(2), the Commission stated its belief that this will not result in a material burden because this will be done electronically though the reporting system that the reporting side must develop and maintain to comply with Rule 901. The overall burdens associated with such a reporting system are addressed in the Commission's analysis of Rule 901.

With regard to non-reporting-side participants, the Commission stated its belief that Rule 905(a) will impose an initial and ongoing burden associated with promptly notifying the relevant reporting entity after discovery of an error as required under Rule 905(a)(1). In the Regulation SBSR Adopting Release, the Commission estimated that the annual burden will be 998,640 hours, which corresponds to 208.05 burden hours per non-reporting-side participant.[348] This figure was based on the Commission's estimate of (1) 4,800 non-reporting-side participants; and (2) 1 transaction per day per non-reporting-side participant.[349] The burdens of Rule 905 on reporting sides and non-reporting-side participants will be reduced to the extent that complete and accurate information is reported to registered SDRs in the first instance pursuant to Rule 901.

Rule 905(b) requires a registered SDR to develop protocols regarding the reporting and correction of erroneous information. In the Regulation SBSR Adopting Release, however, the

---

346 See Regulation SBSR Adopting Release, Section XXI(F).

347 See id.

348 See id.

349 See id.

Commission stated its belief that this duty would represent only a minor extension of other duties for which the Commission is estimating burdens, and consequently, will not impose substantial additional burdens on a registered SDR. The Commission noted that a registered SDR will be required to have the ability to collect and maintain security-based swap transaction reports and update relevant records under the rules adopted in the SDR Adopting Release. Likewise, the Commission noted that a registered SDR must have the capacity to disseminate additional, corrected security-based swap transaction reports under Rule 902. The Commission concluded that the burdens associated with Rule 905—including systems development, support, and maintenance—are addressed in the Commission's analysis of those other rules and, thus, the Commission stated its belief that Rule 905(b) will impose only an incremental additional burden on registered SDRs. In the Regulation SBSR Adopting Release, the Commission estimated that developing and publicly providing the necessary procedures will impose on each registered SDR an initial one-time burden on each registered SDR of approximately 730 burden hours.[350] The Commission further estimated that to review and update such procedures on an ongoing basis will impose an annual burden on each SDR of approximately 1,460 burden hours.[351]

Accordingly, in the Regulation SBSR Adopting Release, the Commission estimated that the initial (first-year) aggregate annualized burden on registered SDRs under Rule 905 will be 21,900 burden hours, which corresponds to 2,190 burden hours for each registered SDR.[352] The Commission further estimated that the ongoing aggregate annualized burden on registered SDRs

---

[350] See id.

[351] See id.

[352] See id.

under Rule 905 will be 14,600 burden hours, which corresponds to 1,460 burden hours for each registered SDR.[353]

2. Rule 905—Proposed Amendments

Rule 905, as adopted, establishes a mechanism for reporting corrections of previously submitted security-based swap transaction information and assigns certain duties to the counterparties to a transaction and to the registered SDR that holds the transaction. In light of the Commission's proposed amendment to Rule 901(a) to require a platform to report a security-based swap that is executed on the platform and that will be submitted to clearing, the Commission is proposing to make conforming changes to Rule 905(a) to require the person having the duty to report the initial transaction to correct previously reported erroneous information if it discovers an error. Thus, under the proposed amendments to Rule 905(a), the person having the duty to report a security-based swap, whether a counterparty or a platform, would be required to correct previously reported erroneous information with respect to that security-based swap if it discovers an error.

Certain provisions of Rule 905 of Regulation SBSR contain "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 905—Correction of Errors in Security-Based Swap Information."

a. Summary of Collection of Information

Rule 905 establishes duties for security-based swap counterparties and registered SDRs to correct errors in information that previously has been reported.

Duty to correct. Under the proposed amendment to Rule 905(a)(1), where a person that was not the reporting side for a security-based swap transaction discovers an error in the

353 See id.

information reported with respect to such security-based swap, that person must promptly notify the person having the duty to report the security-based swap of the error. Under the proposed amendment to Rule 905(a)(2), where a person having the duty to report a security-based swap transaction discovers an error in the information reported with respect to a security-based swap, or receives notification from a counterparty of an error, such person must promptly submit to the entity to which the security-based swap was originally reported an amended report pertaining to the original transaction. The amended report must be submitted to the registered SDR in a manner consistent with the policies and procedures of the registered SDR required pursuant to Rule 907(a)(3), as adopted. As a result the proposed amendments to Rule 905, a platform would have the duty to report if it discovers an error.

b. Proposed Use of Information

The security-based swap transaction information required to be reported under the proposed amendments to Rule 905 would be used by registered SDRs, its participants, the Commission, and other relevant authorities. Participants will be able to use such information to evaluate and manage their own risk positions and satisfy their duties to report corrected information to a registered SDR. A registered SDR will need the required information to correct security-based swap transaction records, in order to maintain an accurate record of a participant's positions as well as to disseminate corrected information. The Commission and other relevant authorities will need the corrected information to have an accurate understanding of the market for surveillance and oversight purposes.

c. Respondents

Rule 905, as proposed to be amended, would apply to platforms. As noted above, the Commission estimates that there will be approximately 10 platforms that incur a duty to report security-based swap transactions pursuant to Rule 901.

d. Total Initial and Annual Reporting and Recordkeeping Burdens

In the Regulation SBSR Adopting Release, the Commission estimated that Rule 905(a), as adopted, will impose an initial, one-time burden associated with designing and building the reporting side's reporting system to be capable of submitting amended security-based swap transactions to a registered SDR.[354] The Commission stated its belief that designing and building appropriate reporting system functionality to comply with Rule 905(a)(2), as adopted, will be a component of, and represent an incremental "add-on" to, the cost to build a reporting system and develop a compliance function as required under Rule 901, as adopted.[355] Specifically, the Commission estimated that, based on discussions with industry participants, the incremental burden would be equal to 5% of the one-time and annual burdens associated with designing and building a reporting system that is in compliance with Rule 901, plus 10% of the corresponding one-time and annual burdens associated with developing the reporting side's overall compliance program required under Rule 901.[356]

The Commission preliminarily believes that the above methodology is applicable to error reporting by platforms under the proposed amendments to Rule 905(a). Thus, for platforms, the Commission estimates that the proposed amendments to Rule 905(a) would impose an initial

---

354 See id.

355 See id.

356 See id.

(first-year) aggregate burden of 500.5 hours, which is 50.0 burden hours per platform,[357] and an ongoing aggregate annualized burden of 234.5 hours, which is 23.5 burden hours per platform.[358]

e. Recordkeeping Requirements

Security-based swap transaction reports received pursuant to Rule 905 are subject to Rule 13n-5(b)(4) under the Exchange Act. This rule requires an SDR to maintain the transaction data and related identifying information for not less than five years after the applicable security-based swap expires and historical positions for not less than five years.

With respect to corrected information that is disseminated by a registered SDR in compliance with Rule 905(b)(2), Rule 13n-7(b) under the Exchange Act requires an SDR to keep and preserve at least one copy of all documents, including all policies and procedures required by the Exchange Act and the rules or regulations thereunder, for a period of not less than five years, the first two years in a place that is immediately available. This requirement encompasses amended security-based swap transaction reports disseminated by the registered SDR. The amendments to Rule 905(a) clarify the duties of counterparties and other persons to report corrected information to a registered SDR. The requirement that a registered SDR disseminate corrected information would not change. The Commission preliminarily believes that the number of corrections reported to the registered SDR would not be impacted by the proposed

357 See Regulation SBSR Proposing Release, 75 FR at 75254-55. This figure is calculated as follows: [(((172 burden hours for one-time development of reporting system) x (0.05)) + ((33 burden hours annual maintenance of reporting system) x (0.05)) + ((180 burden hours one-time compliance program development) x (0.1)) + ((218 burden hours annual support of compliance program) x (0.1))) x (10 platforms)] = 500.5 burden hours, which is 50 burden hours per reporting side. See also Regulation SBSR Adopting Release, Section XXI(F).

358 See Regulation SBSR Proposing Release, 75 FR at 75254-55. This figure is calculated as follows: [(((33 burden hours annual maintenance of reporting system) x (0.05)) + ((218 burden hours annual support of compliance program) x (0.1))) x (10 platforms)] = 234.5 burden hours, which is 23.5 burden hours per platform.

amendments. As a result, the Commission preliminarily believes that the burdens under Rule 905(b)(2) would not be impacted by the proposed amendments to Rule 905(a).

f. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

g. Confidentiality of Responses to Collection of Information

Information collected pursuant to the proposed amendments to Rule 905 would be widely available to the extent that it corrects information previously reported pursuant to Rule 901(c) and incorporated into security-based swap transaction reports that are publicly disseminated by a registered SDR pursuant to Rule 902. Most of the information required under Rule 902 will be widely available to the public to the extent it is incorporated into security-based swap transaction reports that are publicly disseminated by a registered SDR pursuant to Rule 902. However, Rule 902(c) prohibits public dissemination of certain kinds of transactions and certain kinds of transaction information. An SDR, pursuant to Sections 13(n)(5) of the Exchange Act and Rules 13n-4(b)(8) and Rule 13n-9 thereunder, is required to maintain the privacy of this security-based swap information. To the extent that the Commission receives confidential information pursuant to this collection of information, such information will be kept confidential, subject to the provisions of applicable law.

3. Rule 905—Aggregate Total PRA Burdens and Costs

The Commission estimates the following aggregate total PRA burdens and costs, by category of entity, resulting from the proposed amendments to Rule 905.

a. For Platforms

For platforms, the Commission estimates that the proposed amendments to Rule 905(a) would impose an initial (first-year) aggregate burden of 500.5 hours, which is 50.0 burden hours per platform,[359] and an ongoing aggregate annualized burden of 234.5 hours, which is 23.5 burden hours per platform.[360]

For reporting sides, the Commission estimates that Rule 905(a), as adopted, will impose an initial (first-year) aggregate burden of 15,015 hours, which is 50.0 burden hours per reporting side,[361] and an ongoing aggregate annualized burden of 7,035 hours, which is 23.5 burden hours per reporting side.[362]

b. For Non-Reporting Sides

For non-reporting sides, the Commission estimates that the annual burden will be 998,640 hours, which corresponds to 208.05 burden hours per non-reporting-side participant.[363]

---

359 This figure is calculated as follows: [(((172 burden hours for one-time development of reporting system) x (0.05)) + ((33 burden hours annual maintenance of reporting system) x (0.05)) + ((180 burden hours one-time compliance program development) x (0.1)) + ((218 burden hours annual support of compliance program) x (0.1))) x (10 platforms)] = 500.5 burden hours, which is 50 burden hours per reporting side.

360 This figure is calculated as follows: [(((33 burden hours annual maintenance of reporting system) x (0.05)) + ((218 burden hours annual support of compliance program) x (0.1))) x (10 platforms)] = 234.5 burden hours, which is 23.5 burden hours per platform.

361 This figure is calculated as follows: [(((172 burden hours for one-time development of reporting system) x (0.05)) + ((33 burden hours annual maintenance of reporting system) x (0.05)) + ((180 burden hours one-time compliance program development) x (0.1)) + ((218 burden hours annual support of compliance program) x (0.1))) x (300 reporting sides)] = 15,015 burden hours, which is 50 burden hours per reporting side. The burden hours for annual maintenance of the reporting system has been updated to reflect new information on the number of reportable events.

362 This figure is calculated as follows: [(((33 burden hours annual maintenance of reporting system) x (0.05)) + ((218 burden hours annual support of compliance program) x (0.1))) x (300 reporting sides)] = 7,035 burden hours, which is 23.5 burden hours per reporting side. The burden hours for annual maintenance of the reporting system has been updated to reflect new information on the number of reportable events.

363 This figure is based on the following: [(1.14 error notifications per non-reporting-side participant per day) x (365 days/year) x (Compliance Clerk at 0.5 hours/report) x (4,800 non-reporting-side participants)] = 998,640 burden hours, which corresponds to 208.05 burden hours per non-reporting-side participant.

c. For Registered SDRs

For registered SDRs, the Commission estimates that the initial (first-year) aggregate annualized burden on registered SDRs under Rule 905, as adopted and as proposed to be amended herein, would be 21,900 burden hours, which corresponds to 2,190 burden hours for each registered SDR.[364] The Commission further estimates that the ongoing aggregate annualized burden on registered SDRs under Rule 905, as adopted and as proposed to be amended herein, would be 14,600 burden hours, which corresponds to 1,460 burden hours for each registered SDR.[365]

D. Other Duties of Participants—Rule 906

1. Rule 906—As Adopted

Rule 906(a), as adopted, sets forth a procedure designed to ensure that a registered SDR obtains relevant UICs for both sides of a security-based swap, not just of the reporting side. Rule 906(a) requires a registered SDR to identify any security-based swap reported to it for which the registered SDR does not have a counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID of each counterparty. Rule 906(a) further requires the registered SDR, once a day, to send a report to each participant identifying, for each security-based swap to which that participant is a counterparty, the security-based swap(s) for which the registered SDR lacks counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID. A participant that

364 This figure is based on the following: [(730 burden hours to develop protocols) + (1,460 burden hours annual support)) x (10 registered SDRs)] = 21,900 burden hours, which corresponds to 2,190 burden hours per registered SDR.

365 This figure is based on the following: [(1,460 burden hours annual support) x (10 registered SDRs)] = 14,600 burden hours, which corresponds to 1,460 burden hours per registered SDR.

receives such a report must provide the missing ID information to the registered SDR within 24 hours.

Rule 906(b) requires each participant of a registered SDR to provide the registered SDR with information sufficient to identify the participant's ultimate parent(s) and any affiliate(s) of the participant that are also participants of the registered SDR.

Rule 906(c) requires each participant that is a registered security-based swap dealer or registered major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation SBSR. In addition, Rule 906(c) requires each such participant to review and update its policies and procedures at least annually.

For Registered SDRs. Rule 906(a) requires a registered SDR, once a day, to send a report to each of its participants identifying, for each security-based swap to which that participant is a counterparty, any security-based swap(s) for which the registered SDR lacks counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID. In the Regulation SBSR Adopting Release, the Commission estimated that there will be a one-time, initial burden of 112 burden hours for a registered SDR to create a report template and develop the necessary systems and processes to produce a daily report required by Rule 906(a).[366] Further, the Commission estimated that there will be an ongoing annualized burden of 308 burden hours for a registered SDR to generate and issue the daily reports, and to enter into its systems the ID information supplied by participants in response to the daily reports.[367]

---

366 See Regulation SBSR Adopting Release, Section XXI(G).

367 See id.

Accordingly, in the Regulation SBSR Adopting Release, the Commission estimated that the initial aggregate annualized burden for registered SDRs under Rule 906(a) will be 4,200 burden hours for all SDR respondents, which corresponds to 420 burden hours per registered SDR.[368] The Commission estimated that the ongoing aggregate annualized burden for registered SDRs under Rule 906(a) will be 3,080 burden hours, which corresponds to 308 burden hours per registered SDR.[369]

For Participants. Rule 906(a) requires any participant of a registered SDR that receives a report from that registered SDR to provide the missing UICs to the registered SDR within 24 hours. Because all SDR participants will likely be the non-reporting side for at least some transactions to which they are counterparties, in the Regulation SBSR Adopting Release, the Commission stated its belief that all participants will be impacted by Rule 906(a). In the Regulation SBSR Adopting Release, the Commission estimated that the initial and ongoing annualized burden under Rule 906(a) for all participants will be 199,728 burden hours, which corresponds to 41.6 burden hours per participant.[370] This figure is based on the Commission's estimates of (1) 4,800 participants; and (2) approximately 1.14 transactions per day per participant.[371]

Rule 906(b) requires every participant to provide the registered SDR an initial parent/affiliate report and subsequent reports, as needed. In the Regulation SBSR Adopting Release, the Commission estimated that there will be 4,800 participants, that each participant will connect to two registered SDRs on average, and that each participant will submit two reports

---

368 See id.

369 See id.

370 See id.

371 See id.

each year.[372] Accordingly, the Commission estimated that the initial and ongoing aggregate annualized burden associated with Rule 906(b) will be 9,600 burden hours, which corresponds to 2 burden hours per participant.[373] The aggregate burden represents an upper estimate for all participants; the actual burden will likely decrease because certain larger participants are likely to have multiple affiliates, and one member of the group could report ultimate parent and affiliate information on behalf of all of its affiliates at the same time.

Rule 906(c) requires each participant that is a registered security-based swap dealer or registered major security-based swap participant (each, a "covered participant") to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with applicable security-based swap transaction reporting obligations. Rule 906(c) also requires the review and updating of such policies and procedures at least annually. In the Regulation SBSR Adopting Release, the Commission estimated that the one-time, initial burden for each covered participant to adopt written policies and procedures as required under Rule 906(c) will be approximately 216 burden hours.[374] As discussed in the Regulation SBSR Adopting Release,[375] this figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing. In addition, in the Regulation SBSR Adopting Release, the Commission estimated the burden of maintaining such policies and procedures, including a full review at least annually, as required by Rule 906(c), will be

372 See id. The Commission estimates that, during the first year, each participant will submit an initial report and one update report and, in subsequent years, will submit two update reports.

373 See id.

374 See id.

375 See id.

approximately 120 burden hours for each covered participant.[376] This figure includes an estimate of hours related to reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining internal controls systems, and performing necessary testing. Accordingly, the Commission estimated that the initial aggregate annualized burden associated with Rule 906(c) will be 18,480 burden hours, which corresponds to 336 burden hours per covered participant.[377] In the Regulation SBSR Adopting Release, the Commission estimated that the ongoing aggregate annualized burden associated with Rule 906(c) will be 6,600 burden hours, which corresponds to 120 burden hours per covered participant.[378]

Therefore, in the Regulation SBSR Adopting Release, the Commission estimated that the total initial aggregate annualized burden associated with Rule 906 will be 230,370 burden hours,[379] and the total ongoing aggregate annualized burden will be 217,370 burden hours for all participants.[380]

2. Rule 906—Proposed Amendments

a. Rule 906(b)—Proposed Amendments

The Commission is proposing to revise Rule 906(b) to indicate that reporting obligations under Rule 906(b) would not attach to participants that are platforms or registered clearing agencies. Under the proposed amendments to Rule 901(a) and 901(e), platforms and registered clearing agencies would have the duty to report certain security-based swaps and therefore would become participants of registered SDRs. Rule 906(b), as adopted, requires each participant of a

---

376 See id.

377 See id.

378 See id.

379 See id.

380 See id.

registered SDR to provide the registered SDR information sufficient to identify its ultimate parent(s) and any affiliate(s) of the participant that also are participants of the registered SDR, using ultimate parent IDs and participant IDs. The Commission does not believe that this change, which would relieve platforms and registered clearing agencies of the requirement to provide ultimate parent IDs and participant IDs, would affect the existing burdens being placed on platforms and registered clearing agencies.

b. Rule 906(c)—Proposed Amendments

i. Summary of Collection of Information

The proposed amendments to Rule 906(c) would require each participant that is a registered clearing agency or platform to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with applicable security-based swap transaction reporting obligations. Each such participant also would be required to review and update its policies and procedures at least annually.

ii. Proposed Use of Information

The policies and procedures required under the proposed amendments to Rule 906(c) would be used by participants to aid in their compliance with Regulation SBSR, and also used by the Commission as part of its ongoing efforts to monitor and enforce compliance with the federal securities laws, including Regulation SBSR, through, among other things, examinations and inspections.

iii. Respondents

The proposed amendments to Rule 906(c) would result in the rule applying to registered clearing agencies and platforms. The Commission estimates that there will be 4 registered clearing agencies and 10 platforms.

iv. Total Initial and Annual Reporting and Recordkeeping Burdens

For Registered Clearing Agencies and Platforms. The proposed amendment to Rule 906(c) would require each registered clearing agency or platform to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with applicable security-based swap transaction reporting obligations. The proposed amendment to Rule 906(c) also would require each registered clearing agency and platform to review and update such policies and procedures at least annually. The Commission estimates that the one-time, initial burden for each registered clearing agency or platform to adopt written policies and procedures as required under the proposed amendments to Rule 906(c) would be similar to the Rule 906(c) burdens discussed in the Regulation SBSR Adopting Release for covered participants, and would be approximately 216 burden hours per registered clearing agency or platform.[381] As discussed in the Regulation SBSR Proposing Release,[382] this figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing. In addition, the Commission estimates the burden of maintaining such policies and procedures, including a full review at least annually will be approximately 120 burden hours for each registered clearing agency or platform.[383] This figure includes an estimate of hours

[381] See Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Sr. Programmer at 40 hours) + (Compliance Manager at 40 hours) + (Compliance Attorney at 40 hours) + (Compliance Clerk at 40 hours) + (Sr. Systems Analyst at 32 hours) + (Director of Compliance at 24 hours)] = 216 burden hours per registered clearing agency or platform.

[382] See Regulation SBSR Proposing Release, 75 FR at 75257.

[383] See id. This figure is based on the following: [(Sr. Programmer at 8 hours) + (Compliance Manager at 24 hours) + (Compliance Attorney at 24 hours) + (Compliance

related to reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining internal controls systems, and performing necessary testing. Accordingly, the Commission estimates that the initial aggregate annualized burden associated with the proposed amendments to Rule 906(c) would be 4,704 burden hours, which corresponds to 336 burden hours per registered clearing agency or platform.[384] The Commission estimates that the ongoing aggregate annualized burden associated with the proposed amendments to Rule 906(c) will be 1,680 burden hours, which corresponds to 120 burden hours per registered clearing agency or platform.[385]

v. Recordkeeping Requirements

The Commission has adopted recordkeeping rules for registered clearing agencies[386] and proposed recordkeeping rules for platforms.[387]

vi. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

vii. Confidentiality of Responses to Collection of Information

The collection of information required by the proposed amendments to Rule 906 would not be widely available. To the extent that the Commission receives confidential information

---

Clerk at 24 hours) + (Sr. Systems Analyst at 16 hours) + (Director of Compliance at 24 hours)] = 120 burden hours per registered clearing agency or platform.

384 This figure is based on the following: [(216 + 120 burden hours) x (14 registered clearing agencies and platforms)] = 4,704 burden hours.

385 This figure is based on the following: [(120 burden hours) x (14 registered clearing agencies and platforms)] = 1,680 burden hours.

386 See Clearing Agency Standards Adopting Release.

387 See Securities Exchange Act Release No. 63825 (February 2, 2011), 76 FR 10948 (February 29, 2011) ("SB SEF Proposing Release").

pursuant this collection of information, such information will be kept confidential, subject to applicable law.

3. Rule 906—Aggregate Total PRA Burdens and Costs

Based on the foregoing, the Commission estimates the following aggregate total PRA burdens and costs, by category of entity, resulting from Rule 906, as adopted and as proposed to be amended herein.

a. For Platforms and Registered Clearing Agencies

The Commission estimates that the one-time, initial burden for each registered clearing agency or platform to adopt written policies and procedures as required under Rule 906(c), as adopted and as proposed to be amended herein, would be similar to the Rule 906(c) burdens discussed in the Regulation SBSR Adopting Release for covered participants, and would be approximately 216 burden hours per registered clearing agency or platform.[388] This figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing. In addition, the Commission estimates the burden of maintaining such policies and procedures, including a full review at least annually, as required by Rule 906(c), would be approximately 120 burden hours for each registered clearing agency or platform.[389] This figure includes an estimate of hours related to reviewing existing policies and

388 This figure is based on the following: [(Sr. Programmer at 40 hours) + (Compliance Manager at 40 hours) + (Compliance Attorney at 40 hours) + (Compliance Clerk at 40 hours) + (Sr. Systems Analyst at 32 hours) + (Director of Compliance at 24 hours)] = 216 burden hours per registered clearing agency or platform.

389 This figure is based on the following: [(Sr. Programmer at 8 hours) + (Compliance Manager at 24 hours) + (Compliance Attorney at 24 hours) + (Compliance Clerk at 24 hours) + (Sr. Systems Analyst at 16 hours) + (Director of Compliance at 24 hours)] = 120 burden hours per registered clearing agency or platform.

procedures, making necessary updates, conducting ongoing training, maintaining internal controls systems, and performing necessary testing. Accordingly, the Commission estimates that the initial aggregate annualized burden associated with Rule 906(c), as adopted and as proposed to be amended herein, would be 4,704 burden hours, which corresponds to 336 burden hours per registered clearing agency or platform.[390] The Commission estimates that the ongoing aggregate annualized burden associated with Rule 906(c), as adopted and as proposed to be amended herein, would be 1,680 burden hours, which corresponds to 120 burden hours per registered clearing agency or platform.[391]

b. For Registered SDRs

The proposed amendments to Regulation SBSR discussed in this release would not modify any requirements in Rule 906(a), as adopted. Therefore, the Commission is not modifying its analysis of the burden that Rule 906(a), as adopted, will impose on registered SDRs.

c. For Participants

The Commission estimates that the initial and ongoing annualized burden under Rule 906(a) for all participants will be 199,728 burden hours, which corresponds to 41.6 burden hours per participant.[392] This figure is based on the Commission's estimates of (1) 4,800 participants; and (2) approximately 1.14 transactions per day per participant.[393]

---

390 This figure is based on the following: [(216 + 120 burden hours) x (14 registered clearing agencies and platforms)] = 4,704 burden hours.

391 This figure is based on the following: [(120 burden hours) x (14 registered clearing agencies and platforms)] = 1,680 burden hours.

392 See Regulation SBSR Adopting Release, Section XXI(G). This burden was calculated using the same methodology as was used in the Regulation SBSR Proposing Release, updated to account for new estimates of the number of missing information reports resulting from updates in the number of reportable events. See Regulation SBSR

The Commission estimates that the initial and ongoing aggregate annualized burden associated with Rule 906(b), as adopted and as proposed to be amended herein, would be 9,600 burden hours, which corresponds to 2 burden hours per participant.[394]

The Commission estimates that the one-time, initial burden for each covered participant to adopt written policies and procedures as required under Rule 906(c), as adopted and as proposed to be amended herein, would be approximately 216 burden hours.[395] This figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing. In addition, the Commission estimates the burden of maintaining such policies and procedures, including a full review at least annually, as required by Rule 906(c), as adopted and as proposed to be amended herein, would be approximately 120 burden hours for each covered participant.[396] This figure includes an estimate of hours related to

---

Proposing Release, 75 FR at 75256-57. This figure is based on the following: [(1.14 missing information reports per participant per day) x (365 days/year) x (Compliance Clerk at 0.1 hours/report) x (4,800 participants) = 199,728 burden hours, which corresponds to 47.5 burden hours per participant.

393 This figure is based on the following: [((2,000,000 estimated annual security-based swap transactions) / 4,800 participants)) / (365 days/year)] = 1.14, or approximately 1 transaction per day.

394 See Regulation SBSR Adopting Release, Section XXI(G). See also Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Compliance Clerk at 0.5 hours per report) x (2 reports/year/SDR connection) x (2 SDR connections/participant) x (4,800 participants)] = 9,600 burden hours, which corresponds to 2 burden hours per participant.

395 See Regulation SBSR Adopting Release, Section XXI(G). See also Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Sr. Programmer at 40 hours) + (Compliance Manager at 40 hours) + (Compliance Attorney at 40 hours) + (Compliance Clerk at 40 hours) + (Sr. Systems Analyst at 32 hours) + (Director of Compliance at 24 hours)] = 216 burden hours per covered participant.

396 See Regulation SBSR Adopting Release, Section XXI(G). See also Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Sr.

reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining internal controls systems, and performing necessary testing. Accordingly, the Commission estimates that the initial aggregate annualized burden associated with Rule 906(c), as adopted and as proposed to be amended herein, would be 18,480 burden hours, which corresponds to 336 burden hours per covered participant.[397] The Commission estimates that the ongoing aggregate annualized burden associated with Rule 906(c), as adopted and as proposed to be amended herein, would be 6,600 burden hours, which corresponds to 120 burden hours per covered participant.[398]

Therefore, the Commission estimates that the total initial aggregate annualized burden associated with Rule 906, as adopted and as proposed to be amended herein, would be 232,008 burden hours,[399] and the total ongoing aggregate annualized burden would be 219,008 burden hours for all participants.[400]

Programmer at 8 hours) + (Compliance Manager at 24 hours) + (Compliance Attorney at 24 hours) + (Compliance Clerk at 24 hours) + (Sr. Systems Analyst at 16 hours) + (Director of Compliance at 24 hours)] = 120 burden hours per covered participant.

397 See Regulation SBSR Adopting Release, Section XXI(G). This figure is based on the following: [(216 + 120 burden hours) x (55 covered participants)] = 18,480 burden hours.

398 See Regulation SBSR Adopting Release, Section XXI(G). This figure is based on the following: [(120 burden hours) x (55 covered participants)] = 6,600 burden hours.

399 See Regulation SBSR Adopting Release, Section XXI(G). This figure is based on the following: [(4,200 burden hours for registered SDRs under Rule 906(a)) + (199,728 burden hours for participants under Rule 906(a)) + (9,600 burden hours for participants under Rule 906(b)) + (18,480 burden hours for covered participants under Rule 906(c))] = 232,008 burden hours.

400 See Regulation SBSR Adopting Release, Section XXI(G). This figure is based on the following: [(3,080 burden hours for registered SDRs under the proposed amendment to Rule 906(a)) + (199,728 burden hours for participants under the proposed amendment to Rule 906(a)) + (9,600 burden hours for participants under the proposed amendment to Rule 906(b)) + (6,600 burden hours for covered participants under the proposed amendment to Rule 906(c))] = 219,008 burden hours.

E. Policies and Procedures of Registered SDRs—Rule 907

1. Rule 907—As Adopted

Rule 907(a), as adopted, requires a registered SDR to establish and maintain written policies and procedures that detail how it will receive and publicly disseminate security-based swap transaction information. Rule 907(a)(4) requires policies and procedures for assigning "special circumstances" flags to the necessary transaction reports.

Rule 907(c), as adopted, requires a registered SDR to make its policies and procedures available on its website. Rule 907(d), as adopted, requires a registered SDR to review, and update as necessary, the policies and procedures that it is required to have by Regulation SBSR at least annually. Rule 907(e), as adopted, requires a registered SDR to have the capacity to provide to the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to it pursuant to Regulation SBSR and the registered SDR's policies and procedures established thereunder.

In the Regulation SBSR Adopting Release, the Commission estimated that the one-time, initial burden for a registered SDR to adopt written policies and procedures as required under Rule 907 will be approximately 15,000 hours.[401] In the Regulation SBSR Adopting Release, the Commission stated that, drawing on the Commission's experience with other rules that require entities to establish and maintain policies and procedures,[402] this figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary

---

401 See Regulation SBSR Adopting Release, Section XXI(H). These burdens are the result of Rule 907 only and do not account for any burdens that result from the SDR Rules. Such burdens are addressed in a separate release. See SDR Adopting Release, Section VIII(D).

402 See supra note 382.

testing.[403] In addition, in the Regulation SBSR Adopting Release, the Commission estimated the annual burden of maintaining such policies and procedures, including a full review at least annually, making available its policies and procedures on the registered SDR's website, and information or reports on non-compliance, as required under Rule 907(e), will be approximately 30,000 hours for each registered SDR.[404] As discussed in the Regulation SBSR Proposing Release, this figure includes an estimate of hours related to reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining relevant systems and internal controls systems, performing necessary testing, monitoring participants, and compiling data.

In the Regulation SBSR Adopting Release, the Commission estimated that the initial annualized burden associated with Rule 907 will be approximately 45,000 hours per registered SDR, which corresponds to an initial annualized aggregate burden of approximately 450,000 hours.[405] The Commission further estimated that the ongoing annualized burden associated with Rule 907 will be approximately 30,000 hours per registered SDR,[406] which corresponds to an ongoing annualized aggregate burden of approximately 300,000 hours.[407]

2. Rule 907—Proposed Amendments

403 See Regulation SBSR Adopting Release, Section XXI(H). This figure also includes time necessary to design and program systems and implement policies and procedures to assign certain UICs, as required by Rule 907(a)(5).

404 See Regulation SBSR Adopting Release, Section XXI(H).

405 This figure is based on the following: [((15,000 burden hours per registered SDR) + (30,000 burden hours per registered SDR)) x (10 registered SDRs)] = 450,000 initial annualized aggregate burden hours during the first year.

406 See Regulation SBSR Adopting Release, Section XXI(H).

407 See id.

The Commission is proposing to revise Rule 907(a)(6) to indicate that a registered SDR's policies and procedures need not contain provisions for obtaining ultimate parent IDs and participant IDs from participants that are platforms or registered clearing agencies. Under the proposed amendments to Rule 901(a) and 901(e), platforms and registered clearing agencies would have the duty to report certain security-based swaps and become participants of registered SDRs to which they report. Rule 907(a)(6), as adopted, requires a registered SDR to establish and maintain written policies and procedures "[f]or periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any participant(s) with which the participant is affiliated, using ultimate parent IDs and participant IDs." The Commission preliminarily believes that requiring a platform or registered clearing agency to report parent and affiliate information to a registered SDR would not serve any regulatory purpose and, therefore, has proposed to amend Rule 907(a)(6) to indicate that the obligations under Rule 907(a)(6) do not attach to participants that are platforms or a registered clearing agencies. This proposed amendment would not result in any burdens being placed on platforms and registered clearing agencies.

3. Rule 907—Aggregate Total PRA Burdens and Costs

Based on the foregoing, the Commission estimates that the one-time, initial burden for a registered SDR to adopt written policies and procedures as required under Rule 907 will be approximately 15,000 hours. In addition, the Commission estimated the annual burden of maintaining such policies and procedures, including a full review at least annually, making available its policies and procedures on the registered SDR's website, and information or reports on non-compliance, as required under Rule 907(e), will be approximately 30,000 hours for each registered SDR. The Commission therefor estimates that the initial annualized burden associated with Rule 907 will be approximately 45,000 hours per registered SDR, which corresponds to an initial annualized aggregate burden of approximately 450,000 hours.[408] The Commission further estimated that the ongoing annualized burden associated with Rule 907 will be approximately 30,000 hours per registered SDR,[409] which corresponds to an ongoing annualized aggregate burden of approximately 300,000 hours.[410]

F. Cross-Border Matters—Rule 908

1. Rule 908—As Adopted

Rule 908(a), as adopted, defines when a security-based swap transaction is subject to regulatory reporting and/or public dissemination. Specifically, Rule 908(a)(1)(i), as adopted, provides that a security-based swap shall be subject to regulatory reporting and public dissemination if "[t]here is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction." Rule 908(a)(1)(ii), as adopted, provides that a security-based swap shall be subject to regulatory reporting and public dissemination if "[t]he security-based swap is submitted to a clearing agency having its principal place of business in the United States." Rule 908(a)(2), as adopted, provides that a security-based swap not included within the above provisions would be subject to regulatory reporting but not public dissemination "if there is a

---

408 This figure is based on the following: [((15,000 burden hours per registered SDR) + (30,000 burden hours per registered SDR)) x (10 registered SDRs)] = 450,000 initial annualized aggregate burden hours during the first year.

409 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure is based on the following: [(Sr. Programmer at 3,333 hours) + (Compliance Manager at 6,667 hours) + (Compliance Attorney at 10,000 hours) + (Compliance Clerk at 5,000 hours) + (Sr. System Analyst at 3,333 hours) + (Director of Compliance at 1,667 hours)] = 30,000 burden hours per registered SDR.

410 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure is based on the following: [(30,000 burden hours per registered SDR) x (10 registered SDRs)] = 300,000 ongoing, annualized aggregate burden hours.

direct or indirect counterparty on either or both sides of the transaction that is a registered security-based swap dealer or a registered major security-based swap participant."

Regulation 908(b), as adopted, defines when a person might incur obligations under Regulation SBSR. Rule 908(b) provides that, notwithstanding any other provision of Regulation SBSR, a person shall not incur any obligation under Regulation SBSR unless it is a U.S. person, a registered security-based swap dealer, or a registered major security-based swap participant.

The Commission stated its belief in the Regulation SBSR Adopting Release that Rules 908(a) and 908(b) do not impose any collection of information requirements. To the extent that a security-based swap transaction or person is subject to Rule 908(a) or 908(b), respectively, the collection of information burdens are calculated as part of the underlying rule (e.g., Rule 901, which imposes the basic duty to report security-based swap transaction information).

Rule 908(c), as adopted, sets forth the requirements surrounding requests for substituted compliance. Rule 908(c)(1) sets forth the general rule that compliance with Title VII's regulatory reporting and public dissemination requirements may be satisfied by compliance with the rules of a foreign jurisdiction that is the subject of a Commission order described in Rule 908(c)(2), provided that at least one of the direct counterparties is either a non-U.S. person or a foreign branch.

Rule 908(c)(2)(ii), as adopted, applies to any person that requests a substituted compliance determination with respect to regulatory reporting and public dissemination of security-based swaps. In connection with each request, the requesting party must provide the Commission with any supporting documentation that the entity believes is necessary for the Commission to make a determination, including information demonstrating that the requirements applied in the foreign jurisdiction are comparable to the Commission's and describing the methods used by relevant foreign financial regulatory authorities to monitor compliance with those requirements. In the Regulation SBSR Adopting Release, the Commission estimated that the total paperwork burden associated with submitting a request for a substituted compliance determination with respect to regulatory reporting and public dissemination will be approximately 1,120 hours, plus $1,120,000 for 14 requests.[411] The Commission noted that this estimate includes all collection burdens associated with the request, including burdens associated with analyzing whether the regulatory requirements of the foreign jurisdiction impose a comparable, comprehensive system for the regulatory reporting and public dissemination of all security-based swaps. Furthermore, the Commission observed that this estimate assumes that each request will be prepared de novo, without any benefit of prior work on related subjects. The Commission noted, however, that as such requests are developed with respect to certain jurisdictions, the cost of preparing such requests with respect to other foreign jurisdictions could decrease.[412]

In the Regulation SBSR Adopting Release, the Commission estimated, assuming ten requests in the first year, that the aggregated burden for the first year will be 800 hours, plus $800,000 for the services of outside professionals.[413] The Commission estimated that it would

---

411 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 908(c)(2)(ii) will be approximately 80 of in-house counsel time, plus $80,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400). See Cross-Border Proposing Release, 78 FR at 31110.

412 If and when the Commission grants a request for substituted compliance, subsequent applications might be able to leverage work done on the initial application. However, the Commission is unable to estimate the amount by which the cost could decrease without knowing the extent to which different jurisdictions have similar regulatory structures.

413 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 242.908(c)(2)(ii) will be up to approximately 800 hours (80 hours of in-house counsel time x 10 respondents), plus

receive 2 requests for substituted compliance determinations pursuant to Rule 908(c)(2)(ii) in each subsequent year. Assuming the same approximate time and costs, the Commission stated that the aggregate burden for each year following the first year will be up to 160 hours of company time and $160,000 for the services of outside professionals.[414]

2. Rule 908—Proposed Amendments

The Commission is proposing to amend Rule 908(b) to make it consistent with 901(a)(1) which would provide that platforms and registered clearing agencies would have the duty to report in certain circumstances. The Commission proposes to amend Rule 908(b) to provide: "Notwithstanding any other provision of [Regulation SBSR], a person shall not incur any obligation under [Regulation SBSR] unless it is: (1) A U.S. person; (2) A registered security-based swap dealer or registered major security-based swap participant; (3) A platform; or (4) A registered clearing agency." The Commission preliminarily believes that, since the proposed amendment to Rule 908(b) simply makes it clear that platforms and registered clearing agencies may have obligations under Regulation SBSR, there are no burdens associated with the amendment to Rule 908(b). In addition, to the extent that a platform or registered clearing agency does have obligations under Regulation SBSR, those burdens are discussed under the applicable rule.

3. Rule 908—Aggregate Total Burdens and Costs

$800,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400 x 10 respondents). See Cross-Border Proposing Release, 78 FR at 31110.

414 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 908(c)(2)(ii) would be up to approximately 160 hours (80 hours of in-house counsel time x two respondents) + plus $160,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400 x two respondents). See Cross-Border Proposing Release, 78 FR at 31110.

Based on the foregoing, the Commission estimates the following aggregate total PRA burdens and costs, by category of entity, resulting from Rule 908, as adopted and as proposed to be amended herein.

The Commission has estimated that the total paperwork burden associated with submitting a request for a substituted compliance determination with respect to regulatory reporting and public dissemination will be approximately 1,120 hours, plus $1,120,000 for 14 requests.[415] The Commission further estimated that the aggregated burden for the first year will be 800 hours, plus $800,000 for the services of outside professionals.[416] The Commission estimated that it would receive 2 requests for substituted compliance determinations pursuant to Rule 908(c)(2)(ii) in each subsequent year. Assuming the same approximate time and costs, the Commission stated that the aggregate burden for each year following the first year will be up to 160 hours of company time and $160,000 for the services of outside professionals.[417]

G. Request for Comments

Pursuant to 44 U.S.C. 3505(c)(2)(B), the Commission solicits comment to:

---

415 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 908(c)(2)(ii) will be approximately 80 of in-house counsel time, plus $80,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400). See id. at 31110

416 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 908(c)(2)(ii) will be up to approximately 800 hours (80 hours of in-house counsel time x 10 respondents), plus $800,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400 x 10 respondents). See Cross-Border Proposing Release, 78 FR at 31110.

417 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 908(c)(2)(ii) would be up to approximately 160 hours (80 hours of in-house counsel time x 2 respondents) + plus $160,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400 x 2 respondents). See Cross-Border Proposing Release, 78 FR at 31110.

1. Evaluate whether the proposed collection of information is necessary for the proper performance of our functions, including whether the information shall have practical utility;
2. Evaluate the accuracy of our estimate of the burden of the proposed collection of information;
3. Determine whether there are ways to enhance the quality, utility, and clarity of the information to be collected; and
4. Evaluate whether there are ways to minimize the burden of collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology.

Persons submitting comments on the collection of information requirements should direct them to the Office of Management and Budget, Attention: Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Washington, DC 20503, and should also send a copy of their comments to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090, with reference to File Number S7-03-15. Requests for materials submitted to OMB by the Commission with regard to this collection of information should be in writing, with reference to File Number S7-03-15 and be submitted to the Securities and Exchange Commission, Office of FOIA/PA Operations, 100 F Street NE., Washington, DC 20549-2736. As OMB is required to make a decision concerning the collections of information between 30 and 60 days after publication, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

X. Consideration of Impact on the Economy

For purposes of the Small Business Regulatory Enforcement Fairness Act of 1996

("SBREFA)[418] the Commission must advise the OMB whether the proposed regulation constitutes a "major" rule. Under SBREFA, a rule is considered "major" where, if adopted, it results or is likely to result in: (1) an annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers or individual industries; or (3) significant adverse effect on competition, investment or innovation.

The Commission requests comment on the potential impact of the proposed rules and amendments on the economy on an annual basis. Commenters are requested to provide empirical data and other factual support for their views to the extent possible.

XI. Regulatory Flexibility Act Certification

Section 3(a) of the Regulatory Flexibility Act of 1980 ("RFA")[419] requires the Commission to undertake an initial regulatory flexibility analysis of the proposed rules on "small entities." Section 605(b) of the RFA[420] provides that this requirement shall not apply to any proposed rule or proposed rule amendment which, if adopted, would not have a significant economic impact on a substantial number of small entities. Pursuant to 5 U.S.C. 605(b), the Commission hereby certifies that the proposed rules and rule amendments to Regulation SBSR would not, if adopted, have a significant economic impact on a substantial number of small entities. In developing these proposed amendments to Regulation SBSR, the Commission has considered their potential impact on small entities. For purposes of Commission rulemaking in connection with the RFA, a small entity includes: (1) when used with reference to an "issuer" or a "person," other than an investment company, an "issuer" or "person" that, on the last day of its

---

418 Pub. L. No. 104-121, Title II, 110 Stat. 857 (1996) (codified in various sections of 5 U.S.C. and 15 U.S.C. and as a note to 5 U.S.C. 601).

419 5 U.S.C. 603(a).

420 5 U.S.C. 605(b).

most recent fiscal year, had total assets of $5 million or less;[421] or (2) a broker-dealer with total capital (net worth plus subordinated liabilities) of less than $500,000 on the date in the prior fiscal year as of which its audited financial statements were prepared pursuant to Rule 17a-5(d) under the Exchange Act,[422] or, if not required to file such statements, a broker-dealer with total capital (net worth plus subordinated liabilities) of less than $500,000 on the last day of the preceding fiscal year (or in the time that it has been in business, if shorter); and is not affiliated with any person (other than a natural person) that is not a small business or small organization.[423]

The Commission believes, based on input from security-based swap market participants and its own information, that the majority of security-based swap transactions have at least one counterparty that is either a security-based swap dealer or major security-based swap participant, and that these entities—whether registered broker-dealers or not—would exceed the thresholds defining "small entities" set out above. Accordingly, neither of these types of entities would likely qualify as small entities for purposes of the RFA. Moreover, even in cases where one of the counterparties to a security-based swap is not covered by these definitions, the Commission believes that any such entities would not be "small entities" as defined in Commission Rule 0-10. Feedback from industry participants and the Commission's own information about the security-based swap market indicate that only persons or entities with assets significantly in excess of $5 million participate in the security-based swap market.[424] Given the magnitude of this figure, and

---

421 See 17 CFR 240.0-10(a).

422 17 CFR 240.17a-5(d).

423 See 17 CFR 240.0-10(c).

424 For example, as revealed in a current survey conducted by Office of the Comptroller of the Currency, 99.9% of CDS positions by U.S. commercial banks are held by those with assets over $80 billion. See Office of the Comptroller of the Currency, "Quarterly Report on Bank Trading and Derivatives Activities First Quarter 2014" (2014).

the fact that it so far exceeds $5 million, the Commission continues to believe that the vast majority of, if not all, security-based swap transactions are between large entities for purposes of the RFA.

In addition, the Commission believes that persons that are likely to register as SDRs would not be small entities. Based on input from security-based swap market participants and its own information, the Commission continues to believe that most if not all registered SDRs would be part of large business entities, and that all registered SDRs would have assets exceeding $5 million and total capital exceeding $500,000. Therefore, the Commission continues to believe that no registered SDRs would be small entities.

The proposed rules and rule amendments would apply to all platforms on which security-based swaps are executed and registered clearing agencies that clear security-based swaps. Based on the Commission's existing information about the security-based swap market and the entities likely to be platforms and registered clearing agencies, the Commission preliminarily believes that these entities would not be small entities. The Commission preliminarily believes that most, if not all, of the platforms and registered clearing agencies would be large business entities or subsidiaries of large business entities, and that all platforms would have assets in excess of $5 million and annual receipts in excess of $7,000,000. Therefore, the Commission preliminarily believes that no platforms or registered clearing agencies would be small entities.

The Commission encourages written comments regarding this certification. The Commission solicits comment as to whether the proposed rules and amendments to Regulation SBSR could have an effect on small entities that has not been considered. The Commission requests that commenters describe the nature of any impact on small entities and provide empirical data to support the extent of such impact.

XII. Statutory Basis and Text of Proposed Rules

Pursuant to the Exchange Act, 15 U.S.C. 78a et seq., and particularly Sections 3C(e), 11A(b), 13(m)(1), 13A(a), 23(a)(1), 30(c), and 36(a), 15 U.S.C. §§ 78c-3(e), 78k-1(b), 78m(m)(1), 78m-1(a), 78w(a)(1), 78dd(c), and 78mm(a) thereof, the Commission is proposing to amend Rules 900, 901, 905, 906, 907, and 908 of Regulation SBSR under the Exchange Act, 17 CFR 242.900, 242.901, 242.905, 242.906, 242.907, and 242.908.

List of Subjects in 17 CFR Part 242

Brokers, Reporting and recordkeeping requirements, Securities.

Text of Amendments

In accordance with the foregoing, the Commission proposes to revise Title 17, Chapter II of the Code of Federal Regulations as follows:

PART 242—REGULATIONS M, SHO, ATS, AC, NMS, AND SBSR AND CUSTOMER MARGIN REQUIREMENTS FOR SECURITY FUTURES

1. The authority citation for part 242 continues to read as follows:

Authority: 15 U.S.C. 77g, 77q(a), 77s(a), 78b, 78c, 78g(c)(2), 78i(a), 78j, 78k-l(c), 78*l*, 78m, 78n, 78o(b), 78o(c), 78o(g), 78q(a), 78q(b), 78q(h), 78w(a), 78dd-1, 78mm, 80a-23, 80a-29, and 80a-37, unless otherwise noted.

2. Amend § 242.900 to revise paragraph (u) and add paragraph (tt) to read as follows:

Regulation SBSR-Regulatory Reporting and Public Dissemination of Security-Based Swap Information

§ 242.900 Definitions

(a)-(t) No change.

(u) Participant, with respect to a registered security-based swap data repository, means (1) a counterparty, that meets the criteria of § 242.908(b), of a security-based swap that is reported to that registered security-based swap data repository to satisfy an obligation under § 242.901(a); (2) a platform that reports a security-based swap to that registered security-based swap data repository to satisfy an obligation under § 242.901(a); or (3) a registered clearing agency that is required to report to that registered security-based swap data repository whether or not it has accepted a security-based swap for clearing pursuant to § 242.901(e)(1)(ii).

* * * * *

(tt) Widely accessible, as used in § 242.900(cc), means widely available to users of the information on a non-fee basis.

3. Amend § 242.901 to add paragraphs (a)(1), (a)(2)(i), (a)(3), and (e)(1)(ii) and to revise paragraphs (e)(2) and (h) to read as follows:

§ 242.901 Reporting obligations.

(a) * * * * *

(1) Platform-executed security-based swaps that will be submitted to clearing. If a security-based swap is executed on a platform and will be submitted to clearing, the platform on which the transaction was executed shall report to a registered security-based swap data repository the information required by §§ 242.901(c), 901(d)(1), 901(d)(9), and 901(d)(10).

(2) * * * * *

(i) Clearing transactions. For a clearing transaction, the reporting side is the registered clearing agency that is a counterparty to the transaction.

(ii) * * * * *

(3) Notification to registered clearing agency. A person who, under § 242.901(a)(1) or § 242.901(a)(2)(ii), has a duty to report a security-based swap that has been submitted to clearing at a registered clearing agency shall promptly provide that registered clearing agency with the transaction ID of the submitted security-based swap and the identity of the registered security-based swap data repository to which the transaction will be reported or has been reported.

(b) * * * * *

(c) * * * * *

(d) * * * * *

(e) Reporting of life cycle events.

(1) (i) * * * * *

(ii) Acceptance for clearing. A registered clearing agency shall report whether or not it has accepted a security-based swap for clearing.

(2) All reports of life cycle events and adjustments due to life cycle events shall, within the timeframe specified in paragraph (j) of this section, be reported to the entity to which the original security-based swap transaction will be reported or has been reported and shall include the transaction ID of the original transaction.

(f) * * * * *

(g) * * * * *

(h) Format of reported information. A person having a duty to report shall electronically transmit the information required under this section in a format required by the registered security-based swap data repository to which it reports.

* * * * *

4. Amend § 242.905 to revise paragraph (a) to read as follows:

§ 242.905 Correction of errors in security-based swap information.

(a) Duty to correct. Any counterparty or other person having a duty to report a security-based swap that discovers an error in information previously reported pursuant to §§ 242.900 through 242.909 shall correct such error in accordance with the following procedures:

(1) If a person that was not the reporting side for a security-based swap transaction discovers an error in the information reported with respect to such security-based swap, that person shall promptly notify the person having the duty to report the security-based swap of the error; and

(2) If the person having the duty to report a security-based swap transaction discovers an error in the information reported with respect to a security-based swap, or receives notification from a counterparty of an error, such person shall promptly submit to the entity to which the security-based swap was originally reported an amended report pertaining to the original transaction report. If the person having the duty to report reported the initial transaction to a registered security-based swap data repository, such person shall submit an amended report to the registered security-based swap data repository in a manner consistent with the policies and procedures contemplated by § 242.907(a)(3).

* * * * *

5. Amend § 242.906 by revising paragraphs (b) and (c) to read as follows:

§ 242.906 Other duties of participants.

(a) * * * * *

(b) Duty to provide ultimate parent and affiliate information. Each participant of a registered security-based swap data repository that is not a platform or a registered clearing agency shall provide to the registered security-based swap data repository information sufficient to identify its ultimate parent(s) and any affiliate(s) of the participant that also are participants of the registered security-based swap data repository, using ultimate parent IDs and counterparty IDs. Any such participant shall promptly notify the registered security-based swap data repository of any changes to that information.

(c) Policies and procedures of security-based swap dealers, major security-based swap participants, registered clearing agencies, and platforms. Each participant of a registered security-based swap data repository that is a security-based swap dealer, major security-based swap participant, registered clearing agency, or platform shall establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure that it complies with any obligations to report information to a registered security-based swap data repository in a manner consistent with §§ 242.900 through 242.909. Each such participant shall review and update its policies and procedures at least annually.

6. Amend § 242.907 to revise paragraph (a)(6) to read as follows:

§ 242.907 Policies and procedures of registered security-based swap data repositories.

(a) * * * * *

(6) For periodically obtaining from each participant other than a platform or a registered clearing agency information that identifies the participant's ultimate parent(s) and any participant(s) with which the participant is affiliated, using ultimate parent IDs and counterparty IDs.

* * * * *

7. Amend § 242.908 to revise paragraphs (b)(1) and (b)(2) and by adding paragraphs (b)(3) and (b)(4) to read as follows:

§ 242.908 Cross-border matters

(a) * * * * *

(b) * * * * *

(1) A U.S. person;

(2) A registered security-based swap dealer or registered major security-based swap participant;

(3) A platform; or

(4) A registered clearing agency.

* * * * *

By the Commission.

Brent J. Fields
Secretary

Release No. 34-74246; File No. S7-35-10

RIN 3235–AK79

Security-Based Swap Data Repository Registration, Duties, and Core Principles

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: Pursuant to Section 763(i) of Title VII ("Title VII") of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 ("Dodd-Frank Act"), the Securities and Exchange Commission ("Commission") is adopting new rules under the Securities Exchange Act of 1934 ("Exchange Act") governing the security-based swap data repository ("SDR") registration process, duties, and core principles. The Commission is also adopting a new registration form. Additionally, the Commission is amending several of its existing rules and regulations in order to accommodate SDRs. First, the Commission is amending Regulation S-T and Exchange Act Rule 24b-2 to clarify that all filings by SDRs, including any confidential portion, and their requests for confidential treatment must be filed electronically. Second, the Commission is amending Regulation S-T by, among other things, adding a new rule that specifically applies to the electronic filing of SDRs' financial reports.

DATES: **Effective Date:** [insert date that is 60 days from publication in the Federal Register]

Compliance Date: [insert date that is 365 days from publication in the Federal Register]

FOR FURTHER INFORMATION CONTACT: Paula Jenson, Acting Chief Counsel; Jo Anne Swindler, Assistant Director; Richard Vorosmarti, Branch Chief; Angie Le, Special

Counsel; or Kevin Schopp, Special Counsel, Division of Trading and Markets, at (202) 551-5750, Securities and Exchange Commission, 100 F Street, NE, Washington, D.C. 20549. For questions regarding the SDR registration process, please contact Jeffrey Mooney, Assistant Director, Stephanie Park, Senior Special Counsel, Andrew Shanbrom, Special Counsel, or Elizabeth Fitzgerald, Special Counsel, Division of Trading and Markets, at (202) 551-5710.

SUPPLEMENTARY INFORMATION: The Commission is taking several actions. First, the Commission is adopting Rules 13n-1 to 13n-12 ("SDR Rules") under the Exchange Act governing SDRs and a new form for registration as a security-based swap data repository ("Form SDR"). Second, the Commission is adopting technical amendments to Regulation S-T and Exchange Act Rule 24b-2 to clarify that all filings by SDRs, including any confidential portion, and their requests for confidential treatment must be filed electronically. Third, the Commission is amending Regulation S-T, including adopting new Rule 407, as a technical amendment related to Rule 13n-11, which is applicable to the electronic filing of SDRs' financial reports.

I. Introduction

A. Proposed Rules Governing the SDR Registration Process, Duties, and Core Principles, and Form SDR

Title VII of the Dodd-Frank Act provides for a comprehensive new regulatory framework for security-based swaps ("SBSs"), including the regulation of SDRs.[1] SDRs are required to collect and maintain accurate SBS transaction data so that relevant authorities can access and analyze the data from secure, central locations, thereby putting them in a better position to monitor for potential market abuse and risks to financial stability. On November 19, 2010, the Commission proposed new Rules 13n-1 to 13n-11 under the Exchange Act governing the SDR registration process, duties, and core principles, and new Form SDR, through which applicants would seek to register as SDRs.[2]

Subsequently, on May 1, 2013, the Commission issued a proposing release discussing

---

1 Pub. L. No. 111-203, § 761(a) (adding Exchange Act Section 3(a)(75) (defining SDR)) and § 763(i) (adding Exchange Act Section 13(n) (establishing a regulatory regime for SDRs)).

2 See Security-Based Swap Data Repository Registration, Duties, and Core Principles, Exchange Act Release No. 63347 (Nov. 19, 2010), 75 FR 77306 (Dec. 10, 2010), corrected at 75 FR 79320 (Dec. 20, 2010) and 76 FR 2287 (Jan. 13, 2011) ("Proposing Release").

cross-border SBS activities, including activities involving SDRs.[3] In that release, the Commission proposed guidance regarding the application of certain SDR requirements in the cross-border context;[4] new Rule 13n-12 under the Exchange Act, which would provide certain SDRs with an exemption from Exchange Act Section 13(n) and the rules and regulations thereunder;[5] and guidance to specify how SDRs may comply with the notification requirement in the Exchange Act and how the Commission proposes to determine whether a relevant authority is appropriate for purposes of receiving SBS data from an SDR.[6] In addition, the Commission proposed an exemption from the indemnification requirement in the Exchange Act.[7]

B. Related Commission Actions

In conjunction with issuing the Proposing Release on November 19, 2010, the Commission also proposed Regulation SBSR to implement the Dodd-Frank Act's provisions relating to reporting SBS information to SDRs, including standards for the data elements that must be provided to SDRs.[8] Subsequently, on June 15, 2011, the Commission issued an exemptive order, which provided guidance and certain exemptions with respect to the requirements under Title VII, including requirements governing SDRs, which would have had to

3 Cross-Border Security-Based Swap Activities; Re-Proposal of Regulation SBSR and Certain Rules and Forms Relating to the Registration of Security-Based Swap Dealers and Major Security-Based Swap Participants, Exchange Act Release No. 69490 (May 1, 2013), 78 FR 30968 (May 23, 2013) ("Cross-Border Proposing Release").

4 Cross-Border Proposing Release, 78 FR at 31041-44, supra note 3.

5 Cross-Border Proposing Release, 78 FR at 31209, supra note 3.

6 Cross-Border Proposing Release, 78 FR at 31046-48, supra note 3.

7 Cross-Border Proposing Release, 78 FR at 31209, supra note 3 (proposing Rule 13n-4(d)).

8 Regulation SBSR-Reporting and Dissemination of Security-Based Swap Information, Exchange Act Release No. 63346 (Nov. 19, 2010), 75 FR 75208 (Dec. 2, 2010) ("Regulation SBSR Proposing Release").

be complied with as of July 16, 2011 (i.e., the effective date of Title VII).[9] Later, on June 11, 2012, the Commission issued a statement of general policy on the anticipated sequencing of compliance dates of final rules to be adopted under Title VII.[10] On May 1, 2013, the Commission re-proposed Regulation SBSR in the Cross-Border Proposing Release.[11] At the same time, the Commission reopened the comment period for certain rules proposed under Title

9 See Temporary Exemptions and Other Temporary Relief, Together With Information on Compliance Dates for New Provisions of the Securities Exchange Act of 1934 Applicable to Security-Based Swaps, Exchange Act Release No. 64678 (June 15, 2011), 76 FR 36287 (June 22, 2011) ("Effective Date Order"). The Effective Date Order included temporary exemptions from Exchange Act Sections 13(n)(5)(D)(i), 13(n)(5)(F), 13(n)(5)(G), 13(n)(5)(H), 13(n)(7)(A), 13(n)(7)(B), and 13(n)(7)(C), each of which will expire on the earlier of (1) the date the Commission grants registration to the SDR and (2) the earliest compliance date set forth in any of the final rules regarding the registration of SDRs. Id. at 36306. In addition, the Commission granted temporary exemptions from Exchange Act Section 29(b) in connection with the above listed provisions of the Exchange Act until such date as the Commission specifies. Id. at 36307. Section 29(b) generally provides that contracts made in violation of any provision of the Exchange Act, or the rules thereunder, shall be void "(1) as regards the rights of any person who, in violation of any such provision . . . shall have made or engaged in the performance of any such contract, and (2) as regards the rights of any person who, not being a party to such contract, shall have acquired any right thereunder with actual knowledge of the facts by reason of which the making or performance of such contract was in violation of any such provision . . . ." 15 U.S.C. 78cc(b).

10 See Statement of General Policy on the Sequencing of the Compliance Dates for Final Rules Applicable to Security-Based Swaps Adopted Pursuant to the Securities Exchange Act of 1934 and the Dodd-Frank Wall Street Reform and Consumer Protection Act, Exchange Act Release No. 67177 (June 11, 2012), 77 FR 35625 (June 14, 2012) ("Implementation Policy Statement").

11 Cross-Border Proposing Release, 78 FR at 31210-31216, supra note 3. The Commission subsequently adopted certain aspects of the Cross-Border Proposing Release, which, as discussed below, has implications on this release. See Application of "Security-Based Swap Dealer" and "Major Security-Based Swap Participant" Definitions to Cross-Border Security-Based Swap Activities, Exchange Act Release No. 72472 (June 25, 2014), 79 FR 39068 (July 9, 2014) republished at 79 FR 47278 (Aug. 12, 2014) ("Cross-Border Adopting Release").

VII, including the SDR Rules and Form SDR, and the Implementation Policy Statement.[12]

The Commission is concurrently adopting Regulation SBSR in a separate release.[13] The Dodd-Frank Act requires the Commission to engage in rulemaking for the public dissemination of SBS transaction, volume, and pricing data,[14] and provides the Commission with discretion to determine an appropriate approach to implement this important function. Regulation SBSR requires SDRs to undertake this role.[15]

As discussed in the Proposing Release, when considered in conjunction with Regulation SBSR, the rules that the Commission adopts in this release seek to provide improved transparency to regulators and the markets through comprehensive regulations for SBS transaction data and SDRs.[16] In combination, these rules represent a significant step forward in providing a regulatory framework that promotes transparency and efficiency in the OTC

12 Reopening of Comment Periods for Certain Rulemaking Releases and Policy Statement Applicable to Security-Based Swaps Proposed Pursuant to the Securities Exchange Act of 1934 and the Dodd-Frank Wall Street Reform and Consumer Protection Act, Exchange Act Release No. 69491 (May 1, 2013), 78 FR 30800 (May 23, 2013) ("Reopening Release").

13 Regulation SBSR-Reporting and Dissemination of Security-Based Swap Information, Exchange Act Release No. 74244 (Feb. 11, 2015) ("Regulation SBSR Adopting Release"). The Commission is also concurrently proposing certain new rules and amendments to Regulation SBSR. See Regulation SBSR-Reporting and Dissemination of Security-Based Swap Information, Exchange Act Release No. 74245 (Feb. 11, 2015) ("Regulation SBSR Proposed Amendments Release").

14 Exchange Act Section 13(m)(1), 15 U.S.C. 78m(m)(1), as added by Dodd-Frank Act Section 763(i).

15 See Regulation SBSR Adopting Release, supra note 13. In a separate proposal relating to implementation of Dodd-Frank Act Section 763(i) (adding Exchange Act Section 13(n)(5)(E)), the Commission proposed rules that would require SDRs to collect data related to monitoring the compliance and frequency of end-user clearing exemption claims. See End-User Exception to Mandatory Clearing of Security-Based Swaps, Exchange Act Release No. 63556 (Dec. 15, 2010), 75 FR 79992 (Dec. 21, 2010) ("End-User Exception Proposing Release").

16 Proposing Release, 75 FR at 77307, supra note 2.

derivatives markets and creates important infrastructure to assist relevant authorities in performing their market oversight functions.

C. Public Comment

In each of the releases discussed above, the Commission requested comment on a number of issues related to the proposed SDR Rules. In addition, Commission staff and Commodity Futures Trading Commission ("CFTC") staff conducted joint public roundtables, including, for example, a joint public roundtable on implementation issues raised by Title VII ("Implementation Joint Roundtable")[17] and a joint public roundtable on international issues relating to the implementation of Title VII ("International Joint Roundtable").[18]

The Commission received twenty comment letters in response to the Proposing Release and the Reopening Release[19] as well as six letters submitted with respect to SDRs prior to the

See letter from Tradeweb Markets LLC ("Tradeweb SB SEF"). The comments that the Commission received on the SB SEF Proposing Release are available on the Commission's website at http://www.sec.gov/comments/s7-06-11/s70611.shtml.

30 See, e.g., Barnard, supra note 19 (generally supporting the proposed SDR Rules and agreeing that establishing SDRs will enhance transparency and promote standardization in the SBS market); MFA 1, supra note 19 (fully supporting the objectives of the Dodd-Frank Act and the proposed rules to enhance transparency in the SBS market); Markit, supra note 19 (supporting the Commission's objectives of increasing transparency and efficiency in the OTC derivatives markets and of reducing both systemic and counterparty risk); DTCC 2, supra note 19 (supporting the Commission's efforts to establish a comprehensive new framework for the regulation of SDRs and noting that "[i]mposing requirements on [SDRs] would promote safety and soundness for all U.S. markets by bringing increased transparency and oversight to [the SBS market]"); IIB CB, supra note 26 (believing that "the Commission has appropriately sought to take into account the greater extent to which the SBS markets are globally interconnected, as well

provided information regarding industry practices. In particular, commenters discussed SDRs' registration, enumerated duties, market access to services and data, governance arrangements, conflicts of interest, data collection and maintenance, privacy and disclosure requirements, and chief compliance officers ("CCOs"). The Commission has carefully reviewed and considered all of the comments that it received relating to the proposed rules.[31] As adopted, the SDR Rules and new Form SDR have been modified from the proposal, in part to respond to these comments.[32] The revisions to each proposed rule are described in more detail throughout this release. The following are among the most significant changes from the Commission's proposed rules:

- **Form SDR:** In the Proposing Release, the Commission asked whether it should combine Form SDR and Form SIP such that an SDR would register as an SDR and a securities information processer ("SIP") using only one form.[33] After further consideration and in response to comments received, the Commission has determined that Form SDR should be modified from the proposal to allow an SDR to register as both an SDR and SIP on one form.[34]
- **Access by Relevant Authorities:** The Commission proposed Rules 13n-4(b)(9) and (10) and Rule 13n-4(d) relating to relevant authorities' access to SBS data

---

as the role that foreign regulators therefore must play as the primary supervisors of SBS market participants based abroad").

31 The Commission also considered certain comments submitted with respect to other proposed Commission rulemakings, related CFTC rulemakings, and international initiatives. See Sections I.C and I.D discussing other comments and initiatives considered in this rulemaking.

32 As discussed below, comments relating to relevant authorities' access to SBS data will be addressed in a separate release.

33 Proposing Release, 75 FR at 77313, supra note 2.

34 See Section VI.A.1.c of this release discussing the combination of Form SDR and Form SIP.

maintained by SDRs. The Commission has determined not to adopt these rules at this time and anticipates soliciting additional public comment regarding such relevant authorities' access.

- **Automated Systems:** The Commission proposed Rule 13n-6 to provide standards for SDRs with regard to their automated systems' capacity, resiliency, and security. After further consideration, and as explained more fully below, the Commission has determined to adopt an abbreviated version of proposed Rule 13n-6.[35]

- **CCO:** In the Proposing Release, the Commission asked whether it should prohibit officers, directors, or employees of an SDR from, directly or indirectly, taking any action to coerce, manipulate, mislead, or fraudulently influence the SDR's CCO in the performance of his responsibilities. The Commission has decided to adopt new Rule 13n-11(h).

D. Other Initiatives Considered in this Rulemaking

The Commission also recognizes the CFTC's companion efforts in promulgating rules governing swap data repositories pursuant to Dodd-Frank Act Section 728. The CFTC adopted final rules on swap data repositories on August 4, 2011.[36] The CFTC also adopted rules regarding swap data recordkeeping and reporting requirements, some of which pertain to

35 See Section VI.F of this release discussing Rule 13n-6.

36 See Swap Data Repositories: Registration Standards, Duties and Core Principles, 76 FR 54538 (Sept. 1, 2011) ("CFTC Part 49 Adopting Release"). See also Swap Data Repositories – Access to SDR Data by Market Participants, 79 FR 16672 (Mar. 26, 2014) (CFTC adopting interim final rule regarding access to swap data repositories' data).

subjects covered in this release.[37] Commission staff consulted with CFTC staff with respect to the rules applicable to swap data repositories and SDRs, as well as with prudential regulators,[38] and the Commission has taken into consideration comments received supporting harmonization of the CFTC's rules for swap data repositories with the SDR Rules.[39] The Commission believes that the final SDR Rules are largely consistent with the rules adopted by the CFTC.[40] While one

---

37 See Swap Data Recordkeeping and Reporting Requirements, 77 FR 2136 (Jan. 13, 2012) ("CFTC Part 45 Adopting Release"). See also Review of Swap Data Recordkeeping and Reporting Requirements, 79 FR 16689 (Mar. 26, 2014) (CFTC requesting comment on specific swap data reporting and recordkeeping rules).

38 See Dodd-Frank Act Section 712(a)(2) (requiring the Commission to consult and coordinate to the extent possible with the CFTC and prudential regulators for "the purposes of assuring regulatory consistency and comparability, to the extent possible").

39 See DTCC 2, supra note 19 (recommending that to the extent that there are any differences, "the Commission and the CFTC should harmonize the regimes that oversee SDRs" and noting that "harmonization is a more important priority than the exact nature of the consistent standard, as SDRs can adjust to meet a single standard but not multiple, inconsistent standards"); DTCC 5, supra note 19 (urging the Commission to harmonize its rules with the CFTC's rules by working, to the extent possible, with the CFTC to minimize the number of regulatory inconsistencies between the two agencies); DTCC CB, supra note 26 ("Given the significant number of registered entities (execution platforms, clearinghouses, SDRs, dealers, and major swap participants) that will face dual oversight, unnecessary distinctions in the registration and regulation of these entities risk jeopardizing regulatory compliance, add confusion to Dodd-Frank Act implementation, and ultimately impose unnecessary costs."); Better Markets CB, supra note 26 (recommending that the Commission "promote harmony with the CFTC's cross-border guidance, subject to its primary duty and recognizing that its statutory authority and jurisdiction is distinct from that of the CFTC" and that the Commission "adopt rules that are at least as strong as the CFTC's guidance, consistent with its statutory authority, but should go further than the CFTC wherever necessary, and again consistent with its statutory authority, to better fulfill the goals of the Dodd-Frank Act"). But see Better Markets 2, supra note 19 (recommending that "all of the substantive rule provisions proposed [as of July 22, 2013] must remain as strong as possible, irrespective of . . . the CFTC's approach to the implementation of Title VII").

40 See DTCC 2, supra note 19 (observing that, with respect to the Commission's proposed rules and the CFTC's proposed rules for swap data repositories, "[t]here appear to be relatively narrow differences between the Commission's and the CFTC's approaches to the regulation of SDRs").

commenter recommended adopting joint rules with the CFTC,[41] the Commission has not done so. Congress did not require the two agencies to engage in joint rulemakings on this topic.[42] In addition, the CFTC has already adopted its final rules for swap data repositories.[43] The Commission does not believe that the differences between the rules adopted herein and the CFTC's rules regarding swap data repositories will place undue burdens on persons that register as both SDRs and swap data repositories.[44]

Finally, Commission staff has consulted and coordinated with foreign regulators through bilateral and multilateral discussions, including in groups that have prepared reports related to SDRs.[45] For example, the Committee on Payments and Market Infrastructures ("CPMI"), formerly known as the Committee on Payment and Settlement Systems ("CPSS"),[46] and the

---

41 FSR Implementation, supra note 23 (supporting a Title VII-wide harmonization process and recommending adopting joint SEC-CFTC rules in areas, such as SDRs, where they are not required to do so). The commenter stated that the "process of jointly adopting final rules would ensure consistency on the most critical points. It would also ensure that final rules are adopted at the same time, so that market participants do not have to bear the cost of complying with one set of rules before they know whether their actions will be consistent with the other rules to which they will be subject." Id.

42 Cf., e.g., Dodd-Frank Act Section 712(d) (requiring joint rulemaking regarding certain definitions).

43 CFTC Part 49 Adopting Release, supra note 36; CFTC Part 45 Adopting Release, supra note 37.

44 See Section VIII of this release discussing economic analysis.

45 See Dodd-Frank Act Section 752 (relating to international harmonization); DTCC 3, supra note 19 ("The global SDR framework emerging from the Dodd-Frank Act and European regulatory processes must provide comprehensive data for all derivatives markets globally. If the global regulatory process is not harmonized, both the published and regulator-only accessible data will be fragmented, resulting in misleading reporting of exposures, uncertain risk concentration reports and a decreased ability to identify systemic risk.").

46 CPMI is an international standard setting body for payment, clearing, and securities settlement systems. It serves as a forum for central banks to monitor and analyze

International Organization of Securities Commissions ("IOSCO,"[47] jointly, "CPSS-IOSCO") have issued several reports applicable to SDRs. First, in May 2010, CPSS and the Technical Committee of IOSCO issued a consultative report that presented a set of factors for trade repositories in the OTC derivatives markets to consider in designing and operating their services and for relevant authorities to consider in regulating and overseeing trade repositories ("CPSS-IOSCO Trade Repository Report").[48] Second, in January 2012, CPSS and the Technical Committee of IOSCO issued a final report on OTC derivatives data reporting and aggregation requirements.[49] Third, in April 2012, CPSS-IOSCO issued a final report that sets forth risk management and related standards applicable to financial market infrastructures, including trade repositories ("PFMI Report").[50] Fourth, in August 2013, CPSS and the Board of IOSCO issued a report on authorities' access to trade repository data ("CPSS-IOSCO Access Report").[51] The

---

developments in domestic payment, clearing, and settlement systems as well as in cross-border and multicurrency settlement schemes. See http://www.bis.org/cpmi/.

47 IOSCO is an international standard setting body for securities regulation. It serves as a forum to review regulatory issues related to international securities and futures transactions. See http://www.iosco.org.

48 See Considerations for Trade Repositories in OTC Derivatives Markets, CPSS-IOSCO (May 2010), available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD321.pdf.

49 See Report on OTC Derivatives Data Reporting and Aggregation Requirements, CPSS-IOSCO (Jan. 2012), available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD366.pdf.

50 See Principles for Financial Market Infrastructures, CPSS-IOSCO (Apr. 2012), available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD377.pdf. The PFMI Report incorporated feedback received on the CPSS-IOSCO Trade Repository Report. Commission representatives participated in the development and drafting of the PFMI Report. In particular, Commission staff co-chaired the Editorial Team, a working group within CPSS-IOSCO that drafted both the consultative and final versions of the PFMI Report. The Commission believes that the standards applicable to trade repositories set forth in the PFMI Report are generally consistent with the final SDR Rules.

51 See Authorities' Access to Trade Repository Data, CPSS-IOSCO (Aug. 2013), available at http://www.iosco.org/library/pubdocs/pdf/IOSCOPD417.pdf.

Commission has taken these discussions and reports into consideration in developing the final SDR Rules and Form SDR.[52]

II. Broad Economic Considerations and Baseline

This section describes the most significant economic considerations that the Commission has taken into account in adopting Form SDR and the SDR Rules, as well as the baseline for evaluating the economic effects of the final SDR Rules. The Commission is sensitive to the economic consequences and effects, including the costs and benefits, of Form SDR and the SDR Rules. A detailed analysis of the particular economic effects – including the costs and benefits and the impact on efficiency, competition, and capital formation – that may result from Form SDR and the final SDR Rules is discussed in Section VIII of this release.

A. Broad Economic Considerations

The SBS market prior to the passage of the Dodd-Frank Act has been described as being opaque,[53] in part because price and volume data for SBS transactions were not publicly available.

52 If any provision of these rules, or the application thereof to any person or circumstance, is held to be invalid, such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application.

53 With respect to one type of SBS, credit default swaps ("CDSs"), the Government Accountability Office found that "comprehensive and consistent data on the overall market have not been readily available," "authoritative information about the actual size of the [CDS] market is generally not available," and regulators currently are unable "to monitor activities across the market." Government Accountability Office, GAO-09-397T, Systemic Risk: Regulatory Oversight and Recent Initiatives to Address Risk Posed by Credit Default Swaps, at 2, 5, 27, (2009) available at http://www.gao.gov/new.items/d09397t.pdf; see also Robert E. Litan, The Derivatives Dealers' Club and Derivatives Market Reform: A Guide for Policy Makers, Citizens and Other Interested Parties, Brookings Institution (Apr. 7, 2010), http://www.brookings.edu/~/media/research/files/papers/2010/4/07%20derivatives%20litan/0407_derivatives_litan.pdf; Michael Mackenzie, Era of an Opaque Swaps Market Ends, Financial Times, June 25, 2010, http://www.ft.com/intl/cms/s/0/f49f635c-8081-11df-be5a-00144feabdc0.html#axzz3HLUjYNI7.

In opaque markets, price and volume information is difficult or impossible to obtain, and access to price and volume information confers a competitive advantage on market participants with such access. In the SBS market, for example, SBS dealers currently gain access to proprietary transaction-level price and volume information by observing order flow. Large SBS dealers and other large market participants with a large share of order flow have an informational advantage over smaller SBS dealers and non-dealers who, in the absence of pre-trade transparency, observe a smaller subset of the market. As the Commission highlights in Section II.B below, the majority of SBS market activity, and therefore information about market activity, is concentrated in a small number of SBS dealers and widely dispersed among other market participants. Greater access by SBS dealers to non-public information about order flow enables better assessment of current market values by SBS dealers, permitting them to extract economic rents from counterparties who are less informed.[54] Non-dealers are aware of this information asymmetry, and certain non-dealers – particularly larger entities who transact with many dealers – may be able to obtain access to competitive pricing or otherwise demand a price discount that reflects the information asymmetry. Typically, however, the market participants with an information advantage will earn economic rents from their non-public information. In the SBS market, it is predominantly SBS dealers who observe the greatest order flow and benefit from market opacity.

The Commission expects that SDRs will play a critical role in enhancing transparency and competitive access to information in the SBS market. In order to increase the transparency

54 In this situation, economic rents are the profits that SBS dealers earn by trading with counterparties who are less informed. In a market with competitive access to information, there is no informational premium; SBS dealers only earn a liquidity premium. The difference between the competitive liquidity premium and the actual profits that SBS dealers earn is the economic rent.

of the OTC derivatives market, Title VII requires the Commission to undertake a number of rulemakings, including the SDR Rules and Regulation SBSR,[55] to establish a framework for the regulatory reporting of SBS transaction information to SDRs, public dissemination of transaction-level information, and a framework for SDRs to provide access to the information to the Commission. Persons that meet the definition of an SDR will be required, absent an exemption, to comply with all SDR obligations, including the SDR Rules requiring SDRs to collect and maintain accurate data and the requirements under Regulation SBSR to publicly disseminate transaction-level information. Reporting of SBS transaction information and public dissemination of accurate transaction price and volume information should promote price discovery and lessen the informational advantage enjoyed by SBS dealers with access to order flow.[56] By requiring SDRs to collect SBS transaction, volume, and pricing information and publicly disseminate information, the SDR Rules and Regulation SBSR may promote transparency in the SBS market.[57]

In addition to lessening the informational advantage currently available to SBS dealers, increased transparency of the SBS market could have other widespread benefits. Public

---

55 See Regulation SBSR Adopting Release, supra note 13.

56 Price discovery refers to the process by which buyers seek the lowest available prices and sellers seek the highest available prices. This process reveals the prices that best match buyers to sellers. See Larry Harris, Trading & Exchanges: Market Microstructure for Practitioners 94 (2003). Price discovery may be hindered by such things as a scarcity of buyers or sellers or an asymmetry of information between potential buyers and sellers. For example, when traders are asymmetrically informed, liquidity suppliers set their prices far from the market to recover from uninformed traders what they lose to well-informed traders. See id. at 312.

57 Regulation SBSR requires that the economic terms of the transaction, with the exception of the identities of the counterparties, be publicly disseminated. These terms include the product ID, date and time of execution, price, and notional amount of an SBS. See Regulation SBSR Adopting Release, supra note 13 (Rules 901(c) and 902).

availability of SBS price and volume information could lower the costs of SBS trading by reducing implicit trading costs.[58] To the extent that implicit costs of SBS trading are reduced and the availability of the data necessary to evaluate the performance of a market participant's SBS dealer using transaction cost analysis, more market participants may be inclined to trade in the SBS market.[59]

Allowing competitive, impartial access to the most recent transaction price and volume information may promote the efficiency of SBS trading and increase opportunities for risk-sharing in other ways. In particular, as in other securities markets, quoted bids and offers should form and adjust according to the reporting of executed trades, attracting liquidity from hedgers and other market participants that do not observe customer order flow and do not benefit from opacity.

Separately, the SDR Rules are designed to, among other things, make available to the Commission SBS data that will provide a broad view of the SBS market and help monitor for

---

58 Implicit trading cost is the difference between the price at which a market participant can enter into an SBS and the theoretical fundamental value of that SBS. Post-trade transparency has been shown to lower implicit trading costs in US corporate bond markets, which, prior to the introduction of FINRA's Trade Reporting and Compliance Engine (TRACE), was a dealer-centric over-the-counter ("OTC") market characterized by limited transparency, similar to the SBS market. See, e.g., Amy K. Edwards, Lawrence Harris, & Michael S. Piwowar, Corporate Bond Market Transparency and Transaction Costs, 62 Journal of Finance 1421 (2007); Hendrik Bessembinder, William F. Maxwell, & Kumar Venkataraman, Market Transparency, Liquidity, Externalities and Institutional Trading Costs in Corporate Bonds, 82 Journal of Financial Economics 251 (2006).

59 Transaction cost analysis refers to an evaluation of the price received by a market participant relative to prevailing market prices at the time the decision to transact was made as well as transaction prices received by other market participants just before and just after the transaction.

pockets of risk that might not otherwise be observed by financial market regulators.[60] Unlike most other securities transactions, SBSs involve ongoing financial obligations between counterparties during the life of transactions that typically span several years. Counterparties to an SBS rely on each other's creditworthiness and bear this credit risk and market risk until the SBS terminates or expires. This can lead to market instability when a large market participant, such as an SBS dealer, major SBS market participant, or central counterparty ("CCP"), becomes financially distressed. The default of a large market participant could introduce the potential for sequential counterparty failure; the resulting uncertainty could reduce the willingness of market participants to extend credit, and substantially reduce liquidity and valuations for particular types of financial instruments.[61] A broad view of the SBS market, including aggregate market exposures to referenced entities (instruments), positions taken by individual entities or groups, and data elements necessary for a person to determine the market value of the transaction could provide the Commission with a better understanding of the actual and potential risks in the SBS market and promote better risk monitoring efforts. The information provided by SDRs could also help the Commission detect market manipulation, fraud, and other market abuses.

60 See Exchange Act Section 13(n)(5)(D), 15 U.S.C. 78m(n)(5)(D), and Rule 13n-4(b)(5) (requiring SDRs to provide direct electronic access to the Commission). See also 156 Cong. Rec. S5920 (daily ed. July 15, 2010) (statement of Sen. Lincoln) ("These new 'data repositories' will be required to register with the CFTC and the SEC and be subject to the statutory duties and core principles which will assist the CFTC and the SEC in their oversight and market regulation responsibilities.").

61 See, e.g., Markus K. Brunnermeier and Lasse Heje Pedersen, Market Liquidity and Funding Liquidity, 22 Review of Financial Studies 2201 (2009); Denis Gromb and Dimitri Vayanos, A Model of Financial Market Liquidity Based on Intermediary Capital, 8 Journal of the European Economic Association 456 (2010).

The extent of the benefits discussed above may be limited by the inaccuracy or incompleteness of SBS data maintained by SDRs.[62] The Commission believes, however, that the SDR Rules relating to data accuracy[63] and maintenance[64] will help minimize the inaccuracy or incompleteness of SBS data maintained by SDRs. The benefits discussed above may have associated costs for compliance with the SDR Rules and Regulation SBSR. Persons that meet the definition of an SDR will be required to invest in infrastructure necessary to comply with rules for collecting, maintaining, and disseminating accurate data. Such infrastructure costs may ultimately be reflected in the prices that SBS dealers charge to customers, mitigating the reduction in indirect trading costs that may accrue from reducing SBS dealers' information advantage.

---

62 The CFTC's experience with collecting swap data suggests that the benefits of receiving information from trade repositories may be reduced by inaccuracies or inconsistencies in information maintained by trade repositories. See, e.g., Andrew Ackerman, CFTC Seeks Comment on Improving Swaps Data Stream; Data Problems Have Hobbled Efforts to See More Clearly Into Swaps Market, Wall Street Journal Mar. 19, 2014, http://online.wsj.com/news/articles/SB10001424052702304026304579449552899867592 (noting that "a series of data problems . . . have hobbled efforts to see more clearly into the multitrillion-dollar swaps market"). The CFTC has published a request for comment on specific swap data reporting and recordkeeping rules to determine how these rules were being applied and whether or what clarifications, enhancements, or guidance may be appropriate. See Review of Swap Data Recordkeeping and Reporting Requirements, 79 FR 16689 (Mar. 26, 2014).

63 See, e.g., Rule 13n-5(b)(3) (requiring an SDR to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the transaction data and positions that it maintains are complete and accurate).

64 See, e.g., Rule 13n-5(b)(4) (requiring an SDR to maintain transaction data and related identifying information for not less than five years after the applicable SBS expires and historical positions for not less than five years); Rule 13n-5(b)(5) (requiring an SDR to establish, maintain, and enforce written policies and procedures reasonably designed to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the SDR).

The SDR Rules permit the possibility of multiple SDRs within an asset class.[65] If there are multiple SDRs in any given asset class, then differences in how each SDR accepts, stores, and disseminates SBS data may cause fragmentation in the SBS data, thereby making it more difficult for the Commission and the public to compile, compare, and analyze market information. As discussed below, the Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies that would facilitate an accurate interpretation, aggregation, and analysis of SBS data by the Commission.[66] The Commission believes that these specifications may help reduce any difficulties resulting from the fragmentation of data among multiple SDRs by facilitating the clear, uniform reporting of SBS data to the Commission.

B. Baseline

To assess the economic impact of the SDR Rules described in this release, the Commission is using as a baseline the SBS market as it exists today, including applicable rules that have already been adopted and excluding rules that have been proposed, but not yet finalized. The Commission acknowledges limitations in the degree to which the Commission can quantitatively characterize the current state of the SBS market. As described in more detail below, because the available data on SBS transactions do not cover the entire market, the Commission has developed an understanding of market activity using a sample that includes only certain portions of the market.

65 See Section IV of this release discussing number of SDRs and consolidation of SBS data.

66 See Section VI.D.2.c.ii of this release.

1. Transparency in the SBS Market

There currently is no robust, widely accessible source of information about individual SBS transactions. Nevertheless, market participants can gather certain limited information for the single-name CDS market from a variety of sources. For example, some vendors provide indicative quotes. Indicative quotes are not based on actual transactions and, as such, they may not reflect the true value. Moreover, these quotes do not represent firm commitments to buy or sell protection on particular reference entities. However, market participants can gather information from indicative quotes that may inform their trading. In addition, one entity as part of its single-name CDS clearing, makes its daily settlement prices on 5 year single-name CDSs available to the public on its website.[67] A more complete database of current and historical settlement prices is available by subscription.

In addition to the pricing data discussed above, there is limited, publicly-disseminated information about aggregate SBS market activity. The Depository Trust and Clearing Corporation – Trade Information Warehouse ("DTCC-TIW") publishes weekly transaction and position reports for single-name CDSs. ICE Clear Credit also provides aggregated volumes of clearing activity. Additionally, large multilateral organizations periodically report measures of market activity. For example, the Bank for International Settlements ("BIS") reports gross notional outstanding for single-name CDSs and equity forwards and swaps semiannually.

---

67 See https://www.theice.com/cds/MarkitSingleNames.shtml. End-of-Day ("EOD") prices are established for all cleared CDS single name and index instruments using a price discovery process developed for the CDS market. Clearing participants are required to submit prices every business day, and the clearing house conducts a daily auction-like process resulting in periodic trade executions among clearing participants. This process determines the clearing house EOD prices, which are used for daily mark-to-market purposes.

Market participants that are SBS dealers can also draw inferences about SBS market activity by observing order flow. This source of proprietary information is most useful for SBS dealers with large market shares.

Finally, DTCC-TIW voluntarily provides to the Commission data on individual CDS transactions. This information is made available to the Commission in accordance with an agreement between the DTCC-TIW and the OTC Derivatives Regulators' Forum ("ODRF"), of which the Commission is a member. While DTCC-TIW generally provides this information to regulators that are members of the ODRF, DTCC-TIW does not make the information available to the public.

2. Current Security-Based Swap Market

The Commission's analysis of the current state of the SBS market is based on data obtained from DTCC-TIW, particularly data regarding the activity of market participants for single-name CDSs from 2008 to 2013. While other repositories may collect data on transactions in total return swaps on equity and debt, the Commission does not currently have access to such data for these products (or other products that are SBSs). Although the Commission has previously noted that the definition of SBS is not limited to single-name CDSs, the Commission believes that the single-name CDS data is sufficiently representative of the SBS market and therefore can directly inform the analysis of the state of the current SBS market.[68] The

[68] According to data published by BIS, the global notional amount outstanding in equity forwards and swaps as of December 2013 was $2.28 trillion. The notional amount outstanding was approximately $11.32 trillion for single-name CDSs, approximately $9.70 trillion for multi-name index CDSs, and approximately $0.95 trillion for multi-name, non-index CDSs. See Bank of International Settlement, BIS Quarterly Review, Statistical Annex, Table 19 (June 2014), available at http://www.bis.org/publ/qtrpdf/r_qt1406.htm. For purposes of this analysis, the Commission assumes that multi-name index CDSs are not narrow-based index CDSs, and

Commission believes that DTCC-TIW's data for single-name CDSs is reasonably comprehensive because it includes data on almost all single-name CDS transactions and market participants trading in single-name CDSs.[69] The Commission notes that the data that it receives from DTCC-TIW does not encompass CDS transactions that both: (i) do not involve any U.S. counterparty,[70] and (ii) are not based on a U.S. reference entity. Notwithstanding this limitation, the Commission believes that DTCC-TIW data provides sufficient information to identify the types of market participants active in the SBS market and the general pattern of dealing within that market.[71]

therefore do not fall within the definition of SBS. See Exchange Act Section 3(a)(68)(A), 15 U.S.C. 78c(a)(68)(A); see also Further Definition of "Swap," "Security-Based Swap," and "Security-Based Swap Agreement"; Mixed Swaps; Security-Based Swap Agreement Recordkeeping, Exchange Act Release No. 67453 (July 18, 2012), 77 FR 48207 (Aug. 13, 2012). The Commission also assumes that instruments reported as equity forwards and swaps include instruments such as total return swaps on individual equities that fall with the definition of SBS, potentially resulting in underestimation of the proportion of the SBS market represented by single-name CDSs. Although the BIS data reflects the global OTC derivatives market, and not only the U.S. market, the Commission is not aware of any reason to believe that these ratios differ significantly in the U.S. market.

69 See ISDA, CDS Marketplace, Exposures & Activity, http://www.isdacdsmarketplace.com/exposures_and_activity ("DTCC Deriv/SERV's Trade Information Warehouse is the only comprehensive trade repository and post-trade processing infrastructure for OTC credit derivatives in the world. Its Deriv/SERV matching and confirmation service electronically matches and confirms more than 98% of credit default swaps transactions globally.").

70 The Commission notes that DTCC-TIW's entity domicile determinations may not reflect the Commission's definition of "U.S. person" in all cases.

71 In 2013, DTCC-TIW reported on its website new trades in single-name CDSs with gross notional of $12.0 trillion. DTCC-TIW provided to the Commission data that included only transactions with a U.S. counterparty or a U.S. reference entity. During the same period, this data included new trades with gross notional equaling $9.3 trillion, or 77% of the total reported by DTCC-TIW.

a. Security-Based Swap Market Participants

A key characteristic of SBS activity is that it is concentrated among a relatively small number of entities that engage in dealing activities.[72] Based on DTCC-TIW data that the Commission has received, thousands of other market participants appear as counterparties to SBS transactions, including, but not limited to, investment companies, pension funds, private (hedge) funds, sovereign entities, and industrial companies. The Commission observes that most end users of SBSs do not directly trade SBSs, but instead use dealers, banks, or investment advisers as agents to establish the end users' positions. Based on the Commission's analysis of DTCC-TIW data, there were 1,800 entities engaged directly in trading CDSs between November 2006 and December 2013.[73] Table 1 below highlights that of these entities, there were 17, or approximately 0.9%, that were ISDA-recognized dealers.[74] The vast majority of transactions (84.1%) measured by the number of counterparties (each transaction has two counterparties or transaction sides) were executed by ISDA-recognized dealers. Thus, a small set of dealers observe the largest share of the market and potentially benefit the most from opacity.

72 See Cross-Border Adopting Release, 79 FR at 47293, supra note 11. All data in this section cites updated data from this release and the accompanying discussion.

73 These 1,800 transacting agents represent over 10,000 accounts representing principal risk holders. See Regulation SBSR Adopting Release, supra note 13 and Cross Border Adopting Release, 79 FR at 47293-4, supra note 11 (discussing the number of transacting agents and accounts of principal risk holders).

74 For the purpose of this analysis, the ISDA-recognized dealers are those identified by ISDA as a recognized dealer in any year during the relevant period. Dealers are only included in the ISDA-recognized dealer category during the calendar year in which they are so identified. The complete list of ISDA recognized dealers is: JP Morgan Chase NA (and Bear Stearns), Morgan Stanley, Bank of America NA (and Merrill Lynch), Goldman Sachs, Deutsche Bank AG, Barclays Capital, Citigroup, UBS, Credit Suisse AG, RBS Group, BNP Paribas, HSBC Bank, Lehman Brothers, Société Générale, Credit Agricole, Wells Fargo, and Nomura. See ISDA, Operations Benchmarking Surveys, available at http://www2.isda.org/functional-areas/research/surveys/operations-benchmarking-surveys.

Table 1. The number of transacting agents in the CDS market by counterparty type and the fraction of total trading activity, from November 2006 through December 2013, represented by each counterparty type.

Transacting Agents	Number	Percent	Transaction share
Investment Advisers	1,347	74.8%	9.7%
- SEC registered	*529*	*29.4%*	*5.9%*
Banks	256	14.2%	5.0%
Pension Funds	29	1.6%	0.1%
Insurance Companies	36	2.0%	0.2%
ISDA-Recognized Dealers	17	0.9%	84.1%
Other	115	6.4%	1.0%
Total	1,800	100.0%	100.0%

Principal holders of CDS risk exposure are represented by accounts in DTCC-TIW.[75] As highlighted in Table 2 below, Commission staff's analysis of these accounts in DTCC-TIW shows that the 1,800 transacting agents (entities directly engaged in trading) described above represented 10,054 principal risk holders (entities bearing the risk of the CDS). In some cases, the principal risk holder may have been represented by an investment adviser that served as the transacting agent. In other cases, the principal risk holder may have participated directly as the transacting agent. Each account does not necessarily represent a separate legal person; one legal person may allocate transactions across multiple accounts. For example, the 17 ISDA-recognized dealers described above allocated transactions across 69 accounts.

[75] "Accounts" as defined in the DTCC-TIW context are not equivalent to "accounts" in the definition of "U.S. person" provided by Exchange Act Rule 3a71-3(a)(4)(i)(C). They also do not necessarily represent separate legal persons. One entity or legal person may have multiple accounts. For example, a bank may have one DTCC account for its U.S. headquarters and one DTCC account for one of its foreign branches.

Among the accounts, there are 1,086 Dodd-Frank Act-defined special entities and 636 investment companies registered under the Investment Company Act of 1940.[76] Private funds comprise the largest type of account holders that the Commission was able to classify, and although not verified through a recognized database, most of the funds the Commission was not able to classify appear to be private funds.[77] While the Commission anticipates that some of these accounts may prefer to operate in an opaque market (if, for example, they are relying on a proprietary trading strategy and wish to keep their transactions anonymous), the data suggest that the vast majority of principal risk holders in CDS may benefit from the Dodd-Frank Act's transparency requirements. As discussed above and in Section VIII below, dealers are the category of market participants most likely to benefit from opaqueness. As shown in Table 1, of the 1,800 transacting agents in the 2006-2013 sample, 17 (or 0.9%) are ISDA-recognized dealers. Similarly, as shown in Table 2, of the 10,054 accounts with CDS transactions, 69 (or 0.7%) are accounts held by ISDA-recognized dealers. As many as 99% of market participants may benefit from increasing transparency.

76 There remain over 4,600 DTCC "accounts" unclassified by type. Although unclassified, each was manually reviewed to verify that it was not likely to be a special entity within the meaning of the Dodd-Frank Act and instead was likely to be an entity such as a corporation, an insurance company, or a bank.

77 "Private funds" encompass various unregistered pooled investment vehicles, including hedge funds, private equity funds, and venture capital funds.

Table 2. The number and percentage of account holders—by type—who participate in the CDS market through a registered investment adviser, an unregistered investment adviser, or directly as a transacting agent from November 2006 through December 2013.

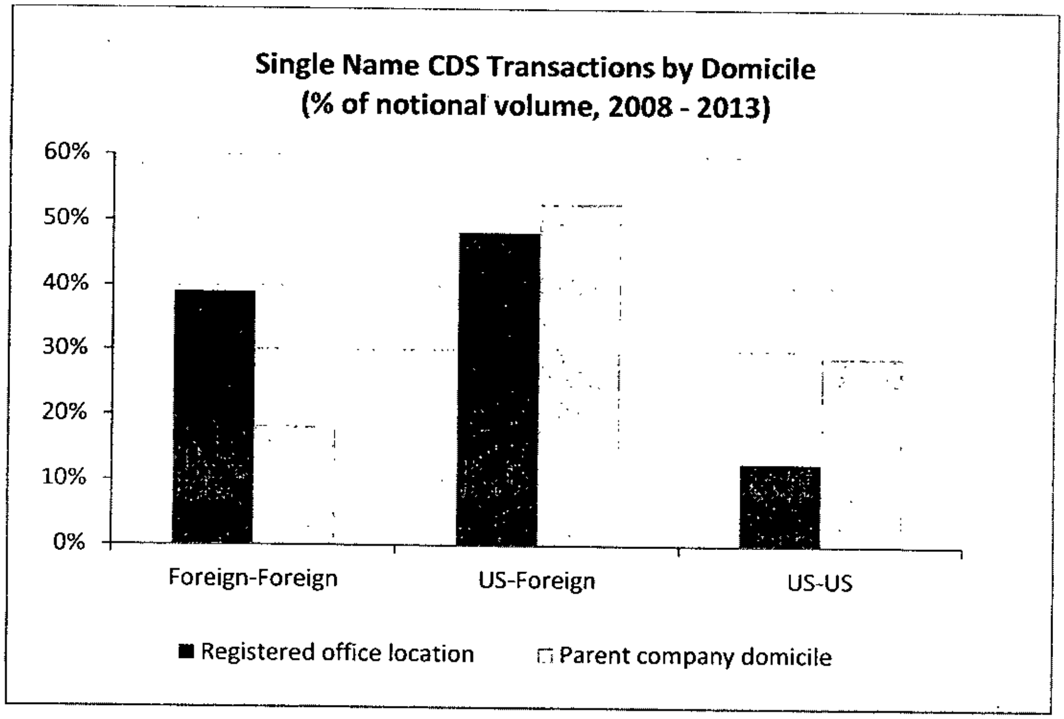
Account Holders by Type	Number	Represented by a registered investment adviser		Represented by an unregistered investment adviser		Participant is transacting agent[78]	
Private Funds	2,914	1,395	48%	1,496	51%	23	1%
Dodd-Frank Act Special Entities	1,086	1,050	97%	12	1%	24	2%
Registered Investment Companies	636	620	97%	14	2%	2	0%
Banks (non-ISDA-recognized dealers)	369	25	7%	5	1%	339	92%
Insurance Companies	224	144	64%	21	9%	59	26%
ISDA-Recognized Dealers	69	0	0%	0	0%	69	100%
Foreign Sovereigns	63	45	71%	2	3%	16	25%
Non-Financial Corporations	57	39	68%	3	5%	15	26%
Finance Companies	10	5	50%	0	0%	5	50%
Other/Unclassified	4,626	3,131	68%	1,295	28%	200	4%
All	10,054	6,454	64%	2,848	28%	752	7%

Although the SBS market is global in nature, 61% of the transaction volume in the 2008-2013 period included at least one U.S.-domiciled entity (see Figure 1). Moreover, 18% of the CDS transactions reflected in DTCC-TIW data that include at least one U.S.-domiciled

78 This column reflects the number of participants who are also trading for their own accounts.

counterparty or a U.S. reference entity were between U.S.-domiciled entities and foreign-domiciled counterparties.

Figure 1: The fraction of notional volume in North American corporate single-name CDS between (1) two U.S.-domiciled accounts, (2) one U.S.-domiciled account and one non-U.S.-domiciled account, and (3) two non-U.S.-domiciled accounts, computed from January 2008 through December 2013.



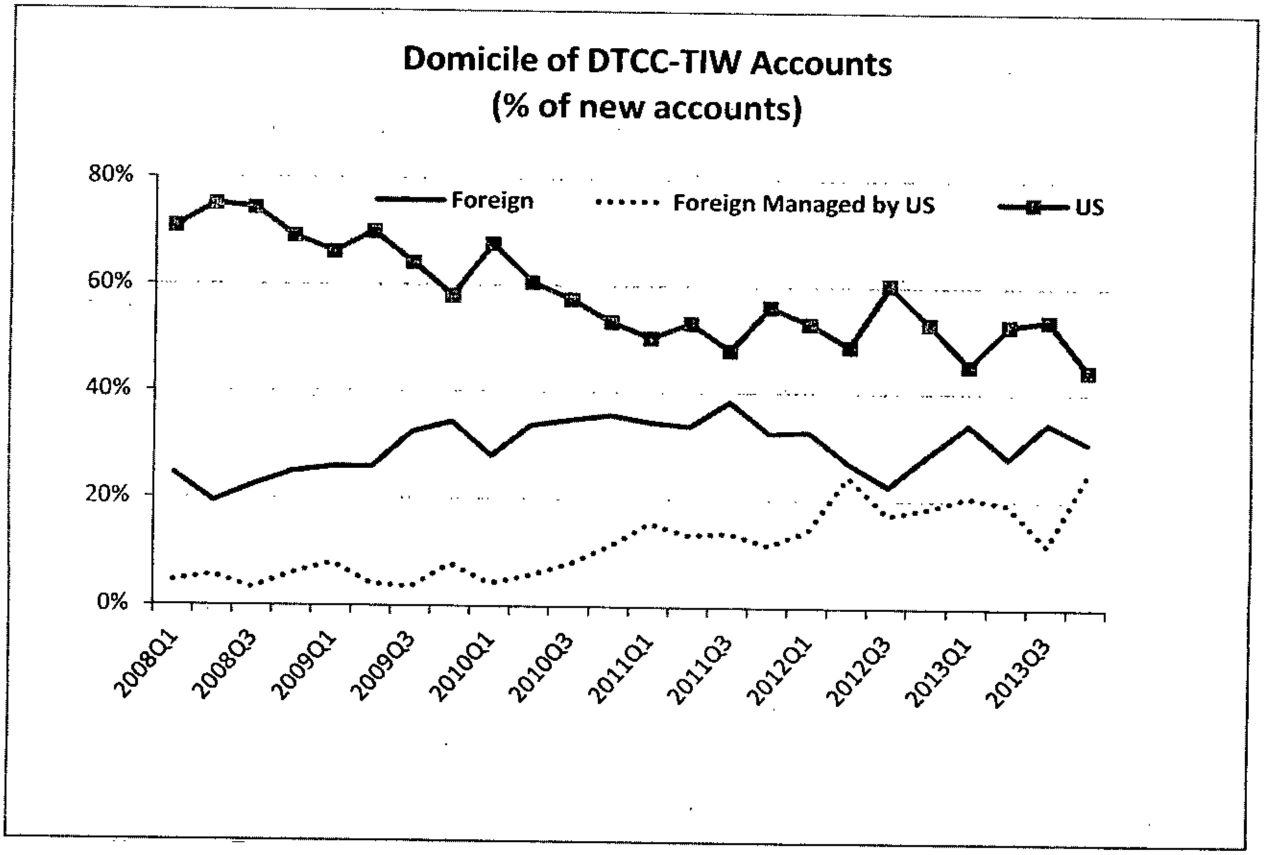
The cross-border nature of the SBS market is growing over time. Figure 2 below is a chart of (1) the percentage of new accounts with a domicile in the United States,[79] (2) the

[79] The domicile classifications in DTCC-TIW are based on the market participants' own reporting and have not been verified by Commission staff. Prior to enactment of the Dodd-Frank Act, account holders did not formally report their domicile to DTCC-TIW because there was no systematic requirement to do so. After enactment of the Dodd-Frank Act, the DTCC-TIW has collected the registered office location of the account. This information is self-reported on a voluntary basis. It is possible that some market participants may misclassify their domicile status because the databases in DTCC-TIW do not assign a unique legal entity identifier to each separate entity. It is also possible that the domicile classifications may not correspond precisely to the definition of U.S. person under the rules defined in Exchange Act Rule 3a71-3(a)(4), 17 CFR 240.3a71-

percentage of new accounts with a domicile outside the United States, and (3) the percentage of new accounts outside the United States, but managed by a U.S. entity, foreign accounts that include new accounts of a foreign branch of a U.S. bank, and new accounts of a foreign subsidiary of a U.S. entity. Over time, a greater share of accounts entering the DTCC-TIW data either have a foreign domicile or have a foreign domicile while being managed by a U.S. person. The increase in foreign accounts may reflect an increase in participation by foreign accountholders and the increase in foreign accounts managed by U.S. persons may reflect the flexibility with which market participants can restructure their market participation in response to regulatory intervention, competitive pressures, and other factors. There are, however, alternative explanations for the shifts in new account domicile in Figure 2. Changes in the domicile of new accounts through time may reflect improvements in reporting by market participants to DTCC-TIW. Additionally, because the data includes only accounts that are domiciled in the United States, transact with U.S.-domiciled counterparties, or transact in single-name CDSs with U.S. reference entities, changes in the domicile of new accounts may reflect increased transaction activity between U.S. and non-U.S. counterparties.

3(a)(4). Notwithstanding these limitations, the Commission believes that the cross-border and foreign activity demonstrates the nature of the single-name CDS market.

Figure 2: The percentage of (1) new accounts with a domicile in the United States (referred to below as "US"), (2) new accounts with a domicile outside the United States (referred to below as "Foreign"), and (3) new accounts outside the United States, but managed by a U.S. entity, new accounts of a foreign branch of a U.S. bank, and new accounts of a foreign subsidiary of a U.S. entity (collectively referred to below as "Foreign managed by US"). Unique, new accounts are aggregated each quarter and shares are computed on a quarterly basis, from January 2008 through December 2013. The sample includes accounts that are domiciled in the United States, transact with U.S.-domiciled accounts, or transact in CDSs that reference U.S. entities. (Source: DTCC-TIW)



b. Security-Based Swap Data Repositories

No SDRs are currently registered with the Commission. The Commission is aware of one entity in the market (i.e., the DTCC-TIW) that has been accepting voluntary reporting of single-name and index CDS transactions. In 2013, DTCC-TIW received approximately 3.1 million records of CDS transactions, of which approximately 800,000 were price forming.[80]

The CFTC has provisionally registered four swap data repositories.[81] These swap data repositories are: BSDR LLC, Chicago Mercantile Exchange Inc., DTCC Data Repository LLC, and ICE Trade Vault, LLC. The Commission believes that most of these entities will likely register with the Commission as SDRs and that other persons may seek to register with both the CFTC and the Commission as swap data repositories and SDRs, respectively. As stated above, the Commission believes that the final SDR Rules are largely consistent with the CFTC's rules governing swap data repositories

Efforts to regulate the swap and SBS market are underway not only in the United States, but also abroad. In 2009, leaders of the G20—whose members include the United States, 18 other countries, and the European Union—called for global improvements in the functioning, transparency, and regulatory oversight of OTC derivatives markets and agreed, among other things, that OTC derivatives contracts should be reported to trade repositories.[82] Substantial progress has been made in establishing the trade repository infrastructure to support the reporting

---

80 Price-forming CDS transactions include all new transactions, assignments, modifications to increase the notional amounts of previously executed transactions, and terminations of previously executed transactions. Transactions terminated or entered into in connection with a compression exercise, and expiration of contracts at maturity are not considered price-forming and are therefore excluded, as are replacement trades and all bookkeeping-related trades.

81 CFTC Rule 49.3(b) provides for provisional registration of a swap data repository. 17 CFR 49.3(b).

82 See Leaders' Statement, The Pittsburgh Summit, September 24-25, 2009, available at http://www.treasury.gov/resource-center/international/g7-g20/Documents/pittsburgh_summit_leaders_statement_250909.pdf.

of all contracts.[83] Currently, multiple trade repositories operate, or are undergoing approval processes to do so, in a number of different jurisdictions.[84] The requirements for trade reporting differ across jurisdictions. The result is that trade repository data is fragmented across many locations, stored in a variety of formats, and subject to many different rules for authorities' access. The data in these trade repositories will need to be aggregated in various ways if authorities are to obtain a comprehensive and accurate view of the global OTC derivatives markets and to meet the original financial stability objectives of the G20 in calling for comprehensive use of trade repositories.

III. Definition, Scope of Registration, Services, and Business Models of SDRs

The Proposing Release generally discussed the role, regulation, and business models of SDRs,[85] but it did not specifically address the applicability of the statutory definition of an SDR.[86] The Commission received several comments that addressed broad issues regarding what persons fall within the statutory definition of an SDR, what services can or must be provided by SDRs, and what business models are appropriate for SDRs. In light of these comments, the Commission believes that it is useful to provide clarity on the definition of an SDR and the services that are required or permitted to be provided by SDRs. For purposes of this release, the Commission will refer to services that are specifically included in the statutory definition of an

83 See OTC Derivatives Market Reforms Eighth Progress Report on Implementation (Nov. 2014), available at http://www.financialstabilityboard.org/wp-content/uploads/r_141107.pdf.

84 Id.

85 See Proposing Release, 75 FR at 77307-77308, supra note 2.

86 In the Cross-Border Proposing Release, the Commission discussed several examples of circumstances in which a person would be performing the functions of an SDR in the cross-border context. 78 FR at 31041-31043, supra note 3. The Commission did not receive any comments on this aspect of the Cross-Border Proposing Release.

SDR[87] as "core" services. All other services – both those required by the Dodd-Frank Act and the rules and regulations thereunder, and those not required, but which the Commission believes are permissible for SDRs to perform – will be referred to as "ancillary" services.

A. Definition of SDR: Core Services

Exchange Act Section 3(a)(75), enacted by Dodd-Frank Act Section 761, defines a "security-based swap data repository" to mean "any person that collects and maintains information or records with respect to transactions or positions in, or the terms and conditions of, security-based swaps entered into by third parties for the purpose of providing a centralized recordkeeping facility for security-based swaps."[88]

One commenter requested that "the Commission provide clear guidance as to the scope of the entities covered within the [statutory] definition of SDR in the Dodd-Frank Act."[89] The commenter stated as follows: "The statutory duties required of an SDR are extensive and can form a business in their own right. The requirements of an SDR should not be imposed upon service providers looking to provide targeted solutions to specific processes, as opposed to providers looking more broadly to fulfill the role of an SDR. All third party service providers have to perform a level of recordkeeping and often retain data previously submitted by customers to offer services efficiently. This should not transform them into an SDR unless there is a corresponding policy reason for doing so. In fact, there is a strong policy reason to exclude them, the goal of countering the risk of fragmentation in data collection and dissemination on a

87 Exchange Act Section 3(a)(75), 15 U.S.C. 78c(a)(75).

88 Exchange Act Section 3(a)(75), 15 U.S.C. 78c(a)(75).

89 DTCC 2, supra note 19.

global basis."[90] Another commenter described an SDR's core functions as "basic receipt and storage of [SBS] data."[91]

The Commission believes that the statutory definition in Exchange Act Section 3(a)(75) describes the core services or functions of an SDR. Whether a person falls within the statutory definition of an SDR is fact-specific. An example of a person that would likely meet the statutory definition of an SDR is a person that provides the service of maintaining a centralized repository of records of SBSs for counterparties to SBS transactions that are intended to be relied on by counterparties for legal purposes. Providing this service would cause the person to meet the statutory definition of an SDR because the person is "collect[ing] and maintain[ing] information or records with respect to transactions or positions in, or the terms and conditions of, [SBSs] entered into by third parties for the purpose of providing a centralized recordkeeping facility for [SBSs]."[92] In contrast, a law firm, trustee, custodian, or broker-dealer that holds SBS records likely would not meet the statutory definition of an SDR because those persons would not be doing so "for the purpose of providing a centralized recordkeeping facility for [SBSs]."[93]

One commenter identified countering the risk of fragmentation in data collection and dissemination as a policy reason to exclude certain persons, such as certain third party service providers, from the definition of an SDR.[94] The Commission believes that while third party service providers may collect and maintain SBS data, they generally do not do so "for the purpose of providing a centralized recordkeeping facility." As such, third party service providers

90 DTCC 2, supra note 19.

91 MarkitSERV, supra note 19.

92 See Exchange Act Section 3(a)(75), 15 U.S.C. 78c(a)(75).

93 See Exchange Act Section 3(a)(75), 15 U.S.C. 78c(a)(75).

94 See DTCC 2, supra note 19.

generally would not fall within the statutory definition of an SDR. Thus, they do not need to be excluded from the definition of an SDR, as the commenter suggested. If, however, the third party service provider collects and maintains the SBS data "for the purpose of providing a centralized recordkeeping facility,"[95] it would likely fall within the definition of an SDR. The Commission does not believe that there are any policy reasons, including countering the risk of fragmentation, to warrant a broad-based exemption from registration for third party service providers that collect and maintain SBS data "for the purpose of providing a centralized recordkeeping facility."

B. SDRs Required to Register With The Commission

To the extent that a person falls within the statutory definition of an SDR, and makes use of the mails or any means or instrumentality of interstate commerce to perform the functions of an SDR, then that person is required to register with the Commission,[96] absent an exemption.[97] As discussed in the Cross-Border Proposing Release,[98] the Commission believes that U.S. persons[99] that perform the functions of an SDR are required to register with the Commission and

95 Exchange Act Section 3(a)(75), 15 U.S.C. 78c(a)(75).

96 See Exchange Act Section 13(n)(1), 15 U.S.C. 78m(n)(1).

97 See Section VI.K of this release discussing Rule 13n-12.

98 Cross-Border Proposing Release, 78 FR at 31042, supra note 3.

99 The term "U.S. person" is defined in Rule 13n-12(a), as discussed in Section VI.K.3 of this release, and cross-references to the definition of "U.S. person" in Exchange Act Rule 3a71-3(a)(4)(i), 17 CFR 240.3a71-3(a)(4)(i). See Cross-Border Adopting Release, 79 FR at 47371, supra note 11. Rule 3a71-3(a)(4)(i) defines "U.S. person" to mean "any person that is: (A) A natural person resident in the United States; (B) A partnership, corporation, trust, investment vehicle, or other legal person organized, incorporated, or established under the laws of the United States or having its principal place of business in the United States; (C) An account (whether discretionary or non-discretionary) of a U.S. person; or (D) An estate of a decedent who was a resident of the United States at the time of death." Id. at 47371. As the Commission noted in the Cross-Border Adopting Release, the definition of "U.S. person" in Rule 3a71-3(a)(4)(i) "reflect[s] a territorial approach to the

comply with Exchange Act Section 13(n)[100] and the rules and regulations thereunder, as well as other requirements applicable to SDRs registered with the Commission.[101] Requiring U.S. persons that perform the functions of an SDR to be operated in a manner consistent with the Title VII regulatory framework and subject to the Commission's oversight, among other things, helps ensure that relevant authorities are able to monitor the build-up and concentration of risk exposure in the SBS market, reduce operational risk in that market, and increase operational efficiency.[102] SDRs themselves are subject to certain operational risks that may impede the ability of SDRs to meet these goals,[103] and the Title VII regulatory framework is intended to address these risks.

---

application of Title VII." Cross-Border Adopting Release, 79 FR at 47306, supra note 11. The Commission believes that the territorial focus of the definition is appropriate in the context of the SDR Rules because it will enable the Commission to identify those SDRs that should be required to register with the Commission by virtue of the location of a significant portion of their commercial and legal relationships within the United States. Cf. Cross-Border Adopting Release, 79 FR at 47337, supra note 11.

100 15 U.S.C. 78m(n).

101 In addition to the SDR Rules, the Commission is adopting Regulation SBSR, which imposes certain obligations on SDRs registered with the Commission. See Regulation SBSR Adopting Release, supra note 13. In a separate proposal relating to implementation of Dodd-Frank Act Section 763(i) (adding Exchange Act Section 13(n)(5)(E), 15 U.S.C. 78m(n)(5)(E)), the Commission proposed rules that would require SDRs registered with the Commission to collect data related to monitoring the compliance and frequency of end-user clearing exemption claims. See End-User Exception Proposing Release, supra note 15.

102 See Proposing Release, 75 FR at 77307, supra note 2 ("The enhanced transparency provided by an SDR is important to help regulators and others monitor the build-up and concentration of risk exposures in the SBS market . . . . In addition, SDRs have the potential to reduce operational risk and enhance operational efficiency in the SBS market.").

103 See Proposing Release, 75 FR at 77307, supra note 2 ("The inability of an SDR to protect the accuracy and integrity of the data that it maintains or the inability of an SDR to make such data available to regulators, market participants, and others in a timely manner could have a significant negative impact on the SBS market. Failure to maintain privacy of such data could lead to market abuse and subsequent loss of liquidity.").

Also, as stated in the Cross-Border Proposing Release, the Commission believes that a non-U.S. person[104] that performs the functions of an SDR within the United States would be required to register with the Commission, absent an exemption.[105] The Commission's interpretation of the scope of SDR registration is consistent with the Commission's territorial approach to the application of Title VII, as discussed in the Cross-Border Adopting Release.[106] As noted in that release, the Commission takes the view that a territorial approach to the application of Title VII is grounded in the text of the relevant statutory provisions and is designed to help ensure that the Commission's application of the relevant provisions is consistent with the goals that the statute was intended to achieve.[107] Once the focus of the statute has been identified using this analysis, determining whether a particular application of the statute is territorial turns on whether any relevant conduct that is the focus of the statute has a sufficient territorial nexus with the United States.[108]

---

104 Under this interpretation, the term "non-U.S. person" would have the same meaning as set forth in Rule 13n-12(a), as discussed in Section VI.K.3 of this release.

105 Cross-Border Proposing Release, 78 FR at 31042, supra note 3. See also Exchange Act Section 13(n)(1), 15 U.S.C. 78m(n)(1) (requiring persons that, directly or indirectly, make use of the mails or any means or instrumentality of interstate commerce to perform the functions of an SDR to register with the Commission). The Commission recognizes that some non-U.S. persons that perform the functions of an SDR may do so entirely outside the United States, and thus, are not required to register with the Commission. See Cross-Border Proposing Release, 78 FR at 31042 n.721, supra note 3.

106 Cross-Border Adopting Release, 79 FR at 47287, supra note 11. Accord IIB CB, supra note 26 (believing that the Commission's territorial approach to registration is appropriate for market infrastructures, including SDRs, and stating that "[t]his approach will help [ ] achieve the Commission's market oversight objectives while avoiding conflicts with foreign regulators, and it is consistent with the CFTC's approach").

107 Cross-Border Adopting Release, 79 FR at 47287, supra note 11.

108 See Cross-Border Adopting Release, 79 FR at 47287, supra note 11.

As stated in the Cross-Border Proposing Release, the Commission believes that "a non-U.S. person would be performing 'the functions of a security-based swap data repository within the United States' if, for example, it enters into contracts, such as user or technical agreements, with a U.S. person to enable the U.S. person to report [SBS] data to such non-U.S. person."[109] As another example, "a non-U.S. person would be performing 'the functions of a security-based swap data repository within the United States' if it has operations in the United States, such as maintaining [SBS] data on servers physically located in the United States, even if its principal place of business is not in the United States."[110]

One commenter submitted a comment relating to the Commission's guidance on SDR registration in the cross-border context.[111] This commenter suggested that "[t]he SDR registration requirement should apply to any entity, regardless of physical location of servers, that receives [SBS] transaction data from reporting sides who are U.S. persons for the purpose of complying with the Commission's reporting regulations."[112] The commenter also suggested that if an SDR "collects and maintains [SBS] transaction information or records in furtherance of these obligations, then it should be deemed to 'function' as an SDR in the United States and face

---

109 Cross-Border Proposing Release, 78 FR at 31042, supra note 3.

110 Cross-Border Proposing Release, 78 FR at 31042, supra note 3. The Commission notes that if a person performing the functions of an SDR has operations in the United States to the extent that such operations constitute a principal place of business, then the person would fall within the definition of "U.S. person" in Rule 13n-12, which cross-references to Exchange Act Rule 3a71-3(a)(4)(i), 17 CFR 240.3a71-3(a)(4)(i). As adopted, the term "U.S. person" includes a partnership, corporation, trust, investment vehicle, or other legal person having its principal place of business in the United States. See Cross-Border Adopting Release, 79 FR at 47371, supra note 11. As a result of being a "U.S. person," the person with its principal place of business in the United States would be required to register as an SDR with the Commission.

111 See DTCC CB, supra note 26.

112 DTCC CB, supra note 26.

the registration requirements."[113] The Commission agrees generally with the commenter, but notes that determination of whether or not an SDR is required to register with the Commission is based on relevant facts and circumstances, including, for example, whether the SDR performs the functions of an SDR within the United States, such as having operations within the United States, as discussed above. Thus, an SDR's registration requirements should be analyzed separately from the reporting requirements of Title VII and Regulation SBSR.

The commenter stated that "an entity that (i) collects and maintains [non-SBS] transaction information, (ii) collects and maintains [SBS] transaction information from activity between non-U.S. persons, or (iii) collects and maintains [SBS] transaction information reported to the entity pursuant to regulatory requirements or commitments unrelated to those imposed by the Commission . . . should not be considered to function in the United States," and "[a]ccordingly, such an entity would not be required to register with the Commission as an SDR."[114] The Commission believes that this position is overly broad. The Commission agrees that a person that collects and maintains only non-SBS transaction information would not have to register with the Commission because it would not fall within the statutory definition of an SDR.[115] However, consistent with the Commission's territorial approach to the application of Title VII, an SDR that collects and maintains data relating to SBS transactions between non-U.S. persons may still be required to register with the Commission if the SDR makes use of the mails or any means or instrumentality of interstate commerce to perform the functions of an SDR – for example by maintaining SBS data on servers physically located in the United States. Similarly,

---

113 DTCC CB, supra note 26.

114 DTCC CB, supra note 26.

115 See Exchange Act Section 3(a)(75), 15 U.S.C. 78c(a)(75).

an SDR that collects and maintains SBS transaction information reported to the SDR pursuant to requirements or commitments unrelated to those imposed by the Commission may still be required to register with the Commission if the SDR makes use of the mails or any means or instrumentality of interstate commerce to perform the functions of an SDR.

Determination of whether or not an SDR is required to register with the Commission is fact-specific. As stated in the Cross-Border Proposing Release, given the constant innovation in the market and the fact-specific nature of the determination, it is not possible to provide a comprehensive discussion of every activity that would constitute a non-U.S. person performing "the functions of a security-based swap data repository within the United States."[116] In order to provide legal certainty to market participants and to address commenters' concerns regarding the potential for duplicative regulatory requirements, the Commission is adopting Rule 13n-12, which exempts certain non-U.S. persons performing "the functions of a security-based swap data repository within the United States" from the registration and other requirements set forth in Exchange Act Section 13(n) and the rules and regulations thereunder. Rule 13n-12 is discussed in Section VI.K of this release.

C. Ancillary Services

As stated above, the Commission believes that the statutory definition of an SDR describes the core services or functions of an SDR. This release will refer to all other services or functions provided by an SDR as "ancillary services." SDRs are required to provide some ancillary services under the Exchange Act and the rules and regulations thereunder ("required ancillary services"). These required ancillary services include certain duties of SDRs that are set

116 Cross-Border Proposing Release, 78 FR at 31042-3, supra note 3.

forth in Exchange Act Section 13(n)(5)[117] and the duties imposed by the SDR Rules. SDRs also may voluntarily choose to provide other ancillary services ("voluntary ancillary services").

Five commenters submitted comments relating to "ancillary services."[118] Three commenters recommended that SDRs be allowed (but not be required) to offer ancillary services to SBS counterparties.[119] One of these commenters recommended that SDRs be allowed (but not be required) to offer "ancillary services," which, according to that commenter, "may include: asset servicing, confirmation, verification and affirmation facilities, collateral management, settlement, trade compression and netting services, valuation, pricing and reconciliation functionalities, position limits management, dispute resolution, counterparty identity verification and others."[120] The commenter noted that allowing SDRs to offer such services would "promote greater efficiencies and greater accuracy of data."[121] The commenter also recommended allowing an SDR's affiliates, which may not be registered with the Commission, to perform such "ancillary services."[122] The second commenter recommended that life cycle event processing

---

117 15 U.S.C. 78m(n)(5).

118 See Barnard, supra note 19; BNY Mellon, supra note 19; DTCC 2, supra note 19; MarkitSERV, supra note 19; TriOptima, supra note 19; see also DTCC 1*, supra note 20; DTCC 3, supra note 19. These commenters generally did not define "ancillary services." But see MarkitSERV, supra note 19 (referring to "an array of services that are ancillary . . . to those narrowly outlined in the [SDR Rules] (i.e., basic receipt and storage of [SBS] data.)").

119 See MarkitSERV, supra note 19; DTCC 2, supra note 19; Barnard, supra note 19; see also TriOptima, supra note 19 (contemplating that an SDR would provide ancillary services and stressing the importance of equal access to SDR data when such services are provided).

120 MarkitSERV, supra note 19.

121 MarkitSERV, supra note 19.

122 MarkitSERV, supra note 19.

and legal recordkeeping services be treated as "ancillary" services.[123] The second commenter also recommended allowing SDRs to offer "an asset servicing function," which would allow SDRs to "assist in systemic risk monitoring by providing regulators with regular reports analyzing the data (such as position limit violations or certain identified manipulative trading practices)."[124] With respect to bundling, both commenters agreed that an SDR should not be allowed to require counterparties to use "ancillary services" in order to gain access to the SDR.[125] The third commenter believed that SDRs should be able to offer "ancillary services," but did not support the bundling of such services with mandatory or regulatory services.[126] The fourth commenter believed that if SDRs provide "ancillary services," then the SDRs should not have advantages in providing these services over competitors offering the same services.[127] This commenter noted, for example, that SDRs will maintain granular trade data that is valuable in providing post-trade services, and that other post-trade service providers should have the same access to the granular trade data as the SDR and its affiliates when providing post-trade services.[128] The fifth commenter suggested that certain functions that an SDR may perform (e.g., confirmation of trades, reconciliation, valuation of transactions, life-cycle management, collateral management) should not be considered as "processing of [SBSs]" for the purposes of

123 DTCC 2, supra note 19.

124 DTCC 1*, supra note 20.

125 MarkitSERV, supra note 19; DTCC 3, supra note 19; see also DTCC 4, supra note 19 (stating that providers offering services for one asset class should not be permitted to bundle or tie these services with services for other asset classes); TriOptima, supra note 19 (agreeing that "it is important that market participants have the ability to access specific services separately"). See Section VI.D.3.a of this release discussing bundling of services.

126 Barnard, supra note 19.

127 TriOptima, supra note 19.

128 TriOptima, supra note 19.

SB SEF registration.[129]

It appears that the commenters generally used the term "ancillary services" to mean voluntary ancillary services. The Commission, however, notes that at least two services identified by a commenter as "ancillary services" are considered by the Commission to be required ancillary services for an SDR. This commenter suggested that "confirmation" and "dispute resolution" are ancillary to "those [services] narrowly outlined in the SBS SDR Regulation (i.e., basic receipt and storage of swaps data)."[130] The Commission agrees with the commenter's suggestion that these two services are not "core" SDR services, which would cause a person providing such core services to meet the definition of an SDR, and thus, require the person to register with the Commission as an SDR. However, SDRs are required to perform these two services or functions, and thus, they are required ancillary services; as discussed in Sections VI.E.1.c and VI.E.6.c of this release, the Exchange Act requires SDRs to "confirm" the accuracy of the data submitted,[131] and the final SDR Rules include a dispute resolution

---

129 BNY Mellon, supra note 19. See also Exchange Act Section 3D(a)(1), 15 U.S.C. 78c-4(a)(1) (stating that "[n]o person may operate a facility for the trading or processing of security-based swaps, unless the facility is registered as a security-based swap execution facility or as a national securities exchange under this section"). Subsequent to receiving this comment, the Commission issued a proposing release on the registration and regulation of SB SEFs, interpreting the Dodd-Frank Act to key the SB SEF registration obligation on the definition of an SB SEF in Exchange Act Section 3(a)(77). See 15 U.S.C. 78c(a)(77), as added by Dodd-Frank Act Section 761(a). See SB SEF Proposing Release, 76 FR at 10959 n.62; supra note 29. The Commission expects to address the scope of SB SEF registration when it adopts final rules relating to the registration and regulation of SB SEFs.

130 See MarkitSERV, supra note 19.

131 See Exchange Act Section 13(n)(5)(B), 15 U.S.C. 78m(n)(5)(B); Rule 13n-4(b)(3) (requiring an SDR to "[c]onfirm, as prescribed in Rule 13n-5, with both counterparties to the [SBS] the accuracy of the data that was submitted"); Rule 13n-5(b)(1)(iii) (requiring an SDR to establish, maintain, and enforce written policies and procedures reasonably

requirement.[132]

An SDR may delegate some of these required ancillary services to third party service providers, who do not need to register as SDRs to provide such services. The SDR will remain legally responsible for the third party service providers' activities relating to the required ancillary services and their compliance with applicable rules under the Exchange Act. For example, as discussed above, the Exchange Act requires SDRs to "confirm" the accuracy of the data submitted.[133] If an SDR delegates its confirmation obligation to a third party service provider, then the third party service provider that provides this required ancillary service would not need to register as an SDR, unless it otherwise falls within the definition of an SDR; however, the SDR that delegates its obligation to the third party service provider would remain responsible for compliance with the statutory requirement.[134]

---

designed to satisfy the SDR that the transaction data that has been submitted to the SDR is complete and accurate).

132 See Section VI.E.6.c of this release discussing Rule 13n-5(b)(6).

133 See Exchange Act Section 13(n)(5)(B), 15 U.S.C. 78m(n)(5)(B). In a separate release, the Commission proposed rules under Exchange Act Section 15F(i)(1), which provides that SBS dealers and major SBS participants must "conform with such standards as may be prescribed by the Commission, by rule or regulation, that relate to timely and accurate confirmation . . . of all security-based swaps." See Trade Acknowledgment and Verification of Security-Based Swap Transactions, Exchange Act Release No. 63727 (Jan. 14, 2011), 76 FR 3859 (Jan. 21, 2011) ("Trade Acknowledgment Release"). SDRs are not required to perform confirmations under Exchange Act Section 15F(i)(1) and the rules and regulations thereunder, but, in certain circumstances, SDRs may be able to rely on confirmations that are provided pursuant to Exchange Act Section 15F(i)(1). See Section VI.E.1.c of this release discussing the circumstances where a single confirmation could fulfill both requirements.

134 An SDR that delegates required ancillary services to a third party service provider must have a reasonable basis for relying on the third party service provider. See Section VI.E.1.c of this release discussing reasonable reliance in the context of confirmations. Cf. Exchange Act Rule 17a-4(i), 71 CFR 240.17a-4(i) (stating that an agreement with an outside entity to maintain and preserve records for a member, broker, or dealer will not

The Commission agrees with the commenters' view that SDRs should be allowed to offer voluntary ancillary services.[135] The Commission believes that use of such services by market participants and market infrastructures will likely improve the quality of the data held by the SDRs.[136] The Commission believes that when the data held at an SDR is used by counterparties for their own business purposes, rather than solely for regulatory purposes, the counterparties will have additional opportunities to identify errors in the data and will likely have incentives to ensure the accuracy of the data held by the SDR.[137] Such voluntary ancillary services that an SDR could provide include, for example, collateral management, clearing and settlement, trade compression and netting services, and pricing and reconciliation functionalities. These services could also be provided by persons that are not SDRs and would not, in and of themselves, require the providers to register as SDRs.[138]

---

relieve the member, broker, or dealer from its responsibilities under Exchange Act Rules 17a-3 or 17a-4).

135 See MarkitSERV, supra note 19; DTCC 2, supra note 19; Barnard, supra note 19.

136 See MarkitSERV, supra note 19 (recommending allowing SDRs to offer "ancillary services" because it would "promote greater efficiencies and greater accuracy of data").

137 For example, counterparties might use the data maintained by the SDR as part of their risk management activities. See MarkitSERV, supra note 19 ("[O]ne of the critical components in ensuring the accuracy of swaps data is the degree to which such data is utilized by industry participants in other processes. The existence of a number of feedback loops and distribution channels through which data will flow will enable participants to identify, test and correct inaccuracies and errors.").

138 The performance of some of these services, such as clearing and settlement and netting services, may cause a person to be a "clearing agency," as defined in Exchange Act Section 3(a)(23), 15 U.S.C. 78c(a)(23); see also Clearing Agency Standards, Exchange Act Release No. 68080 (Oct. 22, 2012), 77 FR 66220, 66227–28 (Nov. 2, 2012) ("Clearing Agency Standards Release") ([T]he definition of clearing agency in Section 3(a)(23)(A) of the Exchange Act covers any person who acts as an intermediary in making payments or deliveries or both in connection with transactions in securities and provides facilities for the comparison of data regarding the terms of settlement of securities transactions, to reduce the number of settlements of securities transactions, or

The Commission also agrees with the commenters' view that market participants should not be required to use voluntary ancillary services offered by an SDR as a condition to use the SDR's repository services,[139] and that SDRs should not be permitted to use their repository function to gain advantages in providing voluntary ancillary services over competitors offering the same services.[140] As discussed further below, the Commission is adopting Rule 13n-4(c)(1), which should address commenters' concerns.[141]

D. Business Models of SDRs

The Commission understands that SDRs might operate under a number of business models and did not intend for the proposed SDR Rules to mandate any particular business model.[142] In the Proposing Release, the Commission solicited comments on whether the SDR Rules should favor or discourage one business model over another.[143] Three commenters, including one comment submitted prior to the Proposing Release, suggested that SDRs should be required to operate on an at-cost utility model.[144]

---

for the allocation of securities settlement responsibilities. . . . The determination of whether particular activities meet the definition of a clearing agency depends on the totality of the facts and circumstances involved."). It is unlawful for a clearing agency to make use of the mails or any means or instrumentality of interstate commerce to perform the functions of a clearing agency with respect to any security (other than exempted securities) unless it is registered with the Commission, or exempted from registration, pursuant to Exchange Act Sections 17A(b) and 19(a), and the rules and regulations thereunder.

139 See MarkitSERV, supra note 19; DTCC 2, supra note 19; Barnard, supra note 19.

140 See TriOptima, supra note 19.

141 See Section VI.D.3.a of this release discussing Rule 13n-4(c)(1).

142 See Proposing Release, 75 FR at 77308, supra note 2.

143 Proposing Release, 75 FR at 77308, supra note 2.

144 See DTCC 2, supra note 19 (stating that "there is a significant advantage to the market if SDRs are required to provide basic services on an at-cost or utility model basis, as it avoids the potential abuse or conflict of interest related to a relatively small number of

Consistent with commenters' views, the Commission understands that an SDR operating on a for-profit, non-utility model, or commercial basis, may be presented with more conflicts of interest, including economic self-interest in pricing or bundling its services, than an SDR operating on an at-cost utility model, or non-profit basis.[145] The Commission believes, however, that if an SDR operating on an at-cost utility model has an affiliate that provides ancillary services for SBSs for profit, then that SDR may be presented with conflicts of interest similar to conflicts at an SDR operating on a for-profit, non-utility model.[146] For example, an SDR that has an affiliate that provides asset servicing for profit would most likely face similar conflicts as a for-profit SDR that provides asset servicing itself.

The Commission believes that the final SDR Rules, including rules pertaining to conflicts of interest, are sufficiently broad to address the range of conflicts of interest inherent in different SDR business models. For instance, under Rule 13n-4(c)(3), each SDR is required to identify conflicts of interest applicable to it and establish, maintain, and enforce written policies and procedures to mitigate these conflicts.[147] In addition, the Commission believes that allowing SDRs to pursue different business models will increase competition, efficiency, and innovation among SDRs. For example, by not prescribing one particular business model, new entrants may

service providers in the SDR industry" and that "SDR fee structures should reflect an at-cost operating budget"); Benchmark*, supra note 20 (stating that a non-profit utility structure "helps promote innovative uses" of SBS data "to maximize its value to market participants"); Saul, supra note 19 (stating that SDRs should "serve the entire industry as a utility" and that "[t]reating an SDR as a utility would also make it easier for the industry to provide the manpower and the capital to form an SDR"); see also DTCC 3, supra note 19 ("SDRs should serve an impartial, utility function.").

145 See Section VIII of this release discussing the costs and benefits of different business models.

146 See Section VIII of this release for further discussion.

147 See Section VI.D.3.c.iii of this release discussing Rule 13n-4(c)(3).

have an incentive to develop business models for SDRs that efficiently provide core services to the industry and effectively mitigate conflicts.[148] Therefore, after considering the comments, the Commission continues to believe that it is not necessary to mandate any particular business model for SDRs.

IV. Number of SDRs and Consolidation of SBS Data

The Commission received several comments relating to the issue of data fragmentation among SDRs. The Commission believes that if there are multiple SDRs in any given asset class, then it may be more difficult for regulators to monitor the SBS market because of the challenges in aggregating SBS data from multiple SDRs.[149] Some commenters suggested limiting the number of SDRs to one per asset class in order to address these concerns.[150] While such a limitation would resolve many of the challenges involved in aggregating SBS data, the Commission believes that imposing such a limitation would stymie competition among SDRs,

---

148 See Section VIII of this release discussing the costs and benefits of different business models.

149 See FINRA SBSR, supra note 27 (recognizing "the Commission's acknowledgement of 'the possibility that there could emerge multiple registered SDRs in an asset class,' and, in the event this should occur that 'the Commission and the markets would be confronted with the possibility that different registered SDRs could adopt different dissemination protocols, potentially creating fragmentation in SBS market data'") (citations omitted); DTCC 3, supra note 19 ("When there are multiple SDRs in any particular asset class, the [Commission] should take such action as is necessary to eliminate any overstatements of open interest or other inaccuracies that may result from having broader market data published from separate SDRs.").

150 See ISDA Temp Rule, supra note 28 ("[T]he designation of a single [SDR] per class of security-based swap would provide the Commission and market participants with valuable efficiencies. In particular, there would be no redundancy of platforms, no need for additional levels of data aggregation for each asset class and reduced risk of errors and greater transparency (because a single [SDR] per asset class would avoid the risk of errors associated with transmitting, aggregating and analyzing multiple sources of potentially incompatible and duplicative trade data)."); see also Saul, supra note 19 (suggesting that the Commission should seek to have only one or two SDRs to service the SBS market).

and, consequently, may lead to increased costs to market participants.[151] The Commission believes that the better avenue at this point is to refrain from regulating the number of SDRs in an asset class to permit market forces to determine an efficient outcome. Therefore, the Commission is not adopting the commenters' suggestions to limit the number of SDRs in each asset class.

In the Proposing Release, the Commission requested comment on whether the Commission should designate one SDR as the recipient of the information from all other SDRs in order to provide the Commission and relevant authorities with a consolidated location from which to access SBS data for regulatory monitoring and oversight purposes.[152] Some commenters suggested that an SDR's duties should include reporting SBS data to a single SDR that would consolidate the data for relevant authorities or otherwise mandating the consolidation of SBS data.[153] Specifically, one commenter recommended that the Commission "designate one SDR as the recipient of the information of other SDRs to ensure the efficient consolidation of data."[154] The commenter further stated that the designated SDR would need to have "the

151 See Section VIII.C.3.b of this release discussing the SDR Rules' potential effects on competition ("The Commission believes that by allowing multiple SDRs to provide data collection, maintenance, and recordkeeping services, the SDR Rules should promote competition among SDRs . . . . Increased competition may lower costs for users of SDR services."). Accord PFMI Report, supra note 50("Competition can be an important mechanism for promoting efficiency. Where there is effective competition and participants have meaningful choices among FMIs[, including SDRs], such competition may help to ensure that FMIs are efficient.").

152 Proposing Release, 75 FR at 77309, supra note 2.

153 See DTCC 1*, supra note 20; Better Markets 1, supra note 19; see also FINRA SBSR, supra note 27 (urging the Commission to mandate the consolidation of disseminated SBS data to the public).

154 DTCC 1*, supra note 20; see also Better Markets 1, supra note 19 (making similar comments); see also DTCC 2, supra note 19 ("The role of an aggregating SDR is

organization and governance structure that is consistent with being a financial market utility serving a vital function to the entire marketplace."[155]

The Commission does not dispute the commenter's assertion that fragmentation of data among SDRs would "leave to regulators the time consuming, complicated and expensive task of rebuilding complex data aggregation and reporting mechanisms."[156] However, if the Commission were to designate one SDR as the data consolidator, such an action could be deemed as the Commission's endorsement of one regulated person over another, discourage new market entrants, and interfere with competition, resulting in a perceived government-sponsored monopoly.[157] In addition, such a requirement would likely impose an additional cost on market participants to cover the SDR's cost for acting as the data consolidator.

In addition, any consolidation required by the Commission would be limited to SBS data and may not necessarily include data not required to be reported under Title VII and Regulation SBSR, such as swap data. For example, consolidated SBS data may show that a person entered into several SBSs based on individual equity securities. If the person also entered into swaps based on a broad-based security index made up of the individual equity securities, then the consolidated data would not necessarily include that information. Therefore, commenters' suggestion to designate one SDR as the data consolidator may not fully address their data fragmentation concerns unless the same SDR also consolidates swap data, which the CFTC regulates.

---

significant in that it ensures regulators efficient, streamlined access to consolidated data, reducing the strain on limited agency resources.").

155 DTCC 1*, supra note 20.

156 DTCC 3, supra note 19.

157 See Section VIII of this release for further discussion.

Therefore, after considering the comments, the Commission is not designating, at this time, one SDR as the recipient of information from other SDRs in order to provide relevant authorities with consolidated data. The Commission may revisit this issue if there is data fragmentation among SDRs that is creating substantial difficulties for relevant authorities to get a complete and accurate view of the market.[158]

V. Implementation of the SDR Rules

A. Prior Commission Action

The Commission solicited comment in the Proposing Release on whether it should adopt an incremental, phase-in approach with respect to Exchange Act Section 13(n) and the rules thereunder.[159] The Commission further sought and received comments on similar implementation issues relating to Title VII in other rulemakings and through solicitations for comments.[160]

1. Effective Date Order

In addition, as discussed above, on June 15, 2011, the Commission issued the Effective Date Order, which provided guidance on the provisions of the Exchange Act added by Title VII with which compliance would have been required as of July 16, 2011 (i.e., the effective date of the provisions of Title VII). The Effective Date Order provided exemptions to SDRs from Exchange Act Sections 13(n)(5)(D)(i), 13(n)(5)(F), 13(n)(5)(G), 13(n)(5)(H), 13(n)(7)(A), 13(n)(7)(B), and 13(n)(7)(C), each of which will expire on the earlier of (1) the date the

---

158 See Section VI.D.2.c.ii of this release discussing aggregation of data across multiple registered SDRs by the Commission.

159 Proposing Release, 75 FR at 77314, supra note 2.

160 See Sections I.C and I.D of this release discussing other comments and regulatory initiatives considered in this rulemaking.

Commission grants registration to the SDR and (2) the earliest compliance date set forth in any of the final rules regarding the registration of SDRs.[161] Absent further Commission action, these exemptions will expire as of the Compliance Date (as defined below), unless the Commission has granted an SDR's registration before the Compliance Date, in which case these exemptions will expire, with respect to that SDR, as of the date the Commission grants the SDR's registration.

In addition, the Effective Date Order also provided exemptive relief from the rescission provisions of Exchange Act Section 29(b) in connection with Exchange Act Sections 13(n)(5)(D)(i), 13(n)(5)(F), 13(n)(5)(G), 13(n)(5)(H), 13(n)(7)(A), 13(n)(7)(B), and 13(n)(7)(C).[162] That relief does not expire automatically, but rather when the Commission specifies.[163] The Commission is now specifying that this exemption from Section 29(b) will expire on the Compliance Date, or for those SDRs that are registered prior to the Compliance Date, the date that the Commission grants each SDR's registration.

2. Implementation Policy Statement

As discussed above, on June 11, 2012, the Commission issued a statement of general policy on the anticipated sequencing of compliance dates of final rules to be adopted under Title VII. The Implementation Policy Statement stated that compliance with the SDR Rules "earlier in the implementation process should facilitate the development and utilization of SDRs in a regulated manner."[164] Among other things, the Implementation Policy Statement requested comment on whether the Commission should adopt a phase-in of the SDR Rules and whether

161 Effective Date Order, 76 FR at 36306, supra note 9.

162 Effective Date Order, 76 FR at 36307, supra note 9.

163 Effective Date Order, 76 FR at 36307, supra note 9.

164 Implementation Policy Statement, 77 FR at 35631, supra note 10.

SDRs should be able to secure a grace period to defer compliance with some or all of the requirements of Exchange Act Section 13(n) and the SDR Rules.[165]

B. Summary of Comments

While only two commenters on implementation referred specifically to the SDR Rules, the Commission believes that other comments, particularly those related to timing with respect to implementing rules on SBS reporting, are relevant to the implementation of the SDR Rules as well. Eight commenters suggested that a phase-in approach to the SDR Rules or SBS reporting generally may be appropriate.[166] The commenters generally indicated that a phase-in would be necessary to enable existing SDRs and other market participants to make the necessary changes

165 Implementation Policy Statement, 77 FR at 35634, supra note 10.

166 See Barclays*, supra note 21; DTCC 2, supra note 19 ("[T]he Commission [should] ensure that the registration process does not interrupt current operation of existing trade repositories who intend to register as SDRs. This can be achieved as a phase-in for existing SDRs where services will need to be amended to conform with the final rules given the compressed time period between the publication of the final rules and the effective date of the Dodd-Frank Act."); FIA*, supra note 21("[P]hase-in is critical for a smooth implementation of the changes required under the Dodd-Frank Act."); FSF*, supra note 21; FSR Implementation, supra note 23; MFA 2, supra note 19; Morgan Stanley*, supra note 20 ("[G]iven the market disruption that could result from the simultaneous application of these requirements across products and markets, and the potentially severe consequences to the markets and the larger economy, we believe that a phase in approach is both permitted and contemplated by Dodd-Frank, and desirable in order to maintain orderly, efficient, liquid and inclusive markets."); SIFMA Implementation, supra note 22 ("Once SDRs are registered and [SBS dealers] and [major SBS participants] have connected to them, data reporting can begin. [SBS dealers] and [major SBS participants] will not be able to provide, and [SDRs] will not be able to accept, all data on Dodd-Frank Act-compliant timelines on the first day of operation. Instead, there should be a phased process to develop the procedures and connections needed to ultimately report all Dodd-Frank Act-required data in the appropriate time frame."); see also DTCC 3, supra note 19; DTCC 5, supra note 19 ("[T]he final rules should include implementation and compliance dates that are unambiguous . . . . Appropriate time must be afforded to ensure that implementation can take place smoothly for all market participants.").

to their operations to comply with the new regulatory requirements.[167] One of the commenters who advocated a phase-in approach also recognized the importance of reporting SBS data to SDRs as an early part of the Dodd-Frank Act implementation process.[168]

Six commenters supported a phase-in approach based on asset class.[169] Some

---

167 See, e.g., Barclays*, supra note 21 ("Changes envisioned by Title VII require very significant investment into operational, IT and other infrastructure - infrastructure that will take time and resources to build, test and optimize. The ability to fund and execute the necessary infrastructure build, as well as put in place the risk management and operational processes needed to conduct business under the new regulatory regime, will vary significantly by asset class and type of market participant."); DTCC 2, supra note 19 (stating that "the final rules [should] be subject to a phase-in period to allow an adequate period for existing service providers . . . to make necessary changes to their service offerings," requesting that the Commission alternatively "provide specific transitional arrangements for existing infrastructures," and noting that the continuation of counterparty reporting and the ability of SDRs to receive and maintain current trade information on an ongoing basis is "imperative for effective oversight of systemic risk and the continuance of the operational services to market participants"); FSF*, supra note 21 ("New market infrastructure and technologies, including central clearing services, data reporting services and trading platforms, will be required to give effect to the new Swap regulatory regime. Unless sufficient time is allotted for these components of market infrastructure and technologies to adequately develop, all market participants (and particularly end users) will face interruptions in their ability to enter into Swaps to hedge their business risks or manage investments to meet client objectives.").

168 See MFA 2, supra note 19 ("[W]e believe the first two priorities should be: (i) expanding the use of central clearing for liquid ('clearable') contracts; and (ii) having trade repositories receive data on both cleared and bilateral swaps. These changes would provide substantial benefits to the markets by enhancing price transparency and competition for the most liquid swap transactions . . . . Comprehensive reporting to SDRs and regulators . . . will allow regulators to monitor systemic risk and individual risk concentrations much more effectively, and intervene specifically as necessary."); see also FSF*, supra note 21 (The Commission "should prioritize implementation of data reporting, including registration of [SDRs], to regulators ahead of real-time reporting and other requirements, including public reporting. The [Commission] will learn much about the full range of Swap markets from the data collected by SDRs. This knowledge will be essential in developing rules that meet Dodd-Frank's requirements while still allowing for active and liquid Swap markets.").

169 See Barclays*, supra note 21 ("[W]e recommend that the [Commission] phase in the clearing, execution and reporting requirements gradually over time, staggered by asset class."); DTCC 3, supra note 19 ("[P]hasing should focus first on the products with the

commenters supported a phase-in based on other criteria.[170] Some commenters indicated that a phase-in period, which could be based on asset class or other SBS or market participant attributes, is important in order to avoid market disruption.[171] While one commenter indicated

---

greatest automation and then on products with less automation. The more widespread the automated processing, the higher quality the data reported to SDRs. As automated processing is most widely prevalent in credit derivatives . . . it should be the first asset class implemented. Interest rate derivatives, being the next most widely automated asset class, would be next, followed by FX derivatives, then commodity and equity derivatives last."); FSF*, supra note 21 ("The [Commission] should phase in requirements based on the state of readiness of each particular asset class (including, where applicable, by specific products within an asset class) and market participant type."); FSR Implementation, supra note 23 ("[I]mplementing regulations on a product-by-product basis would reduce the risk of significant market dislocation during a transition period. For example, certain credit default swaps that are already reported to a trade information warehouse, are highly standardized, and are being regularly submitted for central clearing . . . may be a natural choice with which to confirm that systems are operating appropriately before expanding regulatory requirements to other [asset] classes."); AII Implementation, supra note 23 ("[C]learing and other requirements should come first for highly liquid, standardized instruments, such as credit default swaps" and "[l]ess liquid products, such as certain physical commodity instruments, should come afterward."); SIFMA Implementation, supra note 22 ("Reporting should also be phased in by asset class, based on whether reporting infrastructure and data exist.").

170 See Morgan Stanley*, supra note 20 ("In addition to phase in based on asset class and reporting times, reporting could also be phased in based on how a product trades [e.g., whether the SBS is cleared]."); FSR Implementation, supra note 23 (stating that "it may be prudent to have different portions of a single rulemaking proposal take effect at different times and with due consideration of steps that are preconditions to other steps"; suggesting, as an example, that a requirement to designate a CCO should be implemented quickly, but that the CCO be given time to design, implement, and test the compliance system before any requirement to certify as to the compliance system becomes effective; and supporting a phase-in approach "that recognizes the varying levels of sophistication, resources and scale of operations within a particular category of market participant"). But see Barclays*, supra note 21 ("Phasing by type of market participant would not be useful for reporting obligations, in [the commenter's] view, as the reported information needs to reflect the entirety of the market to be useful for the market participants and regulators.").

171 See, e.g., DTCC 2, supra note 19 ("[A]ppropriate transitional arrangements [should] be made to avoid market disruption by the implementation of the Proposed Rule . . . . Restrictions to [the commenter's SDR] operation could introduce significant operational risks to market participants."); Barclays*, supra note 21 (Phase-in by asset class would

that connectivity concerns should not delay implementation because it is easy for an SDR and other market infrastructures to establish connectivity,[172] another commenter cautioned that market connectivity will take time to establish and test.[173] None of the commenters provided specific timeframes for a phase-in approach.[174]

In addition to the comments received above, participants in the Implementation Joint Roundtable provided input regarding the appropriateness of a phase-in period for Title VII rulemakings. Many of the participants in the Implementation Joint Roundtable advocated for a phase-in period for the SDR Rules or SBS reporting generally; however, the participants' specific approaches varied. While some participants at the Implementation Joint Roundtable advocated a phase-in by asset class,[175] other participants suggested that a phase-in should be

---

help "ensure that both the industry and SDRs have sufficient time to build and test the needed infrastructure in order to prevent any potential market disruptions that could result from the implementation of new rules."); see also FSR Implementation, supra note 23 (recommending that the Commission consider resource constraints in evaluating transition deadlines and stating that "if there are a dozen rules that would each take about a month to implement in isolation under normal circumstances, it is unrealistic to expect all twelve rules to be implemented one month from passage of final rules").

172 DTCC 3, supra note 19 ("Connectivity between clearinghouses and [SB SEFs], as well as SDRs, is easy to establish (and, in many instances, already exists) and should not be the reason for delaying the implementation of real-time reporting rules.").

173 FSR Implementation, supra note 23 ("Although we recognize that central clearing, exchange trading and transparent reporting are core aspects of the new regulatory system, they require a web of interconnections that will take time to establish and test, and their use should not become obligatory until such establishment and testing is complete.").

174 But see Bank of Tokyo SBSR, supra note 27 (requesting "that the [Commission] . . . defer compliance requirements under Title VII until December 31, 2012" to "facilitate coordination among national authorities in the United States, Japan and other relevant jurisdictions in order to avoid overlapping and inconsistent regulatory regimes"). Because the timeframe suggested by this commenter has passed, this aspect of the comment is now moot.

175 See, e.g., statement of Ronald Levi, GFI Group, Inc., at Implementation Joint Roundtable ("[D]epending on which asset classes go first or which asset classes are amongst the first

based on other product attributes, such as the liquidity of the product,[176] or based on the development of other market infrastructures.[177] Another participant suggested that SDRs' obligations to provide reports of SBS transactions to regulators – which the Commission believes are relevant to the direct electronic access requirement in Rule 13n-4(b)(5)[178] – should be implemented in a prioritized manner, with daily batch snapshots provided until more real-time solutions are developed.[179] None of the Implementation Joint Roundtable participants provided specific timeframes for a phase-in approach.

C. Sequenced Effective Date and Compliance Date for the SDR Rules

After considering the issues raised by the commenters and Implementation Joint Roundtable participants, the Commission has determined to adopt, in lieu of a phase-in approach,

---

phase will determine how long it takes us."); statement of Larry Thompson, The Depository Trust & Clearing Corporation, at Implementation Joint Roundtable ("And right now, at least for a couple of classes, they're in a much better position to be able to see transparent into the marketplace, especially the credit default swap [marketplace] . . . ."); statement of Jamie Cawley, Javelin Capital Markets, LLC, at Implementation Joint Roundtable ("Certainly from where we sit . . . interest rate swaps, vanilla swaps clearly qualify for a day one [implementation and] index [swaps] right behind that or on the same day. And the constituents of the indices certainly as well. And then it trails off from there over time . . . .").

176 See, e.g., statement of Chris Edmonds, ICE Trust, at Implementation Joint Roundtable ("[I]nstead of looking at it necessarily by asset class, the commissions may want to look at it by the instruments that have the greatest amount of liquidity.").

177 See, e.g., statement of Sunil Cutinho, CME Group, at Implementation Joint Roundtable ("[W]e don't believe that . . . data should be in an SDR before clearing has to be done.").

178 See Section VI.D.2.c.ii of this release discussing direct electronic access.

179 Statement of Raf Pritchard, TriOptima – triResolve, at Implementation Joint Roundtable ("[W]e would observe obviously that building real-time solutions is a lot more critical and sensitive than building daily batch solutions. And so in terms of getting that first cut, it might make sense to prioritize a daily batch snapshot of the market . . . . [T]hen you could sequence the real-time -- the more real-time sensitive parts of the reporting requirements subsequent to that.").

a sequenced effective date and compliance date for the SDR Rules[180] that recognizes the practical constraints arising from the time necessary for persons to analyze and understand the final rules adopted by the Commission, to develop and test new systems required as a result of the Dodd-Frank Act's regulation of SDRs and the SDR Rules, to prepare and file a completed Form SDR, to be in a position to demonstrate their ability to meet the criteria for registration set forth in Rule 13n-1(c)(3),[181] and to register with the Commission. The Commission agrees with commenters who have suggested that the Commission require the reporting of SBS transaction information to registered SDRs early in the implementation process because the Commission will then be able to utilize the information reported to registered SDRs to inform other aspects of its Title VII rulemaking.[182] Adopting and implementing a regulatory framework for SDRs will facilitate access by the Commission and market participants to SBS information collected by

180 Title VII provides the Commission with the flexibility to establish effective dates beyond the minimum 60 days specified therein for Title VII provisions that require a rulemaking. See Dodd-Frank Act Section 774 (specifying that the effective date for a provision requiring a rulemaking is "not less than 60 days after publication of the final rule or regulation implementing such provision"). Furthermore, as with other rulemakings under the Exchange Act, the Commission may set compliance dates (which may be later than the effective dates) for rulemakings under the Title VII amendments to the Exchange Act. Together, this provides the Commission with the ability to sequence the implementation of the various Title VII requirements in a way that effectuates the policy goals of Title VII while minimizing unnecessary disruption or costs. See Effective Date Order, 76 FR at 36289, supra note 9.

181 See Section VI.A.2.c of this release discussing Rule 13n-1(c), which requires that the Commission make a finding that a "security-based swap data repository is so organized, and has the capacity, to be able to assure the prompt, accurate, and reliable performance of its functions as a security-based swap data repository, comply with any applicable provision of the federal securities laws and the rules and regulations thereunder, and carry out its functions in a manner consistent with the purposes of Section 13(n) of the [Exchange] Act . . . and the rules and regulations thereunder."

182 See, e.g., FSF*, supra note 21 (noting that the Commission "will be in a better position to adopt rules that achieve Dodd-Frank's goals while maintaining active and viable [SBS] markets" if SDRs are required to register and data reporting is enabled).

SDRs.[183]

All of the SDR Rules will become effective 60 days following publication of the rules in the Federal Register ("Effective Date"). However, the exemptions to provisions in Exchange Act Section 13(n) that the Commission provided in the Effective Date Order will continue to be in effect following the adoption of the SDR Rules. Consistent with the Effective Date Order, the exemptive relief remains in place and will expire: (1) upon the compliance date for the SDR Rules, or (2) for those SDRs that are registered prior to such compliance date, the date that the Commission grants each SDR's registration.[184]

SDRs must be in compliance with the SDR Rules by 365 days after publication of the rules in the Federal Register ("Compliance Date").[185] Absent an exemption, SDRs must be registered with the Commission and in compliance with the federal securities laws and the rules and regulations thereunder (including the applicable Dodd-Frank Act provisions and all of the SDR Rules) by the Compliance Date, and all exemptions that the Commission provided in the Effective Date Order will expire on the Compliance Date.[186] After the Compliance Date,

183 See, e.g., FSF*, supra note 21 ("The [Commission] should prioritize implementation of data reporting, including registration of Swap data repositories ('SDRs'), to regulators ahead of real-time reporting and other requirements, including public reporting. The [Commission] will learn much about the full range of Swap markets from the data collected by SDRs. This knowledge will be essential in developing rules that meet Dodd-Frank's requirements while still allowing for active and liquid Swap markets.").

184 See Effective Date Order, 76 FR at 36306, supra note 9.

185 In a separate release, the Commission is proposing a compliance schedule for portions of Regulation SBSR in which the timeframes for compliance with the reporting and public dissemination requirements would key off of the registration of SDRs. See Regulation SBSR Proposed Amendments Release, supra note 13.

186 Any SDR that is registered with the Commission before the Compliance Date will be required, absent an exemption, to comply with Exchange Act Section 13(n); the SDR Rules; and Regulation SBSR, as applicable to registered SDRs, as of the date the Commission grants registration to the SDR. See Effective Date Order, 76 FR at 36306,

pursuant to Exchange Act Section 13(n)(1), it will be unlawful, absent exemptive relief,[187] (1) for a person, unless registered with the Commission as an SDR, directly or indirectly, to make use of the mails or any means or instrumentality of interstate commerce to perform the functions of an SDR or (2) for an SDR to fail to comply with all applicable statutory provisions and the SDR Rules.

The Commission believes that setting the Compliance Date for the SDR Rules at 365 days after publication of the rules in the Federal Register adequately addresses commenters' concerns[188] by providing SDRs with sufficient time to become compliant with the Dodd-Frank Act and the SDR Rules and for the Commission to act on SDRs' applications for registration, while also allowing SDRs to continue performing the functions of an SDR without interruption.

The Commission notes that if an SDR files its Form SDR close to the Compliance Date, it is possible that the Commission will not have sufficient time to consider the Form SDR and the SDR may not be registered with the Commission by the Compliance Date. In this case, the SDR must cease any operations that cause it to meet the statutory definition of an SDR as of the Compliance Date and not begin or resume such operations until (and unless) the Commission grants the SDR's registration or provides the SDR with an exemption. As discussed below, Rule 13n-1(c), as adopted, provides that the Commission will grant registration to an SDR or institute proceedings to determine whether registration should be granted or denied within 90 days of the

supra note 9 (granting exemptions to certain provisions in Exchange Act Section 13(n) and indicated that the exemptions will expire on the earlier of (1) the date the Commission grants registration to an SDR and (2) the earliest compliance date set forth in any of the final rules regarding the registration of SDRs).

187 See Section VI.K of this release discussing Rule 13n-12, which provides an exemption for certain non-U.S. persons from the SDR requirements.

188 See, e.g., DTCC 2, supra note 19.

date of the publication of notice of the filing of an application for registration. Accordingly, SDRs should consider that the Commission may take several months following the publication of notice of the filing of an application for registration[189] to review an SDR's application for registration and assess whether the SDR meets the criteria for registration set forth in Rule 13n-1(c)(3).[190]

After weighing the practical considerations with respect to SDRs' preparations for compliance with the Dodd-Frank Act and the SDR Rules, as well as the benefits to investors and regulators of adopting the SDR Rules in order to facilitate the establishment and utilization of registered SDRs, the Commission has determined not to adopt a phase-in approach, as suggested

189 The Commission's review of the application for registration could extend beyond 90 days. Rule 13n-1(c) provides that the Commission will grant registration or institute proceedings to determine whether registration should be granted or denied within 90 days of the publication of notice of the filing of an application for registration "or within such longer period as to which the applicant consents."

190 As provided in Rule 13n-1(c)(3), in order to grant the registration of an SDR, the Commission must make a finding that "such security-based swap data repository is so organized, and has the capacity, to be able to assure the prompt, accurate, and reliable performance of its functions as a security-based swap data repository, comply with any applicable provision of the federal securities laws and the rules and regulations thereunder, and carry out its functions in a manner consistent with the purposes of Section 13(n) of the [Exchange] Act . . . and the rules and regulations thereunder." In addition to the application for registration on Form SDR, Rule 13n-1(b) provides that, "[a]s part of the application process, each [SDR] shall provide additional information to any representative of the Commission upon request." In determining whether an applicant meets the criteria set forth in Rule 13n-1(c), the Commission will consider the application and any additional information obtained from the SDR, which may include information obtained in connection with an inspection or examination of the SDR. If the Commission is unable to determine that the applicant meets the criteria for registration set forth in Rule 13n-1(c)(3), then the Commission may not grant registration to the applicant. See also Section VI.A.1 of this release discussing Form SDR and information required for registration as an SDR.

by some commenters and Implementation Joint Roundtable participants.[191] Specifically, the Commission does not believe that it is necessary or appropriate to tailor a phase-in period for the SDR Rules based on specific asset classes, type of market participant, or other SBS attributes. While a phase-in approach based on asset class, type of market participant, or other attributes may have been appropriate had the Commission adopted rules prior to the July 16, 2011 effective date of the Dodd-Frank Act,[192] the Commission believes that the passage of time has afforded ample time for the development of SDR infrastructure. This belief is based, in part, on the existence of four swap data repositories already provisionally registered with the CFTC.[193] These swap data repositories, most of which will likely register as SDRs with the Commission, have had approximately three years to implement the final swap data repository rules adopted by the CFTC on August 4, 2011 (Part 49 swap data repository rules)[194] and December 20, 2011 (Part 45 swap data recordkeeping and reporting rules).[195] The Commission believes that the CFTC's Part 49 rules[196] and Part 45 rules[197] applicable to swap data repositories are substantially similar to the final SDR Rules. Because of the substantial similarity between the Commissions' rules, to the extent that the SDRs are in compliance with the CFTC's rules, they are likely already in substantial compliance with the Commission's SDR Rules.

---

197 See CFTC Part 45 Adopting Release, supra note 37.

VI. Discussion of Rules Governing SDRs

Exchange Act Section 13(n), enacted in Dodd-Frank Act Section 763(i), makes it "unlawful for any person, unless registered with the Commission, directly or indirectly, to make use of the mails or any means or instrumentality of interstate commerce to perform the functions of a security-based swap data repository."[198] To be registered and maintain such registration, each SDR is required (absent an exemption) to comply with the requirements and core principles described in Exchange Act Section 13(n), as well as with any requirements that the Commission adopts by rule or regulation.[199] The Exchange Act also requires each SDR to designate an individual to serve as a CCO and specifies the CCO's duties.[200] In addition, the Exchange Act grants the Commission authority to inspect and examine any registered SDR and to prescribe data standards for SDRs.[201]

---

198 15 U.S.C. 78m(n)(1); see also Section III.A of this release discussing definition of "security-based swap data repository." Any person that is required to be registered as an SDR under Exchange Act Section 13(n) must register with the Commission (absent an exemption), regardless of whether that person is also registered under the Commodity Exchange Act ("CEA") as a swap data repository. Exchange Act Section 13(n)(8), 15 U.S.C. 78m(n)(8); see also CEA Section 21, 7 U.S.C. 24a (regarding swap data repositories). Under the Exchange Act, a clearing agency may register as an SDR. Exchange Act Section 13(m)(1)(H), 15 U.S.C. 78m(m)(1)(H). In addition, any person that is required to register as an SDR pursuant to this section must register with the Commission (absent an exemption) regardless of whether that person is also registered as an SB SEF. See SB SEF Proposing Release, supra note 29.

199 See Exchange Act Section 13(n)(3), 15 U.S.C. 78m(n)(3).

200 See Exchange Act Section 13(n)(6), 15 U.S.C. 78m(n)(6).

201 See Exchange Act Sections 13(n)(2) and 13(n)(4), 15 U.S.C. 78m(n)(2) and 78m(n)(4). In a separate release, the Commission proposed rules prescribing the data elements that an SDR would be required to accept for each SBS in association with requirements under Dodd-Frank Act Section 763(i), adding Exchange Act Section 13(n)(4)(A) relating to standard setting and data identification. See Regulation SBSR Proposing Release, 75 FR at 75284-5, supra note 8 (proposed Rule 901); see also Cross-Border Proposing Release, 78 FR at 31212-3, supra note 3 (re-proposing Rule 901). The Commission is concurrently adopting Regulation SBSR, including rules prescribing the data elements

A. Registration of SDRs (Rule 13n-1 and Form SDR)

Proposed Rule 13n-1 and proposed Form SDR would establish the procedures by which a person may apply to the Commission for registration as an SDR. After considering the comments, the Commission is adopting Rule 13n-1 and Form SDR substantially as proposed, with certain modifications.[202]

1. New Form SDR; Electronic Filing

a. Proposed Form SDR

As proposed, Form SDR would require an applicant seeking to register as an SDR and a registered SDR filing an amendment (including an annual amendment) to indicate the purpose for which it is filing the form and then to provide several categories of information. As part of the application process, each SDR would be required to provide additional information to the Commission upon request. Applicants would be required to file Form SDR electronically in a tagged data format. As proposed, Form SDR would require all SDRs to provide the same information, with two related limited exceptions applicable to non-resident SDRs. First, if the applicant is a non-resident SDR, then Form SDR would require the applicant to attach as an exhibit to the form an opinion of counsel stating that the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records and that the SDR can, as a matter of law, submit to onsite inspection and examination by the Commission. Second, Form

that an SDR is required to accept. See Regulation SBSR Adopting Release, supra note 13 (Rule 901).

202 The Commission did not receive any comments on the definitions in proposed Rule 13n-1(a) and is adopting each of them as proposed, other than revising the definition of "tag" to have the same meaning as set forth in Rule 11 of Regulation S-T and deleting the definition of "EDGAR Filer Manual," which is no longer referenced in the revised definition of "tag." See Rule 13n-1(a)(2). The Commission is also revising the heading of paragraph (a) of the rule by changing "Definition" to "Definitions" to reflect that there is more than one definition in the paragraph.

SDR would require an applicant that is a non-resident SDR to certify to this (i.e., the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records and the SDR can, as a matter of law, submit to onsite inspection and examination by the Commission).[203]

b. Comments on Proposed Form SDR

Two commenters submitted comments relating to this proposal.[204] One commenter urged the Commission to ensure that the registration process does not interfere with the ongoing operation of existing SDRs.[205] This commenter also addressed the items to be provided on Form SDR and stressed the importance of gathering information regarding an applicant's information technology systems, including its ability to provide direct electronic access to the Commission.[206] In addition, the commenter supported combining new Form SDR with Form

---

203 See Items 12 and 46 of proposed Form SDR; see also Sections VI.A.1 and VI.A.5 of this release discussing legal opinion of counsel and certification by non-resident SDRs on Form SDR.

204 See DTCC 2, supra note 19; ESMA, supra note 19; see also DTCC 3, supra note 19. Five commenters submitted comments to the Commission regarding registration of non-resident SDRs. See ESMA, supra note 19; DTCC 2, supra note 19; Foreign Banks SBSR, supra note 27; BofA SBSR, supra note 27; US & Foreign Banks, supra note 24. With the exception of the certification and legal opinion requirements discussed later in this section, the Commission discussed cross-border issues applicable to SDRs that were raised by Title VII in the Cross-Border Proposing Release, and is adopting an exemption from the SDR requirements for certain non-U.S. persons, as discussed in Section VI.K of this release.

205 DTCC 2, supra note 19.

206 DTCC 2, supra note 19 ("[I]t is essential that proposed Form SDR request information related to the SDR's operating schedule, real-time processing, existence of multiple redundant infrastructures for continuity, strong information security controls, and robust reporting operations (including direct electronic access by the Commission). Because an SDR provides important utility services to regulators and market participants, such resiliency and redundancy should be evaluated in light of the significant policies and procedures for establishing such redundancy, including several backup locations in different geographic regions.").

SIP and further suggested that the Commission and the CFTC publish a joint form for registration with the Commission as an SDR and SIP and with the CFTC as a swap data repository.[207] The commenter also suggested that the Commission require applicants to submit their rulebooks as part of the registration process on Form SDR.[208]

One commenter expressed concern that non-resident SDRs would be subject to a stricter regulatory regime than that applicable to resident SDRs due to the proposed opinion of counsel requirement, which is applicable only to non-resident SDRs.[209]

c. Final Form SDR

After considering the comments, the Commission is adopting Form SDR substantially as proposed with certain modifications. Form SDR includes a set of instructions for its completion and submission. These instructions are included in this release, together with Form SDR. The instructions require an SDR to indicate the purpose for which it is filing the form (i.e., application for registration, interim or annual amendment to an application or to an effective

---

207 DTCC 2, supra note 19; DTCC 3, supra note 19 ("Harmonization in the registration process for SDRs is necessary. Requiring one SDR to complete three sets of registration forms – an SDR application to the CFTC, an SDR application to the SEC and Form SIP to the SEC – demonstrates a specific instance where the regulatory agencies should come together, determine the information necessary for registration and jointly publish a common registration application.").

208 DTCC 3, supra note 19 ("The [Commission] should require rulebooks for SDRs prior to operation and as part of the registration process. SDRs will need to complete legal agreements with clearing-houses and among the users of an SDR. These agreements generally constitute the agreement of the user to abide by published rules and/or procedures of the SDR and generally have a notice of change to permit amendments without having to re-execute with all users. These agreements should be in place before SDRs operate under the new regulatory regime.").

209 ESMA, supra note 19 ("[N]on-resident SDRs are actually subject to a stricter regime than the resident ones, as they need to provide a legal opinion certifying that they can provide the SEC with prompt access to their books and records and that they can be subject to onsite inspections and examinations by the SEC.").

registration,[210] or withdrawal from registration[211]) and to provide information in seven categories: (1) general information, (2) business organization, (3) financial information, (4) operational capability, (5) access to services and data, (6) other policies and procedures, and (7) legal opinion. As part of the application process, each SDR will be required to provide additional information to any representative of the Commission upon request.[212]

As noted in the Proposing Release, the Commission believes that permitting an SDR to provide information in narrative form in Form SDR will allow the SDR greater flexibility and opportunity for meaningful disclosure of relevant information.[213] The Commission believes that it is necessary to obtain the information requested in Form SDR to enable the Commission to determine whether to grant or deny an application for registration. Specifically, the information will assist the Commission in understanding the basis for registration as well as an SDR's overall business structure, financial condition, track record in providing access to its services and data, technological reliability, and policies and procedures to comply with its statutory and regulatory obligations. The information will also be useful to the Commission in tailoring any requests for additional information that it may ask an SDR to provide. Furthermore, the required information will assist Commission representatives in the preparation of their inspection and examination of

---

210 See Section VI.A.4 of this release discussing amendments on Form SDR.

211 See Section VI.B of this release discussing withdrawal from registration as an SDR.

212 See Rule 13n-1(b). The Commission is revising the last sentence of proposed Rule 13n-1(b) to use the statutorily defined term "security-based swap data repository" rather than "SDR" to be consistent with the rest of the SDR Rules. The Commission is also revising the last sentence of proposed Rule 13n-1(b) to require SDRs to provide additional information upon request to "any representative of the Commission," rather than "the Commission." This revision is intended to clarify that such requests will be made by Commission staff.

213 Proposing Release, 75 FR at 77310, supra note 2.

an SDR.[214]

Form SIP.[215] In the Proposing Release, the Commission noted that proposed Regulation SBSR would require each registered SDR to register with the Commission as a SIP on Form SIP, and requested comment on whether the Commission should combine Form SDR and Form SIP, such that an SDR would register as an SDR and SIP using only one form.[216] One commenter supported combining Form SDR with Form SIP.[217] Taking into consideration this commenter's view and in an effort to minimize the burden of filing multiple registration forms, the Commission has decided to amend proposed Form SDR to accommodate SIP registration; thus, an SDR will register and amend such registration as an SDR and as a SIP using one combined form.[218] An amendment or withdrawal on Form SDR will also constitute an amendment or withdrawal of SIP registration pursuant to Exchange Act Section 11A and the rules and regulations thereunder.[219] The Commission has made certain changes to proposed Form SDR to incorporate the additional information requested on Form SIP of applicants for registration as a

214 The Commission is revising Form SDR from proposed Form SDR to include disclosure relating to the Paperwork Reduction Act. See Section VII of this release regarding the Paperwork Reduction Act.

215 Today, the Commission is adopting Regulation SBSR, which includes a requirement for each registered SDR to register as a SIP, as defined in Exchange Act Section 3(a)(22), 15 U.S.C. 78c(a)(22). See Regulation SBSR Adopting Release, supra note 13 (Rule 909).

216 Proposing Release, 75 FR at 77313, supra note 2. See also Regulation SBSR Proposing Release, 75 FR at 75287, supra note 8 (proposed Rule 909); Cross-Border Proposing Release, 78 FR at 31215-6, supra note 3 (re-proposing Rule 909).

217 DTCC 2, supra note 19; see also DTCC 3, supra note 19.

218 Form SDR will be used only by SIPs that also register as SDRs; Form SIP will continue to be used by applicants for registration as SIPs not seeking to become dually-registered as an SDR and SIP, and for interim amendments or annual amendments by registered SIPs that are not dually-registered as an SDR and SIP. In discussing Form SDR as adopted in this release, references to SDRs may, where applicable, refer to SDRs and SIPs, collectively.

219 See General Instruction 2 to Form SDR.

SIP.[220] However, there are some disclosures required in Form SIP that have not been incorporated into Form SDR because they do not appear to be relevant to SDRs.[221] The Commission notes that by requiring a registered SDR to register as a SIP, the requirements of SIP registration provided in Exchange Act Section 11A, including publication of notice of the filing of an application for registration, will apply to applications filed on Form SDR[222] and, accordingly, the Commission will publish notice of the filing of applications for registration on Form SDR in the Federal Register.[223] In addition, the Commission expects that it will make the filed applications available on its website, except for information where confidential treatment is

---

220 See Item 32(a)(1) (adding "(or disseminate for display or other use)" and "(e.g., number of inquiries from remote terminals)"), Item 32(a)(2) (adding "(or disseminate for display or other use)"), new Item 33(c) (With respect to each of an applicant's "services that involves the supply of information to a quotation board, ticker device, electronic information terminal, or other such device, [the applicant must] state the total number of devices to which information is, or will be supplied ('serviced') and any minimum and or maximum number of devices required or permitted by agreement or otherwise to be serviced by the applicant. In addition, [an applicant must] define the data elements for each service."); and Item 36 of Form SDR (adding "processing, preparing for distribution, and publication"); see also new General Instructions 2 and 3 and conforming revisions to General Instructions 7 and 9 to Form SDR and Items 16, 19, 20, 23, 25 - 35, and 39 of Form SDR.

221 See, e.g., Item 31 of Form SIP, 17 CFR 249.1001 (requiring applicant to state whether certain specifications or qualifications are imposed at the direction of a national securities exchange or a registered securities association).

222 15 U.S.C. 78k-1(b).

223 As discussed below, the Commission is revising Rule 13n-1(c) from the proposal to reflect this publication requirement with respect to the registration process for Form SDR. See Section VI.A.2.c of this release discussing revision to Rule 13n-1(c) to provide that: (1) within 90 days of the date of the publication of notice of the filing of an application for registration (or within such longer period as to which the SDR consents), the Commission shall either grant the registration by order or institute proceedings to determine whether registration should be granted or denied and (2) proceedings instituted pursuant to Rule 13n-1(c) shall be concluded not later than 180 days after the date of the publication of notice of the filing of the application for registration, absent an extension.

requested by the applicant[224] and granted by the Commission.[225]

The Commission has determined not to adopt a joint form for registration with the Commission as an SDR and SIP and with the CFTC as a swap data repository, as suggested by one commenter.[226] First, the CFTC has already adopted the final registration rules and form for swap data repositories to use.[227] Adopting a joint form for registration would require the CFTC to amend its adopted Form SDR while the industry is still in the implementation phase and swap data repositories are already provisionally registered with the CFTC.[228] Second, the CFTC's registration form for swap data repositories is substantially similar to the Commission's Form SDR. Thus, the Commission does not anticipate that filing with each Commission separately will entail a significant cost for dual registrants even though the Commission and the CFTC have

---

224 As discussed below, the Commission is adopting technical amendments to Exchange Act Rule 24b-2 to clarify that the confidential portion of electronic filings by SDRs must be filed electronically and to require SDRs to request confidential treatment electronically. The Commission is also adopting technical amendments to Rule 101 of Regulation S-T to provide that, except as otherwise provided, all filings by SDRs, including any information with respect to which confidential treatment is requested, must be filed electronically.

225 The instructions to Form SDR have been modified from the proposal to clarify that information supplied on the form may be made available on the Commission's website. See General Instruction 7 to Form SDR (stating that "[e]xcept in cases where confidential treatment is requested by the applicant and granted by the Commission pursuant to the Freedom of Information Act and the rules of the Commission thereunder, information supplied on this form may be made available on the Commission's website, will be included routinely in the public files of the Commission, and will be available for inspection by any interested person"). The Commission expects that non-confidential information supplied on an SDR's completed application for registration will be made available on the Commission's website; other filings on Form SDR may be made available on the Commission's website.

226 See DTCC 3, supra note 19.

227 See CFTC Part 49 Adopting Release, supra note 36.

228 As noted above, CFTC Rule 49.3(b) provides for provisional registration of a swap data repository. 17 CFR 49.3(b).

tailored their respective forms in order to meet the specific needs of each agency and their respective statutory mandates. For example, the Commission is revising proposed Form SDR to require an SDR to provide certain information to address Exchange Act requirements applicable to SIPs. The CFTC's Form SDR does not require information to address some of these requirements.

General Information.[229] Form SDR requires an applicant to provide contact information, information concerning any predecessor SDR (if applicable), a list of asset classes of SBSs for which the applicant is collecting and maintaining data or for which it proposes to collect and maintain data,[230] a description of the functions that it performs or proposes to perform, and general information regarding its business organization.[231] This information will assist the Commission and its staff in evaluating applications for registration and overseeing registered SDRs for purposes of determining whether the SDRs are able to comply with the federal

---

229 In the General Information section of Form SDR, the Commission is adding a new item (Item 12) to implement the requirement in Rule 13n-2(b) for a registered SDR seeking to withdraw from registration to identify a custodian of its books and records, and the address(es) where the books and records will be located. See Section VI.B of this release discussing Rule 13n-2(b).

230 As proposed, Item 6 of Form SDR implicitly pertained to the data that an applicant is collecting and maintaining or proposes to collect and maintain. The Commission is revising Item 6 of Form SDR from the proposal to make this explicit by adding references to "data."

231 See Items 1 – 10 of Form SDR. The Commission is revising Form SDR from the proposal to remove the heading "Business Organization" in the "General Information" section because the heading is superfluous and may lead to confusion with another section entitled "Exhibits – Business Organization." General information regarding business organization is requested in the "General Information" section, whereas detailed information regarding business organization is requested in the "Exhibits – Business Organization" section. As proposed, Item 10 of Form SDR requested information regarding the filing date of "partnership articles" and "place where partnership agreement was filed." For consistency, the Commission is revising Item 10 of Form SDR from the proposal to request the filing date of the "partnership agreement" rather than "partnership articles."

securities laws and the rules and regulations thereunder.

An applicant is required to acknowledge and consent that any notice or service of process, pleadings, or other documents in connection with any action or proceeding against the applicant may be effectuated by certified mail to an officer or person specified by the SDR at a given U.S. address.[232] The Commission believes that such consent is important to minimize any logistical obstacles (e.g., locating defendants or respondents abroad) that the Commission may encounter when attempting to provide notice to an applicant or to effect service, including service overseas.

Form SDR must be signed by a person who is duly authorized to act on behalf of the applicant.[233] The signer is required to certify that all information contained in the application, including the required items and exhibits, is true, current, and complete.[234] The Commission

232 See Item 11 of Form SDR.

233 See Item 13 of Form SDR.

234 See Item 13 of Form SDR. The Commission is revising the signature block from the proposal to be consistent with an SDR's filing requirements for interim amendments on Form SDR. See note infra 356 (discussing amendment of signature block). The Commission is also revising the signature block to state that "[i]ntentional misstatements or omissions of fact constitute federal criminal violations (see 18 U.S.C. 1001 and 15 U.S.C. 78ff(a))." This statement was included in Instruction 5 of proposed Form SDR, and is included in Instruction 7 of Form SDR, as adopted. This statement has been added to the signature block to remind the signer of the consequences of intentional misstatements or omissions of fact. See 18 U.S.C. 1001 (applying to "whoever, in any matter within the jurisdiction of the executive, legislative, or judicial branch of the Government of the United States, knowingly and willfully — (1) falsifies, conceals, or covers up by any trick, scheme, or device a material fact; (2) makes any materially false, fictitious, or fraudulent statement or representation; or (3) makes or uses any false writing or document knowing the same to contain any materially false, fictitious, or fraudulent statement or entry"); 15 U.S.C. 78ff(a) (applying to, among other persons, "any person who willfully and knowingly makes, or causes to be made, any statement in any application, report, or document required to be filed under [the Exchange Act] or any rule or regulation thereunder or any undertaking contained in a registration statement as provided in subsection (d) of section 78*o* of [Title 15 of the U.S. Code], or by any self-

believes that this certification requirement will serve as an effective means to assure that the information filed on Form SDR with the Commission is reliable.[235] The Commission notes that this certification is consistent with the certification provisions in the registration forms for SIPs, broker-dealers, and investment advisers (i.e., Forms SIP, BD, and ADV).[236]

If an applicant is a non-resident SDR, then the signer of Form SDR is also required to certify that the applicant can, as a matter of law, and will provide the Commission with prompt access to the applicant's books and records and that the applicant can, as a matter of law, and will submit to onsite inspection and examination by the Commission.[237] For purposes of the certification, Form SDR defines "non-resident security-based swap data repository" as (i) in the case of an individual, one who resides in or has his principal place of business in any place not in the United States; (ii) in the case of a corporation, one incorporated in or having its principal

---

regulatory organization in connection with an application for membership or participation therein or to become associated with a member thereof, which statement was false or misleading with respect to any material fact").

235 Accord Registration of Municipal Advisors, Exchange Act Release No. 70462 (Sept. 20, 2013), 78 FR 67468, 67568 (Nov. 12, 2013) (stating that the certification requirement in Form MA-W pertaining to the accuracy and completeness of information previously submitted in Form MA should serve as an effective means to assure that the information supplied is correct).

236 See Form SIP, 17 CFR 249.1001, available at http://www.sec.gov/about/forms/formsip.pdf; Form BD, 17 CFR 249.501, available at http://www.sec.gov/about/forms/formbd.pdf; Form ADV, 17 CFR 279.1, available at http://www.sec.gov/about/forms/formadv.pdf.

237 See Item 13 of Form SDR. Under Exchange Act Section 13(n)(2), an SDR is subject to inspection and examination by any representative of the Commission. See 15 U.S.C. 78m(n)(2); see also Section VI.D.2 of this release discussing Rule 13n-4(b)(1). The Commission is revising "can, as a matter of law" (referring to the certification regarding access to the SDR's books and records) and "can" (referring to the certification regarding inspection and examination) in the signature block of proposed Form SDR to "can, as a matter of law, and will" to track the language of Rule 13n-1(f), as discussed in Section VI.A.5 of this release.

place of business in any place not in the United States; or (iii) in the case of a partnership or other unincorporated organization or association, one having its principal place of business in any place not in the United States.[238] Certain foreign jurisdictions may have laws that complicate the ability of regulated persons such as SDRs located in their jurisdictions from sharing certain information, including personal information of individuals that the regulated persons come to possess from third persons (e.g., personal data relating to the identity of market participants or their customers), with the Commission.[239] In order for the Commission to fulfill its oversight responsibilities with respect to registered SDRs, it is important that Commission representatives have prompt access to the SDRs' books and records and have the ability to conduct onsite inspections and examinations.[240] As noted above, one commenter was concerned that non-resident SDRs are subject to a stricter regime than resident SDRs.[241] To the extent that

238 See Item 13 of Form SDR; see also Rule 13n-1(a)(1) (defining "non-resident security-based swap data repository"). This definition is substantially similar to the definition of "non-resident broker or dealer" in Exchange Act Rule 17a-7(d)(3). See 17 CFR 240.17a-7(d)(3). Although there may be instances in which a non-resident SDR can fall within the definition of a "U.S. person," the Commission believes that, as a practical matter, all non-resident SDRs would likely be non-U.S. persons given the similar distinguishing factors in the definitions of "non-resident security-based swap data repository" and "non-U.S. person." See supra note 99(discussing definition of "U.S. person") and Section VI.A.5 of this release discussing non-resident SDRs.

239 See, e.g., Dagong Global Credit Rating Agency, Exchange Act Release No. 62968 (Sept. 22, 2010) (denying application as an NRSRO due to applicant's inability to comply with U.S. securities laws, in part because records requests would have to be approved by a Chinese regulator); Dominick & Dominick, Inc., Exchange Act Release No. 29243 (May 29, 1991) (settled administrative proceeding involving a broker-dealer's failure to furnish promptly to the Commission copies of certain records required to be kept pursuant to Exchange Act Section 17(a)(1) and Rule 17a-3 thereunder where the broker-dealer initially asserted that Swiss law prevented it from producing the required records).

240 See Section VI.D.2 of this release discussing inspection and examination by Commission representatives.

241 ESMA, supra note 19.

the commenter's concerns pertain to the certification requirement, the Commission notes that it continues to believe that if a non-resident SDR is registered with the Commission, the SDR's certification is important to confirm that it has taken the necessary steps to be in the position to provide the Commission with prompt access to the SDR's books and records and to be subject to onsite inspection and examination by the Commission. Failure to make this certification may be a basis for the Commission to institute proceedings to consider denying an application for registration. If a registered non-resident SDR becomes unable to provide this certification, then this may be a basis for the Commission to institute proceedings to consider revoking the SDR's registration.

Business Organization. Form SDR requires each applicant to provide as exhibits detailed information regarding its business organization, including information about (1) any person that owns 10 percent or more of the applicant's stock or that, either directly or indirectly, through agreement or otherwise, in any other manner, may control or direct the applicant's management or policies;[242] (2) the business experience, qualifications, and disciplinary history of its designated CCO, officers, directors, governors, and persons performing functions similar to any of the foregoing, and the members of all standing committees;[243] (3) its governance

242 See Item 14 of Form SDR.

243 See Items 15 and 16 of Form SDR. More specifically, Form SDR requires an applicant to disclose the following information regarding its designated CCO, officers, directors, governors, and persons performing functions similar to any of the foregoing, and the members of all standing committees: (a) name; (b) title; (c) date of commencement and, if appropriate, termination of present term of position; (d) length of time such person has held the same position; (e) brief account of the business experience of such person over the last five years; (f) any other business affiliations in the securities industry or derivatives industry; and (g) details of: (1) any order of the Commission with respect to such person pursuant to Sections 15(b)(4), 15(b)(6), 19(h)(2), or 19(h)(3) of the Exchange Act, (2) any conviction or injunction of a type described in Sections 15(b)(4)(B) or (C) of the Exchange Act within the past ten years, (3) any action of an

arrangements;[244] (4) the applicant's constitution, articles of incorporation or association with all amendments to them, existing by-laws, rules, procedures, and instruments corresponding to them;[245] (5) the applicant's organizational structure;[246] (6) its affiliates;[247] (7) any material

---

SRO with respect to such person imposing a final disciplinary sanction pursuant to Exchange Act Sections 6(b)(6), 15A(b)(7), or 17A(b)(3)(G), (4) any final action by an SRO with respect to such person constituting a denial, bar, prohibition, or limitation of membership, participation, or association with a member, or of access to services offered by such organization or a member thereof, and (5) any final action by another federal regulatory agency, including the CFTC, any state regulatory agency, or any foreign financial regulatory authority resulting in: (i) a finding that such person has made a false statement or omission, or has been dishonest, unfair, or unethical; (ii) a finding that such person has been involved in a violation of any securities-related regulations or statutes; (iii) a finding that such person has been a cause of a business having its authorization to do business denied, suspended, revoked, or restricted; (iv) an order entered, in the past ten years, against such person in connection with a securities-related activity; or (v) any disciplinary sanction, including a denial, suspension, or revocation of such person's registration or license or otherwise, by order, a prevention from associating with a securities-related or a restriction of such person's activities. The Commission is correcting a typographical error in proposed Items 14(g)(4) and 15(g)(4). As proposed, the items stated ". . . such organization of a member thereof." As adopted, Items 15(g)(4) and 16(g)(4) state ". . . such organization or a member thereof."

244 See Item 17 of Form SDR. The Commission has made minor revisions to Form SDR from the proposal with regard to the disclosure of governance arrangements for the sake of clarity. Compare Item 16 of Form SDR, as proposed (requiring disclosure of the responsibilities "of each of the board and such committee" and the composition "of each board and such committee"), with Item 17 of Form SDR, as adopted (requiring disclosure of the responsibilities and composition "of the board and each such committee").

245 See Item 18 of Form SDR.

246 See Item 19 of Form SDR.

247 See Item 20 of Form SDR. For purposes of Form SDR, an "affiliate" of an SDR is defined as a person that, directly or indirectly, controls, is controlled by, or is under common control with the SDR. See also Rule 13n-4(a)(1); Rule 13n-9(a)(1). This definition of "affiliate" is designed to allow the Commission to collect comprehensive identifying information relating to an SDR. This definition is substantially similar to the definition of "affiliate" in Exchange Act Rule 12b-2. See 17 CFR 240.12b-2. See also infra note 621 (defining "control" (including the terms "controlled by" and "under common control with")). The Commission notes that it received a comment letter after the Proposing Release through the Commission's general solicitation for comments that addressed the definition of "affiliate" for all of Title VII. See letter from ABA Securities

pending legal proceedings to which the applicant or its affiliate(s) is a party or to which any of its property is the subject;[248] (8) the applicant's material contracts with any SB SEF, clearing agency, central counterparty, and third party service provider;[249] and (9) the applicant's policies and procedures to minimize conflicts of interest in its decision-making process and to resolve any such conflicts of interest.[250] Obtaining this information will assist the Commission in, among other things, understanding an SDR's overall business structure, governance arrangements, and operations, all of which will assist the Commission in its inspection and examination of the SDR and the Commission's decision on whether to grant the SDR's registration.

Association, American Council of Life Insurers, Financial Services Roundtable, Futures Industry Association, Institute of International Bankers, International Swaps and Derivatives Association and the Securities Industry and Financial Markets Association, available on the Commission's website at http://www.sec.gov/comments/df-title-vii/swap-data-repositories/swap-data-repositories.shtml (suggesting defining "affiliate" for the purposes of Title VII rulemaking generally as "any group of entities that is under common control and that reports information or prepares its financial statements on a consolidated basis"). The commenter focused on the effect of the definition in the context of inter-affiliate transactions, such as whether inter-affiliate transactions should be counted when determining if a person is required to register as an SBS dealer. Among other things, the commenter addressed the reporting of inter-affiliate transactions to SDRs. Because Form SDR and the SDR Rules do not pertain to what transactions must be reported to an SDR, the Commission believes that the letter is not relevant to Form SDR or the SDR Rules. Additionally, the Commission believes that it is important that an applicant for registration as an SDR provide information regarding all of its affiliates, regardless of whether the SDR's and affiliates' financial statements are prepared on a consolidated basis. Among other reasons, the Commission needs to know the identity of an SDR's affiliates before it can determine whether the SDR has any material conflicts of interest based on the services provided by those affiliates or is providing favorable treatment to affiliates in accessing the SDR's services or whether the SDR is complying with other rules and core principles, such as the core principle related to access to services and data.

248 See Item 21 of Form SDR.

249 See Item 22 of Form SDR.

250 See Item 23 of Form SDR.

The Commission is revising Form SDR from the proposal requiring disclosure of business affiliations in the "derivatives industry" rather than the "OTC derivatives industry" for an applicant's designated CCO, officers, directors, governors, and persons performing functions similar to any of the foregoing, and the members of all standing committees[251] The Commission is making this revision to clarify that the disclosure covers derivatives traded on exchanges and SB SEFs as well as those traded over-the-counter.

Financial Information. Each applicant is required to disclose as exhibits to Form SDR certain financial and related information, including (1) its statement of financial position, results of operations, statement of sources and application of revenues, and all notes or schedules thereto, as of the most recent fiscal year of the applicant, or, alternatively, a financial report, as discussed further in Section VI.J.5 of this release;[252] (2) a statement of financial position and results of operations for each affiliate of the applicant as of the end of the most recent fiscal year of each such affiliate, or, alternatively, identification of the most recently filed annual report on Form 10-K of the applicant's affiliate, if available;[253] (3) a list of all dues, fees, and other charges imposed, or to be imposed, for the applicant's services, as well as all discounts and rebates

---

251 Compare Items 14(f) and 15(f) of proposed Form SDR with Items 15(f) and 16(f) of Form SDR, as adopted.

252 See Item 24 of Form SDR. As proposed, this item referred to a "balance sheet" and a "statement of income and expenses" rather than a "statement of financial position" and "results of operations." The Commission is making this change from the proposal for consistency with Rule 13n-11(f)(4). See Section VI.J.5 of this release discussing Rule 13n-11(f). This revision is not intended to substantively change the requirements of this item.

253 See Item 25 of Form SDR. As proposed, this item referred to a "balance sheet" and a "statement of income and expenses" rather than a "statement of financial position" and "results of operations." The Commission is making this change from the proposal for consistency with Rule 13n-11(f)(4). See Section VI.J.5 of this release discussing Rule 13n-11(f). This revision is not intended to substantively change the requirements of this item.

offered, or to be offered;[254] (4) a description of the basis and methods used in determining the level and structure of the applicant's services as well as its dues, fees, other charges, discounts, or rebates;[255] and (5) a description of any differentiations in such dues, fees, other charges, discounts, and rebates.[256] This information will assist the Commission in, among other things, its decision of whether to grant the SDR's registration and in its evaluation of the financial resources available to the SDR to support its operations.

Operational Capability. Form SDR requires each applicant to provide as exhibits information on its operational capability, including (1) its SDR and SIP functions and services;[257] (2) the computer hardware that it uses to perform its SDR or SIP functions;[258] (3) personnel qualifications for each category of professional, non-professional, and supervisory employees employed by the applicant or the division, subdivision, or other segregable entity within the applicant;[259] (4) the applicant's measures or procedures to provide for the security of any system employed to perform its SDR or SIP functions, including any physical and operational safeguards designed to prevent unauthorized access to the system;[260] (5) any circumstances within the past year in which such security measures or safeguards failed to prevent any such unauthorized access to the system and any measures taken to prevent a reoccurrence;[261] (6) any measures used by the applicant to satisfy itself that the information received or disseminated by

255 See Item 26.b of Form SDR.

256 See Item 26.c of Form SDR.

257 See Item 27 of Form SDR.

258 See Item 28 of Form SDR.

259 See Item 29 of Form SDR.

260 See Item 30 of Form SDR.

261 See Item 30 of Form SDR.

the system is accurate;[262] (7) the applicant's backup systems or subsystems that are designed to prevent interruptions in the performance of any SDR or SIP functions;[263] (8) limitations on the applicant's capacity to receive (or collect), process, store, or display (or disseminate for display or other use) its data and factors that account for such limitations;[264] and (9) the priorities of assignment of capacity between functions of an SDR or SIP and any other uses and methods used or able to be used to divert capacity between such functions and other uses.[265] As stated in the Cross-Border Proposing Release, SDRs themselves are subject to certain operational risks that may impede their ability to fulfill their roles.[266] Obtaining information regarding an SDR's operational capability will assist the Commission in determining, among other things, whether an SDR's automated systems provide adequate levels of capacity, integrity, resiliency, availability, and security.

As highlighted by one commenter, it is imperative that Form SDR includes "information related to the SDR's operating schedule, real-time processing, existence of multiple redundant infrastructures for continuity, strong information security controls, and robust reporting operations."[267] The Commission believes that the operational capability information requested on Form SDR sufficiently addresses the commenter's concern. In addition, Commission

Failure to maintain privacy of such data could lead to market abuse and subsequent loss of liquidity.")).

267 DTCC 2, supra note 19.

representatives may conduct inspections or examinations to assess a registered SDR's ongoing operational capability and compliance with the federal securities laws and the rules and regulations thereunder.[268]

Access to Services and Data. Form SDR requires an applicant to provide as exhibits information regarding access to its services and data, including (1) the number of persons who presently subscribe, or who have notified the applicant of their intention to subscribe, to its services;[269] (2) instances in which the applicant has prohibited or limited any person with respect to access to services offered or data maintained by the applicant;[270] (3) for each service that involves the supply of information to a quotation board, ticker device, electronic information terminal, or other such device, the total number of devices to which information is, or will be supplied and any minimum and or maximum number of devices required or permitted by agreement or otherwise to be serviced by the applicant;[271] (4) the storage media of any service furnished in machine-readable form and the data elements of such service;[272] (5) copies of all contracts governing the terms by which persons may subscribe to the SDR services, SIP services, and any ancillary services provided by the applicant;[273] (6) any specifications, qualifications, or

---

268 See Section VI.A.2 of this release discussing Rule 13n-1(c) (reviews by Commission staff of the SDR's operational capacity and ability are important to determine whether the Commission should grant an SDR's application for registration or revoke the registration of a registered SDR pursuant to Rule 13n-2(e)).

269 See Item 33.a of Form SDR.

270 See Item 33.b of Form SDR; see also infra note 278 (discussing denials of access to services offered by SDRs).

271 See Item 33.c of Form SDR. The Commission is including this item from Form SIP to Form SDR for purposes of combining the two forms. See Section VI.A.1 of this release discussing Form SIP.

272 See Item 33.d of Form SDR.

273 See Item 34 of Form SDR.

other criteria that limit, are interpreted to limit, or have the effect of limiting access to or use of any SDR or SIP services offered or data maintained by the applicant;[274] (7) any specifications, qualifications, or other criteria required of persons who supply SBS information to the applicant for collection, maintenance, processing, preparing for distribution, and publication by the applicant or of persons who seek to connect to or link with the applicant;[275] (8) any specifications, qualifications, or other criteria required of any person who requests access to data maintained by the applicant;[276] and (9) the applicant's policies and procedures to review any prohibition or limitation of any person with respect to access to services offered or data maintained by the applicant and to grant such person access to such services or data if such person has been discriminated against unfairly.[277]

The information regarding access to services and data will assist the Commission in determining, among other things, whether an SDR can comply with Rule 13n-4(c)(1), which relates to the core principle for market access to services and data, as discussed further in Section VI.D.3.a of this release. With respect to Item 33 of Form SDR (requiring an SDR to provide information regarding access to services and data, including any denials of such access), the Commission further believes that, due to an SDR's role as a central recordkeeping facility for SBSs, upon which the Commission and the public will rely for market-wide SBS data, the

---

274 See Item 35 of Form SDR.

275 See Item 36 of Form SDR.

276 See Item 37 of Form SDR. The Commission is correcting a typographical error in proposed Item 36 of Form SDR. As proposed, the item stated "any person, including, but not limited to . . . third party service providers who request access . . . ." As adopted, Item 37 states "any person, including, but not limited to . . . third party service providers, who requests access . . . ."

277 See Item 38 of Form SDR.

Commission should be informed of persons who have been granted access to an SDR's services and data, as well as instances in which an SDR prohibits or limits access to its services.[278] As part of the process to amend Form SDR from the proposal to accommodate SIP registration, discussed above, the Commission is adding Item 33(c) to Form SDR so that the Commission can obtain specific information regarding an SDR's supply of information for public dissemination purposes.

Other Policies and Procedures. Form SDR requires each applicant to attach as exhibits: (1) the applicant's policies and procedures to protect the privacy of any and all SBS transaction information that the applicant receives from a market participant or any registered entity;[279] (2) a description of the applicant's safeguards, policies, and procedures to prevent the misappropriation or misuse of (a) any confidential information received by the applicant, including, but not limited to, trade data, position data, and any nonpublic personal information about a market participant or any of its customers; (b) material, nonpublic information; and/or (c) intellectual property by the applicant or any person associated with the applicant for their

---

278 See Regulation SBSR Adopting Release, supra note 13 (discussing Rule 909, which requires a registered SDR to also register as a SIP); Proposing Release, 75 FR at 77311 n.33, supra note 2 (noting that if the Commission adopts proposed Rule 909 of Regulation SBSR, then Exchange Act Section 11A(b)(5) would govern denials of access to all SDRs' services); see also 15 U.S.C. 78k-1(b)(5) (A registered SIP must promptly file notice with the Commission if it, directly or indirectly, prohibits or limits any person in respect of access to its services, which may be subject to review by the Commission. If the Commission finds that (a) such limitation or prohibition is not consistent with Exchange Act Section 11A and the rules and regulations thereunder and that such person has been discriminated against unfairly or (b) the prohibition or limitation imposes any burden on competition not necessary or appropriate, it may set aside the prohibition or limitation and require the SIP to permit such person access to its services.). The Commission has made certain changes to Form SDR from the proposal to accommodate SIP registration. See supra note 220.

279 See Item 39 of Form SDR.

personal benefit or for the benefit of others;[280] (3) the applicant's policies and procedures regarding its use of the SBS transaction information that it receives from a market participant, any registered entity, or any other person for non-commercial and/or commercial purposes;[281] (4) the applicant's procedures and a description of its facilities for resolving disputes over the accuracy of the transaction data and positions that are recorded in the SDR;[282] (5) the applicant's policies and procedures relating to its calculation of positions;[283] (6) the applicant's policies and procedures to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the applicant;[284] and (7) a plan to ensure that the transaction data and position data that are recorded in the SDR continue to be maintained after the applicant withdraws from registration, which shall include procedures for transferring transaction data and position data to the Commission or its designee (including another registered SDR).[285] This information will assist the Commission in determining, among other things, whether an SDR can comply with the requirements to establish, maintain, and enforce these seven policies and procedures, as discussed further in Sections VI.D, VI.E, VI.G, and VI.I of this release. In addition, Form SDR requires an applicant to attach as exhibits all of the policies and procedures set forth in Regulation SBSR.[286]

One commenter suggested that the Commission require an applicant to submit its

---

280 See Item 40 of Form SDR.

281 See Item 41 of Form SDR.

282 See Item 42 of Form SDR.

283 See Item 43 of Form SDR.

284 See Item 44 of Form SDR.

285 See Item 45 of Form SDR.

286 See Item 46 of Form SDR; Regulation SBSR Adopting Release, supra note 13 (Rule 907 requiring SDRs to establish and maintain certain written policies and procedures).

"rulebook."[287] The Commission does not believe that such a requirement is necessary, but is revising Form SDR from the proposal to provide that if an applicant has a rulebook, then it may attach its rulebook as an exhibit to the form,[288] as a supplement to the policies and procedures required by Form SDR. The Commission believes that if an applicant has a rulebook, much of the information that would be contained in the rulebook likely would be filed as part of an SDR's policies and procedures.[289] To the extent that an applicant's rulebook is broader, an applicant may submit its rulebook to the Commission if, for example, the applicant believes that it would be useful for the Commission to better understand the context of the applicant's policies and procedures or how the policies and procedures relate to one another.

Legal Opinion. Form SDR requires each non-resident SDR to attach as an exhibit an opinion of counsel that the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records and that the SDR can, as a matter of law, submit to onsite inspection and examination by the Commission.[290]

---

287 DTCC 3, supra note 19.

288 See Item 47 of Form SDR.

289 The Commission notes that an SDR that is also registered with the CFTC as a swap data repository is required under CFTC Rule 49.8 to either submit its rules and amendments thereto for approval by the CFTC or self-certify that the rulebook complies with the CFTC's swap data repository rules and the CEA. See 17 CFR 49.8. The Dodd-Frank Act did not establish SDRs as self-regulatory organizations ("SROs") (which, under the Exchange Act, are required to file their rules with the Commission) or create an express obligation for SDRs to file their rules with the Commission. As noted above, SDRs must provide certain policies and procedures on Form SDR. The Commission believes that this disclosure is sufficient to enable the Commission to determine whether an SDR's policies and procedures are in compliance with the Exchange Act, including Section 13(n), and the rules and regulations thereunder. The Commission recognizes, however, that reviewing a rulebook that is voluntarily submitted to the Commission may assist the Commission in understanding other items in an applicant's Form SDR.

290 See Item 48 of Form SDR.

As discussed above, one commenter suggested that the legal opinion requirement would subject non-resident SDRs to a stricter regulatory regime than resident SDRs.[291] The Commission, however, continues to believe that non-resident SDRs that are registered, or seek to register, with the Commission should be required to provide the opinion of counsel. Each jurisdiction may have a different legal framework (e.g., privacy laws) that may limit or restrict the Commission's ability to access information from an SDR. Rather than create unequal regulatory obligations, the legal opinion requirement equalizes the regulatory landscape for SDRs by addressing whether a non-resident SDR is able to comply with the requirements for it to provide the Commission with prompt access to the SDR's books and records,[292] and to submit to onsite inspection and examination by the Commission,[293] similar to SDRs that reside in the United States. Failure to provide an opinion of counsel may be a basis for the Commission to institute proceedings to consider denying an application for registration.

Electronic Filing. The Commission is revising Rule 13n-1(b) from the proposal to conform the rule with General Instruction 1 to Form SDR. As revised, Rule 13n-1(b) provides that in addition to an application for registration as an SDR, all amendments thereto must be filed electronically in a tagged[294] data format on Form SDR with the Commission in accordance with

---

291 ESMA, supra note 19.

292 See Rule 13n-7(b)(3) (requiring every SDR to, upon request of any representative of the Commission, promptly furnish requested documents to the representative).

293 See Exchange Act Section 13(n)(2), 15 U.S.C. 78m(n)(2) (subjecting registered SDRs to inspection and examination by any representative of the Commission)).

294 The term "tag" (including the term "tagged") is being revised from the proposal to have the same meaning as set forth in Rule 11 of Regulation S-T (defining "tag" as "an identifier that highlights specific information to EDGAR that is in the format required by the EDGAR Filer Manual"). See Rules 13n-1(a)(2), 13n-2(a)(1), and 13n-11(b)(9); see also 17 CFR 232.11. The Commission is revising this term from the proposal to be consistent with all the other terms in the SDR Rules that cross-reference to the definitions

the instructions contained in the form.[295] This modification to also require all amendments on Form SDR be filed electronically in a tagged data format is intended to conform with General Instruction 1 to Form SDR, which requires the form and exhibits thereto to be filed electronically in a tagged data format by an applicant for registration as an SDR and by an SDR amending its application for registration.

The Commission anticipates developing an electronic filing system through which an SDR will be able to file and update Form SDR on or about the effective date of Rule 13n-1.[296] If the Commission's electronic filing system is unavailable at the time an applicant seeks to file its application for registration on Form SDR, the applicant may file the form, including any amendments thereto, in paper format with the Commission's Division of Trading and Markets at the Commission's principal office in Washington, DC. However, doing so does not relieve the SDR from compliance with the requirement in Rule 13n-1(b) to file Form SDR "electronically in a tagged data format." Therefore, when the Commission's electronic filing system is available,

---

set forth in Regulation S-T, where applicable. For example, the term "EDGAR Filer Manual" has the same meaning as set forth in Rule 11 of Regulation S-T (defining "EDGAR Filer Manual" as "the current version of the manual prepared by the Commission setting out the technical format requirements for an electronic submission"). See Rule 13n-11(b)(3); see also 17 CFR 232.11.

295 See Rule 13n-1(b).

296 This electronic filing system for Form SDR will be through EDGAR, and thus, the electronic filing requirements of Regulation S-T will apply. See generally 17 CFR 232 (governing the electronic submission of documents filed with the Commission). The Commission is amending General Instruction 1 to Form SDR to clarify the applicability of Regulation S-T to Form SDR. To conform with how filings are presently made through EDGAR, the Commission has made several minor edits to Form SDR from the proposal. See, e.g., Instruction 10 of Form SDR (providing guidance on filing Form SDR as an amendment, other than an annual amendment); Item 3 of Form SDR (requesting mailing address, which includes state/country and mailing zip/postal code); Item 9 of Form SDR (requesting information regarding an entity's incorporation or organization); Item 13 of Form SDR (requesting date of signature in different format).

the applicant should file electronically any initial and amended Form SDRs that had been filed previously in paper format.[297] The Commission expects that the information filed will be made available on the Commission's website, except in cases where confidential treatment is requested by an SDR and granted by the Commission.[298] The Commission acknowledges that SDRs will likely incur additional costs and burdens, particularly in initial compliance, with the data tagging requirement, when compared with filing Form SDR in paper format. However, the Commission believes that such costs will be minimal and that this requirement will facilitate review and analysis of registration materials by Commission staff and, to the extent such materials are made public, the public. The Commission believes that the costs of completing Form SDR in tagged data format are justified by the benefits derived from the ability of investors, analysts, and Commission staff to be able to more effectively capture, review, and analyze the SDR registration materials if they are in tagged data format.[299]

297 See Proposing Release, 75 FR at 77309 n.25, supra note 2 (noting that SDRs might be required to file Form SDR in paper until such time as an electronic filing system is operational and capable of receiving the form and the Commission may require each SDR to promptly re-file electronically Form SDR and any amendments to the form).

298 As discussed below, the Commission is adopting technical amendments to Exchange Act Rule 24b-2 to clarify that the confidential portion of electronic filings by SDRs must be filed electronically and to require SDRs to request confidential treatment electronically. The Commission is also adopting technical amendments to Rule 101 of Regulation S-T to provide that, except as otherwise provided, all filings by SDRs, including any information with respect to which confidential treatment is requested, must be filed electronically.

299 As part of the Commission's longstanding efforts to increase transparency and the usefulness of information, the Commission has been implementing data tagging of information contained in electronic filings to improve the accuracy of financial information and facilitate its analysis. See Regulation S-T, 17 CFR 232; see also Securities Act Release No. 8891 (Feb. 6, 2008), 73 FR 10592 (Feb. 27, 2008); Securities Act Release No. 9002 (Jan. 30, 2009), 74 FR 6776 (Feb. 10, 2009); Securities Act Release No. 9006 (Feb. 11, 2009), 74 FR 7748 (Feb. 19, 2009); Exchange Act Release No. 61050 (Nov. 23, 2009), 74 FR 63832 (Dec. 4, 2009); Investment Company Release

Technical Amendments to Electronic Filing Requirements. The Commission is adopting technical amendments to Exchange Act Rule 24b-2[300] and Rule 101 of Regulation S-T[301] to clarify that SDRs' electronic filings pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder[302] must include any information with respect to which confidential treatment is requested ("confidential portion"). Generally speaking, Exchange Act Rule 24b-2 and Rule 101 of Regulation S-T require confidential treatment requests and the confidential portion to be submitted in paper format only. The Commission's technical amendments provide an exception from Rule 24b-2's and Rule 101's paper-only filing requirements for all SDR filings. Under this exception, the confidential portion of all SDR filings must be filed in electronic format.

The Commission is revising Rule 24b-2 in two ways. First, the Commission is revising Rule 24b-2(b) to provide an exception for persons providing materials pursuant to Rule 24b-2(h)

No. 29132 (Feb. 23, 2010), 75 FR 10060 (Mar. 4, 2010); What is Interactive Data and Who's Using It?, http://www.sec.gov/spotlight/xbrl/what-is-idata.shtml (last updated March 15, 2010) (link to the Commission's Office of Interactive Disclosure's discussion of the benefits of interactive data). Data becomes machine-readable when it is labeled, or tagged, using a computer markup language that can be processed by software programs for analysis. Such computer markup languages use standard sets of definitions, or "taxonomies," that translate text-based information in Commission filings into structured data that can be retrieved, searched, and analyzed through automated means. Requiring the information to be tagged in a machine-readable format using a data standard that is freely available, consistent, and compatible with the tagged data formats already in use for Commission filings will enable the Commission to review and analyze more effectively Form SDR submissions.

300 17 CFR 240.24b-2.

301 17 CFR 232.101.

302 See, e.g., Rule 13n-2(b) (relating to withdrawal on Form SDR) and Rule 13n-11(d)(2) (relating to compliance reports); see also Rule 13n-11(f)(5) (relating to financial reports); General Instruction 1 to Form SDR (requiring Form SDR and exhibits to be filed electronically in a tagged data format, including amendments filed under Rule 13n-1(d)).

from the general requirement to omit the confidential portion from "the material filed."[303] Second, the Commission is adding Rule 24b-2(h) to provide that an SDR must not omit the confidential portion from the material filed in electronic format pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder, and must request confidential treatment electronically in lieu of the procedures described in Rule 24b-2(b).

The Commission is also revising Rule 101 to add paragraph (a)(1)(xvii) to the list of mandated electronic submissions. Specifically, paragraph (a)(1)(xvii) adds to this list documents filed with the Commission pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder, including Form SDR and reports filed pursuant to Exchange Act Rules 13n-11(d) and (f).[304] The Commission is also revising Rule 101(c) to provide that except as otherwise specified in Rule 101(d), confidential treatment requests and the information with respect to which confidential treatment is requested must not be submitted in electronic format. The Commission is further adding Rule 101(d) to provide as an exception to Rule 101(c)'s paper-only filing requirement all documents, including any information with respect to which confidential treatment is requested, filed pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder.

Electronic filing of all materials filed by SDRs, including the confidential portion, will reduce the burden on SDRs by not requiring a separate paper submission and facilitate the

303 Rule 24b-2(a) refers to "any registration statement, report, application, statement, correspondence, notice or other document" as "the material filed."

304 See Sections VI.J.4 and VI.J.5 of this release discussing compliance reports and financial reports filed pursuant to Rules 13n-11(d) and (f).

Commission's review and analysis of the filings.[305]

2. Factors for Approval of Registration and Procedural Process for Review (Rule 13n-1(c))

a. Proposed Rule

Proposed Rule 13n-1(c) would establish the timeframe for Commission action on applications for registration as an SDR, as well as the Commission's procedures for reviewing applications for registration. In particular, proposed Rule 13n-1(c) provided that, within 90 days of the date of the filing of an application for registration on Form SDR (or within such longer period as to which the SDR consents), the Commission will either grant the registration by order or institute proceedings to determine whether registration should be denied. The proposed rule set forth the time period for such proceedings. The proposed rule also set forth the standard applicable to an application for registration as an SDR.

b. Comments on the Proposed Rule

Although the Commission did not receive any comments directly relating to this proposed rule, two commenters expressed their views on the SDR registration process generally.[306]

The first commenter recommended sufficient time for an appropriate level of due diligence with respect to applications for registration.[307] While the commenter expressly

---

305 See Rules 13-1(b); 13n-2(b); 13n-11(d)(2); see also Rule 13n-11(f)(5); General Instruction 1 to Form SDR.

306 See DTCC 2, supra note 19; ICE CB, supra note 26.

307 DTCC 2, supra note 19 ("DTCC is concerned that the SEC's proposed implementation schedule for reporting to SDRs is heavily compressed and, when coupled with the temporary registration regime, may lead to compromised solutions, including operational and security compromises . . . . [P]otential SDRs are unlikely to be able to offer fully robust or efficient solutions for early registration, given that the final rules will be available relatively shortly before the effective date. DTCC recommends that appropriate

referenced the proposed temporary registration rule, the Commission believes that the commenter's concern regarding the operational capability of SDRs is applicable to any applicant for registration as an SDR.[308] Additionally, the same commenter supported combining new Form SDR with Form SIP,[309] which would necessitate a revision to Rule 13n-1(c), as described below.[310]

The second commenter requested the Commission's expedited review of SDR registration.[311]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-1(c) as proposed, with minor modifications. First, the Commission is making minor revisions from the proposal relating to the event that begins the 90-day period for Commission review and action on the application for registration as an SDR. The final rule provides that within 90 days of the date of the publication of notice of the filing of an application for registration (or within such longer

---

due diligence is conducted with respect to the temporary registration process and that those diligence findings are either used to support transition of existing infrastructure or used for new entrants who can demonstrate that their infrastructure supports key operational capabilities, including 24/6 operation, real-time processing, multiple redundancy, and robust information security controls."); see also DTCC 3, supra note 19 ("SDRs must be able to demonstrate an infrastructure which supports critical operational capabilities . . . . Assessment of these core capabilities is a critical component of any registration process, including a temporary registration.").

308 See Section VI.A.3.c of this release discussing the Commission's decision not to adopt the proposed temporary registration rule.

309 DTCC 2, supra note 19 (requesting that the Commission combine Form SDR and Form SIP such that an SDR would register as an SDR and a SIP using only one form or permit either Form SDR or Form SIP to be the application for registration as both an SDR and an SIP); DTCC 3, supra note 19.

310 See Section VI.A.1 of this release discussing combining Form SDR and Form SIP.

311 ICE CB, supra note 26 (suggesting that the Commission take into consideration the SDR's provisional registration with the CFTC).

period as to which the applicant consents), the Commission will either grant the registration by order or institute proceedings to determine whether registration should be granted or denied.[312] The 90-day period will not begin to run until an SDR files a complete Form SDR with the Commission,[313] and the Commission publishes notice of the filing of Form SDR to afford interested persons an opportunity to submit written comments concerning such application.[314] As discussed above, in light of the Commission's adoption of the requirement for a registered SDR to also register as a SIP in Regulation SBSR,[315] the Commission has decided to consolidate Form SIP and Form SDR in order to make the registration process for SDRs more efficient; this approach has been endorsed by one commenter.[316] The Commission's revision of Rule 13n-1(c)

---

312 Rule 13n-1(c).

313 See Proposing Release, 75 FR at 77313, supra note 2. If a Form SDR is incomplete, then it may be deemed as not acceptable for filing. General Instruction 7 to Form SDR, as adopted, provides that "[a] form that is not prepared and executed in compliance with applicable requirements may be deemed as not acceptable for filing." Further, the application must include information sufficient to allow the Commission to assess the applicant's ability to comply with the federal securities laws and the rules and regulations thereunder. Form SDR consists of instructions, a list of questions, a signature page, and a list of exhibits that the Commission requires in order to be able to determine whether an applicant is able to comply with the federal securities laws and the rules and regulations thereunder. An application on Form SDR may not be considered complete unless the applicant has filed, at a minimum, responses to all the questions listed, the signature page, and exhibits as required in Form SDR, and any other materials the Commission may require, upon request, in order to assess whether an applicant is able to comply with the federal securities laws and the rules and regulations thereunder. If the application is not complete, then the application will not be deemed to have been filed for the Commission's review.

314 If, however, an SDR files an amendment to its application for registration after the Commission has already published notice of the filing of Form SDR and the Commission finds that the amendment renders the prior filing materially incomplete, then the 90-day period will reset from the time that the Commission deems the amended application to be complete for the Commission's review.

315 See Regulation SBSR Adopting Release, supra note 13 (Rule 909).

316 See DTCC 2, supra note 19; DTCC 3, supra note 19.

relating to the publication of notice makes it procedurally consistent with the registration process applicable to SIPs under Exchange Act Section 11A(b)[317] and stems from the Commission's requirement that a registered SDR register as a SIP[318] and the Commission's revision of Form SDR to accommodate SIP registration. Exchange Act Section 11A(b)(3) provides that the Commission will, upon the filing of an application for registration as a SIP, publish notice of the filing and afford interested persons an opportunity to submit written data, views, and arguments concerning such application; within 90 days of the date of the publication of such notice (or within such longer period as to which the applicant consents), the Commission will by order grant such registration or institute proceedings to determine whether registration should be denied.[319] The Commission has determined to adopt Rule 13n-1(c) with revised text from the proposal that conforms the event preceding the period for Commission action, with respect to applications for registration as an SDR, to the event set forth in Section 11A(b)(3), with respect to applications for registration as a SIP.[320]

Second, the Commission is revising Rule 13n-1(c) from the proposal to clarify that the purpose of proceedings instituted pursuant to the rule is to determine whether an applicant's registration as an SDR should be granted or denied, rather than only denied (as proposed).[321] The Commission is further revising Rule 13n-1(c) from the proposal to provide that proceedings instituted pursuant to the rule will include notice of the issues under consideration (rather than

317 See 15 U.S.C. 78k-1(b).

318 See Regulation SBSR Adopting Release, supra note 13 (Rule 909).

319 See 15 U.S.C. 78k-1(b)(3).

320 A publication of notice of the filing of an application for registration is required in the SIP context.

321 See Rule 13n-1(c)(2).

grounds for denial under consideration, as proposed) and opportunity for hearing on the record and will be concluded within 180 days after the date of the publication of notice of the filing of the application for registration.[322] These revisions from the proposal are intended to make the rule internally consistent.[323]

The Commission is adopting Rule 13n-1(c) as proposed in all other respects. Rule 13n-1(c) provides that at the conclusion of proceedings instituted pursuant to the rule, the Commission, by order, will grant or deny such registration.[324] The Commission may extend the time for conclusion of such proceedings for up to 90 days if it finds good cause for such extension and publishes its reasons for so finding or for such longer period as to which the SDR consents.[325]

As noted in the Proposing Release, the Commission believes that the timeframes for reviewing applications for registration as an SDR are appropriate to allow Commission staff sufficient time to ask questions and, as needed, to request amendments or changes by SDRs to address legal or regulatory concerns before the Commission takes final action on an application

322 See Rule 13n-1(c)(2). For the reasons provided above, in conjunction with the revision from the proposal to the event that precedes the 90-day period, and for consistency within the rule, the Commission is also revising from the proposal the event that precedes the 180-day period for conclusion of Commission action on the application for registration as an SDR. In making this revision, the Commission is changing "not later than 180 days" to "within 180 days" for consistency within the rule.

323 Proposed Rule 13n-1(c)(2) stated that the Commission may institute proceedings to determine whether registration should be "denied," and that such proceedings include notice of the "grounds for denial," but that at the conclusion of such proceedings, the Commission shall "grant or deny" registration. As adopted, the rule clarifies that the Commission may institute proceedings to determine whether registration should be "granted or denied" and that proceedings instituted pursuant to this rule must include notice of the "issues under consideration."

324 Rule 13n-1(c)(2).

325 Rule 13n-1(c)(2).

for registration.[326] In addition, the registration process provides a mechanism for an SDR to demonstrate that it can comply with the federal securities laws and the rules and regulations thereunder.[327] One commenter requested that the Commission provide for expedited review of the commenter's application for registration as an SDR, in part because of its provisional registration with the CFTC as a swap data repository.[328] It is unclear what the commenter means by "expedited review," but the Commission believes that the procedures for reviewing applications for registration as an SDR that the Commission is adopting in this release provide reasonable timeframes for the Commission's review of the applications and the Compliance Date for the SDR Rules will address the concerns of existing SDRs operating during the registration period.[329] Moreover, these procedures are consistent with the procedures for reviewing applications of other registrants by the Commission (e.g., SIPs, broker-dealers, nationally recognized statistical ratings organizations, national securities exchanges, registered securities associations, and registered clearing agencies) although the timeframes for review vary.[330] Additionally, the Commission notes that its review of an SDR's application for registration is

---

[326] Proposing Release, 75 FR at 77313, supra note 2. In addition to the applicant's registration on Form SDR, "[a]s part of the application process, each SDR shall provide additional information to any representative of the Commission upon request." See Rule 13n-1(b).

[327] See Proposing Release, 75 FR at 77313, supra note 2 (discussing Rule 13n-1(c) and noting that "the registration provides a mechanism for an SDR to demonstrate that it can comply with the federal securities laws and the rules and regulations thereunder").

[328] See ICE CB, supra note 26.

[329] See Section V.C of this release discussing the Commission's efforts designed to minimize interference with ongoing operations of existing SDRs during the implementation of the SDR Rules.

[330] See Exchange Act Sections 11A(b)(3), 15(b), 15E(a)(2), and 19(a), 15 U.S.C. 78k-1(b)(3), 78o(b), 78o-7(a)(2), and 78s(a).

independent of the CFTC's review of a swap data repository's application for registration.[331]

The Commission will grant the registration of an SDR if the Commission finds that the SDR is so organized, and has the capacity, to be able to assure the prompt, accurate, and reliable performance of its functions as an SDR, comply with any applicable provision of the federal securities laws and the rules and regulations thereunder, and carry out its functions in a manner consistent with the purposes of Exchange Act Section 13(n) and the rules and regulations thereunder.[332] The Commission will deny the registration of an SDR if the Commission does not make such a finding.[333]

One commenter indicated that applicants for registration as an SDR should be able to "demonstrate that their infrastructure supports key operational capabilities, including 24/6 operation, real-time processing, multiple redundancy, and robust information security controls."[334] Similarly, the same commenter stated that "SDRs must be able to demonstrate an infrastructure which supports critical operational capabilities" and "[a]ssessment of these core capabilities is a critical component of any registration process."[335] The Commission generally agrees with this commenter and believes that an SDR's infrastructure and operational capabilities are important factors in determining whether to grant an SDR's application for registration.[336]

---

331 But see ICE CB, supra note 26 (suggesting that the Commission take into consideration the SDR's provisional registration with the CFTC).

332 Rule 13n-1(c)(3).

333 Id.

334 DTCC 2, supra note 19.

335 DTCC 3, supra note 19.

336 See Rule 13n-6 (requiring SDRs to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that its systems provide adequate levels of capacity, integrity, resiliency, availability, and security); Rule 13n-1(c)(3) (discussing the standards for the Commission to grant registration of an SDR, including having the

In the Proposing Release, the Commission asked whether, in order to form a more complete and informed basis on which to determine whether to grant, deny, or revoke an SDR's registration, it should adopt a requirement that an SDR file with the Commission, as a condition of registration or continued registration, a review relating to the SDR's operational capacity and ability to meet its regulatory obligations.[337] The Commission did not receive any comments directly on this issue, but upon further consideration, the Commission has determined not to require an SDR to file with the Commission a review of the SDR's operational capacity and ability to meet its regulatory obligations because it is not clear that the benefits of such a requirement would justify the costs. However, in determining whether an applicant meets the criteria set forth in Rule 13n-1(c), the Commission will consider the application and any additional information obtained from the SDR, which may include information obtained in connection with an inspection or examination of the SDR. Additionally, in connection therewith, the Commission may consider, among other things, whether an applicant can demonstrate its operational capabilities and conduct its operations in compliance with its statutory and regulatory obligations. If an applicant (rather than its affiliate) is already registered with the Commission as, for example, a clearing agency, then Commission representatives may also take into account any recent examinations in its determination pursuant to Rule 13n-1(c)(3).

The Commission will consider a registered SDR's operational capacity and ability to meet its statutory and regulatory obligations to determine whether the SDR should continue to operate as such or whether the Commission should take steps to revoke the SDR's registration.

---

capacity to be able to assure the prompt, accurate, and reliable performance of its functions as an SDR, and comply with any applicable provision of the federal securities laws and the rules and regulations thereunder).

337 Proposing Release, 75 FR at 77313, supra note 2.

As provided in Exchange Act Section 13(n)(2), "[e]ach registered security-based swap data repository shall be subject to inspection and examination by any representative of the Commission."[338] The results of such inspection and examination will be used to inform the Commission whether the SDR is complying with the federal securities laws and the rules and regulations thereunder. As discussed further below, under Rule 13n-2(e), if the Commission finds, on the record after notice and opportunity for hearing, that any registered SDR has, among other things, failed to comply with any provision of the federal securities laws and the rules and regulations thereunder, the Commission, by order, may revoke the SDR's registration.[339]

In considering initial applications for registration on Form SDR filed contemporaneously with the Commission, the Commission intends to process such applications for multiple SDRs accepting SBS transaction data from the same asset classes within the same period of time so as to address competition concerns that could arise if such SDRs were granted registration at different times.[340] Further, in light of the Commission's adoption of the requirement in Regulation SBSR for a registered SDR to register as a SIP,[341] the Commission is adopting Form SDR, which incorporates the requirements of Form SIP, as discussed in Section VI.A.1.c above. The Commission's review of an applicant's registration as an SDR on Form SDR will encompass review with respect to both SDR and SIP registration. The Commission

338 Exchange Act Section 13(n)(2), 15 U.S.C. 78m(n)(2). See also Section VI.D.2 of this release discussing Rule 13n-4(b)(1), which implements Exchange Act Section 13(n)(2).

339 See Section VI.B of this release discussing Rule 13n-2(e).

340 Certain unexpected events that raise compliance concerns with respect to one applicant but not another, such as deficiencies identified in connection with the Commission's consideration of whether an applicant meets the criteria set forth in Rule 13n-1(c), may interfere with the Commission's ability to process initial applications for registration within the same period of time.

341 See Regulation SBSR Adopting Release, supra note 13 (Rule 909).

contemplates that it will grant registrations to an applicant both as an SDR and as a SIP simultaneously.

3. Temporary Registration (Rule 13n-1(d))

a. Proposed Rule

As proposed, Rule 13n-1(d) provided a method for SDRs to register temporarily with the Commission. The proposed rule provided that, upon the request of an SDR, the Commission may grant temporary registration of the SDR that would expire on the earlier of: (1) the date that the Commission grants or denies (permanent) registration of the SDR, or (2) the date that the Commission rescinds the temporary registration of the SDR.[342]

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[343] One commenter recommended that the Commission establish clear standards and requirements for temporary registration.[344] Similarly, another commenter recommended that "the Commission establish clearly articulated standards and requirements for temporary registration so that existing trade repositories may quickly begin to provide similar transparency to the [SBS] markets that is currently provided to the rest of the swaps market, thus facilitating the Commission's oversight of these markets."[345] That same commenter also expressed concern about the temporary registration provision, particularly the cumulative effect of the short time frame afforded for

342 Proposed Rule 13n-1(d).

343 See DTCC 2, supra note 19; ICE CB, supra note 26; see also DTCC 5, supra note 19.

344 ICE CB, supra note 26.

345 DTCC 5, supra note 19 ("Further clarity on the standards and process that will be utilized to grant temporary registration will also provide applicants to register as [SDRs] with a better understanding of the Commission's expectations with respect to their obligations and requirements prior to being granted full registration.").

registration and the possibility that a temporary registration regime "may lead to compromised solutions [at SDRs], including operational and security compromises."[346] Additionally, the commenter urged the Commission to ensure that the registration process does not interfere with the ongoing operation of existing SDRs.[347]

c. Final Rule

After considering the comments, the Commission has determined not to adopt proposed Rule 13n-1(d). As stated in the Proposing Release, the temporary registration provision would have enabled an SDR to comply with the Dodd-Frank Act upon its effective date (i.e., the later of 360 days after the date of its enactment or 60 days after publication of the final rule implementing Exchange Act Section 13(n))[348] regardless of any unexpected contingencies that may arise in connection with the filing of Form SDR. The proposed temporary registration

---

346 DTCC 2, supra note 19 ("DTCC is concerned that the SEC's proposed implementation schedule for reporting to SDRs is heavily compressed and, when coupled with the temporary registration regime, may lead to compromised solutions, including operational and security compromises . . . . [P]otential SDRs are unlikely to be able to offer fully robust or efficient solutions for early registration, given that the final rules will be available relatively shortly before the effective date. DTCC recommends that appropriate due diligence is conducted with respect to the temporary registration process and that those diligence findings are either used to support transition of existing infrastructure or used for new entrants who can demonstrate that their infrastructure supports key operational capabilities, including 24/6 operation, real-time processing, multiple redundancy, and robust information security controls."); see also DTCC 3, supra note 19 ("SDRs must be able to demonstrate an infrastructure which supports critical operational capabilities . . . . Assessment of these core capabilities is a critical component of any registration process, including a temporary registration.").

347 DTCC 2, supra note 19; see also DTCC 5, supra note 19 (stating the same and "[w]hether done through a phasing-in of final [SDR] rules or the Commission's prompt issuance of temporary registration conditioned on implementation of enhancements to comply more fully with specified provisions, the Commission should ensure the continuation of counterparty reporting and the ability of the entities currently performing the functions of an [SDR] to receive and maintain current trade information on an ongoing basis").

348 Proposing Release, 75 FR at 77314, supra note 2; see also Dodd-Frank Act Section 774.

would also have allowed the Commission to implement the registration requirements of the Dodd-Frank Act for SDRs while still giving the Commission sufficient time to review fully the application of an SDR after it becomes operational, but before granting a registration that is not limited in duration.

These concerns were motivated primarily by the short timeframe between when the SDR Rules were first proposed and when registration would have been required (i.e., as of July 16, 2011). However, the exemptive relief provided by the Commission, which was effective on June 15, 2011,[349] addressed this primary purpose for temporary registration. Further, the Compliance Date for the SDR Rules[350] should provide sufficient time for SDRs to analyze and understand the final SDR Rules, to develop and test new systems required to comply with the Dodd-Frank Act's provisions governing SDRs and the SDR Rules, to prepare and file Form SDR, to demonstrate their ability to meet the criteria for registration set forth in Rule 13n-1(c)(3), and to obtain registration with the Commission. Therefore, the Commission believes that it has addressed commenters' concerns relating to interference with the ongoing operation of existing SDRs.[351] For these reasons, the Commission no longer believes that a temporary registration regime for SDRs is necessary or appropriate.

4. Amendment on Form SDR (Proposed Rule 13n-1(e)/Final Rule 13n-1(d))

a. Proposed Rule

As proposed, Rule 13n-1(e) would require an SDR to file promptly an amendment on Form SDR ("interim amendment") if any information reported in Items 1 through 16, 25, and

349 See Effective Date Order, 76 FR at 36306, supra note 9.

350 See Section V.C of this release discussing the Compliance Date.

351 See, e.g., DTCC 2, supra note 19; DTCC 5, supra note 19.

46[352] of Form SDR or in any amendment thereto is or becomes inaccurate for any reason. The Proposing Release indicated that an SDR would generally be required to file such an amendment within 30 days from the time such information becomes inaccurate.[353] In addition, an SDR would be required to file an annual amendment on Form SDR within 60 days after the end of its fiscal year.

b. Comments on the Proposed Rule

The Commission did not receive any comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-1(e) as proposed, redesignated as Rule 13n-1(d). Under Rule 13n-1(d), if any information reported in Items 1 through 17, 26, and 48 of Form SDR (designated as Items 1 through 16, 25, and 46 in proposed Rule 13n-1(e)) or in any amendment thereto is or becomes inaccurate for any reason, whether before or after the registration has been granted, an SDR shall promptly file an amendment on Form SDR updating the information. An SDR should file an interim amendment as soon as practicable, and generally no later than 30 days from the time such information becomes inaccurate in order for the filing to be viewed as "promptly" filed. For example, an SDR should file an amendment promptly after any change in

352 The Commission notes that the Proposing Release, proposed Rule 13n-1(e), and General Instruction 6 to proposed Form SDR inadvertently referred to Item 44 instead of Item 46. See Proposing Release, 75 FR at 77314, 77315, and 77374, supra note 2. However, the discussion in the Proposing Release made clear that the Commission expected a non-resident SDR to promptly amend its Form SDR after any changes in the legal and regulatory framework that would impact the SDR's ability to provide the Commission with prompt access to the SDR's books and records, and such amendment should include a revised opinion of counsel. See Proposing Release, 75 FR at 77314, supra note 2. This discussion was clearly referring to the requirements in proposed Item 46 (requiring opinion of counsel by non-resident SDRs), and not proposed Item 44 (requiring plan to ensure data is maintained after the applicant withdraws from registration).

353 Proposing Release, 75 FR at 77314, supra note 2.

the identity of its CCO or if the biographical information provided about its CCO changes (e.g., if the CCO becomes the subject of certain specified SRO actions).[354]

In addition to interim amendments, an SDR is required to file a comprehensive annual amendment on Form SDR, including all items subject to interim amendments, within 60 days after the end of its fiscal year.[355] This annual amendment must be fully restated and complete, including all pages, answers to all items, together with exhibits.[356] This annual amendment must also indicate which items have been amended since the last annual amendment, or if the SDR has not yet filed an annual amendment, since the SDR's application for registration. Rule 13n-1(d) is consistent with the Commission's requirements for other registrants (e.g., national securities exchanges, broker-dealers, transfer agents, SIPs) to file updated and annual amendments to registration forms with the Commission.[357] The Commission believes that such amendments are important to obtain updated information on each SDR, which will assist the Commission in

---

354 See Section VI.J of this release discussing the CCO requirements in Rule 13n-11.

355 See Rule 13n-1(d).

356 The General Instructions to Form SDR have been amended from the proposal to clarify what items and exhibits need to be included when filing an amendment. Additionally, the Commission is revising Form SDR from the proposal to include separate designations on the form for an annual amendment and an amendment other than an annual amendment, rather than a single designation that covers any amendment. The signature block to Form SDR has also been amended from the proposal to clarify that an SDR that files an amendment (other than an annual amendment) need only represent that all unamended information contained in Items 1 through 17, 26, and 48 remains true, current, and complete as filed, rather than all unamended items and exhibits to Form SDR.

357 See Exchange Act Rule 6a-2, 17 CFR 240.6a-2 (requiring national securities exchanges to amend some information on Form 1 within 10 days, and other information annually); Exchange Act Rule 15b3-1, 17 CFR 240.15b3-1 (requiring broker-dealers to promptly amend applications for registration); Exchange Act Rules 17Ac2-1 and 17Ac2-2, 17 CFR 240.17Ac2-1 and 240.17Ac2-2 (requiring transfer agents to amend information on Form TA-1 within 60 days, and to file an annual report); Rule 609 of Regulation NMS, 17 CFR 242.609, and Form SIP, 17 CFR 249.1001 (requiring SIPs to amend certain items on Form SIP promptly and also requiring an annual amendment).

determining whether each SDR continues to be in compliance with the federal securities laws and the rules and regulations thereunder. Obtaining updated information will also assist Commission representatives in their inspection and examination of an SDR. The Commission may make filed amendments available on its website, except for information where confidential treatment is requested by the SDR[358] and granted by the Commission.

5. Service of Process and Non-Resident SDRs (Proposed Rules 13n-1(f) and 13n-1(g)/Final Rules 13n-1(e) and 13n-1(f))

a. Proposed Rule

As proposed, Rule 13n-1(f) would require each SDR to designate and authorize on Form SDR an agent in the United States, other than a Commission member, official, or employee, to accept any notice or service of process, pleadings, or other documents in any action or proceedings brought against the SDR to enforce the federal securities laws and the rules and regulations thereunder. Proposed Rule 13n-1(g) would require any non-resident SDR applying for registration to certify on Form SDR and provide an opinion of counsel that the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records and that the SDR can, as a matter of law, submit to onsite inspection and examination by the Commission.

b. Comments on the Proposed Rule

The Commission did not receive any comments relating to proposed Rule 13n-1(f). One

---

358 As discussed above, the Commission is adopting technical amendments to Exchange Act Rule 24b-2 to clarify that the confidential portion of electronic filings by SDRs must be filed electronically and to require SDRs to request confidential treatment electronically. The Commission is also adopting technical amendments to Rule 101 of Regulation S-T to provide that, except as otherwise provided, all filings by SDRs, including any information with respect to which confidential treatment is requested, must be filed electronically.

commenter submitted a comment relating to proposed Rule 13n-1(g).[359] The commenter expressed concern that proposed Rule 13n-1(g) would subject non-resident SDRs to a stricter regime than that applicable to resident SDRs.[360]

c. Final Rule

The Commission is adopting Rule 13n-1(f) as proposed, redesignated as Rule 13n-1(e). Rule 13n-1(e) requires each SDR to designate and authorize on Form SDR an agent in the United States, other than a Commission member, official, or employee, to accept any notice or service of process, pleadings, or other documents in any action or proceedings brought against the SDR to enforce the federal securities laws and the rules and regulations thereunder. If an SDR appoints a different agent to accept such notice or service of process, then the SDR will be required to file promptly an amendment on Form SDR updating this information.[361] The requirement applies equally to both SDRs within the United States and non-resident SDRs that are required to register with the Commission. Rule 13n-1(e) is intended to conserve the Commission's resources and to minimize any logistical obstacles (e.g., locating defendants or respondents within the United States or abroad) that the Commission may encounter when attempting to effect service. For instance, by requiring an SDR to designate an agent for service of process in the United States, and by prohibiting an SDR from designating a Commission member, official, or employee as its agent for service of process, the rule will reduce a

359 See ESMA, supra note 19.

360 ESMA, supra note 19 ("According to our reading, non-resident SDRs are actually subject to a stricter regime than the resident ones, as they need to provide a legal opinion certifying that they can provide the SEC with prompt access to their books and records and that they can be subject to onsite inspections and examinations by the SEC.").

361 See Rule 13n-1(d) (requiring an SDR to promptly file an amendment on Form SDR updating information in Item 11 of Form SDR).

significant resource burden on the Commission, including resources to locate agents of registrants overseas and keep track of their whereabouts.

After considering the comment to proposed Rule 13n-1(g), the Commission is adopting Rule 13n-1(g) as proposed, redesignated as Rule 13n-1(f), with one modification. Rule 13n-1(f) requires any non-resident SDR applying for registration pursuant to this rule to certify on Form SDR that the SDR can, as a matter of law, and will provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission. Rule 13n-1(f) also requires any non-resident SDR applying for registration to provide an opinion of counsel that the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, submit to onsite inspection and examination by the Commission. The final rule differs from the proposed rule in that, as proposed, a non-resident SDR would be required to certify that it "can, as a matter of law" provide prompt access to the SDR's books and records and submit to onsite inspection and examination. As adopted, the rule requires the non-resident SDR to certify that it "can, as a matter of law, and will" do those things. This change from the proposal is intended to make clear to a non-resident SDR that it is making an affirmative commitment to comply with its obligation to provide the Commission with prompt access to the SDR's books and records and submit to onsite inspection and examination.[362]

362 See Proposing Release, 75 FR at 77312, supra note 2 (asking whether "the representations that would be required to be made by the person who signs Form SDR [are] appropriate and sufficiently clear," and whether "the Commission [should] require any additional or alternative representations"). See also Exchange Act Section 13(n)(2) and Rule 13n-4(b)(1) (both requiring registered SDRs to be subject to inspection and examination by any representative of the Commission) and Rule 13n-7(b) (requiring SDRs to keep and preserve books and records and promptly furnish them to any representative of the Commission upon request).

While the Commission acknowledges that the rule will impose an additional requirement on non-resident SDRs, for the reasons stated in Section VI.A.1.c above relating to Form SDR's certification and legal opinion requirements, the Commission continues to believe that before granting registration to a non-resident SDR, it is appropriate to obtain a certification and opinion of counsel that such person is in a position to provide legally the Commission with prompt access to the SDR's books and records and to be subject to onsite inspection and examination by the Commission.[363]

6. Definition of "Report" (Proposed Rule 13n-1(h)/Final Rule 13n-1(g))

a. Proposed Rule

Proposed Rule 13n-1(h) provided that "[a]n application for registration or any amendment thereto that is filed pursuant to this [rule] shall be considered a 'report' filed with the Commission for purposes of [Exchange Act Sections 18(a) and 32(a)] and the rules and regulations thereunder and other applicable provisions of the United States Code and the rules and regulations thereunder."

b. Comments on the Proposed Rule

The Commission did not receive any comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-1(h) as proposed, redesignated as Rule 13n-1(g). Rule 13n-1(g) provides that "[a]n application for registration or any amendment thereto that is filed pursuant to this [rule] shall be considered a 'report' filed with the Commission for purposes of [Exchange Act Sections 18(a) and 32(a)] and the rules and regulations thereunder and other

363 See also Section VI.D.2 of this release discussing inspection and examination by Commission representatives.

applicable provisions of the United States Code and the rules and regulations thereunder." Exchange Act Sections 18(a) and 32(a) set forth the potential liability for a person who makes, or causes to be made, any false or misleading statement in any "report" filed with the Commission (e.g., Form SDR).[364] The Commission believes that subjecting a person to this potential liability will enhance the reliability and credibility of any "report" that is filed with the Commission pursuant to Rule 13n-1 because the person will have incentive to take steps to verify the accuracy of the report in order to avoid liability.

B. Withdrawal From Registration; Revocation and Cancellation (Rule 13n-2)

1. Proposed Rule

Proposed Rule 13n-2 set forth a process for a person to withdraw its registration as an SDR and for the Commission to revoke, suspend, or cancel an SDR's registration. With respect to proposed Rule 13n-2(b), a registered SDR would be required to withdraw from registration by filing a notice of withdrawal with the Commission. The proposed rule would require the SDR to designate on its notice of withdrawal a person associated with the SDR to serve as the custodian

364 Exchange Act Section 18(a) provides, in part, that "[a]ny person who shall make or cause to be made any statement in any . . . report . . . which statement was at the time and in the light of the circumstances under which it was made false or misleading with respect to any material fact, shall be liable to any person (not knowing that such statement was false or misleading) who, in reliance upon such statement, shall have purchased or sold a security at a price which was affected by such statement, for damages caused by such reliance, unless the person sued shall prove that he acted in good faith and had no knowledge that such statement was false or misleading." 15 U.S.C. 78r(a). Exchange Act Section 32(a) provides, in part, that "[a]ny person who willfully and knowingly makes, or causes to be made, any statement in any . . . report . . . which statement was false or misleading with respect to any material fact, shall upon conviction be fined not more than $5,000,000, or imprisoned not more than 20 years, or both, except that when such person is a person other than a natural person, a fine not exceeding $25,000,000 may be imposed." 15 U.S.C. 78ff(a).

of the SDR's books and records.[365] Prior to filing a notice of withdrawal, an SDR would be required to file an amended Form SDR to update any inaccurate information.[366] If there is no inaccurate information to update, then an SDR would include a confirmation to that effect in its notice of withdrawal.

Proposed Rule 13n-2(c) set forth the effective date of a notice of withdrawal from registration. Proposed Rule 13n-2(d) provided that a notice of withdrawal from registration that is filed pursuant to this section shall be considered a "report" filed with the Commission for purposes of Exchange Act Sections 18(a) and 32(a) and the rules and regulations thereunder and other applicable provisions of the United States Code and the rules and regulations thereunder.[367] Proposed Rule 13n-2(e) set forth the basis for the Commission, by order, to revoke the registration of an SDR. Finally, proposed Rule 13n-2(f) provided that the Commission, by order, may cancel the registration of an SDR if it finds that the SDR is no longer in existence or has ceased to do business in the capacity specified in its application for registration.

2. Comments on the Proposed Rule

The Commission did not receive any comments relating to this proposed rule.

3. Final Rule

The Commission is adopting Rule 13n-2 as proposed with a few modifications.[368] The Commission is revising the proposed rule to eliminate the requirement for a registered SDR to

365 Proposed Rule 13n-2(b).

366 Proposed Rule 13n-2(b).

367 15 U.S.C. 78r(a), 78ff(a).

368 The Commission did not receive any comments on the definitions of "control" and "person associated with a security-based swap data repository" in proposed Rule 13n-2(a), but is omitting these definitions in Rule 13n-2 because the Commission's revision of the rule, as discussed in this section, no longer uses these terms.

file a separate notice of withdrawal with the Commission in order to streamline the withdrawal process and make it more efficient for SDRs and Commission staff. Instead, Rule 13n-2(b) permits a registered SDR to withdraw from registration by filing Form SDR electronically in a tagged data format;[369] when making such a filing, the SDR must indicate on Form SDR that it is filed for the purpose of withdrawing from registration.[370] The Commission is also revising the proposed rule to give an SDR more flexibility in designating the custodian of the SDR's books and records by requiring the SDR to designate a person to serve as the custodian of the SDR's books and records;[371] the person does not necessarily need to be associated with an SDR, as proposed, and thus, the SDR has the option to designate an unaffiliated entity, such as another

---

369 The Commission is revising proposed Rule 13n-2(a) to add the definition of "tag" (including the term tagged) to have the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11). This definition is added in order to conform the requirements for filing Form SDR to withdraw registration with the requirements for filing Form SDR to register or amend registration pursuant to Rule 13n-1.

370 Exchange Act Section 11A(b)(4) states that "[a] registered securities information processor may, upon such terms and conditions as the Commission deems necessary or appropriate in the public interest or for the protection of investors, withdraw from registration by filing a written notice of withdrawal with the Commission." 15 U.S.C. 78k-1(b)(4). A SIP that is dually-registered as an SDR may withdraw from registration by filing Form SDR, which the Commission would deem as a written notice of withdrawal under Exchange Act Section 11A(b)(4). In addition, the Commission has modified the heading of this rule. As proposed, the heading of this rule was "Withdrawal from registration." As adopted, the heading is "Withdrawal from registration; revocation and cancellation." This change in the heading provides a more accurate description of the subject of the rule.

371 Rule 13n-2(b). The Commission is amending Form SDR from the proposal to add new Item 12 to implement the requirement in Rule 13n-2(b) for an SDR to designate a custodian of its books and records if it withdraws from registration. See new Item 12 to Form SDR and Section VI.A.1 of this release discussing Form SDR. The Commission has also made some conforming changes to proposed Form SDR and the General Instructions to make clear that the form may be used for withdrawal of registration. For example, General Instruction 1 now indicates that Form SDR and exhibits thereto are to be filed electronically in a tagged data format in connection with withdrawing an SDR's registration. See General Instruction 1 to Form SDR.

registered SDR, as the custodian. The purpose of this requirement is to ensure that an SDR's books and records are maintained and available to the Commission and other regulators after the SDR withdraws from registration, and to assist the Commission in enforcing Rules 13n-5(b)(7)[372] and 13n-7(c).[373]

When filing a Form SDR as a withdrawal from registration, the SDR should update any inaccurate information contained in its most recently filed Form SDR.[374] This requirement is substantively the same as the proposal, which would require an SDR, prior to filing a notice of withdrawal, to file an amended Form SDR to update any inaccurate information.[375] If there is no inaccurate information to update, then an SDR should include a confirmation to that effect when filing Form SDR. The Commission may make filed withdrawals available on its website, except for information where confidential treatment is requested by the SDR[376] and granted by the Commission.

Rule 13n-2(c) provides that a withdrawal from registration filed by an SDR on Form

372 See Section VI.E.7 of this release discussing requirement that an SDR that ceases to do business preserve, maintain, and make accessible transaction data and historical positions.

373 See Section VI.G.3 of this release discussing requirement that an SDR that ceases to do business preserve, maintain, and make accessible certain records relating to its business.

374 See Rule 13n-2(b). The General Instructions to Form SDR have been amended from the proposal to clarify what items and exhibits need to be included when filing a withdrawal. See General Instruction 11 to Form SDR.

375 Proposed Rule 13n-2(b).

376 As discussed in Section VI.A.1.c of this release, the Commission is adopting technical amendments to Exchange Act Rule 24b-2 to clarify that the confidential portion of electronic filings by SDRs must be filed electronically and to require SDRs to request confidential treatment electronically. The Commission is also adopting technical amendments to Rule 101 of Regulation S-T to provide that, except as otherwise provided, all filings by SDRs, including any information with respect to which confidential treatment is requested, must be filed electronically.

SDR shall become effective for all matters (except as provided in Rule 13n-2(c)) on the 60th day after the filing thereof with the Commission, within such longer period of time as to which such SDR consents or which the Commission, by order, may determine as necessary or appropriate in the public interest or for the protection of investors, or within such shorter period of time as the Commission may determine. A withdrawal from registration filed on Form SDR that is not prepared and executed in compliance with applicable requirements may be deemed as not acceptable for filing.[377] Rule 13n-2(d) provides that a withdrawal from registration filed on Form SDR that is filed pursuant to this rule shall be considered a "report" filed with the Commission for purposes of Exchange Act Sections 18(a) and 32(a) and the rules and regulations thereunder and other applicable provisions of the United States Code and the rules and regulations thereunder.[378]

Under Rule 13n-2(e), if the Commission finds, on the record after notice and opportunity for hearing, that any registered SDR has obtained its registration by making any false and misleading statements with respect to any material fact or has violated or failed to comply with any provision of the federal securities laws and the rules and regulations thereunder, the Commission, by order, may revoke the registration. The rule further provides that pending final determination of whether any registration be revoked, the Commission, by order, may suspend such registration, if such suspension appears to the Commission, after notice and opportunity for hearing on the record, to be necessary or appropriate in the public interest or for the protection of investors.[379] Finally, Rule 13n-2(f) provides that if the Commission finds that a registered SDR

377 See General Instruction 7 to Form SDR.

378 See Section VI.A.6 of this release discussing definition of "report."

379 Rule 13n-2(e).

is no longer in existence or has ceased to do business in the capacity specified in its application for registration, the Commission, by order, may cancel the registration.[380]

The Commission believes that it is important to set forth a process for a person to withdraw its registration as an SDR and for the Commission to be able to revoke, suspend, or cancel an SDR's registration, similar to the approach that it takes with some of its other registrants.[381]

C. Registration of Successor to Registered SDR (Rule 13n-3)

1. Proposed Rule

Proposed Rule 13n-3 would govern the registration of a successor to a registered SDR. Successor registration would be accomplished either by filing a new application on Form SDR or, in certain circumstances, by filing an amendment on Form SDR.

2. Comments on the Proposed Rule

The Commission did not receive any comments relating to this proposed rule.

3. Final Rule

The Commission is adopting Rule 13n-3 as proposed, with minor revisions to track the language of Rules 13n-1 and 13n-2 as adopted. Rule 13n-3 governs the registration of a

---

380 Where an SDR anticipates that it will cease to exist or cease to do business as an SDR, the SDR may withdraw from registration by filing a withdrawal on Form SDR pursuant to Rule 13n-2(b). Regardless of whether the SDR withdraws from registration pursuant to Rule 13n-2(b), the Commission revokes the SDR's registration pursuant to Rule 13n-2(e), or the Commission cancels the SDR's registration pursuant to Rule 13n-2(f), the SDR is obligated to comply with Rules 13n-5(b)(7) and 13n-7(c), which are discussed in Sections VI.E.7 and VI.G.3 of this release, respectively.

381 Rule 13n-2 is similar to Exchange Act Rule 15b6-1, 17 CFR 240.15b6-1, which relates to withdrawal from registration as a broker-dealer, and includes a provision similar to a provision in Exchange Act Section 15(b)(5), 15 U.S.C. 78o(b)(5) (stating that "[i]f the Commission finds that any registered broker or dealer is no longer in existence or has ceased to do business as a broker or dealer, the Commission, by order, shall cancel the registration of such broker or dealer").

successor to a registered SDR. Because this rule is substantially similar to Exchange Act Rule 15b1-3,[382] which governs the registration of a successor to a registered broker-dealer, the same concepts that the Commission explained when it adopted amendments to Rule 15b1-3 are applicable here.[383]

a. Succession by Application

Rule 13n-3(a) provides that in the event that an SDR succeeds to and continues the business of an SDR registered pursuant to Exchange Act Section 13(n), the registration of the predecessor shall be deemed to remain effective as the registration of the successor if, within 30 days after such succession, the successor files an application for registration on Form SDR, and the predecessor files a withdrawal from registration on Form SDR with the Commission.[384] A successor will not be permitted to "lock in" the 30-day window period by filing an application for registration that is incomplete in material respects.

Rule 13n-3(a) further provides that the registration of the predecessor SDR shall cease to be effective 90 days after the date of the publication of notice of the filing of an application for registration on Form SDR by the successor SDR.[385] In other words, the 90-day period will not

---

382 See 17 CFR 240.15b1-3.

383 See Registration of Successors to Broker-Dealers and Investment Advisers, Exchange Act Release No. 31661 (Dec. 28, 1992), 58 FR 7 (Jan. 4, 1993).

384 As adopted, Rule 13n-2 differs from the proposal by requiring a "filing a withdrawal from registration on Form SDR" rather than "filing a notice of withdrawal." The Commission is revising Rule 13n-3(a) from the proposal to track the language of Rule 13n-2.

385 As adopted, Rule 13n-1(c) differs from the proposal by starting the 90-day period from the publication of notice of the filing of Form SDR rather than from the filing of Form SDR. The Commission is revising Rule 13n-3(a) from the proposal to track more closely the language of Rule 13n-1(c). As discussed in Section VI.A.2.c of this release, the Commission is revising Rule 13n-1(c) from the proposal to make it procedurally consistent with the registration process applicable to SIPs and the rule stems from the

begin to run until a complete Form SDR has been filed by the successor with the Commission and the Commission publishes notice of the filing of Form SDR to afford interested persons an opportunity to submit written comments concerning such application. This 90-day period is consistent with the time period set forth in final Rule 13n-1, pursuant to which the Commission would have 90 days to grant registration or institute proceedings to determine if registration should be granted or denied.

The following are examples of the types of successions that would be required to be completed by filing an application: (1) an acquisition, through which an unregistered person purchases or assumes substantially all of the assets and liabilities of an SDR and then operates the business of the SDR, (2) a consolidation of two or more registered SDRs, resulting in their conducting business through a new unregistered SDR, which assumes substantially all of the assets and liabilities of the predecessor SDRs, and (3) dual successions, through which one registered SDR subdivides its business into two or more new unregistered SDRs.

b. Succession by Amendment

Rule 13n-3(b) provides that notwithstanding Rule 13n-3(a), if an SDR succeeds to and continues the business of a registered predecessor SDR, and the succession is based solely on (1) a change in the predecessor's date or state of incorporation, (2) form of organization, or (3) composition of a partnership, the successor may, within 30 days after the succession, amend the registration of the predecessor SDR on Form SDR to reflect these changes. Such amendment shall be deemed an application for registration filed by the predecessor and adopted by the successor. In all three types of successions, the predecessor must cease operating as an SDR.

Commission's requirement that a registered SDR register as a SIP and the Commission's revision of Form SDR to accommodate SIP registration.

The Commission believes that it is appropriate to allow a successor to file an amendment to the predecessor's Form SDR in these three types of successions.

c. Scope and Applicability of Rule 13n-3

The purpose of Rule 13n-3 is to enable a successor SDR to operate without an interruption of business by relying for a limited period of time on the registration of the predecessor SDR until the successor's own registration becomes effective. The rule is intended to facilitate the legitimate transfer of business between two or more SDRs and to be used only if there is a direct and substantial business nexus between the predecessor and the successor SDR. The rule cannot be used when a registered SDR sells its registration, eliminates substantial liabilities, spins off personnel, or facilitates the transfer of the registration of a "shell" organization that does not conduct any business. No person will be permitted to rely on Rule 13n-3 unless it is acquiring or assuming substantially all of the assets and liabilities of the predecessor's SDR business.

Rule 13n-3 does not apply to reorganizations that involve only registered SDRs. In those situations, the registered SDRs need not use the rule because they can continue to rely on their existing registrations. The rule also does not apply to situations in which the predecessor intends to continue to engage in SDR activities. Otherwise, confusion may result as to the identities and registration statuses of the parties. If a person acquires some or all of the shares of a registered SDR, or if one registered SDR purchases part or all of the business assets or assumes personnel of another registered SDR, then reliance on this rule would not be necessary.[386]

386 In the case of the purchase of the business assets or assumption of the personnel of one registered SDR by another SDR, the purchasing SDR would file an amendment on Form SDR to reflect any changes in its operations, while the other SDR would either file a

D. Enumerated Duties and Core Principles (Rule 13n-4)

Dodd-Frank Act Section 763(i) requires an SDR to comply with the requirements and core principles described in Exchange Act Section 13(n) as well as any requirement that the Commission prescribes by rule or regulation in order to be registered and maintain registration as an SDR with the Commission.[387] After considering comments, the Commission is adopting Rule 13n-4 as proposed, with modifications.

The Commission is not adopting proposed Rules 13n-4(b)(9) and (10), which address relevant authorities' access to SBS data maintained by SDRs. As discussed below, the Commission anticipates soliciting additional public comment regarding relevant authorities' access to SBS data maintained by SDRs.

1. Definitions (Rule 13n-4(a))

a. Proposed Rule

Proposed Rule 13n-4(a) defined the following terms: "affiliate," "board," "control," "director," "direct electronic access," "end-user," "market participant," "nonaffiliated third party," and "person associated with a security-based swap data repository."

b. Comments on the Proposed Rule

The Commission received one comment on the proposed definitions in the context of the

---

Form SDR to withdraw its registration or file an interim amendment on the form, depending on whether the SDR remains in the SDR business.

387 See Exchange Act Section 13(n)(3), 15 U.S.C. 78m(n)(3), as added by Dodd-Frank Act Section 763(i). The Dodd-Frank Act authorizes the Commission to establish additional requirements for SDRs by rule or regulation. Exchange Act Sections 13(n)(4)(B), 13(n)(7)(D), and 13(n)(9), 15 U.S.C. 78m(n)(4)(B), 78m(n)(7)(D), and 78m(n)(9), as added by Dodd-Frank Act Section 763(i).

SDR Rules.[388] Specifically, one commenter believed that the Commission's requirement in the definition of "direct electronic access" that data is "updated at the same time as the [SDR's] data is updated" may pose "operational difficulties that do not outweigh the marginal benefits to the Commission."[389] The commenter also believed that "[t]he Commission's proposed definition provides for no latency between the moment when an [SDR's] records are updated and when the systems used by the Commission (or its designee with direct electronic access) are updated."[390] For these reasons, the commenter suggested that the Commission "allow time for an [SDR] to validate, process, and store the data received prior to populating the data to the environment that will be utilized to provide such direct electronic access to the Commission."[391]

c. Final Rule

After considering the comment, the Commission is adopting Rule 13n-4(a) as proposed, with modifications related to the definition of "end-user."[392] Specifically, the Commission is adopting Rule 13n-4(a) without the definition of "end-user." As discussed above, the Commission proposed rules that would require SDRs to collect data related to monitoring the compliance and frequency of end-user clearing exemption claims.[393] In anticipation that the

---

388 See DTCC 5, supra note 19. See also supra note 247 (discussing a general comment regarding the term "affiliate").

389 DTCC 5, supra note 19.

390 DTCC 5, supra note 19.

391 DTCC 5, supra note 19.

392 The Commission is also correcting a typographical error in the proposed rule. Proposed Rule 13n-4(a)(3)(ii) referred to the right to vote 25 percent "of" more of a class of securities. See Proposing Release, 75 FR at 77367, supra note 2. As adopted, Rule 13n-4(a)(3)(ii) refers to the right to vote 25 percent "or" more of a class of securities. In addition, certain definitions are being renumbered due to the removal of the definition of "end-user."

393 See End-User Exception Proposing Release, supra note 15.

Commission will consider final rules relating to end-users in a separate rulemaking, the Commission has decided not to adopt the proposed definition of "end-user" in this release. The Commission believes that it is better to address the issue of end-users more fully in that release than in this release.

The Commission is adopting the definition of "direct electronic access" as proposed to mean "access, which shall be in a form and manner acceptable to the Commission, to data stored by [an SDR] in an electronic format and updated at the same time as the [SDR]'s data is updated so as to provide the Commission or any of its designees with the ability to query or analyze the data in the same manner that the [SDR] can query or analyze the data." This includes access to all transaction data and positions, as defined in Rule 13n-5(a),[394] and related identifying information, such as transaction IDs and time stamps.[395] With respect to one commenter's view that requiring SBS data to be updated at the same time as the data is updated at an SDR may pose "operational difficulties that do not outweigh the marginal benefits to the Commission,"[396] the Commission believes that its definition of "direct electronic access" is necessary for the Commission's adequate oversight of the SBS market. The commenter asserted that the Commission's definition of "direct electronic access" "provides for no latency between the moment when an [SDR's] records are updated and when the systems used by the Commission (or its designee with direct electronic access) are updated."[397] The Commission understands that

394 See Section VI.E.1 of this release discussing the definition of "transaction data" and Section VI.E.2 of this release discussing the definition of "position."

395 See Regulation SBSR Adopting Release, supra note 13 (Rules 901(f) and (g)).

396 See DTCC 5, supra note 19.

397 See DTCC 5, supra note 19 (suggesting that the Commission "allow time for an [SDR] to validate, process, and store the data received prior to populating the data to the

latency is inherent when updating systems, and that there may be some time lag between when the SDR receives and updates the data and when the updated data is available for the Commission to access. The Commission also understands that an SDR needs to check the data for errors and omissions and process the data before providing the data to the Commission or its designees. Otherwise, the Commission or its designees will not be able to query or analyze the data. Thus, by referencing to the Commission's or its designees' ability to query or analyze the data in the definition of "direct electronic access," the Commission anticipates that there may be a lag time for SDRs to check and process the data before providing the data to the Commission or its designees. The Commission notes, however, that once an SDR checks and processes the data, the SDR is required to provide the Commission or its designees with the ability to access the checked and processed data at the same time as the checked and processed data is updated in the SDR's records.

2. Enumerated Duties (Rule 13n-4(b))

a. Proposed Rule

Proposed Rule 13n-4(b) would incorporate an SDR's duties that are enumerated in Exchange Act Sections 13(n)(2), 13(n)(5), and 13(n)(6),[398] which require each SDR to: (1) subject itself to inspection and examination by the Commission; (2) accept SBS data as prescribed by Regulation SBSR;[399] (3) confirm with both counterparties to the SBS the accuracy of the data that was submitted; (4) maintain the data as prescribed by the Commission; (5)

---

environment that will be utilized to provide such direct electronic access to the Commission").

398 Exchange Act Section 13(n), 15 U.S.C. 78m(n).

399 See supra note 201 (discussing Regulation SBSR, which prescribes the data elements that an SDR will be required to accept for each SBS in association with requirements under Dodd-Frank Act Section 763(i)).

provide direct electronic access to the Commission or any of its designees; (6) provide certain information as the Commission may require to comply with Exchange Act Section 13(m);[400] (7) at such time and in such manner as may be directed by the Commission, establish automated systems for monitoring, screening, and analyzing SBS data; (8) maintain the privacy of any and all SBS transaction information that the SDR receives from an SBS dealer, counterparty, or any registered entity; (9) on a confidential basis pursuant to Exchange Act Section 24 and the rules and regulations thereunder, upon request, and after notifying the Commission of the request, make available all data obtained by the SDR to certain relevant authorities; (10) before sharing information with a relevant authority, obtain a written confidentiality agreement and obtain an agreement from the relevant authority to indemnify the SDR and the Commission; and (11) designate a CCO who must comply with specified duties.

b. Comments on the Proposed Rule

Six commenters submitted comments relating to various aspects of proposed Rule 13n-4(b).[401] These comment letters are described in more detail below, other than those that relate

[400] Exchange Act Section 13(m) pertains to the public availability of SBS data. See 15 U.S.C. 78m(m). In a separate release relating to implementation of Dodd-Frank Act Section 763(i) (adding Exchange Act Section 13(m)), the Commission proposed rules that impose various duties on SDRs in connection with the reporting and public dissemination of SBS information. See Regulation SBSR Proposing Release, supra note 8; see also Cross-Border Proposing Release, 78 FR at 31210-6, supra note 3 (re-proposing Regulation SBSR). The Commission is adopting those rules as part of Regulation SBSR. See Regulation SBSR Adopting Release, supra note 13.

[401] See Barnard, supra note 19; Better Markets 1, supra note 19; DTCC 2, supra note 19; ESMA, supra note 19; MFA 1, supra note 19; US & Foreign Banks, supra note 24; see also DTCC 1*, supra note 20; DTCC 3, supra note 19; DTCC 5, supra note 19. In addition to these commenters, one commenter to the Temporary Rule Release suggested that the Commission affirmatively state that it intends to keep information furnished pursuant to the rules in that release confidential under the Freedom of Information Act ("FOIA") or to seek a legislative solution. Deutsche Temp Rule, supra note 28. Although this comment does not explicitly reference to the SDR Rules, the Commission

solely to relevant authorities' access to SBS data maintained by SDRs, which the Commission anticipates will be addressed separately. Generally speaking, one commenter believed that "all of the substantive rule provisions proposed [as of July 22, 2013] must remain as strong as possible, irrespective of the Commission's approach to its very limited jurisdiction over cross-border transactions or the CFTC's approach to the implementation of Title VII."[402]

i. Inspection and Examination

One commenter expressed concern regarding the potential cost to non-resident SDRs of complying with multiple regulatory regimes, including inspections and examinations by multiple regulators.[403]

ii. Direct Electronic Access

As discussed in Section IV above, two commenters suggested that the Commission designate one SDR to receive SBS data from other SDRs, through direct electronic access, in order to provide the Commission and other regulators a consolidated location from which to access SBS data.[404] Both commenters believed that such designation would ensure efficient consolidation of data.[405]

---

addresses this point in Section VI.D.2 of this release to the extent that the SDR Rules require SDRs to submit information to the Commission.

402 Better Markets 2, supra note 19 (urging the Commission to not dilute or weaken the [p]roposed [r]ules to accommodate concerns about international regulation of the SBS markets).

403 ESMA, supra note 19.

404 DTCC 1*, supra note 20; Better Markets 1, supra note 19. Comments regarding direct electronic access in the context of substituted compliance are addressed in a separate release. See Regulation SBSR Adopting Release, supra note 13.

405 DTCC 1*, supra note 20; Better Markets 1, supra note 19; see also DTCC 2, supra note 19 ("The role of an aggregating SDR is significant in that it ensures regulators efficient, streamlined access to consolidated data, reducing the strain on limited agency resources."); DTCC 3, supra note 19 ("When there are multiple SDRs in any particular

iii. Monitoring, Screening, and Analysis

In the Proposing Release, the Commission proposed taking a measured approach and not requiring SDRs to establish automated systems for monitoring, screening, and analyzing SBS data at that time.[406] One commenter disagreed with this proposal.[407] Another commenter supported "the broad concept that an SDR should monitor, screen and analyze SBS data as input for the [Commission] to facilitate its oversight and monitoring responsibilities," but believed that the proposed rule is too broad and "not clear enough on the level of detail required and on the level of responsibility imposed on SDRs."[408] A third commenter suggested that monitoring, screening, and analysis should be performed centrally by an SDR for efficiency and that the data maintained by the SDR should then be made available to relevant authorities.[409]

iv. Other Enumerated Duties

Comments on the other enumerated duties either are discussed later in this release or addressed in the Regulation SBSR Adopting Release or the Regulation SBSR Proposed

asset class, the [Commission] should take such action as is necessary to eliminate any overstatements of open interest or other inaccuracies that may result from having broader market data published from separate SDRs.").

406 Proposing Release, 75 FR at 77318, supra note 2.

407 Better Markets 1, supra note 19 ("The fact that this market is in its 'infancy' is a unique opportunity for the Commission to guide its development in a way that protects the public interest, promotes competition, and prevents what has been the routine development of conflicts and predatory conduct.").

408 Barnard, supra note 19 (recommending that the Commission "provide additional details on the anticipated requirements in order to better manage the expectations of SDRs and wider market participants concerning their duties in this area").

409 DTCC 2, supra note 19.

Amendments Release.[410] The Commission anticipates addressing comments regarding relevant authorities' access to SBS data maintained by SDRs in a separate release when it solicits additional public comment regarding the issue.

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-4(b) as proposed, with modifications. Specifically, each SDR is required to:

(1) subject itself to inspection and examination by any representative of the Commission;[411]

(2) accept data as prescribed in Regulation SBSR[412] for each SBS;

(3) confirm, as prescribed in Rule 13n-5, with both counterparties to the SBS the accuracy of the data that was submitted, as discussed further in Section VI.E.1 of this release;

(4) maintain, as prescribed in Rule 13n-5, the data described in Regulation SBSR in such form, in such manner, and for such period as provided therein and in the Exchange Act and the rules and regulations thereunder, as discussed further in Section VI.E of this release;

(5) provide direct electronic access to the Commission (or any designee of the Commission, including another registered entity);

---

410 See Regulation SBSR Adopting Release, supra note 13; Regulation SBSR Proposed Amendments Release, supra note 13.

411 The Commission is revising its proposed rule by adding "any representative of" before "the Commission" to track more closely Exchange Act Section 13(n)(2), 15 U.S.C. 78m(n)(2) ("Each registered security-based swap data repository shall be subject to inspection and examination by any representative of the Commission.").

412 The Commission addresses this enumerated duty in further detail in Regulation SBSR. See Regulation SBSR Adopting Release, supra note 13.

(6) provide the information described in Regulation SBSR in such form and at such frequency as prescribed in Regulation SBSR to comply with requirements set forth in Exchange Act Section 13(m) and the rules and regulations thereunder;[413]

(7) at such time and in such manner as may be directed by the Commission, establish automated systems for monitoring, screening, and analyzing SBS data;

(8) maintain the privacy of any and all SBS transaction information that the SDR receives from an SBS dealer, counterparty, or any registered entity, as prescribed in Rule 13n-9 and as discussed further in Section VI.I.1 of this release; and

(9) [Reserved]

(10) [Reserved]

(11) designate an individual to serve as a CCO, as discussed further in Section VI.J of this release.[414]

With respect to one commenter's general recommendation that all of the Commission's substantive rules "remain as strong as possible, irrespective of the Commission's approach to its very limited jurisdiction over cross-border transactions or the CFTC's approach to the implementation of Title VII,"[415] the Commission believes that the final SDR Rules are robust and reflect an appropriate approach to furthering the goals of the Dodd-Frank Act and

---

413 The Commission addresses this enumerated duty in further detail in Regulation SBSR. See Regulation SBSR Adopting Release, supra note 13.

414 The Commission is revising proposed Rule 13n-4(b)(11) by not including the phrase "who shall comply with the duties set forth in Exchange Act Rule 13n-11." This revision is being made to clarify that an SDR is only required to designate a CCO.

415 Better Markets 2, supra note 19 (urging the Commission to not dilute or weaken the [p]roposed [r]ules to accommodate concerns about international regulation of the SBS markets).

minimizing an SDR's cost of compliance.[416]

Because the Commission anticipates soliciting additional public comment regarding relevant authorities' access to SBS data maintained by SDRs in a separate release, the Commission is not adopting proposed Rules 13n-4(b)(9) and (10) at this time and is marking those sections as "Reserved."[417] However, SDRs will have to comply with all statutory requirements, including Exchange Act Sections 13(n)(5)(G) and (H),[418] when the current exemptive relief from the statutory requirements expires.[419]

i. Inspection and Examination

Each registered SDR is statutorily required to be subject to inspection and examination by any representative of the Commission.[420] With respect to one commenter's concern regarding the potential cost to non-resident SDRs of complying with multiple regulatory regimes, including inspections and examinations by multiple regulators,[421] the Commission appreciates this concern and has discussed this concern in the Cross-Border Proposing Release.[422] To address the

416 See Section VIII of this release discussing economic analysis.

417 In the Cross-Border Proposing Release, the Commission proposed interpretive guidance to specify how SDRs may comply with the notification requirement set forth in Exchange Act Section 13(n)(5)(G) and proposed Rule 13n-4(b)(9). Cross-Border Proposing Release, 78 FR at 31046-31047, supra note 3. The Commission also specified how the Commission proposed to determine whether a relevant authority is appropriate for purposes of receiving SBS data from an SDR. Id. at 31047-31048. The Commission is not taking any action on these proposals at this time and anticipates addressing these issues in a separate release.

418 See 15 U.S.C. 78m(n)(5)(G) and 78m(n)(5)(H).

419 See Section V of this release discussing implementation of the SDR Rules.

420 See Exchange Act Section 13(n)(2), 15 U.S.C. 78m(n)(2).

421 See ESMA, supra note 19.

422 See Cross-Border Proposing Release, 78 FR at 31043, supra note 3 (discussing duplicative regulatory regimes for non-U.S. persons performing the functions of an SDR, which may include non-resident SDRs).

commenter's broader concern of duplicative regulatory regimes, the Commission is adopting Rule 13n-12 to provide an exemption from specific SDR requirements in certain circumstances, as discussed in Section VI.K of this release.[423]

ii. Direct Electronic Access

Each SDR should coordinate with the Commission to provide direct electronic access to the Commission or any of its designees. The form and manner that will be acceptable to the Commission for an SDR to provide direct electronic access may vary on a case-by-case basis and may change over time, depending on a number of factors. These factors could include the development of new types of SBSs or variations of existing SBSs that require additional data to accurately describe them. Additionally, the extent to which the Commission encounters difficulty in normalizing and aggregating SBS data across multiple registered SDRs would be a factor in considering the nature of the direct access provided by an SDR to the Commission.

As contemplated in the Proposing Release, the Commission anticipates that an SDR may be able to satisfy its duty to provide direct electronic access to the Commission by providing, for example, (1) a direct streaming of the data maintained by the SDR to the Commission or any of its designees, (2) a user interface that provides the Commission or any of its designees with direct access to the data maintained by the SDR and that provides the Commission or any of its designees with the ability to query or analyze the data in the same manner that is available to the SDR, or (3) another mechanism that provides a mirror copy of the data maintained by the SDR, which is in an electronic form that is downloadable by the Commission or any of its designees and is in a format that provides the Commission or any of its designees with the ability to query

423 See also Regulation SBSR Adopting Release, supra note 13 (discussing substituted compliance); Exchange Act Rule 0-13, 17 CFR 240.0-13 (relating to procedures for filing applications for substituted compliance).

or analyze the data in the same manner that is available to the SDR.[424] The alternative ways to provide direct electronic access to the Commission are not intended to be mutually exclusive.

Additionally, the rule provides that the data must be in a form and manner acceptable to the Commission.[425] Since one of the primary purposes of an SDR is to facilitate regulatory oversight of the SBS market, a significant portion of the benefits of an SDR will not be realized if data stored at an SDR is provided to the Commission in a form or manner that cannot be easily utilized by the Commission. Furthermore, the form and manner with which an SDR provides the data to the Commission should not only permit the Commission to accurately analyze the data maintained by a single SDR, but also allow the Commission to aggregate and analyze data received from multiple SDRs.

The Commission continues to consider whether it should require the data to be provided to the Commission in a particular format.[426] The Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies that would facilitate an accurate interpretation, aggregation, and analysis of SBS data by the Commission. The Commission intends to maximize the use of any applicable current industry standards for the

---

424 Proposing Release, 75 FR at 77318, supra note 2.

425 See Rule 13n-4(a)(5) (defining "direct electronic access" to mean "access, which shall be in a form and manner acceptable to the Commission, to data stored by a security-based swap data repository in an electronic format and updated at the same time as the security-based swap data repository's data is updated so as to provide the Commission or any of its designees with the ability to query or analyze the data in the same manner that the security-based swap data repository can query or analyze the data"); see also Section VI.E.4 of this release discussing the requirement to maintain transaction data and positions in a place and format that is readily accessible to the Commission.

426 Cf. Proposing Release, 75 FR at 77319 and 77331, supra note 2 (asking questions about how direct electronic access could be provided, and asking whether the Commission should require information be kept in a particular format, such as FpML or another standard).

description of SBS data, build upon such standards to accommodate any additional data fields as may be required, and develop such formats and taxonomies in a timeframe consistent with the implementation of SBS data reporting by SDRs. The Commission recognizes that as the SBS market develops, new or different data fields may be needed to accurately represent new types of SBSs, in which case the Commission may provide updated specifications of formats and taxonomies to reflect these new developments. Until such time as the Commission adopts specific formats and taxonomies, SDRs may provide direct electronic access to the Commission to data in the form in which the SDRs maintain such data.

As stated in Section IV of this release with respect to commenters' suggestions regarding consolidation of SBS data,[427] the Commission does not believe that it is necessary to designate, at this time, an SDR or any registered entity to receive, through direct electronic access, SBS data maintained by other SDRs in order to aggregate the data. At this time, the Commission believes that it—rather than any particular registered entity—is in the best position to aggregate data across multiple registered SDRs. The Commission anticipates that its proposal on the formats and taxonomies for SBS data provided to the Commission pursuant to Rule 13n-4(b)(5) will facilitate its ability to carry out this function. The Commission may revisit this issue as the SBS market evolves.

A commenter to the Temporary Rule Release suggested that the Commission affirmatively state that it intends to keep information furnished pursuant to the rules in that

---

427 See DTCC 1*, supra note 20 (recommending that the Commission designate one SDR to receive, through direct electronic access, information from other SDRs to ensure efficient consolidation of data); Better Markets 1, supra note 19 (recommending that "the Commission designate one SDR as the recipient of information of other SDRs, through direct electronic access to the SBS data at the other SDRs, in order to provide the Commission and relevant authorities with a consolidated location for SBS data").

release confidential under FOIA or to seek a legislative solution.[428] The Commission anticipates that it will keep reported data that it obtains from an SDR (via direct electronic access or any other means) confidential, subject to the provisions of applicable law.[429]

After considering the comments, the Commission is adopting Rule 13n-4(b)(5) as proposed.

iii. Monitoring, Screening, and Analysis

Although the Commission is adopting Rule 13n-4(b)(7) as proposed, it is not, at this time, directing SDRs to establish any automated systems for monitoring, screening, and analyzing SBS data. One commenter urged the Commission to adopt a rule to require an SDR to establish automated systems for monitoring, screening, and analyzing SBS data,[430] but the Commission continues to believe that it is better to take a measured approach in addressing this statutory requirement to minimize imposing costs on SDRs until the Commission is in a better position to determine what information it needs in addition to the information that it can obtain from SDRs through other rules applicable to SDRs, such as Rule 13n-4(b)(5).[431] For the same reasons, the

---

428 See Deutsche Temp Rule, supra note 28. It is unclear what the commenter contemplates by its suggestion that the Commission seek a "legislative solution," but the Commission notes that it does not intend to affirmatively seek any legislative action to protect further such information. The commenter is not precluded from doing so on its own initiative.

429 Pursuant to Commission rules, confidential treatment can be sought for information submitted to the Commission. See 17 CFR 200.83 (regarding confidential treatment procedures under FOIA).

430 See Better Markets 1, supra note 19.

431 See Proposing Release, 75 FR at 77318, supra note 2 (discussing reasons to take a measured approach with respect to requiring an SDR to establish automated systems for monitoring, screening, and analyzing SBS data). In a separate release, the Commission is adopting a rule requiring an SDR to provide the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to the SDR. See Regulation SBSR Adopting Release, supra note 13 (Rule 907(e)). In addition, the Commission proposed a rule that would require a counterparty to an SBS that invokes

Commission is not, as another commenter suggested,[432] providing additional details on what may be expected of SDRs in this area. The Commission, however, expects to consider further steps to implement this requirement as the SBS market develops and the Commission gains experience in regulating this market.[433] Because the Commission is not requiring an SDR to monitor, screen, and analyze SBS data maintained by the SDR at this time, the Commission is also not taking one commenter's suggestion to designate, at this time, an SDR to centrally monitor, screen, and analyze SBS data maintained by all SDRs.[434] The Commission believes that it is premature to do so without better understanding what additional information would be useful to the Commission. After considering the comments, the Commission is adopting Rule 13n-4(b)(7) as proposed.

3. Implementation of Core Principles (Rule 13n-4(c))

Each SDR is required, under Exchange Act Section 13(n)(7), to comply with core principles relating to (1) market access to services and data, (2) governance arrangements, and (3) conflicts of interest.[435] Specifically, unless necessary or appropriate to achieve the purposes

---

the end-user clearing exemption to deliver or cause to deliver certain information to a registered SDR, and, if adopted, then an SDR would be required to maintain this information in accordance with Rule 13n-5(b)(4). See End-User Exception Proposing Release, supra note 15.

432 See Barnard, supra note 19 (stating that the proposed rule regarding monitoring, screening, and analysis is too broad and "not clear enough on the level of detail required and on the level of responsibility imposed on SDRs").

433 The Commission may revisit these issues as the Commission becomes more familiar with the SBS market and consider requiring SDRs to monitor, screen, and analyze SBS data if, for example, it is difficult for the Commission to aggregate and analyze the data because SBS data is too fragmented among multiple SDRs or the data is maintained by multiple SDRs in different formats.

434 See DTCC 2, supra note 19.

435 See Exchange Act Section 13(n)(7), 15 U.S.C. 78m(n)(7).

of the Exchange Act, an SDR[436] is prohibited from adopting any rules[437] or taking any action that results in any unreasonable restraint of trade or imposing any material anticompetitive burden on the trading, clearing, or reporting of transactions.[438] In addition, each SDR must establish governance arrangements that are transparent to fulfill public interest requirements and to support the objectives of the Federal Government, owners, and participants.[439] Moreover, each SDR must establish and enforce rules to minimize conflicts of interest in the decision-making process of the SDR and to establish a process for resolving any such conflicts of interest.[440] Rule 13n-4(c) incorporates and implements these three core principles.

a. First Core Principle: Market Access to Services and Data (Rule 13n-4(c)(1))

i. Proposed Rule

Proposed Rule 13n-4(c)(1) would incorporate and implement the first core principle[441] by requiring SDRs, unless necessary or appropriate to achieve the purposes of the Exchange Act and the rules and regulations thereunder, to not (i) adopt any policies and procedures or take any action that results in an unreasonable restraint of trade; or (ii) impose any material

---

436 Although Exchange Act Section 13(n)(7)(A) refers to "swap data repository," the Commission believes that the Congress intended it to refer to "security-based swap data repository." See generally Am. Petroleum Institute v. SEC, 714 F.3d 1329, 1336-37 (D.C. Cir. 2013) (explaining that "[t]he Dodd-Frank Act is an enormous and complex statute, and it contains" a number of "scrivener's errors").

437 See Section VI.A.1.c of this release discussing the likelihood that most of the information that would be contained in a "rulebook" would be filed as part of an SDR's policies and procedures that are attached to Form SDR.

438 See Exchange Act Section 13(n)(7)(A), 15 U.S.C. 78m(n)(7)(A).

439 See Exchange Act Section 13(n)(7)(B), 15 U.S.C. 78m(n)(7)(B).

440 See Exchange Act Section 13(n)(7)(C), 15 U.S.C. 78m(n)(7)(C).

441 See Exchange Act Section 13(n)(7)(A), 15 U.S.C. 78m(n)(7)(A).

anticompetitive burden on the trading, clearing, or reporting of transactions.[442] Proposed Rule 13n-4(c)(1) would include four specific requirements. First, each SDR would be required to ensure that any dues, fees, or other charges it imposes, and any discounts or rebates it offers, are fair and reasonable and not unreasonably discriminatory; such dues, fees, other charges, discounts, or rebates would be required to apply consistently across all similarly-situated users of the SDR's services.[443] Second, each SDR would be required to permit market participants to access specific services offered by the SDR separately.[444] Third, each SDR would be required to establish, monitor on an ongoing basis, and enforce clearly stated objective criteria that would permit fair, open, and not unreasonably discriminatory access to services offered and data maintained by the SDR as well as fair, open, and not unreasonably discriminatory participation by market participants, market infrastructures, venues from which data can be submitted to the SDR, and third party service providers that seek to connect to or link with the SDR.[445] Finally, each SDR would be required to establish, maintain, and enforce written policies and procedures reasonably designed to review any prohibition or limitation of any person with respect to access to services offered, directly or indirectly, or data maintained by the SDR and to grant such person access to such services or data if such person has been discriminated against unfairly.[446]

ii. Comments on the Proposed Rule

As discussed below, eight commenters submitted comments relating to this proposed

442 Proposed Rule 13n-4(c)(1).

443 Proposed Rule 13n-4(c)(1)(i).

444 Proposed Rule 13n-4(c)(1)(ii).

445 Proposed Rule 13n-4(c)(1)(iii).

446 Proposed Rule 13n-4(c)(1)(iv).

rule,[447] which were mixed.[448] Generally speaking, one commenter supported "the Commission's stated goals of protecting market participants and maintaining a fair, orderly, and efficient [SBS] market through the promotion of competition" and urged "the Commission to adopt rules that preserve a competitive marketplace and forbid [ ] anti-competitive practices by all [SBS] market participants."[449] The commenter stated that "[i]n a global SB swap market, the anti-competitive practices of even a single market participant have potential ramifications for the entire marketplace."[450]

In suggesting that the Commission rely on CPSS-IOSCO's recommendations such as the

---

447 See Barnard, supra note 19; Better Markets 1, supra note 19; DTCC 2, supra note 19; MarkitServ, supra note 19; Tradeweb SBSR, supra note 27; Benchmark*, supra note 20; CDEU*, supra note 20; McLeish*, supra note 20; see also Better Markets 2, supra note 19; DTCC 5, supra note 19; DTCC CB, supra note 26.

448 Three comments submitted prior to the Proposing Release agreed with the Commission on the importance of market transparency. See McLeish*, supra note 20; CDEU*, supra note 20 (supporting "efforts by Congress to improve transparency, accountability and stability"); Benchmark*, supra note 20 ("fully support[ing] regulatory efforts to increase transparency in the OTC markets"); see also SIFMA*, supra note 20 (indicating that increased price transparency will improve the application of models used in the computation of capital requirements for purposes of complying with Exchange Act Rule 15c3-1). For example, one commenter stressed the importance of requiring market transparency for all market participants without any exceptions. McLeish*, supra note 20 (believing that "there should be transparency for everyone" and there should be "no exceptions"). Another commenter believed that market transparency will improve liquidity in the SBS market. Benchmark*, supra note 20. To the extent that these commenters are broadly supporting transparency, the Commission believes that Rule 13n-4(c)(1) reflects this broad support.

449 DTCC 5, supra note 19 (stating that "the Commission correctly emphasizes that market participants offering potentially competing services should not be subject to anti-competitive practices, including product tying, overly restrictive terms of use, and anti-competitive price discrimination"). With respect to this comment, the Commission notes that the rules adopted in this release apply to only SDRs. To the extent that the Commission adopts rules prohibiting other market participants from engaging in anti-competitive practices, those rules will be addressed in separate releases.

450 DTCC CB, supra note 26.

PFMI Report, the commenter cited, as an example, to the Commission's concurrence, in the Proposing Release, with the CPSS-IOSCO Trade Repository Report's recommendation that "[m]arket infrastructures and service providers that may or may not offer potentially competing services should not be subject to anticompetitive practices such as product tying, contracts with non-compete and/ or exclusivity clauses, overly restrictive terms of use and anti-competitive price discrimination."[451]

(1) Rule 13n-4(c)(1)(i): Fair, Reasonable, and Not Unreasonably Discriminatory Dues, Fees, Other Charges, Discounts, and Rebates

One commenter supported the requirements in proposed Rule 13n-4(c)(1)(i) because "they should encourage market participants to use SDRs' services."[452] The commenter believed that an SDR should charge different fee structures only if it relates to the SDR's "differing costs of providing access or service to particular categories" and that "[a]nything else would be discrimination."[453] The commenter suggested that "any preferential pricing such as volume discounts or reductions should be generally viewed as discriminatory" and believed that "[s]uch volume discounts or reductions tend to discriminate in favour of the large players."[454]

Two commenters believed that SDRs should be permitted to continue using the current "dealer pays" or "sell-side pays" model,[455] or at least to continue using that model if it is

---

451 DTCC CB, supra note 26; see also Proposing Release, 75 FR at 77321, supra note 2; CPSS-IOSCO Trade Repository Report, supra note 48.

acceptable by the SDRs' market participants.[456] One of the commenters expressed particular concern about the effect that the Commission's proposed rule requiring nondiscriminatory pricing would have on the current "dealer pays" or "sell-side pays" model.[457] The commenter suggested that alternatively, the Commission's proposed rule could be amended to permit: (a) different fee structures for different classes of participants (e.g., sell-side and buy-side) to reflect the different cost of their usage of the SDR, or (b) payment of fees by only the reporting party.[458] The commenter believed that this approach would be consistent with the Commission's proposed "not unreasonably discriminatory" requirement because "SDRs would be prohibited from discriminating within each class, while participants in different classes may be charged different fees."[459] The commenter further believed that "any other literal interpretation of 'non-discriminatory access' would have the unintended consequence of significantly increasing the costs for buy-side participants and, by doing so, generally discouraging their use of [SDRs]."[460]

The same two commenters further believed that an SDR's fees for certain services should reflect the SDR's costs of providing related services.[461] One of these commenters believed, for example, that "if a reporting party uses a third party service provider for trade submission, which fulfils the SDR's requirement to confirm the trade with both parties, this report would potentially be charged at a lower cost than a direct report to the SDR, requiring the SDR itself to confirm

with the other party."[462] The commenter further noted that since small "non-reporting counterparties will legitimately want to interact with SDRs, if only to verify what has been reported, SDRs should have the flexibility to facilitate such access by not charging, or charging only nominal amounts, for such interaction."[463] In addition, the commenter suggested that the Commission clarify its rules to "prevent predatory or coercive pricing by providers engaged in any two or more trading, clearing or repository services" and to prohibit cross-subsidies between services.[464] The other commenter suggested that SDRs should be permitted to charge different (i.e., higher) fees in order to recoup costs associated with "processing any highly non-standard, albeit eligible [(i.e., within the asset class for which the SDR accepts data)], SBS transactions."[465]

Another commenter believed that the Commission's proposed rule, which refers to a standard of "fair and reasonable" and "not unreasonably discriminatory" and which requires consistent application across all similarly-situated users, is vague and suggested that the Commission "establish fees, rates, or even formulas for determining rates."[466] The commenter suggested that in order to prevent SDRs from taking "unfair advantage of the mandated use of their services," particularly "in SBS markets where there is no effective competition, SDRs [should] be required to justify the reasonableness of price levels charged to both suppliers of data

462 DTCC 2, supra note 19.

463 DTCC 2, supra note 19.

464 DTCC 4, supra note 19 ("While market participants should be able to enjoy the economies of shared platforms . . . the allocations of platform operating costs between services cannot be arbitrary.").

465 MarkitSERV, supra note 19.

466 Better Markets 1, supra note 19.

and recipients of data."[467]

One commenter to proposed Regulation SBSR suggested that SDRs should not be permitted to charge fees to third parties acting on behalf of counterparties for accepting SBS transaction information because such fees would increase the cost of using an SB SEF or other third party.[468] The commenter believed that SDRs would likely charge the same third parties for subsequent use of SBS data maintained by the SDRs.[469] In submitting comments to the Commission's rulemaking regarding SB SEFs, the same commenter suggested that the Commission require SDRs to (i) make available any data they collect and may properly use for commercial purposes to all market participants, including SB SEFs and clearing agencies, on reasonable terms and pricing and on a non-discriminatory basis, and (ii) share, on commercially reasonable terms, revenue that SDRs generate from redistributing such data with parties providing the data to the SDRs (e.g., SB SEFs).[470] The commenter believed that without these requirements, the Commission would be effectively taking away from market participants, including SB SEFs and clearing agencies, a potentially significant and valuable component of their potential market data revenue streams.[471]

(2) <u>Rule 13n-4(c)(1)(ii): Offering Services Separately</u>

Three commenters supported the Commission's proposed rule requiring SDRs to permit

[467] Better Markets 1, <u>supra</u> note 19.

[468] Tradeweb SBSR, <u>supra</u> note 27.

[469] Tradeweb SBSR, <u>supra</u> note 27.

[471] Tradeweb SB SEF, <u>supra</u> note 29.

market participants to access services offered by SDRs separately.[472] Specifically, one commenter agreed that SDRs' fees should be transparent.[473] As a corollary to this, one of the commenters suggested that third party service providers should be barred from bundling their services with an SDR's services.[474] Additionally, the same commenter believed that "[a]ny provider offering trading[,] clearing or repository services for one asset class should not be permitted [to] bundl[e] or t[ie] when providing services for other asset classes."[475] The commenter suggested, however, that SDRs should be permitted to offer two or more service options, including one that fulfills the minimum regulatory reporting requirements and a suite of other services to complement the mandatory reporting function.[476]

One commenter believed that SDRs should be able to offer ancillary services, whether

---

472 DTCC 2, supra note 19; MarkitSERV, supra note 19 ("[M]arket participants' decisions to use or not use a given [SDR] or its affiliates' [a]ncillary [s]ervices should rest entirely with the market participant[s]. These decisions should not be tied to any other service provided by a regulated entity or its affiliate . . . or [an SDR] and any related [third party service provider]."); TriOptima, supra note 19 ("[I]t is important that market participants have the ability to access specific services offered by the [SDR] separately."); see also DTCC 3, supra note 19 (noting that the Commission's proposed rule requiring "each SDR to permit market participants to access specific services offered by the SDR separately" is consistent with the CPSS-IOSCO Trade Repository Report); DTCC CB, supra note 26 (not supporting anti-competitive practices such as product tying).

473 MarkitSERV, supra note 19.

474 DTCC 2, supra note 19 ("Allowing bundling of obligations undertaken by third party service providers with an SDR will detract from the SDR's utility function and jeopardize the value of SDRs to regulators and the market."); see also DTCC 4, supra note 19 ("[N]o provider of trading or clearing services should be permitted to simply declare itself the SDR for trades it facilitates . . . . [A]side from being anti-competitive, this type of vertical bundling would also (a) reverse the principal-agent relationship . . . and (b) add a layer of unnecessary risk to the control processes that market participants may determine are needed.").

475 DTCC 4, supra note 19.

476 DTCC 2, supra note 19.

bundled or not.[477] The commenter, however, did not support the bundling of ancillary services with mandatory or regulatory services.[478]

Another commenter stated that the proposed rule went "a long way to address a third party's (such as a service provider's) non-discriminatory access rights to granular [SDR] Information," and that such access is important so as to "not stifle innovation and the competition in the provision of post-trade processing services" and to "uphold a fair, secure and efficient post-trade market."[479] In the context of discussing proposed Rule 13n-4(c)(1)(ii), the commenter suggested that, to further these goals, the Commission should clarify that all "users" of an SDR's services, including unaffiliated third party service providers, and not only market participants that submit trade data, should be permitted to access each of the SDR's services separately.[480]

(3) Rule 13n-4(c)(1)(iii): Fair, Open, and Not Unreasonably Discriminatory Access

Four commenters generally supported the Commission's proposed rule regarding fair, open, and not unreasonably discriminatory access to services offered and data maintained by SDRs, but a few of these commenters also recommended additional requirements.[481] One of

477 Barnard, supra note 19.

478 Barnard, supra note 19.

479 TriOptima, supra note 19.

480 TriOptima, supra note 19 ("[W]e would encourage the SEC to clarify that [proposed Rule 13n-4(c)(1)(ii)] should apply to all users of an [SDR], including third party service providers with Written Client Disclosure Consents seeking to access the [SDR] Information, and not just market participants who submit trade data. I.e., users of an [SDR] should have the right to access services provided by an [SDR] separately.").

481 DTCC 2, supra note 19 (SDRs "should demonstrate strict impartiality in making data available to, or receiving data from, other providers, including affiliates of SDRs."); MarkitSERV, supra note 19; Better Markets 1, supra note 19; TriOptima, supra note 19; see also Better Markets 2, supra note 19; DTCC CB, supra note 26 (not supporting anti-

these commenters noted that "all counterparties to trades reported to an SDR should, as a matter of principle, have access to all data relating to trades to which they are [counterparties]" and that "[t]his access should be made available to smaller, lower volume market participants, as necessary, through the reduction or waiver of certain fees."[482] The same commenter also noted that "clearinghouses and [SB SEFs] should have the ability to report trades to SDRs . . . to satisfy their customers' reporting preferences."[483] In addition, the commenter supported "open access to data by other service providers (based on the consent of the parties for that provider to receive the data) [because it] is critical to preserve the trading parties' control over their own data."[484]

Another commenter who supported the rule indicated that SDRs should be able to condition access by specifying the methods and channels that must be used in order to connect to the SDR and setting certain minimum standards.[485] This commenter also recommended that SDRs should be permitted to provide connectivity to third party service providers, without requiring any specific services from them as a condition to their gaining access to the SBS

---

competitive practices such as contracts with non-compete and/or exclusivity clauses and overly restrictive terms of use).

482 DTCC 2, supra note 19; see also DTCC 3, supra note 19 (recommending that SDRs "be able to accept trades in any manner consistent with the regulations, from any market participant" and " have appropriate communications links, to the extent feasible, with all parties to its transactions"); DTCC SBSR, supra note 27 (stating that SDRs "will need to support an appropriate set of connectivity methods; the Commission should not, however, require SDRs to support all connectivity methods, as the costs to do so would be prohibitive"); see also TriOptima, supra note 19 ("[I]t is clear that an [SDR] should provide [s]wap [p]articipants with access to their own trade data.").

483 DTCC 3, supra note 19.

484 DTCC 3, supra note 19; see also DTCC 2, supra note 19 (believing that open access to data by other service providers "is an important principle for allowing development of automation and efficient operational processing in the market, while preserving the parties' control over confidential information").

485 MarkitSERV, supra note 19.

data.[486]

One commenter urged the Commission to "clarify in the final rule that [SDRs] shall provide third party service providers, who have been authorized to access information by the counterparties to the relevant trades under Written Client Disclosure Consents, with access to [SDR] Information."[487] The commenter further stressed the importance of providing "full and unrestricted" access to SBS data to third party service providers, particularly those acting on behalf of SBS counterparties.[488] The commenter objected to the lack of an "obligation on the [SDR] to provide full and unrestricted access to [granular trade data] to a third party service provider" and suggested that "this obligation should apply where the counterparties to the relevant trades have provided [written consents and authorizations] to the [SDR] to disclose granular trading data to the third party service provider."[489] The commenter noted that, when such third party service provider is acting pursuant to a written consent by an SBS counterparty, it is exercising that counterparty's right to access its own trade information.[490] The commenter

487 TriOptima, supra note 19.

488 TriOptima, supra note 19 (emphasizing "the importance of enhanced non-discriminatory access rights to [SDR] Information for third party service providers in order to maintain competition and innovation within the post-trade area, especially where such third party service providers have been authorized to access [SDR] Information under Written Client Disclosure Consents" and stating that "[a]n explicit obligation for an [SDR] to provide such full and unrestricted access to [SDR] Information to a third party (service provider) is important in order to uphold a fair, secure and efficient post-trade market; an [SDR] should not restrict access to [SDR] Information on other grounds than integrity risks to the [SDR] Information").

489 TriOptima, supra note 19.

490 TriOptima, supra note 19 ("We note that the third party service provider, for whom a Written Client Disclosure Consents is given, is actually exercising the Swap Participant's right to access their own trade information which is held by the [SDR]. An [SDR] should be required to treat a third party service provider with a disclosure consent as acting as an

"stress[ed] the importance that data access rights and requirements imposed on a third party (service provider) seeking to access [SDR] Information[ ] are applied equally to the [SDR] itself when providing ancillary services and to affiliated service providers within the same group as the [SDR]."[491] In this regard, the commenter believed that "the [SDR] should not have discretion to offer advantages in respect of its own ancillary services or services offered by affiliated service providers vis-à-vis other third party service providers."[492]

One commenter recommended that the Commission require that each SDR establish and maintain effective interoperability and interconnectivity with other SDRs, market infrastructures, and venues from which data can be submitted to the SDR.[493] Additionally, the commenter suggested that market participants should have "equal and fair access to data on SBS transactions,"[494] and that the Commission's rules "establish stronger and more detailed standards against discriminatory access, and they should also establish regulatory oversight of access denials."[495] The commenter further suggested that the Commission's proposed rules set forth the "clearly stated objective criteria" and permit denial of access only on risk-based grounds, i.e., risks related to the security or functioning of the market.[496]

'agent' for the owner of the trade information and provide the third party service provider with the same type of access which the owner of such data is entitled to, subject to any restrictions set out in the disclosure consent.").

(4) Rule 13n-4(c)(1)(iv): Prohibited or Limited Access

One commenter recommended that the Commission require an SDR "to promptly file a notice with the Commission if the SDR . . . prohibits or limits any person's access to services offered or data maintained by the SDR."[497]

iii. Final Rule

After considering the comments, the Commission is adopting Rule 13n-4(c)(1) as proposed, with one minor modification.[498] Rule 13n-4(c)(1), which tracks the statutory language,[499] provides that "[u]nless necessary or appropriate to achieve the purposes of the [Exchange] Act and the rules and regulations thereunder, the security-based swap data repository shall not adopt any policies or procedures[500] or take any action that results in an unreasonable restraint of trade or impose any material anticompetitive burden on the trading, clearing, or reporting of transactions." In implementing the first core principle, this rule is intended to protect investors and to maintain a fair, orderly, and efficient SBS market.[501] The Commission believes that this rule will protect investors by, for example, fostering service transparency and promoting competition in the SBS market.[502] Generally speaking, the Commission also believes

---

497 Better Markets 1, supra note 19.

498 See infra note 500 of the release discussing a modification to proposed Rule 13n-4(c)(1).

499 See Exchange Act Section 13(n)(7)(A), 15 U.S.C. 78m(n)(7)(A).

500 The Commission is making a typographical modification to proposed Rule 13n-4(c)(1), which refers to "any policies and procedures." As adopted, the rule refers to "any policies or procedures."

501 See DTCC 5, supra note 19 (supporting "the Commission's stated goals of protecting market participants and maintaining a fair, orderly, and efficient [SBS] market through the promotion of competition").

502 See DTCC 5, supra note 19 (urging "the Commission to adopt rules that preserve a competitive marketplace and forbid [ ] anti-competitive practices by all [SBS] market participants"); see also DTCC CB, supra note 26 (stating that "[i]n a global [SBS]

that "[m]arket infrastructures and service providers that may or may not offer potentially competing services should not be subject to anti-competitive practices such as product tying, contracts with non-compete and/or exclusivity clauses, overly restrictive terms of use and anti-competitive price discrimination."[503] As discussed in the Proposing Release and more fully below, when administering this rule, the Commission generally expects to apply the principles and procedures that it has developed in other areas in which it monitors analogous services, such as clearing agencies.[504] To comply with the first core principle, an SDR is required to comply with four specific requirements.

(1) Rule 13n-4(c)(1)(i): Fair, Reasonable, and Not Unreasonably Discriminatory Dues, Fees, Other Charges, Discounts, and Rebates

Rule 13n-4(c)(1)(i) requires each SDR to ensure that any dues, fees, or other charges that it imposes, and any discounts or rebates that it offers, are fair and reasonable and not unreasonably discriminatory.[505] The rule also requires such dues, fees, other charges, discounts,

---

market, the anti-competitive practices of even a single market participant have potential ramifications for the entire marketplace").

503 Proposing Release, 75 FR at 77321, supra note 2; accord DTCC CB, supra note 26 (citing to the CPSS-IOSCO Trade Repository Report's recommendation that market infrastructures and service providers should not be subject to anticompetitive practices).

504 Proposing Release, 75 FR at 77320, supra note 2.

505 The Exchange Act applies a similar standard for other registrants. See, e.g., Exchange Act Section 6(b)(4), 15 U.S.C. 78f(b)(4) ("The rules of the exchange [shall] provide for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities."); Exchange Act Section 17A(b)(3)(D), 15 U.S.C. 78q-1(b)(3)(D) ("The rules of the clearing agency [shall] provide for the equitable allocation of reasonable dues, fees and other charges among its participants."); see also Exchange Act Sections 11A(c)(1)(C) and (D), 15 U.S.C. 78k-1(c)(1)(C) and (D) (providing that the Commission may prescribe rules to assure that all SIPs may, "for purposes of distribution and publication, obtain on fair and reasonable terms such information" and to assure that "all other persons may obtain on terms which are not

or rebates to be applied consistently across all similarly-situated users of the SDR's services, including, but not limited to, market participants, market infrastructures (including central counterparties), venues from which data can be submitted to the SDR (including exchanges, SB SEFs, electronic trading venues, and matching and confirmation platforms), and third party service providers.

As discussed in the Proposing Release, the terms "fair" and "reasonable" often need standards to guide their application in practice.[506] One factor that the Commission has taken into consideration to evaluate the fairness and reasonableness of fees, particularly those of a monopolistic provider of a service, is the cost incurred to provide the service.[507] Consistent with commenters' views,[508] the Commission believes that if an SDR's fees for certain services reflect the SDR's costs of providing those services, then the fees would generally be considered fair and reasonable.

Based on the Commission's experience with other registrants, the Commission will take a flexible approach to evaluate the fairness and reasonableness of an SDR's fees and charges on a case-by-case basis. The Commission recognizes that there may be instances in which an SDR could charge different users different prices for the same or similar services. Such differences, however, cannot be unreasonably discriminatory.

---

unreasonably discriminatory" the transaction information published or distributed by SIPs).

506 Proposing Release, 75 FR at 77320, supra note 2.

507 See Regulation of Market Information Fees and Revenues, Exchange Act Release No. 42208 (Dec. 9, 1999), 64 FR 70613, 70619 (Dec. 17, 1999).

508 See DTCC 2, supra note 19; MarkitSERV, supra note 19 (both believing that an SDR's fees for services should be allowable if such fees reflect the SDR's costs of providing such services).

The Commission continues to believe that an SDR should make reasonable accommodations, including consideration of any cost burdens, on a non-reporting counterparty to an SBS in connection with the SDR following up on the accuracy of the SBS transaction data.[509] Thus, the Commission agrees with one commenter's view that an SDR may facilitate a non-reporting counterparty's ability to verify the accuracy of a reported SBS transaction by not charging the counterparty or charging the counterparty only a nominal amount.[510]

With respect to commenters' views on the current "dealer pays" or "sell-side pays" model,[511] the Commission does not believe that such a model is unreasonably discriminatory per se. As such, the Commission believes that amending proposed Rule 13n-4(c)(1)(i) to explicitly permit different fee structures, as suggested by one commenter,[512] is not necessary. Furthermore, Rule 13n-4(c)(1)(i) is not intended to prohibit an SDR from utilizing any one particular model, including a "dealer pays" or "sell-side pays" model, a model with different fee structures for different classes of participants, or a model where only the reporting party is required to pay an SDR's fees, as long as there is a fair and reasonable basis for the fee structure and it is not unreasonably discriminatory. If, however, an SDR imposes dues, fees, or other charges to create intentionally a barrier to access the SDR without a legitimate basis, then those dues, fees, or charges may be considered unfair or unreasonable.

The Commission disagrees with three comments received. The first commenter suggested that the Commission establish fees or rates, or dictate formulas by which fees or rates

---

509 See Proposing Release, 75 FR at 77320, supra note 2.

510 See DTCC 2, supra note 19.

511 See DTCC 2, supra note 19; MarkitSERV, supra note 19.

512 See MarkitSERV, supra note 19.

are determined.[513] The Commission believes that in light of the various SDR business models and fee structures that may emerge, it is better to provide SDRs with the flexibility to establish their own fees or rates, provided that they are fair, reasonable, and not unreasonably discriminatory. The Commission is providing SDRs with such flexibility to promote competition among SDRs, thereby keeping the cost of SDRs' services to a minimum.

The second commenter believed that an SDR should charge different fee structures only if it relates to the SDR's "differing costs of providing access or service to particular categories" and that "any preferential pricing such as volume discounts or reductions should be generally viewed as discriminatory."[514] Although an SDR's costs in providing its services or access to SBS data maintained by the SDR may be a factor in evaluating the SDR's fee structure, the Commission believes that it is not necessarily the only factor. There may be instances in which an SDR's fees or discounts (including volume discounts) are fair, reasonable, and not unreasonably discriminatory, even if the fees or discounts are not related to the SDR's costs in providing such services or access. In all instances, the SDR is responsible for demonstrating that its fees or discounts meet this regulatory standard.[515] As stated above, the Commission expects to evaluate the fairness and reasonableness of an SDR's fees and charges on a case-by-case basis.

The third commenter suggested that the Commission require SDRs to make available any data they collect and may properly use for commercial purposes to all market participants on

---

513 Better Markets 1, supra note 19.

514 Barnard, supra note 19.

515 See Item 26 of Form SDR.

reasonable terms and pricing and on a non-discriminatory basis.[516] Although the Commission agrees that fees imposed by SDRs should be "on reasonable terms and pricing and on a non-discriminatory basis," the Commission notes that an SDR is not required to make SBS data available to all market participants, aside from SBS data that is publicly disseminated pursuant to Regulation SBSR.[517] As discussed below, there may be limited instances in which an SDR denies access to a market participant.[518]

With respect to cross-subsidies, the Commission believes that it is not necessary, as one commenter suggested,[519] to prohibit cross-subsidies between services provided by an SDR, but the Commission recognizes that there may be instances in which such cross-subsidies would violate Rule 13n-4(c)(1)(i). For example, cross-subsidies between an SDR's services that result in fees that are arbitrary or have no relationship to the costs of providing the service on a discrete basis may not be consistent with Rule 13n-4(c)(1)(i). This is because an arbitrary fee structure could mean that fees are not being incurred consistently by similarly-situated users of the SDR's services and because the Commission believes that, in certain instances, fee structures without some relationship to the costs of the SDR may not be fair and reasonable due to the differential impact such charges would have on market participants that may choose to

516 Tradeweb SB SEF, supra note 29.

517 See Regulation SBSR Adopting Release, supra note 13 (Rule 902 requiring SDRs to publicly disseminate certain SBS information).

518 See Section VI.D.3.a.iii(3) of this release discussing an SDR's obligation to provide fair, open, and not unreasonably discriminatory access to others.

519 See DTCC 4, supra note 19.

use some, but not all, of the SDR's or its affiliate's services.[520] Another commenter suggested that the Commission prohibit SDRs from charging fees to third parties acting on behalf of counterparties for accepting SBS transaction information.[521] The commenter also suggested that the Commission require SDRs to share their revenue from redistributing data with parties providing the data to the SDRs.[522] Consistent with the Commission's approach with its other registrants, including exchanges and clearing agencies, the Commission does not believe that it is appropriate to dictate who an SDR can and cannot charge or with whom an SDR must share its revenue.

One commenter suggested that the Commission extend the applicability of its rule to providers engaged in two or more of trading, clearing, or repository services to prevent predatory or coercive pricing by the providers.[523] As with its other rules governing SDRs, the Commission's rule implementing the first core principle generally applies only to SDR services. To the extent that the Commission decides that predatory or coercive pricing with respect to non-SDR services needs to be addressed, the Commission will take appropriate action.

(2) Rule 13n-4(c)(1)(ii): Offering Services Separately

Rule 13n-4(c)(1)(ii) requires each SDR to permit market participants to access specific services offered by the SDR separately. As one commenter suggested,[524] an SDR may bundle its

---

520 Accord Exchange Act Section 17A(b)(3)(D), 15 U.S.C. 78q-1(b)(3)(D) (requiring the rules of a clearing agency to provide for the equitable allocation of reasonable dues, fees, and other charges among its participants).

521 Tradeweb SBSR, supra note 27.

522 Tradeweb SB SEF, supra note 29.

523 DTCC 4, supra note 19.

524 See DTCC 2, supra note 19 (suggesting that SDRs should be permitted to offer two or more service options, including one that fulfills the minimum regulatory reporting requirements and other services to complement the mandatory reporting function). But

services, including any ancillary services, regardless of the asset class at issue, but this rule requires the SDR to also provide market participants with the option of using its services separately.[525] The Commission believes that it is appropriate to adopt this rule as proposed to promote competition.[526]

If an SDR or its affiliate[527] provides an ancillary service, such as a matching and confirmation service, then the SDR is prohibited by Rule 13n-4(c)(1)(ii) from requiring a market participant to use and pay for that service as a condition of using the SDR's data collection and maintenance services.[528] In such an instance, the SDR is also prohibited from requiring a market participant that uses the SDR's or affiliate's ancillary service to use the SDR's data collection and maintenance services. The Commission also believes that if an SDR enters into an oral or written agreement or arrangement with an affiliate or third party service provider that reflects a business plan in which the affiliate or third party service provider will require its customers to use the core services of that SDR, then the SDR would not be in compliance with Rule 13n-4(c)(1)(ii).[529] In evaluating the fairness and reasonableness of fees that an SDR charges for bundled and unbundled services, the Commission will take into consideration, among other

---

see DTCC 4, supra note 19 (suggesting that bundling should not be permitted across asset classes).

525 See Barnard, supra note 19 (believing that SDRs should be able to offer ancillary services, whether bundled or not, but not supporting the bundling of ancillary services with mandatory or regulatory services).

526 See Exchange Act Section 13(n)(7)(A), 15 U.S.C. 78m(n)(7)(A) (regarding the first SDR core principle). See also Section VIII discussing economic analysis.

527 See supra note 247 (defining "affiliate").

528 See Proposing Release, 75 FR at 77320-77321, supra note 2.

529 The Commission notes that under Exchange Act Section 20(b), 15 U.S.C. 78t(b), "[i]t shall be unlawful for any person, directly or indirectly, to do any act or thing which it would be unlawful for such person to do under the provisions of [the Exchange Act] or any rule or regulation thereunder through or by means of any other person."

things, the SDR's cost of making those services available on a bundled or unbundled basis, as the case may be, and a market participant's proportional use of the SDR's services.

With regard to one commenter's suggestion that all "users" of an SDR's services, including unaffiliated third party service providers, should be permitted to access the SDR's non-SDR services separately,[530] the Commission agrees, as set forth in Rule 13n-4(c)(1)(ii), that market participants that use an SDR's services should have access to specific services offered by the SDR, including any ancillary services, separately. The Commission believes that SDRs should consider giving third party service providers acting as agents for such market participants the same rights as the market participants to access these services separately. However, Rule 13n-4(c)(1)(ii) does not require an SDR to afford the agent access to the SDR's unbundled services outside of its agency capacity.

(3) Rule 13n-4(c)(1)(iii): Fair, Open, and Not Unreasonably Discriminatory Access

Rule 13n-4(c)(1)(iii) requires each SDR to establish, monitor on an ongoing basis, and enforce clearly stated objective criteria that would permit fair, open, and not unreasonably discriminatory access to services offered and data maintained by the SDR as well as fair, open, and not unreasonably discriminatory participation by market participants, market infrastructures, venues from which data can be submitted to the SDR, and third party service providers that seek to connect to or link with the SDR. As with Rule 13n-4(c)(1)(i), the Commission will evaluate whether such access or participation is "fair, open, and not unreasonably discriminatory" on a case-by-case basis. Although this rule does not explicitly require, as one commenter

530 See TriOptima, supra note 19.

suggested,[531] SDRs to establish and maintain effective interoperability and interconnectivity with other SDRs,[532] market infrastructures, and venues from which data can be submitted, the rule is intended to encourage such interoperability and interconnectivity by requiring SDRs to establish criteria that would permit fair, open, and not unreasonably discriminatory participation by others, including those that seek to connect to or link with the SDR.

The Commission agrees with most of the comments on this rule. One commenter suggested that market participants should have "equal and fair access to data on SBS transactions."[533] The Commission agrees with the comment to the extent that the commenter equated "equal and fair access" with the "fair, reasonable and not unreasonably discriminatory" standard in the rule. However, the Commission notes that all market participants are not required to be treated the same way in all instances. For example, if a market participant fails to pay the SDR's reasonable fees, then it may be "fair, reasonable and not unreasonably discriminatory" for an SDR to deny access to the market participant.

The Commission agrees that an SDR should be able to condition access to SBS data that it maintains by specifying the methods and channels that must be used to connect to the SDR and by setting certain minimum standards,[534] provided that such conditions are fair, open, and not

531 See Better Markets 1, supra note 19.

532 The Commission is not explicitly requiring SDRs to maintain effective interoperability and interconnectivity with other SDRs at this time, partly because such a requirement could hinder the developing infrastructure for SBS transactions.

533 See Better Markets 2, supra note 19.

534 See MarkitSERV, supra note 19. Related to this comment, another commenter suggested that market infrastructures such as clearing agencies and SB SEFs should generally have the ability to report SBS transactions to SDRs to satisfy their customers' reporting preferences. See DTCC 3, supra note 19. As stated above, the Commission intends to adopt rules relating to clearing agencies and SB SEFs in separate releases.

unreasonably discriminatory. The Commission also agrees with one commenter's view that an SDR should, to the extent feasible, provide each counterparty to an SBS transaction that is reported to an SDR with reasonable access to the data relating to that transaction.[535] If an SDR provides such access to smaller, lower volume market participants at reduced or waived fees, as one commenter suggested,[536] then the discount must be fair and reasonable and not unreasonably discriminatory.[537] The Commission further agrees with commenters' views that an SDR should provide connectivity to others, including third party service providers, clearinghouses, and SB SEFs,[538] and, as one commenter suggested,[539] if the SDR delegates the function of providing connectivity to another entity, that entity cannot require anyone to use the entity's services as a condition to obtaining connectivity to the SDR. The Commission also agrees with another commenter that an SDR generally should impose similar data access rights and requirements on itself (and its affiliates) as those imposed on a third party acting as an agent on behalf of an SBS counterparty.[540]

As stated in the Proposing Release, the Commission is concerned, among other things,

---

535 See DTCC 2, supra note 19; see also DTCC 3, supra note 19 (noting that SDRs should be able to accept trades in any manner consistent with the regulations, from any market participant and have appropriate communication links, to the extent feasible, with all counterparties to SBS transactions reported to the SDR); DTCC SBSR, supra note 27 (stating that SDRs "will need to support an appropriate set of connectivity methods").

536 See DTCC 2, supra note 19 (noting that in providing access to SBS data, SDRs should reduce or waive certain fees, as necessary, to smaller, lower volume market participants).

537 See Rule 13n-4(c)(1)(i).

538 See, e.g., DTCC 3, supra note 19 (supporting open access to SBS data maintained by an SDR by other service providers); Better Markets 1, supra note 19.

539 See MarkitSERV, supra note 19.

540 See TriOptima, supra note 19 (stating that non-discriminatory access is important so as to "not stifle innovation and the competition in the provision of post-trade processing services").

that an SDR, controlled or influenced by a market participant, may limit the level of access to the services offered or data maintained by the SDR as a means to impede competition from other market participants or third party service providers.[541] The Commission believes that Rule 13n-4(c)(1)(iii) addresses this concern.

One commenter recommended that the Commission permit SDRs to deny access only on risk-based grounds.[542] Although the Commission concurs that an SDR should always consider the risks that an actual or prospective market participant may pose to the SDR, the Commission does not believe that it is appropriate to explicitly limit an SDR's ability to deny access because there may be reasonable grounds for denial that may not be risk-related – e.g., a counterparty to an SBS fails to pay the SDR's reasonable fees or a third party service provider breaches its contractual obligation to maintain the privacy of data received by the SDR. The same commenter suggested that the Commission should set forth "clearly stated objective criteria" with respect to fair access and denial of access in the final rule,[543] but the Commission does not believe that it is necessary to do so. Under Rule 13n-4(c)(1)(iii), SDRs must establish appropriate criteria to govern access to their services and data as well as participation by those seeking to connect to or link with the SDR.

The Commission does not believe that Rule 13n-1(c)(1)(iii) should require an SDR to provide "full and unrestricted" access to third party service providers acting pursuant to written authorizations from an SBS counterparty, as suggested by one commenter.[544] While the

541 Proposing Release, 75 FR at 77321, supra note 2.

542 Better Markets 1, supra note 19.

543 Better Markets 1, supra note 19.

544 See TriOptima, supra note 19.

Commission agrees with the commenter that such a third party service provider is exercising the SBS counterparty's right to access data with respect to that counterparty's trades, the Commission believes that requiring an SDR to provide "full and unrestricted" access (beyond that provided to the SBS counterparty acting directly) would appear to be inconsistent with the Exchange Act. Even if the service provider has received written authorization from one SBS counterparty, the SDR nonetheless would be required to protect the privacy and confidentiality of the other counterparty;[545] thus, the SDR need only provide the third party service provider with access to such data that the SBS counterparty that has authorized disclosure would be entitled to access. As noted by the commenter, such a third party service provider is acting as the SBS counterparty's agent and should be entitled to the same level of access as provided to the SBS counterparty.[546] The Commission agrees with the commenter regarding the importance of upholding "a fair, secure and efficient post-trade market"[547] and believes that the rule as adopted achieves this goal.

(4) Rule 13n-4(c)(1)(iv): Prohibited or Limited Access

Rule 13n-4(c)(1)(iv) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to review any prohibition or limitation of any person with respect to access to services offered, directly or indirectly, or data maintained by the SDR and to grant such person access to such services or data if such person has been discriminated against unfairly.

As stated in the Proposing Release, the Commission believes that, for any such policies

---

545 See Exchange Act Section 13(n)(5)(F), 15 U.S.C. 78m(n)(5)(F), and Rule 13n-9 (requiring SDRs to maintain the privacy of SBS transaction information).

546 See TriOptima, supra note 19.

547 See TriOptima, supra note 19.

and procedures to be reasonable, at a minimum, those at an SDR involved in the decision-making process of prohibiting or limiting a person's access to the SDR's services or data cannot be involved in the review of whether the prohibition or limitation was appropriate.[548] Otherwise, the purpose of the review process would be undermined. Additionally, an SDR may wish to consider whether its internal review process should be done by the SDR's board[549] or an executive committee.

As discussed above, one commenter suggested that the Commission require an SDR to promptly file a notice with the Commission if the SDR prohibits or limits any person's access to services offered or data maintained by the SDR.[550] Rule 909 of Regulation SBSR, which the Commission is concurrently adopting in a separate release, requires each registered SDR to register as a SIP, and, as such, Exchange Act Section 11A(b)(5) governs denials of access to services by an SDR.[551] This section provides that "[i]f any registered securities information processor prohibits or limits any person in respect of access to services offered, directly or indirectly, by such securities information processor, the registered securities information processor shall promptly file notice thereof with the Commission."[552] Accordingly, an SDR must promptly notify the Commission if it prohibits or limits access to any of its services to any person. In addition, the SDR is required to notify the Commission of any prohibition or limitation with respect to services offered or data maintained by the SDR in its annual

548 Proposing Release, 75 FR at 77321, supra note 2.

549 The term "board" is defined as "the board of directors of the security-based swap data repository or a body performing a function similar to the board of directors of the security-based swap data repository." See Rule 13n-4(a)(2); see also Rule 13n-11(b)(1).

550 See Better Markets 1, supra note 19.

551 See Regulation SBSR Adopting Release, supra note 13.

552 15 U.S.C. 78k-1(b)(5).

amendment to its Form SDR, which will also enable the Commission to evaluate whether the prohibition or limitation is appropriate.[553] Also, pursuant to Rule 13n-7, records of the decision to prohibit or limit access are required to be maintained by the SDR, and the SDR must promptly furnish such records to any representative of the Commission upon request.[554]

b. Second Core Principle: Governance Arrangements (Rule 13n-4(c)(2))

i. Proposed Rule

Proposed Rule 13n-4(c)(2) would incorporate and implement the second core principle[555] by requiring SDRs to establish governance arrangements that are transparent (i) to fulfill public interest requirements under the Exchange Act and the rules and regulations thereunder; (ii) to carry out functions consistent with the Exchange Act, the rules and regulations thereunder, and the purposes of the Exchange Act; and (iii) to support the objectives of the Federal Government, owners, and participants.[556] The proposed rule would impose four specific requirements. First, an SDR would be required to establish governance arrangements that are well defined and include a clear organizational structure with effective internal controls.[557] Second, an SDR's governance arrangements would be required to provide for fair representation of market participants.[558] Third, an SDR would be required to provide representatives of market participants, including end-users, with the opportunity to participate in the process for

553 See Item 33 of Form SDR.

557 Proposed Rule 13n-4(c)(2)(i).

558 Proposed Rule 13n-4(c)(2)(ii).

nominating directors and with the right to petition for alternative candidates.[559] Finally, an SDR would be required to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the SDR's senior management and each member of the board or committee that has the authority to act on behalf of the board possess requisite skills and expertise to fulfill their responsibilities in the management and governance of the SDR, to have a clear understanding of their responsibilities, and to exercise sound judgment about the SDR's affairs.[560]

In the Proposing Release, the Commission solicited comments on whether to impose any additional requirements, including ownership or voting limitations on SDRs and persons associated with SDRs.[561]

ii. Comments on the Proposed Rule

Four commenters submitted comments relating to this proposed rule.[562] Comments on the proposal were mixed. As a general matter, one commenter stated that the role of the Commission is to "insure that the governing structure [of SDRs] is fair to all market participants."[563]

In suggesting that "ownership and voting limitations be eliminated in their entirety,"[564] another commenter noted that such limitations would be an imprecise tool to achieve the

563 Saul, supra note 19.

564 DTCC 3, supra note 19.

Commission's policy goals regarding conflicts of interest.[565] The commenter stated that instead, "[t]hese policy goals can best be met by structural governance requirements" such as governance by market participants.[566] The commenter believed that "[i]n the specific case of an SDR, governance by market participants is appropriate, given that most potential conflicts of interest are dealt with directly in the Proposed Rule and will be overseen directly by the regulator."[567] The commenter further believed that because the "SDR is not defining the reporting party, timeliness or content for public dissemination, and similarly the SDR is not defining the reporting party, content or process for regulatory access . . . the SDR does not have significant influence over the inclusion or omission of information in the reporting process, nor does it control the output of the process."[568] The commenter suggested that the Commission focus on ensuring open access and, to support such access, "the SDR needs governance that has independence from its affiliates and is representative of users who are the beneficiaries of choice in service providers."[569] Along this line, the commenter believed that SDRs should assure that "dealings with affiliates . . . be subject to oversight by members of the SDR's board of directors who are not engaged in the governance or oversight of either the affiliates or their

567 DTCC 2, supra note 19.

568 DTCC 2, supra note 19 (An SDR's conflicts of interest are "significantly different from other market infrastructures, where these infrastructures may have the ability to influence participation in a service (e.g. execution, clearing membership, portfolio compression), or completeness of product offering (where it is proposed that all trades in an asset class are accepted).").

569 DTCC 2, supra note 19; see also DTCC 3, supra note 19 ("[S]tructural governance requirements offer the best solution to reduce risk, increase transparency and promote market integrity within the financial system while avoiding the potential negative impact on capital, liquidity and mitigating systemic risk that could result from any ownership or voting limitations.").

competitors."[570] The commenter also suggested that SDRs be "user-governed," including "a board of directors that is broadly representative of market participants and that incorporates voting safeguards designed to prevent non-regulatory uses of data of a particular class of market participants that are objectionable to that class."[571] The commenter believed that "[i]ndependent perspectives can provide value to a board of directors, but those who do not directly participate in markets may not have sufficient, timely, and comprehensive expertise on those issues critical to the extraordinarily complex financial operations of SDRs."[572]

A third commenter recommended that "meaningful corporate governance requirements apply to [SDRs]."[573] In this regard, the commenter recommended that the Commission's rules relating to governance arrangements "be much more detailed and clear" and "require SDRs to establish boards and nominating committees that are composed of a majority of independent directors."[574] The commenter believed that "[i]ndependent boards are one of the most effective tools for ensuring that an SDR will abide by the letter and spirit of the enumerated duties and core principles set forth in the Dodd-Frank Act."[575] The commenter also believed that as "important safeguards against the dominant influence of some market participants over others," the Commission's rules should impose both individual and aggregate limitations on ownership and voting (e.g., limit the aggregate ownership interest in an SDR by SDR participants and their related persons to 20%, prohibit SDR participants and their related persons from directly or

575 Better Markets 1, supra note 19.

indirectly exercising more than 20% of the voting power of any class of ownership interest in the SDR).[576]

Another commenter suggested that, with respect to "board membership requirements and ownership and voting limits, there should be a level playing field between at least SDRs and other swap entities."[577] The commenter recommended that the Commission propose something similar to the CFTC's "Independent Perspective"[578] by "requiring a registered SDR to have independent public directors on (i) its board of directors and (ii) any committee that has the authority to (A) act on behalf of the board of directors or (B) amend or constrain the action of the board of directors."[579]

iii. Final Rule

After considering the comments, the Commission is adopting Rule 13n-4(c)(2) as proposed, with one minor modification.[580] Under this rule, each SDR is required to establish governance arrangements that are transparent to fulfill public interest requirements under the Exchange Act and the rules and regulations thereunder; to carry out functions consistent with the

577 Barnard, supra note 19.

578 The CFTC requires each swap data repository to establish, maintain, and enforce written policies or procedures to ensure that the nomination process for its board of directors, as well as the process for assigning members of the board of directors or other person to such committees, adequately incorporates an "Independent Perspective," which is defined as "a viewpoint that is impartial regarding competitive, commercial, or industry concerns and contemplates the effect of a decision on all constituencies involved." See CFTC Rules 49.2(a)(14) and 49.20(c)(1)(i)(B), 17 CFR 49.2(a)(14) and 49.20(c)(1)(i)(B); see also CFTC Part 45 Adopting Release, 76 FR at 54563, supra note 37 (discussing a swap data repository's consideration of an Independent Perspective).

579 Barnard, supra note 19.

580 See infra accompanying text to note 586 of this release discussing a modification to proposed Rule 13n-4(c)(2).

Exchange Act, the rules and regulations thereunder, and the purpose of the Exchange Act; and to support the objectives of the Federal Government, owners, and participants.[581] To comply with the second core principle, each SDR is required to comply with four specific requirements: (i) establish governance arrangements that are well defined and include a clear organizational structure with effective internal controls;[582] (ii) establish governance arrangements that provide for fair representation of market participants;[583] (iii) provide representatives of market participants, including end-users, with the opportunity to participate in the process for nominating directors and with the right to petition for alternative candidates;[584] and (iv) establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the SDR's senior management and each member of the board or committee that has the authority to act on behalf of the board possess requisite skills and expertise to fulfill their responsibilities in the management and governance of the SDR, have a clear understanding of their responsibilities, and exercise sound judgment about the SDR's affairs.[585]

As proposed, Rule 13n-4(c)(2)(iv) would have required an SDR's policies and procedures be reasonably designed to ensure that its senior management and each member of the board or

581 Rule 13n-4(c)(2).

582 Rule 13n-4(c)(2)(i).

583 Rule 13n-4(c)(2)(ii). Accord Exchange Act Section 17A(b)(3)(C), 15 U.S.C. 78q-1(b)(3)(C) (requiring the rules of a clearing agency assure a fair representation of its shareholders (or members) and participants in the selection of its directors and administration of its affairs). The term "market participant" is defined as "(1) any person participating in the security-based swap market, including, but not limited to, security-based swap dealers, major security-based swap participants, and any other counterparties to a security-based swap transaction." See Rule 13n-4(a)(6); see also Rule 13n-9(a)(3); Rule 13n-10(a)(1).

584 Rule 13n-4(c)(2)(iii).

585 Rule 13n-4(c)(2)(iv).

committee that has the authority to act on behalf of the board to "possess requisite skills and expertise . . . to have a clear understanding of their responsibilities" and "possess requisite skills and expertise . . . to exercise sound judgment about the [SDR's] affairs." The Commission is revising the proposed rule by removing the word "to" from the clauses above, to provide that an SDR's policies and procedures be reasonably designed to ensure that its senior management and each member of the board or committee that has the authority to act on behalf of the board is required to actually have a clear understanding of their responsibilities and exercise sound judgment about the SDR's affairs, rather than simply possess the skills and expertise to do so.[586] Without the revision from the proposal, the rule could have been misinterpreted to mean that an SDR's management and each member of the board or committee that has the authority to act on behalf of the board need only possess the skills and expertise to have a clear understanding of their responsibilities. With respect to sound judgment, an SDR may want to include, in its policies and procedures, a requirement that its management and each member of the board or committee that has the authority to act on behalf of the board consider fairly all relevant information and views without undue influence from others, and provide advice and recommendations that are reasonable under the relevant facts and circumstances.

Given an SDR's unique and integral role in the SBS market, the Commission believes that it is particularly important that an SDR establish a governance arrangement that is well defined and include a clear organizational structure with effective internal controls. Because the board has a role in overseeing the SDR's compliance with the SDR's statutory and regulatory

586 Rule 13n-4(c)(2)(iv).

obligations,[587] the Commission also believes that it is important that those who are managing and overseeing an SDR's activities are qualified to do so. An SDR's failure to comply with their obligations could affect, for example, the SDR's operational efficiency, which could, in turn, impact the SBS market as a whole.[588]

The Commission believes that Rule 13n-4(c)(2)'s requirement that SDRs establish governance arrangements that provide for fair representation of market participants is consistent with one commenter's view that governance of SDRs by market participants is appropriate.[589] With respect to one commenter's recommendation that an SDR's governance should be independent from its affiliates by, for example, ensuring that dealings with its affiliates are subject to oversight by members of the SDR's board who are not engaged in the governance or oversight of either the affiliates or their competitors,[590] the Commission believes that this is one effective way to comply with the rule and to minimize the SDR's potential conflicts of interest, as discussed further in Section VI.D.3.c of this release.

In establishing a governance arrangement that provides for fair representation of market participants, one way for an SDR to comply with Rule 13n-4(c)(2) is to provide market

---

587 See Rule 13n-11(e) (requiring an SDR's CCO to submit an annual compliance report to the board for its review prior to the filing of the report to with the Commission).

588 Accord Proposing Release, 75 FR at 77307, supra note 2 ("The inability of an SDR to protect the accuracy and integrity of the data that it maintains or the inability of an SDR to make such data available to regulators, market participants, and others in a timely manner could have a significant negative impact on the SBS market. Failure to maintain privacy of such data could lead to market abuse and subsequent loss of liquidity.").

589 See DTCC 2, supra note 19. In discussing governance arrangements, the commenter seemed to imply that the Commission is responsible for directly overseeing an SDR's conflicts of interest. To clarify, it is the SDR itself that is statutorily required to establish and enforce policies and procedures to minimize its conflicts of interest in its decision-making process. See Exchange Act Section 13(n)(7)(C), 15 U.S.C. 78m(n)(7)(C).

590 See DTCC 2, supra note 19.

participants with the opportunity to participate in the process for nominating directors and with the right to petition for alternative candidates. These two requirements are interrelated. The Commission believes that if market participants have no say in an SDR's governance process, then the market participants may not be fairly represented.[591] The Commission notes, however, that having fair representation of market participants does not necessarily equate to requiring a fixed number or percentage of enumerated categories of market participants. Instead, the requirement is intended to promote a fair representation of the views and perspectives of market participants.

The Commission considered whether an SDR's potential and existing conflicts of interest would warrant prescriptive rules relating to governance (e.g., ownership or voting limitations, independent directors, nominating committees composed of a majority of independent directors), as two commenters suggested,[592] but believes that the rules that are intended to minimize such

591 One commenter suggested that the Commission propose something similar to the CFTC's "Independent Perspective." Barnard, supra note 19. The Commission believes that although Rule 13n-4(c)(2) is different from CFTC Rule 49.20 in this area, both rules may achieve the same objective of broad representation on SDRs' boards. Rule 13n-4(c)(2)(ii) requires SDRs to "[e]stablish governance arrangements that provide for fair representation of market participants," and Rule 13n-4(c)(2)(iii) requires SDRs to "[p]rovide representatives of market participants, including end-users, with the opportunity to participate in the process for nominating directors and with the right to petition for alternative candidates." Instead of focusing on fair representation of market participants, CFTC Rule 49.20(c) requires a swap data repository to establish, maintain, and enforce written policies and procedures to ensure that its board and other committees adequately consider an "Independent Perspective" in their decision-making process. See 17 CFR 49.20(c). Cf. DTCC 2, supra note 19 (stating that "[i]ndependent perspectives can provide value to a board of directors, but those who do not directly participate in markets may not have sufficient, timely, and comprehensive expertise on those issues critical to the extraordinarily complex financial operations of SDRs").

592 See Barnard, supra note 19; Better Markets 1, supra note 19; see also Better Markets 2, supra note 19.

conflicts and to help ensure that SDRs meet core principles are sufficient at this time.[593] If the Commission were to impose additional governance requirements and limitations, SDRs would likely incur costs in addition to the costs already imposed by the SDR Rules.[594] The Commission, however, does not believe that the additional costs are warranted at this time. Also, consistent with one comment,[595] the Commission continues to believe that it is appropriate and cost-effective to provide SDRs with flexibility in determining their ownership and governance structure. The Commission may, however, revisit the issue of whether to impose additional governance requirements and limitations as the SBS market evolves.

c. Third Core Principle: Rules and Procedures for Minimizing and Resolving Conflicts of Interest (Rule 13n-4(c)(3))

i. Proposed Rule

Proposed Rule 13n-4(c)(3) would incorporate the third core principle[596] by requiring each SDR to establish and enforce written policies and procedures reasonably designed to minimize

---

593 See, e.g., Rule 13n-4(c)(1) (implementing core principle relating to market access to SDRs' services and data), as discussed in Section VI.D.3.a of this release; Rule 13n-4(c)(3) (implementing core principle relating to conflicts of interest), as discussed in Section VI.D.3.c of this release; and Rule 13n-5 (requiring an SDR to accept all SBSs in a given asset class if it accepts any SBS in that asset class), as discussed in Section VI.E of this release; see also Item 32 of Form SDR (requiring disclosure of instances in which an SDR has prohibited or limited a person with respect to access to the SDR's services or data). As stated in Section VI.D.3.a.iii(4) of this release, the Commission is adopting Rule 909 of Regulation SBSR, which requires each SDR to register as a SIP; as such, Exchange Act Section 11A(b)(5) governs denials of access to all services of an SDR. See Regulation SBSR Adopting Release, supra note 13; Exchange Act Section 11A(b)(5), 15 U.S.C. 78k-1(b)(5).

594 See Section VIII.D of this release (discussing SDRs' costs of complying with the SDR Rules).

595 See DTCC 2, supra note 19 (recommending structural governance requirements instead of ownership and voting limitations); see also DTCC 3, supra note 19 (supporting the mitigation of conflicts of interest through the imposition of structural governance requirements instead of ownership and voting limitations).

596 See Exchange Act Section 13(n)(7)(C), 15 U.S.C. 78m(n)(7)(C)).

conflicts of interest in the decision making process of the SDR, and establish a process for resolving any such conflicts of interest.[597] The proposed rule provided general examples of conflicts of interest that should be considered by an SDR and would require each SDR to comply with the core principle by (i) establishing, maintaining, and enforcing written policies and procedures reasonably designed to identify and mitigate potential and existing conflicts of interest in the SDR's decision-making process on an ongoing basis;[598] (ii) recusing any person involved in a conflict of interest from the decision-making process for resolving such conflicts of interest;[599] and (iii) establishing, maintaining, and enforcing reasonable written policies and procedures regarding the SDR's non-commercial and/or commercial use of the SBS transaction information that it receives from a market participant, any registered entity, or any other person.[600]

ii. Comments on the Proposed Rule

Seven commenters submitted comments relating to this proposed rule.[601] One commenter agreed that the Proposing Release "correctly highlights a number of the harmful practices that can thrive in an environment that does not adequately address conflicts of interest . . . ."[602] These practices are discussed further in Section VI.D.3.c.iii below. Another commenter acknowledged that "[t]he mandatory reporting regime [under the Dodd-Frank Act] creates an

602 Better Markets 1, supra note 19.

opportunity for [an] SDR to improperly commercialize the information it receives" and agreed with the Commission that "market access by service providers to an SDR could be a potential source for conflicts of interest."[603] This commenter expressed the view, however, that because "[t]he reporting rules for SDRs are highly prescriptive, and the primary consumers of this data are regulators, [there is] limited room for conflicts involving regulatory or public data access."[604] The commenter noted that "[i]t is important that regulators ensure that the public utility function of SDRs . . . is separated from potential commercial uses of the data."[605]

As noted in the Proposing Release, a few entities that presently provide or had anticipated providing trade repository services identified the following conflicts of interest that could arise at an SDR.[606] First, owners of an SDR could have commercial incentives to exert undue influence to control the level of access to the services offered and data maintained by the SDR and to implement policies and procedures that would further their self-interests to the detriment of others.[607] Specifically, owners of an SDR could exert their influence and control to prohibit or limit access to the services offered and data maintained by the SDR in order to impede

607 See, e.g., Reval, Responses to the CFTC's Questions on the SDR Requirements, available at http://www.cftc.gov/ucm/groups/public/@swaps/documents/dfsubmission/dfsubmission9_100110-reval.pdf (stating that an SDR with any ownership or revenue sharing arrangements directly or indirectly with a dealer would be an obvious conflict of interest) ("Reval CFTC Response Letter").

competition.[608] Second, an SDR could favor certain market participants over others with respect to the SDR's services and pricing for such services.[609] Third, an SDR could require that services be purchased on a "bundled" basis.[610] Finally, an SDR or a person associated with the SDR could misuse or misappropriate data reported to the SDR for financial gain.[611] As one trade repository noted, "SDR data is extremely valuable and could be sold either stand alone or enhanced with other market data and analysis. The use of this data in this manner would present competitive problems" as well as conflicts of interest issues.[612]

Several commenters expressed their views on the ownership of SBS data maintained by SDRs. Specifically, three commenters believed that ownership of SBS data should remain with counterparties to the SBS unless specifically agreed by them.[613] One commenter to proposed

---

608 See, e.g., Warehouse Trust Company, Draft Response to CFTC re: CFTC Request for Information regarding SDR Governance, available at http://www.cftc.gov/ucm/groups/public/@swaps/documents/dfsubmission/dfsubmission9_100510-wt.pdf (stating that "ownership of an SDR could lead to access restrictions on non-owners") ("Warehouse Trust CFTC Response Letter").

609 See Reval CFTC Response Letter, supra note 607 (stating that preferential treatment in services provided by an SDR could also occur).

610 See Warehouse Trust CFTC Response Letter, supra note 608 ("The issue of vertical bundling could arise where [SB SEFs and clearing agencies] have preferred access or servicing arrangements with SDRs primarily due to ownership overlaps.").

611 See Reval CFTC Response Letter, supra note 607 ("[T]here would always be an underlying conflict to ensure that the position information or client activity does not get into the hands of investors or business partners of the SDR who could benefit from that information.").

612 Warehouse Trust CFTC Response Letter, supra note 608; see also Reval CFTC Response Letter, supra note 607 ("[I]f only one SDR is created for an asset class and that SDR is held by a market participant that could gain by having an edge on when the information is received, even if by a split second, it could have a trading edge.").

613 MarkitSERV, supra note 19 ("[I]n the interest of ensuring minimal intrusion on commercial activity and optimal incentives for parties to support and encourage robust and accurate reporting, and the development of valuable commercial products . . . data provided to [SDRs] should only be used as permitted by the relevant market participants

Regulation SBSR stated that ownership of SBS data should be retained by the reporting party (e.g., SB SEFs, counterparties to an SBS),[614] whereas a commenter to the Proposing Release believed that data ownership does not transfer to an SB SEF or any other regulated entity.[615] Three commenters, including two commenters to proposed Regulation SBSR, believed that SDRs and/or their affiliates should be prohibited from using SBS data for commercial purposes.[616] One of those commenters supported an SDR's use of aggregated data for commercial use, such as marketing.[617]

One commenter to the SB SEF Proposing Release recommended that the Commission clarify in its final rules or adopting release that its rules are not intended to impose or imply any limit on the ability of market participants, including counterparties to SBS transactions, SB SEFs, and clearing agencies, to use and/or commercialize data that they create or receive in

---

in agreements between them and the [SDR]."); Markit, supra note 19 (stating that "commercialization of data should only be done with the specific consent of the data owners"); DTCC 2, supra note 19 ("The principle of user control over the data for non-regulatory purposes must . . . be scrupulously maintained."); see also DTCC 3, supra note 19 ("It is critical to preserve the trading parties' control over their own data.").

614 WMBAA SBSR, supra note 27.

615 Markit, supra note 19.

616 MFA 1, supra note 19 (suggesting that the Commission adopt a rule similar to the CFTC's proposed rule that would prohibit SDRs from using data for commercial purposes without express written consent); DTCC SBSR, supra note 27 ("It is good public policy that the aggregating entity not itself use the data for commercial purposes, particularly where data is required to be reported to an aggregator serving a regulatory purpose, and make such data available to value added providers on a non-discriminatory basis, consistent with restrictions placed on the data by the data contributors themselves."); WMBAA SBSR, supra note 27 ("Consistent with reporting practices in other markets, the reporting of SBS transaction information to a registered SDR should not bestow the SDR with the authority to use the SBS transaction data for any purpose other than those explicitly enumerated in the Commission's regulations.").

617 MFA 1, supra note 19; see also Tradeweb SB SEF, supra note 29 (supporting SDRs' commercial use of data with limitations).

connection with the execution or reporting of SBS data.[618] Similarly, one commenter to proposed Regulation SBSR suggested that the Commission require SDRs to adopt policies and procedures explicitly acknowledging that counterparties to SBS transactions and SB SEFs retain the ability to market and commercialize their own proprietary data.[619]

iii. Final Rule

After considering the comments, the Commission is adopting Rule 13n-4(c)(3) as proposed. Under this rule, each SDR is required to establish and enforce written policies and procedures reasonably designed to minimize conflicts of interest in the decision-making process of the SDR and to establish a process for resolving any such conflicts of interest.[620]

Rule 13n-4(c)(3) provides general examples of conflicts of interest that should be considered by an SDR, including, but not limited to: (1) conflicts between the commercial interests of an SDR and its statutory and regulatory responsibilities, (2) conflicts in connection with the commercial interests of certain market participants or linked market infrastructures, third party service providers, and others, (3) conflicts between, among, or with persons associated with the SDR,[621] market participants, affiliates of the SDR, and nonaffiliated third

---

618 Tradeweb SB SEF, supra note 29 (believing that its recommendation will help ensure a robust and competitive market, as envisioned by the Dodd-Frank Act, and help limit the possibility of overreaching by SDRs due to their unique position in the data-reporting regime).

619 WMBAA SBSR, supra note 27.

620 Rule 13n-4(c)(3).

621 Rule 13n-4(a)(8) defines "person associated with a security-based swap data repository" as (i) any partner, officer, or director of such SDR (or any person occupying a similar status or performing similar functions), (ii) any person directly or indirectly controlling, controlled by, or under common control with such SDR, or (iii) any employee of such SDR. See also Rule 13n-9(a)(7). This definition draws from the definition of "person associated with a broker or dealer" in the Exchange Act, and includes persons associated with an SDR whose functions are solely clerical or ministerial. See Exchange Act ...

parties,[622] and (4) misuse of confidential information, material, nonpublic information, and/or intellectual property. These general examples are the same as those included in proposed Rule 13n-4(c)(3) with one modification. The proposed rule provided, as an example, "conflicts between the commercial interests of [an SDR] and its statutory responsibilities." Upon further consideration, the Commission is revising this example, to include potential conflicts between an SDR's commercial interests and its regulatory responsibilities. This revision is intended to clarify that an SDR's commercial interests can conflict with not only its statutory responsibilities, but also its regulatory responsibilities, which may be more prescriptive than its statutory responsibilities.

To comply with the third core principle, an SDR is required to comply with three specific

---

Section 3(a)(18), 15 U.S.C. 78c(a)(18). Rule 13n-4(a)(3) defines "control" (including the terms "controlled by" and "under common control with") as "the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise." Pursuant to Rule 13n-4(a)(3), "[a] person is presumed to control another person if the person: (i) is a director, general partner, or officer exercising executive responsibility (or having similar status or functions); (ii) directly or indirectly has the right to vote 25 percent or more of a class of voting securities or has the power to sell or direct the sale of 25 percent or more of a class of voting securities; or (iii) in the case of a partnership, has the right to receive, upon dissolution, or has contributed, 25 percent or more of the capital." The Commission is correcting a typographical error in the proposed definition. Proposed Rule 13n-4(a)(3)(ii) referred to the right to vote 25 percent "of" more of a class of securities. See Proposing Release, 75 FR at 77367, supra note 2. As adopted, Rule 13n-4(a)(3)(ii) refers to the right to vote 25 percent "or" more of a class of securities. See also Rules 13n-9(a)(2) and 13n-11(b)(2). The definition of "control" incorporates the definition of "control" in Exchange Act Rule 12b-2 and Form BD, the registration form for broker-dealers. See 17 CFR 240.12b-2 and Form BD, 17 CFR 249.501.

622 The term "nonaffiliated third party" of an SDR is defined as any person except (1) the SDR, (2) an SDR's affiliate, or (3) a person employed by an SDR and any entity that is not the SDR's affiliate (and "nonaffiliated third party" includes such entity that jointly employs the person). See Rule 13n-4(a)(7); see also Rule 13n-9(a)(4). This definition draws from the definition of "nonaffiliated third party" in § 248.3 of Regulation S-P. See 17 CFR 248.3.

requirements. First, Rule 13n-4(c)(3)(i) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to identify and mitigate potential and existing conflicts of interest in the SDR's decision-making process on an ongoing basis. The Commission continues to believe that requiring an SDR to conduct ongoing identification and mitigation of conflicts of interest is important because such conflicts can arise gradually over time or unexpectedly. Furthermore, a situation that is acceptable one day may present a conflict of interest the next. The Commission believes that in order to identify and address potential conflicts that may arise over time, an SDR's procedures generally should provide a means for regular review of conflicts as they impact the SDR's decision-making processes. Rather than imposing prescriptive requirements on SDRs regarding how to address conflicts, the Commission believes that SDRs should be provided the flexibility to determine how best to address and manage their conflicts.

Second, Rule 13n-4(c)(3)(ii) requires an SDR to recuse any person involved in a conflict of interest from the decision-making process for resolving that conflict of interest. As stated in the Proposing Release, the Commission believes that such recusal is necessary to eliminate an apparent conflict of interest in an SDR's decision-making process.[623] Additionally, recusal will likely increase confidence in the SDR's decision-making process and avoid an appearance of impropriety.

Finally, Rule 13n-4(c)(3)(iii) requires an SDR to establish, maintain, and enforce reasonable written policies and procedures regarding the SDR's non-commercial and/or commercial use of the SBS transaction information that it receives from a market participant, any registered entity, or any other person. The Commission recognizes that an SDR may have

623 Proposing Release, 75 FR at 77325, supra note 2.

commercial incentives to operate as an SDR and agrees with one commenter's view that the Dodd-Frank Act's mandatory reporting regime creates an opportunity for an SDR to commercialize improperly the information that it receives.[624] To the extent that an SDR uses data that it receives from others for commercial purposes, the Commission believes that such uses should be clearly defined and disclosed to market participants.[625] If, for example, a market participant is considering waiving confidentiality of the data that it provides to an SDR, then, at the very least, such disclosure should provide the market participant with the information necessary to make a meaningful choice. One commenter suggested that an SDR should, as a way to minimize potential conflicts of interest, consider separating its utility function from its commercial use of the SBS transaction information that it receives.[626] The Commission agrees that this could be a way to address potential conflicts of interest, but the Commission does not believe that it necessarily mitigates or eliminates conflicts in all circumstances. Thus, while SDRs may wish to consider this approach, the Commission is not requiring them to do so at this time.

As discussed in the Proposing Release, the Commission believes that a small number of dealers could control an SDR, which may require SDR owners to balance competing interests.[627] Owners of an SDR could derive greater revenues from their non-trade repository activities in the SBS market than they would from sharing in the profits of the SDR in which they hold a financial interest; consequently, the owners of an SDR may be conflicted in making decisions

[624] See DTCC 2, supra note 19.

[625] See Section VI.I.2 of this release discussing an SDR's disclosure requirements.

[626] DTCC 2, supra note 19.

[627] Proposing Release, 75 FR at 77324, supra note 2.

that would increase the SDR's profitability, but decrease the profitability of their non-trade repository activities. In addition, there may be a tension between an SDR's statutory or regulatory obligations (e.g., maintaining the privacy of data reported to the SDR) and its own commercial interests or those of its owners (e.g., using data reported to the SDR for commercial purposes).[628]

An SDR's conflicts of interest that are not properly managed could limit the benefits of the SDR to the markets and regulators of SDRs as well as undermine the mandatory reporting requirement in Exchange Act Section 13(m)(1)(G), thereby impacting efficiency in the SBS market.[629] If, for instance, a market participant loses confidence in a particular SDR because the SDR fails to minimize its conflicts of interest, then the market participant may report its SBS transactions to an alternative SDR, which could lead to data fragmentation. By requiring an SDR to take specific actions to minimize its conflicts of interest, the Commission believes that Rule 13n-4(c)(3), as adopted, addresses these concerns as well as the concerns expressed in comments received on the rule proposal.

Several commenters expressed their views on whether an SDR should be permitted to use

---

628 See Proposing Release, 75 FR at 77324, supra note 2 (citing to CPSS-IOSCO Trade Repository Report (noting the conflicts of interest "between the unique public role of the [SDR] and its own commercial interests particularly if the [SDR] offers services other than record keeping or between commercial interests relating to different participants and linked market infrastructures and service providers")).

629 See 15 U.S.C. 78m(m)(1)(G). Exchange Act Section 13(m)(1)(G) imposes a mandatory reporting requirement, which provides that "[e]ach security-based swap (whether cleared or uncleared) shall be reported to a registered security-based swap data repository." See also Exchange Act Section 13A(a)(1), 15 U.S.C. 78m-1(a)(1) ("Each security-based swap that is not accepted for clearing by any clearing agency or derivatives clearing organization shall be reported to – (A) a security-based swap data repository . . . , or (B) in the case in which there is no security-based swap data repository that would accept the security-based swap, to the Commission . . . .").

data for commercial purposes.[630] For a number of reasons, the Commission continues to believe that it is not appropriate to adopt, at this time, a rule prohibiting an SDR and its affiliates from using for commercial purposes SBS data that the SDR maintains without obtaining express written consent from both counterparties to the SBS transaction or the reporting party. First, the Commission believes that such a prohibition may limit transparency by hindering an SDR's ability to provide anonymized and aggregated reports to the public if the Commission does not specifically mandate an SDR to provide these reports to the public. Under the final rule, an SDR may provide these reports to the public, provided that it complies with the privacy requirements of Rule 13n-9, as discussed in Section VI.I.1 below.[631] Second, a rule that prohibits an SDR from using SBS data for commercial purposes seems to presume that the market participants or reporting party owns the data. As evidenced by the comment letters received,[632] the issue of who owns the data is not clear cut, particularly when value is added to it. Third, a general prohibition

---

630 See Markit, supra note 19 (stating that "commercialization of data should only be done with the specific consent of the data owners"); MarkitSERV, supra note 19 (stating that "data provided to [SDRs] should only be used as permitted by the relevant market participants in agreements between them and the [SDR]"); MFA 1, supra note 19 (suggesting that the Commission adopt a rule similar to the CFTC's proposed rule that would prohibit SDRs from using data for commercial purposes without express written consent); see also DTCC SBSR, supra note 27 (suggesting that an SDR should not use data for commercial purposes); WMBAA SBSR, supra note 27 (indicating that an SDR should not have the authority to use SBS transaction data "for any purpose other than those explicitly enumerated in the Commission's regulations"). See also CFTC Rule 49.17(g), 17 CFR 49.17(g) ("Swap data accepted and maintained by the swap data repository generally may not be used for commercial or business purposes by the swap data repository or any of its affiliated entities"; however, "[t]he swap dealer, counterparty or any other registered entity that submits the swap data maintained by the registered swap data repository may permit the commercial or business use of the data by express written consent.").

631 Cf. SBSR Adopting Release, supra note 13 (prohibiting public dissemination of "non-mandatory reports," as defined in Regulation SBSR).

632 See DTCC 2, supra note 19; Markit, supra note 19; MarkitSERV, supra note 19; MFA 1, supra note 19; DTCC SBSR, supra note 27; WMBAA SBSR, supra note 27.

on an SDR's commercial use of SBS data could hinder competition and the establishment of new SDRs. As stated in Section III.D of this release, the Commission does not support any particular business model; restricting an SDR's commercial use of SBS data entirely, however, may be viewed as the Commission favoring one model over other models. Finally, the Commission believes that it is adopting adequate mechanisms to prevent or detect an SDR's misuse of SBS data.[633] If, however, such mechanisms prove to be inadequate, then the Commission may revisit this issue.

At this time, the Commission believes that the core principles and statutory requirements applicable to SDRs under the Dodd-Frank Act can be appropriately addressed under the final SDR Rules, without the need for the Commission to take a position on ownership of SBS data. In response to one commenter's request for clarification,[634] the Commission notes that Rule 13n-4(c)(3) is not intended to impose or imply any limit on the ability of market participants, including counterparties to SBS transactions, SB SEFs, and clearing agencies, to use or commercialize data that they create or receive in connection with the execution or reporting of SBS data. The Commission, however, does not believe that it is necessary, as another commenter suggested,[635] to require SDRs to adopt policies and procedures explicitly acknowledging that market participants retain the ability to market and commercialize their own proprietary data.

634 See Tradeweb SB SEF, supra note 29.

635 See WMBAA SBSR, supra note 27.

4. Indemnification Exemption (Rule 13n-4(d))

In the Cross-Border Proposing Release, the Commission proposed Rule 13n-4(d), pursuant to its authority under Exchange Act Section 36,[636] to provide a tailored exemption from the indemnification requirement set forth in Exchange Act Section 13(n)(5)(H)(ii)[637] and previously proposed Rule 13n-4(b)(10) thereunder.[638] The Commission received a number of comments relating to the indemnification requirement and the proposed exemption.[639] While the Commission continues to believe that an exemption from the indemnification requirement should be considered, the Commission also believes that the final resolution of this issue can benefit from further consideration and public comment. Accordingly, the Commission is not adopting proposed Rule 13n-4(d) at this time. The Commission anticipates soliciting additional public comment regarding the indemnification requirement and a proposed exemption. As discussed above, SDRs will have to comply with all statutory requirements, including the indemnification requirement set forth in Exchange Act Section 13(n)(5)(H)(ii),[640] when the current exemptive relief from the statutory requirements expires.[641]

E. Data Collection and Maintenance (Rule 13n-5)

The Commission proposed Exchange Act Rule 13n-5 to specify the data collection and

641 See Section V of this release discussing the implementation of the SDR Rules.

maintenance requirements applicable to SDRs.[642] After considering the comments received on this proposal, the Commission is adopting Rule 13n-5 as proposed, with certain modifications.[643]

1. Transaction Data (Rule 13n-5(b)(1))

a. Proposed Rule

Proposed Rule 13n-5(b)(1)(i) would require every SDR to establish, maintain, and enforce written policies and procedures reasonably designed for the reporting of transaction data to the SDR, and would require the SDR to accept all transaction data that is reported to the SDR in accordance with such policies and procedures. Proposed Rule 13n-5(a)(1) defined "transaction data" to mean all the information reported to an SDR pursuant to the Exchange Act and the rules and regulations thereunder.[644]

Proposed Rule 13n-5(b)(1)(ii) would require an SDR, if it accepts any SBS in a given

642 Rule 13n-5 is being promulgated under Exchange Act Sections 13(n)(4)(B), 13(n)(7)(D), and 13(n)(9). See 15 U.S.C. 78m(n)(4)(B), 78m(n)(7)(D), and 78m(n)(9). Rule 13n-5(b) does not apply to SDR records other than transaction data and positions, as defined below. Records made or kept by an SDR, other than transaction data and positions, are governed by Rule 13n-7, as discussed in Section VI.G of this release.

643 Each definition in Rule 13n-5(a) is discussed alongside the substantive rule in which the definition is used. See Section VI.E.1 below discussing "asset class" and "transaction data"; and Section VI.E.2 below discussing "position."

644 In a separate rulemaking implementing Dodd-Frank Act Sections 763(i) and 766(a) (adding Exchange Act Sections 13(m) and 13A(a)(1) respectively), the Commission is adopting rules requiring SBS transactions to be reported to a registered SDR. See Regulation SBSR Adopting Release, supra note 13 (Rules 901 and 902). In another separate proposal relating to implementation of Dodd-Frank Act Section 763(i) (adding Exchange Act Section 13(n)(5)(E)), the Commission proposed rules that would require SDRs to receive SBS transaction data that satisfies the notice requirement for parties that elect the end-user exception to mandatory clearing of SBSs in order to aid the Commission in its responsibility to prevent abuse of the end-user exception as provided for in Exchange Act Section 3C(g). See End-User Exception Proposing Release, supra note 15 ("Using the centralized facilities of SDRs should also make it easier for the Commission to analyze how the end-user clearing exception is being used, monitor for potentially abusive practices, and take timely action to address abusive practices if they were to develop.").

asset class, to accept all SBSs in that asset class that are reported to it in accordance with its policies and procedures required by paragraph (b)(1) of the proposed rule. Proposed Rule 13n-5(a)(3) defined "asset class" as "those security-based swaps in a particular broad category, including, but not limited to, credit derivatives, equity derivatives, and loan-based derivatives."

Proposed Rule 13n-5(b)(1)(iii) would require every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself by reasonable means that the transaction data that has been submitted to the SDR is accurate. This proposed rule would also require every SDR to clearly identify the source for each trade side and the pairing method (if any) for each transaction in order to identify the level of quality of that transaction data.[645]

Proposed Rule 13n-5(b)(1)(iv) would require every SDR to promptly record the transaction data it receives.[646]

b. Comments on the Proposed Rule

Three commenters submitted comments relating to this proposed rule.[647] One commenter stated that an SDR should have "certain minimum data standards" with regard to the transaction data that it accepts, but that "such standards should be able to accommodate a wide variety of SBS transactions submitted per asset class."[648] The commenter also stated that "the regulations

645 Proposed Rule 13n-5(b)(1)(iii).

646 In a separate release, the Commission is adopting rules prescribing the data elements that an SDR is required to accept for each SBS, in association with requirements under Dodd-Frank Act Section 763(i) (adding Exchange Act Section 13(n)(4)(A), relating to standard setting and data identification). See Regulation SBSR Adopting Release, supra note 13 (Rule 901).

647 See DTCC 2, supra note 19; MarkitSERV, supra note 19; MFA 1, supra note 19; see also DTCC 3, supra note 19; DTCC 4, supra note 19; DTCC 5, supra note 19.

648 MarkitSERV, supra note 19.

should be understood to permit [SDRs] to specify the methods and channels that participants need to use to connect to them, which will most commonly be provided in the form of the Application Programming Interfaces (APIs) and through setting of certain minimum standards."[649]

Another commenter recommended revising the definition of "asset class" from the proposal to eliminate "the distinction between loan-based and credit asset classes," and noted that "products like CDS on loans, while loan-based, are currently reported alongside other CDS products."[650] The commenter believed that "[i]n general, equity and credit derivatives will be easy to classify, although it is possible that certain transactions could be mixed and more difficult to classify."[651] The commenter stated that it considers it more likely to have classification difficulties between "a swap and an SBS, rather than between SBS asset classes."[652] The commenter suggested that, in order to mitigate the problem of classification between asset classes, the Commission could combine "the loan-based asset class with credit derivatives, and [allow] an SBS to be reported to either the equity or credit SDR if there is any uncertainty of a product's asset class."[653]

Two commenters agreed that SDRs should be required to support all trades in an asset class.[654] One commenter stated that "[w]ithout specific requirements related to the range of

products that can be reported to them, [SDRs] may be tempted to limit their operating costs by only accepting the more standardized categories of swaps [that] also tend to trade in high volumes. This would result in incomplete market coverage and an increased fragmentation of the reported data."[655] Thus, the commenter recommended that the Commission require SDRs "to accept all trades in a given asset class as a means of ensuring broad coverage while guarding against fragmentation that could result from inadequate [SDR] functionality."[656] The other commenter stated that the "requirement for an SDR to support all trades in an asset class is . . . important to reduce the complexity for reporting parties," and that the "requirement discourages an SDR from only servicing high volume products within an asset class to maximize profit, and leaving more complex (and less frequently traded) transactions to be reported by reporting parties directly to the Commission."[657]

Three commenters addressed the SDR's role with respect to verifying the accuracy of the transaction data submitted.[658] One commenter fully supported the requirement that SDRs confirm with both counterparties the accuracy of the data submitted.[659] Another commenter

655 MarkitSERV, supra note 19 (citation omitted).

656 MarkitSERV, supra note 19 (noting that "some level of data fragmentation will be unavoidable") (citation omitted).

657 DTCC 2, supra note 19; see also DTCC 3, supra note 19 (recommending that any SDR "be able to receive and manage all swaps in any asset class for which it is registered in accordance with the requirements of the Commission" because such requirement is "critical . . . for assuring that the more complex and non-standard transactions, typically the higher risk creating transactions . . . , are appropriately registered in SDRs so accurate risk and market activity profiles can be maintained"); DTCC 4, supra note 19 (stating that "no provider of trading or clearing services should be permitted to simply declare itself the SDR for trades it facilitates" and that it "strenuously objects" to allowing SDRs accept only those SBSs that are cleared).

658 See DTCC 2, supra note 19; MarkitSERV, supra note 19; MFA 1, supra note 19.

659 MFA 1, supra note 19.

stated that "the Commission should encourage the use and reporting of trade data that has been confirmed or verified by both counterparties via an affirmation or a matching process,"[660] and that this should be "connected with" the Commission's proposed requirement that SBS dealers and major SBS participants provide trade acknowledgments and verify those trade acknowledgments.[661] This commenter suggested, however, that SDRs should be able to accept single-sided trades for real-time reporting purposes, and that any subsequently discovered discrepancies could be corrected after confirmation.[662] The third commenter recommended that "SDRs should not have additional duties with respect to verifying the accuracy of [a] submission, as there is limited data available to the SDR. The SDR may carry out certain routine functions to identify trades which may indicate erroneous data (e.g. based on size), but in general, the primary responsibility for accuracy of reported information should remain with the reporting party."[663] This commenter also recommended that the Commission determine that an SDR has satisfied its obligation where "(i) the [SBS] has been reported by a [SEF], clearing agency, designated contract market, or other regulated counterparty who has an independent obligation to maintain the accuracy of the transaction data; (ii) a confirmation has been submitted to the [SDR] to demonstrate that both counterparties have agreed to the accuracy of the swap information that was submitted to the [SDR]; or (iii) the [SBS] is deemed verified and the [SDR] has developed and implemented policies and procedures reasonably designed to provide the non-

660 MarkitSERV, supra note 19 (stating such an approach would motivate parties to ensure the accuracy of reported data because of the associated economic and legal consequences).

661 See Trade Acknowledgment Release, supra note 133.

662 MarkitSERV, supra note 19.

663 DTCC 2, supra note 19.

reporting side of the [SDR] with an opportunity to confirm the information submitted by the reporting side."[664] This same commenter stated that SDRs should "process transactions in real-time."[665]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-5(b)(1) and the definition of "transaction data" under Rule 13n-5(a)(3) as proposed, with modifications.[666] The Commission is adopting the definition of "asset class" under Rule 13n-5(a)(1) as proposed, with one modification.[667]

Rule 13n-5(b)(1)(i) and the definition of "transaction data": Rule 13n-5(b)(1)(i) requires every SDR to establish, maintain, and enforce written policies and procedures reasonably designed for the reporting of complete and accurate transaction data to the SDR, and requires the SDR to accept all transaction data that is reported to the SDR in accordance with such policies and procedures. "Transaction data" is defined to mean all the information reported to an SDR pursuant to the Exchange Act and the rules and regulations thereunder, except for information provided pursuant to Rule 906(b) of Regulation SBSR.[668]

664 DTCC 5, supra note 19.

665 DTCC 2, supra note 19.

666 The Commission is making one technical amendment to proposed Rule 13n-5(b)(1)(ii). As proposed, the rule referenced the "policies and procedures required by paragraph (b)(1) of this section." As adopted, the rule references the "policies and procedures required by paragraph (b)(1)(i) of this section." Additionally, the Commission is renumbering the definition of "transaction data" as Rule 13n-5(a)(3) in order to alphabetize the definitions in Rule 13n-5(a). The definition of "transaction data" is also being revised from the proposal, as discussed below.

667 The definition of "asset class" is also being renumbered as Rule 13n-5(a)(1) in order to alphabetize the definitions in Rule 13n-5(a).

668 Rule 13n-5(a)(3). As proposed, the definition of "transaction data" did not include the exception for information provided pursuant to Rule 906(b) of Regulation SBSR. See

As explained in the Proposing Release, a fundamental goal of Title VII is to have all SBSs reported to SDRs.[669] Therefore, "transaction data" includes all information, including life cycle events, required to be reported to an SDR under Rule 901 of Regulation SBSR.[670] Rule 13n-5(b)(1)(i) is intended to prevent SDRs from rejecting SBSs for arbitrary or anti-competitive reasons, minimize the number of SBSs that are not accepted by an SDR, and to the extent that an SDR's policies and procedures make clear which SBSs the SDR will accept, make it easier for market participants and market infrastructures to determine whether there is an SDR that will accept a particular SBS.[671]

The Commission is revising the rule from the proposal to clarify that an SDR's policies and procedures should be reasonably designed for the reporting of "complete and accurate"

Regulation SBSR Adopting Release, supra note 13 (Rule 906(b) requiring a participant to provide information related to its ultimate parent(s) and affiliates). Because the information provided pursuant to Rule 906(b) is not tied to a particular SBS, the Commission believes that it does not make sense to tie the retention of the information to the expiration of an SBS. See Rule 13n-5(b)(4) (requiring an SDR to maintain transaction data "for not less than five years after the applicable [SBS] expires"). By adding the exception to the definition of "transaction data," the information that an SDR receives pursuant to Rule 906(b) will instead be required to be kept and preserved for not less than five years, pursuant to Rule 13n-7(b).

669 Proposing Release, 75 FR at 77327, supra note 2. See Exchange Act Section 13(m)(1)(G), 15 U.S.C. 78m(m)(1)(G), as added by Dodd-Frank Act Section 763(i) (requiring "[e]ach security-based swap (whether cleared or uncleared)" to be reported to a registered SDR).

670 A definition of "life cycle event" is included in Regulation SBSR. See Regulation SBSR Adopting Release, supra note 13 (Rule 900).

671 In a separate release relating to implementation of Dodd-Frank Act Section 763(i), the Commission is adopting additional rules requiring an SDR to have policies and procedures relating to the reporting of SBS data to the SDR. See Regulation SBSR Adopting Release, supra note 13 (Rule 907); see also id. (Rule 901(h) requiring information to be reported to an SDR "in a format required by the registered [SDR]").

transaction data to the SDR.[672] For example, an SDR's policies and procedures may not be reasonable if they do not require reporting of all the data elements required under Regulation SBSR and that the data reported be accurate.

The Commission agrees with one commenter's view that an SDR's policies and procedures should allow for the reporting of "a wide variety of SBS transactions."[673] The Commission also agrees that SDRs should be allowed to "specify the methods and channels that participants need to use to connect to [SDRs],"[674] so long as such methods and channels are reasonable. Therefore, an SDR may reject SBS data that is reported in a manner that is inconsistent with its reasonable policies and procedures.

In addition, to the extent that an SDR's policies and procedures allow SBSs to be reported to it in more than one format,[675] the SDR may need to reformat or translate the data to conform to any format and taxonomy that the Commission may adopt pursuant to Rule 13n-4(b)(5) in order to satisfy the requirement of providing direct electronic access to the

---

672 See Proposing Release, 75 FR at 77307 and 77327, supra note 2 ("SDRs are required to collect and maintain accurate SBS transaction data so that relevant authorities can access and analyze the data from secure, central locations to better monitor for systemic risk and potential market abuse" and "an SDR is useful only insofar as the data it retains is accurate"); see also MFA 1, supra note 19 (discussing the importance of SDRs maintaining accurate data).

673 See MarkitSERV, supra note 19.

674 See MarkitSERV, supra note 19.

675 See Regulation SBSR Adopting Release, supra note 13 (Rule 907(a)(2) requiring a registered SDR to establish and maintain written policies and procedures that specify one or more acceptable data formats (each of which must be an open-source structured data format that is widely used by participants), connectivity requirements, and other protocols for submitting information).

Commission.[676] For example, the SDR may need to reformat or translate terms of the transaction (e.g., scheduled termination dates, prices, or fixed or floating rate payments). The Commission notes that an SDR is not required to make persons who report SBSs to the SDR use any of the formats and taxonomies specified by the Commission. Rather, the SDR is only required to use such formats and taxonomies when providing the Commission with direct electronic access.

Rule 13n-5(b)(1)(ii) and the definition of "asset class": Rule 13n-5(b)(1)(ii) requires an SDR, if it accepts any SBS in a particular asset class, to accept all SBSs in that asset class that are reported to it in accordance with its policies and procedures required by Rule 13n-5(b)(1)(i). As explained in the Proposing Release, this requirement is designed to maximize the number of SBSs that are accepted by an SDR.[677] The comments that the Commission received on this rule endorsed it.[678] The Commission believes that if certain SBSs are not accepted by any SDR and are reported to the Commission instead,[679] the purpose of the Dodd-Frank Act to have centralized data on SBSs for regulators and others to access could be undermined.[680] In addition,

676 See Section VI.D.2.c.ii of this release discussing Rule 13n-4(b)(5) (requiring SDRs to provide direct electronic access to the Commission or any designee); Section VI.E.4 of this release discussing Rule 13n-5(b)(4) (requiring every SDR to maintain transaction data in a format readily accessible and usable to the Commission); and Section VI.H of this release discussing Rule 13n-8 (requiring every SDR to promptly report information to the Commission in a form and manner acceptable to the Commission).

677 Proposing Release, 75 FR at 77327, supra note 2.

678 See DTCC 2, supra note 19; MarkitSERV, supra note 19; DTCC 3, supra note 19; DTCC 4, supra note 19.

679 See Exchange Act Section 13A(a)(1), 15 U.S.C. 78m-1(a)(1) (requiring an uncleared SBS to be reported to the Commission if there is no SDR that would accept the SBS)); see also Regulation SBSR Adopting Release, supra note 13 (Rule 901(b) requiring SBSs to be reported to the Commission if there is no SDR that would accept the SBSs).

680 See also MarkitSERV, supra note 19 (stating that the requirement to accept all trades in an asset class is "a means of ensuring broad coverage while guarding against fragmentation").

the Commission agrees with one commenter that this requirement will "reduce the complexity for reporting parties."[681] The Commission also agrees with commenters' views that without this requirement, SDRs may be tempted to limit their services to standardized, high-volume SBSs.[682] Given these incentives, the requirement that an SDR accept all SBSs in a given asset class if it accepts any SBS in that asset class is meant to facilitate the aggregation of, and relevant authorities' and market participants' access to, SBS transaction data. This requirement prevents a provider of trading or clearing services to act as an SDR for only those SBSs that it trades or clears.[683] This requirement also prevents an SDR from accepting only SBSs that have been cleared.[684]

As explained in the Proposing Release, an SDR is required to accept only those SBSs that are reported in accordance with the SDR's policies and procedures required by Rule 13n-5(b)(1)(i).[685] For example, an SDR's policies and procedures could prescribe the necessary

681 See DTCC 2, supra note 19.

682 See DTCC 2, supra note 19 (stating that the requirement for an SDR to support all trades in an asset class "discourages an SDR from only servicing high volume products within an asset class to maximize profit, and leaving more complex (and less frequently traded) transactions to be reported by reporting parties directly to the Commission"); MarkitSERV, supra note 19 ("Without specific requirements related to the range of products that can be reported to them, [SDRs] may be tempted to limit their operating costs by only accepting the more standardized categories of swaps [that] also tend to trade in high volumes. This would result in incomplete market coverage and an increased fragmentation of the reported data.") (citation omitted).

683 See DTCC 4, supra note 19 (stating that "no provider of trading or clearing services should be permitted to simply declare itself the SDR for trades it facilitates").

684 See DTCC 4, supra note 19 (stating that it "strenuously objects" to allowing SDRs to accept only those SBSs that are cleared).

685 Proposing Release, 75 FR at 77327, supra note 2. An SDR is required to disclose to market participants its criteria for providing others with access to services offered and data maintained by the SDR pursuant to Rule 13n-10(b)(1), as discussed in Section VI.I.2

security and connectivity protocols that market participants and market infrastructures must have in place prior to transmitting transaction data to the SDR. The SDR is not required to accept transaction data from market participants and market infrastructures that do not comply with these protocols; otherwise the transmission of the transaction data could compromise the SDR's automated systems.[686]

In response to the comment recommending amending the definition of "asset class" to remove the "the distinction between loan-based and credit asset classes,"[687] the Commission agrees that removing such distinction will make it easier for reporting parties when classifying a transaction. Therefore, the Commission is modifying from the proposal the definition of "asset class" in Rule 13n-5(a)(1) to mean "those security-based swaps in a particular broad category, including, but not limited to, credit derivatives and equity derivatives."[688]

Where an SBS arguably could belong to more than one asset class, for example, if it has characteristics of both credit and equity derivatives, then an SDR serving either asset class

---

of this release. Therefore, market participants will be made aware of an SDR's policies and procedures for reporting data.

686 To the extent that an SDR already has systems in place to accept and maintain SBSs in a particular asset class, the Commission believes that Rule 13n-5(b)(1)(ii) will not add a material incremental financial or regulatory burden to SDRs. See Proposing Release, 75 FR at 77327, supra note 2.

687 See DTCC 2, supra note 19.

688 In a separate release relating to implementation of Dodd-Frank Act Section 763(i), the Commission is adopting the same definition of "asset class." See Regulation SBSR Adopting Release, supra note 13 (Rule 900). In addition, the Commission proposed rules relating to trade acknowledgments and verifications of SBSs, which proposed a definition of "asset class" that is the same as the definition of "asset class" in the Proposing Release, 75 FR at 77369, supra note 2, and therefore differs from the definition of "asset class" being adopted in this release. See Trade Acknowledgment Release, supra note 133. The Commission expects to consider conforming the proposed definition of "asset class" in the Trade Acknowledgment Release with the definition being adopted today at a later time.

should be able to accept that SBS without then being required to accept all SBSs in the other asset class – i.e., an SDR for the credit derivative asset class could accept such an SBS without then having to accept all equity SBSs, and an SDR for the equity derivative asset class could accept the SBS without then having to accept all credit SBSs.

One commenter expressed concern about transactions that could be considered both swaps and SBSs, such as one constructed based on the correlation between commodities and equities.[689] The Commission notes that it has adopted, jointly with the CFTC, regulations applicable to mixed swaps.[690] The Commission believes that if an SDR accepts a mixed swap, then it should not be required to accept all SBSs in all asset classes to which the mixed swap belongs. For example, if a swap data repository that accepts commodity swaps accepts a mixed swap that is based on the value of both equity and commodity prices, then that swap data repository should not be required to accept all equity SBSs.

Rule 13n-5(b)(1)(iii): Rule 13n-5(b)(1)(iii) requires every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the SDR is complete and accurate.[691] Rule 13n-5(b)(1)(iii) also requires every SDR to clearly identify the source for each trade side and the pairing method (if any) for each transaction in order to identify the level of quality of that

---

689 See DTCC 2, supra note 19.

690 See Further Definition of "Swap," "Security-Based Swap," and "Security-Based Swap Agreement"; Mixed Swaps; Security-Based Swap Agreement Recordkeeping, Exchange Act Release No. 67453 (July 18, 2012), 77 FR 48207 (Aug. 13, 2012).

691 As proposed, Rule 13n-5(b)(1)(iii) would require the SDR's policies and procedures to be "reasonably designed to satisfy [the SDR] by reasonable means that the transaction data that has been submitted to the SDR is accurate." In adopting Rule 13n-5(b)(1)(iii), the Commission is removing the phrase "by reasonable means" to make the rule text clearer. This revision is not intended to substantively change the meaning of the rule.

transaction data.[692] These requirements, which are intended to improve data accuracy, are based on the requirement in Exchange Act Section 13(n)(5)(B) that an SDR "confirm with both counterparties to the security-based swap the accuracy of the data that was submitted."[693] As explained in the Proposing Release, the requirement is based on the premise that an SDR is useful only insofar as the data it retains is accurate.[694] Unreliable SBS data does not enhance transparency. Requiring the SDR to take steps regarding the accuracy of the transaction data submitted to it, should help ensure that the data submitted to the SDR is accurate and agreed to by both counterparties. One commenter suggested that "SDRs should not have additional duties with respect to verifying the accuracy of submission."[695] But because of the statutory requirement and the likelihood that the commenter's approach would lead to less accurate information being provided to the Commission and the marketplace, the Commission is adopting Rule 13n-5(b)(1)(iii) largely as proposed.

As proposed, the rule would require an SDR's policies and procedures to address the accuracy of the transaction data. For purposes of clarification, the rule as adopted requires that an SDR's policies and procedures address both the completeness and accuracy of the transaction data. For example, an SDR's policies and procedures may not be reasonable if they allow data

692 With regard to this requirement, proposed Rule 13n-5(b)(1)(iii) used the phrase "including clearly identifying." In adopting Rule 13n-5(b)(1)(iii), the Commission is changing "including clearly identifying" to "clearly identifies" to make the rule text clearer. This revision is not intended to substantively change the meaning of the rule.

693 15 U.S.C. 78m(n)(5)(B); see also Rule 13n-4(b)(3) (implementing same requirement).

694 Proposing Release, 75 FR at 77327, supra note 2. Accord CPSS-IOSCO Trade Repository Report, supra note 48 (the primary public policy benefit of an SDR is facilitated by the integrity of the information maintained by an SDR).

695 See DTCC 2, supra note 19; see also DTCC 5, supra note 19 (recommending that SDRs be determined to have satisfied their obligation to confirm the accuracy of data under certain circumstances).

elements required under Regulation SBSR to be blank.

The Commission understands that with respect to certain asset classes, third party service providers currently provide an electronic affirmation or matching process prior to the SBS data reaching an SDR.[696] As explained in the Proposing Release, the Commission believes that an SDR can fulfill its responsibilities under Exchange Act Section 13(n)(5)(B), Rule 13n-4(b)(3),[697] and this Rule 13n-5(b)(1)(iii) by developing reasonable policies and procedures that rely on confirmations completed by another entity, such as an SB SEF, clearing agency, or third party vendor, as long as such reliance is reasonable.[698] In order for such policies and procedures establishing reliance on a third party to be reasonable, the SDR would need to oversee and supervise the performance of the third party confirmation provider. This could include having policies and procedures in place to monitor the third party confirmation provider's compliance with the terms of any agreements and to assess the third party confirmation provider's continued fitness and ability to perform the confirmations. It could also include having the SDR or an independent auditor inspect or test the performance of the third party confirmation provider, with the SDR retaining records of such inspections or tests.[699]

For example, if an SBS is traded on an SB SEF, that SB SEF could confirm the accuracy of the transaction data with both counterparties, and the SB SEF could then report the transaction

696 See, e.g., MarkitSERV, supra note 19 (noting that commenter provides confirmation and matching services for post-trade SBS transactions).

697 Rule 13n-4(b)(3) requires SDRs to "[c]onfirm, as prescribed in Rule 13n-5, with both counterparties to the security-based swap the accuracy of the data that was submitted."

698 Proposing Release, 75 FR at 77327-8, supra note 2. See, e.g., MarkitSERV, supra note 19 (The "Commission should encourage the use and reporting of trade data that has been confirmed or verified by both counterparties via an affirmation or a matching process.").

699 Such records would have to be maintained pursuant to Rule 13n-7(b). See Section VI.G.2 of this release discussing SDR recordkeeping.

data to an SDR.[700] The SDR would not need to further substantiate the accuracy of the transaction data, as long as the SDR has a reasonable belief that the SB SEF performed an accurate confirmation. However, the SDR would not comply with Exchange Act Section 13(n)(5)(B), Rule 13n-4(b)(3), and this Rule 13n-5(b)(1)(iii) if the confirmation proves to be inaccurate and the SDR's reliance on the SB SEF for providing accurate confirmations was unreasonable (e.g., the SDR ignored a pattern of inaccuracies or red flags). In certain circumstances, such as where an SBS is transacted by two commercial end-users and is not electronically traded or cleared, and is reported to an SDR by one of those end-users, there may not be any other entity upon which the SDR can reasonably rely to perform the confirmation. In such a case, the SDR would have to contact each of the counterparties to substantiate the accuracy of the transaction data.[701]

Similarly, it would not be reasonable for an SDR to rely on a trade acknowledgment provided by one counterparty to an SBS, without verifying that the other counterparty has agreed to the trade. However, if a party to an SBS timely delivers a trade acknowledgment to both the counterparty and the SDR (or a third party confirmation provider), and the counterparty promptly sends the verification back to both the original party and the SDR (or a third party confirmation provider), then the SDR could use the trade acknowledgment and verification to fulfill its

700 See Proposing Release, 75 FR at 77328, supra note 2.

701 The Commission believes that an SDR should consider making reasonable accommodations, including consideration of any cost burdens, for a non-reporting counterparty of an SBS transaction in connection with any follow-up by the SDR regarding the accuracy of the counterparty's SBS transaction. These accommodations could, for example, include providing means for non-reporting counterparties to substantiate the accuracy of the transaction data without having to incur significant systems or technology costs.

obligations under this rule.[702]

With regard to the requirement that an SDR "clearly identif[y] the source for each trade side and the pairing method (if any) for each transaction,"[703] the Commission notes that transaction data may vary in terms of reliability and such source and pairing method may affect the reliability of the transaction data. As explained in the Proposing Release, some transaction data may be affirmed by counterparties to an SBS, but not confirmed.[704] Some transaction data may be confirmed informally by the back-offices of the counterparties, but the confirmation may not be considered authoritative. Other transaction data may go through an electronic confirmation process, which is considered authoritative by the counterparties. The Commission is adopting this requirement to enable relevant authorities to better determine the reliability of any particular transaction data maintained by an SDR. In order for an SDR's policies and procedures for satisfying itself that the transaction data that has been submitted to the SDR is complete and accurate to be reasonable, the SDR could consider documenting the processes used by third parties to substantiate the accuracy of the transaction data.

Rule 13n-5(b)(1)(iv): Rule 13n-5(b)(1)(iv) requires every SDR to promptly record the transaction data it receives. As explained in the Proposing Release, it is important that SDRs keep up-to-date records so that regulators and counterparties to SBSs will have access to accurate

---

702 Although the Commission proposed rules requiring SBS dealers and major SBS participants to provide trade acknowledgment and verification of SBS transactions, it has not adopted any such rules. See Trade Acknowledgment Release, supra note 133. The Commission may address in a later release whether the procedure described above would comply with any such rules. See MarkitSERV, supra note 19 (stating that "the environment envisaged by the SBS SDR Regulation would greatly benefit from being connected with the confirmation requirement (such as the verified trade acknowledgement record)").

703 Rule 13n-5(b)(1)(iii).

704 Proposing Release, 75 FR at 77328, supra note 2.

and current information.[705] One commenter recommended that SDRs process transactions in "real-time."[706] The commenter did not define "real-time." If, by "real-time," the commenter means that SDRs should begin to record the transaction data as soon as it arrives, then the Commission believes that the rule's requirement to "promptly record the transaction data it receives" is consistent with the commenter's recommendation.

2. Positions (Rule 13n-5(b)(2))

a. Proposed Rule

Proposed Rule 13n-5(b)(2) would require every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to calculate positions for all persons with open SBSs for which the SDR maintains records. Proposed Rule 13n-5(a)(2) defined "position" as the gross and net notional amounts of open SBS transactions aggregated by one or more attributes, including, but not limited to, the (i) underlying instrument, index, or reference entity; (ii) counterparty; (iii) asset class; (iv) long risk of the underlying instrument, index, or reference entity; and (v) short risk of the underlying instrument, index, or reference entity. The Commission requested comment regarding whether it should require SDRs to calculate market values of each position at least daily and provide them to the Commission.[707]

b. Comments on the Proposed Rule

Three commenters submitted comments relating to this proposed rule.[708] One commenter expressed the view that "position data is most valuable when aggregated among all SDRs," and

705 Proposing Release, 75 FR at 77328, supra note 2.

706 See DTCC 2, supra note 19 (stating that SDRs should "process transactions in real-time").

707 See Proposing Release, 75 FR at 77329, supra note 2.

708 See DTCC 2, supra note 19; Markit, supra note 19; Ethics Metrics, supra note 19.

therefore suggested that "one SDR should be given the responsibility to aggregate and maintain the consolidated position data for regulatory purposes."[709]

None of the commenters believed that SDRs should be required to perform valuation calculations at this time. One commenter indicated, however, that providing valuations should be a long-term goal.[710] In this commenter's view, existing SDRs do not have the capability to provide valuations and they are not currently best situated to develop this capability; the short-term goal should be for SDRs to collect, and potentially report, valuations provided by the counterparties to an SBS and/or any relevant third party entities.[711] Another commenter expressed the view that "firms" should provide market values because they invest considerable resources in valuing trades and it would be difficult for an SDR to replicate these activities for all trades.[712] The commenter stated that an "SDR could contract with a market valuation service to provide some values and this would provide some independent valuation, but this will not readily extend to illiquid or structured products."[713] The commenter also stated that while mark-to-market values would be of some use to regulators, without collateral information "the values would not be useful in assessing counterparty risk exposures."[714] A third commenter stated that valuation models for counterparty credit risks and systemic risk should include independent,

709 DTCC 2, supra note 19.

710 Markit, supra note 19 ("[W]e believe that the Commission should work to create a system where SBS SDRs play an important and even primary role not only in ensuring the accuracy of counterparties' swap valuations, but also in performing independent valuations for the counterparties.").

711 Markit, supra note 19 (recognizing that an SDR performing "independent valuations may not be practical given the highly customized and bespoke nature of many swaps").

712 DTCC 2, supra note 19.

713 DTCC 2, supra note 19.

714 DTCC 2, supra note 19.

third party data.[715]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-5(b)(2) and the definition of "position" under Rule 13n-5(a)(2) as proposed. Rule 13n-5(b)(2) requires every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to calculate positions for all persons with open SBSs for which the SDR maintains records.[716] Rule 13n-5(a)(2) defines "position" as the gross and net notional amounts of open SBS transactions aggregated by one or more attributes, including, but not limited to, the (i) underlying instrument, index, or reference entity; (ii) counterparty; (iii) asset class; (iv) long risk of the underlying instrument, index, or reference entity; and (v) short risk of the underlying instrument, index, or reference entity.[717]

As explained in the Proposing Release, position information is important to regulators for

715 Ethics Metrics, supra note 19; see also MarkitSERV, supra note 19 (describing valuations as a possible ancillary service of SDRs).

716 Position data is required to be provided by an SDR to certain entities pursuant to Exchange Act Section 13(n)(5)(G), 15 U.S.C. 78m(n)(5)(G).

717 As stated in the Proposing Release, for purposes of this definition, positions aggregated by long risk would be only for the aggregate notional amount of SBSs in which a market participant has long risk of the underlying instrument, index, or reference entity. Proposing Release, 75 FR at 77326 n.102, supra note 2. Similarly, positions aggregated by short risk would be only for the aggregate notional amount of SBSs in which a market participant has short risk of the underlying instrument, index, or reference entity. For SBSs other than credit default swaps, a counterparty has long risk where the counterparty profits from an increase in the price of the underlying instrument or index, and a counterparty has short risk where the counterparty profits from a decrease in the price of the underlying instrument or index. For credit default swaps, a counterparty has long risk where the counterparty profits from a decrease in the price of the credit risk of the underlying index or reference entity, and a counterparty has short risk where the counterparty profits from an increase in the price of the credit risk of the underlying index or reference entity. As the market develops, the Commission may consider whether to require SDRs calculate positions in another manner and provide those positions to the Commission on a confidential basis.

risk, enforcement, and examination purposes.[718] In addition, having a readily available source of position information can be useful to counterparties in evaluating their own risk. As explained in the Proposing Release, in order to meet its obligation to calculate positions, an SDR could require reporting parties to report the necessary events to calculate positions, or it could have a system that will monitor for and collect such information.[719] In order for the positions to be calculated accurately, an SDR will need to promptly incorporate recently reported transaction data and collected unreported data. It is important that the SDR keep up-to-date records so that relevant authorities and parties to the SBS will have access to accurate and current information. In calculating positions, an SDR is only required to reflect SBS transactions reported to that SDR.

As explained in the Proposing Release, the definition of "position" is designed to be sufficiently specific so that SDRs are aware of the types of position calculations that regulators may require an SDR to provide, while at the same time, provide enough flexibility to encompass the types of position calculations that regulators and the industry will find important as new types of SBSs are developed.[720]

---

718 Proposing Release, 75 FR at 77329, supra note 2.

719 Proposing Release, 75 FR at 77329, supra note 2.

720 Proposing Release, 75 FR at 77326, supra note 2. The Commission notes that Dodd-Frank Act Section 763(h) adds Exchange Act Section 10B, which provides, among other things, for the establishment of position limits for any person that holds SBSs. See 15 U.S.C. 78j-2. Specifically, Exchange Act Section 10B(a) provides that "[a]s a means reasonably designed to prevent fraud and manipulation, the Commission shall, by rule or regulation, as necessary or appropriate in the public interest or for the protection of investors, establish limits (including related hedge exemption provisions) on the size of positions in any security-based swap that may be held by any person." Id. In addition, Exchange Act Section 10B(d) provides that the Commission may establish position reporting requirements for any person that effects transactions in SBSs, whether cleared or uncleared. Id.

While one commenter suggested that "one SDR should be given the responsibility to aggregate and maintain the consolidated position data for regulatory purposes,"[721] the Commission is not mandating the aggregation of position data at one SDR. At this time, the Commission believes that it—rather than any particular registered entity—is in the best position to aggregate data across multiple registered SDRs. As described above, the Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies that will facilitate an accurate interpretation, aggregation, and analysis of SBS data by the Commission.[722] The Commission may revisit this issue as the SBS market evolves.[723]

With regard to valuations, the Commission agrees with commenters[724] that SDRs are not necessarily in the best position to calculate market valuations at this time. While, as one commenter pointed out, an SDR could contract with a market valuation service to provide some values,[725] it is not apparent how useful the valuation would be without collateral information,[726] and a valuation service could not readily provide valuations for illiquid or structured products.[727] Therefore, the Commission is not requiring SDRs to calculate market values of positions daily and to provide them to the Commission. The Commission notes that under Regulation SBSR,

---

721 DTCC 2, supra note 19.

722 See Section VI.D.2.c.ii of this release discussing anticipated Commission proposal pursuant to Rule 13n-4(b)(5).

723 See Section IV of this release for further discussion of consolidating data in one SDR.

724 See DTCC 2, supra note 19; Markit, supra note 19.

725 See DTCC 2, supra note 19.

726 See DTCC 2, supra note 19 (stating that valuations without collateral information would not be useful in assessing counterparty risk exposures).

727 See DTCC 2, supra note 19 (stating that independent market valuations services could not readily value illiquid or structured products).

the counterparties are required to report to an SDR the "data elements included in the agreement between the counterparties that are necessary for a person to determine the market value of the transaction."[728] Accordingly, if necessary, the Commission could calculate some market valuations either in-house or by hiring a third party market valuation service provider. As the market develops and SDRs develop and increase their capabilities, the Commission may revisit this issue.

3. Maintain Accurate Data (Rule 13n-5(b)(3))

a. Proposed Rule

Proposed Rule 13n-5(b)(3) would require every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the transaction data and positions that it maintains are accurate.

b. Comments on the Proposed Rule

Both commenters that submitted comments relating to this proposed rule agreed that SDRs serve an important role in collecting and maintaining accurate SBS data.[729] One commenter stated that "[e]nsuring the accuracy and quality of [data reported to SDRs] will be critical for the Commission's achievement of the regulatory goals of transparency, efficiency and systemic risk mitigation [and that] SDRs will play a pivotal role in ensuring the accuracy of [SBS] data both for public consumption and regulatory reporting purposes."[730] The commenter further noted that "[t]he existence of a number of feedback loops and distribution channels through which data will flow will enable participants to identify, test and correct inaccuracies

[728] See Regulation SBSR Adopting Release, supra note 13 (Rule 901).

[729] See DTCC 2, supra note 19; MarkitSERV, supra note 19; see also DTCC 1*, supra note 20.

[730] MarkitSERV, supra note 19.

and errors."[731] This commenter also indicated that the ability to ensure data accuracy would be influenced by the degree to which such data is utilized by industry participants in other processes. Therefore, that commenter stressed that "SDRs and their affiliates should be permitted to offer a range of ancillary services in addition to their core services of data acceptance and data storage."[732]

Another commenter stated that "the multiple bilateral reconciliations performed between the parties to a trade throughout the life of a trade (and often on an ad hoc basis or only following a dispute), could be replaced by one single reconciliation framework with a shared central record, increasing both [sic] operating efficiency as well as reducing operational risks. The Commission's suggestion for portfolio reconciliation seems well aligned with this, and this would give the direct benefit of improved bilateral portfolio reconciliation processes between the parties."[733] The commenter also stated that "[a]fter each recorded transaction is consummated, the SDR can maintain the validity of the data for that transaction by offering an asset servicing function."[734]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-5(b)(3) as proposed, with one modification. Rule 13n-5(b)(3) requires every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the transaction data and positions that it maintains are complete and accurate. As explained in the Proposing

---

731 MarkitSERV, supra note 19.

732 MarkitSERV, supra note 19.

733 DTCC 2, supra note 19. In the Proposing Release, the Commission stated that the policies and procedures required by Rule 13n-5(b)(3) "could include portfolio reconciliation." Proposing Release, 75 FR at 77330, supra note 2.

734 DTCC 1*, supra note 20.

Release, maintaining accurate records is an integral function of an SDR.[735] As further explained in the Proposing Release, maintaining accurate records requires diligence on the part of an SDR because, among other things, SBSs can be amended, assigned, or terminated and positions change upon the occurrence of new events (such as corporate actions).[736]

As proposed, the rule would require an SDR's policies and procedures to address the accuracy of the transaction data and positions. For purposes of clarification, the rule as adopted requires that an SDR's policies and procedures address both the completeness and accuracy of the transaction data and positions. For example, an SDR's policies and procedures may not be reasonable if they allow data elements required under Regulation SBSR to be blank.

The Commission agrees with one commenter that the degree to which industry participants use the data will influence the accuracy of the data, and that the ability of participants to identify, test, and correct inaccuracies and errors should be encouraged.[737] The Commission also agrees with another commenter that offering an asset servicing function may assist an SDR in maintaining the validity of transaction data and positions.[738] Therefore, the Commission supports the provision by SDRs of voluntary ancillary services, such as asset servicing, that improve the quality of the SBS data in the SDRs.[739] With regard to the comment acknowledging the value to portfolio reconciliation,[740] while portfolio reconciliation is a voluntary ancillary service, the Commission believes, consistent with its position in the

740 See DTCC 2, supra note 19.

Proposing Release,[741] that it is a method that an SDR can use to ensure reasonably the accuracy of the transaction data and positions that the SDR maintains.

4. Data Retention (Rule 13n-5(b)(4))

a. Proposed Rule

Proposed Rule 13n-5(b)(4) would require every SDR to maintain transaction data for not less than five years after the applicable SBS expires and historical positions for not less than five years. Alternatively, the Commission considered, but did not propose a rule, requiring every SDR to maintain transaction data for not less than five years after the applicable SBS expires or ten years after the applicable SBS is executed, whichever is greater, and historical positions for not less than five years.[742] Under either alternative, SDRs would be required to maintain the transaction data and historical positions (i) in a place and format that is readily accessible to the Commission and other persons with authority to access or view such information; and (ii) in an electronic format that is non-rewriteable and non-erasable.[743]

b. Comments on the Proposed Rule

Four commenters submitted comments relating to this proposed rule.[744] The commenters generally agreed with the Commission's proposal that SDRs should maintain SBS data for the life of the SBS contract and a reasonable time period thereafter.[745] Commenters expressed various views on whether the Commission should require SBS data to be maintained in a

741 Proposing Release, 75 FR at 77330, supra note 2 (stating that the policies and procedures required by proposed Rule 13n-5(b)(3) "could include portfolio reconciliation").

745 See, e.g., DTCC 2, supra note 19.

particular format.[746] One commenter stated that "[t]he Proposed Rule should require the retention of electronic records of transactions, including life cycle events. These should be maintained for the life of the contract in order to provide an audit trail to positions and for a reasonable retention period thereafter. An SDR's records should be in an electronically readable format (where available) that allows for application and analysis."[747] The commenter also stated that "certain aggregate data should be maintained beyond the maturity of contracts to provide public availability of time series data."[748]

One commenter to the Temporary Rule Release believed that the Commission should consider requiring SBS transaction data to be recorded and reported pursuant to a single electronic data standard because "[t]his will enable transactions to be reported in an efficient and timely manner in a form readily accessible to all concerned parties."[749] The commenter recommended using Financial products Markup Language (FpML)[750] as that standard.[751] Another commenter recommended that "the Commission require that all SDRs maintain [stored SBS data] in the same format."[752] This commenter further recommended that "the Commission specifically require the SDR to organize and index accurately the transaction data and positions so that the Commission and other users of such information are easily able to obtain the specific

752 Better Markets 1, supra note 19; see also Better Markets 2, supra note 19 (recommending reported data be subject to uniform formatting requirements).

information that they require."[753] Another commenter stated that a "registered SDR should have flexibility to specify acceptable data formats, connectivity requirements and other protocols for submitting information. Market practice, including structure of confirmation messages and detail of economic fields, evolve over time, and the SDR should have the capability to adopt and set new formats."[754]

Another commenter recommended that data be "standardized and use a common terminology."[755] The commenter also recommended that records at SDRs be kept indefinitely because the commenter believed that there is "no technological or practical reason for limiting the retention period."[756] The commenter further recommended that "[a]ny original documents should be scanned."[757]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-5(b)(4) as proposed, with two modifications. Rule 13n-5(b)(4) requires every SDR to maintain transaction data and related identifying information for not less than five years after the applicable SBS expires and historical positions for not less than five years. Rule 13n-5(b)(4) also requires SDRs to maintain the transaction data and historical positions (i) in a place and format that is readily accessible and usable to the Commission and other persons with authority to access or view such information; and (ii) in an electronic format that is non-rewriteable and non-erasable.

Time Period: As explained in the Proposing Release, a five-year retention period is the

---

753 Better Markets 1, supra note 19.

754 DTCC SBSR, supra note 27.

755 Barnard, supra note 19.

756 Barnard, supra note 19.

757 Barnard, supra note 19.

current requirement for the records of clearing agencies and other registered entities, and is the statutory requirement for SB SEFs.[758] Because an SBS transaction creates obligations that continue for a specified period of time, the Commission believes that the transaction data should be maintained for the duration of the SBS, with the five years running after the SBS expires. This requirement applies to all transaction data, including life cycle events that are reported to an SDR pursuant to Regulation SBSR.[759] The Commission believes that transaction data and position data that are older than their respective retention periods will not be materially useful to the Commission or other relevant authorities.

There may be transaction-specific identifying information assigned or used by an SDR, such as a transaction ID[760] or a time stamp,[761] that are not included in the definition of "transaction data." This identifying information should also be maintained for the same time period as the transaction data because it is necessary to understanding the transaction data. Therefore, the Commission is revising the proposed rule to require SDRs to maintain "related identifying information" for not less than five years after the applicable SBS expires. Positions are not tied to any particular SBS transaction; therefore, the Commission requires positions, as

758 Proposing Release, 75 FR at 77330, supra note 2. See also Exchange Act Rule 17a-1, 17 CFR 240.17a-1 (requiring recordkeeping for national securities exchanges, national securities associations, clearing agencies, and the Municipal Securities Rulemaking Board); Exchange Act Section 3D(d)(9), 15 U.S.C. 78c-4(d)(9) (requiring recordkeeping for SB SEFs).

759 See Regulation SBSR Adopting Release, supra note 13 (Rules 901, 905, and 906(a)); see also DTCC 2, supra note 19 (recommending requiring the retention of life cycle events).

760 See Regulation SBSR Adopting Release, supra note 13 (Rule 901(g) requiring a registered SDR to assign a transaction ID to each SBS, or establish or endorse a methodology for transaction IDs to be assigned by third parties).

761 See Regulation SBSR Adopting Release, supra note 13 (Rule 901(f) requiring a registered SDR to time stamp, to the second, its receipt of any information submitted to it pursuant to Rules 901(c), (d), (e), or (i)).

calculated pursuant to Rule 13n-5(b)(2), to be maintained for five years, similar to the record retention requirement for clearing agencies.[762]

The Commission is not adopting the alternative time period that was set forth in the Proposing Release. No comments supported the alternative time period. The Commission is not adopting one commenter's recommendation that data at SDRs be kept indefinitely[763] because the Commission believes that requiring transaction data to be maintained for not less than five years after the applicable SBS expires is more reasonable,[764] and this approach is consistent with the record retention period for other Commission registrants and the statutory requirement for SB SEFs.

One commenter stated that "certain aggregate data should be maintained beyond the maturity of contracts to provide public availability of time series data."[765] Because the Commission is not requiring an SDR to provide the public with historic data (aggregated or otherwise) that it previously publicly disseminated, the Commission does not believe that it is appropriate to require SDRs to maintain aggregate data for public availability. However, SDRs may find it useful to maintain such data if they intend to provide the public with data sets beyond

---

762 See Exchange Act Rule 17a-1, 17 CFR 240.17a-1 (requiring clearing agencies to retain records for five years). See also Exchange Act Section 13(n)(4)(C), 15 U.S.C. 78m(n)(4)(C) (requiring "standards prescribed by the Commission under this subsection [to] be comparable to the data standards imposed by the Commission on clearing agencies in connection with their clearing of security-based swaps"). Clearing Agency Standards Release, 77 FR at 66243 n.270, supra note 138 ("Clearing agencies may destroy or otherwise dispose of records at the end of five years consistent with Exchange Act Rule 17a–6.").

763 See Barnard, supra note 19.

764 See DTCC 2, supra note 19 ("[E]lectronic records of transactions . . . should be maintained for the life of the contract . . . and for a reasonable retention period thereafter.").

765 DTCC 2, supra note 19.

the public dissemination requirements of Regulation SBSR.[766] To the extent that the Commission requires the creation of aggregate data, such as through reports requested pursuant to Rule 13n-8, the data will be for regulatory purposes. Any aggregation of data that is created by an SDR, either at the Commission's direction or voluntarily, must be retained for five years pursuant to Rule 13n-7(b).[767]

Format: As explained in the Proposing Release, the Commission believes that transaction data, including life cycle events, and positions should be maintained in a place and format that is readily accessible to the Commission and other persons with authority to access or view such information.[768] This requirement is important to ensure that SDRs maintain the information in an organized and accessible manner so that users, including relevant authorities and counterparties, can easily obtain the data that would assist them in carrying out their appropriate functions. The Commission also believes that this requirement helps ensure that the information is maintained in a common and easily accessible language, such as a language commonly used in financial markets. The Commission agrees with one commenter's recommendation that an SDR's records should "be in an electronically readable format (where available) that allows for application and analysis,"[769] and therefore the Commission is modifying proposed Rule 13n-5(b)(4) to provide that the information must be in a format that is usable to (1) the Commission and (2) other persons with authority to access or view such

---

766 See Regulation SBSR Adopting Release, supra note 13 (Rule 902).

767 See Section VI.G.2 of this release.

768 Proposing Release, 75 FR at 77330, supra note 2.

769 See DTCC 2, supra note 19 (recommending that an SDR's records "be in an electronically readable format (where available) that allows for application and analysis").

information.[770] The Commission believes that if the information is not in a usable format, then the Commission and others would not have the ability to analyze the information as needed.

Despite comments to the contrary,[771] the Commission is not establishing a specific, prescribed format in which an SDR must maintain transaction data and positions. The Commission expects that the "readily accessible and usable" requirement will be sufficient to cause the format and content of transaction data and historical positions maintained by any individual SDR to be sufficiently robust and complete for relevant persons to fully, accurately, and consistently process the data. The Commission believes that SDRs, working with market participants, will be in a better position to upgrade formats and data elements as needed. Having the Commission establish a specific format could impede the timely collection of data on new types of transactions from the SDRs.[772]

However, in order to oversee the SBS market, it will be necessary for the Commission to

---

770 Rule 13n-5(b)(4). The Commission notes that this change is consistent with other Commission rules. For example, Rule 605(a)(2) of Regulation NMS, 17 CFR 242.605(a)(2), requires reports be "in a uniform, readily accessible, and usable electronic form."

771 See Better Markets 1, supra note 19 (recommending that the Commission require all SDRs to maintain stored SBS data in the same format); ISDA Temp Rule, supra note 28 (recommending that the Commission require SBS transaction data to be reported and recorded pursuant to a single electronic data standard, and using FpML as that standard); Barnard, supra note 19 (recommending that data be "standardized and use a common terminology" and that original documents be scanned); see also Better Markets 2, supra note 19 (recommending that reported data be subject to uniform formatting requirements).

772 See DTCC SBSR, supra note 27 (stating that SDRs "should have flexibility to specify acceptable data formats, connectivity requirements and other protocols for submitting information," and that SDRs "should have the capability to adopt and set new formats" as market practices evolve over time).

aggregate and analyze data across different SDRs.[773] As discussed above, the Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies for providing SBS data to the Commission in order to facilitate an accurate interpretation, aggregation, and analysis by the Commission of SBS data submitted to it by different SDRs.[774]

The requirement for transaction data and historical positions to be maintained in an electronic format that is non-rewriteable and non-erasable[775] is consistent with the record retention format applicable to electronic broker-dealer records.[776] As explained in the Proposing Release, this requirement would prevent the maintained information from being modified or removed without detection.[777]

The Commission is not specifically requiring that SDRs organize and index the transaction data and positions that they collect and maintain.[778] The Commission believes that

---

773 See Section VI.D.2.c.ii of this release discussing aggregation of data across multiple registered SDRs by the Commission.

774 See Section VI.D.2.c.ii of this release discussing Rule 13n-4(b)(5) (direct electronic access).

775 Rule 13n-5(b)(4).

776 See Exchange Act Rule 17a-4(f)(2)(ii)(A), 17 CFR 240.17a-4(f)(2)(ii)(A). In Electronic Storage of Broker-Dealer Records, Exchange Act Release No. 47806 (May 7, 2003), 68 FR 25281 (May 12, 2003), the Commission stated, among other things, that a broker-dealer would not violate Exchange Act Rule 17a-4(f)(2)(ii)(A) "if it used an electronic storage system that prevents the overwriting, erasing or otherwise altering of a record during its required retention period through the use of integrated hardware and software control codes." The Commission incorporates this interpretation into Rule 13n-5(b)(4).

777 Proposing Release, 75 FR at 77330, supra note 2.

778 See Proposing Release, 75 FR at 77331, supra note 2 (asking whether the Commission should adopt a requirement that SDRs organize and index transaction data and positions "so that the Commission and other users of such information are easily able to obtain the specific information that they require"); Better Markets 1, supra note 19.

the requirement in Rule 13n-5(b)(4) that each SDR must maintain transaction data and related identifying information for not less than five years after the applicable SBS expires and historical positions for not less than five years, in a place and format that is "readily accessible and usable to the Commission and other persons with authority to access or view such information" incorporates the requirement that the data must be organized in a way that allows the data to be readily obtained or accessed by the Commission and other appropriate persons – data is not readily accessible and usable if it is not organized in a way that allows the data to be obtained quickly and easily. Further, whether users of information maintained by an SDR, other than the Commission, are able to easily obtain such information is also addressed by Rule 13n-4(c)(1)(iii), which requires, among other things, an SDR to establish, monitor on an ongoing basis, and enforce clearly stated objective criteria that would permit fair, open, and not unreasonably discriminatory access to data maintained by the SDR.[779]

With respect to the Commission's ability to obtain the specific information it requires, the Commission believes that several other statutory and regulatory requirements under the Exchange Act also address this issue. For example, the Commission will have direct electronic access to the transaction data and positions pursuant to Exchange Act Section 13(n)(5)(D)[780] and Rule 13n-4(b)(5).[781] The Commission expects to be able to query and analyze the data as

779 See Section VI.D.3.a of this release discussing Rule 13n-4(c)(1)(iii).

780 15 U.S.C. 78m(n)(5)(D).

781 See Sections VI.D.1 and VI.D.2 of this release discussing Rules 13n-4(a)(5) and 13n-4(b)(5). Rule 13n-4(b)(5) requires each SDR to provide direct electronic access to the Commission or its designees; "direct electronic access" is defined in Rule 13n-4(a)(5) to mean access, which shall be in a form and manner acceptable to the Commission, to data stored by an SDR in an electronic format and updated at the same time as the SDR's data is updated so as to provide the Commission with the ability to query or analyze the data in the same manner that the SDR can query or analyze the data.

necessary without imposing an indexing requirement at this time.[782] In addition, Rule 13n-8, discussed below, requires each SDR to promptly report to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines to be necessary or appropriate for the Commission to perform the duties of the Commission under the Exchange Act and the rules and regulations thereunder.[783]

5. Controls to Prevent Invalidation (Rule 13n-5(b)(5))

a. Proposed Rule

Proposed Rule 13n-5(b)(5) would require every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the SDR.

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[784] Both commenters seemed to agree with this proposal.[785] One commenter stated that an SDR "should be able to offer life cycle event processing and asset servicing activities" that may lead to "an update or modification to the records in the SDR," with the consent of both parties.[786]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-5(b)(5) as

782 Although the Commission is not imposing an indexing requirement, SDRs are required under Regulation SBSR to utilize a transaction ID for each SBS. The transaction ID is designed to allow the Commission and other relevant persons to link related activity, such as life cycle events, to the original transaction. See Regulation SBSR Adopting Release, supra note 13 (Rule 901).

783 See Section VI.H of this release discussing Rule 13n-8.

784 See DTCC 2, supra note 19; MarkitSERV, supra note 19.

785 DTCC 2, supra note 19 (supporting "the approach that records are not invalidated by the actions of the SDR"); MarkitSERV, supra note 19.

786 DTCC 2, supra note 19.

proposed. Rule 13n-5(b)(5) requires every SDR to establish, maintain, and enforce written policies and procedures reasonably designed to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the SDR. The terms of SBSs can be the result of negotiation between the counterparties, and the Commission believes that these terms should not be modified or invalidated without the full consent of the counterparties.[787]

The Commission agrees with one commenter's view that an SDR should be able to offer life cycle event processing and asset servicing activities that may lead to an updating of the records in the SDR, with the consent of both parties.[788] In such a case, it is not the SDR that is modifying the SBS, but the parties to the SBS who are doing so (or the parties are submitting information regarding the SBS that relates to the terms of the original contract); the SDR is simply updating its records to reflect the changes to the SBS made by the parties to the SBS, or to reflect life cycle events that have occurred and the parties to the SBS agree should be reflected in the updated records of the SDR. However, whenever an SDR updates its records, it must retain the data as it existed prior to the update pursuant to Rule 13n-5(b)(4), which is discussed above.[789]

If the reporting party reports inconsistent data, such as where the reporting party reports that the SBS is a standard SBS, but also reports a non-standard provision, the SDR can correct the inconsistency if it gives appropriate notice to both parties.[790] In formulating its policies and

787 See Proposing Release, 75 FR at 77331, supra note 2.

788 See DTCC 2, supra note 19.

789 See Section VI.E.4 of this release discussing Rule 13n-5(b)(4).

790 The Commission believes that an SDR's policies and procedures would not necessarily be reasonable if they authorize the SDR to "deem" a user to have effectively consented to

procedures required by Rule 13n-5(b)(5), an SDR may want to consider providing the parties with notice of the inconsistency as soon as practicable.

6. Dispute Resolution Procedures (Rule 13n-5(b)(6))

a. Proposed Rule

Proposed Rule 13n-5(b)(6) would require every SDR to establish procedures and provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.[791]

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[792] One commenter supported this proposed rule, stating that it is a key step in the effort to have accurate data at the SDR.[793] The commenter stated that a reporting party and a non-reporting party may disagree on the terms of a reported SBS transaction and the reporting party may refuse to correct the erroneously reported transaction information.[794] The commenter urged the Commission to

---

the SDR's changes if the user merely utilizes the SDR system after such change. At a minimum, the SDR should inform both parties of the change. The Commission notes that Rule 905 of Regulation SBSR establishes procedures for correcting errors in data reported to an SDR. See Regulation SBSR Adopting Release, supra note 13 (Rule 905). Additionally, as discussed in Section VI.E.6 of this release, Rule 13n-5(b)(6) requires SDRs to establish procedures and provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.

791 In a separate release, the Commission is adopting rules regarding the correction of errors in SBS information maintained by an SDR in association with requirements under Dodd-Frank Act Section 763(i). See Regulation SBSR Adopting Release, supra note 13 (Rules 905 and 907(a)(3)).

792 See DTCC 2, supra note 19; MFA 1, supra note 19; see also MFA SBSR, supra note 27.

793 MFA 1, supra note 19; see also MFA SBSR, supra note 27.

794 MFA SBSR, supra note 27.

require the SDR to review promptly the disputed data with the parties.[795] The other commenter stated that it believed that "an SDR should be in a position to identify disputes or unconfirmed data as part of its process to confirm the data with both parties. However, only the parties to a transaction can resolve any dispute as to the terms of the trade."[796] Where a trade comes through a third party service provider that "act[s] directly as an affirmation, confirmation or verification platform and already utilizes dispute resolution workflows," the commenter did "not support a Proposed Rule that would require that the SDR [build] processes to replicate these services."[797] The commenter stated that "an SDR can make the quality of the data or disputed trades visible to a firm's prudential regulator and this would act as an incentive to timely resolution."[798]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-5(b)(6) as proposed. Rule 13n-5(b)(6) requires every SDR to establish procedures and provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR. As the Commission explained in the Proposing Release, the data maintained by an SDR will be used by relevant authorities and counterparties.[799] Parties, therefore, should have the ability to dispute the accuracy of the data maintained by an SDR regarding their SBSs. SDRs providing the means to resolve disputes should enhance data

---

795 MFA SBSR, supra note 27.

796 DTCC 2, supra note 19.

797 DTCC 2, supra note 19.

798 DTCC 2, supra note 19.

799 Proposing Release, 75 FR at 77331, supra note 2. In some cases, the data maintained by the SDR may be considered by the counterparties to be the legal or authoritative record of the SBS. However, this is due to the consent of the counterparties. Simply reporting an SBS to an SDR does not affect the legal terms of the SBS. See Section III.A of this release discussing the service of maintaining legally binding records.

quality and integrity.

The Commission agrees with one commenter that only the parties to a dispute can resolve it,[800] but the Commission believes that SDRs can provide processes to facilitate resolution, which would improve the quality and accuracy of SBS data. The Commission does not believe that this requirement mandates that an SDR replicate the services of third party service providers, such as providing matching platforms.[801] Having both parties verify the SBS data through a third party service provider prior to submitting it to an SDR will ensure a great deal of accuracy in the data maintained by the SDR. However, there may be instances where disputes still occur, such as where a party disagrees with a position reflected in an SDR's records, where one party realizes it mistakenly verified a transaction and the other party refuses to submit or verify a correction, or where a transaction has been amended, but one party refuses to report or verify the amendment. In such instances, the Commission believes that the SDR should provide a party with the ability to raise the dispute, and have some sort of process to resolve the dispute. As with the other SDR Rules, an SDR could rely on a third party service provider to perform the SDR's obligation to provide a dispute resolution process. If it does so, in order for such a process to be "reasonably designed," the SDR would have to oversee and supervise the performance of the third party service provider. The Commission agrees with one commenter[802] that to the extent that Rule 13n-5(b)(6) makes disputes visible to regulators, the rule should incentivize parties to resolve them. In any event, the Commission believes that the rule will further increase the quality and accuracy of SBS data.

800 See DTCC 2, supra note 19.

801 See DTCC 2, supra note 19

802 See DTCC 2, supra note 19.

7. Data Preservation After an SDR Ceases to Do Business (Rule 13n-5(b)(7))

a. Proposed Rule

Proposed Rule 13n-5(b)(7) would require an SDR, if it ceases to do business, or ceases to be registered as an SDR, to continue to preserve, maintain, and make accessible the transaction data and historical positions required to be collected, maintained, and preserved by Rule 13n-5 in the manner required by the Exchange Act and the rules and regulations thereunder for the remainder of the period required by this rule.[803]

b. Comments on the Proposed Rule

The Commission received no comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-5(b)(7) as proposed. Rule 13n-5(b)(7) requires an SDR, if it ceases to do business, or ceases to be registered pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder, to continue to preserve, maintain, and make accessible the transaction data and historical positions required to be collected, maintained, and preserved by Rule 13n-5 in the manner required by the Exchange Act and the rules and regulations thereunder (including in a place and format that is readily accessible and usable to the Commission and other persons with authority to access or view such information, in an electronic format that is non-rewriteable and non-erasable, and in a manner that protects confidentiality and accuracy) for the remainder of the period required by Rule 13n-5 (i.e., not less than five years after the applicable SBS expires for transaction data and not less than five years for historical positions). As the Commission explained in the Proposing Release, given the

---

[803] As noted in the Proposing Release, this proposed requirement was based on Exchange Act Rule 17a-4(g), 17 CFR 240.17a-4(g), which applies to books and records of broker-dealers. Proposing Release, 75 FR at 77332 n.128, supra note 2.

importance of the records maintained by an SDR to the functioning of the SBS market, an SDR ceasing to do business could cause serious disruptions in the market should the information it maintains becomes unavailable.[804]

8. Plan for Data Preservation (Rule 13n-5(b)(8))

a. Proposed Rule

Proposed Rule 13n-5(b)(8) would require an SDR to make and keep current a plan to ensure that the transaction data and positions that are recorded in the SDR continue to be maintained in accordance with proposed Rule 13n-5(b)(7).

b. Comments on the Proposed Rule

The Commission received no comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-5(b)(8) as proposed. Rule 13n-5(b)(8) requires an SDR to make and keep current a plan to ensure that the transaction data and positions that are recorded in the SDR continue to be maintained in accordance with Rule 13n-5(b)(7), which shall include procedures for transferring the transaction data and positions to the Commission or its designee (including another registered SDR).[805] As the Commission explained in the Proposing Release, given the importance of the records maintained by an SDR to the functioning of the SBS market, if an SDR ceases to do business, the absence of a plan to transfer information could

---

804 Proposing Release, 75 FR at 77332, supra note 2.

805 In addition, Item 45 of Form SDR requires each SDR to attach as an exhibit to its Form SDR "a plan to ensure that the transaction data and position data that are recorded in the applicant continue to be maintained after the applicant withdraws from registration as [an SDR], which shall include procedures for transferring the transaction data and position data to the Commission or its designee (including another registered [SDR])." This item implements Rule 13n-5(b)(8).

cause serious disruptions.[806] The Commission expects that an SDR's plan would establish procedures and mechanisms so that another entity would be in the position to maintain this information after the SDR ceases to do business or ceases to be registered pursuant to Exchange Act Section 13(n)[807] and the rules and regulations thereunder.

F. Automated Systems (Rule 13n-6)

1. Proposed Rule

The Commission proposed Exchange Act Rule 13n-6 to provide standards for SDRs with regard to their automated systems' capacity, resiliency, and security. The proposed rule was designed to be comparable to the standards applicable to SROs, including exchanges and clearing agencies,[808] and market information dissemination systems, pursuant to the Commission's Automation Review Policy ("ARP") program[809] and rules applicable to significant-volume alternative trading systems ("ATSs").[810]

807 15 U.S.C. 78m(n).

808 See Automated Systems of Self-Regulatory Organizations, Exchange Act Release No. 27445 (Nov. 16, 1989), 54 FR 48703 (Nov. 24, 1989) ("ARP I Release"); Automated Systems of Self-Regulatory Organizations, Exchange Act Release No. 29185 (May 9, 1991), 56 FR 22490 (May 15, 1991) ("ARP II Release") (collectively, "ARP Policy Statements").

809 See ARP II Release, 56 FR at 22491 n.4, supra note 808 (stating that the Commission's automated review policies are intended to "encompass SRO systems that disseminate transaction and quotation information"); see also ARP I Release, 54 FR at 48704, supra note 808 (discussing that "the SROs have developed and continue to enhance automated systems for the dissemination of transaction and quotation information").

810 See Regulation of Exchanges and Alternative Trading Systems, Exchange Act Release No. 40760 (Dec. 8, 1998), 63 FR 70844 (Dec. 22, 1998) (adopting Rule 301(b)(6) of Regulation ATS, 17 CFR 242.301(b)(6)). Rule 301(b)(6) has since been superseded in part by Regulation SCI, 17 CFR 242.1000 – 1007.

2. Comments on the Proposed Rule

Three commenters submitted comments relating to proposed Rule 13n-6.[811] One commenter "support[ed] the Commission's intent" behind the rule, but suggested several specific changes.[812] The commenter also stated that it "has always placed a high priority on maintaining business resiliency," including having "in place multiple fully staffed data and operations centers in diverse regions of the country, each capable of handling [the commenter's] entire business."[813] The commenter stated that it "performs both data center and operational failover tests every year" and "[d]atacenter recovery tests are performed at least six times a year in various configurations, and there are more than two dozen operational failover tests each year, ranging from a single department failover, to an operational recovery involving more than 400 staff."[814] The commenter believed that "[t]hese capabilities are fundamental to any registration as an SDR."[815] The commenter further stated that "'[g]iven the importance of SDRs to the regulatory and systemic risk oversight of the financial markets and the important role they will play in

811 See DTCC 2, supra note 19; Deutsche Temp Rule, supra note 28; ISDA, supra note 19; see also DTCC 3, supra note 19; DTCC 5, supra note 19.

812 See DTCC 2, supra note 19 (stating that business continuity provisions should include multiple redundant systems, supporting "the Commission in requiring robust operational capabilities of an SDR," and stating that SDRs should "maintain multiple levels of operational redundancy"); DTCC 3, supra note 19 (recommending that SDRs "maintain multiple levels of operational redundancy and data security"); DTCC 5, supra note 19 (recommending (1) granting an SDR flexibility to make contingency and disaster recovery plans part of a parent's or affiliate's disaster recovery operations, (2) revising proposed Rule 13n-6(b)(2) to require an external audit only once every five years when the SDR's objective review is performed by an internal department rather than every year, and (3) revising proposed Rule 13n-6(b)(3) to be less prescriptive in its time frames and grant more flexibility to an SDR for reporting outages).

813 DTCC 2, supra note 19.

814 DTCC 2, supra note 19.

815 DTCC 2, supra note 19.

providing market transparency, a lack of robust resiliency and redundancy in operations should disqualify an entity from registering as an SDR."[816]

The second commenter suggested that the Commission "take all possible steps to ensure that identifying information is protected by SDRs and the [Commission]."[817] The third commenter believed that SDRs, among other entities, should "have proper safeguards and barriers in place in order to ensure the security of data, prevent cyber-crime and safeguard against inappropriate access," and that such entities should "make the appropriate level of investment to design, implement and continually review their information barriers . . . in order to protect markets and market participants."[818] The commenter also believed that "[i]t is equally important that regulators ensure that the viability and rigor of these information barriers . . . are reviewed and audited as they are at all other market participants."[819]

3. Final Rule

After considering the comments received on this proposal, the Commission is not adopting the more specific requirements of proposed Rule 13n-6(b)(1),[820] but is instead adopting the core policies and procedures requirement. Thus, final Rule 13n-6 is consistent with, but is

---

816 DTCC 2, supra note 19; see also DTCC 3, supra note 19 (recommending that "a failure to demonstrate robust resiliency, security and redundancy in operations should preclude an entity from registering as an SDR").

817 Deutsche Temp Rule, supra note 28 (stating that the Commission should use its authority under Dodd-Frank Act Section 763 to "impose strict requirements on the handling, disclosure and use by the SDRs of identifying information and on the operational and technological measures that must be employed by SDRs to protect such information from disclosure (including by way of unauthorized access)").

818 ISDA, supra note 19 ("[T]here is a real need for [SDRs] to have robust policies, procedures and systems in place to address the information barrier and privacy issue.").

819 ISDA, supra note 19.

820 Rule 13n-6 is being promulgated under Exchange Act Sections 13(n)(4)(B), 13(n)(7)(D), and 13(n)(9). See 15 U.S.C. 78m(n)(4)(B), 78m(n)(7)(D), and 78m(n)(9).

more general and flexible than, proposed Rule 13n-6. Final Rule 13n-6 provides in full that "[e]very security-based swap data repository, with respect to those systems that support or are integrally related to the performance of its activities, shall establish, maintain, and enforce written policies and procedures reasonably designed to ensure that its systems provide adequate levels of capacity, integrity, resiliency, availability, and security."[821] The Commission is not adopting proposed Rules 13n-6(b)(2), (3), and (4).[822]

The Commission is not adopting Rule 13n-6 as proposed because, after proposing Rule 13n-6, the Commission considered the need for an updated regulatory framework for certain systems of the U.S. securities trading markets and adopted Regulation Systems Compliance and Integrity ("Regulation SCI").[823] Regulation SCI supersedes the Commission's ARP Policy Statements and Rule 301(b)(6) of Regulation ATS (with respect to significant-volume ATSs that

---

821 Rule 13n-6 is similar to the first sentence in proposed Rule 13n-6(b)(1). As adopted, the words "integrity" and "availability" have been added. The addition is consistent with, and captures concepts in, the rule as proposed, which implicitly addressed both integrity and availability. See Proposing Release, 75 FR at 77370, supra note 2 (proposing requirement that an SDR has policies and procedures that, at a minimum, (i) establish reasonable current and future capacity estimates; (ii) conduct periodic capacity stress tests of critical systems to determine such systems' ability to process transactions in an accurate, timely, and efficient manner; (iii) develop and implement reasonable procedures to review and keep current its system development and testing methodology; (iv) review the vulnerability of its systems and data center computer operations to internal and external threats, physical hazards, and natural disasters; and (v) establish adequate contingency and disaster recovery plans). These edits also make Rule 13n-6 more consistent with Rule 1001(a)(1) of Regulation SCI, 17 CFR 242.1000(a)(1) (requiring each SCI entity to "establish, maintain, and enforce written policies and procedures reasonably designed to ensure that its SCI systems and, for purposes of security standards, indirect SCI systems, have levels of capacity, integrity, resiliency, availability, and security, adequate to maintain the SCI entity's operational capability and promote the maintenance of fair and orderly markets").

822 In addition, the Commission is not adopting proposed Rules 13n-6(a), (c), and (d) because they are not applicable without proposed Rules 13n-6(b)(2), (3), and (4).

823 See Regulation Systems Compliance and Integrity, Exchange Act Release No. 73639 (Nov. 19, 2014), 79 FR 72252 (Dec. 5, 2014) ("Regulation SCI Adopting Release").

trade NMS stocks[824] and non-NMS stocks), on which proposed Rule 13n-6 was largely based. The Regulation SCI Adopting Release includes a discussion of comment letters addressing the application of Regulation SCI to SDRs.[825]

In light of this development, the Commission believes that Rule 13n-6, as adopted, better sets an appropriate core framework for the policies and procedures of SDRs with respect to automated systems. While this framework responds to comments about the application of Regulation SCI to SDRs and is broadly consistent with Regulation SCI, Rule 13n-6 does not apply Regulation SCI and its specific obligations to SDRs.[826] In adopting Regulation SCI, the Commission explained that it will "monitor and evaluate the implementation of Regulation SCI, the risks posed by the systems of other market participants, and the continued evolution of the securities markets, such that it may consider, in the future, extending the types of requirements in Regulation SCI to additional categories of market participants."[827] Consistent with this approach and in recognition of the importance of SDRs as the primary repositories of SBS trade information, the Commission may consider the application of any features of Regulation SCI to SDRs in the future. In addition, to the extent that an SDR may share systems with an SCI entity (e.g., an affiliated clearing agency), such systems may meet the definition of "indirect SCI systems" of the SCI entity, as defined in Regulation SCI, and certain provisions of Regulation

---

824 See 17 CFR 242.600 (defining "NMS stock").

825 Regulation SCI Adopting Release, 79 FR at 72363-4, supra note 823.

826 In preparing their policies and procedures, SDRs may consider whether to incorporate aspects of Regulation SCI that may be appropriate for their particular implementation of Rule 13n-6, including where an SDR is related by virtue of its corporate structure to an entity subject to Regulation SCI.

827 Regulation SCI Adopting Release, 79 FR at 72259, supra note 823.

SCI may apply.[828]

Rule 13n-6 applies to "systems that support or are integrally related to the performance of [each SDR's] activities."[829] This includes automated systems that support or are integrally related to performing both core and ancillary services, including functions that may be required by Regulation SBSR, such as public dissemination of SBS information.[830] To the extent that an SDR uses a third party service provider to perform the SDR's functions, the SDR's policies and procedures required by Rule 13n-6 continue to apply; an SDR cannot absolve itself of its responsibilities under this rule through the use of a third party service provider.

The Commission believes that Rule 13n-6 addresses commenters' concerns about operational capabilities and protecting information.[831] With respect to comments suggesting specific substantive requirements,[832] the Commission believes that a more measured approach is to adopt a rule that requires SDRs to adopt policies and procedures reasonably designed to ensure that they have adequate levels of capacity, integrity, resiliency, availability, and security. Consistent with the comments,[833] an SDR may want to consider, in developing its policies and procedures required by Rule 13n-6, whether to include the establishment and maintenance of

---

828 See Regulation SCI, 17 CFR 242.1000-1007. Rule 1000 of Regulation SCI defines "indirect SCI systems" as "any systems of, or operated by or on behalf of, an SCI entity that, if breached, would be reasonably likely to pose a security threat to SCI systems."

829 Rule 13n-6.

830 See Regulation SBSR Adopting Release, supra note 13; see also ARP II Release, 56 FR at 22491 n.4, supra note 808 (stating that ARP standards encompass "systems that disseminate transaction and quotation information").

831 See DTCC 2, supra note 19; Deutsche Temp Rule, supra note 28; ISDA, supra note 19.

832 See DTCC 2, supra note 19; DTCC 3, supra note 19; Deutsche Temp Rule, supra note 28.

833 See DTCC 2, supra note 19; DTCC 3, supra note 19; Deutsche Temp Rule, supra note 28.

multiple redundant systems and data and operations centers in diverse regions of the country,[834] periodic data center and operational failover tests,[835] robust operational capabilities,[836] and multiple levels of operational redundancy and data security.[837] The Commission also believes that an SDR's policies and procedures required by Rule 13n-6 can be "a part of or consistent with a parent or affiliate entity's disaster recovery operations."[838] The Commission further believes that Rule 13n-6 is consistent with one commenter's recommendation that SDRs should "have proper safeguards and barriers in place in order to ensure the security of data, prevent cyber-crime and safeguard against inappropriate access."[839] Additionally, the Commission believes that to comply with Rule 13n-6, SDRs will likely need to "make the appropriate level of investment to design, implement and continually review their information barriers . . . in order to protect markets and market participants."[840]

G. SDR Recordkeeping (Rule 13n-7)

The Commission proposed Rule 13n-7 to specify the books and records requirements applicable to SDRs. After receiving no comments on this proposal, the Commission is adopting Rule 13n-7 as proposed, with some technical modifications.

---

834 See DTCC 2, supra note 19.

835 See DTCC 2, supra note 19.

836 See DTCC 2, supra note 19; Deutsche Temp Rule, supra note 28 (commenting on the need for "strict requirements . . . on the operational and technological measures . . . employed by SDRs to protect [reported data] from disclosure (including by way of unauthorized access)").

837 See DTCC 2, supra note 19; DTCC 3, supra note 19.

838 DTCC 5, supra note 19.

839 ISDA, supra note 19.

840 ISDA, supra note 19.

1. Records to be Made by SDRs (Rule 13n-7(a))

a. Proposed Rule

Proposed Rule 13n-7(a) would require every SDR to make and keep current certain books and records relating to its business.

b. Comments on the Proposed Rule

The Commission received no comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-7(a)(1) as proposed. Rule 13n-7(a)(1) requires every SDR to make and keep current "a record for each office listing, by name or title, each person at that office who, without delay, can explain the types of records the security-based swap data repository maintains at that office and the information contained in those records." The Commission continues to believe that SDR recordkeeping practices may vary in ways ranging from format and presentation to the name of a record.[841] Therefore, as explained in the Proposing Release, the Commission believes that each SDR must be able to promptly explain how it makes, keeps, and titles its records.[842] To comply with this rule, an SDR may identify more than one person and list which records each person is able to explain. Because it may be burdensome for an SDR to keep this record current if it lists each person by name, an SDR may satisfy this requirement by recording the persons capable of explaining the SDR's records by either name or title.

The Commission is also adopting Rule 13n-7(a)(2) as proposed. Rule 13n-7(a)(2) requires every SDR to make and keep current "a record listing each officer, manager, or person

841 See Proposing Release, 75 FR at 77337, supra note 2.

842 Proposing Release, 75 FR at 77337, supra note 2.

performing similar functions of the security-based swap data repository responsible for establishing policies and procedures that are reasonably designed to ensure compliance with the [Exchange] Act and the rules and regulations thereunder." This rule is intended to assist securities regulators by identifying individuals responsible for designing an SDR's compliance policies and procedures.

The purpose of both Rules 13n-7(a)(1) and 13n-7(a)(2) is to assist the Commission in its inspection and examination function.[843] These two requirements are based on Exchange Act Rules 17a-3(a)(21) and (22), respectively, which are applicable to broker-dealers.[844] It is important for the Commission's examiners to have the ability to find quickly what records are maintained in a particular office and who is responsible for establishing particular policies and procedures of an SDR.

2. Records to be Preserved by SDRs (Rule 13n-7(b))

a. Proposed Rule

Proposed Rule 13n-7(b) would require every SDR to keep and preserve copies of its documents, keep such documents for a period of not less than five years, the first two in a place that is immediately available to Commission staff, and promptly furnish such documents to Commission staff upon request.

b. Comments on the Proposed Rule

The Commission received no comments relating to this proposed rule.

---

843 See Exchange Act Section 13(n)(2), 15 U.S.C. 78m(n)(2) (stating that "[e]ach registered security-based swap data repository shall be subject to inspection and examination by any representative of the Commission"); see also Rule 13n-4(b)(1) (implementing same requirement).

844 17 CFR 240.17a-3(a)(21) and (22).

c. Final Rule

The Commission is adopting Rule 13n-7(b) as proposed, with one technical modification. Rule 13n-7(b)(1) requires every SDR to "keep and preserve at least one copy of all documents, including all documents and policies and procedures required by the [Exchange] Act and the rules and regulations thereunder, correspondence, memoranda, papers, books, notices, accounts, and other such records as shall be made or received by it in the course of its business as such." Rule 13n-7(b)(2) requires every SDR to "keep all such documents for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination."[845] Rule 13n-7(b)(3) requires every SDR to, "upon request of any representative of the Commission, promptly furnish[846] to the possession of such representative copies of any documents required to be kept and preserved by it pursuant to sections (a) and (b) of this [rule]."

Rule 13n-7(b) is based on Exchange Act Rule 17a-1, which is the recordkeeping rule for national securities exchanges, national securities associations, registered clearing agencies, and

845 The Commission is making a technical modification to Rule 13n-7(b)(2) from the proposal. As proposed, the rule referred to "the staff of the Commission." As adopted, the rule instead refers to "representatives of the Commission" for consistency with other rules being adopted in this release. See Rule 13n-4(b)(1) and Rule 13n-7(b)(3) (both referring to "any representative of the Commission").

846 For purposes of Rule 13n-7(b)(3), the Commission interprets the term "promptly" to mean making reasonable efforts to produce records that are requested by Commission representatives during an examination without delay. The Commission believes that in many cases, an SDR could, and therefore will be required to, furnish records immediately or within a few hours of a request. The Commission expects that only in unusual circumstances would an SDR be permitted to delay furnishing records for more than 24 hours. Accord Registration of Municipal Advisors, Exchange Act Release No. 70462 (Sept. 20, 2013), 78 FR 67468, 67578-67579 n.1347 (Nov. 12, 2013) (interpreting the term "prompt" in the context of Exchange Act Rule 15Ba1-8(d)).

the Municipal Securities Rulemaking Board.[847] As explained in the Proposing Release, Rule 13n-7(b) is intended to set forth the recordkeeping obligation of SDRs and thereby facilitate implementation of the broad inspection authority given to the Commission in Exchange Act Section 13(n)(2).[848] This rule includes all electronic documents and correspondence, such as data dictionaries, e-mails and instant messages, which should be furnished in their original electronic format.

3. Recordkeeping After an SDR Ceases to do Business (Rule 13n-7(c))

a. Proposed Rule

Proposed Rule 13n-7(c) would require an SDR that ceases doing business, or ceases to be registered as an SDR, to continue to preserve, maintain, and make accessible the records/data required to be collected, maintained, and preserved by Rule 13n-7 in the manner required by this rule and for the remainder of the period required by this rule.[849]

b. Comments on the Proposed Rule

The Commission received no comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-7(c) as proposed, with a technical modification. Rule 13n-7(c) requires an SDR that ceases doing business, or ceases to be registered pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder, to continue to preserve,

---

847 17 CFR 240.17a-1.

848 15 U.S.C. 78m(n)(2); see also Rule 13n-4(b)(1) (implementing same requirement); Proposing Release, 75 FR at 77338, supra note 2.

849 This requirement is based on Exchange Act Rule 17a-4(g), 17 CFR 240.17a-4(g), which applies to books and records of broker-dealers.

maintain, and make accessible the records and data[850] required to be collected, maintained, and preserved by Rule 13n-7 in the manner required by this rule and for the remainder of the period required by this rule. This requirement is intended to allow Commission representatives to perform effective inspections and examinations of an SDR pursuant to Exchange Act Section 13(n)(2).[851] In addition, the Commission notes that, as discussed in Section VI.B of this release regarding Rule 13n-2, an SDR that ceases to exist or do business as an SDR is required to file a withdrawal from registration on Form SDR pursuant to Rule 13n-2(b) and designate on Item 12 of Form SDR a custodian of books and records.

An SDR may wish to consider establishing contingency plans so that another entity will be in the position to maintain the SDR's records and data after the SDR ceases to do business. The Commission notes that the requirement in Rule 13n-5(b)(8) for an SDR to make and keep current a plan to ensure that the SDR's transaction data and positions are maintained after it ceases doing business or ceases to be registered[852] does not expressly extend to a plan for maintaining all of the records and data required to be maintained pursuant to Rule 13n-7, but that plan could also include such records and data.

4. Applicability (Rule 13n-7(d))

a. Proposed Rule

Proposed Rule 13n-7(d) provided that Rule 13n-7 "does not apply to data collected and maintained pursuant to Rule 13n-5."

---

850 The Commission is making a technical amendment to Rule 13n-7(c) from the proposal. As proposed, the rule referred to "records/data." The rule being adopted refers to "records and data" for clarity.

851 15 U.S.C. 78m(n)(2); see also Rule 13n-4(b)(1) (implementing same requirement).

852 See Section VI.E.8 of this release discussing Rule 13n-5(b)(8).

b. Comments on the Proposed Rule

The Commission received no comments relating to this proposed rule.

c. Final Rule

The Commission is adopting Rule 13n-7(d) as proposed, with a technical modification. Rule 13n-7(d) states that Rule 13n-7 "does not apply to transaction data and positions collected and maintained pursuant to Rule 13n-5."[853] As explained in the Proposing Release, the purpose of this rule is to clarify that the requirements in Rule 13n-7 are designed to capture those records of an SDR other than the transaction data, positions, and market data that would be required to be maintained in accordance with Rule 13n-5, as discussed in Section VI.E of this release.[854] The requirements of Rule 13n-7 do apply to records that an SDR creates using the data required to be maintained in accordance with Rule 13n-5, such as aggregate reports.

H. Reports to be Provided to the Commission (Rule 13n-8)

The Commission proposed Rule 13n-8 to specify certain reports that an SDR would be required to provide to the Commission. After considering the two comments received on this proposal, the Commission is adopting Rule 13n-8 as proposed.

853 The Commission is making a technical modification to Rule 13n-7(d) from the proposal, changing "data" to "transaction data and positions." This is to clarify that the data that Rule 13n-7 does not apply to is limited to transaction data and positions, both of which are required to be maintained in accordance with Rule 13n-5(b)(4). Rule 13n-7 applies to other information that may be created pursuant to Rule 13n-5, but which is not required to be maintained pursuant to Rule 13n-5(b)(4). For example, in order to assure itself of compliance with Rule 13n-5(b)(1)(iv), an SDR could run tests to determine how long it takes for it to record transaction data that it receives. Data from such test would be required to be retained pursuant to Rule 13n-7, not Rule 13n-5(b)(4). The Commission clearly contemplated this distinction in the Proposing Release when it stated that Rule 13n-7(d) was proposed to clarify that Rule 13n-7 was designed to capture those records other than the data required to be maintained in accordance with proposed Rule 13n-5. <u>See</u> Proposing Release, 75 FR at 77338, <u>supra</u> note 2.

854 Proposing Release, 75 FR at 77338, <u>supra</u> note 2.

1. Proposed Rule

Proposed Rule 13n-8 would require every SDR to "promptly report to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines to be necessary or appropriate for the Commission to perform the duties of the Commission under the [Exchange] Act and the rules and regulations thereunder." This proposed rule was designed to provide the Commission with the necessary information for it to fulfill its regulatory duties.

2. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[855] One commenter stated that it "currently makes information available directly to regulators, having created a web portal for access to scheduled reports, and providing extracts from [the trade repository's] database based on parameters set by regulators . . . . Through this system, [the commenter] expects to be able to offer acceptable access to the Commission."[856] The other commenter recommended that reports "be standardized and use a common terminology."[857]

3. Final Rule

After considering the comments, the Commission is adopting Rule 13n-8 as proposed. Rule 13n-8 requires every SDR to "promptly report to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines to be necessary

---

855 See DTCC 2, supra note 19; Barnard, supra note 19. In addition, one commenter to the Temporary Rule Release suggested that the Commission affirmatively state that it intends to keep information furnished to the Commission pursuant to the rules in that release, which could be information similar to that reported to the Commission under Rule 13n-8, confidential under FOIA or to seek a legislative solution. See Deutsche Temp Rule, supra note 28.

856 DTCC 2, supra note 19.

857 Barnard, supra note 19.

or appropriate for the Commission to perform the duties of the Commission under the [Exchange] Act and the rules and regulations thereunder." This requirement provides flexibility to the Commission to obtain information on a case-by-case basis and in connection with fulfilling its examination function.[858]

Under Rule 13n-8, the Commission may request specific reports related to the final SDR Rules.[859] For example, in the Proposing Release, the Commission stated that it may request a report on the number of complaints an SDR has received pertaining to data integrity.[860] In addition, the Commission may request other reports in the future based upon, for example, developments in the SBS markets or a newly identified need for particular SBS information. The Commission expects that an SDR will be able to promptly report any information in its possession to the Commission pursuant to Rule 13n-8. If the report involves provision of SBS data, then the Commission could require an SDR to adhere to any formats and taxonomies

---

858 One commenter describes its approach to addressing the proposed rule's requirements. See DTCC 2, supra note 19. With respect to the commenter to the Temporary Rule Release suggesting that the Commission affirmatively state that it intends to keep information furnished pursuant to the rules in that release confidential under FOIA or to seek a legislative solution, the Commission anticipates that it will keep reported data that SDRs submit to the Commission (via Rule 13n-8 or any other means) confidential, subject to the provisions of applicable law. See Deutsche Temp Rule, supra note 28. Pursuant to Commission rules, confidential treatment can be sought for information submitted to the Commission. See 17 CFR 200.83 (regarding confidential treatment procedures under FOIA). The Commission does not intend to affirmatively seek any legislative action to protect further such information. The commenter is not precluded from doing so on its own initiative.

859 In a separate release, the Commission is adopting a rule requiring an SDR to provide the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to the SDR. See Regulation SBSR Adopting Release, supra note 13 (Rule 907(e)).

860 Proposing Release, 75 FR at 77339, supra note 2.

required pursuant to Rule 13n-4(b)(5).[861] This approach is consistent with one commenter's recommendation that reports "be standardized and use common terminology."[862]

I. Privacy of SBS Transaction Information and Disclosure to Market Participants (Rules 13n-9 and 13n-10)

1. Privacy Requirements (Rule 13n-9)

Proposed Rule 13n-9 set forth requirements to implement an SDR's statutory duty to "maintain the privacy of any and all security-based swap transaction information that the [SDR] receives from a security-based swap dealer, counterparty, or any other registered entity."[863] After considering the comments received on the proposal, the Commission is adopting the rule as proposed.

a. Proposed Rule

Proposed Rule 13n-9 would require each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to protect the privacy of any and all SBS transaction information that the SDR receives from an SBS dealer, counterparty, or any registered entity. Such policies and procedures would be required to include, but not be limited to, policies and procedures to protect the privacy of any and all SBS transaction information that the SDR shares with affiliates and nonaffiliated third parties.[864] The proposed rule would also require each SDR to establish and maintain safeguards, policies, and procedures reasonably designed to prevent the misappropriation or misuse of (i) any confidential information received by the SDR; (ii) material,

861 See Section VI.D.2.c.ii of this release discussing anticipated Commission proposal pursuant to Rule 13n-4(b)(5). With regard to other types of reports, the Commission will seek to work with SDRs to develop the form and the manner for the SDRs to provide the Commission with the information it needs, while seeking to minimize the SDRs' burdens.

862 See Barnard, supra note 19.

863 See Exchange Act Section 13(n)(5)(F), 15 U.S.C. 78m(n)(5)(F).

864 Proposed Rule 13n-9(b)(1).

nonpublic information; and/or (iii) intellectual property, by the SDR or any person associated with the SDR for their personal benefit or the benefit of others.[865] Such safeguards, policies, and procedures would be required to address, without limitation, (1) limiting access to such confidential information, material, nonpublic information, and intellectual property, (2) standards pertaining to the trading by persons associated with the SDR for their personal benefit or the benefit of others, and (3) adequate oversight to ensure compliance of this provision.[866]

b. Comments on the Proposed Rule

Five commenters submitted comments relating to this proposed rule.[867] Two of the commenters supported the proposal.[868] One commenter "fully support[ed] the Commission's efforts to protect the privacy of any and all SBS transaction information received by an SDR" and believed that "no communication of data (other than to, or as required by, applicable regulators) that could have the result of disclosing the actual positions or specific business or trading activity of a counterparty should be permitted without the consent of that counterparty."[869] The commenter suggested that the definition of "personally identifiable information" in proposed Rule 13n-9(a)(6) be limited to information that is not otherwise disclosed or made available to the public.[870] In making its suggestion, the commenter stated that

868 See DTCC 2, supra note 19; MFA 1, supra note 19. The Commission received no comments on proposed Rule 13n-9(a), which set forth the definitions applicable to the rule, and is adopting each of them as proposed. See supra note 247 (discussing a general comment regarding the term "affiliate").

869 DTCC 2, supra note 19; see also DTCC 5, supra note 19.

870 DTCC 5, supra note 19.

"[b]ecause much of the information utilized to on-board participants or to identify counterparties to an [SBS] will be publicly available through websites issuing legal entity identifiers or similar identifiers, this information should not be considered confidential simply because it is required by an [SDR]."[871]

Another commenter also "agree[d] with the Commission's concerns about privacy of SBS data" and "strongly support[ed] imposing privacy requirements on [SDRs]."[872] Specifically, the commenter supported the Commission's proposed requirements related to policies and procedures reasonably designed to protect the privacy of SBS transaction information and noted that "such privacy protections will ensure that market participants utilize the services of registered [SDRs] with confidence."[873] The commenter made a number of suggestions. First, the commenter suggested that the Commission add safeguards related to "confidentiality of trading positions" to the Commission's proposed rule because disclosure of position information could reveal market participants' customized and proprietary investment strategies in which they invest heavily and "which form the foundation of their businesses."[874] Second, the commenter suggested that the Commission expand its proposed rules to include a standard of care that would require SDRs to adopt policies and procedures to ensure that any confidential information received will be used solely for the purpose of fulfilling regulatory

---

873 MFA 1, supra note 19 ("Specifically, we recommend adding to the information covered under [proposed Rule] 13n-9(b): (i) information related to transactions of a market participant, including the size and volume of such transactions; (ii) the identity of each market participant; and (iii) the details of any master agreement (to the extent provided) governing the relevant SBS.").

874 MFA 1, supra note 19.

obligations.[875] Third, the commenter suggested that the Commission require SDRs to adopt policies and procedures to limit access to confidential information to directors, officers, employees, agents, and representatives who need to know such information in order to fulfill regulatory obligations.[876] The commenter noted that "[t]hose policies and procedures should also have a mechanism in place for all [SDR representatives] to be informed of, and required to follow, the [SDR's] policies and procedures related to privacy of information received."[877] The commenter believed that such persons should be liable for any breach of an SDR's policies and procedures related to privacy of information.[878]

Another commenter suggested that "where trading counterparties have given [written authorizations] in favor of a third party service provider to access their [SBS transaction information], there is no need to have the third party service provider observe the [SDR's] privacy policies and procedures."[879] The commenter stated that "if the counterparties to a trade authorize the third party service provider to use their information, an [SDR] should not be able to restrict or limit such use through privacy policies and procedures when the owners of the

879 TriOptima, supra note 19 (stating that "establishment of clear rights and obligations governing access to [SDR] Information" is an important element in establishing "fair, secure and efficient market functioning for market participants," and believing that it would "be appropriate and helpful to the market if the SEC can clarify in the final rule that [SDRs] shall provide third party service providers, who have been authorized to access information by the counterparties to the relevant trades under Written Client Disclosure Consents, with access to [SDR] Information").

information have provided appropriate consents and authorizations."[880]

Consistent with the commenters supporting proposed Rule 13n-9, a commenter to the Temporary Rule Release stated that "market participants have legitimate interests in the protection of their confidential and identifying financial information."[881] In this regard, the commenter suggested that the Commission "take all possible steps to ensure that identifying information is protected by SDRs and the [Commission]" and that the Commission use its statutory authority under Dodd-Frank Act Section 763 to "impose strict requirements on the handling, disclosure and use by the SDRs of identifying information and on the operational and technological measures that must be employed by SDRs to protect such information from disclosure (including by way of unauthorized access)."[882]

Another commenter believed that "non-bank entities," including SDRs, should "make the appropriate level of investment to design, implement and continually review their . . . data privacy policies and procedures in order to protect markets and market participants."[883] The commenter also believed that "[i]t is equally important that regulators ensure that the viability and rigor of these . . . privacy policies are reviewed and audited as they are at all other market participants."[884]

880 TriOptima, supra note 19 (asking the Commission to "treat a third party service provider with a disclosure consent as acting as an 'agent' for the owner of the trade information and provide the third party service provider with the same type of access which the owner of such data is entitled to, subject to any restrictions set out in the disclosure consent").

882 Deutsche Temp Rule, supra note 28.

883 ISDA, supra note 19 ("[T]here is a real need for [SDRs] to have robust policies, procedures and systems in place to address the information barrier and privacy issue.").

884 ISDA, supra note 19.

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-9 as proposed, with two minor modifications.[885] Specifically, Rule 13n-9(b)(1) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to protect the privacy of any and all SBS transaction information that the SDR receives from an SBS dealer, counterparty, or any registered entity. The rule further provides that such policies and procedures shall include, but are not limited to, policies and procedures to protect the privacy of any and all SBS transaction information that the SDR shares with affiliates[886] and nonaffiliated third parties.[887] As mentioned above, the Exchange Act[888] requires, and commenters supported, the Commission's imposition of privacy requirements on SDRs.[889]

Additionally, Rule 13n-9(b)(2) requires each SDR to establish and maintain safeguards, policies, and procedures reasonably designed to prevent the misappropriation or misuse, directly or indirectly, of: (1) any confidential information received by the SDR, including, but not limited

885 See infra note 886 (discussing revised definition of "control") and note 890 (discussing revised definition of "nonpublic personal information").

886 See supra notes 247 and 621 (defining "affiliate" and "control"). The Commission is correcting a typographical error in the proposed definition of "control." Proposed Rule 13n-9(a)(2)(ii) referred to the right to vote 25 percent "of" more of a class of securities. See Proposing Release, 75 FR at 77371, supra note 2. As adopted, Rule 13n-9(a)(2)(ii) refers to the right to vote 25 percent "or" more of a class of securities. See also Rule 13n-4(a)(3).

887 Rule 13n-9(b)(1); see also supra note 622 (defining "nonaffiliated third party").

888 See Exchange Act Section 13(n)(5), 15 U.S.C. 78m(n)(5).

889 See DTCC 2, supra note 19; MFA 1, supra note 19 (noting that an SDR's protection of the privacy of SBS transaction information "will ensure that market participants utilize the services of [a] registered [SDR] with confidence").

to, trade data, position data, and any nonpublic personal information[890] about a market participant[891] or any of its customers; (2) material, nonpublic information; and/or (3) intellectual property, such as trading strategies or portfolio positions, by the SDR or any person associated with the SDR[892] for their personal benefit or the benefit of others. Such safeguards, policies, and procedures shall address, without limitation, (1) limiting access to such confidential information, material, nonpublic information, and intellectual property, (2) standards pertaining to the trading by persons associated with the SDR for their personal benefit or the benefit of others, and (3) adequate oversight to ensure compliance with Rule 13n-9(b)(2).[893] As stated in the Proposing Release, Rule 13n-9(b)(2) incorporates current requirements regarding the treatment of proprietary information of clearing members, which are contained in exemptive orders issued to

[890] In response to one commenter's suggestion, the Commission is revising the definition of "nonpublic personal information" from the proposal to mean (1) personally identifiable information that is not publicly available information and (2) any list, description, or other grouping of market participants (and publicly available information pertaining to them) that is derived using personally identifiable information that is not publicly available information. See Rule 13n-9(a)(5); DTCC 5, supra note 19 (suggesting limiting the applicability of Rule 13n-9 to "personally identifiable information" that is not otherwise disclosed or made available to the public "[b]ecause much of the information utilized to on-board participants or to identify counterparties to an [SBS] will be publicly available through websites issuing legal entity identifiers or similar identifiers, this information should not be considered confidential simply because it is required by an [SDR]"). This revision, which limits personally identifiable information to not publicly available information, is consistent with the definition of "nonpublic personal information" in Regulation SP, 17 CFR 248.3(t). The term "personally identifiable information" is defined as any information (i) a market participant provides to an SDR to obtain service from the SDR, (ii) about a market participant resulting from any transaction involving a service between the SDR and the market participant, or (iii) the SDR obtains about a market participant in connection with providing a service to that market participant. See Rule 13n-9(a)(6).

[891] See supra note 583 (defining "market participant").

[892] See supra note 621 (defining "person associated with a security-based swap data repository").

[893] Id.

SBS clearing agencies,[894] and draws from Exchange Act Section 15(g), which requires broker-dealers to establish, maintain, and enforce written policies and procedures reasonably designed to prevent the misuse of material, nonpublic information by such broker or dealer or any person associated with such broker or dealer.[895]

The Commission anticipates that as a central recordkeeper of SBS transactions, each SDR will receive proprietary and highly sensitive information, which could disclose, for instance, a market participant's trade information, trading strategy, or nonpublic personal information.[896] Rule 13n-9 is designed to ensure that an SDR has reasonable safeguards, policies, and procedures in place to protect such information from being misappropriated or

---

894 See, e.g., Order Extending and Modifying Temporary Exemptions Under the Securities Exchange Act of 1934 in Connection with Request of ICE Trust U.S. LLC Related to Central Clearing of Credit Default Swaps and Request for Comment, Exchange Act Release No. 63387 (Nov. 29, 2010), 75 FR 75502 (Dec. 3, 2010) ("ICE Trust shall establish and maintain adequate safeguards and procedures to protect clearing members' confidential trading information. Such safeguards and procedures shall include: (A) limiting access to the confidential trading information of clearing members to those employees of ICE Trust who are operating the system or responsible for its compliance with this exemption or any other applicable rules; and (B) establishing and maintaining standards controlling employees of ICE Trust trading for their own accounts. ICE Trust must establish and maintain adequate oversight procedures to ensure that the safeguards and procedures established pursuant to this condition are followed . . . ."); Exchange Act Release No. 61973 (Apr. 23, 2010), 75 FR 22656 (Apr. 29, 2010), and Exchange Act Release No. 63389 (Nov. 29, 2010), 75 FR 75520 (Dec. 3, 2010) (temporary exemptions in connection with CDS clearing by ICE Clear Europe, Limited). See also Proposing Release, 75 FR at 77339 n.171, supra note 2.

895 See 15 U.S.C. 78o(g); see also Exchange Act Section 15F(j)(5), 15 U.S.C. 78o-10(j)(5) (requiring SBS dealers and major SBS participants to "establish structural and institutional safeguards to ensure that the activities of any person within the firm relating to research or analysis of the price or market for any security-based swap or acting in a role of providing clearing activities or making determinations as to accepting clearing customers are separated by appropriate informational partitions within the firm from the review, pressure, or oversight of persons whose involvement in pricing, trading, or clearing activities might potentially bias their judgment or supervision and contravene the [enumerated] core principles of open access and the business conduct standards").

896 See Proposing Release, 75 FR at 77339, supra note 2.

misused by the SDR or any person associated with the SDR. The Commission agrees with one commenter's view that "market participants have legitimate interests in the protection of their confidential and identifying financial information," and Rule 13n-9 sets forth requirements sufficient to protect such information from disclosure, as the commenter suggested.[897]

The Commission also believes that as part of an SDR's responsibility to have adequate oversight to ensure compliance with Rule 13n-9, an SDR's governance arrangements and organizational structure should have adequate internal controls to protect against misappropriation or misuse of a market participant's trade information, trading strategy, or nonpublic personal information.[898] For instance, an SDR could limit access to the proprietary and sensitive information by creating informational, technological, and physical barriers. Consistent with one commenter's suggestion,[899] an SDR could also limit access to the data that it maintains to only those officers, directors, employees, and agents who need to know the data to perform their job responsibilities, including responsibilities to fulfill the SDR's regulatory obligations. An SDR may want to consider limiting such access to data only to the extent that such access is justified based on the particular job responsibilities of the officers, directors, employees, or agents. In preventing the misappropriation or misuse of confidential information, material, nonpublic information, and intellectual property pursuant to Rule 13n-9(b)(2), an SDR could have controls to prevent unauthorized or unintentional access to its data. An SDR may want to consider holding its officers, directors, employees, and agents contractually liable for a

897 See Deutsche Temp Rule, supra note 28.

898 See Proposing Release, 75 FR at 77339, supra note 2.

899 See MFA 1, supra note 19.

breach of its privacy policies and procedures, as suggested by one commenter.[900] In order for an SDR to enforce effectively its written policies and procedures to protect the privacy of SBS transaction information, it is reasonable to expect that the SDR must, as one commenter noted,[901] properly convey these policies and procedures to all those subject to its privacy requirements.

Additionally, in establishing standards pertaining to the trading by persons associated with an SDR in accordance with Rule 13n-9(b)(2), the SDR should consider restricting the trading activities of individuals who have access to proprietary or sensitive information maintained by the SDR or implementing firm-wide restrictions on trading certain SBSs, as well as underlying or related investment instruments.[902] Such restrictions could include, for example, a pre-trade clearance requirement. An SDR should also have systems in place to prevent and detect insider trading by the SDR or persons associated with the SDR. Such systems could include a mechanism to monitor such persons' access to the SDR's data, their trading activities, and their e-mails.[903]

The Commission believes that to the extent that an SDR or any person associated with the SDR shares information with the SDR's affiliate or a nonaffiliated third party, the SDR's policies and procedures pursuant to Rule 13n-9(b)(1) should be reasonably designed to protect

---

900 See MFA 1, supra note 19.

901 See MFA 1, supra note 19.

902 See Proposing Release, 75 FR at 77339-77340, supra note 2.

903 Cf., e.g., Janney Montgomery Scott LLC, Exchange Act Release No. 64855, 2011 SEC LEXIS 3166 (July 11, 2011) (finding, in a settled action, Exchange Act Section 15(g) violation where broker-dealer failed to monitor its proprietary trading and employee trading); Merrill Lynch, Pierce, Fenner & Smith, Inc., Exchange Act Release No. 59555, 2009 SEC LEXIS 660 (Mar. 11, 2009) (finding, in a settled action, Exchange Act Section 15(f) [subsequently renumbered as Section 15(g)] violation where broker-dealer failed to limit or monitor traders' access to the equity squawk box that broadcasts material, nonpublic information).

the privacy of the information shared.[904] One option that an SDR could choose to comply with this requirement would be to require the affiliate or nonaffiliated party to consent to being subject to the SDR's privacy policies and procedures as a condition of receiving any sensitive information from the SDR.[905]

Consistent with one commenter's view, the Commission agrees that an SDR will likely need to make an appropriate level of investment to design, implement, and periodically review its privacy policies and procedures "in order to protect markets and market participants,"[906] but that an SDR should have some flexibility to develop reasonable policies and procedures to protect the privacy of the SBS transaction information that the SDR receives. One approach, as one commenter suggested,[907] may be for an SDR's policies and procedures to require consent of counterparties prior to communication of the SBS transaction information to an SDR's affiliate or a nonaffiliated third party.[908] An SDR may, however, develop other reasonable policies and procedures to protect the privacy of the SBS transaction information.

With respect to one commenter's suggestion that the Commission add safeguards related

---

904 See Proposing Release, 75 FR at 77340, supra note 2.

905 The Commission notes that CFTC Rule 49.17(e) permits a third party service provider to access swap data maintained by a swap data repository on the condition that both the swap data repository and the provider have strict confidentiality procedures that protect data and information from proper disclosure and that they execute a "confidentiality agreement." See 17 CFR 49.17(e).

906 See ISDA, supra note 19.

907 See DTCC 2, supra note 19 ("[N]o communication of data (other than to, or as required by, applicable regulators) that could have the result of disclosing the actual positions or specific business or trading activity of a counterparty should be permitted without the consent of that counterparty.").

908 The Commission notes that CFTC Rule 49.17(g) requires a swap data repository to obtain express written consent from the swap dealer, counterparty, or any other registered entity that submits the swap data maintained by the swap data repository before using that swap data for commercial or business purposes. See 17 CFR 49.17(g).

to "confidentiality of trading positions,"[909] the Commission believes that its final rule broadly covers such safeguards. Although not explicitly stated in Rule 13n-9, the Commission also believes that its definitions of "nonpublic personal information"[910] and "personally identifiable information"[911] overlap significantly with the information that the commenter recommended the rule to explicitly cover.[912] Certain information, however, will be subject to public dissemination under Regulation SBSR.[913] The commenter further suggested that SDRs should be permitted to use confidential information solely to fulfill their regulatory obligations,[914] but the Commission does not believe that it is necessary or appropriate to impose such a narrow restriction on SDRs. It could, for example, be in the public interest for SDRs to use transaction-specific confidential SBS data to generate aggregated reports for the public even though such reports are not mandated. However, any such reports must be sufficiently anonymized so that the trading positions or identities of market participants, or group of market participants, cannot be derived from the reports.

One commenter suggested that a third party service provider should not be required to observe an SDR's privacy policies and procedures if such third party service provider has received written authorization from an SBS counterparty to access its SBS transaction

909 See MFA 1, supra note 19.

910 See Rule 13n-9(a)(5).

911 See Rule 13n-9(a)(6).

912 See MFA 1, supra note 19 (recommending adding to proposed Rule 13n-9(b): (i) information related to transactions of a market participant (including a market participant's trading positions), (ii) the identity of each market participant, and (iii) details of any master agreement governing the relevant SBS that are provided to an SDR).

913 See Regulation SBSR Adopting Release, supra note 13 (Rule 902).

914 See MFA 1, supra note 19.

information.[915] The Commission believes that an SDR's obligation to provide fair, open, and not unreasonably discriminatory participation to third party service providers[916] would prohibit an SDR from unreasonably imposing its privacy policies and procedures on third party service providers. The Commission also believes that, generally, a third party service provider, acting as an agent for a counterparty, should be given the same rights to access SBS transaction information as the counterparty for which it is acting as an agent. To the extent that the counterparties to a transaction reach a confidentiality agreement between themselves limiting the information that can be provided to their agents, it is up to the parties to ensure that the authorizations they provide to the SDR are appropriately limited.[917]

With respect to one commenter's view that regulators should "ensure that the viability and rigor of [an SDR's] privacy policies are reviewed and audited as they are at all other market participants,"[918] the Commission contemplates that its review of an SDR's privacy policies and procedures will be sufficient.[919] As a general matter, the Commission will review an SDR's privacy policies and procedures for compliance with the law in a manner similar to reviews of

915 See TriOptima, supra note 19 (stating that "if the counterparties to a trade authorize the third party service provider to use their information, an [SDR] should not be able to restrict or limit such use through privacy policies and procedures when the owners of the information have provided appropriate consents and authorizations").

916 See Section VI.D.3.a of this release discussing fair, open, and not unreasonably discriminatory access.

917 To the extent that a transaction is executed anonymously on an SB SEF or exchange, when the counterparties do not know each other's identity or other reported information (e.g., the trader ID), the SDR's policies and procedures under Rule 13n-9(b) must not allow either counterparty to access this information relating to the other counterparty.

918 ISDA, supra note 19.

919 To the extent that the Commission addresses other market participants' privacy policies and procedures, it will do so in separate releases pertaining specifically to those market participants.

other registrants' privacy policies and procedures. For example, an SDR is required to file, as exhibits to Form SDR, its policies and procedures to protect the privacy of any and all SBS transaction information that the SDR receives from a market participant or any registered entity.[920] These policies and procedures are subject to the Commission's review. As discussed in Section VI.A.2 of this release, the Commission will review an SDR's application for registration on Form SDR in determining whether the SDR is able to comply with the federal securities laws and the rules and regulations thereunder. The Commission will also review an SDR's comprehensive annual amendment on Form SDR in determining whether the SDR continues to be in compliance with the federal securities laws and the rules and regulations thereunder. Additionally, an SDR (including its privacy policies and procedures) are subject to inspection and examination by any representative of the Commission.[921] In addition, an SDR's CCO is required to review the compliance of its policies and procedures at least on an annual basis and include a description of such compliance as well as the SDR's enforcement of its policies and procedures in the SDR's annual compliance report that is filed with the Commission.[922]

2. Disclosure Requirements (Rule 13n-10)

a. Proposed Rule

Proposed Rule 13n-10 would require each SDR to provide a disclosure document to each market participant prior to accepting any SBS data from the market participant or upon the

---

920 See Item 39 of Form SDR.

921 Exchange Act Section 13(n)(2), 15 U.S.C. 78m(n)(2) (stating that "[e]ach registered security-based swap data repository shall be subject to inspection and examination by any representative of the Commission").

922 See Rules 13n-11(c)(2) and 13n-11(d)(1).

market participant's request. The disclosure document would include specific information designed to enable a market participant to identify and evaluate the risks and costs associated with using the SDR's services.

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[923] One commenter agreed with proposed Rule 13n-10(b)(8), which would require disclosure of an SDR's updated schedule of any dues; unbundled prices, rates, or other fees for all of its services, including any ancillary services; any discounts or rebates offered; and the criteria to benefit from such discounts or rebates.[924] In supporting the Commission's proposed rule, another commenter "recognize[d] the importance of providing market participants with disclosure documents outlining the SDR's policies regarding member participant criteria and the safeguarding and privacy of data submitted to the SDR."[925]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-10 as proposed. The Commission is adopting the rule to enhance transparency in the SBS market, bolster market efficiency, promote standardization, and foster competition.[926] Specifically, the rule provides that before accepting any SBS data from a market participant[927] or upon a market participant's

---

923 See Barnard, supra note 19; DTCC 2, supra note 19. The Commission received no comments on proposed Rule 13n-10(a), which set forth the definitions applicable to the rule, and is adopting each of them as proposed.

924 See Barnard, supra note 19.

925 DTCC 2, supra note 19.

926 Rule 13n-10 is being promulgated under Exchange Act Sections 13(n)(3), 13(n)(7)(D)(i), and 13(n)(9). See 15 U.S.C. 78m(n)(3), 78m(n)(7)(D)(i), and 78m(n)(9).

927 See supra note 583 (defining "market participant").

request, each SDR must furnish to the market participant a disclosure document that contains the following written information, which must reasonably enable the market participant to identify and evaluate accurately the risks and costs associated with using the SDR's services: (1) the SDR's criteria for providing others with access to services offered and data maintained by the SDR, (2) the SDR's criteria for those seeking to connect to or link with the SDR, (3) a description of the SDR's policies and procedures regarding its safeguarding of data and operational reliability, as described in Rule 13n-6, (4) a description of the SDR's policies and procedures reasonably designed to protect the privacy of any and all SBS transaction information that the SDR receives from an SBS dealer, counterparty, or any registered entity, as described in Rule 13n-9(b)(1), (5) a description of the SDR's policies and procedures regarding its non-commercial and/or commercial use of the SBS transaction information that it receives from a market participant, any registered entity, or any other person, (6) a description of the SDR's dispute resolution procedures involving market participants, as described in Rule 13n-5(b)(6), (7) a description of all the SDR's services, including any ancillary services, (8) the SDR's updated schedule of any dues; unbundled prices, rates, or other fees for all of its services, including any ancillary services; any discounts or rebates offered; and the criteria to benefit from such discounts or rebates, and (9) a description of the SDR's governance arrangements.[928]

As stated in the Proposing Release, these disclosure requirements are intended to promote competition and foster transparency regarding SDRs' services by enabling market participants to identify the range of services that each SDR offers and to evaluate the risks and costs associated

---

[928] Rule 13n-10(b).

with using such services.[929] The Commission also believes that transparency regarding SDRs' services is particularly important in light of the complexity of OTC derivatives products and their markets, and that greater service transparency could improve market participants' confidence in an SDR and result in greater use of the SDR, which would ultimately increase market efficiency.

J. Chief Compliance Officer of Each SDR; Compliance Reports and Financial Reports (Rule 13n-11)

Proposed Rule 13n-11 set forth the requirements for an SDR's CCO, annual compliance reports, and financial reports. The Commission is adopting the rule substantially as proposed with changes in response to comments.

1. In General (Rule 13n-11(a))

a. Proposed Rule

To implement the statutory requirement for each SDR to designate an individual to serve as a CCO,[930] the Commission proposed Rule 13n-11(a), which would require each SDR to identify on Form SDR a person who has been designated by the board to serve as a CCO of the SDR. In addition, to promote the independence and effectiveness of the CCO, the proposed rule would require that the compensation and removal of the CCO be approved by a majority of the SDR's board.[931]

---

929 Proposing Release, 75 FR at 77340, supra note 2. See also Barnard, supra note 19 (believing that the disclosure requirement in Rule 13n-10(b)(8) would formalize "the market practice and ensure that informed decisions were being made").

930 See Exchange Act Section 13(n)(6)(A), 15 U.S.C. 78m(n)(6)(A).

931 Proposed Rule 13n-11(a).

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[932] Specifically, one commenter agreed that "[w]ith respect to compensation and termination of the CCO, the Proposed Rules appropriately assign authority over those matters to the board, rather than management," but believed that "[t]he rules should go one step further and confer that authority upon the *independent* board members."[933] Additionally, the commenter suggested that "the [SDR Rules] should preclude the General Counsel or a member of that office from serving as CCO, since those attorneys owe a duty of loyalty to the SDR itself that may not be compatible with the watchdog function of the CCO."[934] The commenter also suggested "[c]ompetency standards to ensure that CCOs have the background and skills necessary to fulfill their responsibilities."[935] The commenter further suggested requiring a group of affiliated or controlled entities to appoint the CCO.[936]

Another commenter fully supported the intent of proposed Rule 13n-11, but also suggested that the Commission "restrict the CCO from serving as the General Counsel or other attorney within the legal department of the SDR."[937] The commenter stated that the CCO's remuneration must be designed so as to avoid potential conflicts of interest with his compliance

932 See Better Markets 1, supra note 19; Barnard, supra note 19; see also Better Markets 3, supra note 19.

933 Better Markets 1, supra note 19 (emphasis in the original); see also Better Markets 3 supra note 19 (suggesting "[t]he vesting of authority in the independent board members to oversee the hiring, compensation, and termination of the CCO").

934 Better Markets 1, supra note 19.

935 Better Markets 3, supra note 19.

936 Better Markets 3, supra note 19.

937 Barnard, supra note 19 ("[T]he CCO should have a single compliance role and no other competing role or responsibility that could create conflicts of interest or threaten [his] independence . . . .").

role.[938] The commenter further suggested that the Commission amend the rule so that "the authority and sole responsibility to appoint or remove the CCO, or to materially change its duties and responsibilities[ ] only vests with the independent public directors or 'Independent Perspective' . . . and not the full board."[939]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-11(a) as proposed, with one modification. Rule 13n-11(a) requires that (1) each SDR identify on Form SDR a person who has been designated by the board to serve as a CCO of the SDR and (2) the compensation and removal of the CCO be approved by a majority of the SDR's board.[940] The Commission is revising the rule from the proposal to require the appointment of the CCO to be approved by the majority of the SDR's board.[941]

In the Proposing Release, the Commission asked whether there are other measures that would further enhance a CCO's independence and effectiveness that should be prescribed in a rule.[942] Two commenters suggested that the Commission require the CCO's appointment, removal, or compensation be approved by independent board members or "independent public

---

938 Barnard, supra note 19.

939 Barnard, supra note 19 (believing that the suggested amendment would help ensure the CCO's independence and possibly mitigate the Commission's need to promulgate additional measures to adequately protect CCOs from undue influence or coercion).

940 See Barnard, supra note 19 (supporting the CCO's compensation to be specifically designed to avoid potential conflicts of interest with the CCO's compliance role).

941 The Commission is also revising the heading of Rule 13n-11 from the proposal to describe the scope of the rule more accurately. The proposed heading was "Designation of chief compliance officer of security-based swap data repository." As revised, the heading is broader: "Chief compliance officer of security-based swap data repository; compliance reports and financial reports."

942 Proposing Release, 75 FR at 77341, supra note 2.

directors."[943] The Commission has determined not to adopt such a requirement at this time because, as discussed in Section VI.D.3.b.iii of this release, the Commission is not requiring SDRs to have independent directors.[944] Based in part on these comments, however, the Commission believes that requiring the appointment of the CCO to be approved by a majority of the SDR's board would be another measure to enhance the CCO's independence and effectiveness. The Commission notes that the requirement that the appointment of the CCO must be approved by a majority of the SDR's board is consistent with the requirement that the designation of CCOs at investment companies must be approved by the board of directors.[945] One commenter suggested requiring a group of affiliated or controlled entities to appoint the CCO.[946] The Commission believes that this suggestion contravenes an SDR's statutory requirement to designate the CCO.[947]

The Commission is concerned that an SDR's commercial interests might discourage its CCO from making forthright disclosure to the board or senior officer about any compliance failures.[948] The Commission believes that to mitigate this potential conflict of interest, an SDR's

---

943 See Better Markets 1, supra note 19 (discussing independent board members); Barnard, supra note 19 (discussing independent public directors); see also Better Markets 3, supra note 19.

944 To the extent that an SDR has independent board members or independent public directors, the SDR may want to consider requiring the appointment, removal, or compensation of the CCO be approved by the majority of independent board members or independent public directors in addition to the majority of the board.

945 See Rule 38a-1(a)(4)(i) under the Investment Company Act of 1940 ("Investment Company Act"), 17 CFR 270.38a-1(a)(4)(i). The Commission also notes that CFTC Rule 49.22(c) requires the appointment, compensation, and removal of a CCO to be approved by either a swap data repository's board or senior officer. See 17 CFR 49.22(c).

946 Better Markets 3, supra note 19.

947 See Exchange Act Section 13(n)(6)(A), 15 U.S.C. 78m(n)(6)(A).

948 See Proposing Release, 75 FR at 77341, supra note 2.

CCO should be independent from its management so as not to be conflicted in reporting or addressing any compliance failures. Accordingly, as discussed in Section VI.J.3 below, each CCO of an SDR is required to report directly to the board or its senior officer,[949] but only the board is able to approve the CCO's appointment, remove the CCO from his or her responsibilities, and approve the CCO's compensation.

Rule 13n-11(a) is intended to promote a CCO's independence and effectiveness. The Commission is not extending the applicability of this rule to an SDR's senior officer because the Commission believes that this may unnecessarily create conflicts of interest for the CCO, particularly if the CCO is subsequently responsible for reviewing the senior officer's compliance with the Exchange Act and the rules and regulations thereunder.

In promoting a CCO's independence and effectiveness, the Commission does not believe that it is necessary to adopt, as two commenters suggested,[950] a rule prohibiting a CCO from being a member of the SDR's legal department or from serving as the SDR's general counsel. To the extent that this poses a potential or existing conflict of interest, the Commission believes that an SDR's written policies and procedures can be designed to adequately identify and mitigate any associated costs.[951]

---

949 See Exchange Act Section 13(n)(6)(B)(i), 15 U.S.C. 78m(n)(6)(B)(i).

950 See Barnard, supra note 19 (suggesting that the Commission "restrict the CCO from serving as the General Counsel or other attorney within the legal department of the SDR"); Better Markets 1, supra note 19 (suggesting that "the [SDR Rules] should preclude the General Counsel or a member of that office from serving as CCO, since those attorneys owe a duty of loyalty to the SDR itself that may not be compatible with the watchdog function of the CCO").

951 As discussed in Section VI.D.3.c of this release, Rule 13n-4(c)(3)(i) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to identify and mitigate potential and existing conflicts of interest in the SDR's decision-making process on an ongoing basis.

With respect to one commenter's suggestion that there should be "[c]ompetency standards to ensure that CCOs have the background and skills necessary to fulfill their responsibilities,"[952] the Commission notes that while it is not requiring such standards, Form SDR requires an SDR to provide a brief account of the CCO's prior business experience and business affiliations in the securities industry or derivatives industry.[953] In addition, as discussed above, the Commission is adopting Rule 13n-4(c)(2)(iv) to require an SDR to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the SDR's senior management and each member of the board or committee that has the authority to act on behalf of the board possess requisite skills and expertise to fulfill their responsibilities in the management and governance of the SDR, have a clear understanding of their responsibilities, and exercise sound judgment about the SDR's affairs.[954] To the extent that a CCO is considered to be in senior management of an SDR, Rule 13n-4(c)(2)(iv) applies to the CCO, but even if the CCO is not in senior management, the Commission does not believe that it is necessary to prescribe competency standards for CCOs by rule, in part because it is most likely that an SDR already has business incentives to retain a competent CCO in light of the SDR's exposure to liability if its CCO fails to comply with his or her statutory and regulatory responsibilities. Additionally, the Commission believes that an SDR will be in a better position to determine what its own requirements and specific needs are with respect to a CCO's background and skills, both of which may change as the SBS market evolves.

952 See Better Markets 3, supra note 19.

953 See Item 15 of Form SDR.

954 See Section VI.D.3.b of the release discussing Rule 13n-4(c)(2)(iv).

2. Definitions (Rule 13n-11(b))

a. Proposed Rule

Proposed Rule 13n-11(b) defined the following terms: "affiliate," "board," "director," "EDGAR Filer Manual," "material change," "material compliance matter," and "tag."

b. Comments on the Proposed Rule

The Commission received no comments relating to the proposed definitions.

c. Final Rule

The Commission is adopting Rule 13n-11(b) substantially as proposed, with several modifications. Specifically, the Commission is adopting the definitions of "board," "director," "EDGAR Filer Manual," "material change," and "material compliance matter" as proposed. However, the Commission is not adopting the definition of "affiliate" because the term is not used in the final rule. To conform with adopted Rule 13n-11(f), as discussed below, the Commission is adding the definitions of "Interactive Data Financial Report" and "official filing," both of which have the same meaning as set forth in Rule 11 of Regulation S-T, which sets forth the standards for electronic filing with the Commission.[955] For consistency, the Commission is revising the definition of "tag" (including the term "tagged") from the proposal to have the same meaning as set forth in Rule 11 of Regulation S-T.[956]

Moreover, the Commission is adopting the definition of "senior officer" to mean "the chief executive officer or other equivalent officer."[957] Proposed Rule 13n-11 referenced the

955 See Rules 13n-11(b)(4) and (b)(7). The terms "Interactive Data Financial Report" and "official filing" are used in new Rule 407 of Regulation S-T, as discussed in Section VI.J.5.c of this release.

956 See Rule 13n-11(b)(9).

957 See Rule 13n-11(b)(8). The term "senior officer" is used in Rules 13n-11(c)(1) and (c)(3), as discussed in Section VI.J.3 of this release. This definition is consistent with the

"chief executive officer" in lieu of the statutory references to the "senior officer."[958] As adopted, Rule 13n-11 tracks the statutory references to "senior officer" and defines "senior officer" to include an SDR's CEO.

3. Enumerated Duties of Chief Compliance Officer (Rule 13n-11(c))

a. Proposed Rule

Proposed Rule 13n-11(c) incorporated the CCO's duties that are set forth in Exchange Act Section 13(n)(6).[959] Proposed Rule 13n-11(c) would require a CCO to (1) report directly to the board or to the SDR's CEO, (2) review the SDR's compliance with respect to its statutory and regulatory requirements and core principles, (3) in consultation with the board or the SDR's CEO, resolve any conflicts of interest that may arise, (4) be responsible for administering each policy and procedure that is required to be established pursuant to Exchange Act Section 13 and the rules and regulations thereunder, (5) ensure compliance with the Exchange Act and the rules and regulations thereunder relating to SBSs, (6) establish procedures for the remediation of noncompliance issues identified by the CCO through certain specified means, and (7) establish and follow appropriate procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues.

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule, expressing differing

---

definition proposed in the CCO rules for SBS dealers, major SBS participants, and clearing agencies. See Business Conduct Standards for Security-Based Swap Dealers and Major Security-Based Swap Participants, Exchange Act Release No. 64766 (June 29, 2011), 76 FR 42396 (July 18, 2011) (proposing Rule 15Fk–1(e)); Clearing Agency Standards for Operations and Governance, Exchange Act Release No. 64017 (Mar. 3, 2011), 76 FR 14472 (Mar. 16, 2011) (proposing Rule 3Cj-1).

958 See Exchange Act Section 13(n)(6)(B), 15 U.S.C. 78m(n)(6)(B).

959 See 15 U.S.C. 78m(n)(6).

views.[960] As discussed below, one commenter suggested a more prescriptive approach[961] while the other suggested a less prescriptive approach, but with certain clarifications.[962]

Specifically, one commenter suggested that the Commission "establish a meaningful role for" an SDR's CCO.[963] The commenter believed that "the rules should preclude the [g]eneral [c]ounsel or a member of that office from serving as CCO, since those attorneys owe a duty of loyalty to the SDR itself that may not be compatible with the watchdog function of the CCO."[964] The commenter also believed that "the CCO should have a direct reporting line to the independent board members and should be required to meet with those independent members at least quarterly" in order for "independent members of the board to become effective partners with the CCO in promoting a culture of compliance within the SDR."[965]

The other commenter believed that as a general matter, "SDRs should have some flexibility to implement the required compliance procedures in ways consistent with their structure and business."[966] The commenter "agree[d] with the Commission that a robust internal compliance function[, including a CCO,] plays an important role in facilitating an SDR's

---

961 See Better Markets 1, supra note 19.

962 See DTCC 2, supra note 19.

963 Better Markets 2, supra note 19; see also Better Markets 3, supra note 19 ("Ensuring that market participants have CCOs with real authority and autonomy to police a firm from within is one of the most efficient and effective tools available to regulators.").

964 Better Markets 1, supra note 19.

965 Better Markets 1, supra note 19; see also Better Markets 3, supra note 19 (suggesting requirements that the CCO have direct access to the board and the CCO "meet quarterly with the Audit Committee (if there is one or non-management members of the [b]oard if there is not), in addition to annual meetings with the board and senior management").

966 DTCC 2, supra note 19.

monitoring of, and compliance with, the requirements of the Exchange Act (and rules thereunder) applicable to SDRs."[967] The commenter also "fully support[ed] Commission efforts to require the highest standards of regulatory compliance at SDRs, and believe[d that] requiring each SDR to have a CCO is an effective way to ensure compliance."[968]

The commenter, however, believed that "some of the enumerated responsibilities of [a CCO] require clarification in order to avoid an overly broad reading of those duties."[969] Specifically, the commenter suggested that the CCO's responsibilities should not, for instance, "be read to encompass responsibilities beyond those traditionally understood to be part of a compliance function (i.e., those issues that can as a matter of competence, and typically would be, handled by a compliance department)."[970] The commenter further believed that "the CCO should be responsible for establishing relevant compliance procedures, and monitoring compliance with those procedures and other applicable legal requirements" and that "the CCO should also participate in other aspects of the SDR's activities that implicate compliance or regulatory issues."[971] The commenter believed, however, that "the CCO cannot be, and should not be, required to be responsible for the overall operation of the SDR's business."[972] The commenter stated that the Commission "should recognize that oversight of certain aspects of SDR activities are principally (and, as a practical matter, need to be) within the purview of risk management and operations personnel. Although there may be a regulatory component to

967 DTCC 2, supra note 19.

968 DTCC 2, supra note 19.

969 DTCC 2, supra note 19.

972 DTCC 2, supra note 19.

whether an SDR is meeting its operational readiness, service level or data security responsibilities for example, oversight of those aspects of the SDR business should remain with the relevant business areas, subject of course to oversight by senior management and ultimately the board of directors. While a CCO may have an important role to play in overall oversight and remediation of any problems, the Commission's rules should not be interpreted to impose on CCOs responsibility outside of their traditional core competencies."[973]

In suggesting that the Commission "clarify what types of conflict of interest should be within the CCO's purview," the commenter noted that "[s]ome issues, such as permissibility of dealings with related parties or entities, are properly within the CCO's functions. Other issues, such as restrictions on ownership and access, may be fundamental for the board of directors and senior management to address."[974] Additionally, the commenter stated that to the extent that the Commission's rule requires consultation with the board or senior management, "some materiality threshold would be appropriate, as not every potential conflict of interest that might be addressed by a CCO (or his or her subordinates) would need such consultation."[975]

The commenter further suggested that the Commission "clarify that the CCO's specific responsibilities related to conflicts are limited to compliance with the provisions of Exchange Act Section 13(n) and the final rules thereunder as they relate to the SBS operations of an SDR."[976] The commenter believed that "[t]he Commission should not mandate compliance responsibilities with respect to other regulatory requirements to which an SDR may be subject;

[973] DTCC 2, supra note 19.

[974] DTCC 2, supra note 19.

[975] DTCC 2, supra note 19.

[976] DTCC 2, supra note 19.

those responsibilities should be specified by the regulator imposing the other requirements."[977]

c. Final Rule

After considering the comments, the Commission is adopting Rule 13n-11(c) as proposed, with modifications. The final rule incorporates the duties of an SDR's CCO that are set forth in Exchange Act Section 13(n)(6)[978] and imposes additional requirements. Specifically, each CCO is required to comply with the following requirements: (1) report directly to the board[979] or to the SDR's senior officer,[980] (2) review the compliance of the SDR with respect to the requirements and core principles described in Exchange Act Section 13(n) and the rules and regulations thereunder, (3) in consultation with the board or the SDR's senior officer,[981] take reasonable steps to resolve any material conflicts of interest that may arise, (4) be responsible for administering each policy and procedure that is required to be established pursuant to Exchange Act Section 13 and the rules and regulations thereunder, (5) take reasonable steps to ensure compliance with the Exchange Act and the rules and regulations thereunder relating to SBSs, including each rule prescribed by the Commission under Exchange Act Section 13, (6) establish procedures for the remediation of noncompliance issues identified by the CCO through any (a) compliance office review, (b) look-back, (c) internal or external audit finding, (d) self-reported error, or (e) validated complaint, and (7) establish and follow appropriate procedures for the

977 DTCC 2, supra note 19.

978 See 15 U.S.C. 78m(n)(6).

979 See supra note 549 (defining "board").

980 The Commission is amending proposed Rule 13n-11(c)(1) by replacing "chief executive officer" with "senior officer" to track the language of Exchange Act Section 13(n)(6)(B)(i)), 15 U.S.C. 78m(n)(6)(B)(i).

981 The Commission is amending proposed Rule 13n-11(c)(3) by replacing "chief executive officer" with "senior officer" to track the language of Exchange Act Section 13(n)(6)(B)(i)), 15 U.S.C. 78m(n)(6)(B)(i).

handling, management response, remediation, retesting, and closing of noncompliance issues. Consistent with one commenter's suggestion, the Commission believes that Rule 13n-11(c) establishes a meaningful role for CCOs.[982] However, because the Commission is not requiring SDRs to have independent directors, Rule 13n-11(c) does not, as the commenter suggested,[983] require a CCO to report directly to independent directors or meet with independent directors at least quarterly. To provide CCOs with greater flexibility in fulfilling their duties, the Commission is also not requiring, as the commenter suggested, CCOs to "meet quarterly with the Audit Committee (if there is one or non-management members of the [b]oard if there is not), in addition to annual meetings with the board and senior management."[984] The Commission expects CCOs to meet with the board, the senior officer, and others, whenever necessary to fulfill their duties.

The Commission agrees with one commenter that, in general, SDRs should have flexibility to implement the required compliance procedures in ways consistent with their structure and business.[985] In response to a commenter's request for clarification,[986] the Commission notes that generally, an SDR's CCO is not responsible for the SDR's overall or day-to-day business operation, for example, with respect to risk management and operations; nor is the CCO responsible for the decisions and actions of every director, officer, and employee of the SDR. Instead, the CCO's statutory and regulatory responsibilities generally entail, among other

---

982 See Better Markets 2, supra note 19; see also Better Markets 3, supra note 19 ("Ensuring that market participants have CCOs with real authority and autonomy to police a firm from within is one of the most efficient and effective tools available to regulators.").

983 See Better Markets 1, supra note 19.

984 See Better Markets 3, supra note 19.

985 See DTCC 2, supra note 19.

986 See DTCC 2, supra note 19.

things, administering the SDR's policies and procedures required under Exchange Act Section 13 and the rules and regulations thereunder, keeping the SDR's board or senior officer apprised of significant compliance issues, advising the board or senior officer of needed changes in the SDR's policies and procedures, generally overseeing compliance with the Exchange Act and the rules and regulations thereunder, as well as remediating noncompliance at the SDR. If, in the course of administering policies and procedures required under Exchange Act Section 13 and the rules and regulations thereunder, the CCO believes that operations or risk management personnel are not in compliance with such policies and procedures or the Exchange Act and the rules and regulations thereunder relating to SBSs (e.g., with Rule 13n-9, which prohibits the misappropriation or misuse of material nonpublic information by employees), then the CCO is responsible for establishing and following procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues.

In the Proposing Release, the Commission stated that "a CCO should review, on an ongoing basis, the SDR's service levels, costs, pricing, and operational reliability, with the view to preventing anticompetitive practices and discrimination, and encouraging innovation and the use of the SDR."[987] With respect to one commenter's remarks regarding the scope of the CCO's responsibilities,[988] the Commission continues to believe that the CCO's administration of an SDR's policies and procedures should include, among other things, a review of the SDR's service levels, costs, pricing, and operational reliability and a determination that such service

987 Proposing Release, 75 FR at 77342, supra note 2.

988 See DTCC 2, supra note 19 (stating that "the CCO cannot be, and should not be, required to be responsible for the overall operation of the SDR's business.").

levels, costs, pricing, and operational reliability are reasonable.[989] The Commission recognizes, however, that oversight of certain aspects of an SDR's activities may overlap with or be within the purview of the SDR's risk management and operations personnel or other business personnel.[990] In that situation, the CCO may need to consult with business personnel to assess whether they have an appropriate justification for the reasonableness of such service levels, costs, pricing, and operational reliability.

As the Commission also noted in the Proposing Release, an SDR is not required to hire an additional person to serve as its CCO.[991] Instead, an SDR can designate an individual already employed with the SDR as its CCO. Given the critical role that a CCO is intended to play in ensuring an SDR's compliance with the Exchange Act and the rules and regulations thereunder,[992] the Commission believes that an SDR's CCO should be competent and knowledgeable regarding the federal securities laws, should be empowered with full responsibility and authority to develop and enforce appropriate policies and procedures for the SDR, as necessary, and should be responsible for monitoring compliance with the SDR's policies and procedures adopted pursuant to rules under the Exchange Act. However, the Commission will not substantively review a CCO's competency, and is not requiring any

---

989 See Section VI.D.3.a of this release discussing an SDR's obligation to ensure that its fees are fair and reasonable and not unreasonably discriminatory.

990 See DTCC 2, supra note 19 (stating that the Commission "should recognize that oversight of certain aspects of SDR activities are principally (and, as a practical matter, need to be) within the purview of risk management and operations personnel" and that "[a]lthough there may be a regulatory component to whether an SDR is meeting its operational readiness, service level or data security responsibilities for example, oversight of those aspects of the SDR business should remain with the relevant business areas, subject of course to oversight by senior management and ultimately the board of directors").

991 Proposing Release, 75 FR at 77341, supra note 2.

992 See Rules 13n-11(c)(4) and (5).

particular level of competency or business experience for a CCO.

To address a concern raised by one commenter,[993] the Commission is revising Rule 13n-11(c)(3) from the proposal to clarify that the CCO must, in consultation with the board or the senior officer of the SDR, take reasonable steps to resolve any material conflicts of interest (as opposed to all conflicts of interest) that may arise.[994] Recognizing that a CCO may not be in a position to resolve certain material conflicts of interest, as suggested by the commenter,[995] the Commission is revising the rule from the proposal to specify that CCOs must take reasonable steps to resolve such conflicts, which is intended to clarify that CCOs are not required to actually resolve such conflicts. These conflicts of interest may include, for example, general conflicts of interest identified in the Commission's Rule 13n-4(c)(3), as discussed in Section VI.D.3.c of this release.

Recognizing that a CCO cannot guarantee an SDR's statutory compliance, the Commission is also revising Rule 13n-11(c)(5) from the proposal to clarify that CCOs are not required to ensure compliance with the relevant Exchange Act provisions and the rules and regulations thereunder relating to SBSs, but rather to take reasonable steps to ensure such compliance. With respect to the comment that the CCO's specific responsibilities related to conflicts should be limited to compliance with the provisions of Exchange Act Section 13(n) and

---

993 See DTCC 2, supra note 19 (noting that some conflicts of interest are within a CCO's purview while other issues (e.g., restrictions on ownership and access) may be fundamental for an SDR's board or senior management to address and that a CCO would not need to consult with the board every potential conflict of interest that might be addressed by a CCO).

994 See Rule 13n-11(c)(3).

995 See DTCC 2, supra note 19.

the final rules thereunder as they relate to the SBS operations of an SDR,[996] the Commission notes that the CCO's responsibilities go beyond the provisions of Exchange Act Section 13(n), as required by the Dodd-Frank Act.[997] For example, the CCO should take reasonable steps to ensure compliance with Exchange Act Section 10(b)'s antifraud requirements.[998] However, the CCO is required to take only reasonable steps to ensure compliance with relevant Exchange Act provisions and the rules and regulations thereunder "relating to" SBSs.

4. Compliance Reports (Rules 13n-11(d) and 13n-11(e))

a. Proposed Rule

An SDR's CCO is required, under Exchange Act Section 13(n)(6)(C)(i), to annually prepare and sign a report that contains a description of the SDR's compliance with respect to the Exchange Act and the rules and regulations thereunder and each policy and procedure of the SDR (including the SDR's code of ethics and conflicts of interest policies).[999] The Commission proposed Rule 13n-11(d)(1) to incorporate this requirement and to set forth minimum requirements for what must be included in each annual compliance report.

Under proposed Rule 13n-11(d)(2), an SDR would be required to file with the Commission a financial report, as discussed further in Section VI.J.5 of this release, along with a compliance report, which must include a certification that, under penalty of law, the compliance

[996] See DTCC 2, supra note 19.

[997] See Exchange Act Section 13(n)(6)(B)(v), 15 U.S.C. 78m(n)(6)(B)(v), as added by Dodd-Frank Act Section 763(i) (requiring an SDR's CCO to "ensure compliance with [the Exchange Act] (including regulations) relating to agreements, contracts, or transactions, including each rule prescribed by the Commission under [Section 13(n)]").

[998] 15 U.S.C. 78j(b).

[999] See 15 U.S.C. 78m(n)(6)(C)(i).

report is accurate and complete.[1000] The compliance report would also be required to be filed in a tagged data format in accordance with instructions contained in the EDGAR Filer Manual, as described in Rule 301 of Regulation S-T.[1001]

In addition, proposed Rule 13n-11(e) would require a CCO to submit the annual compliance report to an SDR's board for its review prior to the submission of the report to the Commission under proposed Rule 13n-11(d)(2).

b. Comments on the Proposed Rule

Two commenters submitted comments relating to this proposed rule.[1002] One commenter believed that an annual compliance report "should be limited to compliance with the requirements of the Exchange Act and the policies and procedures of the SDR that relate to its activities as such with respect to SBSs (as opposed to policies and procedures that may address other regulatory requirements)."[1003] Additionally, the commenter did "not believe [that] it is appropriate to require the report to include a discussion of recommendations for material changes to the policies and procedures of the SDR as a result of the annual review (as well as the rationale for such recommendations and whether the policies or procedures will be modified as a result of such recommendations)."[1004] The commenter believed that "the inclusion of a description of any material changes to the SDR's policies and procedures, and any material compliance matters identified both since the date of the preceding compliance report, provide

1003 DTCC 2, supra note 19.

1004 DTCC 2, supra note 19.

comprehensive information," and that "requiring the CCO to detail every recommendation (whether or not accepted) may chill open communication between the CCO and other SDR management."[1005] The commenter "firmly believe[d that] the annual report should be kept confidential by the Commission" and explained that "[g]iven the level of disclosure expected to be required . . . the report will likely contain confidential and proprietary business information."[1006]

The other commenter recommended that "the review and reporting should be more frequent, at least semiannually or quarterly," and that "the rules should expressly prohibit the board of an SDR from requiring the CCO to make any changes to the compliance reports."[1007] The commenter suggested that "[a]ny edits or supplements to the report sought by the board may be submitted to the Commission along with – but not as part of – the CCO's report."[1008]

c. Final Rule

After considering the comments, the Commission is adopting Rules 13n-11(d) and 13n-11(e) as proposed, each with two modifications.[1009] Specifically, Rule 13n-11(d)(1) requires that an SDR's CCO annually prepare and sign a report that contains a description of the SDR's compliance with respect to the Exchange Act and the rules and regulations thereunder and each of the SDR's policies and procedures (including the SDR's code of ethics and conflicts of

---

1005 DTCC 2, supra note 19.

1006 DTCC 2, supra note 19.

1007 Better Markets 1, supra note 19; see also Better Markets 3, supra note 19 (suggesting that the Commission require "the board to review and comment on, but not edit, the CCO's annual report to the Commission").

1008 Better Markets 1, supra note 19.

1009 To conform with Rule 13n-11's heading, as adopted, the Commission is revising the heading of paragraph (d) of the rule to specify that the paragraph pertains to "[c]ompliance reports" rather than "[a]nnual reports." See supra note 941.

interest policies). One commenter suggested that the Commission limit the applicability of this rule to an SDR's activities relating to SBSs, but did not provide a rationale for such a limit.[1010] The Commission does not believe that there is a rationale for such a limit and has concluded that it is appropriate to adopt this rule, which essentially reiterates the statutory language.[1011] In addition, compliance issues at an SDR that are not related to SBSs may impact the SDR as a whole, of which the Commission should be kept apprised.

Additionally, Rule 13n-11(d)(1) requires each annual compliance report to contain, at a minimum, a description of: (1) the SDR's enforcement of its policies and procedures, (2) any material changes[1012] to the policies and procedures since the date of the preceding compliance report, (3) any recommendation for material changes to the policies and procedures as a result of the annual review, the rationale for such recommendation, and whether such policies and procedures were or will be modified by the SDR to incorporate such recommendation, and (4) any material compliance matters[1013] identified since the date of the preceding compliance report. These minimum disclosure requirements are substantially similar to the Commission's requirements for annual reports filed by CCOs of investment companies.[1014] Further, these

---

1010 See DTCC 2, supra note 19.

1011 See Exchange Act Section 13(n)(6)(C)(i), 15 U.S.C. 78m(n)(6)(C)(i).

1012 The term "material change" is defined as a change that a CCO would reasonably need to know in order to oversee compliance of the SDR. See Rule 13n-11(b)(5).

1013 The term "material compliance matter" is defined as any compliance matter that the board would reasonably need to know to oversee the compliance of the SDR and that involves, without limitation: (1) a violation of the federal securities laws by the SDR, its officers, directors, employees, or agents; (2) a violation of the policies and procedures of the SDR, by the SDR, its officers, directors, employees, or agents; or (3) a weakness in the design or implementation of the SDR's policies and procedures. See Rule 13n-11(b)(6).

1014 See Investment Company Act Rule 38a-1(a)(4)(iii), 17 CFR 270.38a-1(a)(4)(iii).

disclosure requirements will provide important information to Commission staff regarding any material compliance issues at an SDR and material changes or recommendations for material changes to the SDR's policies and procedures. Among other things, such information will be useful to assist Commission staff in monitoring compliance by SDRs with the relevant provisions of the Exchange Act and the rules and regulations thereunder. Thus, the Commission believes that the minimum disclosure requirements are appropriate and disagrees with one commenter's remark that it is not appropriate to require a compliance report to include a description of any recommendation for material changes to an SDR's policies and procedures as a result of an annual review, the rationale for such recommendation, and whether such policies and procedures were or will be modified by the SDR to incorporate such recommendation.[1015]

To address a concern raised by the same commenter,[1016] the Commission notes that it is not "requiring the CCO to detail every recommendation."[1017] The rule is limited to "recommendations for material changes."[1018] The Commission believes that limiting the description required in an annual compliance report to recommendations for material changes to the SDR's policies and procedures appropriately addresses the commenter's concern. The Commission notes, however, that individual compliance matters may not be material when viewed in isolation, but may collectively suggest a material compliance matter. In addition, the

1015 See DTCC 2, supra note 19.

1016 See DTCC 2, supra note 19 (stating that "requiring the CCO to detail every recommendation (whether or not accepted) may chill open communication between the CCO and other SDR management").

1017 But see DTCC 2, supra note 19 (believing that it is not appropriate to require compliance reports to include a discussion of recommendations for material changes to an SDR's policies and procedures).

1018 Rule 13n-11(d)(1)(iii).

Commission recognizes that this rule may "chill open communication between the CCO and other SDR management," as one commenter suggested,[1019] but the Commission believes that the usefulness of the information in an SDR's annual compliance reports to the Commission, as discussed above, would justify any potential chilling of communications.

Consistent with the relevant statutory provision,[1020] the rule requires annual compliance reports. The Commission does not believe that it is necessary to require more frequent reports, as one commenter suggested, in order to assess an SDR's financial stability.[1021] CCOs, however, should consider the need for interim reviews of compliance at SDRs in response to significant compliance events, changes in business arrangements, and regulatory developments. For example, if there is an organizational restructuring of an SDR, then its CCO should consider evaluating whether its policies and procedures are adequate to guard against potential conflicts of interest. Additionally, if a new rule regarding SDRs is adopted by the Commission, then a CCO would need to take reasonable steps to ensure compliance with the rule, including reviewing the SDR's policies and procedures.

Under Rule 13n-11(d)(2), an SDR is required to file with the Commission a financial report along with the annual compliance report, and the compliance report must include a certification by the CCO that, to the best of his or her knowledge and reasonable belief,[1022] and

---

1019 See DTCC 2, supra note 19.

1020 See Exchange Act Section 13(n)(6)(C)(i), 15 U.S.C. 78m(n)(6)(C)(i).

1021 See Better Markets 1, supra note 19.

1022 The Commission is revising Rule 13n-11(d)(2) from the proposal to clarify that the certification must be made by the CCO and permit the certification to be based on the best of the CCO's knowledge and reasonable belief. Accord General Rule of Practice 153(b)(1)(ii), 17 CFR 201.153(b)(1)(ii) (requiring an attorney who signs a filing with the Commission to certify that "to the best of his or her knowledge, information, and belief, formed after reasonable inquiry, the filing is well grounded in fact and is warranted by under penalty of law, the compliance report is accurate and complete. The compliance report is also required to be filed in a tagged[1023] data format in accordance with instructions contained in the EDGAR Filer Manual,[1024] as described in Rule 301 of Regulation S-T.[1025]

Rule 13n-11(e) requires a CCO to submit the annual compliance report to the board for its review prior to the filing of the report with the Commission under Rule 13n-11(d)(2).[1026] Although the rule requires the compliance report to be submitted to the board once a year, a CCO should promptly bring serious compliance issues to the board's attention rather than wait until an annual compliance report is prepared. One commenter suggested that the Commission permit an SDR's board to submit edits or supplements to a CCO's annual compliance report, but not as part of the report.[1027] Rule 13n-11 does not prohibit a CCO from editing an annual compliance report to reflect the board's comments because the Commission believes that the CCO and the board should be working toward the same compliance goals and that prohibiting the CCO from taking the board's edits could create an adversarial atmosphere between them. As discussed above, however, an SDR could, pursuant to the conflicts of interest requirements set forth in Rule 13n-4(c)(3), consider prohibiting a board from requiring the CCO to make any changes to

---

existing law or a good faith argument for the extension, modification, or reversal of existing law").

1023 See supra note 294 (defining "tag" (including the term "tagged")).

1024 See supra note 294 (defining "EDGAR Filer Manual").

1025 Rule 13n-11(d)(2); see also 17 CFR 232.301. The information in each compliance report will be tagged using an appropriate machine-readable, tagged data format to enable the efficient analysis and review of the information contained in the report.

1026 The Commission is revising Rule 13n-11(e) from the proposal to refer to the "submission" of the annual compliance report "to" the Commission as the "filing" of the report "with" the Commission. The Commission believes that using the term "filing" is more precise than the term "submission" in this context.

1027 Better Markets 1, supra note 19.

the report.[1028]

One commenter suggested that the Commission keep the annual compliance report confidential.[1029] The Commission is not providing, by rule, that the annual compliance reports are automatically granted confidential treatment, but an SDR may seek confidential treatment pursuant to Exchange Act Rule 24b-2. This approach is consistent with how the Commission generally treats the filings that it receives from its regulated entities, including exchanges and clearing agencies. The Commission may make filed annual compliance reports available on its website, except for information where confidential treatment is requested by the SDR and granted by the Commission.[1030]

5. Financial Reports and Filing of Reports (Exchange Act Rules 13n-11(f) and (g)/Rules 11, 305, and 407 of Regulation S-T)

a. Proposed Rule

Proposed Rule 13n-11(f) set forth a number of requirements relating to an SDR's financial report. First, the proposed rule would require each financial report to be a complete set of the SDR's financial statements that are prepared in conformity with U.S. generally accepted accounting principles ("GAAP") for the SDR's most recent two fiscal years.[1031] Second, the

1028 Accord Better Markets 3, supra note 19 (suggesting that the Commission require "the board to review and comment on, but not edit, the CCO's annual report to the Commission").

1029 DTCC 2, supra note 19.

1030 As discussed in Section VI.A.1.c of this release, the Commission is adopting technical amendments to Exchange Act Rule 24b-2 to clarify that the confidential portion of electronic filings by SDRs must be filed electronically and to require SDRs to request confidential treatment electronically. The Commission is also adopting technical amendments to Rule 101 of Regulation S-T to provide that, except as otherwise provided, all filings by SDRs, including any information with respect to which confidential treatment is requested, must be filed electronically.

1031 Proposed Rule 13n-11(f)(1).

proposed rule would provide that each financial report shall be audited in accordance with the standards of the Public Company Accounting Oversight Board ("PCAOB") by a registered public accounting firm that is qualified and independent in accordance with Rule 2-01 of Regulation S-X.[1032] Third, each financial report would be required to include a report of the registered public accounting firm that complies with paragraphs (a) through (d) of Rule 2-02 of Regulation S-X.[1033] Fourth, if an SDR's financial statements contain consolidated information of a subsidiary of the SDR, then the SDR's financial statements must provide condensed financial information as prescribed by the Commission.[1034] Fifth, an SDR's financial reports would be required to be provided in XBRL consistent with Rules 405(a)(1), (a)(3), (b), (c), (d), and (e) of Regulation S-T.[1035]

Proposed Rule 13n-11(g) would further require that annual compliance reports and financial reports be filed within 60 days after the end of the fiscal year covered by such reports.

b. Comments on the Proposed Rule

The Commission received one comment relating to this proposed rule.[1036] Specifically, one commenter suggested harmonizing Rule 13n-11(f) with the CFTC's rule by eliminating proposed Rule 13n-11(f)(2)'s requirement that each financial report be audited in accordance with the PCAOB's standards by a registered public accounting firm that is qualified and

1032 Proposed Rule 13n-11(f)(2).

1033 Proposed Rule 13n-11(f)(3).

1034 Proposed Rule 13n-11(f)(4).

1035 Proposed Rule 13n-11(f)(5); see also 17 CFR 232.405 (imposing content, format, submission, and website posting requirements for an interactive data file, as defined in Rule 11 of Regulation S-T).

1036 See DTCC 5, supra note 19.

independent unless the SDR is under a separate obligation to provide financial statements.[1037] The commenter believed that "[t]his requirement imposes an additional burden for an [SDR] and is not justified in relation to the risks that an [SDR] would pose to its members."[1038] The commenter further suggested that the Commission "consider adopting the CFTC's approach in its final [swap data repository] rules, which require [a swap data repository's] financial statements be prepared in conformity with . . . GAAP."[1039]

c. Final Rules

The Commission is adopting proposed Rules 13n-11(f) and (g) with modifications.[1040] Specifically, Rule 13n-11(f)(1) requires each financial report to be a complete set of the SDR's financial statements that are prepared in conformity with U.S. GAAP for the SDR's most recent two fiscal years.[1041] Rule 13n-11(f)(2) provides that each financial report must be audited in accordance with the PCAOB's standards by a registered public accounting firm[1042] that is

---

1037 DTCC 5, supra note 19.

1038 DTCC 5, supra note 19 (noting that "[u]nlike clearing agencies or other entities supervised by the Commission, an [SDR] does not have financial exposure to its users or participants that would justify the imposition of this requirement").

1039 DTCC 5, supra note 19.

1040 To conform with the headings of Rule 13n-11 and paragraph (d) of the rule, as adopted, the Commission is revising the heading of paragraph (f) of the rule to refer to "financial reports" in a plural form.

1041 This is generally consistent with CFTC Rule 49.25(f). See 17 CFR 49.25(f); DTCC 5, supra note 19 (suggesting that the Commission adopt the CFTC's rule requiring a swap data repository's financial statements to be prepared in conformity with GAAP).

1042 The term "registered public accounting firm" is defined in Exchange Act Section 3(a)(59) to have the same meaning as in Section 2 of the Sarbanes-Oxley Act of 2002. See 15 U.S.C. 78c(a)(59). Section 2 of the Sarbanes-Oxley Act defines "registered public accounting firm" as a public accounting firm registered with the PCAOB in accordance with the Sarbanes-Oxley Act.

qualified and independent in accordance with Rule 2-01 of Regulation S-X.[1043] Pursuant to Rule 13n-11(f)(3), each financial report is required to include a report of the registered public accounting firm that complies with paragraphs (a) through (d) of Rule 2-02 of Regulation S-X.[1044]

Rule 13n-11(f)(4) further provides that if an SDR's financial statements contain consolidated information of a subsidiary of the SDR, then the SDR's financial statements must provide condensed financial information, in a financial statement footnote, as to the financial position, changes in financial position and results of operations of the SDR, as of the same dates and for the same periods for which audited consolidated financial statements are required. Such financial information need not be presented in greater detail than is required for condensed statements by Rules 10-01(a)(2), (3), and (4) of Regulation S-X.[1045] Detailed footnote disclosure that would normally be included with complete financial statements may be omitted with the exception of disclosures regarding material contingencies, long-term obligations, and guarantees.[1046] Descriptions of significant provisions of the SDR's long-term obligations, mandatory dividend or redemption requirements of redeemable stocks, and guarantees of the SDR shall be provided along with a five-year schedule of maturities of debt.[1047] If the material contingencies, long-term obligations, redeemable stock requirements, and guarantees of the SDR have been separately disclosed in the consolidated statements, then they need not be repeated in

1043 Rule 13n-11(f)(2).

1044 Rule 13n-11(f)(3).

1045 Rule 13n-11(f)(4).

1046 Id.

1047 Id.

this schedule.[1048] Rule 13n-11(f)(4) is substantially similar to Rule 12-04 of Regulation S-X, which pertains to condensed financial information of registrants.[1049]

The Commission is revising proposed Rule 13n-11(f)(5) to require an SDR's financial reports to be provided as an official filing[1050] in accordance with the EDGAR Filer Manual and include, as part of the official filing, an Interactive Data Financial Report[1051] filed in accordance with new Rule 407 of Regulation S-T. Finally, Rule 13n-11(g) provides that annual compliance reports and financial reports filed pursuant to Rules 13n-11(d) and (f) are required to be filed within 60 days after the end of the fiscal year covered by such reports.

Rule 407 of Regulation S-T

In conjunction with Rule 13n-11(f)(5), the Commission is adopting new Rule 407 of Regulation S-T, which stems from provisions in proposed Rule 13n-11(f). Rule 407 sets forth the requirements equivalent to those in Rules 405(a)(1) (except as to the requirement for website

---

1048 Id.

1049 See 17 CFR 210.12-04.

1050 "Official filing" has the same meaning as set forth in Rule 11 of Regulation S-T. Rule 13n-11(b)(7). Specifically, Rule 11 of Regulation S-T defines "official filing" as "any filing that is received and accepted by the Commission, regardless of filing medium and exclusive of header information, tags and any other technical information required in an electronic filing; except that electronic identification of investment company type and inclusion of identifiers for series and class (or contract, in the case of separate accounts of insurance companies) as required by [R]ule 313 of Regulation S-T (§ 232.313) are deemed part of the official filing."

1051 "Interactive Data Financial Report" has the same meaning as set forth in Rule 11 of Regulation S-T. Rule 13n-11(b)(4). Specifically, the Commission is adding the definition of "Interactive Data Financial Report" in Rule 11 of Regulation S-T to mean "the machine-readable computer code that presents information in eXtensible Business Reporting Language (XBRL) electronic format pursuant to § 232.407." This definition is substantially the same as the definition of "Interactive Data File" in Rule 11 of Regulation S-T. However, Interactive Data Financial Reports are not considered Interactive Data Files for purposes of Rule 405 or for other rules and regulations that reference to Rule 405.

posting), (a)(2) (with modifications), (a)(3), (b), (c), (d)(1), and (e)(1) of Regulation S-T. With the exception of Rule 405(a)(2), these provisions were cross-referenced in proposed Rule 13n-11(f)(5). Thus, substantively, the requirements in new Rule 407 are the same as those proposed under proposed Rule 13n-11(f)(5), except as detailed below. The text of Rule 407 is also substantially the same as those provisions of Rule 405 that pertain to the content, format, and filing requirements of XBRL-formatted financial statements. Rule 407, however, applies to Interactive Data Financial Reports, whereas Rule 405 applies to Interactive Data Files. The Commission is adopting new Rule 407 to specify the content, format, and filing requirements for Interactive Data Financial Reports.

Although substantially similar, there are several differences between the provisions of Rule 405 that proposed Rule 13n-11(f) cross-referenced and the provisions of Rule 405 that are included in new Rule 407. As a general matter, these differences relate to modifications from the proposal that address the unique aspects of SDRs and the applicability of certain filing requirements to them.

Upon further consideration, the Commission is not adopting, in Rule 407, several provisions that the Commission had initially proposed applying to SDRs' financial reports. Rule 405(a)(1), which was cross-referenced in proposed Rule 13n-11(f)(5), requires compliance with the web site posting requirements found elsewhere in Rule 405. As adopted, Rule 407 does not have website posting requirements because the Commission believes that it is not necessary to impose such requirements on SDRs in this context. No commenters have suggested otherwise. Additionally, this is consistent with the SDR Rules not imposing any web site posting requirements on any other filings by SDRs. Rule 407 also does not require an SDR to file its financial reports consistent with Rules 405(d)(2), (3), and (4), all of which require detailed tagging of footnotes in financial statements. Additionally, Rule 407 does not require an SDR to file its financial reports consistent with Rule 405(e)(2), which requires detailed tagging of financial statement schedules. The Commission believes that block-text tags of complete footnotes and schedules in an SDR's financial reports[1052] will provide sufficient data structure for the Commission to assess and analyze effectively the SDR's financial and operational condition. Thus, the Commission believes that it is not necessary to impose additional costs on SDRs to provide detailed tagged footnotes and schedules in SDRs' financial reports. For these reasons, the Commission is not requiring SDRs to detail tag footnotes and schedules in their financial reports.

In addition, the provisions of Rule 405 that proposed Rule 13n-11(f) cross-referenced and the provisions of Rule 405 that are included in new Rule 407 differ in another way. New Rule 407(a)(2) specifies that Rule 407 applies only to SDRs filing financial reports.[1053] Specifically, new Rule 407(a)(2) states that an Interactive Data Financial Report must be filed only by an electronic filer that is required to file an Interactive Data Financial Report pursuant to Rule 13n-11(f)(5) as an exhibit to a filing of an SDR's financial report. Consistent with other documents required to be filed in a tagged data, or interactive, format,[1054] an SDR's financial report is required to be filed with the Commission in two formats. The first part of the official filing is the

---

1052 See Rules 407(d) and (e) of Regulation S-T (requiring complete footnotes and schedules in financial statements to be block-text tagged).

1053 Rule 405(a)(2), on the other hand, applies to other electronic filers either required or permitted to submit an Interactive Data File.

1054 See Rule 405 of Regulation S-T, 17 CFR 232.405.

Related Official Financial Report Filing,[1055] which is in ASCII or HTML format. The second part of the official filing, the Interactive Data Financial Report, is an exhibit to the filing, which is required to be in XBRL format.[1056]

In addition to adopting new Rule 407 of Regulation S-T, the Commission is making a conforming amendment to Rule 305 of Regulation S-T to include Interactive Data Financial Reports among the list of filings to which Rule 305(a) does not apply.[1057] Rule 305(a) limits the number of characters and positions of tabular or columnar information of electronic filings with the Commission. By amending Rule 305, the Commission is treating Interactive Data Financial Reports in the same manner as it treats other XBRL filings in this context.

As mentioned above, Rule 13n-11(g) provides that annual compliance reports and financial reports are required to be filed within 60 days after the end of the fiscal year covered by such reports. The Commission anticipates developing an electronic filing system through which an SDR will be able to file annual compliance reports and financial reports shortly after the effective date of Rule 13n-11. The Commission anticipates that this electronic filing system will be through EDGAR and that it will be the same portal for SDRs to file Form SDR. If an SDR needs to file an annual compliance report and financial report prior to such time as the electronic filing system is available, then the SDR may file the reports in paper format with the

1055 The Commission is adding the definition of "Related Official Financial Report Filing" in Rule 11 of Regulation S-T to mean "the ASCII or HTML format part of the official filing with which an Interactive Data Financial Report appears as an exhibit."

1056 The Commission's proposed Rule 13n-11(f) stated that an SDR's financial report must be provided in XBRL consistent with certain provisions in Rule 405. As adopted, Rule 407 is intended to clarify that it is only the exhibit to the filing of an SDR's financial report that must be in XBRL.

1057 The Commission notes that Rule 305(a) of Regulation S-T does not apply to HTML documents. If a Related Official Financial Report Filing is filed in HTML format, then Rule 305(a) will not apply to that filing.

Commission's Division of Trading and Markets at the Commission's principal office in Washington, DC. However, doing so does not relieve the SDR from compliance with the requirement in Rule 13n-11(d)(2) to file the annual compliance report "in a tagged data format in accordance with the instructions contained in the EDGAR Filer Manual," or the requirement in Rule 13n-11(f)(5) to provide the financial report "as part of an official filing in accordance with the EDGAR Filer Manual." Therefore, when the Commission's electronic filing system is available, the SDR should file electronically any such reports that previously had been filed in paper format.

The Commission is not providing, by rule, that the financial reports are automatically granted confidential treatment, but an SDR may seek confidential treatment of certain information pursuant to Exchange Act Rule 24b-2. As stated above, this approach is consistent with how the Commission generally treats the filings that it receives from its regulated entities, including exchanges. The Commission may make filed financial reports available on its website except for information where confidential treatment is requested by the SDR and granted by the Commission.[1058]

The Commission notes that with respect to its other filers, the Commission has required, at a minimum, the financial information discussed above[1059] and, in some instances, significantly

1058 As discussed in Section VI.A.1.c of this release, the Commission is adopting technical amendments to Exchange Act Rule 24b-2 to clarify that the confidential portion of electronic filings by SDRs must be filed electronically and to require SDRs to request confidential treatment electronically. The Commission is also adopting technical amendments to Rule 101 of Regulation S-T to provide that, except as otherwise provided, all filings by SDRs, including any information with respect to which confidential treatment is requested, must be filed electronically.

1059 See, e.g., Exchange Act Rule 17a-5(d), 17 CFR 240.17a-5(d) (requiring broker-dealers to file annually audited financial statements); Article 3 of Regulation S-X, 17 CFR 210.3-01 et seq. (requiring certain financial statements to be audited by independent accountants).

more information.[1060] Additionally, as discussed in the Proposing Release, the Commission believes that it is necessary to obtain an audited annual financial report from each registered SDR to understand the SDR's financial and operational condition. It is particularly important for the Commission to have this understanding because SDRs are intended to play a pivotal role in improving the transparency and efficiency of the SBS market and because SBSs (whether cleared or uncleared) are required to be reported to a registered SDR.[1061] In its role as central recordkeeper, an SDR serves an important role as a source of data for regulators to monitor exposures, risks, and compliance with the Exchange Act and for market participants to access position information. Among other things, the Commission will need to know whether an SDR has adequate financial resources to comply with its statutory obligations or is having financial difficulties. If an SDR ultimately ceases doing business, then it could create a significant disruption in the OTC derivatives market.

With respect to one commenter's suggested deletion of the auditing requirement in Rule 13n-11(f)(2), the Commission disagrees with the commenter's view that the requirement imposes an additional burden for an SDR that is not justified in relation to the risks that an SDR would pose to its members.[1062] The Commission believes that the audit requirement will serve as an effective means to assure the reliability of the information in an SDR's financial report that is filed with the Commission. The Commission also believes that the filing of audited financial

1060 See, e.g., Exchange Act Rule 17a-5(a), 17 CFR 240.17a-5(a) (requiring broker-dealers to file monthly and quarterly Financial and Operational Combined Uniform Single (FOCUS) reports); Article 10-01(d) of Regulation S-X, 17 CFR 210.10-01(d) (requiring public companies to have their quarterly reports reviewed by independent public accountants).

1061 Proposing Release, 75 FR at 77343, supra note 2; see also Exchange Act Section 13(m)(1)(G), 15 U.S.C. 78m(m)(1)(G).

1062 See DTCC 5, supra note 19.

statements (as opposed to unaudited financial statements) is important because it would bolster market participants' confidence in the SDR and provide greater credibility to the accuracy of the information that the SDR files with the Commission.[1063] The Commission recognizes that because of the audit requirement in Rule 13n-11(f)(2), the rule may, in some instances, be more costly than the CFTC's requirement of quarterly unaudited financial statements.[1064] The Commission believes, however, that the additional burden, where it exists, is justified by the aforementioned benefits of requiring audited financial statements.

6. Additional Rule Regarding Chief Compliance Officer (Rule 13n-11(h))

In the Proposing Release, the Commission asked whether it should prohibit any officers, directors, or employees of an SDR from, directly or indirectly, taking any action to coerce, manipulate, mislead, or fraudulently influence the SDR's CCO in the performance of his responsibilities.[1065] In response, one commenter recommended that the Commission adopt such a prohibition.[1066] After considering the commenter's recommendation, the Commission has decided to adopt Rule 13n-11(h), which states that "[n]o officer, director, or employee of a security-based swap data repository may directly or indirectly take any action to coerce, manipulate, mislead, or fraudulently influence the security-based swap data repository's chief compliance officer in the performance of his or her duties under [Rule 13n-11]." This rule is

1063 See Revision of the Commission's Auditor Independence Requirements, Securities Act Release No. 7919 (Nov. 21, 2000), 65 FR 76008 (Dec. 5, 2000) (discussing importance of auditor independence and audited financial statements).

1064 See CFTC Rule 49.25, 17 CFR 49.25; DTCC 5, supra note 19 (suggesting that the Commission "consider adopting the CFTC's approach in its final [swap data repository] rules," regarding financial statements).

1065 Proposing Release, 75 FR at 77341, supra note 2.

1066 Better Markets 1, supra note 19; see also Better Markets 3, supra note 19 (suggesting "[e]xplicit prohibitions against attempts by officers, directors, or employees to coerce, mislead, or otherwise interfere with the CCO").

intended to advance the goals of the statute's requirements by preventing others at the SDR from seeking to improperly affect the SDR's CCO in the performance of his or her responsibilities. This rule is also intended to promote the independence of an SDR's CCO while maintaining the CCO's effectiveness by mitigating the potential conflicts of interest between the CCO and the SDR's officers, directors, and employees.

K. Exemption from Requirements Governing SDRs for Certain Non-U.S. Persons (Rule 13n-12)

1. Proposed Rule

In the Cross-Border Proposing Release, the Commission proposed, pursuant to its authority under Exchange Act Section 36,[1067] an exemption from Exchange Act Section 13(n)[1068] and the rules and regulations thereunder (collectively, the "SDR Requirements") for non-U.S. persons that perform the functions of an SDR within the United States, subject to a condition.[1069] Specifically, the Commission proposed Rule 13n-12 ("SDR Exemption"), which provides: "A non-U.S. person[1070] that performs the functions of a security-based swap data repository within the United States shall be exempt from the registration and other requirements set forth in Section 13(n) of the [Exchange] Act . . . and the rules and regulations thereunder, provided that

1067 Exchange Act Section 36 authorizes the Commission to conditionally or unconditionally exempt any person, security, or transaction, or any class or classes of persons, securities, or transactions, from certain provisions of the Exchange Act or certain rules or regulations thereunder, by rule, regulation, or order, to the extent that such exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors. 15 U.S.C. 78mm.

1068 15 U.S.C. 78m(n).

1069 Cross-Border Proposing Release, 78 FR at 31209, supra note 3.

1070 Proposed Rule 13n-12(a)(1) defines "non-U.S. person" to mean any person that is not a U.S. person. Proposed Rule 13n-12(a)(2) defines "U.S. person" by cross-reference to the definition of "U.S. person" in proposed Rule 3a71-3(a)(7). See Cross-Border Proposing Release, 78 FR at 31209, supra note 3.

each regulator with supervisory authority over such non-U.S. person has entered into a supervisory and enforcement memorandum of understanding or other arrangement with the Commission that addresses the confidentiality of data collected and maintained by such non-U.S. person, access by the Commission to such data, and any other matters determined by the Commission."[1071]

2. Comments on the Proposed Rule

The Commission received several comment letters concerning the registration and regulation of SDRs in the cross-border context, most of which were submitted prior to the Commission's proposal of Rule 13n-12. As a general matter, commenters suggested that the Commission should apply principles of international comity.[1072]

One commenter expressed concern that "the current asymmetry in the [proposed SDR

1071 Proposed Rule 13n-12(b).

1072 See DTCC 2, supra note 19 (urging the Commission, in its regulation of SDRs, to aim for regulatory comity as it has already been agreed to by ODRF and other international bodies such as CPSS and IOSCO); Foreign Banks SBSR, supra note 27 (recommending that the Commission work with foreign authorities to permit SDRs in all major jurisdictions to register with the appropriate regulators in each jurisdiction); see also Société Générale SBSR, supra note 27 (suggesting that the Commission consider international comity and public policy goals of derivatives regulation to limit its regulation of swap business and requesting that the Commission coordinate with its foreign counterparts, especially those based in Europe, to work toward an MOU on the jurisdictional reach of the derivatives rules of the U.S./European Market Infrastructure Regulation); ISDA SIFMA SBSR, supra note 27 ("The Commission should consult with foreign regulators before establishing the extra-territorial scope of the rules promulgated under Title VII."). See also DTCC CB, supra note 26 ("Given the global nature of OTC swaps and SB swaps markets, the United States should continue to promote an approach to the regulation of the swaps markets that adheres to international comity and mitigates the risk of regulatory arbitrage in market decisions. Regulations among jurisdictions must be coordinated in a manner that promotes competition, transparency, and protects the safety and soundness of these global markets. At the same time, the Commission should remain vigilant that the international framework is efficient and does not unfairly disadvantage or concentrate systemic risk in the United States.").

Rules], when compared to existing international standards, will lead to fragmentation along regional lines and prohibit global services and global data provision, which will weaken the introduction of trade repositories as a financial markets reform measure."[1073] The commenter stated that "because of the onerous standards imposed on SDRs compared to the regulatory framework of other competitive jurisdictions, the U.S. will be less attractive than other locations for the purpose of storing full global data where SDRs are actively looking to service the global regulatory community."[1074]

In addition, two commenters expressed concern about the potential impact of duplicative registration requirements imposed on SDRs.[1075] Specifically, one of these commenters remarked that the Commission's proposed rules governing SDRs "would seem to force a non-resident SDR to be subject to multiple regimes and to the jurisdiction of several authorities" and that the Proposing Release made no "reference to equivalency of regulatory regimes or cooperation with the authorities of the country of establishment of the non-resident SDRs."[1076] To address this concern, the commenter suggested that the Commission adopt a regime under which foreign SDRs would be deemed to comply with the SDR Requirements if the laws and regulations of the relevant foreign jurisdiction were equivalent to those of the Commission and an MOU has been entered into between the Commission and the relevant foreign authority.[1077] The commenter noted that the recommended "regime would have the following advantages: i) facilitating cooperation among authorities from different jurisdictions; ii) ensuring the mutual recognition of

[1073] DTCC 2, supra note 19.

[1074] DTCC 2, supra note 19.

[1075] See US & Foreign Banks, supra note 24; ESMA, supra note 19.

[1076] ESMA, supra note 19.

[1077] ESMA, supra note 19.

[SDRs]; and iii) establishing convergent regulatory and supervisory regimes which is necessary in a global market such as the OTC derivatives one."[1078]

Recognizing that some SDRs would function solely outside of the United States and, therefore, would be regulated by an authority in another jurisdiction, commenters suggested possible approaches to the SDR registration regime. One commenter, for example, suggested that "a non-U.S. SDR should not be subject to U.S. registration so long as it collects and maintains information from outside the U.S., even if such information is collected from non-U.S. swap dealer or [major security-based swap participant] registrants."[1079] Two commenters supported "cross-registration" of SDRs, whereby SDRs in all major jurisdictions may register with the appropriate regulators in each jurisdiction.[1080]

3. Final Rule

As stated above,[1081] the Commission believes that a non-U.S. person that performs the functions of an SDR within the United States is required to register with the Commission, absent

---

1078 ESMA, supra note 19 (noting that a similar regulatory regime is delineated in the "European Commission's proposal for a Regulation on OTC derivatives, central counterparties and trade repositories").

1079 See US & Foreign Banks, supra note 24.

1080 Foreign Banks SBSR, supra note 27 ("Cross-registration of SDRs is not only necessary given the global nature of the swaps market, it also reduces duplicative data reporting. Cross-registration would also facilitate the creation of uniform reporting rules and procedures that would enable easy comparison of transaction data from different jurisdictions. Cross-border information sharing and cross-registration, coupled with the new standard identification codes that will be required for reporting to SDRs, would provide regulators and market participants with a comprehensive picture, thus enabling more robust surveillance and supervision of the global swaps market."); BofA SBSR, supra note 27 (noting that the Commission can ensure that it retains access to data reported to foreign SDRs by establishing a regime for cross-registration of SDRs in multiple jurisdictions).

1081 See Section III.B of this release discussing persons performing the functions of an SDR within the United States that must register with the Commission.

an exemption.[1082] After considering comments, including those urging the Commission to take into consideration the principles of international comity and mitigate the risk of regulatory arbitrage in market decisions,[1083] the Commission is adopting Rule 13n-12 as proposed, with two modifications,[1084] to provide an exemption from the SDR Requirements for certain non-U.S. persons. This rule is intended to provide legal certainty to market participants and to address commenters' concerns regarding the potential for duplicative regulatory requirements.[1085] Specifically, Rule 13n-12 states as follows: "A non-U.S. person[1086] that performs the functions of a security-based swap data repository within the United States shall be exempt from the registration and other requirements set forth in Section 13(n) of the [Exchange] Act . . . and the rules and regulations thereunder, provided that each regulator with supervisory authority over

1082 See Cross-Border Proposing Release, 78 FR at 31042, supra note 3. See also Exchange Act Section 13(n)(1), 15 U.S.C. 78m(n)(1) (requiring persons that, directly or indirectly, make use of the mails or any means or instrumentality of interstate commerce to perform the functions of an SDR, to register with the Commission). The Commission recognizes that some non-U.S. persons that perform the functions of an SDR may do so entirely outside the United States, and thus, are not required to register with the Commission.

1083 See DTCC 2, supra note 19; DTCC CB, supra note 26; Foreign Banks SBSR, supra note 27; Société Générale SBSR, supra note 27; and ISDA SIFMA SBSR, supra note 27.

1084 See infra note 1086 (discussing technical revision) and infra note 1087 (discussing MOU requirement).

1085 See US & Foreign Banks, supra note 24; ESMA, supra note 19.

1086 Exchange Act Rule 13n-12(a)(1), as adopted, defines "non-U.S. person" to mean any person that is not a U.S. person. Exchange Act Rule 13n-12(a)(2) defines "U.S. person" by cross-reference to the definition of "U.S. person" in Exchange Act Rule 3a71-3(a)(4)(i), 17 CFR 240.3a71-3(a)(4)(i). See Cross-Border Adopting Release, 79 FR at 47371, supra note 11 (adopting Exchange Act Rule 3a71-3(a)(4)(i)). As proposed, Rule 13n-12(a)(2) cross-referenced to "§ 240.3a71-3(a)(7)." For consistency in how cross-references are formatted in the SDR Rules, the Commission is revising from the proposal the format of the cross-reference to "Rule 3a71-3(a)(4)(i) of the Act (17 CFR 240.3a71-3(a)(4)(i))."

such non-U.S. person has entered into a memorandum of understanding[1087] or other arrangement with the Commission that addresses the confidentiality of data collected and maintained by such non-U.S. person, access by the Commission to such data, and any other matters determined by the Commission."

The Commission continues to believe that the SDR Exemption is necessary or appropriate in the public interest, and consistent with the protection of investors.[1088] Because the reporting requirements of Title VII and Regulation SBSR can be satisfied only if an SBS transaction is reported to an SDR that is registered with the Commission,[1089] the Commission continues to believe that the primary reason for a person subject to the reporting requirements of

---

1087 Upon further consideration, the Commission is revising the proposed rule to require an MOU rather than a more specific "supervisory and enforcement" MOU. Requiring an MOU provides the Commission with the flexibility to negotiate a broad range of terms, conditions, and circumstances under which information can be shared with other relevant authorities.

1088 See Cross-Border Proposing Release, 78 FR at 31043, supra note 3.

1089 The Commission believes that the SDR Exemption addresses one commenter's view that "a non-U.S. SDR should not be subject to U.S. registration so long as it collects and maintains information from outside the U.S." See US & Foreign Banks, supra note 24; see also Section III.B of this release (discussing when SDRs that are non-U.S. persons must register with the Commission). The Commission notes, however, that a non-U.S. person that performs the functions of an SDR outside the United States may choose to register with the Commission as an SDR to enable that person to accept data from persons that are reporting an SBS pursuant to the reporting requirements of Title VII and Regulation SBSR. See Exchange Act Sections 13(m)(1)(G) and 13A(a)(1), 15 U.S.C. 78m(m)(1)(G) and 78m-1(a)(1), as added by Dodd-Frank Act Sections 763(i) and 766(a); Regulation SBSR Adopting Release, supra note 13 (Rule 901 requiring all SBSs to be reported to a registered SDR or, if no SDR will accept the SBSs, the Commission). This approach is consistent with commenters' views supporting cross-registration of SDRs. See Foreign Banks SBSR, supra note 27 (suggesting cross-registration of SDRs); BofA SBSR, supra note 27 (suggesting cross-registration of SDRs). The Commission may consider also granting, pursuant to its authority under Exchange Act Section 36, 15 U.S.C. 78mm, exemptions to such non-U.S. person that registers with the Commission from certain of the SDR Requirements on a case-by-case basis. In determining whether to grant such an exemption, the Commission may consider, among other things, whether there are overlapping requirements in the Exchange Act and applicable foreign law.

Title VII and Regulation SBSR to report an SBS transaction to an SDR that is not registered with the Commission would likely be to satisfy reporting obligations that it or its counterparty has under foreign law.[1090] Such person would still be required to fulfill its reporting obligations under Title VII and Regulation SBSR by reporting its SBS transaction to an SDR that is registered with the Commission, absent other relief from the Commission,[1091] even if the transaction were also reported to a non-U.S. person that is not registered with the Commission because it is relying on the SDR Exemption. The Commission believes that this approach to the SDR Requirements appropriately balances the Commission's interest in having access to data about SBS transactions involving U.S. persons, while addressing commenters' concerns regarding the potential for duplicative regulatory requirements[1092] as well as furthering the goals of the Dodd-Frank Act.

The SDR Exemption includes a condition that each regulator with supervisory authority over the non-U.S. person that performs the functions of an SDR within the United States enters into an MOU or other arrangement with the Commission, as specified in Exchange Act Rule 13n-12(b). The Commission anticipates that in determining whether to enter into such an MOU or other arrangement with a relevant authority, the Commission will consider whether the relevant authority can keep confidential requested data that is collected and maintained by the

---

1090 See Cross-Border Proposing Release, 78 FR at 31043, supra note 3.

1091 See Cross-Border Proposing Release, 78 FR at 31043, supra note 3 (discussing Regulation SBSR and substituted compliance); see also Regulation SBSR Adopting Release, supra note 13 (adopting Rule 908(c) allowing for the possibility of substituted compliance).

1092 See US & Foreign Banks, supra note 24; ESMA, supra note 19.

non-U.S. person that performs the functions of an SDR within the United States[1093] and whether the Commission will have access to data collected and maintained by such non-U.S. person.[1094] The Commission anticipates that it will consider other matters, including, for example, whether the relevant authority agrees to provide the Commission with reciprocal assistance in securities matters within the Commission's jurisdiction and whether an MOU or other arrangement would be in the public interest.[1095] The Commission believes that, in lieu of requiring every non-U.S. person that performs the functions of an SDR within the United States to register with the Commission, the condition in the SDR Exemption is appropriate to address the Commission's interest in having access to SBS data involving U.S. persons and U.S. market participants that is maintained by non-U.S. persons that perform the functions of an SDR within the United States and protecting the confidentiality of such SBS data involving U.S. persons and U.S. market participants.[1096]

1093 The Commission contemplates that the relevant authority will keep requested data that is collected and maintained by such non-U.S. person confidential in a manner that is consistent with Exchange Act Section 24 and Rule 24c-1 thereunder. See 15 U.S.C. 78x and 17 CFR 240.24c-1.

1094 The Commission contemplates that the Commission's access to data collected and maintained by such non-U.S. person will be in a manner that is consistent with Exchange Act Section 13(n)(5)(D) and Rule 13n-4(b)(5) thereunder. See Exchange Act Section 13(n)(5)(D), 15 U.S.C. 78m(n)(5)(D).

1095 The Commission has entered numerous cooperative agreements with foreign authorities. See Cooperative Arrangements with Foreign Regulators, available at http://www.sec.gov/about/offices/oia/oia_cooparrangements.shtml. Based on the Commission's experience with negotiating MOUs and other agreements with foreign authorities, the Commission believes that the MOU or agreement described in Rule 13n-12(b) could, in many cases, be negotiated in a timely manner so that the exemption provided under Rule 13n-12(b) should be available before the registration of an SDR seeking to claim the exemption would otherwise be required.

1096 Accord Société Générale SBSR, supra note 27 (requesting that the Commission coordinate with its foreign counterparts, especially those based in Europe, to work toward

With respect to one commenter's concern about "the current asymmetry in the [proposed SDR Rules] when compared to existing international standards" and "onerous standards imposed on SDRs compared to regulatory framework of other competitive jurisdictions," the Commission believes that the SDR Exemption is intended to encourage international cooperation, and thereby mitigate to some extent the concern of data fragmentation and regulatory arbitrage.[1097] The commenter, which was submitted prior to the Commission's proposal of Rule 13n-12, did not provide specific examples of international standards or regulatory frameworks for comparison with the SDR Rules, but, as discussed in Section I.D above, the Commission has taken into consideration recommendations by international bodies; Commission staff also has consulted and coordinated with foreign regulators through bilateral and multilaterial discussions.[1098]

VII. Paperwork Reduction Act

Certain provisions of the SDR Rules[1099] and Form SDR impose new "collection of information" requirements within the meaning of the Paperwork Reduction Act of 1995 ("PRA").[1100] In accordance with 44 U.S.C. 3507 and 5 CFR 1320.11, the Commission submitted the provisions to the Office of Management and Budget ("OMB") for review when it issued the Proposing Release. The title of the new collection of information is "Form SDR and Security-

---

an MOU on the jurisdictional reach of the derivatives rules of the U.S./European Market Infrastructure Regulation).

1097 See DTCC 2, supra note 19.

1098 Senior representatives of authorities with responsibility for regulation of OTC derivatives have met on a number of occasions to discuss international coordination of OTC derivatives regulations. See, e.g., Report of the OTC Derivatives Regulators Group (ODRG) on Cross-Border Implementation Issues (Mar. 31, 2014), available at http://www.cftc.gov/ucm/groups/public/@internationalaffairs/documents/file/odrgreport033114.pdf.

1099 As noted above, "SDR Rules" means, collectively, Rules 13n-1 to 13n-12.

1100 44 U.S.C. 3501 et seq.

Based Swap Data Repository Registration, Duties, and Core Principles." An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB assigned control number 3235-0719 to the new collection of information.

In the Proposing Release, the Commission solicited comment on the collection of information requirements and the accuracy of the Commission's statements.[1101] The Commission received three comments noting the importance of confidentiality.[1102] The Commission received one comment generally discussing the burden of Rule 13n-11(f)(2), which is discussed below.[1103]

The Commission also received one comment recommending that "the Commission should generally seek to avoid any divergence from the CFTC's and international regulators' frameworks that is likely to give rise to undue costs or burdens."[1104] The commenter believed

---

1101 See Proposing Release, 75 FR at 77354, supra note 2.

1102 One commenter emphasized that regulators should provide confidential treatment to the annual compliance reports that SDRs provide to the Commission. DTCC 2, supra note 19. Consistent with its treatment of filings that it receives from other registrants, the Commission is not providing, by rule, that annual compliance reports are automatically granted confidential treatment, but SDRs may request confidential treatment. See Section VI.J.4.c of this release. One commenter to the Temporary Rule Release emphasized the importance of the Commission protecting information furnished to it under the rules in that release. Deutsche Temp Rule, supra note 28. A second commenter reiterated that regulators should provide confidential treatment to SBS data provided by SDRs. ESMA, supra note 19. The Commission anticipates that it will keep reported data that SDRs submit to the Commission confidential, subject to the provisions of applicable law. Pursuant to Commission rules, confidential treatment can be sought for information submitted to the Commission. See 17 CFR 200.83 (regarding confidential treatment procedures under FOIA).

1103 See Section VIII.D.6.c of this release discussing economic alternatives to Rule 13n-11(f)(2).

1104 IIB CB, supra note 26.

that "divergence is generally warranted only if the rule adopted by the Commission is more flexible than those adopted by others (and therefore would not preclude the voluntary adoption of consistent practices by market participants)."[1105]

None of the commenters specifically addressed the burden estimates in the Proposing Release related to the collection of information. The Commission has, however, revised the burden associated with completing Form SDR to reflect some additional material incorporated from Form SIP to accommodate SDRs' registration as SIPs and to reflect a revision to the disclosure of business affiliations.[1106] The Commission has also made a change to correct a calculation error.[1107] Other than these changes, the Commission's estimates remain unchanged from the Proposing Release.

A. Summary of Collection of Information

1. Registration Requirements, Form SDR, and Withdrawal from Registration

Rule 13n-1(b) requires an SDR to apply for registration with the Commission by filing Form SDR electronically in tagged data format in accordance with the instructions contained on the form. Under Rule 13n-1(e), each SDR is required to both designate and authorize on Form SDR an agent in the United States, other than a Commission member, official, or employee, to accept notice or service of process, pleadings, or other documents in any action or proceedings brought against the SDR to enforce the federal securities laws and the rules and regulations thereunder. Rule 13n-1(f) requires a non-resident SDR to (i) certify on Form SDR that the SDR

1105 IIB CB, supra note 26.

1106 See Section VII.D.1 of this release discussing the burdens associated with SDRs' registration requirements.

1107 The calculation of the burden on non-resident SDRs under Rule 13n-1(f) has been revised to correct a calculation error, which slightly reduces the burden hours incurred by non-resident SDRs. See infra note 1136 and the accompanying text.

can, as a matter of law, and will provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission and (ii) provide an opinion of counsel that the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, submit to onsite inspection and examination by the Commission. Under Rule 13n-3(a), in the event that an SDR succeeds to and continues the business of a registered SDR, the successor SDR may file an application for registration on Form SDR (and the predecessor SDR is required to file a withdrawal from registration with the Commission) within 30 days after the succession in order for the registration of the predecessor to be deemed to remain effective as the registration of the successor. Also, under Rule 13n-11(a), an SDR is required to identify on Form SDR a person who has been designated by the board to serve as a CCO of the SDR.

Rule 13n-1(d) requires SDRs to file an amendment on Form SDR annually as well as when any information provided in items 1 through 17, 26, and 48 on Form SDR is or becomes inaccurate for any reason. Under Rule 13n-3(b), if an SDR succeeds to and continues the business of a registered SDR and the succession is based solely on a change in the predecessor's date or state of incorporation, form of organization, or composition of a partnership, the successor SDR is permitted, within 30 days after the succession, to amend the registration of the predecessor SDR on Form SDR to reflect these changes.

Rule 13n-2(b) permits a registered SDR to withdraw from registration by filing a withdrawal from registration on Form SDR electronically in a tagged data format. The SDR must designate on Form SDR a person to serve as custodian of its books and records. When filing a withdrawal from registration on Form SDR, the SDR must update any inaccurate information.

2. SDR Duties, Data Collection and Maintenance, and Direct Electronic Access

Rule 13n-4(b) sets out a number of duties for SDRs. Under Rules 13n-4(b)(2) and (4), SDRs are required to accept data as prescribed in Regulation SBSR[1108] and maintain that data, as required in Rule 13n-5, for each SBS reported to the SDRs. SDRs are required, pursuant to Rule 13n-4(b)(5), to provide direct electronic access to the Commission or its designees.[1109] SDRs are required, pursuant to Rule 13n-4(b)(6), to provide information in such form and at such frequency as required by Regulation SBSR. The Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies for the purposes of direct electronic access. Until such time as the Commission adopts any format or taxonomy, SDRs may provide direct electronic access to the Commission to data in the form in which SDRs maintain such data.

SDRs have an obligation under Rule 13n-4(b)(3) to confirm, as prescribed in Rule 13n-5, with both counterparties the accuracy of the information submitted to the SDRs. Under Rule 13n-4(b)(7), at such time and in such manner as may be directed by the Commission, an SDR is required to establish automated systems for monitoring, screening, and analyzing SBS data.[1110]

Rule 13n-5 establishes rules regarding SDR data collection and maintenance. Rule 13n-5(b)(1) requires every SDR to (1) establish, maintain, and enforce written policies and procedures reasonably designed for the reporting of complete and accurate transaction data to the SDR;[1111] (2) accept all transaction data reported to it in accordance with those policies and

1108 See Regulation SBSR Adopting Release, supra note 13.

1109 See also Rule 13n-4(a)(5) (defining "direct electronic access").

1110 The Commission is not requiring SDRs to monitor, screen, and analyze SBS data maintained by the SDR at this time. See Section VI.D.2.c.iii of this release.

1111 "Transaction data" is defined in Rule 13n-5(a)(3).

procedures; (3) accept all data provided to it regarding all SBSs in an asset class if the SDR accepts data on any SBS in that particular asset class; and (4) establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the SDR is complete and accurate, and clearly identifies the source for each trade side, and the pairing method (if any) for each transaction in order to identify the level of quality of the transaction data. An SDR is also required under Rule 13n-5(b)(1)(iv) to promptly record transaction data it receives.

In addition, Rule 13n-5(b) requires every SDR to establish, maintain, and enforce written policies and procedures reasonably designed: (1) to calculate positions[1112] for all persons with open SBSs for which the SDR maintains records; (2) to ensure that the transaction data and positions that it maintains are complete and accurate; and (3) to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the SDR.

Rule 13n-5(b)(4) requires that every SDR maintain the transaction data and related identifying information for not less than five years after the applicable SBS expires and historical positions for not less than five years. This data is required to be maintained in a place and format that is readily accessible and usable to the Commission and other persons with authority to access or view the information. SDRs must also maintain this data in an electronic format that is non-rewritable and non-erasable. Under Rule 13n-5(b)(7), the SDR's obligation to preserve, maintain, and make accessible the transaction data and historical positions extends to the periods required under Rule 13n-5 even if the SDR ceases to do business or to be registered pursuant to Exchange Act Section 13(n). Rule 13n-5(b)(8) requires every SDR to make and keep current a plan to ensure that the transaction data and positions that are recorded in the SDR continue to be

[1112] "Position" is defined in Rule 13n-5(a)(2).

maintained in accordance with Rule 13n-5(b)(7), including procedures for transferring the transaction data and positions to the Commission or its designee (including another registered SDR).

Rule 13n-6 establishes rules regarding SDR automated systems. Rule 13n-6 requires that every SDR, with respect to those systems that support or are integrally related to the performance of its activities, establish, maintain, and enforce written policies and procedures reasonably designed to ensure that its systems provide adequate levels of capacity, integrity, resiliency, availability, and security.

3. Recordkeeping

Rule 13n-7 requires every SDR to make and keep records, in addition to those required under Rules 13n-4(b)(4) and 13n-5. Specifically, every SDR is required, under Rule 13n-7(a)(1), to make and keep current a record for each office listing, by name or title, each person at that office who, without delay, can explain the types of records the SDR maintains at that office and the information contained in those records. Every SDR is also required, under Rule 13n-7(a)(2), to make and keep current a record listing each officer, manager, or person performing similar functions of the SDR responsible for establishing policies and procedures that are reasonably designed to ensure compliance with the Exchange Act and the rules and regulations thereunder. Rule 13n-7(b) requires every SDR to keep and preserve at least one copy of all documents made or received by it in the course of its business as such. These records are required to be kept for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination. Upon the request of any representative of the Commission, pursuant to Rule 13n-7(b)(3), an SDR is required to furnish promptly to such representative copies of any documents required to be kept and preserved by the SDR pursuant to Rules 13n-7(a) and (b). Under Rule 13n-7(c), the SDR's recordkeeping obligation is extended to the periods required under Rule 13n-7 even if the SDR ceases to do business or to be registered pursuant to Exchange Act Section 13(n).

SDRs are also required to make available the books and records required by Rules 13n-1 through 13n-11 upon request by Commission representatives for inspection and examination.[1113]

4. Reports

Under Rule 13n-8, SDRs are required to promptly report to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines necessary or appropriate for the Commission to perform its duties.

5. Disclosure

Rule 13n-10 describes disclosures that SDRs are required to provide to a market participant before accepting any SBS data from that market participant or upon a market participant's request. The information required in the disclosure document includes: (1) the SDR's criteria for providing others with access to services offered and data maintained by the SDR, (2) the SDR's criteria for those seeking to connect to or link with the SDR, (3) a description of the SDR's policies and procedures regarding its safeguarding of data and operational reliability, as described in Rule 13n-6, (4) a description of the SDR's policies and procedures reasonably designed to protect the privacy of any and all SBS transaction information that the SDR receives from an SBS dealer, counterparty, or any registered entity, as described in Rule 13n-9(b)(1), (5) a description of the SDR's policies and procedures regarding its non-commercial and/or commercial use of the SBS transaction information that it receives from a market participant, any registered entity, or any other person, (6) a description of the SDR's

---

1113 See, e.g., Rules 13n-4(b)(1) and 13n-7(b)(3).

dispute resolution procedures involving market participants, as described in Rule 13n-5(b)(6), (7) a description of all the SDR's services, including any ancillary services, (8) the SDR's updated schedule of any dues; unbundled prices, rates, or other fees for all of its services, including any ancillary services; any discounts or rebates offered; and the criteria to benefit from such discounts or rebates, and (9) a description of the SDR's governance arrangements.

6. Chief Compliance Officer; Compliance Reports and Financial Reports

Rule 13n-4(b)(11) requires an SDR and Rule 13n-11(a) requires the board of an SDR to designate a CCO to perform the duties identified in Rule 13n-11. Under Rules 13n-11(c)(6) and (7), the CCO is responsible for, among other things, establishing procedures for the remediation of noncompliance issues identified by the CCO and establishing and following appropriate procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues.

The CCO is also required under Rules 13n-11(d), (e), and (g) to prepare and submit annual compliance reports to the SDR's board for review before they are filed with the Commission. The annual compliance reports must contain, at a minimum, a description of the SDR's enforcement of its policies and procedures, any material changes to the policies and procedures since the date of the preceding compliance report, any recommendation for material changes to the policies and procedures, and any material compliance matters identified since the date of the preceding compliance report. The compliance reports must be filed in a tagged data format in accordance with the instructions contained in the EDGAR Filer Manual.[1114]

Rules 13n-11(f) and (g) require that financial reports be prepared and filed annually with the Commission. These financial reports must, among other things, be prepared in conformity

[1114] See 17 CFR 232.301.

with GAAP for the most recent two fiscal years of the SDR, audited by a registered public accounting firm that is qualified and independent in accordance with Rule 2-01 of Regulation S-X, and audited in accordance with standards of the Public Company Accounting Oversight Board. The financial reports must be provided as an official filing in accordance with the EDGAR Filer Manual and include, as part of the official filing, an Interactive Data Financial Report filed in accordance with Rule 407 of Regulation S-T.[1115]

7. Other Provisions Relevant to the Collection of Information

Rule 13n-4(c)(1) sets forth the requirements for SDRs related to market access to services and data. Among other things, an SDR must: (1) establish, monitor on an ongoing basis, and enforce clearly stated objective criteria that would permit fair, open, and not unreasonably discriminatory access to services offered and data maintained by the SDR, as well as fair, open, and not unreasonably discriminatory participation by market participants, market infrastructures, venues from which data can be submitted to the SDR, and third party service providers that seek to connect to or link with the SDR; and (2) establish, maintain, and enforce written policies and procedures reasonably designed to review any prohibition or limitation of any person with respect to services offered or data maintained by the SDR and to grant that person access to those services or data if the person has been discriminated against unfairly.

Rule 13n-4(c)(2)(iv) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the SDR's senior management and each member of the board or committee that has the authority to act on behalf of the board possesses requisite skills and expertise to fulfill their responsibilities in the management and

1115 See Section VI.J.5.c of this release discussing Rule 407 of Regulation S-T.

governance of the SDR, have a clear understanding of their responsibilities, and exercise sound judgment about the SDR's affairs.

Rule 13n-4(c)(3) sets forth the conflicts of interest controls required of SDRs. In particular, SDRs must establish and enforce written policies and procedures reasonably designed to minimize conflicts of interest, including establishing, maintaining, and enforcing written policies and procedures reasonably designed to identify and mitigate potential and existing conflicts of interest in the SDR's decision-making process on an ongoing basis and written policies and procedures regarding the SDR's non-commercial and commercial use of the SBS transaction information that it receives.

Rule 13n-5(b)(6) requires SDRs to establish procedures and provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.

Rules 13n-4(b)(8) and 13n-9 relate to the privacy requirements for SDRs. Rule 13n-4(b)(8) requires SDRs to maintain the privacy of any and all SBS transaction information that the SDR receives from a SBS dealer, counterparty, or any registered entity as prescribed in Rule 13n-9. Rule 13n-9(b)(1) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to protect the privacy of any and all SBS transaction information that the SDR receives from any SBS dealer, counterparty, or any registered entity. Rule 13n-9(b)(2) requires each SDR to establish and maintain safeguards, policies, and procedures reasonably designed to prevent the misappropriation or misuse of any confidential information received by the SDR, material, nonpublic information, and/or intellectual property. At a minimum, these policies and procedures must address limiting access to such information and intellectual property, standards pertaining to the trading by persons associated with the SDR for their personal benefit or the benefit of others, and adequate oversight.

B. Use of Information

1. Registration Requirements, Form SDR, and Withdrawal from Registration

As discussed above, Rules 13n-1 and 13n-3 generally require SDRs to register on Form SDR and make amendments on Form SDR when specified information on the form becomes inaccurate, as well as annually. The information collected in Form SDR is used to enhance the ability of the Commission to monitor SDRs and oversee their compliance with the federal securities laws and the rules and regulations thereunder, as well as understand their operations and organizational structure. The information will also be used to make determinations of whether to grant or institute proceedings to determine whether registration should be granted or denied.

As discussed above, Rule 13n-2 generally permits a registered SDR to withdraw from registration by filing Form SDR electronically in a tagged data format, designating a custodian of its books and records, and updating any inaccurate information contained in its most recently filed Form SDR. The information collected from an SDR withdrawing from registration is used by the Commission to monitor and oversee SDRs by ensuring that the Commission has an accurate record of registered SDRs and access to an SDR's books and records after the SDR withdraws from registration.

Also, under Rule 13n-11(a), an SDR is required to identify on Form SDR a person who has been designated by the board to serve as a CCO of the SDR. This information will help the Commission identify SDRs' CCOs.

2. SDR Duties, Data Collection and Maintenance, and Direct Electronic Access

As discussed above, Rules 13n-4(b), 13n-5, and 13n-6 specify the duties of SDRs, require SDRs to collect and maintain specific data and provide that data to certain entities.[1116] The information that is collected under these provisions will help ensure an orderly and transparent SBS market as well as provide the Commission and other relevant authorities with tools to help oversee this market.

3. Recordkeeping

As discussed above, Rule 13n-7 requires an SDR to make and keep books and records relating to its business (except for the transaction data and positions collected and maintained pursuant to Rule 13n-5) for a prescribed period.[1117] The information collected under these provisions is necessary for Commission representatives to inspect and examine an SDR and to facilitate the Commission's efforts to evaluate the SDR's compliance with the federal securities laws and the rules and regulations thereunder.

4. Reports

As discussed above, Rule 13n-8 requires SDRs to provide certain reports to the Commission.[1118] The Commission will use the information collected under this provision to assist in its oversight of SDRs, which will help ensure an orderly and transparent SBS market.

5. Disclosure

As discussed above, Rule 13n-10 requires SDRs to provide certain specific disclosures to a market participant before accepting any data from that market participant or upon a market

[1116] See Sections VI.D.2.c, VI.E, VI.F.3 of this release discussing Rules 13n-4(b), 13n-5, and 13n-6, respectively.

[1117] See Section VI.G of this release discussing Rule 13n-7.

[1118] See Section VI.H.3 of this release discussing Rule 13n-8.

participant's request.[1119] These disclosures will help market participants understand the potential risks and costs associated with using an SDR's services, as well as the protections and services available to them.

6. Chief Compliance Officer; Compliance Reports and Financial Reports

As discussed above, Rule 13n-11 requires an SDR's CCO to establish certain procedures relating to the remediation of noncompliance issues as well as prepare and sign an annual compliance report, which is filed with the Commission.[1120] Rule 13n-11 also requires that a financial report be prepared and filed with the Commission as an official filing in accordance with the EDGAR Filer Manual and include, as part of the official filing, an Interactive Data Financial Report filed in accordance with Rule 407 of Regulation S-T. The information collected under this rule will help ensure compliance by SDRs with the federal securities laws and the rules and regulations thereunder as well as assist the Commission in overseeing SDRs.

7. Other Provisions Relevant to the Collection of Information

As discussed above, Rule 13n-4(c)(1) requires SDRs to comply with certain requirements relating to market access to services and data, including establishment of certain policies and procedures and clearly stated objective criteria. Rule 13n-4(c)(2)(iv) requires SDRs to establish, maintain, and enforce policies and procedures regarding the skills and expertise, understanding of responsibilities, and sound judgment of the SDRs' senior management and members of the board or committee that has the authority to act on behalf of the board. Rule 13n-4(c)(3) requires SDRs to establish and enforce written conflicts of interest policies and procedures; to establish, maintain, and enforce written policies and procedures reasonably designed to identify and

[1119] See Section VI.I.2.c of this release discussing Rule 13n-10.

[1120] See Section VI.J of this release discussing Rule 13n-11.

mitigate conflicts of interest on an ongoing basis; and to establish, maintain, and enforce written policies and procedures regarding their noncommercial and commercial use of transaction information. Rule 13n-5(b)(6) requires SDRs to establish procedures and provide facilities reasonably designed to effectively resolve disputes regarding the accuracy of the transaction data and positions that are recorded in the SDRs. Rules 13n-4(b)(8) and 13n-9 require SDRs to establish, maintain, and enforce policies, procedures, and safeguards regarding privacy and misappropriation or misuse of certain information.[1121] The information collected pursuant to these provisions will help ensure a transparent and orderly SBS market, protect market participants' privacy, and facilitate Commission oversight of SDRs.

C. Respondents

1. Registration Requirements, Form SDR, and Withdrawal from Registration

As discussed above, the registration requirements of Rules 13n-1, 13n-2, 13n-3, 13n-11(a), and Form SDR apply to every U.S. person performing the functions of an SDR and every non-U.S. person performing the functions of an SDR within the United States, absent an exemption.[1122] Commission staff is aware of seven persons that have, to date, filed applications for registration with the CFTC as swap data repositories, three of which have withdrawn their applications and four of which are provisionally registered with the CFTC. It is reasonable to estimate that a similar number of persons provisionally registered with the CFTC may seek to register with the Commission as SDRs. Therefore, the Commission continues to estimate, for PRA purposes, that ten persons may register with the Commission as SDRs. The Commission also continues to estimate, for PRA purposes, that three of the ten respondents may be non-

[1121] See Section VI.I.1.c of this release discussing Rule 13n-9.

[1122] See Section VI.K of this release discussing Rule 13n-12 ("SDR Exemption").

resident SDRs subject to the additional requirements of Rule 13n-1(f). The Commission received no comments on its estimate of the number of non-resident SDRs and continues to believe that this estimate is reasonable. Although non-resident SDRs may be able to take advantage of the SDR Exemption, the Commission conservatively estimates for PRA purposes that none of the three would rely on the exemption.

2. SDR Duties, Data Collection and Maintenance, and Direct Electronic Access

The duties, data collection and maintenance, and direct electronic access requirements of Rules 13n-4(b), 13n-5, and 13n-6 as a general matter, apply to all SDRs, absent an exemption. Thus, for these provisions, the Commission estimates that there will be 10 respondents.

3. Recordkeeping

The recordkeeping requirements of Rule 13n-7 apply to all SDRs, absent an exemption. Thus, for this rule, the Commission estimates that there will be 10 respondents.

4. Reports

The report requirement of Rule 13n-8 applies to all SDRs, absent an exemption. Thus, for this rule, the Commission estimates that there will be 10 respondents.

5. Disclosure

The disclosure requirements of Rule 13n-10 apply to all SDRs, absent an exemption. Thus, for this rule, the Commission estimates that there will be 10 respondents.

6. Chief Compliance Officer; Compliance Reports and Financial Reports

The provisions regarding CCOs set forth in Rule 13n-11 apply to all SDRs, absent an exemption. Thus, for this rule, the Commission estimates that there will be 10 respondents.

7. Other Provisions Relevant to the Collection of Information

The remaining requirements of the SDR Rules[1123] relevant to the collection of information, specifically Rules 13n-4(c), 13n-5(b)(6), and 13n-4(b)(8) and 13n-9, apply to all SDRs, absent an exemption. Thus, for these provisions, the Commission estimates that there will be 10 respondents.

As stated above, no commenters addressed any of these estimates.[1124]

D. Total Annual Reporting and Recordkeeping Burden

The Commission received no comments on any of the estimates provided in the Proposing Release. The Commission has, however, revised the burden associated with completing Form SDR to reflect some additional material incorporated from Form SIP to accommodate SDRs' registration as SIPs and to reflect a revision to the disclosure of business affiliations. The Commission has also made a change to correct a calculation error.[1125] Other than these changes, the Commission's estimates remain unchanged from the Proposing Release.

1. Registration Requirements, Form SDR, and Withdrawal from Registration

Rule 13n-1(b) and Rule 13n-3(a) (which relates to successor SDRs as described above) require SDRs to apply for registration using Form SDR and file the form electronically in tagged data format with the Commission in accordance with the instructions to the form.[1126] Further, Rule 13n-1(e) requires SDRs to designate an agent for service of process on Form SDR, and

1123 As noted above, "SDR Rules" means Rules 13n-1 to 13n-12.

1124 See Section VII of this release discussing comments related to the collection of information.

1125 In one minor respect, the calculation of the burden on non-resident SDRs under Rule 13n-1(f) has been revised to correct a calculation error, which slightly reduces the burden hours incurred by non-resident SDRs. See infra note 1136 and the accompanying text.

1126 See Sections VI.A and VI.C.3 of this release discussing Rule 13n-1(b) and Rule 13n-3(a), respectively.

Rule 13n-11(a) requires SDRs to identify their CCOs on Form SDR. For purposes of the PRA, the Commission initially estimated that it would take an SDR approximately 400 hours to complete the initial Form SDR with the information required, including all exhibits to Form SDR.[1127] The Commission based this estimate on the number of hours necessary to complete Form SIP because Form SDR was based on Form SIP and incorporated many of the provisions of Form SIP.[1128] The Commission continues to estimate, based on Form SIP, that it will initially take an SDR 400 hours to complete the proposed portions of Form SDR with the information required, including all exhibits thereto,[1129] and now estimates that it will take an SDR an additional 81 hours to complete Form SDR to reflect the additional burden hours discussed below.

As noted above, the Commission has revised Form SDR to incorporate certain provisions from Form SIP to allow SDRs to register as both SDRs and SIPs using Form SDR.[1130] The Commission believes that the burden of filing Form SDR should be adjusted to reflect these revisions. Because of the overlap between Form SDR and Form SIP, the Commission initially estimated that SDRs would need only one-quarter of the time to complete Form SIP, or 100

1127 See Proposing Release, 75 FR at 77348, supra note 2.

1128 See Proposing Release, 75 FR at 77348, supra note 2.

1129 The Commission calculated in 2011 that Form SIP would take 400 hours to complete. See Submission for OMB Review; Comment Request, 76 FR 30984 (May 27, 2011) (outlining the Commission's most recent calculations regarding the PRA burdens for Form SIP) ("SIP PRA Filing"). While the requirements of Form SIP and Form SDR are not identical, the Commission believes that there is sufficient similarity for PRA purposes that the burden will be roughly equivalent.

1130 See Section VI.A.1.c of this release discussing Form SDR. See also supra note 220 discussing changes to proposed Form SDR to incorporate the additional information requested on Form SIP of applicants for registration as a SIP.

hours, when registering with the Commission as SIPs separately on Form SIP.[1131] The Commission believes that this estimate of the burden of an SDR to register as a SIP using Form SDR should be reduced to 80 hours because (1) SDRs will not have to process and file two separate forms; (2) SDRs will not have to provide duplicate information in two forms; and (3) SDRs will not have to prepare and file duplicate exhibits to two forms. The Commission believes that 80 hours represents a reasonable estimate of the additional burden hours that SDRs will incur in responding to the provisions incorporated from Form SIP into Form SDR.

Moreover, as discussed above, the Commission is revising Form SDR from the proposal by requiring disclosure of business affiliations in the "derivatives industry" rather than the "OTC derivatives industry" for an applicant's designated CCO, officers, directors, governors, and persons performing functions similar to any of the foregoing, and the members of all standing committees.[1132] The Commission believes that SDRs will incur an additional burden in replying to this disclosure, which may require disclosure of more business affiliations than would have been disclosed under Form SDR, as proposed. The Commission believes that 1 hour represents a reasonable estimate of the additional burden hours that each SDR will incur in responding to the revised disclosure requirement.

1131 See Regulation SBSR Proposing Release, 75 FR at 75260, supra note 8 ("Any entity that is required to complete proposed Form SDR also would have to complete Form SIP. Because of the substantial overlap in the forms, much of the burden for completing Form SIP would be subsumed in completing proposed Form SDR. Therefore, the Commission preliminarily estimates that, having completed a proposed Form SDR, an entity would need only one-quarter of the time to then complete Form SIP, or 100 hours (specifically, 37.5 hours of legal compliance work and 62.5 hours of clerical compliance work).").

1132 See Section VI.A.1.c of this release discussing Form SDR.

As noted above, the Commission estimates that 10 respondents will be subject to this burden.[1133] Accordingly, the Commission estimates that the one-time initial registration burden for all SDRs is approximately 4810 burden hours.[1134] The Commission believes that SDRs will, as a general matter, prepare Form SDR internally, except as otherwise discussed below. In the Proposing Release, the Commission solicited comments as to whether SDRs would outsource this requirement, but the Commission did not receive any comments in this regard.[1135]

Under Rule 13n-1(f), a non-resident SDR must (i) certify that the SDR can, as a matter of law, and will provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission and (ii) provide an opinion of counsel that the SDR can, as a matter of law, provide the Commission with access to the books and records of such SDR and can, as a matter of law, submit to onsite inspection and examination by the Commission. This creates an additional burden for non-resident SDRs. The Commission estimates, based on similar requirements of Form 20-F, that this additional burden will add 1 hour and $900 in outside legal costs per respondent.[1136] As stated above, the Commission believes that there will be three respondents to

---

1133 See Section VII.C.1 of this release discussing respondents to the registration requirements and Form SDR.

1134 The Commission derived its estimate from the following: (400 hours for the burden of Form SDR, as proposed) + (80 hours for the burden of responding to additional provisions incorporated from Form SIP) + (1 hour for the burden of responding to the revised disclosure of business affiliations) x 10 SDRs = 4810.

1135 See Proposing Release, 75 FR at 77348, supra note 2.

1136 Foreign Bank Exemption from the Insider Lending Prohibition of Exchange Act Section 13(k), Exchange Act Release No. 49616 (Apr. 26, 2004), 69 FR 24016, 24022 (Apr. 30, 2004) (outlining the Commission's calculations regarding the PRA burdens resulting from having to provide a legal opinion and additional disclosure required by Instruction 3 to Item 7.B to Form 20-F). The Commission calculates that the certification and opinion of counsel would result in an additional burden to non-resident SDRs of 3.25 hours, of this collection, for a total additional burden of 3 hours and $2,700 for non-resident SDRs to comply with Rule 13n-1(f).[1137]

SDRs are also required to amend Form SDR pursuant to Rule 13n-1(d) annually as well as when information in certain items is or becomes inaccurate. Amendments are also permitted in certain situations involving successor SDRs pursuant to Rule 13n-3(b).[1138] The Commission believes that these amendments represent the ongoing annual burdens of Form SDR and Rules 13n-1(d) and 13n-3(b).[1139] The Commission estimates that the ongoing annualized burden for complying with these registration amendment requirements will be approximately 12 burden

---

which approximately 1 hour would be incurred by the non-resident SDRs themselves and 2.25 hours would be incurred by outside legal counsel, which would cost approximately $900 ($900 = 2.25 hours (portion of estimated burden incurred by outside legal counsel) × $400 (hourly rate for an outside attorney)). The Commission continues to estimate the hourly rate for an outside attorney at $400 per hour, based on industry sources. See Registration of Municipal Advisors, Exchange Act Release No. 70462 (Sep. 20, 2013), 78 FR 67468, 67593 n.1538 (Nov. 12, 2013) (estimating the cost of an outside attorney to be $400 per hour). In the Proposing Release, the Commission mistakenly estimated the burden to be 3 hours incurred by each non-resident SDR (in addition to $900 incurred by each SDR in connection with hiring outside legal counsel). Proposing Release, 75 FR at 77348, supra note 2.

1137 See Section VII.C.1 of this release discussing respondents to the registration requirements and Form SDR. The base burden of 4000 hours includes resident and non-resident SDRs. The 3 hour and $2700 figures are the additional costs as a result of Rule 13n-1(f) for non-resident SDRs not already accounted for in the 4000 hour figure.

1138 See Section VI.C.3 of this release discussing Rule 13n-3(b).

1139 When estimating the burden associated with Form SIP, the Commission did not separately estimate the burden associated with amendments on Form SIP because the Commission believed that the annual burden of Form SIP encompassed the burden of amending Form SIP. SIP PRA Filing, 76 FR 30984, supra note 1129 ("This annual reporting and recordkeeping burden does not include the burden hours or cost of amending a Form SIP because the Commission has already overstated the compliance burdens by assuming that the Commission will receive one initial registration pursuant to Rule 609 on Form SIP a year.") Although the Commission is basing its estimate of the burden of Form SDR on its estimate of the burden of Form SIP, the Commission is separately estimating the burden of amendments on Form SDR.

hours for each SDR per amendment[1140] and approximately 120 burden hours for all SDRs per amendment. Rule 13n-1(d) requires one annual amendment on Form SDR as well as interim amendments on Form SDR when certain reported information therein is or becomes inaccurate or, under Rule 13n-3(b), in certain circumstances involving successor SDRs, as discussed above.[1141] When Form ADV was amended in 2010, the Commission estimated that there were 2 amendments per year for that form.[1142] The Commission believes that 2 amendments will be a reasonable estimate for the number of amendments per year to correct inaccurate information or in situations involving successor SDRs because amendments on Form ADV, like amendments on Form SDR, are required annually as well as when certain information on Form ADV becomes inaccurate.[1143] Thus, the Commission estimates that respondents will be required to file on average a total of 3 amendments per year, 2 amendments plus the required annual amendment. Therefore, the Commission estimates that each respondent will have an average annual burden of

1140 When amendments to Form ADV were proposed in 2008, the Commission estimated the hour burden for amendments to be roughly 3% of the initial burden. Amendments to Form ADV, Investment Advisers Act Release No. 2711 (Mar. 3, 2008), 73 FR 13958, 13979 (Mar. 14, 2008). In that proposal, the initial burden was calculated to be 22.25 hours per respondent and 0.75 hours per respondent for amendments. The Commission believes that a similar ratio will apply to filers of Form SDR because filers of Form ADV, like filers of Form SDR, are required to file amendments annually as well as when certain information on Form ADV becomes inaccurate. See Form ADV: General Instructions, available at http://www.sec.gov/about/forms/formadv-instructions.pdf. Thus, the Commission estimates that the annual burden of filing one amendment on Form SDR will be 3% of the 400 hour initial burden, or 12 hours.

1141 See Sections VI.A.4.c and VI.C.3 of this release discussing Rule 13n-1(d) and Rule 13n-3(b), respectively.

1142 Amendments to Form ADV, Investment Advisers Act Release No. 3060 (July 28, 2010), 75 FR 49234, 49257 (Aug. 12, 2010). Although this information is based upon investment adviser statistics, the Commission believes that, for PRA purposes, the differences between investment advisers and SDRs are minimal.

1143 See Form ADV: General Instructions, available at http://www.sec.gov/about/forms/formadv-instructions.pdf.

36 hours for a total estimated average annual burden of 360 hours.[1144] The Commission believes that SDRs will conduct this work internally.

SDRs may withdraw from registration by filing a withdrawal from registration on Form SDR electronically in a tagged data format. An SDR withdrawing from registration must designate on Form SDR a person to serve as the custodian of the SDR's books and records. An SDR must also update any inaccurate information. The Commission believes that an SDR's withdrawal from registration on Form SDR will be substantially similar to its most recently filed Form SDR. The Form SDR being filed in this circumstance will therefore already be substantially complete and as a result, the burden will not be as great as the burden of filing an application for registration on Form SDR. Rather, the Commission believes that the burden of filing a withdrawal from registration on Form SDR will be akin to filing an amendment on Form SDR. Thus, the Commission estimates that the one-time burden of filing a Form SDR to withdraw from registration will be approximately 12 burden hours for each SDR and approximately 120 burden hours for all SDRs.

2. <u>SDR Duties, Data Collection and Maintenance, and Direct Electronic Access</u>

As discussed above, Rules 13n-4(b)(2) and (4), and 13n-5 require SDRs to accept and maintain data, including transaction data, received from third parties and to calculate and maintain positions.[1145] Rule 13n-4(b)(5) requires SDRs to provide direct electronic access to the Commission or its designees. Rules 13n-4(b)(3) and 13n-5(b)(1)(iii) require SDRs to confirm

---

1144 The 36 hour figure is the result of the estimated burden hour per SDR per amendment (12) times the estimated number of amendments per year (3). The 360 hour figure is the result of the estimated burden per SDR (36) times the number of SDRs (10).

1145 See Sections VI.D.2.c, VI.E, and VI.F.3 of this release discussing Rules 13n-4(b)(2) and (4), 13n-5, and 13n-6, respectively.

the accuracy of the data submitted and to establish, maintain, and enforce written policies and procedures reasonably designed to satisfy themselves that the transaction data that has been submitted to the SDRs is complete and accurate. In addition, Rule 13n-5(b)(4) requires SDRs to maintain the transaction data and related identifying information for not less than five years after the applicable SBS expires and historical positions for not less than five years.[1146] This obligation would continue even if an SDR ceases to be registered or ceases doing business.[1147] SDRs are required to make and keep current a plan to ensure compliance with this requirement.[1148]

The Commission estimates that the average one-time start-up burden per SDR of establishing systems compliant with all of the requirements described in this section, including the SBS data maintenance requirements of Rules 13n-5(b)(4), (7), and (8), will be 42,000 hours and $10 million in information technology costs. Based on the expected number of respondents, the Commission estimates a total start-up cost of 420,000 hours and $100 million in information technology costs. The Commission further estimates that the average ongoing annual costs of these systems to be 25,200 hours and $6 million per respondent or a total of 252,000 hours and $60 million for a total ongoing annual burden.

Each SDR is also required to establish, maintain, and enforce written policies and procedures, reasonably designed: (1) under Rule 13n-5(b)(1), for the reporting of complete and accurate transaction data to the SDR and to satisfy itself that such information is complete and

1146 This data is required to be maintained in a place and format that is readily accessible and usable to the Commission and other persons with authority to access or view the information and is also required to be maintained in an electronic format that is non-rewritable and non-erasable.

1147 Rule 13n-5(b)(7).

1148 Rule 13n-5(b)(8).

accurate; (2) under Rule 13n-5(b)(2), to calculate positions for all persons with open SBSs for which the SDR maintains records; (3) under Rule 13n-5(b)(3), to ensure transaction data and positions that the SDR maintains are complete and accurate; (4) under Rule 13n-5(b)(5), to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the SDR; and (5) under Rule 13n-6, with respect to those systems that support or are integrally related to the performance of the SDR's activities, to ensure that those systems provide adequate levels of capacity, integrity, resiliency, availability, and security. While these policies and procedures will vary in exact cost, the Commission estimates that they will require an average of 210 hours per respondent per policy and procedure to prepare and implement. The Commission further estimates that these policies and procedures will require a total of $100,000 for outside legal costs per SDR.[1149] In sum, the Commission estimates the initial burden for all respondents to be 10,500 hours and $1,000,000 for outside legal costs.[1150] The Commission based these estimates upon those estimates the Commission used with regards to establishing policies and procedures regarding Regulation NMS.[1151] Once these policies and procedures are established, the Commission estimates that it will take, on average, 60 hours annually to

1149 This figure is the result of an estimated $400 an hour cost for outside legal services (as discussed in supra note 1136) times 50 hours of outside legal consulting per policy and procedure, times 5 policies and procedures.

1150 The 10,500 hour figure is the result of the number of hours per policy and procedure (210) times the number of policies and procedures required by these provisions (5), times the number of respondents (10). The $1,000,000 figure is the result of the outside dollar cost per respondent ($100,000) times the number of respondents (10).

1151 Regulation NMS, Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37577 (June 29, 2005) ("Regulation NMS Adopting Release"). The Commission based these estimates on those for non-SRO trading centers rather than for SRO trading centers because the Commission believes that, for PRA purposes, non-SRO trading centers' burdens are more like those that SDRs will face under the SDR Rules. Like non-SRO trading centers, SDRs are not SROs and handle data regarding trades.

maintain each of these policies and procedures per respondent, with a total estimated average annual burden of 3,000 hours for all respondents.[1152] The Commission believes that SDRs will conduct this maintenance work internally.

As discussed above, the Commission is not adopting the more specific requirements of proposed Rule 13n-6(b)(1), but is instead adopting the core policies and procedures requirement.[1153] The Commission continues to believe, however, that the 210 hour per respondent estimate for adopting policies and procedures is applicable because Rule 13n-6 continues to require SDRs to adopt policies and procedures. The Commission believes that the 210 hour estimate is a reasonable estimate because the estimate is used in other contexts to estimate the burdens of creating policies and procedures and the Commission expects that the policies and procedures required by Rule 13n-6 would result in a comparable burden to SDRs.[1154] Also as discussed above, the Commission is not adopting proposed Rules 13n-6(b)(3) and (4).[1155] Thus, the Commission is no longer including the estimated burden of those proposed rules in the overall burdens discussed in this release.

3. Recordkeeping

Every SDR is required, under Rule 13n-7(a)(1), to make and keep current a record for each office listing, by name or title, each person who, without delay, can explain the types of records the SDR maintains at that office. Also, under Rule 13n-7(a)(2), every SDR is required to make and keep current a record listing officers, managers, or persons performing similar

---

1152 The 3,000 hour figure is the result of the estimated average hourly burden to maintain each policy and procedure (60), times the total number of policies and procedures required under this requirement (5), times the total number of SDRs (10).

1153 See Section VI.F.3 of this release discussing Rule 13n-6.

1154 See supra note 1151 discussing Regulation NMS.

1155 See Section VI.F.3 of this release discussing Rule 13n-6.

functions with responsibility for establishing the policies and procedures of the SDR that are reasonably designed to ensure compliance with the Exchange Act and the rules and regulations thereunder. The Commission estimates that these records will create an initial burden, at a maximum, of 1 hour per respondent, for a total initial burden of 10 hours. The Commission estimates that the ongoing annual burden will be 0.17 hours (10 minutes) per respondent to keep these records current and to store these documents based on the Commission's estimates for similar requirements for broker-dealers.[1156] This results in a total ongoing annual burden of 1.7 hours. The Commission believes that SDRs will conduct this work internally.

Rule 13n-7(b) requires each SDR to keep and preserve at least one copy of all documents made or received by it in the course of its business as such, other than the transaction data and positions collected and maintained pursuant to Rule 13n-5. These records are required to be kept for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination.[1157] Upon the request of any representative of the Commission, an SDR is required to furnish promptly documents required to be kept and preserved by it pursuant to Rules 13n-7(a) or (b) to such a representative. As discussed above, Rule 13n-7(b) is intended to set forth the recordkeeping obligations of SDRs and thereby facilitate implementation of the inspection and examination of SDRs by representatives of the Commission.[1158] Based on the Commission's experience with

1156 See Books and Records Requirements for Brokers and Dealers Under the Securities Exchange Act of 1934, Exchange Act Release No. 44992 (Oct. 26, 2001), 66 FR 55818, 55836 (Nov. 2, 2001) (regarding the collection of information pursuant to Rules 17a-3(a)(21) and (22)).

1157 This obligation will continue even if an SDR withdraws from registration or ceases doing business. See Rule 13n-7(c).

1158 See Section VI.G.2.c of this release discussing Rule 13n-7(b).

recordkeeping costs and consistent with prior burden estimates for similar provisions,[1159] the Commission estimates that this requirement will create an initial burden of 345 hours and $1800 in information technology costs per respondent, for a total initial burden of 3450 hours and $18,000 for all respondents. The Commission further estimates that the ongoing annual burden will be 279 hours per respondent and a total ongoing annual burden of 2790 hours for all respondents.

4. Reports

Under Rule 13n-8, SDRs are required to report promptly to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines necessary or appropriate for the Commission to perform the duties of the Commission. For PRA purposes only, the Commission estimates that it will request these reports a maximum of once per year, per respondent. For PRA purposes only, the Commission estimates that these reports will be limited to information that will have been already compiled under the SDR Rules and thus require only 1 hour per response to compile and transmit. Thus, the Commission estimates, for PRA purposes only, that the total annual burden for these reports to be 10 hours for all respondents. The Commission believes that SDRs will conduct this work internally.

As discussed above, the Commission is not adopting proposed Rule 13n-6(b)(2).[1160] Thus, the Commission is no longer including the estimated burden of that proposed rule in the overall burdens discussed in this release.

1159 See Amendments to Rules for Nationally Recognized Statistical Rating Organizations, Exchange Act Release No. 59342 (Feb. 2, 2009), 74 FR 6456, 6472 (Feb. 9, 2009).

1160 See Section VI.F.3 of this release discussing Rule 13n-6.

5. Disclosure

As discussed above, pursuant to Rule 13n-10, SDRs are required to provide certain disclosures to certain market participants.[1161] The Commission estimates that the average one-time start-up burden per SDR of preparing this disclosure document is 97.5 hours and $4,400 of external legal costs and $5,000 of external compliance consulting costs, resulting in a total initial burden of 975 hours and $94,000 for all respondents. This estimate reflects the Commission's experience with and burden estimates for similar disclosure document requirements applied to investment advisers with 1000 or fewer employees and as a result of its discussions with market participants.[1162] Because the Commission expects that SDRs will be able to provide this disclosure document electronically, the Commission expects that this requirement will result in an average annual burden, after the initial creation of the disclosure document, of 1 hour per respondent, with a total annual burden of 10 hours for all respondents. The Commission believes that SDRs will conduct this ongoing annual work internally.

6. Chief Compliance Officer; Compliance Reports and Financial Reports

Under Rules 13n-11(c)(6) and (7), an SDR's CCO is responsible for, among other things, establishing procedures for the remediation of noncompliance issues identified by the CCO, and establishing and following appropriate procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues. Based on the Commission's estimates regarding Regulation NMS,[1163] it estimates that on average these two provisions will

1161 See Section VI.I.2.c of this release discussing Rule 13n-10.

1162 See Amendments to Form ADV, Investment Advisers Act Release No. 3060 (July 28, 2010), 75 FR 49234, 49255-49256 (Aug. 12, 2010) (finding that average initial annual burden associated with Form ADV for each medium-sized investment adviser, meaning an adviser with between 11 and 1,000 employees, to be 97.5 hours).

1163 See Regulation NMS Adopting Release, supra note 1151.

require 420 hours to implement and 120 hours to administer per year per respondent, for a total burden of 4200 hours initially and, on average, 1200 hours annually for all respondents.[1164] Also based on the estimates regarding Regulation NMS, the Commission estimates that SDRs will incur a total of $40,000 in initial outside legal costs to establish the required procedures as a result of this burden per respondent, for a total outside cost burden of $400,000 for all respondents.[1165]

A CCO is also required under Rules 13n-11(d), (e), and (g) to prepare and submit annual compliance reports to the SDR's board for review before the annual compliance reports are filed with the Commission. Based upon the Commission's estimates for similar annual reviews by CCOs of investment companies,[1166] the Commission estimates that these reports will require on average 5 hours per respondent per year. Thus, the Commission estimates a total annual burden of 50 hours for all respondents. The Commission believes that these costs will be internal costs.

Rules 13n-11(f) and (g) require that financial reports be prepared and filed with the Commission as an official filing in accordance with the EDGAR Filer Manual and include, as

---

1164 The 420 hour figure is the result of the estimated average burden hours to create one policy and procedure (210) times the 2 policies and procedures required by these provisions. The 120 hour figure is the result of the estimated average burden hours to administer one policy and procedure (60) times the 2 policies and procedures required by these provisions. The 4200 hour figure is the result of the estimated average burden hours per respondent to create these policies and procedures (420) times the number of SDRs (10). The 1200 hour figure is the result of the estimated average burden hours per respondent to maintain these policies and procedures (120) times the number of SDRs (10).

1165 $400,000 figure is the result of an estimated $400 an hour cost for outside legal services (as discussed in supra note 1136) times 50 hours per policy and procedure, times 2 policies and procedures, times the number of SDRs (10).

1166 See Compliance Programs of Investment Companies and Investment Advisers, Investment Company Act Release No. 25925 (Feb. 5, 2003), 68 FR 7038, 7047 (Feb. 11, 2003).

part of the official filing, an Interactive Data Financial Report filed in accordance with Rule 407 of Regulation S-T. The Commission estimates, based on its experience with entities of similar size to the respondents to this collection, that preparing and filing the financial reports will generally require on average 500 hours per respondent and cost $500,000 for independent public accounting services. Thus, the Commission estimates a total annual burden of 5000 hours and $5,000,000 for all respondents.

One commenter suggested that "[i]n an attempt to harmonize final [SDR] rules with the CFTC's final [swap data repository] rules, the Commission should consider removing Proposed Rule 240.13n–11(f)(2)'s requirement that each financial report filed with a compliance report is audited in accordance with the standards of the Public Company Accounting Oversight Board by a registered public accounting firm that is qualified and independent unless the [SDR] is under a separate obligation to provide financial statements."[1167] The commenter believed that "[t]his requirement imposes an additional burden for an [SDR] and is not justified in relation to the risks that an [SDR] would pose to its members" and that "[u]nlike clearing agencies or other entities supervised by the Commission, an [SDR] does not have financial exposure to its users or participants that would justify the imposition of this requirement."[1168] The commenter suggested that the Commission consider "adopting [instead] the CFTC's approach in its final [swap data repository] rules, which require [a swap data repository's] financial statements be prepared in conformity with generally accepted accounting principles . . . ."[1169]

1167 DTCC 5, supra note 19.

1168 DTCC 5, supra note 19.

1169 DTCC 5, supra note 19.

As discussed further below, although the Commission understands that SDRs will incur costs in hiring and retaining qualified public accounting firms, the Commission believes that obtaining audited financial reports from SDRs is important given the significant role the Commission believes that SDRs will play in the SBS market.[1170] Given this significant role, the Commission believes that it is important to obtain audited financial reports from SDRs in order to determine whether or not they have sufficient financial resources to continue operations. While the Commission recognizes that Rule 13n-11(f)(2) may, in some cases, be more costly than the CFTC's requirement of quarterly unaudited financial statements, the Commission believes that the additional burden, where it exists, is justified by the benefits of requiring audited financial statements.

The compliance reports and financial reports filed with the Commission are required to be filed in a tagged data format. The compliance reports must be filed in a tagged data format in accordance with the instructions contained in the EDGAR Filer Manual,[1171] and the financial reports must be provided as an official filing in accordance with the EDGAR Filer Manual and include, as part of the official filing, an Interactive Data Financial Report filed in accordance with Rule 407 of Regulation S-T.[1172] These requirements will create an additional burden on respondents beyond the preparation of these reports. The Commission estimates, based on its experience with other tagged data initiatives, that these requirements will add a burden of an average of 54 hours and $22,772 in outside software and other costs per respondent per year, creating an estimated total annual burden of 540 hours and $227,720 for all respondents to tag

1170 See Section VIII.D.6.c of this release discussing economic alternatives to Rule 13n-11(f)(2).

1171 See 17 CFR 232.301.

1172 See Section VI.J.5.c of this release discussing Rule 407 of Regulation S-T.

the data for both the compliance reports and financial reports that are required under Rule 13n-11.

7. Other Provisions Relevant to the Collection of Information

Rule 13n-4(c)(1)(iii) requires an SDR to establish, monitor on an ongoing basis, and enforce clearly stated objective criteria that would permit fair, open, and not unreasonably discriminatory access to services offered and data maintained by the SDR as well as fair, open, and not unreasonably discriminatory participation by market participants and others that seek to connect to or link with the SDRs. For PRA purposes only, the Commission believes that this should be a lesser burden than for written policies and procedures because such criteria may not need to be as detailed or intricate as written policies and procedures. Thus, the Commission estimates that this provision will require 157.5 hours to implement, with an associated outside legal cost of $15,000 per respondent.[1173] This results in an estimate of an initial burden for this requirement for all respondents of 1575 hours and $150,000. The Commission estimates that the average annual burden will be 45 hours per respondent, for a total estimated average annual burden of 450 hours for all respondents.[1174] The Commission believes that SDRs will conduct this work internally.

1173 These numbers are based on 75% of the 210 hour and $20,000 (50 hours of outside legal costs at $400 an hour) estimates to create one set of written policies and procedures under Regulation NMS for non-SRO trading centers. See Regulation NMS Adopting Release, supra note 1151. This is based on an estimate that this requirement will create 75% of the burden of creating written policies and procedures under Regulation NMS. The Commission believes that the 75% assumption is appropriate because the Commission believes that Rule 13n-4(c)(1)(iii) imposes a lesser burden than the written policies and procedures required by other SDR Rules because it requires only written criteria and not full policies and procedures.

1174 These numbers are 75% of the 60 hour estimates of the ongoing burden regarding one set of written policies and procedures under Regulation NMS for non-SRO trading centers. See Regulation NMS Adopting Release, supra note 1151. This is based on an estimate

Rule 13n-4(c)(1)(iv) requires an SDR to establish, maintain, and enforce written policies and procedures reasonably designed to review any prohibition or limitation of any person with respect to access to services offered, directly or indirectly, or data maintained by the SDR and to grant such person access to such services or data if such person has been discriminated against unfairly. Based on the Commission's estimates regarding Regulation NMS,[1175] it estimates that, on average, this provision will require 210 hours to implement and 60 hours to administer per year per respondent, for a total burden of 2100 hours initially and 600 hours on average, annually. The Commission also estimates, based on this earlier estimate, that SDRs will incur a total of $20,000 in initial outside legal costs to establish the required policies and procedures as a result of this provision per respondent for a total outside cost burden of $200,000 for all respondents.[1176]

Rule 13n-4(c)(2)(iv) requires an SDR to establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the SDR's senior management and each member of the board or committee that has the authority to act on behalf of the board possess

---

that this requirement will create 75% of the ongoing burden of written policies and procedures under Regulation NMS. The Commission believes that the 75% assumption is appropriate because the Commission believes that Rule 13n-4(c)(1)(iii) imposes a lesser burden than the written policies and procedures required by other SDR Rules because it requires only written criteria and not full policies and procedures.

1175 See Regulation NMS Adopting Release, supra note 1151. These estimates are based on 100% of the 210 hour estimate to create one set of written policies and procedures and 100% of the 60 hour estimate of the ongoing burden regarding one set of written policies and procedures under Regulation NMS for non-SRO trading centers. The Commission believes that the 100% assumption is appropriate because Rule 13n-4(c)(1)(iv) requires written policies and procedures.

1176 This figure is the result of an estimated $400 an hour cost for outside legal services (as discussed in supra note 1136) times 50 hours per policy and procedure, times 1 policy and procedure, times the number of SDRs (10). The Commission believes that SDRs will use outside counsel to initially create these policies and procedures because SDRs just beginning operations may not have sufficient in-house legal staff.

requisite skills and expertise to fulfill their responsibilities in the management and governance of the SDR, to have a clear understanding of their responsibilities, and to exercise sound judgment about the SDR's affairs. Based on the Commission's estimates regarding similar requirements in Regulation NMS,[1177] it estimates that, on average, this provision will require 210 hours to implement and 60 hours to administer per year per respondent, for a total burden of 2100 hours initially and 600 hours on average, annually. The Commission also estimates, based on this earlier estimate, that SDRs will initially incur a total of $20,000 in outside legal costs to establish the required policies and procedures as a result of this provision per respondent for a total outside cost burden of $200,000 for all respondents.[1178] The Commission believes that SDRs will conduct the ongoing administration of this provision internally.

Rule 13n-4(c)(3) addresses the conflict of interest requirements governing SDRs. In particular, each SDR is required to establish and enforce written policies and procedures reasonably designed to minimize conflicts of interest. This includes establishing, maintaining, and enforcing written policies and procedures reasonably designed to identify and mitigate potential and existing conflicts of interest in the SDR's decision-making process on an ongoing basis. It also includes establishing, maintaining, and enforcing written policies and procedures regarding the SDR's non-commercial and commercial use of the SBS transaction information that it receives. Based on the Commission's estimates regarding Regulation NMS,[1179] it estimates that on average these two requirements will require 420 hours to implement and 120

1177 See Regulation NMS Adopting Release, supra note 1151.

1178 This figure is the result of an estimated $400 an hour cost for outside legal services (as noted in supra note 1136) times 50 hours per policy and procedure, times 1 policy and procedure, times the number of SDRs (10).

1179 See Regulation NMS Adopting Release, supra note 1151.

hours to administer per year per respondent, for a total burden of 4200 hours initially and 1200 hours on average annually.[1180] Also based on the Regulation NMS estimates regarding policies and procedures, the Commission estimates that SDRs will incur a total of $40,000 in initial outside legal costs to establish the required policies and procedures as a result of this provision per respondent for a total outside cost burden of $400,000 for all respondents.[1181]

Rule 13n-5(b)(6) requires that every SDR establish procedures and provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR. For PRA purposes only, the Commission believes that this is a greater burden than that for written policies and procedures alone because SDRs will also be required to provide facilities. Thus, the Commission estimates that Rule 13n-5(b)(6) will require 315 hours for each respondent to implement.[1182] There will likely be a need for a respondent to consult with outside legal counsel, which the Commission estimates will cost

---

1180 The 420 hour figure is the result of the estimated average burden hours to create one policy and procedure (210) times the 2 policies and procedures required by these provisions. The 120 hour figure is the result of the estimated average burden hours to administer one policy and procedure (60) times the 2 policies and procedures required by these provisions. The 4200 hour figure is the result of the estimated average burden hours per respondent to create these policies and procedures (420) times the number of SDRs (10). The 1200 hour figure is the result of the estimated average burden hours per respondent to maintain these policies and procedures (120) times the number of SDRs (10).

1181 This $400,000 figure is the result of an estimated $400 an hour cost for outside legal services (as discussed in supra note 1136) times 50 hours, times 2 policies and procedures, times the number of SDRs (10).

1182 This number is 150% of the 210 hour estimate to create one set of written policies and procedures under Regulation NMS for non-SRO trading centers. See Regulation NMS Adopting Release, supra note 1151. This is based on an estimate that Rule 13n-5(b)(6) will create 150% of the burden of creating written policies and procedures under Regulation NMS because, in addition to establishing procedures, SDRs will also be required to provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.

$30,000 per respondent.[1183] Thus, the Commission estimates a total initial burden for all respondents of 3150 hours and $300,000 in outside costs. The Commission estimates the ongoing average annual burden of this requirement to be 90 hours per respondent for a total of 900 hours for the estimated total annual burden for all respondents.[1184] The Commission believes that SDRs will conduct this ongoing work internally.

Rules 13n-4(b)(8) and 13n-9 address privacy requirements for SDRs. Rule 13n-4(b)(8) requires SDRs to maintain the privacy of any and all SBS transaction information that the SDR receives from a SBS dealer, counterparty, or any registered entity as prescribed in Rule 13n-9. Rule 13n-9(b)(1) requires each SDR to establish, maintain, and enforce written policies and procedures reasonably designed to protect the privacy of any and all SBS transaction information that the SDR receives from any SBS dealer, counterparty, or any registered entity. Based on the Commission's estimates regarding Regulation NMS,[1185] it estimates that, on average, these provisions will require 420 hours to implement and 120 hours to administer per year per

---

1183 This number is 150% of the estimate of outside legal costs (50 hours) to create one set of written policies and procedures under Regulation NMS for non-SRO trading centers, at an estimate of $400 per hour. See Regulation NMS Adopting Release, supra note 1151. This is based on an estimate that Rule 13n-5(b)(6) will create 150% of the burden of creating written policies and procedures under Regulation NMS because, in addition to establishing procedures, SDRs will also be required to provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.

1184 These numbers are based on 150% of the 60 hour estimate of the ongoing burden regarding one set of written policies and procedures under Regulation NMS for non-SRO trading centers. See Regulation NMS Adopting Release, supra note 1151. This is based on an estimate that Rule 13n-5(b)(6) will create 150% of the ongoing burden of written policies and procedures under Regulation NMS because, in addition to establishing procedures, SDRs will also be required to provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.

1185 See Regulation NMS Adopting Release, supra note 1151.

respondent, for a total burden of 4200 hours initially and 1200 hours on average, annually.[1186] Also based on the Regulation NMS estimates,[1187] the Commission estimates that SDRs will incur a total of $40,000 in initial outside legal costs to establish the required policies and procedures as a result of these provisions per respondent for a total outside cost burden of $400,000 for all respondents.[1188]

Rule 13n-9(b)(2) requires each SDR to establish and maintain safeguards, policies, and procedures reasonably designed to prevent the misappropriation or misuse, directly or indirectly, of (1) any confidential information received by the SDR, (2) material, nonpublic information, and/or (3) intellectual property. At a minimum, these safeguards, policies and procedures must address limiting access to that information and intellectual property, standards pertaining to the trading by persons associated with the SDR for their personal benefit or the benefit of others, and adequate oversight. Based on the Commission's estimates regarding Regulation NMS,[1189] it estimates that on average this provision will require 210 hours to implement and 60 hours to administer per year per respondent, for a total burden of 2100 hours initially and 600 hours on

1186 The 420 hour figure is the result of the estimated average burden hours to create one policy and procedure (210) times the 2 policies and procedures required by these provisions. The 120 hour figure is the result of the estimated average burden hours to administer one policy and procedure (60) times the 2 policies and procedures required by these provisions. The 4200 hour figure is the result of the estimated average burden hours per respondent to create these policies and procedures (420) times the number of SDRs (10). The 1200 hour figure is the result of the estimated average burden hours per respondent to maintain these policies and procedures (120) times the number of SDRs (10).

1187 See Regulation NMS Adopting Release, supra note 1151.

1188 This $400,000 figure is the result of an estimated $400 an hour cost for outside legal services (as discussed in supra note 1136) times 50 hours per policy and procedure, times 2 policies and procedures, times the number of SDRs (10).

1189 See Regulation NMS Adopting Release, supra note 1151.

average, annually. Also based on the Regulation NMS estimates,[1190] the Commission estimates that SDRs will incur a total of $20,000 in initial outside legal costs to establish the required policies and procedures as a result of this provision per respondent for a total outside cost burden of $200,000 for all respondents.[1191]

E. Collection of Information is Mandatory

1. Registration Requirements, Form SDR, and Withdrawal from Registration

The collection of information relating to registration requirements, Form SDR, and withdrawal from registration is mandatory for all SDRs when registering with the Commission, amending their applications for registration, or withdrawing from registration.

2. SDR Duties, Data Collection and Maintenance, and Direct Electronic Access

The collection of information relating to SDR duties, data collection and maintenance, and direct electronic access is mandatory for all SDRs, absent an exemption.[1192]

3. Recordkeeping

The collection of information relating to recordkeeping is mandatory for all SDRs, absent an exemption.

4. Reports

The collection of information relating to reports is mandatory for all SDRs, absent an exemption.

1190 See Regulation NMS Adopting Release, supra note 1151.

1191 This figure is the result of an estimated $400 an hour cost for outside legal services (as discussed in supra note 1136) times 50 hours per policy and procedure, times 1 policy and procedure, times the number of SDRs (10).

1192 See Section VI.K of this release discussing the SDR Exemption.

5. Disclosure

The collection of information relating to disclosure is mandatory for all SDRs, absent an exemption.

6. Chief Compliance Officer; Compliance Reports and Financial Reports

The collection of information relating to CCOs is mandatory for all SDRs, absent an exemption.

7. Other Provisions Relevant to the Collection of Information

The collection of information relating to other relevant provisions is mandatory for all SDRs, absent an exemption.

F. Confidentiality

As discussed above, the Commission expects that it will make any information filed on, or in an exhibit or attachment to, an application for registration on Form SDR available on its website, except in cases where confidential treatment is requested by the applicant and granted by the Commission.[1193]

As discussed above, the Commission may make any information filed on, or in an exhibit or attachment to, an amendment on Form SDR available on its website, except in cases where confidential treatment is requested by the applicant and granted by the Commission.[1194]

As discussed above, the Commission may make any information filed on, or in an exhibit or attachment to, withdrawals on Form SDR available on its website, except in cases where confidential treatment is requested by the applicant and granted by the Commission.[1195]

1193 See Section VI.A.1.c of this release discussing Form SDR.

1194 See Section VI.A.4.c of this release discussing amendments on Form SDR.

1195 See Section VI.B.3 of this release discussing withdrawal from registration.

Pursuant to Rules 13n-11(d), (f), and (g), SDRs must file an annual compliance report and financial report with the Commission. One commenter believed that the Commission should keep the annual compliance report confidential.[1196] As discussed above, the Commission is not providing, by rule, that the annual compliance reports and financial reports are automatically granted confidential treatment, but an SDR may seek confidential treatment pursuant to Exchange Act Rule 24b-2.[1197] The Commission may make filed annual compliance reports and financial reports available on its website, except in cases where confidential treatment is requested by the SDR and granted by the Commission.

G. Retention Period of Recordkeeping Requirements

Rule 13n-5(b)(4) requires that SDRs maintain the transaction data and related identifying information for not less than five years after the applicable SBS expires and historical positions for not less than five years. This data is required to be maintained in a place and format that is readily accessible and usable to the Commission and other persons with authority to access or view the information and is also required to be maintained in an electronic format that is non-rewritable and non-erasable.

Pursuant to Rule 13n-7(b), an SDR is required to preserve at least one copy of all documents as shall be made or received by it in the course of its business as such, including all records required under the Exchange Act and the rules and regulations thereunder, other than the transaction data and positions collected and maintained pursuant to Rule 13n-5. These records

1196 DTCC 2, supra note 19 ("DTCC firmly believes [that] the annual [compliance] report should be kept confidential by the Commission" and explained that "[g]iven the level of disclosure expected to be required . . . the report will likely contain confidential and proprietary business information.").

1197 See Section VI.J.4.c of this release discussing compliance reports.

are required to be kept for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination.

VIII. Economic Analysis

A. Introduction

The Commission has considered the economic implications of the SDR Rules and Form SDR as well as comments regarding the costs and benefits of the SDR Rules and Form SDR.[1198] The Commission is sensitive to the economic consequences and effects of the SDR Rules and Form SDR, including their costs and benefits. In adopting the SDR Rules and Form SDR, the Commission has analyzed their costs and benefits, as set forth below, and has been mindful of the economic consequences of its policy choices. The SDR Rules and Form SDR fulfill the mandate of the Dodd-Frank Act that the Commission adopt rules governing the registration, duties, and core principles of SDRs.

As discussed above, the SBS market developed as an opaque OTC market without centralized trading venues or dissemination of pre- or post-trade pricing and volume information.[1199] SBS dealers, as intermediaries in SBS transactions, observe order flow and have access to pricing and volume information that is generally not available to other market participants. With such access, SBS dealers generally have an informational and competitive advantage over non-dealer counterparties, granting SBS dealers some degree of market power,

---

1198 See Further Definition of "Swap," "Security-Based Swap," and "Security-Based Swap Agreement"; Mixed Swaps; Security-Based Swap Agreement Recordkeeping, Securities Act Release No. 9338 (July 18, 2012), 77 FR 48208, 48332 (Aug. 13, 2012) (noting that "[t]he programmatic costs and benefits associated with substantive rules applicable to [SBSs] under Title VII are being addressed in more detail in connection with the applicable rulemakings implementing Title VII").

1199 See Section II.A of this release discussing limited information currently available to market participants.

which may enable them to extract economic rents in transactions with those counterparties. This informational advantage may result in increased transaction costs for less-informed counterparties relative to a market where all participants have competitive access to information.

In addition to the advantages that an opaque SBS market may give to SBS dealers, the opacity of the SBS market as described above may also affect current participation levels in the SBS market.[1200] Certain market participants, including speculative traders who rely on proprietary trading strategies, may wish to keep their trades anonymous and may prefer to operate in an opaque SBS market. Hedgers and other market participants that do not benefit from opacity, however, may be dissuaded from participating in the SBS market by higher transaction costs and their disadvantageous informational position.

Opacity in the SBS market also limits the ability of market participants to form broad views of financial market conditions. In capital markets, pricing and volume information provide signals about liquidity and the quality of investments, including investments in reference entities underlying derivatives. In the SBS market, where pricing and volume information is not readily available, market participants may have difficulty assessing investment opportunities as well as the state of the broader market, or must form assessments with a narrower set of information than SBS dealers. In an opaque SBS market, difficulty in assessing investment opportunities and the state of the SBS market may inhibit participation in the SBS market.

While opacity may generally confer a competitive advantage to SBS dealers who observe the largest share of order flow and limit participation in the SBS market, some features of the market and market participants may offset these effects. For example, large market participants that often transact with many SBS dealers are aware of the potential information asymmetries in

1200 See Section II.B of this release.

the market. Furthermore, by virtue of their high trading volume, these participants may also observe a large share of the market, reducing the information advantage afforded to SBS dealers. SBS dealers may wish to compete for SBS business with the largest counterparties, and these participants may be able to obtain access to competitive pricing.[1201] Nevertheless, the Commission generally expects that market participants with proprietary access to information – in the case of SBS markets, SBS dealers who observe order flow – can benefit from opacity and earn economic rents from their less-informed counterparties.[1202]

It is in this context that the Commission analyzes the economic effects of the SDR Rules and Form SDR. The Commission envisions that registered SDRs will become an essential part of the infrastructure of the SBS market. Persons that meet the definition of an SDR will be required by the SDR Rules to maintain policies and procedures relating to data accuracy and maintenance, and will be further required by Regulation SBSR to publicly disseminate transaction-level data, thereby promoting post-trade transparency in the SBS market. Transparency stemming from the SDR Rules and Regulation SBSR should reduce the informational advantage of SBS dealers and promote competition among SBS dealers and other market participants.[1203] This could reduce implicit transaction costs and attract liquidity from

---

1201 As described in the Cross-Border Proposing Release, the non-dealer market participants transact with four counterparties on average. Cross Border Proposing Release, 78 FR at 31126 n.1329, supra note 3. However, the largest market participants transact with as many as 50 counterparties, suggesting that dealers compete for business with these participants.

1202 See, e.g., Richard C. Green, Burton Hollifield, and Norman Schurhoff, Financial Intermediation and the Costs of Trading in an Opaque Market, 20 Review of Financial Studies 275 (2007) (estimating that, prior to the introduction of transparency measures in the municipal bond market, dealers exercised substantial market power, but that market power decreases with the size of the trade).

1203 See Section II.A of this release.

those market participants that do not benefit from opacity, providing more opportunities for market participants with hedging needs to manage their risks and providing more opportunities for market participants to access liquidity. Similarly, public dissemination of SBS pricing and volume information by SDRs pursuant to Regulation SBSR may allow market participants to incorporate information from the SBS market into their assessments of SBS and non-SBS investment opportunities, thereby promoting price efficiency and efficient capital allocation.

At the same time, increased quality and quantity of pricing and volume information and other information available to the Commission about the SBS market may enhance the Commission's ability to respond to market developments. As discussed above, DTCC-TIW voluntarily provides to the Commission data on individual CDS transactions in accordance with an agreement between the DTCC-TIW and the ODRF. In conjunction with Regulation SBSR, the SDR Rules should assist the Commission in fulfilling its regulatory mandates and legal responsibilities such as detecting market manipulation, fraud, and other market abuses by providing it with greater access to SBS information than that provided under the voluntary reporting regime. In particular, without an SDR, data on SBS transactions could be dispersed and might not be readily available to the Commission and others. SDRs may be especially critical during times of market turmoil, both by giving the Commission information to monitor risk exposures taken by individual entities or to particular referenced entities, and by promoting stability through enhanced transparency. Additionally, more available data about the SBS market should give the Commission better insight into how regulations are affecting, or may affect, the SBS market, which may allow the Commission to better craft regulations to achieve desired goals, and therefore, increase regulatory effectiveness.

In adopting the SDR Rules and Form SDR, the Commission has attempted to balance different goals. For example, data fragmentation resulting from multiple SDRs may make it more difficult for the Commission and to the extent that SBS data is made public, the public, to aggregate SBS data from multiple SDRs. The Commission could have resolved issues related to data fragmentation by designating one SDR as the recipient of the information from all other SDRs in order to provide the Commission with a consolidated location from which to access SBS data for regulatory monitoring and oversight purposes. Designating one SDR as the data consolidator, however, could discourage new market entrants, and interfere with competition. Designating one SDR as data consolidator may also impose an additional cost on market participants to cover the SDR's cost for acting as the data consolidator. Similarly, the SDR Exemption,[1204] which allows certain non-U.S. persons to perform the functions of an SDR within the United States without registering with the Commission, may reduce potentially duplicative registration and operating costs by allowing these persons to continue to receive data reported pursuant to the reporting requirements of a foreign jurisdiction. The SDR Exemption, however, also increases the risk of data fragmentation to the extent that reporting requirements differ across jurisdictions and relevant authorities have difficulty accessing data across jurisdictions. The Commission has attempted to balance the considerations of competition, data fragmentation, and avoidance of potentially duplicative registration and operating costs in adopting the SDR Rules.

In assessing the economic impact of the SDR Rules and Form SDR, the Commission refers to the broader costs and benefits associated with the application of the rules and interpretations as "programmatic" costs and benefits. These include the costs and benefits of applying the substantive Title VII requirements to the reporting of transactions by market

---

[1204] See Section VI.K of this release discussing Rule 13n-12.

participants, as well as to the functions performed by market infrastructures, including SDRs, in the global SBS market. The Commission's analysis also takes into consideration "assessment costs," which arise from current and future market participants expending effort to determine whether they are subject to the SDR Rules. Current and future market participants could incur expenses in making this determination even if they ultimately are not subject to the SDR Rules. Finally, the Commission's analysis considers "compliance costs," which are the costs that SDRs will incur in registering and complying with the SDR Rules.

B. General Comments on the Costs and Benefits of the SDR Rules

The Commission received two comments regarding the general costs and benefits of the SDR Rules.[1205]

One commenter offered general observations about the application of the SDR Rules to non-resident SDRs, maintaining that the costs of an extraterritorial application of U.S. law would be significant and not estimable beforehand, and that the Commission should consider comity and conflict with non-U.S. regulatory requirements when weighing the costs and benefits of the SDR Rules.[1206] The Commission agrees that determining the costs and benefits of the application of the SDR Rules to non-resident SDRs is difficult; nevertheless, the Commission has analyzed the economic effects of the SDR Rules below.

A second commenter recommended that "the Commission should generally seek to avoid any divergence from the CFTC's and international regulators' frameworks that is likely to give rise to undue costs or burdens."[1207] The commenter believed that "divergence is generally

---

1205 See US & Foreign Banks, supra note 24; IIB CB, supra note 26.

1206 See US & Foreign Banks, supra note 24.

1207 IIB CB, supra note 26.

warranted only if the rule adopted by the Commission is more flexible than those adopted by others (and therefore would not preclude the voluntary adoption of consistent practices by market participants)."[1208] The Commission acknowledges that there are concerns regarding divergent regulatory frameworks. The economic effects that could result from divergent regulatory frameworks, as well as other comments regarding the costs and benefits of specific rules, are discussed below. The Commission notes, however, that the SDR Rules are largely consistent with the CFTC's rules. Furthermore, the Commission has consulted and coordinated with foreign regulators through bilateral and multilateral discussions and has taken these discussions into consideration in developing the SDR Rules and Form SDR.

C. Consideration of Benefits, Costs, and the Effect on Efficiency, Competition, and Capital Formation

The potential economic effects stemming from the SDR Rules can be grouped into several categories. In this section, the Commission first discusses assessment costs relating to the SDR Rules. The Commission then discusses the SDR Rules' programmatic costs and benefits, highlighting broader and more comprehensive economic effects that result when the SDR Rules are considered as a part of other rules resulting from Title VII of the Dodd Frank Act. Next, the Commission discusses the effects of the SDR Rules on efficiency, competition, and capital formation. In the next section, the Commission discusses the compliance costs relating to certain of the SDR Rules.

1. Assessment Costs

The Commission believes that persons will incur assessment costs in determining whether they fall within the statutory definition of an SDR. The Commission believes that the

[1208] IIB CB, supra note 26.

statutory definition in Exchange Act Section 3(a)(75) describes the core services or functions of an SDR. Whether a person falls within the statutory definition of an SDR is fact-specific. The Commission believes that at least 10 persons[1209] will make the assessment of whether they fall within the statutory definition of an SDR, which may result in a cost of $15,200 per person, for a total cost of $152,000 for all persons.[1210]

The Commission believes that certain non-U.S. persons may incur assessment costs in determining whether they can rely on the SDR Exemption. Under the Commission's approach, certain non-U.S. persons that perform the functions of an SDR may incur certain assessment costs in determining whether they fall within the statutory definition of an SDR, and, if so, whether they perform the functions of an SDR within the United States. If so, they may incur certain assessment costs in determining whether they can rely on the SDR Exemption.[1211]

With respect to determining the availability of the SDR Exemption for a non-U.S. person performing the function of an SDR within the United States, the Commission believes that costs

---

1209 At a minimum, the Commission estimates that the same persons who will register with the Commission as SDRs will make an assessment as to whether they fall within the statutory definition of an SDR. Therefore, the Commission estimates that at least 10 persons will make this assessment. See Section VII.C.1 of this release discussing the number of respondents to the registration requirements and Form SDR.

1210 This estimate is based on an estimated 40 hours of in-house legal or compliance staff's time to assess whether a person falls within the statutory definition of an SDR. The Commission estimates that a person will assign these responsibilities to an Attorney. Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of an Attorney is $380 per hour. Thus, the total one-time estimated dollar cost is $15,200 per person and $152,000 for all persons, calculated as follows: (Compliance Attorney at $380 per hour for 40 hours) x 10 persons = $152,000.

1211 The Commission recognizes that some non-U.S. persons that perform the functions of an SDR may do so entirely outside the United States, and thus, may determine that they do not need to incur any assessment costs related to the Commission's approach.

would arise from confirming whether the Commission and each regulator with supervisory authority over such non-U.S. person have entered into an MOU or other arrangement. The Commission believes that because this information generally should be readily available,[1212] the cost involved in making such assessment should not exceed one hour of in-house legal or compliance staff's time or $380 per person,[1213] for an aggregate one-time cost of $7,600.[1214]

Assessment costs may also result from determining whether existing policies and procedures will satisfy the requirements of the SDR Rules. An SDR may have existing policies and procedures that it may use to comply with the SDR Rules. In order to use such policies and procedures to comply with the SDR Rules, the SDR will first have to assess whether the policies and procedures will result in compliance with the SDR Rules.

2. Programmatic Costs and Benefits

a. SDR Registration, Duties, and Core Principles

Rules 13n-1 through 13n-3 and Form SDR establish the mechanism by which SDRs must register as such pursuant to Exchange Act Section 13(n), absent an exemption. Rules 13n-4

1212 The Commission provides a list of MOUs and other arrangements on its public website, which are available at this link: http://www.sec.gov/about/offices/oia/oia_cooparrangements.shtml.

1213 This estimate is based on an estimated one hour of in-house legal or compliance staff's time to confirm whether the Commission and each regulator with supervisory authority over such non-U.S. person have entered into an MOU or other arrangement. The Commission estimates that an SDR will assign these responsibilities to an Attorney. Thus, the total one-time estimated dollar cost is $380 per person, calculated as follows: (Attorney at $380 per hour for 1 hour) = $380.

1214 This total is based on the assumption that as many as 20 non-U.S. persons that perform the functions of an SDR would use in-house legal or compliance staff, specifically, an Attorney, to determine whether an applicable MOU or other arrangement is in place. Thus, the total one-time estimated dollar cost for all 20 non-U.S. persons is $7,600, calculated as follows: (Attorney at $380 per hour for 1 hour) x 20 non-U.S. persons = $7,600.

through 13n-10 set forth the duties and core principles of SDRs. Rule 13n-11 sets forth the requirements for an SDR's CCO, annual compliance reports, and financial reports. Finally, Rule 13n-12 provides an exemption from registration and other requirements in certain circumstances.

The Commission believes that it and market participants will enjoy a number of programmatic benefits from the SDR Rules. For example, because the final SDR Rules require SDRs to register with and provide data to the Commission and require SDRs to take steps to facilitate accurate data collection and retention with respect to SBSs, the SDR Rules will increase the availability of SBS data relative to that in the existing voluntary disclosure system.[1215] The data provided by SDRs will provide a window into SBS transactions and allow the Commission to oversee the SBS market beyond that which is currently available. Further, the SDR Rules requiring SDRs to provide information to market participants about the nature and costs of SDRs' services are intended to provide transparency about the costs of reporting, thereby enabling market participants to make informed choices among competing SDRs. Finally, by requiring SDRs to register with the Commission, provide the Commission with access to their books and records, and submit to inspections and examinations by representatives of the Commission, the SDR Rules will allow the Commission to evaluate SDRs' compliance with the Exchange Act and the rules and regulations thereunder.

Persons that meet the definition of an SDR will also be required to comply with the public dissemination requirements of Regulation SBSR. Public dissemination is a core component of post-trade transparency in the SBS market. As discussed below, enhanced transparency should produce market-wide benefits in terms of a reduction in SBS dealers'

[1215] See Section II.B of this release discussing data that is currently available to regulators and market participants.

market power. Enhanced transparency could also lead to reduced trading costs if competitive access to information and reduced SBS dealers' market power reduce the premium that SBS dealers are able to charge for intermediating SBS transactions.[1216] Indeed, post-trade transparency has been shown to reduce implicit trading costs (i.e., the difference between the price at which a market participant can trade a security and the fundamental value of that security) in other securities markets. For example, post-trade transparency that followed the introduction of TRACE and trade reporting in the corporate bond market has been shown to lower implicit costs of trading corporate bonds.[1217] While there are differences between SBSs and corporate bonds, there are similarities to how the markets are structured – both markets evolved as dealer-centric OTC markets with limited pre- or post-trade transparency. Thus, the Commission expects that some of the benefits that result from transparency in the corporate bond market may extend to SBS markets as well.

Nevertheless, the extent to which trading cost reductions are realized could be mitigated by additional factors. Trade reporting, public dissemination, and providing direct electronic access are costly in terms of establishing and maintaining infrastructure necessary to report and store large volumes of trade-level transaction data. SDRs may be able to pass the costs of complying with the SDR Rules and public dissemination requirements onto reporting parties – e.g., SBS dealers – who, in turn, may be able to pass costs on to their customers. Therefore, the infrastructure costs associated with transparency may partially offset the trade cost benefits that could accrue through the reduction in asymmetric information and SBS dealers' market power.

1216 See Section VIII.C.3 of this release discussing the potential effects on competition, efficiency, and capital formation.

1217 See supra note 58.

Enhanced transparency could produce additional market-wide benefits by promoting stability in the SBS market, particularly during periods of market turmoil,[1218] and it should indirectly contribute to improved stability in related financial markets, including equity and bond markets.[1219] In conjunction with Regulation SBSR, the SDR Rules should assist the Commission in fulfilling its regulatory mandates and legal responsibilities such as detecting market manipulation, fraud, and other market abuses by providing it with greater access to SBS information.[1220] In particular, without an SDR, data on SBS transactions would be dispersed and would not be readily available to the Commission and others. SDRs may be especially critical during times of market turmoil, both by giving the Commission information to monitor risk exposures taken by individual entities or to particular referenced entities, and by promoting stability through enhanced transparency. Additionally, more available data about the SBS market should give the Commission a better idea of how regulations are affecting, or may affect,

1218 See Proposing Release, 75 FR at 77307, supra note 2 ("SDRs may be especially critical during times of market turmoil, both by giving relevant authorities information to help limit systemic risk and by promoting stability through enhanced transparency. By enhancing stability in the SBS market, SDRs may also indirectly enhance stability across markets, including equities and bond markets.").

1219 See Darrell Duffie, Ada Li, and Theo Lubke, Policy Perspectives of OTC Derivatives Market Infrastructure, Federal Reserve Bank of New York Staff Report No. 424 (Jan. 2010, as revised Mar. 2010) ("Transparency can have a calming influence on trading patterns at the onset of a potential financial crisis, and thus act as a source of market stability to a wider range of markets, including those for equities and bonds.").

1220 See Proposing Release, 75 FR at 77307, supra note 2 ("The enhanced transparency provided by an SDR is important to help regulators and others monitor the build-up and concentration of risk exposures in the SBS market."); see also DTCC 1*, supra note 20 ("A registered SDR should be able to provide (i) enforcement agents with necessary information on trading activity; (ii) regulatory agencies with counterparty-specific information about systemic risk based on trading activity; (iii) aggregate trade information for publication on market-wide activity; and (iv) a framework for real-time reporting from swap execution facilities and derivatives clearinghouses.").

the SBS market, which may allow the Commission to better craft regulation to achieve desired goals, and therefore, increase regulatory effectiveness.

The Commission believes that U.S. persons performing the functions of an SDR will play a key role in collecting and maintaining information regarding SBS transactions, and making available such information to the Commission and the public, all of which may affect the transparency of the SBS market within the United States.[1221] Requiring such U.S. persons to comply with the SDR Requirements will help ensure that they maintain data and make it available in a manner that advances the benefits that the requirements are intended to produce.

The information provided by SDRs to the Commission pursuant to the SDR Rules may assist it in advancing the goals of the Dodd-Frank Act. The Dodd-Frank Act was designed, among other things, to promote the financial stability of the United States by improving accountability and transparency in the financial system and the SDR Rules, which implement the statute, are a necessary and important component of implementing this goal.[1222] As discussed above, an SBS transaction involves ongoing financial obligations between counterparties during the life of the transaction, which can typically span several years, and counterparties bear credit and market risk until the transaction is terminated or expires. Because large market participants may have ongoing obligations with many different counterparties, financial markets may be particularly vulnerable to instability resulting from the financial distress of a large market participant being transmitted to counterparties and others through connections in the SBS market. In extreme cases, the default of a large market participant could lead to financial distress

[1221] See Proposing Release, 75 FR at 77356, supra note 2; Cross-Border Proposing Release, 78 FR at 31184, supra note 3.

[1222] See Dodd-Frank Act, Pub. L. No. 111-203 at Preamble.

among the counterparties to SBSs, which could introduce the potential for sequential counterparty failure and create uncertainty in the SBS market, thereby reducing the willingness of market participants to extend credit. A reduction in credit may result in liquidity and valuation difficulties that could spill over into the broader financial market.

Thus, disruptions in the SBS market could potentially affect other parts of the financial system. Increasing the availability and reliability of information about the SBS market will improve the Commission's ability to oversee and regulate this market. A more complete understanding of activity in the SBS market, including information on risk and connections between counterparties, should help the Commission assess the risk in these markets and evaluate appropriate regulatory responses to market developments. Appropriate and timely regulatory responses to market developments could enhance investor protection and confidence, which may encourage greater investor participation in the SBS market.[1223]

b. Registration Requirements in the Cross-Border Context

The Commission believes that there are a number of programmatic benefits to requiring non-U.S. persons that perform the functions of an SDR within the United States to register with the Commission and to comply with the SDR Requirements. These requirements are intended to help ensure that all persons that perform the functions of an SDR within the United States function in a manner that will increase the transparency and further other goals of the Dodd-Frank Act.[1224] The SDR Requirements, including requirements that SDRs register with the

[1223] See Section II.A of this release discussing broad economic considerations.

[1224] See Proposing Release, 75 FR at 77354, supra note 2 (noting that "the proposed SDR rules will lead to a more robust, transparent environment for the market for SBSs"); Cross-Border Proposing Release, 78 FR at 31183, supra note 3 (discussing programmatic benefits to requiring non-U.S. persons that perform the functions of an SDR within the

Commission, retain complete records of SBS transactions, maintain the integrity and confidentiality of those records, and disseminate appropriate information to the public are intended to help ensure that the data held by SDRs is reliable and that the SDRs provide information that contributes to the transparency of the SBS market while protecting the confidentiality of information provided by market participants.[1225]

Non-U.S. persons performing the functions of an SDR within the United States also may affect the transparency of the SBS market within the United States, even if transactions involving U.S. persons or U.S. market participants are being reported to such non-U.S. persons in order to satisfy the reporting requirements of a foreign jurisdiction (and not those of Title VII). The Commission believes that, to the extent that non-U.S. persons are performing the functions of an SDR within the United States, they will likely receive data relating to transactions involving U.S. persons and other U.S. market participants. Ensuring that such data is maintained and made available in a manner consistent with the SDR Requirements would likely contribute to the transparency of the U.S. market and reduce potential confusion that may arise from discrepancies in transaction data due to, among other things, differences in the operational standards governing persons that perform the functions of an SDR in other jurisdictions (or the absence of such standards for any such persons that are not subject to any regulatory regime). Moreover, given the sensitivity of reported SBS data and the potential for market abuse and subsequent loss of liquidity in the event that a person performing the function of an SDR within the United States

---

United States to register with the Commission and to comply with the SDR Requirements). See also Dodd-Frank Act, Pub. L. No. 111-203 at Preamble.

1225 See Proposing Release, 75 FR at 77307, supra note 2 (noting that SDRs "are intended to play a key role in enhancing transparency in the SBS market" and thus "it is important that SDRs are well-run and effectively regulated").

fails to maintain the privacy of such data,[1226] the Commission believes that requiring non-U.S. persons that perform the functions of an SDR within the United States to register with the Commission will help ensure that data relating to transactions involving U.S. persons or U.S. market participants is handled in a manner consistent with the confidentiality protections applicable to such data, thereby reducing the risk of the loss or disclosure of proprietary or other sensitive data and of market abuse arising from the misuse of such data.

As noted above, the Commission is adopting Exchange Act Rule 13n-12 to provide an exemption from the SDR Requirements for non-U.S. persons that perform the functions of an SDR within the United States, provided that each regulator with supervisory authority over any such non-U.S. person has entered into an MOU or other arrangement with the Commission that addresses the confidentiality of data collected and maintained by such non-U.S. person, access by the Commission to such data, and any other matters determined by the Commission.

The Commission believes that this SDR Exemption will not significantly reduce the programmatic benefits associated with the SDR Requirements. Although the approach could potentially reduce the number of persons performing the functions of an SDR that are registered with the Commission,[1227] the Commission believes that there will be little impact on reporting of transactions involving U.S. persons because data relating to transactions involving U.S. persons

---

1226 See Proposing Release, 75 FR at 77307, supra note 2 ("The inability of an SDR to protect the accuracy and integrity of the data that it maintains or the inability of an SDR to make such data available to regulators, market participants, and others in a timely manner could have a significant negative impact on the SBS market.").

1227 As of November 2014, there were several non-U.S. persons performing the functions of an SDR or intending to do so in the future. See OTC Derivatives Market Reforms Eighth Progress Report on Implementation, Financial Stability Board (Nov. 2014), available at http://www.financialstabilityboard.org/wp-content/uploads/r_141107.pdf. The Commission, however, does not possess data regarding how many, if any, of these persons perform the functions of an SDR within the United States.

and U.S. market participants would still be required to be reported, pursuant to Regulation SBSR, to an SDR registered with the Commission and subject to all SDR Requirements, absent other exemptive relief from the Commission.[1228] Moreover, the SDR Exemption may have the benefit of reducing the incentive for non-U.S. persons performing the functions of an SDR within the United States to restructure their operations to avoid registration with the Commission.

Moreover, the SDR Exemption is conditioned on an MOU or other arrangement with each regulator with supervisory authority over the non-U.S. person that seeks to rely on the SDR Exemption. This MOU or arrangement will address the Commission's interest in having access to SBS data involving U.S. persons and other U.S. market participants that is maintained by non-U.S. persons that perform the functions of an SDR within the United States and in protecting the confidentiality of such data. Further, Rule 13n-12 should not impair the integrity and accessibility of SBS data. The Commission, therefore, believes that exempting certain non-U.S. persons performing the functions of an SDR within the United States, subject to the condition described above, will likely not significantly affect the programmatic benefits that the SDR Requirements are intended to achieve.[1229]

1228 See Regulation SBSR Adopting Release, supra note 13 (Rule 908(c) setting forth "substituted compliance" regime).

1229 The Commission also anticipates that non-U.S. persons that avail themselves of the SDR Exemption will be subject to the regulatory requirements of one or more foreign jurisdictions. The SDR Exemption will help ensure that such persons do not incur costs of compliance with duplicative regulatory regimes while also ensuring, through the condition that each regulator with supervisory authority enter into an MOU or other arrangement with the Commission, that they are subject to regulatory requirements that will prevent them from undermining the transparency and other purposes of the SDR Requirements by, for example, failing to protect the confidentiality of data relating to U.S. persons and other U.S. market participants.

Registering with the Commission and complying with the SDR Requirements will impose certain costs on an SDR.[1230] The Commission believes that the SDR Exemption is likely to reduce the costs for certain non-U.S. persons performing the functions of an SDR within the United States without reducing the expected benefits of the SDR Requirements.[1231] As discussed in Section VI.K.3 of this release, the Commission believes that such persons will likely be performing the functions of an SDR in order to permit persons to satisfy reporting requirements under foreign law. The exemption, if available, will allow these non-U.S. persons to continue to perform this function within the United States without incurring the costs of compliance with the SDR Rules; such non-U.S. persons may pass along their cost savings to U.S. market participants that report to the non-U.S. persons pursuant to the market participants' reporting obligations under foreign law. Additionally, the exemption may reduce the incentive for non-U.S. persons performing the functions of an SDR within the United States to restructure their operations to avoid registration with the Commission.

The Commission recognizes that conditioning the SDR Exemption may delay the availability of the SDR Exemption to certain non-U.S. persons. In some cases, the Commission may be unable to enter into an MOU or other arrangement with each regulator with supervisory

---

1230 See Cross-Border Proposing Release, 78 FR at 31184-31185, supra note 3 (discussing programmatic costs of SDRs registering with the Commission and complying with the SDR Requirements).

1231 As noted above, the data currently available to the Commission does not indicate how many non-U.S. persons performing the functions of an SDR perform such functions within the United States. See supra note 1227. However, even if persons with reporting obligations under Regulation SBSR report their transactions to a non-U.S. person that performs the functions of an SDR within the United States, but is exempt from registration, they will still be required to report transactions under Regulation SBSR to an SDR registered with the Commission, absent other exemptive relief from the Commission. See Regulation SBSR Adopting Release, supra note 13 (Rule 908(c) setting forth "substituted compliance" regime).

authority over a non-U.S. person performing the functions of an SDR within the United States. The resulting delay or unavailability of the SDR Exemption may lead some of these non-U.S. persons to exit the U.S. market by, for example, restructuring their business so that they perform the functions of an SDR entirely outside the United States, potentially resulting in business disruptions in the SBS market. Despite the potential business disruptions in the SBS market that could result from the delay or unavailability of the SDR Exemption, the Commission believes that conditioning the SDR Exemption on an MOU or other arrangement with each regulator with supervisory authority over the non-U.S. person that seeks to rely on the exemption is important because it will help ensure the Commission's access to SBS data involving U.S. persons and other U.S. market participants that may be maintained by such non-U.S. person.

Finally, in developing its approach to the application of the SDR Requirements to non-U.S. persons that perform the functions of an SDR within the United States, the Commission considered, as an alternative to Rule 13n-12, requiring such non-U.S. persons to comply with the SDR Requirements, including registering with the Commission, as well as other requirements applicable to SDRs registered with the Commission.[1232] In such a scenario, a non-U.S. person performing the functions of an SDR within the United States would be required to register as an SDR and incur the costs associated with the SDR Requirements, as well as other requirements applicable to SDRs registered with the Commission.[1233] The Commission believes that the benefit of requiring all non-U.S. persons that perform the functions of an SDR within the United States to register with the Commission, even where similar objectives could be achieved through

1232 See Cross-Border Proposing Release, 78 FR at 31185-31186, supra note 3 (discussing alternatives to proposed SDR Exemption).

1233 See Cross-Border Proposing Release, 78 FR at 31185-31186, supra note 3.

an exemption conditioned on an MOU or other arrangement with each regulatory authority with supervisory authority over such non-U.S. persons, would be marginal, particularly in light of the costs that such non-U.S. persons would incur in complying with the SDR Requirements, as well as other requirements applicable to SDRs registered with the Commission.[1234]

3. Consideration of Burden on Competition and Promotion of Efficiency, Competition, and Capital Formation

In developing its approach to the registration, duties, and implementation of the core principles of SDRs, the Commission has focused on meeting the goals of Title VII, including promoting financial stability and transparency in the United States financial system.[1235] The Commission has also considered the effects of its policy choices on competition, efficiency, and capital formation as mandated under Exchange Act Section 3(f).[1236] That section requires the Commission, whenever it engages in rulemaking pursuant to the Exchange Act and is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition, and capital formation. In addition, Exchange Act Section 23(a)(2) requires the Commission, when making rules under the Exchange Act, to consider the impact such rules would have on competition.[1237] Section 23(a)(2) also prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the purposes of the Exchange Act.[1238]

1234 See Cross-Border Proposing Release, 78 FR at 31185-31186, supra note 3.

1235 Dodd-Frank Act, Pub. L. No. 111-203 at Title VII.

1236 15 U.S.C. 78c(f).

1237 Exchange Act Section 23(a)(2), 15 U.S.C. 78w(a)(2).

1238 Exchange Act Section 23(a)(2), 15 U.S.C. 78w(a)(2).

In Section II of this release, the Commission described the baseline used to evaluate the economic impact of the SDR Rules, including the impact on efficiency, competition, and capital formation. In particular, the Commission noted that the current SBS market is characterized by information asymmetries that confer a competitive advantage on SBS dealers relative to their non-dealer counterparties who may be less informed. The Commission also noted that the opacity of the SBS market may lead to certain inefficiencies in the market relative to a transparent market, including higher transaction costs and wider spreads. Finally, the Commission noted that some of the effects described below, such as the effects on capital formation, are measured relative to a world without public dissemination requirements. That is, in evaluating the effect of the SDR Rules on capital formation, the Commission discusses how the final SDR Rules may enhance or diminish capital formation relative to the current opaque SBS market environment.

a. Potential Effects on Efficiency

Two important economic characteristics of SDRs are the high fixed costs and increasing economies of scale. Compliance with the SDR Rules necessitates large investments in information technology infrastructure, including storage infrastructure and technology for electronic reporting and access to data, which results in high fixed costs for SDRs. The Commission believes, however, that once the infrastructure for operating as an SDR and compliance with the SDR Rules is in place, the SDR's costs of accepting transactions are minimal. Consequently, an SDR exhibits increasing economies of scale in that the average total cost to the SDR per transaction reported, which includes fixed costs, diminishes with the increase in volume of trades reported as high fixed costs are spread over a larger number of trades.

As a result, viewed in terms of minimizing the average SDR-related cost per transaction, it may be efficient to limit the total number of SDRs to one per asset class. In such a case, the SDR chosen for each asset class would receive reports of all transactions in that asset class, reducing inefficient duplication of fixed costs and potentially giving that SDR a large number of transactions over which the SDR could spread its high fixed costs. Furthermore, limiting the number of SDRs to one per asset class would reduce the potential difficulties that may arise when consolidating and aggregating data from multiple SDRs.[1239] While such a limitation would resolve many of the challenges involved in aggregating SBS data, the Commission is not limiting the number of SDRs.[1240] There are competitive benefits to having multiple SDRs, as discussed below. Furthermore, the existence of multiple SDRs may reduce operational risks, such as the risk that a catastrophic event or the failure of an SDR leaves no registered SDR to which transactions can be reported, impeding the functioning of the SBS market.

Nevertheless, the Commission believes that multiple SDRs may result in certain inefficiencies relative to a market with a single SDR per asset class, as explained above.[1241] In particular, the potential reporting of transaction data to multiple SDRs may create a need to aggregate that data by the Commission and other interested parties. If aggregation of data is made difficult because identifiers or data field definitions used by different SDRs are not compatible, then the cost and time required by the Commission or any other interested party to aggregate the data would increase, and the Commission's oversight of the SBS market would be

1239 As discussed above, some commenters suggested limiting the number of SDRs to one per asset class. However, their suggestions concerning average total cost and data fragmentation extend to one SDR that serves the entire SBS market. See Section IV of this release discussing number of SDRs.

1240 See Section IV of this release discussing number of SDRs.

1241 See Sections II.A and IV of this release.

less efficient. The complications associated with aggregation could be particularly costly when aggregation is required across the same asset class and related transactions reside in different SDRs.

On the other hand, by allowing the creation of multiple SDRs, Exchange Act Section 13(n)[1242] and the SDR Rules may result in positive effects for market participants. Competition among SDRs may lead to better services and may reduce the costs of those services for market participants. As discussed above, there are currently four swap data repositories for equity or credit swaps that are provisionally registered with the CFTC and that may choose to register with the Commission as SDRs. While some swap data repositories may ultimately choose not to register and operate as an SDR, either because of regulatory requirements that govern SDRs or for other reasons, the Commission is not limiting the number of SDRs per asset class.

Furthermore, the Commission believes that the SDR Exemption may have positive effects on operational efficiency for SDRs, in terms of cost savings relative to a scenario where the SDR Exemption does not exist. The Commission believes that the exemption will allow certain non-U.S. persons to continue to receive data reported pursuant to the reporting requirements of a foreign jurisdiction without registering with the Commission as an SDR, subject to a condition that helps ensure that the privacy of the data and the Commission's access to the data is maintained. The SDR Exemption may also reduce the incentives for SDRs to restructure their operations to avoid triggering registration requirements, thereby reducing potentially negative effects on efficiency.[1243] In particular, some persons may restructure solely

1242 15 U.S.C. 78m(n).

1243 See Section VI.K of this release discussing the SDR Exemption.

for the purposes of avoiding registration; in such restructurings, persons expend resources that could potentially be put to more productive uses.

Viewed in the context of the broader transparency goals of Title VII, the SDR Rules may provide additional informational (or price) efficiency benefits in terms of asset valuation.[1244] That is, by improving the flow of information about SBSs and the reference entities underlying SBSs, the SDR Rules may result in a market where prices of SBSs and their underlying reference entities more accurately reflect their fundamental value. The SDR Rules, together with the reporting and public dissemination requirements of Regulation SBSR, should also promote the process by which market participants seek the best available price. Increased availability of information may lead to a reduction in the spread between the price at which market participants can enter into an SBS and the fundamental value of that SBS (referred to as implicit trading costs in this release).[1245] Real-time transaction pricing and volume information provide signals to market participants about the value of their investments. Market participants may use these signals to update their assessment of the value of an investment opportunity. In contrast to an opaque market, information revealed through trades that are reported and publicly disseminated allows market participants to make more-informed assessments of asset valuations, promoting informational efficiency. This should be true for the underlying assets or reference entities as well. That is, information from SBS transactions provides signals not only about SBS valuation, but also about the value of reference assets underlying SBSs.

[1244] Informational or price efficiency refers to the degree to which asset prices reflect available information about the value of the asset. See, e.g., Eugene Fama, Efficient Capital Market II, 46(5) Journal of Finance 1575 (1991).

[1245] See Section II.A of this release.

b. Potential Effects on Competition

The Commission believes that by allowing multiple SDRs to provide data collection, maintenance, and recordkeeping services, the SDR Rules should promote competition among SDRs. The Commission notes that, in an analogous setting, there are currently four swap data repositories provisionally registered with the CFTC, suggesting that multiple SDRs competing in the SBS market is a likely outcome.[1246] Increased competition may lower costs for users of SDR services.

The Commission believes that because the SDR Rules do not preclude an SDR from registering with the Commission and other foreign relevant authorities, non-resident SDRs generally can take steps to comply with both their home country requirements and the SDR Rules, and therefore can register with the Commission. The Commission recognizes that a non-resident SDR will incur additional burdens in making the certification or providing the opinion of counsel required by Exchange Act Rule 13n-1(f), and that these burdens may place non-resident SDRs at a competitive disadvantage relative to resident SDRs.[1247] The Commission believes that by subjecting non-resident SDRs to the same requirements as resident SDRs in all other respects – e.g., requiring all SDRs to provide prompt access to books and records and submit to onsite inspection and examination – the SDR Rules do not give a significant competitive advantage to either resident or non-resident SDRs. As a result, the Commission believes that the SDR Rules should promote competition among SDRs both domestically and internationally.

[1246] See Section II.B of this release.

[1247] See Section VIII.D.1.b of the release discussing cost of certification and opinion of counsel.

The Commission recognizes that there may be competitive effects due to the jurisdictional divide between the CFTC and the Commission with respect to swaps and SBSs. Swap data repositories that are registered only with the CFTC may compete against SDRs that are registered only with the Commission, and vice versa, for acceptance of mixed swaps. As noted by commenters, divergent regulatory frameworks could lead to "undue costs or burdens" for SDRs and SBS market participants.[1248] To the extent that the SDR Rules contain provisions that are more burdensome than the CFTC's rules, the SDR Rules could hinder 1) an SDR registered with only the Commission from competing against a swap data repository registered with only the CFTC for acceptance of mixed swaps, and 2) an SDR registered with both the Commission and the CFTC from competing against a swap data repository registered with only the CFTC for acceptance of CFTC-regulated swaps. On the other hand, if the SDR Rules are less burdensome than the CFTC's rules, then an SDR registered with only the Commission may enjoy a competitive advantage relative to 1) a swap data repository registered with only the CFTC for acceptance of mixed swaps, and 2) an SDR registered with both the Commission and the CFTC for acceptance of SBSs.

As stated above, the Commission believes that the SDR Rules and the CFTC's final rules governing swap data repositories' registration, duties, and core principles are largely consistent.[1249] Indeed, the Commission believes that, on the whole, the SDR Rules are substantially similar to those adopted by the CFTC for swaps, and that any differences are not significant enough to reduce the ability of SEC-registered SDRs to compete against CFTC-

1248 See IIB CB, supra note 26.

1249 See Section I.D of this release.

registered swap data repositories for acceptance of mixed swaps.[1250] Thus, the Commission does not believe that the SDR Rules, as a result of the jurisdictional divide between the Commission and the CFTC, will negatively affect competition in the market for acceptance of mixed swaps.

Finally, in addition to affecting competition among SDRs, the SDR Rules have implications for competition among market participants. As discussed above, by observing order flow, SBS dealers may have access to information not available to the broader market, and therefore may enjoy a competitive advantage over their non-dealer counterparties.[1251] Because price and volume information (revealed to SBS dealers through their observation of order flow) contains signals about the value of investment opportunities, SBS dealers are able to use private information about order flow to derive more-informed assessments of current market values, allowing them to extract economic rents from less-informed counterparties.[1252] Impartial access to pricing and volume information should allow market participants to derive more-informed assessments of asset valuations, reducing SBS dealers' market power over other market participants. Additionally, price transparency should also promote competition among SBS dealers. The Commission expects that, as in other securities markets, quoted bids and offers should form and adjust according to reported, executed trades.

1250 See DTCC 2, supra note 19 (stating that "[t]he Commission's proposed required practices are generally consistent with those of" the commenter's trade repository).

1251 See Section II.A of this release.

1252 See Martin D. D. Evans and Richard K. Lyons, Exchange Rate Fundamentals and Order Flow, NBER Working Paper No. 13151 (June 2007), available at: http://128.97.165.17/media/files/evans_lyons.pdf (finding evidence, based on data regarding end-user currency trades, that transaction flows forecast future macroeconomic variables such as output growth, money growth, and inflation).

c. Potential Effects on Capital Formation

The Commission believes that compliance with the SDR Rules will promote data collection, maintenance, and recordkeeping. In conjunction with Regulation SBSR, including its public dissemination requirements, the SDR Rules will likely have a positive effect on transparency in credit markets by increasing information about the SBS market. In particular, the definition of an SDR, which identifies persons that may be required to register with the Commission and thereby required to comply with the public dissemination requirements of Regulation SBSR, and the data accuracy and maintenance requirements in the SDR Rules, should have a positive effect by making comprehensive, accurate information available to all market participants. The increased availability of information should enable persons that rely on the SBS market to meet their hedging objectives to make better decisions about capital formation in general, which may positively affect capital formation in the broader capital market. In particular, improved transparency in the SBS market should improve the quality and quantity of price information available in the SBS market, so that SBS prices more accurately reflect fundamental value and risk. Improved insight into the relationship between price and risk could attract hedgers and other market participants that do not benefit from opacity, improving liquidity and increasing opportunities for market participants to diversify and share risks through trading SBS.[1253]

Similarly, the Commission expects increased transparency in the SBS market to benefit the broader economy. Similar to the derivatives markets providing signals about the valuation of underlying reference entities, transparent SBS prices provide signals about the quality of a reference entity's business investment opportunities. Because market prices incorporate

1253 See Section II.A of this release discussing transparency in the SBS market.

information about the value of underlying investment opportunities, market participants can use their observations of price and volume to derive assessments of the profitability of a reference entity's business and investment opportunities. Furthermore, business owners and managers can use information gleaned from the SBS market – both positive and negative – to make more-informed investment decisions in physical assets and capital goods, as opposed to investment in financial assets, thereby promoting efficient resource allocation and capital formation in the real economy. Finally, transparent SBS prices may also make it easier for firms to obtain new financing for business opportunities, by providing information and reducing uncertainty about the value and profitability of a firm's investments.[1254]

The SDR Rules are intended to help the Commission perform its oversight functions in a more effective manner. For example, a more complete picture of the SBS market, including information on risk exposures and asset valuations, should allow the Commission to better assess risk in the SBS market and evaluate the effectiveness of the Commission's regulation of the SBS market. Appropriate and timely regulatory responses to market developments could enhance investor protection, and could encourage greater participation in the SBS market, thereby improving risk-sharing opportunities and efficient capital allocation. In addition, the SBS data provided by SDRs to the Commission should help it advance the goals of the Dodd-Frank Act, thereby promoting stability in the overall capital markets. Increased overall stability in the capital markets could promote investor participation, thereby increasing liquidity and capital formation.

1254 See Philip Bond, Alex Edmans, and Itay Goldstein, The Real Effects of Financial Markets, 4 Annual Review of Financial Economics 339 (2012) (reviewing the theoretical literature on the feedback between financial market prices and the real economy).

Finally, to the extent that the SDR Rules promote competition among SDRs, as discussed above, the SDR Rules may lower costs for users of SDR services.[1255] Decreased costs may promote capital formation by increasing the amount of capital available for investment by users of SDR services.

D. Costs and Benefits of Specific Rules

1. Registration Requirements, Form SDR, and Withdrawal from Registration

Rule 13n-1 and Form SDR describe the information that a person must file to register as an SDR and also provide for interim amendments and required annual amendments that must be filed within 60 days after the end of each fiscal year of the SDR and that these filings must be in a tagged data format. Each non-resident SDR is required to (i) certify on Form SDR that the SDR can, as a matter of law, and will provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission and (ii) provide an opinion of counsel that the SDR can, as a matter of law, provide the Commission with access to the books and records of such SDR and can, as a matter of law, submit to onsite inspection and examination by the Commission. Rule 13n-2 sets forth the process by which a registered SDR would withdraw its registration or have its registration revoked or cancelled.[1256] Rule 13n-3 sets forth the registration process for a successor to a registered SDR.[1257] These rules and Form SDR are adopted pursuant to the Commission's rulemaking authority under Exchange Act Section 13(n).[1258]

1255 See Section VIII.C.3.a of this release discussing the effect of competition between SDRs on the prices of SDR services.

1256 See Sections VI.B of this release discussing Rule 13n-2.

1257 See Sections VI.C of this release discussing Rule 13n-3.

1258 See 15 U.S.C. 78m(n).

a. Benefits

The rules and Form SDR described in this section provide for the registration of SDRs, withdrawal from registration, revocation and cancellation of the registration, and successor registration of SDRs. Congress enacted the new registration requirements as part of the Dodd-Frank Act in order to increase the transparency in the SBS market. The registration process will further the Dodd-Frank Act's goals by assisting the Commission in overseeing and regulating the SBS market. The requirement that a non-resident SDR (i) certify that the SDR can, as a matter of law, and will provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission and (ii) provide an opinion of counsel that it can, as a matter of law, provide the Commission with access to the SDR's books and records and can, as a matter of law, submit to inspection and examination will allow the Commission to evaluate an SDR's ability to meet the requirements for registration and to conduct ongoing oversight.

The information required to be provided in Form SDR is necessary to enable the Commission to assess whether an applicant has the capacity to perform the duties of an SDR and to comply with the duties, core principles, and other requirements imposed on SDRs pursuant to Exchange Act Section 13(n) and the rules and regulations thereunder.

The requirement that SDRs file Form SDR in a tagged data format will facilitate review and analysis of registration materials by Commission staff and, to the extent such materials are made public, the public This requirement is consistent with the Commission's longstanding efforts to increase transparency and the usefulness of information by requiring the data tagging of information contained in electronic filings in order to improve the accuracy of submitted information, including financial information, and facilitate its analysis.[1259]

The Commission solicited comments on the benefits associated with the registration-related rules and Form SDR.[1260] The Commission did not receive any comments specifically addressing these benefits.

b. Costs

The Commission anticipates that the primary costs to SDRs from the registration-related rules and Form SDR result from the requirement to complete Form SDR and any amendments thereto.

As discussed above, the Commission estimates that the average initial paperwork cost of SDR registration will be 481 hours per SDR and the average ongoing paperwork cost of interim and annual updated Form SDR will be 36 hours for each registered SDR.[1261] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $793,840[1262] and the

1259 See Regulation S-T, 17 CFR 232; see also Electronic Filing and Revision of Form D, Securities Act Release No. 8891 (Feb. 6, 2008), 73 FR 10592 (Feb. 27, 2008); Interactive Data to Improve Financial Reporting, Securities Act Release No. 9002 (Jan. 30, 2009), 74 FR 6776 (Feb. 10, 2009); Interactive Data for Mutual Fund Risk/Return Summary, Securities Act Release No. 9006 (Feb. 11, 2009), 74 FR 7748 (Feb. 19, 2009); Amendments to Rules for National Recognized Statistical Rating Organizations, Exchange Act Release No. 61050 (Nov. 23, 2009), 74 FR 63832 (Dec. 4, 2009); Money Market Fund Reform, Investment Company Release No. 29132 (Feb. 23, 2010), 75 FR 10060 (Mar. 4, 2010).

1260 See Proposing Release, 75 FR at 77355, supra note 2.

1261 See Section VII.D.1 of this release discussing the cost of SDR registration.

1262 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney and a Compliance Clerk. Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of a Compliance Clerk is $64 per hour. Thus, the total one-time estimated dollar cost of complying with the initial registration-related requirements is $79,384 per SDR and $793,840 for all SDRs, calculated as aggregate ongoing estimated dollar cost per year will be $55,440[1263] to comply with the rule.

As discussed above, the Commission estimates that the average initial paperwork cost of filing a Form SDR to withdraw from registration will be 12 hours per SDR.[1264] Assuming that, at most, one SDR per year would withdraw, the aggregate one-time estimated dollar cost will be $4,008[1265] to comply with the rule.

As discussed above, the Commission estimates that the average initial paperwork cost for each non-resident SDR to (i) certify on Form SDR that the SDR can, as a matter of law, and will provide the Commission with prompt access to the SDR's books and records and can, as a matter of law, and will submit to onsite inspection and examination by the Commission and (ii) provide an opinion of counsel that the SDR can, as a matter of law, provide the Commission with prompt access to the SDR's books and records can, as a matter of law, and submit to onsite inspection and examination will be 1 hour and $900 per SDR.[1266] Assuming a maximum of three non-

---

follows: (Compliance Attorney at $334 per hour for 180 hours) + (Compliance Clerk at $64 per hour for 301 hours) x (10 registrants) = $793,840.

1263 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney and a Compliance Clerk. Thus, the total estimated dollar cost of complying with the ongoing registration-related requirements is $5,544 per year per SDR and $55,440 per year for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 12 hours) + (Compliance Clerk at $64 per hour for 24 hours) x (10 registrants) = $55,440.

1264 <u>See</u> Section VII.D.1 of this release discussing the cost of filing Form SDR to withdraw from registration.

1265 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total estimated dollar cost of complying with the requirements related to withdrawal from registration is $4,008 per year per SDR and $4,008 per year for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 12 hours) x (1 SDR withdrawing) = $4,008.

1266 <u>See</u> Section VII.D.1 of this release discussing the cost of non-resident SDRs' certification on Form SDR and opinion of counsel.

resident SDRs,[1267] the aggregate one-time estimated dollar cost will be $3,840.[1268]

The Commission believes that the costs of filing Form SDR in a tagged data format beyond the costs of collecting the required information, will be minimal. The Commission does not believe that these costs will be significant, as large-scale changes will likely not be necessary for most modern data management systems to output structured data files, particularly for widely used file formats such as XML. XML is a widely used file format, and based on the Commission's understanding of current practices, it is likely that most reporting persons and third party service providers have systems in place to accommodate the use of XML.

The Commission solicited comment on the estimated costs associated with the registration-related rules and Form SDR.[1269] The Commission specifically requested comment on the estimated number of respondents that would be filing Form SDR and the initial costs associated with completing the registration form and the ongoing annual costs of completing the required amendments.[1270]

One commenter expressed concern about non-resident SDRs being subject to a stricter regime than resident SDRs because of the non-resident SDRs' obligation to provide a

---

1267 See Section VII.C.1 of this release discussing the number of non-resident SDRs.

1268 The Commission estimates that an SDR will assign these responsibilities to an Attorney. Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of an Attorney is $380 per hour. Thus, the total estimated dollar cost of complying with the requirements of Rule 13n-1(f) is $1,280 per year per SDR and $3,840 per year for all SDRs, calculated as follows: ($900 for outside legal services + (Attorney at $380 per hour for 1 hour)) x (3 non-resident registrants) = $3,840.

1269 See Proposing Release, 75 FR at 77355, supra note 2.

1270 See Proposing Release, 75 FR at 77355, supra note 2.

certification and opinion of counsel under Rule 13n-1(f).[1271] The Commission acknowledges that non-resident SDRs may incur costs in providing the certification and opinion of counsel. The Commission believes, however, that these costs may be avoided to the extent that non-resident SDRs are able to take advantage of the SDR Exemption.

The Commission did not receive any other comments on the estimated costs associated with the registration-related rules and Form SDR.[1272]

c. Alternatives

Following one commenter's suggestion, the Commission considered requiring an SDR applicant to submit its rulebook[1273] with its initial Form SDR. As discussed above, the Commission has not adopted this approach because an SDR is already required to provide policies and procedures on Form SDR, and the Commission believes that most of the information that would be contained in a rulebook would be filed as part of an SDR's policies and procedures.[1274] If an SDR's rulebook is broader than its policies and procedures, however, an SDR may submit its rulebook to the Commission to assist the Commission in better understanding the context of the SDR's policies and procedures or how the policies and procedures relate to one another.

1271 ESMA, supra note 19.

1272 Although one commenter expressed concern that non-resident SDRs would be subject to a stricter regulatory regime because of the certification and opinion of counsel requirements, the commenter did not comment specifically on the Commission's estimates of the costs of providing such an opinion. See ESMA, supra note 19.

1273 See DTCC 3, supra note 19.

1274 See Section VI.A.1.c of this release discussing rulebooks.

In accordance with one commenter's suggestion,[1275] the Commission amended Form SDR to accommodate SIP registration, as discussed above.[1276] The Commission considered requiring persons to register as an SDR and SIP on two separate forms, but determined not to do so because the costs to SDRs to make multiple filings of separate Form SDR and Form SIP would not provide any measureable benefits to the Commission.

The Commission considered, in accordance with one commenter's suggestion,[1277] adopting a joint form with the CFTC for SDR and swap data repository registration. As discussed above, the Commission believes that it is necessary to maintain separate registration so that each agency's form remains tailored to the particular needs of that agency.[1278] For example, the Commission is revising Form SDR to accommodate SIP registration, while the CFTC's form accommodates only swap data repository registration. Moreover, adopting a joint form may impose costs and cause uncertainty for dual registrants because the CFTC would be required to amend its form, which it has already adopted, at a time when the industry is still in the implementation phase and some swap data repositories are already provisionally registered with the CFTC. Finally, because the CFTC's registration form for swap data repositories is substantially similar to the Commission's Form SDR, the Commission does not anticipate that filing with each commission separately will entail a significant cost for a dual registrant. The Commission is sensitive to the potential costs imposed by duplicative forms, but believes that

1275 See DTCC 2, supra note 19; see also DTCC 3, supra note 19 (suggesting adopting a joint registration form with the CFTC that would include SIP registration).

1276 See Section VI.A.1.c of this release discussing Form SDR.

1277 See DTCC 3, supra note 19.

1278 See Section VI.A.1.c of this release discussing Form SDR.

these costs are justified by the need of having a form specifically tailored to the SDR registration scheme.

The Commission considered the request of one commenter, which is provisionally registered with the CFTC as a swap data repository, for expedited review of the commenter's application for registration as an SDR.[1279] Although it is not clear what the commenter means by "expedited review," the Commission believes that it is necessary to conduct a review of an SDR's application for registration independent of the CFTC's review of a swap data repository's application for registration. Moreover, the Commission believes that the procedures for reviewing applications for registration as an SDR that the Commission is adopting in this release provide reasonable timeframes for the Commission's review of the applications. These procedures are consistent with how the Commission reviews the applications of other registrants, such as SIPs and registered clearing agencies. The Commission believes that each SDR applicant, including an applicant who is provisionally registered with the CFTC, needs to demonstrate that it is so organized, and has the capacity, to be able to assure the prompt, accurate, and reliable performance of its functions as an SDR, comply with any applicable provision of the federal securities laws and the rules and regulations thereunder, and carry out its functions in a manner consistent with the purposes of Exchange Act Section 13(n) and the rules and regulations thereunder.

Finally, the Commission considered providing a method for temporary registration, as proposed.[1280] As discussed above, the Commission believes that the exemptive relief provided by the Commission in the Effective Date Order, which was effective on June 15, 2011, addressed

---

1279 See ICE CB, supra note 26.

1280 See Proposing Release, 75 FR at 77314, supra note 2.

the primary purpose for temporary registration.[1281] The Commission also believes that the Compliance Date for the SDR Rules[1282] should provide sufficient time for SDRs to analyze and understand the final SDR Rules, to develop and test new systems required to comply with the Dodd-Frank Act's provisions governing SDRs and the SDR Rules, to prepare and file Form SDR, to demonstrate their ability to meet the criteria for registration set forth in Rule 13n-1(c)(3), and to obtain registration with the Commission.[1283] For these reasons, the Commission no longer believes that a temporary registration regime for SDRs is necessary or appropriate.

2. SDR Duties, Data Collection and Maintenance, and Direct Electronic Access

Rules 13n-4(b)(2) – (7), 13n-5, and 13n-6 include various requirements relating to SDRs' information technology systems. Rules 13n-4(b)(2) – (7), 13n-5, and 13n-6 set forth the duties of an SDR, including an SDR's collection, maintenance, and analysis of transaction data and other records.[1284]

Under Rules 13n-4(b)(2) and (4), an SDR is required to accept data as prescribed in Regulation SBSR and maintain transaction data and related identifying information as required by Rule 13n-5(b)(4). Rule 13n-4(b)(5) states that each SDR must provide direct electronic access to the Commission or any of its designees.[1285]

1281 See Effective Date Order, 76 FR at 36306, supra note 9.

1282 See Section V.C of this release discussing the Compliance Date.

1283 See Section VI.A.3 of this release discussing temporary registration.

1284 See Sections VI.D.2.c, VI.E, and VI.F.3 of this release discussing Rules 13n-4(b)(2) and (4), 13n-5, and 13n-6, respectively.

1285 See also Exchange Act Section 13(n)(5)(D)(i), 15 U.S.C. 78m(n)(5)(D)(i) (requiring an SDR to provide direct electronic access to the Commission or any of its designees).

Rule 13n-5 establishes requirements for data collection and maintenance.[1286] Rule 13n-5(b) requires, among other things, an SDR to promptly record transaction data and to establish, maintain, and enforce written policies and procedures reasonably designed (1) for reporting complete and accurate transaction data to the SDR; (2) to satisfy itself that the transaction data submitted to it is complete and accurate; (3) to calculate positions for all persons with open SBSs for which the SDR maintains records; (4) to ensure that the transaction data and positions that it maintains are complete and accurate; and (5) to prevent any provision in a valid SBS from being invalidated or modified through the procedures or operations of the SDR. Rule 13n-5(b)(4) establishes requirements related to the formats in which and time periods for which an SDR must maintain transaction data, related identifying information, and positions. Rule 13n-5(b)(7) requires an SDR that ceases doing business, or ceases to be registered pursuant to Exchange Act Section 13(n), to preserve, maintain, and make accessible the transaction data and historical positions for the remainder of the time period required by Rule 13n-5. Rule 13n-5(b)(8) requires an SDR to make and keep current a plan to ensure that the transaction data and positions that are recorded in the SDR continue to be maintained in accordance with Rule 13n-5(b)(7).

Rule 13n-6 requires SDRs, with respect to those systems that support or are integrally related to the performance of their activities, establish, maintain, and enforce written policies and procedures reasonably designed to ensure that their systems provide adequate levels of capacity, integrity, resiliency, availability, and security.[1287]

1286 See Section VI.E of this release discussing Rule 13n-5.

1287 See Section VI.F.3 of this release discussing Rule 13n-6.

a. Benefits

The rules discussed in this section will enhance the Commission's ability to oversee the SBS market beyond that in the current voluntary reporting system. The Commission's ability to oversee the SBS market and benefits of SDRs to the market depend on the accuracy and reliability of the data maintained by SDRs. Exchange Act Section 13(n)(4)(B) specifically instructs the Commission to "prescribe data collection and maintenance standards for" SDRs.[1288] The rules related to an SDR's information technology and related policies and procedures are designed to facilitate accurate data collection and retention with respect to SBSs in order to promote transparency with respect to the SBS market.

The ability of the Commission to oversee the SBS market and detect fraudulent activity depends on the Commission having access to accurate current and historical market data. In particular, the direct electronic access requirement described in Rule 13n-4(b)(5) will permit the Commission to carry out these responsibilities in a more effective and more efficient manner. The requirement that each SDR make and keep current a plan to ensure that SBS data recorded in such SDR continues to be maintained is essential to ensure that the Commission will continue to have access to and the ability to analyze SBS data in the event that the SDR ceases to do business.

The requirements in the rules discussed in this section are likely to create benefits that will follow from providing the Commission with access to SBS market information. Pursuant to the rules discussed in this section, in conjunction with Regulation SBSR,[1289] SDRs will receive and maintain systemically important SBS transaction data from multiple market participants.

[1288] 15 U.S.C. 78m(n)(4)(B).

[1289] See Regulation SBSR Adopting Release, supra note 13.

This data will increase transparency about activity in the SBS market. In addition, this data will enhance the ability of the Commission to respond to market developments.

Benefits also may accrue from the Commission's ability to use SBS data in order to oversee the SBS market for illegal conduct. For example, data collected by SDRs will enhance the Commission's ability to detect and deter fraudulent and manipulative activity and other trading abuses in connection with the SBS market, conduct inspections and examinations to evaluate the financial responsibility and soundness of market participants, and verify compliance with the statutory requirements and duties of SDRs. This data may also help the Commission identify fraudulent or other predatory market activity. Increasing market participants' confidence that the likelihood of illegal or fraudulent activity is low and that the likelihood that they will suffer economic loss from such illegal or fraudulent activity is low will reduce the prices at which they are willing to use SBS to hedge market risks to which they are exposed, which should, in turn, encourage participation in the SBS market.

The richness of data collected by SDRs also may facilitate market analysis. For example, the Commission may review market activity through the study of SBS transactions, which may help assess the effectiveness of the Commission's regulation of the SBS market. Such reviews can inform the Commission on the need for modifications to these and other rules as the market evolves.

The Commission recognizes that these benefits may be reduced to the extent that SBS market data is fragmented across multiple SDRs. Fragmentation of SBS market data may impose costs on any user of this data associated with consolidating, reconciling, and aggregating that data. As discussed above, the Commission believes that the form and manner with which an SDR provides the data to the Commission should not only permit the Commission to accurately analyze the data maintained by a single SDR, but also allow the Commission to aggregate and analyze data received from multiple SDRs.[1290]

SDRs also may create economic benefits for market participants by providing non-core services, such as facilitating the reporting of life cycle events, asset servicing, or payment calculations. These activities may be less costly to perform when SBS market data is centrally located and accessible.

The Commission solicited comment on the benefits related to Rules 13n-4(b)(2) – (7), 13n-5, and 13n-6.[1291] The Commission specifically requested comment on whether any additional benefits would accrue if the Commission imposed further, more specific technology-related requirements.[1292] The Commission received no comments on the estimated benefits of the rules discussed in this section.

b. Costs

The Commission anticipates that the primary costs to SDRs, particularly those that are not already registered with the CFTC or operating as trade repositories, are from the rules described in this section that relate to the cost of developing and maintaining systems to collect and store SBS transaction data. SDRs also need to develop, maintain, and enforce compliance with related policies and procedures and provide applicable training. Changes in the cost of developing and maintaining such systems are likely to be passed on to market participants; similarly, compliance costs incurred by SDRs are likely to be passed on to market participants.

As discussed above, the Commission estimates that the cost associated with creating SDR

1290 See Section VI.D.2.c.ii of this release discussing direct electronic access.

1291 See Proposing Release, 75 FR at 77357, supra note 2.

1292 See Proposing Release, 75 FR at 77357, supra note 2.

information technology systems will be 42,000 hours and $10,000,000 for each SDR and the average ongoing paperwork cost will be 25,200 hours and $6,000,000 per year for each SDR.[1293] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $210,810,000[1294] and the aggregate ongoing estimated dollar cost per year will be $126,486,000[1295] to comply with the rules. Based on Commission staff's conversations with industry representatives, the Commission estimates that the cost imposed on SDRs to provide direct electronic access to the Commission should be minimal as SDRs likely have or will establish comparable electronic access mechanisms to enable market participants to provide data to SDRs and review transactions to which such participants are parties.[1296]

1293 See Section VII.D.2 of this release discussing the costs of creating SDR information technology systems.

1294 The Commission estimates that an SDR will assign these responsibilities to an Attorney, a Compliance Manager, a Programmer Analyst, and a Senior Business Analyst. Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of a Compliance Manager is $283 per hour, a Programmer Analyst is $220 per hour, and a Senior Business Analyst is $251 per hour. Thus, the total initial estimated dollar cost will be $21,081,000 per SDR and $210,810,000 for all SDRs, calculated as follows: ($10,000,000 for information technology systems + (Attorney at $380 per hour for 7,000 hours) + (Compliance Manager at $283 per hour for 8,000 hours) + (Programmer Analyst at $220 per hour for 20,000 hours) + (Senior Business Analyst at $251 per hour for 7,000 hours)) x 10 registrants = $210,810,000.

1295 The Commission estimates that an SDR will assign these responsibilities to an Attorney, a Compliance Manager, a Programmer Analyst, and a Senior Business Analyst. Thus, the total ongoing estimated dollar cost will be $12,648,600 per SDR and $126,486,000 for all SDRs, calculated as follows: ($6,000,000 for information technology systems + (Attorney at $380 per hour for 4,200 hours) + (Compliance Manager at $283 per hour for 4,800 hours) + (Programmer Analyst at $220 per hour for 12,000 hours) + (Senior Business Analyst at $251 per hour for 4,200 hours)) x 10 registrants = $126,486,000.

1296 See SDR Proposing Release, 75 FR at 77357, supra note 2. Indeed, the Commission notes that one commenter, which currently operates a trade repository, stated that "[t]he Commission's proposed required practices are generally consistent with those of" the commenter's trade repository. DTCC 2, supra note 19.

As discussed above, the Commission estimates that the average initial paperwork cost associated with developing policies and procedures necessary to comply with Rules 13n-5(b)(1), (2), (3), and (5) and 13n-6 will be 1,050 hours and $100,000 for each SDR and the average ongoing paperwork cost will be 300 hours per year for each SDR.[1297] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $4,185,300[1298] and the aggregate ongoing estimated dollar cost per year will be $965,400[1299] to comply with the rules.

The Commission believes that existing SDRs may have already developed and implemented information technology systems and related policies and procedures.[1300] Such persons are currently not subject to regulation by the Commission, and therefore, may need to enhance their information technology systems and related policies and procedures to comply with the SDR Rules. Thus, such persons may experience costs in enhancing their information

---

1297 See Section VII.D.2 of this release discussing the costs of developing policies and procedures necessary to comply with Rules 13n-5(b)(1), (2), (3), and (5) and 13n-6.

1298 The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager, an Attorney, a Senior Systems Analyst, and an Operations Specialist. Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of a Senior Systems Analyst is $260 per hour and the cost of an Operation Specialist is $125 per hour. Thus, the total initial estimated dollar cost will be $418,530 per SDR and $4,185,300 for all SDRs, calculated as follows: ($100,000 for outside legal services + (Compliance Manager at $283 per hour for 385 hours) + (Attorney at $380 per hour for 435 hours) + (Senior Systems Analyst at $260 per hour for 115 hours) + (Operations Specialist at $125 per hour for 115 hours)) x 10 registrants = $4,185,300.

1299 The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager and an Attorney. Thus, the total ongoing estimated dollar cost will be $96,540 per SDR and $965,400 for all SDRs, calculated as follows: ((Compliance Manager at $283 per hour for 180 hours) + (Attorney at $380 per hour for 120 hours)) x 10 registrants = $965,400.

1300 Cf. DTCC 2, supra note 19 (stating that "[t]he Commission's proposed required practices are generally consistent with those of" the commenter's trade repository).

technology systems and related policies and procedures to comply with the SDR Rules. Moreover, because the costs discussed above represent the costs of creating information technology systems and related policies and procedures without any existing information technology systems or policies and procedures in place, existing SDRs that already have information technology systems and related policies and procedures may experience initial costs lower than those estimated above. The Commission believes that after such persons bring their technology systems and related policies and procedures into compliance with the SDR Rules, however, the ongoing annual costs for such persons will likely be consistent with the estimates provided above.[1301]

Multiple SDRs may register with the Commission, potentially within the same asset class, with each SDR collecting data from a subset of market participants. While multiple SDRs per asset class will allow for market competition to decide how data is collected, it may hinder market-wide data aggregation due to coordination costs, particularly if market participants adopt incompatible reporting standards and practices. The SDR Rules do not specify a particular reporting format or structure, which may create the possibility that persons reporting to SDRs or other market participants accessing SBS data, will have to accommodate different data standards and develop different systems to accommodate each. This may result in increased costs for reporting persons and users of SBS data.

Furthermore, the costs associated with aggregating data across multiple SDRs by the Commission and other users of such data will increase to the extent that SDRs choose to use different identifying information for transactions, counterparties, and products. Data aggregation

1301 See Section VII.D.2 of this release discussing the costs of Rules 13n-4(b)(2) – (7), 13n-5, and 13n-6.

costs also could accrue to the extent that there is variation in the quality of data maintained across SDRs. Each SDR has discretion over how to implement its policies and procedures in the recording of reportable data, and variations in quality may result. Since aggregated data used for surveillance and risk monitoring requires that the underlying components are provided with the same level of accuracy, variations in the quality of data could be costly if subsequent interpretations of analysis based on the data suffer from issues of integrity. To the extent that market competition among SDRs impacts profit margins and the level of resources devoted to collecting and maintaining transaction data, there is an increased likelihood of variations in the quality of reported data, which could make the aggregation of data across multiple SDRs more difficult.

In the Proposing Release the Commission solicited comment on the costs related to Rules 13n-4(b)(2) – (7), 13n-5, and 13n-6.[1302] The Commission specifically requested comment on the initial and ongoing costs associated with establishing and maintaining the technology systems and related policies and procedures; additional costs to creating an SDR that the Commission should consider; alternatives that the Commission should consider; whether the estimates accurately reflect the cost of storing data in a convenient and usable electronic format for the required retention period; and a description and, to the extent practicable, quantification of the costs associated with any comments that are submitted.[1303] The Commission received no comments on the estimated costs of the rules discussed in this section.

1302 See Proposing Release, 75 FR at 77358, supra note 2.

1303 See Proposing Release, 75 FR at 77358, supra note 2.

c. Alternatives

Commenters suggested that an SDR's duties should include reporting SBS data to a single SDR that would consolidate the data.[1304] Specifically, one commenter recommended that the Commission "designate one SDR as the recipient of the information of the other SDRs to ensure the efficient consolidation of data."[1305] The commenter further stated that the designated SDR would need to have "the organization and governance structure that is consistent with being a financial market utility serving a vital function to the entire marketplace."[1306] The Commission recognizes, as asserted by the commenter, that fragmentation of data among SDRs would "leave to regulators the time consuming, complicated and expensive task of rebuilding complex data aggregation and reporting mechanisms."[1307] If the Commission were to designate one SDR as the data consolidator, however, such an action could be deemed as the Commission's endorsement of one regulated person over another, discourage new market entrants, and interfere with competition, resulting in a perceived government-sponsored monopoly. In addition, such a requirement would likely impose an additional cost on market participants to cover the SDR's cost for acting as the data consolidator. The Commission does not believe that, at this time, the benefits of such a requirement, in terms of saving other SDRs the costs of having to make data available to the Commission and saving the costs of consolidating the data itself, would be

---

1304 See DTCC 1*, supra note 20; Better Markets 1, supra note 19; see also FINRA SBSR, supra note 27 (urging the Commission to mandate the consolidation of disseminated SBS data to the public).

1305 DTCC 1*, supra note 20; see also Better Markets 1, supra note 19 (making similar comments); DTCC 2, supra note 19 ("The role of an aggregating SDR is significant in that it ensures regulators efficient, streamlined access to consolidated data, reducing the strain on limited agency resources.").

1306 DTCC 1*, supra note 20.

1307 DTCC 3, supra note 19.

substantial enough to justify this potential negative effect on competition among SDRs. The Commission, however, may revisit this issue if, for example, there is data fragmentation among SDRs that is creating substantial difficulties for relevant authorities to get a complete and accurate view of the market.

The Commission considered directing, under Rule 13n-4(b)(7), all SDRs to establish automated systems for monitoring, screening, and analyzing SBS data, a position urged by one commenter.[1308] The Commission believes that mandating automated systems for monitoring, screening, and analyzing SBS data at this time would impose an additional cost on SDRs. The Commission believes that it should avoid imposing the cost of automated systems on SDRs until the Commission can better determine what information it needs through such automated systems in addition to the information that it can obtain from SDRs through other rules applicable to SDRs, such as Rule 13n-4(b)(5).

The Commission considered requiring every SDR to maintain transaction data and related identifying information for not less than five years after the applicable SBS expires or ten years after the applicable SBS is executed, whichever is greater, as an alternative to the time period in Rule 13n-5(b)(4) (for not less than five years after the applicable SBS expires). The Commission understands, however, that the alternative time period does not fit current industry practices and therefore would be costly to implement. The five-year period is consistent with the record retention period for other Commission registrants and the statutory requirement for SB SEFs.

[1308] See Better Markets 1, supra note 19. Similarly, another commenter suggested that the Commission "provide additional details on the anticipated requirements in order to better manage the expectations of SDRs and wider market participants concerning their duties in this area." Barnard, supra note 19.

The Commission also considered, as an alternative to Rule 13n-5(b)(4)(i), prescribing a particular data format in which an SDR must maintain transaction data and positions, as suggested by three commenters.[1309] The Commission believes that SDRs should have the flexibility to choose their own data format, based on what works best in practice.[1310] The Commission is also concerned that a format that it mandates would eventually become outdated, necessitating either a rule change to keep pace with technological innovation or a requirement that SDRs use outdated technology. Market participants may incur the increased costs of converting their transaction data to a format that is no longer an industry standard. Although the Commission recognizes that a commonly-mandated format for all SBS data has the potential to facilitate aggregation of data across different SDRs, the Commission believes that not imposing a particular format saves SDRs the costs associated with using and implementing one data format chosen by the Commission. The Commission believes that SDRs, working with market participants, will be in the best position to choose and upgrade formats as needed.[1311] For these reasons, the Commission does not believe that mandating a particular format in which an SDR must maintain transaction data, related identifying information, and positions is, at this time, an appropriate alternative to the flexible approach of Rule 13n-5(b)(4)(i) and the lower compliance costs.

1309 See Better Markets 1, supra note 19; ISDA Temp Rule, supra note 28; Barnard, supra note 19.

1310 See Section VI.E.4.c of this release discussing Rule 13n-5(b)(4).

1311 As discussed above, when an SDR is deciding the format in which it will maintain transaction data and positions, it may want to consider whether it will need to reformat or translate the data to reflect any formats and taxonomies that the Commission may adopt pursuant to Exchange Act Section 13(n)(5)(D) and Rule 13n-4(b)(5). See Section VI.E.4.c of this release.

Finally, the Commission considered, as suggested by one commenter, requiring SDRs to keep records of data indefinitely.[1312] This commenter asserted that there was "no technological or practical reason for limiting the retention period,"[1313] but the Commission believes that given the volume of data and transactions SDRs may handle, prohibiting SDRs from ever eliminating records may result in SDRs retaining a large volume of records for which there may be little or no use. Having to maintain records secure and accessible for an indefinite period of time may impose significant costs to SDRs, particularly as storage and access technology evolves. Because the Commission believes that requiring transaction data to be maintained for not less than five years after the applicable SBS expires is more reasonable, and because that approach is consistent with the record retention period for other Commission registrants and the statutory requirement for SB SEFs, the Commission does not believe that risks and costs that could come with imposing an unlimited time period for retention are justified. Accordingly, the Commission is not adopting the alternative suggested by the commenter.

3. Recordkeeping

Rule 13n-7 requires an SDR to make and keep certain records relating to its business and retain a copy of records made or received by the SDR in the course of its business for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination. The rule also requires an SDR that ceases doing business or ceases to be registered as an SDR to preserve, maintain, and

1312 See Barnard, supra note 19.

1313 Barnard, supra note 19.

make accessible the records required to be collected, maintained, and preserved pursuant to the rule for the remainder of the time period required by Rule 13n-7.[1314]

a. Benefits

Rule 13n-7 is designed to further the Dodd-Frank Act's goals by enhancing the Commission's ability to oversee SDRs, which are critical components of the new regulatory scheme governing SBSs. The rule will assist the Commission in determining whether an SDR is complying with the federal securities laws and the rules and regulations thereunder. In addition, the recordkeeping requirements contained in the rule will permit the Commission to evaluate the financial responsibility and soundness of SDRs.

To the extent that the rule standardizes the business recordkeeping practices of SDRs, the Commission will be better able to perform efficient, targeted inspections and examinations with an increased likelihood of identifying improper conduct. To the extent that standardized recordkeeping requirements will allow the Commission to perform more efficient, targeted inspections and examinations, SDRs may incur less costs in responding to targeted inspections and examinations (as opposed to inspections and examinations that are broader in scope). In addition, both the Commission and SDRs should benefit from standardized recordkeeping requirements to the extent that uniform records will enable the Commission and SDRs to know what records the SDRs are required to maintain.

The Commission solicited comment on the benefits related to Rule 13n-7.[1315] The Commission did not receive any comments on the benefits related to Rule 13n-7.

1314 See Section VI.G of this release discussing Rule 13n-7.

1315 See Proposing Release, 75 FR at 77358, supra note 2.

b. Costs

As discussed above, the Commission estimates that the average initial paperwork cost associated with making, keeping and preserving certain records and developing and maintaining information technology systems to ensure compliance with the recordkeeping requirements will be 346 hours and $1,800 for each SDR and the average ongoing paperwork cost associated with compliance with the recordkeeping requirements will be 279.17 hours per year for each SDR.[1316] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $986,600[1317] and the aggregate ongoing estimated dollar cost per year will be $790,051.10[1318] to comply with Rule 13n-7.

The Commission believes that existing SDRs may already maintain business records as part of their day-to-day operations.[1319] Such persons are currently not subject to regulation by the Commission, and therefore, may need to enhance their maintenance of business records to comply with Rule 13n-7. Thus, such persons may experience costs in enhancing their recordkeeping to comply with Rule 13n-7. Moreover, because the costs discussed above represent the costs of establishing a recordkeeping system without any existing recordkeeping

[1316] See Section VII.D.3 of this release discussing the cost associated with Rule 13n-7.

[1317] The Commission estimates that an SDR will assign these responsibilities primarily to a Compliance Manager as well as a Senior Systems Analyst. Thus, the total initial estimated dollar cost will be $98,660 per SDR and $986,600 for all SDRs, calculated as follows: ($1,800 in information technology costs + (Compliance Manager at $283 per hour for 300 hours) + (Senior Systems Analyst at $260 per hour for 46 hours)) x 10 registrants = $986,600.

[1318] The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager. Thus, the total ongoing estimated dollar cost will be $79,005.11 per SDR and $790,051.10 for all SDRs, calculated as follows: (Compliance Manager at $283 per hour for 279.17 hours) x 10 registrants = $790,051.10.

[1319] Cf. DTCC 2, supra note 19 (stating that "[t]he Commission's proposed required practices are generally consistent with those of" the commenter's trade repository).

system in place, existing SDRs that already have a recordkeeping system may experience initial costs lower than those estimated above. The Commission believes that after such persons bring their recordkeeping into compliance with Rule 13n-7, however, the ongoing annual costs for such persons will likely be consistent with the estimates provided above.

The Commission solicited comment on the costs related to Rule 13n-7.[1320] The Commission specifically requested comment on the initial and ongoing costs associated with establishing and maintaining the recordkeeping systems and related policies and procedures, including whether currently-operating SDRs would incur different recordkeeping costs.[1321] The Commission did not receive any comments on the costs related to Rule 13n-7.

4. Reports

Rule 13n-8 requires SDRs to report promptly to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines necessary or appropriate for the Commission to perform its duties.[1322]

a. Benefits

Title VII establishes a regulatory framework for the OTC derivatives market that depends on the Commission's access to information regarding the current and historical operation of the SBS market to verify compliance with the statute and to provide for effective monitoring for market abuse. In addition, specific provisions of Title VII require routine, targeted monitoring of certain types of events. Access to such information will enable the Commission to oversee the SBS market, which is critical to the continued integrity of the markets, and detect and deter

---

1320 See Proposing Release, 75 FR at 77359, supra note 2.

1321 See Proposing Release, 75 FR at 77359, supra note 2.

1322 See Section VI.H.3 of this release discussing Rule 13n-8.

fraudulent and manipulative activity and other trading abuses in connection with the derivatives markets.

The Commission solicited comment on the benefits related to the requirements contained in Rule 13n-8.[1323] The Commission did not receive any comments on the benefits related to the requirements contained in Rule 13n-8.

b. Costs

The Commission anticipates that the initial costs to SDRs from Rule 13n-8 relate to the cost of developing and maintaining systems to respond to requests for information and provide the necessary reports and establishing related policies and procedures. In addition, SDRs will need to employ staff to maintain systems to provide the requested reports as well as to respond to ad hoc requests that cannot be satisfied using such systems.[1324] The information technology costs associated with this rule are included in the overall information technology costs discussed above.[1325]

Furthermore, as discussed above, the Commission estimates that SDRs will incur costs in compiling the information requested under Rule 13n-8, which the Commission estimates will be limited to information already compiled under the SDR Rules, and thus, require only 1 hour per

1323 See Proposing Release, 75 FR at 77359, supra note 2.

1324 The Commission understands that some existing trade repositories may have dedicated personnel who are responsible for responding to and providing ad hoc report requests from relevant authorities, including the Commission. To the extent that Rule 13n-8 may result in more automated reporting, the need for such dedicated personnel resources may be reduced.

1325 See Section VIII.D.2.b of this release.

response to compile and transmit per year for each SDR.[1326] Assuming a maximum of ten SDRs, the aggregate ongoing estimated dollar cost per year will be $2,510 to comply with the rule.[1327]

The Commission solicited comment on the costs related to Rule 13n-8.[1328] The Commission specifically requested comment on the initial and ongoing costs associated with establishing and providing the reports required under the rule.[1329] The Commission did not receive any comments on the estimated costs related to this rule.

5. Disclosure

Under Rule 13n-10, before accepting any SBS data from a market participant or upon the market participant's request, each SDR is required to furnish to the market participant a disclosure document containing certain information that reasonably will enable the market participant to identify and evaluate the risks and costs associated with using the services of the SDR.[1330] An SDR's disclosure document must include the SDR's criteria for providing others with access to services offered and data maintained by the SDR; the SDR's criteria for those seeking to connect to or link with the SDR; a description of the SDR's policies and procedures regarding safeguarding of data and operational reliability; a description of the SDR's policies and procedures reasonably designed to protect the privacy of SBS transaction information; a description of the SDR's policies and procedures regarding its non-commercial and/or

---

1326 See Section VII.D.4 of this release discussing the cost associated with Rule 13n-8.

1327 The Commission estimates that an SDR will assign these responsibilities to a Senior Business Analyst. Thus, the total ongoing estimated dollar cost will be $251 per SDR and $2,510 for all SDRs, calculated as follows: (Senior Business Analyst at $251 per hour for 1 hour) x 10 registrants = $2,510.

1328 See Proposing Release, 75 FR at 77360, supra note 2.

1329 See Proposing Release, 75 FR at 77360, supra note 2.

1330 See Section VI.I.2 of this release discussing Rule 13n-10.

commercial use of SBS transaction information; a description of the SDR's dispute resolution procedures; a description of all of the SDR's services, including ancillary services; the SDR's updated schedule of dues, unbundled prices, rates, or other fees for all of its services, and any discounts or rebates; and a description of the SDR's governance arrangements.

a. Benefits

Rule 13n-10 is intended to provide certain information regarding an SDR to market participants prior to their entering into an agreement to provide SBS data to the SDR. To the extent that multiple SDRs accept data for the same asset class, the disclosure document should enable market participants to make an informed choice among SDRs. The disclosure document is necessary to inform market participants of the nature of the services provided by the SDR and the conditions and obligations that are imposed on market participants in order for them to report data to the SDR.

Rule 13n-10 is designed to further the Dodd-Frank Act's goals by providing market participants with applicable information regarding the operation of SDRs. The Commission solicited comment,[1331] but did not receive any comments on the benefits related to this rule.

b. Costs

The Commission anticipates that the primary costs to SDRs to complying with Rule 13n-10 relate to the development and dissemination of the disclosure document. As discussed above, the Commission estimates that the average initial paperwork cost associated with developing the disclosure document and related policies and procedures will be 97.5 hours and $9,400 for each SDR and the average ongoing paperwork cost will be 1 hour per year for each SDR.[1332]

1331 See Proposing Release, 75 FR at 77360, supra note 2.

1332 See Section VII.D.5 of this release discussing the cost associated with Rule 13n-10.

Assuming a maximum of ten registered SDRs, the aggregate one-time estimated dollar cost will be \$263,162.5[1333] and the aggregate ongoing estimated dollar cost per year will be \$1,735[1334] to comply with the rule.

The Commission solicited comment on the costs related to Rule 13n-10.[1335] The Commission specifically requested comment on the initial and ongoing costs associated with drafting, reviewing, and providing the required disclosure document.[1336] The Commission did not receive any comments on the costs related to this rule.

6. Chief Compliance Officer and Compliance Functions; Compliance Reports and Financial Reports

Rules 13n-4(b)(11) and 13n-11 and the amendments to Regulation S-T require each registered SDR to identify on Form SDR a person who has been designated by the board to serve as CCO whose duties include preparing an annual compliance report, which will be filed with the Commission along with a financial report.[1337] The CCO's appointment must be approved by the majority of the SDR's board and the CCO must report directly to the senior officer of the SDR or the board. As discussed above, the CCO is responsible for, among other things, establishing

1333 The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager and a Compliance Clerk. Thus, the total initial estimated dollar cost will be \$26,316.25 per SDR and \$263,162.5 for all SDRs, calculated as follows: (\$4,400 for external legal costs + \$5,000 for external compliance consulting costs + (Compliance Manager at \$283 per hour for 48.75 hours) + (Compliance Clerk at \$64 per hour for 48.75 hours)) x 10 registrants = \$263,162.5.

1334 The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager and a Compliance Clerk. Thus, the total ongoing estimated dollar cost will be \$173.5 per SDR and \$1,735 for all SDRs, calculated as follows: ((Compliance Manager at \$283 per hour for 0.5 hours) + (Compliance Clerk at \$64 per hour for 0.5 hours)) x 10 registrants = \$1,735.

1335 See Proposing Release, 75 FR at 77360, supra note 2.

1336 See Proposing Release, 75 FR at 77360, supra note 2.

1337 See Section VI.J of this release discussing Rule 13n-11.

procedures for the remediation of noncompliance issues identified by the CCO and establishing and following appropriate procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues.[1338] No officer, director, or employee may directly or indirectly take any action to coerce, manipulate, mislead, or fraudulently influence the CCO in the performance of his or her duties under Rule 13n-11.[1339] The CCO is required to prepare and sign an annual compliance report and submit the report to the board for its review prior to the report being filed with the Commission. Finally, the annual compliance report must be filed along with the financial report, which must be prepared pursuant to Rule 13n-11(f) and filed with the Commission. The compliance report must be filed in a tagged data format in accordance with the instructions contained in the EDGAR Filer Manual,[1340] and the financial report must be provided as an official filing in accordance with the EDGAR Filer Manual and include, as part of the official filing, an Interactive Data Financial Report filed in accordance with Rule 407 of Regulation S-T.[1341]

a. Benefits

Rules 13n-4(b)(11) and 13n-11 are designed to help ensure that SDRs comply with the federal securities laws, including Exchange Act Section 13(n), and the rules and regulations thereunder. Although existing SDRs may already have CCOs in place, the rules will make this standard practice for all registered SDRs, as mandated by the Exchange Act.[1342]

1338 See Section VI.J.3.c of this release discussing the duties of CCOs.

1339 See Section VI.J.6 of this release discussing the prohibition of undue influence on CCOs.

1340 See 17 CFR 232.301.

1341 See Section VI.J.5.c of this release discussing Rule 407 of Regulation S-T.

1342 See Exchange Act Section 13(n)(6), 15 USC 78m(n)(6).

As a result of Rules 13n-4(b)(11) and 13n-11, the Commission believes that data and other records maintained by each SDR are more likely to be accurate and reliable. The Commission believes that strong internal compliance programs lower the likelihood of non-compliance with securities rules and regulations.[1343] The designation of a CCO, who will, among other things, take reasonable steps to ensure compliance with the rules and regulations thereunder relating to SBSs, including each rule prescribed by the Commission, will help ensure that each SDR complies with the Exchange Act and the rules and regulations thereunder. The prohibition against an SDR's officer, director, or employee from directly or indirectly taking any action to coerce, manipulate, mislead, or fraudulently influence its CCO increases the probability that the CCO's actions are based on accurate information and the compliance reports reflect the independent judgment of the CCO; however, these prohibitions may also cause some SDRs or SDR officers, directors and employees to implement additional controls in their interactions with the CCO, potentially limiting the scope or timeliness of the information made available to the CCO. To the extent that compliance with the Exchange Act and the rules and regulations thereunder results in more accurate data being maintained, publicly disseminated, and reported to the Commission, the ability of the Commission to rely on the SBS data will improve. Finally, strong compliance programs may help reduce non-compliance with the SDR Rules by SDRs; non-compliance with, for example, the privacy requirements (Rules 13n-4(b)(8) and 13n-9), have the potential of negatively impacting confidence in the overall SBS market.

1343 See DTCC 2, supra note 19 (agreeing with the Commission that "a robust internal compliance function plays an important role in facilitating an SDR's monitoring of, and compliance with, the requirements of the Exchange Act (and rules thereunder) applicable to SDRs").

Rule 13n-11(f) requires SDRs to file annual audited financial reports to the Commission. This rule will enhance the Commission's oversight of SDRs by facilitating the Commission's evaluation of an SDR's financial and managerial resources. The financial reports will also assist the Commission in assessing potential conflicts of interests of a financial nature arising from the operation of an SDR.

Benefits will also accrue from requiring SDRs to file financial reports in an interactive data format. This requirement will enable the Commission and, to the extent that the data is made public, the public to analyze the reported information more quickly, more accurately, and at a lower cost. In particular, the tagged data will make it easier to aggregate information collected from SDRs and compare across SDRs and over time, which the Commission believes is important to perform its regulatory mandate and legal responsibilities.

The Commission solicited comment on the benefits related to Rules 13n-4(b)(11) and 13n-11.[1344] The Commission specifically requested comment on the benefits that would accrue from designating a CCO who would be responsible for preparing and signing an annual compliance report and reporting annually to the board and on the benefits associated with the financial reports.[1345] The Commission did not receive any comments on the benefits of these rules.

b. Costs

The establishment of a designated CCO and compliance with the accompanying responsibilities of a CCO will impose certain costs on SDRs. As discussed above, the Commission estimates that the average initial paperwork cost associated with establishing

1344 See Proposing Release, 75 FR at 77361, supra note 2.

1345 See Proposing Release, 75 FR at 77361, supra note 2.

procedures for the remediation of noncompliance issues identified by the CCO and establishing and following appropriate procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues will be 420 hours and $40,000 for each SDR and the average ongoing paperwork cost will be 120 hours for each SDR.[1346] In addition, each SDR is required to retain a CCO in order to comply with the SDR Rules, at an annual cost of $873,000.[1347] Assuming a maximum of ten SDRs, the aggregate initial estimated dollar cost per year will be $1,802,000[1348] and the aggregate ongoing estimated dollar cost per year will be $9,130,800[1349] to comply with the rules.

As discussed above, the Commission estimates that the average ongoing paperwork cost associated with preparing and submitting annual compliance reports to the SDR's board pursuant to Rules 13n-11(d) and (e) will be 5 hours.[1350] Assuming a maximum of ten SDRs, the aggregate ongoing estimated dollar cost per year will be $16,700 to comply with the rules.[1351]

1346 See Section VII.D.6 of this release discussing the costs of Rule 13n-11.

1347 Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of a CCO is $485 per hour. Thus, the total ongoing estimated dollar cost will be $873,000 per SDR and $8,730,000 for all SDRs, calculated as follows: (CCO at $485 per hour for 1800 hours) x 10 registrants = $8,730,000.

1348 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total initial estimated dollar cost will be $180,280 per SDR and $1,802,800 for all SDRs, calculated as follows: ($40,000 for outside legal services + (Compliance Attorney at $334 per hour for 420 hours)) x 10 registrants = $1,802,800.

1349 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total ongoing estimated dollar cost will be $913,080 per SDR and $9,130,800 for all SDRs, calculated as follows: ($873,000 for a CCO + (Compliance Attorney at $334 per hour for 120 hours)) x 10 registrants = $9,130,800.

1350 See Section VII.D.6 of this release discussing the costs of Rule 13n-11.

1351 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total ongoing estimated dollar cost will be $1,670 per SDR and

As discussed above, the Commission estimates that the average ongoing paperwork cost associated with preparing and filing financial reports pursuant to Rule 13n-11(f) and (g) and the amendments to Regulation S-T will be 500 hours and $500,000 for each registered SDR.[1352] Assuming a maximum of ten SDRs, the aggregate ongoing estimated dollar cost per year will be $5,990,000 to comply with the rules.[1353]

As discussed above, the Commission estimates that the average ongoing paperwork cost associated with filing annual compliance and financial reports with the Commission in a tagged data format pursuant to Rules 13n-11(d), (f), and (g), and in accordance with the amendments to Regulation S-T, will be 54 hours and $22,772 for each registered SDR.[1354] Assuming a maximum of ten SDRs, the aggregate ongoing estimated dollar cost per year will be $368,120 to comply with the rules.[1355]

$16,700 for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 5 hours) x 10 registrants = $16,700.

1352 See Section VII.D.6 of this release discussing the costs of Rule 13n-11.

1353 The Commission estimates that an SDR will assign these responsibilities to a Senior Accountant. Data from SIFMA's Management & Professional Earnings in the Securities Industry 2013, modified by Commission staff to account for an 1800-hour work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead, suggest that the cost of a Senior Accountant is $198 per hour. Thus, the total ongoing estimated dollar cost will be $599,000 per SDR and $5,990,000 for all SDRs, calculated as follows: ($500,000 for independent public accounting services + (Senior Accountant at $198 per hour for 500 hours)) x 10 registrants = $5,990,000.

1354 See Section VII.D.6 of this release discussing the costs of Rule 13n-11.

1355 The Commission estimates that an SDR will assign these responsibilities to a Senior Systems Analyst. Thus, the total ongoing estimated dollar cost will be $36,812 per SDR and $368,120 for all SDRs, calculated as follows: ($22,772 for information technology services + (Senior Systems Analyst at $260 per hour for 54 hours)) x 10 registrants = $368,120.

The Commission believes that existing SDRs may already maintain compliance programs that are overseen by a CCO or an individual who effectively serves as a CCO.[1356] In addition, CCOs may prepare compliance reports presented to senior management and/or the SDRs' boards as part of their current business practice. SDRs are currently not subject to regulation by the Commission, and therefore, may need to enhance their compliance programs and compliance reports to comply with Rules 13n-4(b)(11) and 13n-11. Thus, SDRs may experience costs in enhancing their compliance programs and compliance reports to comply with Rules 13n-4(b)(11) and 13n-11. Moreover, because the costs discussed above represent the costs of complying with Rules 13n-4(b)(11) and 13n-11 without any existing compliance programs in place that are overseen by a CCO or an individual who effectively serves as a CCO, existing SDRs that already maintain such compliance programs may experience initial costs lower than those estimated above. However, even if an SDR has an existing compliance program overseen by a CCO, it is possible that officers, directors, and employees concerned about the prohibition in Rule 13n-11(h) (prohibiting officers, directors, and employees of an SDR from directly or indirectly taking any action to coerce, manipulate, mislead, or fraudulently influence the CCO) may want expanded liability insurance coverage. In response, an SDR may seek to acquire additional insurance coverage. The Commission acknowledges that it is possible, therefore, that Rule 13n-11(h) may result in liability insurance rates that are above what they would have been in the absence of the rule. The Commission is unable to estimate these costs given that it lacks specific

1356 Cf. DTCC 2, supra note 19 (stating that it "has an established compliance infrastructure for its businesses . . . which includes processes for establishing and implementing required compliance policies and procedures and overseeing adherence to those procedures and a mechanism for reporting, tracking, remediating and closing compliance issues whether self-identified or identified through internal or external examinations" and that "[t]he Commission's proposed required practices are generally consistent with those of" the commenter's trade repository) information regarding current insurance costs for SDRs, the amount of the demand that there will be for increased coverage, and thereby the potential increases associated with the rule. The Commission believes that after SDRs bring their compliance programs and compliance reports into compliance with Rules 13n-4(b)(11) and 13n-11, however, the ongoing annual costs for SDRs will likely be consistent with the estimates provided above.

The Commission solicited comment on these estimates related to Rules 13n-4(b)(11) and 13n-11.[1357] The Commission specifically requested comment on the initial and ongoing costs associated with designating a CCO and the costs associated with any personnel who may be necessary to support the CCO and create the annual compliance and financial reports.[1358] One commenter stated that it is difficult to assess the incremental costs to SDRs of implementing Rule 13n-11 regarding designation of a CCO and that even with an established compliance infrastructure, the commenter believed that "it is likely that the new requirements of Rule 13n-11 will entail additional costs, potentially including additional personnel and systems" and the "compliance responsibilities in an SDR will evolve (and likely increase) as the scope of transactions reported to that SDR increase, which may also result in additional incremental costs."[1359] The Commission agrees with the commenter's views; nevertheless the Commission has attempted to quantify the costs of compliance with the rule, as discussed above.

c. Alternatives

The Commission considered requiring that the compensation, appointment, and termination of a CCO be approved by a majority of independent board members of an SDR, a

1357 See Proposing Release, 75 FR at 77362, supra note 2.

1358 See Proposing Release, 75 FR at 77362, supra note 2.

1359 DTCC 2, supra note 19.

position urged by two commenters.[1360] As discussed above, the Commission believes that the rules that are intended to minimize an SDR's potential and existing conflicts of interest and to help ensure that SDRs meet core principles are sufficient at this time. Consequently, the Commission does not believe that requiring SDRs to have independent directors, and imposing the associated costs on SDRs, is warranted at this time. For these same reasons, the Commission does not believe that approval of a CCO's compensation, appointment, and termination by a majority of independent directors will provide substantially greater benefits than having a majority of the board approve compensation, appointment, and termination.

Similarly, the Commission considered requiring CCOs to report directly to independent directors, as suggested by one commenter.[1361] For the reasons stated above, the Commission does not believe that requiring independent directors, and therefore requiring CCOs to report to independent directors, is warranted at this time.[1362]

The Commission considered whether it should prohibit a CCO from being the general counsel of an SDR or a member of the SDR's legal department, as suggested by two commenters.[1363] The Commission is not adopting this prohibition because, as discussed above, the Commission believes that any potential conflicts of interest can be adequately addressed by

---

[1360] See Better Markets 1, supra note 19 (recommending that the CCO's compensation and termination be approved by independent board members of an SDR). Similarly, one commenter suggested that only public independent directors or directors with an "Independent Perspective," and not the full board, have "the authority and sole responsibility to appoint or remove the CCO, or to materially change its duties and responsibilities." Barnard, supra note 19.

[1361] See Better Markets 1, supra note 19.

[1362] See Section VI.D.3.b.iii of this release discussing prescriptive governance requirements and limitations.

[1363] See Better Markets 1, supra note 19; Barnard, supra note 19.

the SDR's conflicts of interest policies and procedures, which are required to be established under Rule 13n-4(c)(3).[1364] The Commission believes that SDRs should have flexibility in appointing their CCOs and that these conflicts of interest provisions are sufficient to mitigate any risks from not adopting the prohibition suggested by the commenter. Further, the Commission believes that imposing such a prohibition could impose additional costs on SDRs by requiring that they employ two different persons as general counsel and CCO, each position with its own compensation.

The Commission considered reducing the amount of information required on the annual compliance report. For example, the Commission could have not required any discussion of recommendations for material changes to policies and procedures, as suggested by one commenter.[1365] The Commission believes, however, that the benefits of obtaining all of the information required by Rule 13n-11(d) justify any burdens associated with providing such information on the annual compliance report. The information will assist Commission staff in assessing an SDR's compliance with the federal securities laws and the rules and regulations thereunder, and information about recommendations for material changes to an SDR's policies and procedures may alert the staff to material compliance issues at an SDR. Moreover, only recommendations for material changes will have to be described, which will impose a lesser burden than requiring disclosure of every recommendation.

The Commission considered, as suggested by one commenter,[1366] harmonizing with the CFTC's approach[1367] and not adopting Rule 13n-11(f)(2)'s requirement that each financial report

[1364] See Section VI.J.1.c of this release discussing Rule 13n-11(a).

[1365] See DTCC 2, supra note 19.

[1366] See DTCC 5, supra note 19.

be audited in accordance with the PCAOB's standards by a registered public accounting firm that is qualified and independent. Although the Commission understands that SDRs will incur costs in hiring and retaining qualified public accounting firms, the Commission believes that obtaining audited financial reports from SDRs is important given the significant role the Commission believes that SDRs will play in the SBS market. The Commission believes that SDRs will provide transparency to, and increase the efficiency of, the SBS market. The Commission believes that SDRs will also be an important source of market data for regulators. Given the critical nature of their role in the marketplace, the Commission believes that it is important to obtain audited financial reports from SDRs in order to determine whether or not they have sufficient financial resources to continue operations. While the Commission recognizes that Rule 13n-11(f)(2) may, in some cases, be more costly than the CFTC's requirement of quarterly unaudited financial statements, the Commission believes that the additional burden, where it exists, is justified by the benefits of requiring audited financial reports.

Finally, the Commission considered one commenter's suggestion that there should be "[c]ompetency standards to ensure that CCOs have the background and skills necessary to fulfill their responsibilities."[1368] The Commission believes that, as discussed above, such standards do not need to be adopted by rule, but rather that SDRs should have flexibility in determining what standards their CCOs should meet.[1369] The Commission believes that SDRs are in the best position to judge the competency of their CCOs and select them accordingly.

1367 See CFTC Rule 49.25, 17 CFR 49.25.

1368 See Better Markets 3, supra note 19.

1369 See Section VI.J.1.c of this release discussing Rule 13n-11(a).

7. Other Policies and Procedures Relating to an SDR's Business

The SDR Rules require SDRs to develop and maintain various policies and procedures.[1370] Rules 13n-4(b)(8) and 13n-9 require each SDR to comply with certain requirements pertaining to the privacy of SBS transaction information.[1371] Rule 13n-4(c) requires each SDR to comply with certain core principles pertaining to market access to services and data, governance arrangements, and conflicts of interest, including developing policies and procedures related to these core principles.[1372] Rule 13n-5(b)(6) requires SDRs to establish procedures and provide facilities to effectively resolve disputes.[1373]

a. Benefits

The privacy requirements set forth in Rules 13n-4(b)(8) and 13n-9 are intended to safeguard transaction information provided to SDRs by market participants. These privacy requirements make it less likely that the transaction information that market participants are required to report will expose their trading strategies or unhedged positions, which could subject them to predatory trading.

Rule 13n-4(c)(1), which relates to market access to services and data, requires that SDRs impose fair, reasonable, and consistently applied fees and maintain objective access and participation criteria. This rule is designed to help ensure that SDRs do not engage in anticompetitive behavior and assuming that the SDR Rules promote competition among SDRs, that the cost of an SDR's core and ancillary services that are passed on to market participants are

[1370] See Section VIII.D.2 of this release discussing the cost and benefits associated with the policies and procedures that SDRs must develop and maintain with respect to their information systems.

[1371] See Section VI.I.1 of this release discussing Rule 13n-9.

[1372] See Section VI.D.3 of this release discussing Rule 13n-4(c).

[1373] See Section VI.E.6 of this release discussing Rule 13n-5(b)(6).

competitive. Furthermore, the Commission believes that by requiring each SDR to permit market participants to access specific services offered by the SDR separately, Rule 13n-4(c)(1)(ii) may promote efficiency to the extent that it saves market participants from having to purchase ancillary services that they do not want and will not use as a condition to using an SDR's data collection and maintenance services. Rule 13n-4(c)(1)(ii) may also promote efficiency and lower costs to the extent that it promotes competition among SDRs and among SDRs and third party service providers offering ancillary services.

The governance requirements in Rule 13n-4(c)(2) are designed to reduce conflicts of interest in the management of SDRs. In addition, by requiring fair representation of market participants on the board with the opportunity to participate in the process for nominating directors and the right to petition for alternative candidates, the rule will help reduce the likelihood that an incumbent market participant will exert undue influence on the board.

While the above requirements are designed to prevent and constrain potential conflicts of interest, Rule 13n-4(c)(3) directly addresses conflicts of interest through targeted policies and procedures and an obligation to establish a process for resolving conflicts of interest. This rule will help mitigate the possibility that SDRs' business practices and internal structures might disadvantage a particular group of market participants.

The requirement in Rule 13n-5(b)(6) is designed to help ensure that SDRs maintain accurate records relating to SBSs.[1374] In addition to helping to ensure the accuracy of data

[1374] See Exchange Act Section 13(n)(5)(B), 15 U.S.C. 78m(n)(5)(B) (requiring an SDR to "[c]onfirm, as prescribed in Rule 13n-5, with both counterparties to the [SBS] the accuracy of the data that was submitted"); Exchange Act Section 13(n)(5)(C), 15 U.S.C. 78m(n)(5)(C) (requiring SDRs to maintain SBS data).

maintained by SDRs, the requirement will provide a facility through which market participants could correct inaccuracies in SBS data regarding transactions to which they are a party.

Collectively, the rules described in this section will help ensure that SDRs operate consistently with the objectives set forth in the Exchange Act by providing fair, open, and not unreasonably discriminatory access to market participants without taking advantage of the SDRs' access to transaction data that market participants are required to report to the SDRs.

The Commission solicited comment on the benefits related to Rules 13n-4(c), 13n-5(b)(6), 13n-4(b)(8), and 13n-9.[1375] Other than one commenter noting that Rule 13n-5(b)(6) is a key step in the effort to have accurate data at SDRs,[1376] the Commission did not receive any comments on the estimated benefits of these rules.

b. Costs

The Commission anticipates that the costs to SDRs from Rules 13n-4(c), 13n-5(b)(6), 13n-4(b)(8), and 13n-9 will derive primarily from the costs of establishing, maintaining, and enforcing the required policies and procedures.

The governance requirements in Rule 13n-4(c)(2) could impose costs resulting from educating senior management and each director about SBS trading and reporting and the new regulatory structure that will govern SBSs, which could slow management or board processes at least initially. Existing SDRs may experience lower costs, however, to the extent that they have already educated senior management and each director about SBS trading and reporting and the new regulatory structure that will govern SBSs.

1375 See Proposing Release, 75 FR at 77363, supra note 2.

1376 MFA 1, supra note 19; see also MFA SBSR, supra note 27.

The requirement in Rule 13n-5(b)(6) will also impose costs on SDRs because SDRs are required to establish procedures and provide facilities through which market participants can challenge the accuracy of the transaction data and positions recorded in the SDRs.

Rule 13n-4(c)(1)(ii) may also impose costs on SDRs by requiring SDRs to offer services separately. If SDRs would otherwise bundle their ancillary services with their data collection and maintenance services, or vice versa, then the requirement that they offer services separately may impose costs on SDRs. These costs include the cost of building the infrastructure to offer services separately, the potential losses of economies of scope in providing bundled services, and lost revenue from fees for services that market participants would otherwise be required to purchase. Similarly, the rule may impose costs on third party service providers that would be prevented from bundling their services with the services of an SDR.

As discussed above, the Commission estimates that the average initial paperwork cost associated with Rule 13n-4(c)(1) will be 367.5 hours and $35,000 and the average ongoing cost will be 105 hours per year for each SDR.[1377] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $1,465,550[1378] and the aggregate ongoing estimated dollar cost per year will be $320,890[1379] to comply with the rule.

1377 See Section VII.D.7 of this release discussing costs of Rules 13n-4(c)(1)(iii) and (iv).

1378 The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager, an Attorney, a Senior Systems Analyst, and an Operations Specialist. Thus, the total initial estimated dollar cost will be $146,555 per SDR and $1,465,550 for all SDRs, calculated as follows: ($35,000 for outside legal services + (Compliance Manager at $283 per hour for 135 hours) + (Attorney at $380 per hour for 152.5 hours) + (Senior Systems Analyst at $260 per hour for 40 hours) + (Operations Specialist at $125 per hour for 40 hours)) x 10 registrants = $1,465,550.

1379 The Commission estimates that an SDR will assign these responsibilities to a Compliance Manager, an Attorney, a Senior Systems Analyst, and an Operations Specialist. Thus, the total ongoing estimated dollar cost will be $32,089 per SDR and $320,890 for all SDRs, As discussed above, the Commission estimates that the average initial paperwork cost associated with Rule 13n-4(c)(2) will be 210 hours and $20,000 for each SDR and the average ongoing paperwork cost will be 60 hours per year for each SDR.[1380] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $901,400[1381] and the aggregate ongoing estimated dollar cost per year will be $200,400[1382] to comply with the rule.

As discussed above, the Commission estimates that the average initial paperwork cost associated with Rule 13n-4(c)(3) will be 420 hours and $40,000 for each SDR and the average ongoing paperwork cost will be 120 hours per year for each SDR.[1383] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $1,802,800[1384] and the aggregate ongoing estimated dollar cost per year will be $400,800[1385] to comply with the rule.

---

calculated as follows: ((Compliance Manager at $283 per hour for 38 hours) + (Attorney at $380 per hour for 45 hours) + (Senior Systems Analyst at $260 per hour for 11 hours) + (Operations Specialist at $125 per hour for 11 hours)) x 10 registrants = $320,890.

1380 See Section VII.D.7 of this release discussing costs of Rule 13n-4(c)(2)(iv).

1381 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total initial estimated dollar cost will be $90,140 per SDR and $901,400 for all SDRs, calculated as follows: ($20,000 for outside legal services + (Compliance Attorney at $334 per hour for 210 hours)) x 10 registrants = $901,400.

1382 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total ongoing estimated dollar cost will be $20,040 per SDR and $200,400 for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 60 hours) x 10 registrants = $200,400.

1383 See Section VII.D.7 of this release discussing costs of Rule 13n-4(c)(3).

1384 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total initial estimated dollar cost will be $180,280 per SDR and $1,802,800 for all SDRs, calculated as follows: ($40,000 for outside legal services + (Compliance Attorney at $334 per hour for 420 hours)) x 10 registrants = $1,802,800.

1385 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total ongoing estimated dollar cost will be $40,080 per SDR and $400,800 for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 120 hours) x 10 registrants = $400,800.

As discussed above, the Commission estimates that the average initial paperwork cost associated with Rule 13n-5(b)(6) will be 315 hours and $30,000 for each SDR and the average ongoing paperwork cost will be 90 hours per year for each SDR.[1386] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $1,352,100[1387] and the aggregate ongoing estimated dollar cost per year will be $300,600[1388] to comply with the rule.

As discussed above, the Commission estimates that the average initial paperwork cost associated with Rules 13n-4(b)(8) and 13n-9 will be 630 hours and $60,000 for each SDR and the average ongoing paperwork cost will be 180 hours per year for each SDR.[1389] Assuming a maximum of ten SDRs, the aggregate one-time estimated dollar cost will be $2,704,200[1390] and the aggregate ongoing estimated dollar cost per year will be $601,200[1391] to comply with the rules.

The Commission solicited comment on the costs related to Rules 13n-4(c), 13n-5(b)(6),

---

1386 See Section VII.D.7 of this release discussing costs of Rule 13n-5(b)(6).

1387 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total initial estimated dollar cost will be $135,210 per SDR and $1,352,100 for all SDRs, calculated as follows: ($30,000 for outside legal services + (Compliance Attorney at $334 per hour for 315 hours)) x 10 registrants = $1,352,100.

1388 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total initial estimated dollar cost will be $30,060 per SDR and $300,600 for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 90 hours) x 10 registrants = $300,600.

1389 See Section VII.D.7 of this release discussing costs of Rules 13n-4(b)(8), 13n-9(b)(1), and 13n-9(b)(2).

1390 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total initial estimated dollar cost will be $270,420 per SDR and $2,704,200 for all SDRs, calculated as follows: ($60,000 for outside legal services + (Compliance Attorney at $334 per hour for 630 hours)) x 10 registrants = $2,704,200.

1391 The Commission estimates that an SDR will assign these responsibilities to a Compliance Attorney. Thus, the total ongoing estimated dollar cost will be $60,120 per SDR and $601,200 for all SDRs, calculated as follows: (Compliance Attorney at $334 per hour for 180 hours) x 10 registrants = $601,200.

13n-4(b)(8), and 13n-9.[1392] The Commission specifically requested comment on the initial and ongoing costs associated with establishing and maintaining the policies and procedures required by the rules, particularly as the costs apply to persons currently operating as SDRs.[1393] One commenter believed that an interpretation of Rule 13n-4(c)(1)(i) that prohibits the use of the "dealer pays" or "sell-side pays" model "would have the unintended consequence of significantly increasing the costs for buy-side participants . . . ."[1394] Because, as discussed above, Rule 13n-4(c)(1)(i) is not intended to prohibit an SDR from utilizing any one particular model, including a "dealer pays" or "sell-side pays" model, the Commission does not believe that the rule will necessarily increase costs for buy-side participants, as stated by the commenter.[1395] The Commission further believes that if there is significant demand by buy-side participants with reporting responsibility for a "dealer pays" model, then an SDR is likely to provide such a service.

A commenter to proposed Regulation SBSR suggested that SDRs should not be permitted to charge fees to third parties acting on behalf of counterparties for accepting SBS transaction information, as such fees would increase the cost of using an SB SEF or other third party.[1396] Although the Commission agrees that an SB SEF or other third party could pass along fees charged by SDRs, the Commission does not believe that it is appropriate to determine who an SDR can charge for its services. Rather, the Commission believes that SDRs should have flexibility in determining how and whom to charge for their services, and that any costs

1392 See Proposing Release 75 FR at 77364, supra note 2.

1393 See Proposing Release 75 FR at 77364, supra note 2.

1394 MarkitSERV, supra note 19.

1395 See Section VI.D.3.a.iii(1) of this release discussing Rule 13n-4(c)(1)(i).

1396 Tradeweb SBSR, supra note 27.

associated with such flexibility are justified by the benefits of allowing SDRs to develop sustainable business models in an open, competitive environment.

The Commission believes that existing SDRs may already have in place policies and procedures similar to the policies and procedures required by Rules 13n-4(c), 13n-5(b)(6), 13n-4(b)(8), and 13n-9. Such persons are currently not subject to regulation by the Commission, and therefore, may need to enhance their policies and procedures to comply with Rules 13n-4(c), 13n-5(b)(6), 13n-4(b)(8), and 13n-9. Thus, such persons may experience costs in enhancing their policies and procedures to comply with Rules 13n-4(c), 13n-5(b)(6), 13n-4(b)(8), and 13n-9. Moreover, because the costs discussed above represent the costs of creating policies and procedures without any existing policies and procedures in place, existing SDRs that already have policies and procedures may experience initial costs lower than those estimated above. The Commission believes that after such persons bring their policies and procedures into compliance with Rules 13n-4(c), 13n-5(b)(6), 13n-4(b)(8), and 13n-9, however, the ongoing annual costs for such persons will likely be consistent with the estimates provided above.

c. Alternatives

As suggested by a commenter, the Commission considered (1) adding safeguards specifically related to confidentiality of trading positions and (2) requiring SDRs to adopt policies and procedures to limit access to confidential information to directors, officers, employees, agents, and representatives who need to know such information in order to fulfill their regulatory obligations.[1397] As discussed above, the Commission believes that Rules 13n-4(b)(8) and 13n-9, as adopted, are broad enough to cover information about trading positions, so

[1397] See MFA 1, supra note 19.

no specific requirement regarding confidentiality of trading positions is necessary.[1398] The Commission also believes that the rules are broad enough to allow SDRs, if they choose, to adopt policies and procedures to limit access to confidential information to directors, officers, employees, agents, and representatives who need to know such information in order to fulfill their regulatory obligations. The Commission believes that the adoption of the specific policies that were suggested by the commenter would prevent an SDR's management from finding the most cost effective method of meeting the privacy requirements in these rules.

The Commission considered, as an alternative to Rules 13n-4(c)(2) and (3), adopting, as suggested by two commenters, prescriptive rules relating to governance (e.g., ownership or voting limitations, independent directors, nominating committees composed of a majority of independent directors).[1399] As discussed above, the Commission believes that rules that are intended to minimize an SDR's potential and existing conflicts of interest and to help ensure that an SDR meets its core principles are sufficient and that prescriptive governance requirements are not warranted at this time.[1400] If the Commission were to impose additional governance requirements and limitations, SDRs would likely incur costs in addition to the costs already imposed by the SDR Rules, which do not seem to be warranted at this time. For these reasons, the Commission is not adopting the alternative to Rules 13n-4(c)(2) and (3) of more prescriptive governance arrangements.

The Commission considered whether the resolution of disputes should be left primarily to

---

1398 See Sections VI.D.2.c and VI.I.1.c of this release discussing Rules 13n-4(b)(8) and 13n-9, respectively.

1399 See Barnard, supra note 19; Better Markets 1, supra note 19; see also Better Markets 2, supra note 19.

1400 See Sections VI.D.3.b.iii and VI.D.3.c.iii of this release discussing Rules 13n-4(c)(2) and 13n-4(c)(3), respectively.

the SBS counterparties and third party service providers, which one commenter suggested.[1401] The Commission believes that the benefits of a dispute resolution procedure in Rule 13n-5(b)(6) justify the possible issues cited by the commenter, such as duplication of services already provided by third party service providers. As discussed above, there may be instances where a third party service provider cannot resolve a dispute, and, in those situations, the cost of dispute resolution through the SDR will be necessary to maintain the accuracy and quality of the SBS data.[1402] The value of the SBS data depends on its accuracy and quality.

The Commission also considered prohibiting the commercial use of SBS data by SDRs unless the parties to the SBS provide written consent. Three commenters, including two commenters to proposed Regulation SBSR, also suggested that SDRs be prohibited from using SBS data for commercial purposes.[1403] As discussed above, the Commission believes that limiting the commercial use of SBS data would potentially limit the business models that SDRs may develop, thereby reducing competition.[1404] Decreased competition may result in higher costs for SDR services. Limiting the commercial use of SBS data would reduce SDRs' potential revenue streams, reducing the profitability and stability of SDRs. Further, as discussed above, such a limitation may decrease transparency by preventing an SDR from releasing to the public anonymized, aggregated reports of SBS data.[1405] Finally, the Commission believes that the SDR Rules, including Rules 13n-4(c)(3) and 13n-9, are sufficient to reduce conflicts of interest and

1401 See DTCC 2, supra note 19.

1402 See Section VI.E.6.c of this release discussing Rule 13n-5(b)(6).

1403 See MFA 1, supra note 19; DTCC SBSR, supra note 27; WMBAA SBSR, supra note 27.

1404 See Section VI.D.3.c.iii of this release discussing Rule 13n-4(c)(3).

1405 See Section VI.D.3.c.iii of this release discussing Rule 13n-4(c)(3).

protect the privacy of SBS data. For these reasons, the Commission is not adopting the alternative of limiting the commercial use of SBS data.

8. Total Costs

Based on the analyses described above, the Commission estimates that Rules 13n-1 through 13n-11 and Form SDR will impose on registered SDRs an aggregate total initial one-time estimated dollar cost of $227,075,600.50.[1406] The Commission further estimates that Rules 13n-1 through 13n-11 and Form SDR will impose on registered SDRs a total ongoing annualized aggregate dollar cost of $145,630,646.10.[1407] Finally, the Commission estimates that certain non-U.S. persons may incur an aggregate total initial one-time estimated dollar cost of approximately $7,600[1408] in determining the availability of the SDR Exemption (i.e., Rule 13n-12).

1406 The Commission derived its estimate from the following: ($801,688 ($793,840 + $3,840 + $4,008) for Registration Requirements and Form SDR) + ($214,995,300 ($210,810,000 + $4,185,300) for SDR Duties, Data Collection and Maintenance, and Direct Electronic Access) + ($986,600 for Recordkeeping) + ($263,162.50 for Disclosure) + ($1,802,800 for Chief Compliance Officer and Compliance Functions) + ($8,226,050 ($1,465,550 + $901,400 + $1,802,800 + $1,352,100 + 2,704,200) for Other Policies and Procedures Relating to an SDR's Business) = $227,075,600.50.

1407 The Commission derived its estimate from the following: ($55,440 for Registration Requirements and Form SDR) + ($127,451,400 ($126,486,000 + $965,400) for SDR Duties, Data Collection and Maintenance, and Direct Electronic Access) + ($790,051.10 for Recordkeeping) + ($2,510 for Reports) + ($1,735 for Disclosure) + ($15,505,620 ($9,130,800 + $16,700 + $5,990,000 + $368,120) for Chief Compliance Officer and Compliance Functions) + ($1,823,890 ($320,890 + $200,400 + $400,800 + $300,600 + $601,200) for Other Policies and Procedures Relating to an SDR's Business) = $145,630,646.10.

1408 The Commission derived its estimate from the following: ($380 for one hour of an Attorney's time per person) x (20 non-U.S. persons that perform the functions of an SDR using in-house legal counsel to determine whether an applicable MOU or arrangement is in place).

Existing SDRs may experience costs lower than these estimates. Such persons may have in place existing technology systems, policies and procedures, personnel, and compliance regimes that they can use to comply with the SDR Rules. Because the estimates discussed above represent the costs of compliance starting from scratch, an existing SDR will most likely experience costs lower than these estimates.

Similarly, if such a person is registered with the CFTC as a swap data repository, the person's costs of complying with the SDR Rules will most likely be lower than the estimates provided above because the person may be able to use its existing policies, procedures, and operations to comply with the SDR Rules. As stated above, the Commission believes that on the whole, the SDR Rules are largely consistent with the rules adopted by the CFTC for swap data repositories.[1409] Consequently, a person registered with the CFTC as a swap data repository may be able to use its existing policies, procedures, and operations to comply with the SDR Rules and may not need to create policies, procedures, and operations from scratch.

IX. Regulatory Flexibility Act Certification

The Regulatory Flexibility Act ("RFA")[1410] requires Federal agencies, in promulgating rules, to consider the impact of those rules on small entities. Section 603(a)[1411] of the Administrative Procedure Act,[1412] as amended by the RFA, generally requires the Commission to undertake a regulatory flexibility analysis of all proposed rules, or proposed rule amendments, to

---

1409 See Section I.D of this release.

1410 5 U.S.C. 601 et seq.

1411 5 U.S.C. 603(a).

1412 5 U.S.C. 551 et seq.

determine the impact of such rulemaking on "small entities."[1413] Section 605(b) of the RFA states that this requirement does not apply to any final rule that an agency certifies will not "have a significant economic impact on a substantial number of small entities."[1414]

For purposes of Commission rulemaking in connection with the RFA, a small entity includes: (1) an issuer or a person, other than an investment company, that, on the last day of its most recent fiscal year, had total assets of $5 million or less and (2) a broker-dealer with total capital (net worth plus subordinated liabilities) of less than $500,000 on the date in the prior fiscal year as of which its audited financial statements were prepared pursuant to Exchange Act Rule 17a-5(d), or, if not required to file such statements, a broker-dealer with total capital (net worth plus subordinated liabilities) of less than $500,000 on the last business day of the preceding fiscal year (or in the time that it has been in business, if shorter); and is not affiliated with any person (other than a natural person) that is not a small entity.[1415]

In the Proposing Release, the Commission stated that it did not believe that any persons that would register as SDRs would be considered small entities.[1416] The Commission stated that it believed that most, if not all, SDRs would be part of large business entities with assets in excess of $5 million and total capital in excess of $500,000. As a result, the Commission

1413 Although Section 601(b) of the RFA defines the term "small entity," the statute permits agencies to formulate their own definitions. The Commission has adopted definitions for the term small entity for the purposes of Commission rulemaking in accordance with the RFA. Those definitions, as relevant to this rulemaking, are set forth in Rule 0-10, 17 CFR 240.0-10. See Final Definitions of "Small Business" and "Small Organization" for Purposes of the Regulatory Flexibility Act, Exchange Act Release No. 18451 (Jan. 28, 1982), 47 FR 5215 (Feb. 4, 1982).

1414 See 5 U.S.C. 605(b).

1415 17 CFR 240.0-10.

1416 Proposing Release, 75 FR at 77365, supra note 2.

certified that the proposed rules would not have a significant impact on a substantial number of small entities and requested comments on this certification.

The Commission did not receive any comments that specifically addressed whether Rules 13n-1 through 13n-12 and Form SDR would have a significant economic impact on small entities. Therefore, the Commission continues to believe that Rules 13n-1 through 13n-12 and Form SDR will not have a significant economic impact on a substantial number of small entities.[1417] Accordingly, the Commission hereby certifies that, pursuant to 5 U.S.C. 605(b), Rules 13n-1 through 13n-12, Form SDR will not have a significant economic impact on a substantial number of small entities.

X. Statutory Authority

Pursuant to the Exchange Act, and particularly Sections 13(n) and 23(a) thereof, 15 U.S.C. 78m(n) and 78w(a), the Commission is adopting new Rules 13n-1 to 13n-12, which govern SDRs and a new form for registration as an SDR. Additionally, the Commission is adopting new Rule 407 and amendments to Regulation S-T under authority set forth in Exchange Act Section 23(a).[1418] The Commission is also adopting amendments to Exchange Act Rule 24b-2 under authority set forth in Exchange Act Section 23(a).[1419] All the new rules and amendments are adopted under Chapter II of Title 17 of the Code of Federal Regulations in the manner set forth below.

List of Subjects in 17 CFR Part 232

Reporting and recordkeeping requirements.

1417 See Proposing Release, 75 FR at 77365, supra note 2.

1418 15 U.S.C. 78w(a).

1419 15 U.S.C. 78w(a).

List of Subjects in 17 CFR Parts 240 and 249

Confidential business information, Reporting and recordkeeping requirements, Securities.

In accordance with the foregoing, Title 17, Chapter II of the Code of Federal Regulations is amended as follows:

PART 232—REGULATION S-T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS

3. The authority citation for Part 232 continues to read, in part, as follows:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s(a), 77z-3, 77sss(a), 78c(b), 78l, 78m, 78n, 78o(d), 78w(a), 78ll, 80a-6(c), 80a-8, 80a-29, 80a-30, 80a-37, and 7201 et seq.; and 18 U.S.C. 1350.

* * * * *

4. Section 232.11 is amended by adding the definitions of "Interactive Data Financial Report" and "Related Official Financial Report Filing" in alphabetical order.

The amendment reads as follows:

§ 232.11 Definition of terms used in part 232.

* * * * *

Interactive Data Financial Report. The term Interactive Data Financial Report means the machine-readable computer code that presents information in eXtensible Business Reporting Language (XBRL) electronic format pursuant to § 232.407.

* * * * *

Related Official Financial Report Filing. The term Related Official Financial Report Filing means the ASCII or HTML format part of the official filing with which an Interactive Data Financial Report appears as an exhibit.

* * * * *

5. Section 232.101 is amended by:

a. Removing, in paragraph (a)(1)(xv), the word "and" after the semicolon;

b. In paragraph (a)(1)(xvi), replacing the period with a semicolon and adding the word "and" after the semicolon;

c. Adding paragraph (a)(1)(xvii); and

d. Revising paragraph (c) and adding paragraph (d).

The amendment reads as follows:

§ 232.101 Mandated electronic submissions and exceptions.

(a) * * *

(1) * * *

(xvii) Documents filed with the Commission pursuant to Section 13(n) of the Exchange Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder, including Form SDR (17 CFR 249.1500) and reports filed pursuant to Rules 13n-11(d) and (f) under the Exchange Act.

* * * * *

(c) <u>Documents to be submitted in paper only</u>. Except as otherwise specified in paragraph (d) of this section, the following shall not be submitted in electronic format:

(1)(i) Confidential treatment requests and the information with respect to which confidential treatment is requested;

* * * * *

(d) All documents, including any information with respect to which confidential treatment is requested, filed pursuant to Section 13(n) of the Exchange Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder shall be filed in electronic format.

6. Section 232.305 is amended by revising paragraph (b).

The amendment reads as follows:

§ 232.305 Number of characters per line; tabular and columnar information.

* * * * *

(b) Paragraph (a) of this section does not apply to HTML documents, Interactive Data Files (§ 232.11), Interactive Data Financial Reports (§ 232.11) or XBRL-Related Documents (§ 232.11).

7. Section 232.407 is added to read as follows:

§ 232.407 Interactive data financial report filings.

Section 407 of Regulation S-T (§ 232.407) applies to electronic filers that file Interactive Data Financial Reports (§ 232.11) as required by Rule 13n-11(f)(5) (§ 240.13n-11(f)(5) of this chapter). Section 407 imposes content, format, and filing requirements for Interactive Data Financial Reports, but does not change the substantive content requirements for the financial and other disclosures in the Related Official Financial Report Filing (§ 232.11). Rule 13n-11(f)(5) specifies the circumstances under which an Interactive Data Financial Report must be filed as an exhibit.

(a) Content, format, and filing requirements – General. Interactive Data Financial Reports must:

(1) Comply with the content, format, and filing requirements of this section;

(2) Be filed only by an electronic filer that is required to file an Interactive Data Financial Report pursuant to Rule 13n-11(f)(5) as an exhibit to a filing; and

(3) Be filed in accordance with the EDGAR Filer Manual and Rules 13n-11(f)(5) and (g) (§§ 240.13n-11(f)(5) and (g)).

(b) Content – categories of information presented. An Interactive Data Financial Report must consist of only a complete set of information for all periods required to be presented in the corresponding data in the Related Official Financial Report Filing, no more and no less, for the following categories, as applicable:

(1) The complete set of the electronic filer's financial statements (which includes the face of the financial statements and all footnotes); and

(2) All schedules set forth in Article 12 of Regulation S-X (§§ 210.12-01 - 210.12-29 of this chapter) related to the electronic filer's financial statements.

Note to paragraph (b): It is not permissible for the Interactive Data Financial Report to present only partial face financial statements, such as by excluding comparative financial information for prior periods.

(c) Format – Generally. An Interactive Data Financial Report must comply with the following requirements, except as modified by paragraph (d) or (e) of this section, as applicable, with respect to the corresponding data in the Related Official Financial Report Filing consisting of footnotes to financial statements or financial statement schedules as set forth in Article 12 of Regulation S-X:

(1) Data elements and labels.

(i) Element accuracy. Each data element (i.e., all text, line item names, monetary values, percentages, numbers, dates and other labels) contained in the Interactive Data Financial Report reflects the same information in the corresponding data in the Related Official Financial Report Filing;

(ii) Element specificity. No data element contained in the corresponding data in the Related Official Financial Report Filing is changed, deleted or summarized in the Interactive Data Financial Report;

(iii) Standard and special labels and elements. Each data element contained in the Interactive Data Financial Report is matched with an appropriate tag from the most recent version of the standard list of tags specified by the EDGAR Filer Manual. A tag is appropriate only when its standard definition, standard label, and other attributes as and to the extent identified in the list of tags match the information to be tagged, except that:

(A) Labels. An electronic filer must create and use a new special label to modify a tag's existing standard label when that tag is an appropriate tag in all other respects (i.e., in order to use a tag from the standard list of tags only its label needs to be changed); and

(B) Elements. An electronic filer must create and use a new special element if and only if an appropriate tag does not exist in the standard list of tags for reasons other than or in addition to an inappropriate standard label; and

(2) Additional mark-up related content. The Interactive Data Financial Report contains any additional mark-up related content (e.g., the eXtensible Business Reporting Language tags themselves, identification of the core XML documents used and other technology-related content) not found in the corresponding data in the Related Official Financial Report Filing that is necessary to comply with the EDGAR Filer Manual requirements.

(d) Format – Footnotes - Generally. The part of the Interactive Data Financial Report for which the corresponding data in the Related Official Financial Report Filing consists of footnotes to financial statements must comply with the requirements of paragraphs (c)(1) and (c)(2) of this section, as modified by this paragraph (d). Each complete footnote must be block-text tagged.

(e) Format – Schedules - Generally. The part of the Interactive Data Financial Report for which the corresponding data in the Related Official Financial Report Filing consists of financial statement schedules as set forth in Article 12 of Regulation S-X must comply with the requirements of paragraphs (c)(1) and (c)(2) of this section, as modified by this paragraph (e). Each complete schedule must be block-text tagged.

PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

8. The general authority citation for Part 240 is revised to read as follows:

Authority: 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z-2, 77z-3, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78c-3, 78c-5, 78d, 78e, 78f, 78g, 78i, 78j, 78j-1, 78k, 78k-1, 78l, 78m, 78n, 78n-1, 78o, 78o-4, 78o-10, 78p, 78q, 78q-1, 78s, 78u-5, 78w, 78x, 78ll, 78mm, 80a-20, 80a-23, 80a-29, 80a-37, 80b-3, 80b-4, 80b-11, 7201 et seq., and 8302; 7 U.S.C. 2(c)(2)(E); 12 U.S.C. 5221(e)(3); 18 U.S.C. 1350; and Pub. L. 111-203, 939A, 124 Stat. 1376 (2010), unless otherwise noted.

* * * * *

9. Sections 240.13n-1 through 240-13n-12 are added to read as follows:

Sec.

240.13n-1 Registration of security-based swap data repository.

240.13n-2 Withdrawal from registration; revocation and cancellation.

240.13n-3 Registration of successor to registered security-based swap data repository.

240.13n-4 Duties and core principles of security-based swap data repository.

240.13n-5 Data collection and maintenance.

240.13n-6 Automated systems.

240.13n-7 Recordkeeping of security-based swap data repository.

240.13n-8 Reports to be provided to the Commission.

240.13n-9 Privacy requirements of security-based swap data repository.

240.13n-10 Disclosure requirements of security-based swap data repository.

240.13n-11 Chief compliance officer of security-based swap data repository; compliance reports and financial reports.

240.13n-12 Exemption from requirements governing security-based swap data repositories for certain non-U.S. persons.

§ 240.13n-1 Registration of security-based swap data repository.

(a) Definitions. For purposes of this section –

(1) Non-resident security-based swap data repository means:

(i) In the case of an individual, one who resides in or has his principal place of business in any place not in the United States;

(ii) In the case of a corporation, one incorporated in or having its principal place of business in any place not in the United States; or

(iii) In the case of a partnership or other unincorporated organization or association, one having its principal place of business in any place not in the United States.

(2) Tag (including the term tagged) has the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11).

(b) An application for the registration of a security-based swap data repository and all amendments thereto shall be filed electronically in a tagged data format on Form SDR (17 CFR 249.1500) with the Commission in accordance with the instructions contained therein. As part of the application process, each security-based swap data repository shall provide additional information to any representative of the Commission upon request.

(c) Within 90 days of the date of the publication of notice of the filing of such application (or within such longer period as to which the applicant consents), the Commission shall –

(1) By order grant registration; or

(2) Institute proceedings to determine whether registration should be granted or denied.

Such proceedings shall include notice of the issues under consideration and opportunity for hearing on the record and shall be concluded within 180 days of the date of the publication of notice of the filing of the application for registration under paragraph (b) of this section. At the conclusion of such proceedings, the Commission, by order, shall grant or deny such registration. The Commission may extend the time for conclusion of such proceedings for up to 90 days if it finds good cause for such extension and publishes its reasons for so finding or for such longer period as to which the applicant consents.

(3) The Commission shall grant the registration of a security-based swap data repository if the Commission finds that such security-based swap data repository is so organized, and has the capacity, to be able to assure the prompt, accurate, and reliable performance of its functions as a security-based swap data repository, comply with any applicable provision of the federal securities laws and the rules and regulations thereunder, and carry out its functions in a manner consistent with the purposes of Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder. The Commission shall deny the registration of a security-based swap data repository if it does not make any such finding.

(d) If any information reported in items 1 through 17, 26, and 48 of Form SDR (17 CFR 249.1500) or in any amendment thereto is or becomes inaccurate for any reason, whether before or after the registration has been granted, the security-based swap data repository shall promptly file an amendment on Form SDR updating such information. In addition, the security-based swap data repository shall annually file an amendment on Form SDR within 60 days after the end of each fiscal year of such security-based swap data repository.

(e) Each security-based swap data repository shall designate and authorize on Form SDR an agent in the United States, other than a Commission member, official, or employee, who shall accept any notice or service of process, pleadings, or other documents in any action or proceedings brought against the security-based swap data repository to enforce the federal securities laws and the rules and regulations thereunder.

(f) Any non-resident security-based swap data repository applying for registration pursuant to this section shall:

(i) Certify on Form SDR that the security-based swap data repository can, as a matter of law, and will provide the Commission with prompt access to the books and records of such security-based swap data repository and can, as a matter of law, and will submit to onsite inspection and examination by the Commission, and

(ii) Provide an opinion of counsel that the security-based swap data repository can, as a matter of law, provide the Commission with prompt access to the books and records of such security-based swap data repository and can, as a matter of law, submit to onsite inspection and examination by the Commission.

(g) An application for registration or any amendment thereto that is filed pursuant to this section shall be considered a "report" filed with the Commission for purposes of Sections 18(a) and 32(a) of the Act (15 U.S.C. 78r(a) and 78ff(a)) and the rules and regulations thereunder and other applicable provisions of the United States Code and the rules and regulations thereunder.

§ 240.13n-2 Withdrawal from registration; revocation and cancellation.

(a) Definitions. For purposes of this section –

(1) Tag (including the term tagged) has the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11).

(b) A registered security-based swap data repository may withdraw from registration by filing a withdrawal from registration on Form SDR (17 CFR 249.1500) electronically in a tagged data format. The security-based swap data repository shall designate on Form SDR a person to serve as the custodian of the security-based swap data repository's books and records. When filing a withdrawal from registration on Form SDR, a security-based swap data repository shall update any inaccurate information.

(c) A withdrawal from registration filed by a security-based swap data repository shall become effective for all matters (except as provided in this paragraph (c)) on the 60th day after the filing thereof with the Commission, within such longer period of time as to which such security-based swap data repository consents or which the Commission, by order, may determine as necessary or appropriate in the public interest or for the protection of investors, or within such shorter period of time as the Commission may determine.

(d) A withdrawal from registration that is filed pursuant to this section shall be considered a "report" filed with the Commission for purposes of Sections 18(a) and 32(a) of the Act (15 U.S.C. 78r(a) and 78ff(a)) and the rules and regulations thereunder and other applicable provisions of the United States Code and the rules and regulations thereunder.

(e) If the Commission finds, on the record after notice and opportunity for hearing, that any registered security-based swap data repository has obtained its registration by making any false and misleading statements with respect to any material fact or has violated or failed to comply with any provision of the federal securities laws and the rules and regulations thereunder, the Commission, by order, may revoke the registration. Pending final determination of whether any registration shall be revoked, the Commission, by order, may suspend such registration, if such suspension appears to the Commission, after notice and opportunity for hearing on the record, to be necessary or appropriate in the public interest or for the protection of investors.

(f) If the Commission finds that a registered security-based swap data repository is no longer in existence or has ceased to do business in the capacity specified in its application for registration, the Commission, by order, may cancel the registration.

§ 240.13n-3 Registration of successor to registered security-based swap data repository.

(a) In the event that a security-based swap data repository succeeds to and continues the business of a security-based swap data repository registered pursuant to Section 13(n) of the Act (15 U.S.C. 78m(n)), the registration of the predecessor shall be deemed to remain effective as the registration of the successor if, within 30 days after such succession, the successor files an application for registration on Form SDR (17 CFR 249.1500), and the predecessor files a withdrawal from registration on Form SDR; provided, however, that the registration of the predecessor security-based swap data repository shall cease to be effective 90 days after the publication of notice of the filing of the application for registration on Form SDR filed by the successor security-based swap data repository.

(b) Notwithstanding paragraph (a) of this section, if a security-based swap data repository succeeds to and continues the business of a registered predecessor security-based swap data repository, and the succession is based solely on a change in the predecessor's date or state of incorporation, form of organization, or composition of a partnership, the successor may, within 30 days after the succession, amend the registration of the predecessor security-based swap data repository on Form SDR to reflect these changes. This amendment shall be deemed an application for registration filed by the predecessor and adopted by the successor.

§ 240.13n-4 Duties and core principles of security-based swap data repository.

(a) Definitions. For purposes of this section –

(1) Affiliate of a security-based swap data repository means a person that, directly or

indirectly, controls, is controlled by, or is under common control with the security-based swap data repository.

(2) Board means the board of directors of the security-based swap data repository or a body performing a function similar to the board of directors of the security-based swap data repository.

(3) Control (including the terms controlled by and under common control with) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise. A person is presumed to control another person if the person:

(i) Is a director, general partner, or officer exercising executive responsibility (or having similar status or functions);

(ii) Directly or indirectly has the right to vote 25 percent or more of a class of voting securities or has the power to sell or direct the sale of 25 percent or more of a class of voting securities; or

(iii) In the case of a partnership, has the right to receive, upon dissolution, or has contributed, 25 percent or more of the capital.

(4) Director means any member of the board.

(5) Direct electronic access means access, which shall be in a form and manner acceptable to the Commission, to data stored by a security-based swap data repository in an electronic format and updated at the same time as the security-based swap data repository's data is updated so as to provide the Commission or any of its designees with the ability to query or analyze the data in the same manner that the security-based swap data repository can query or analyze the data.

(6) Market participant means any person participating in the security-based swap market, including, but not limited to, security-based swap dealers, major security-based swap participants, and any other counterparties to a security-based swap transaction.

(7) Nonaffiliated third party of a security-based swap data repository means any person except:

(i) The security-based swap data repository;

(ii) Any affiliate of the security-based swap data repository; or

(iii) A person employed by a security-based swap data repository and any entity that is not the security-based swap data repository's affiliate (and "nonaffiliated third party" includes such entity that jointly employs the person).

(8) Person associated with a security-based swap data repository means:

(i) Any partner, officer, or director of such security-based swap data repository (or any person occupying a similar status or performing similar functions);

(ii) Any person directly or indirectly controlling, controlled by, or under common control with such security-based swap data repository; or

(iii) Any employee of such security-based swap data repository.

(b) Duties. To be registered, and maintain registration, as a security-based swap data repository, a security-based swap data repository shall:

(1) Subject itself to inspection and examination by any representative of the Commission;

(2) Accept data as prescribed in Regulation SBSR for each security-based swap;

(3) Confirm, as prescribed in Rule 13n-5, with both counterparties to the security-based swap the accuracy of the data that was submitted;

(4) Maintain, as prescribed in Rule 13n-5, the data described in Regulation SBSR in such

form, in such manner, and for such period as provided therein and in the Act and the rules and regulations thereunder;

(5) Provide direct electronic access to the Commission (or any designee of the Commission, including another registered entity);

(6) Provide the information described in Regulation SBSR in such form and at such frequency as prescribed in Regulation SBSR to comply with the public reporting requirements set forth in Section 13(m) of the Act (15 U.S.C. 78m(m)) and the rules and regulations thereunder;

(7) At such time and in such manner as may be directed by the Commission, establish automated systems for monitoring, screening, and analyzing security-based swap data;

(8) Maintain the privacy of any and all security-based swap transaction information that the security-based swap data repository receives from a security-based swap dealer, counterparty, or any registered entity as prescribed in Rule 13n-9; and

(9) [Reserved]

(10) [Reserved]

(11) Designate an individual to serve as a chief compliance officer.

(c) Compliance with core principles. A security-based swap data repository shall comply with the core principles as described in this paragraph.

(1) Market Access to Services and Data. Unless necessary or appropriate to achieve the purposes of the Act and the rules and regulations thereunder, the security-based swap data repository shall not adopt any policies or procedures or take any action that results in an unreasonable restraint of trade or impose any material anticompetitive burden on the trading, clearing, or reporting of transactions. To comply with this core principle, each security-based

swap data repository shall:

(i) Ensure that any dues, fees, or other charges imposed by, and any discounts or rebates offered by, a security-based swap data repository are fair and reasonable and not unreasonably discriminatory. Such dues, fees, other charges, discounts, or rebates shall be applied consistently across all similarly-situated users of such security-based swap data repository's services, including, but not limited to, market participants, market infrastructures (including central counterparties), venues from which data can be submitted to the security-based swap data repository (including exchanges, security-based swap execution facilities, electronic trading venues, and matching and confirmation platforms), and third party service providers;

(ii) Permit market participants to access specific services offered by the security-based swap data repository separately;

(iii) Establish, monitor on an ongoing basis, and enforce clearly stated objective criteria that would permit fair, open, and not unreasonably discriminatory access to services offered and data maintained by the security-based swap data repository as well as fair, open, and not unreasonably discriminatory participation by market participants, market infrastructures, venues from which data can be submitted to the security-based swap data repository, and third party service providers that seek to connect to or link with the security-based swap data repository; and

(iv) Establish, maintain, and enforce written policies and procedures reasonably designed to review any prohibition or limitation of any person with respect to access to services offered, directly or indirectly, or data maintained by the security-based swap data repository and to grant such person access to such services or data if such person has been discriminated against unfairly.

(2) Governance arrangements. Each security-based swap data repository shall establish

governance arrangements that are transparent to fulfill public interest requirements under the Act and the rules and regulations thereunder; to carry out functions consistent with the Act, the rules and regulations thereunder, and the purposes of the Act; and to support the objectives of the Federal Government, owners, and participants. To comply with this core principle, each security-based swap data repository shall:

(i) Establish governance arrangements that are well defined and include a clear organizational structure with effective internal controls;

(ii) Establish governance arrangements that provide for fair representation of market participants;

(iii) Provide representatives of market participants, including end-users, with the opportunity to participate in the process for nominating directors and with the right to petition for alternative candidates; and

(iv) Establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the security-based swap data repository's senior management and each member of the board or committee that has the authority to act on behalf of the board possess requisite skills and expertise to fulfill their responsibilities in the management and governance of the security-based swap data repository, have a clear understanding of their responsibilities, and exercise sound judgment about the security-based swap data repository's affairs.

(3) Conflicts of interest. Each security-based swap data repository shall establish and enforce written policies and procedures reasonably designed to minimize conflicts of interest in the decision-making process of the security-based swap data repository and establish a process for resolving any such conflicts of interest. Such conflicts of interest include, but are not limited to: conflicts between the commercial interests of a security-based swap data repository and its

statutory and regulatory responsibilities; conflicts in connection with the commercial interests of certain market participants or linked market infrastructures, third party service providers, and others; conflicts between, among, or with persons associated with the security-based swap data repository, market participants, affiliates of the security-based swap data repository, and nonaffiliated third parties; and misuse of confidential information, material, nonpublic information, and/or intellectual property. To comply with this core principle, each security-based swap data repository shall:

(i) Establish, maintain, and enforce written policies and procedures reasonably designed to identify and mitigate potential and existing conflicts of interest in the security-based swap data repository's decision-making process on an ongoing basis;

(ii) With respect to the decision-making process for resolving any conflicts of interest, require the recusal of any person involved in such conflict from such decision-making; and

(iii) Establish, maintain, and enforce reasonable written policies and procedures regarding the security-based swap data repository's non-commercial and/or commercial use of the security-based swap transaction information that it receives from a market participant, any registered entity, or any other person.

Note to § 240.13n-4: This rule is not intended to limit, or restrict, the applicability of other provisions of the federal securities laws, including, but not limited to, Section 13(m) of the Act (15 U.S.C. 78m(m)) and the rules and regulations thereunder.

§ 240.13n-5 Data collection and maintenance.

(a) Definitions. For purposes of this section –

(1) Asset class means those security-based swaps in a particular broad category, including, but not limited to, credit derivatives and equity derivatives.

(2) Position means the gross and net notional amounts of open security-based swap transactions aggregated by one or more attributes, including, but not limited to, the:

(i) Underlying instrument, index, or reference entity;

(ii) Counterparty;

(iii) Asset class;

(iv) Long risk of the underlying instrument, index, or reference entity; and

(v) Short risk of the underlying instrument, index, or reference entity.

(3) Transaction data means all information reported to a security-based swap data repository pursuant to the Act and the rules and regulations thereunder, except for information provided pursuant to Rule 906(b) of Regulation SBSR.

(b) Requirements. Every security-based swap data repository registered with the Commission shall comply with the following data collection and data maintenance standards:

(1) Transaction data.

(i) Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed for the reporting of complete and accurate transaction data to the security-based swap data repository and shall accept all transaction data that is reported in accordance with such policies and procedures.

(ii) If a security-based swap data repository accepts any security-based swap in a particular asset class, the security-based swap data repository shall accept all security-based swaps in that asset class that are reported to it in accordance with its policies and procedures required by paragraph (b)(1)(i) of this section.

(iii) Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the security-based swap data repository is complete and accurate, and clearly identifies the source for each trade side and the pairing method (if any) for each transaction in order to identify the level of quality of the transaction data.

(iv) Every security-based swap data repository shall promptly record the transaction data it receives.

(2) Positions. Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed to calculate positions for all persons with open security-based swaps for which the security-based swap data repository maintains records.

(3) Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed to ensure that the transaction data and positions that it maintains are complete and accurate.

(4) Every security-based swap data repository shall maintain transaction data and related identifying information for not less than five years after the applicable security-based swap expires and historical positions for not less than five years:

(i) In a place and format that is readily accessible and usable to the Commission and other persons with authority to access or view such information; and

(ii) In an electronic format that is non-rewriteable and non-erasable.

(5) Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed to prevent any provision in a valid security-based swap from being invalidated or modified through the procedures or operations of the security-based swap data repository.

(6) Every security-based swap data repository shall establish procedures and provide

facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the security-based swap data repository.

(7) If a security-based swap data repository ceases doing business, or ceases to be registered pursuant to Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder, it must continue to preserve, maintain, and make accessible the transaction data and historical positions required to be collected, maintained, and preserved by this section in the manner required by the Act and the rules and regulations thereunder and for the remainder of the period required by this section.

(8) Every security-based swap data repository shall make and keep current a plan to ensure that the transaction data and positions that are recorded in the security-based swap data repository continue to be maintained in accordance with Rule 13n-5(b)(7), which shall include procedures for transferring the transaction data and positions to the Commission or its designee (including another registered security-based swap data repository).

§ 240.13n-6 Automated systems.

Every security-based swap data repository, with respect to those systems that support or are integrally related to the performance of its activities, shall establish, maintain, and enforce written policies and procedures reasonably designed to ensure that its systems provide adequate levels of capacity, integrity, resiliency, availability, and security.

§ 240.13n-7 Recordkeeping of security-based swap data repository.

(a) Every security-based swap data repository shall make and keep current the following books and records relating to its business:

(1) A record for each office listing, by name or title, each person at that office who,

without delay, can explain the types of records the security-based swap data repository maintains at that office and the information contained in those records; and

(2) A record listing each officer, manager, or person performing similar functions of the security-based swap data repository responsible for establishing policies and procedures that are reasonably designed to ensure compliance with the Act and the rules and regulations thereunder.

(b) Recordkeeping rule for security-based swap data repositories.

(1) Every security-based swap data repository shall keep and preserve at least one copy of all documents, including all documents and policies and procedures required by the Act and the rules and regulations thereunder, correspondence, memoranda, papers, books, notices, accounts, and other such records as shall be made or received by it in the course of its business as such.

(2) Every security-based swap data repository shall keep all such documents for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination.

(3) Every security-based swap data repository shall, upon request of any representative of the Commission, promptly furnish to the possession of such representative copies of any documents required to be kept and preserved by it pursuant to paragraphs (a) and (b) of this section.

(c) If a security-based swap data repository ceases doing business, or ceases to be registered pursuant to Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder, it must continue to preserve, maintain, and make accessible the records and data required to be collected, maintained and preserved by this section in the manner required by this section and for the remainder of the period required by this section.

(d) This section does not apply to transaction data and positions collected and maintained pursuant to Rule 13n-5.

§ 240.13n-8 Reports to be provided to the Commission.

Every security-based swap data repository shall promptly report to the Commission, in a form and manner acceptable to the Commission, such information as the Commission determines to be necessary or appropriate for the Commission to perform the duties of the Commission under the Act and the rules and regulations thereunder.

§ 240.13n-9 Privacy requirements of security-based swap data repository.

(a) Definitions. For purposes of this section –

(1) Affiliate of a security-based swap data repository means a person that, directly or indirectly, controls, is controlled by, or is under common control with the security-based swap data repository.

(2) Control (including the terms controlled by and under common control with) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise. A person is presumed to control another person if the person:

(i) Is a director, general partner, or officer exercising executive responsibility (or having similar status or functions);

(ii) Directly or indirectly has the right to vote 25 percent or more of a class of voting securities or has the power to sell or direct the sale of 25 percent or more of a class of voting securities; or

(iii) In the case of a partnership, has the right to receive, upon dissolution, or has contributed, 25 percent or more of the capital.

(3) Market participant means any person participating in the security-based swap market, including, but not limited to, security-based swap dealers, major security-based swap participants, and any other counterparties to a security-based swap transaction.

(4) Nonaffiliated third party of a security-based swap data repository means any person except:

(i) The security-based swap data repository;

(ii) The security-based swap data repository's affiliate; or

(iii) A person employed by a security-based swap data repository and any entity that is not the security-based swap data repository's affiliate (and nonaffiliated third party includes such entity that jointly employs the person).

(5) Nonpublic personal information means:

(i) Personally identifiable information that is not publicly available information; and

(ii) Any list, description, or other grouping of market participants (and publicly available information pertaining to them) that is derived using personally identifiable information that is not publicly available information.

(6) Personally identifiable information means any information:

(i) A market participant provides to a security-based swap data repository to obtain service from the security-based swap data repository;

(ii) About a market participant resulting from any transaction involving a service between the security-based swap data repository and the market participant; or

(iii) The security-based swap data repository obtains about a market participant in connection with providing a service to that market participant.

(7) Person associated with a security-based swap data repository means:

(i) Any partner, officer, or director of such security-based swap data repository (or any person occupying a similar status or performing similar functions);

(ii) Any person directly or indirectly controlling, controlled by, or under common control with such security-based swap data repository; or

(iii) Any employee of such security-based swap data repository.

(b) Each security-based swap data repository shall:

(1) Establish, maintain, and enforce written policies and procedures reasonably designed to protect the privacy of any and all security-based swap transaction information that the security-based swap data repository receives from a security-based swap dealer, counterparty, or any registered entity. Such policies and procedures shall include, but are not limited to, policies and procedures to protect the privacy of any and all security-based swap transaction information that the security-based swap data repository shares with affiliates and nonaffiliated third parties; and

(2) Establish and maintain safeguards, policies, and procedures reasonably designed to prevent the misappropriation or misuse, directly or indirectly, of:

(i) Any confidential information received by the security-based swap data repository, including, but not limited to, trade data, position data, and any nonpublic personal information about a market participant or any of its customers;

(ii) Material, nonpublic information; and/or

(iii) Intellectual property, such as trading strategies or portfolio positions,

by the security-based swap data repository or any person associated with the security-based swap data repository for their personal benefit or the benefit of others. Such safeguards, policies, and procedures shall address, without limitation:

(A) Limiting access to such confidential information, material, nonpublic information, and intellectual property;

(B) Standards pertaining to the trading by persons associated with the security-based swap data repository for their personal benefit or the benefit of others; and

(C) Adequate oversight to ensure compliance with this subparagraph.

§ 240.13n-10 Disclosure requirements of security-based swap data repository.

(a) Definition. For purposes of this section –

(1) Market participant means any person participating in the over-the-counter derivatives market, including, but not limited to, security-based swap dealers, major security-based swap participants, and any other counterparties to a security-based swap transaction.

(b) Before accepting any security-based swap data from a market participant or upon a market participant's request, a security-based swap data repository shall furnish to the market participant a disclosure document that contains the following written information, which must reasonably enable the market participant to identify and evaluate accurately the risks and costs associated with using the services of the security-based swap data repository:

(1) The security-based swap data repository's criteria for providing others with access to services offered and data maintained by the security-based swap data repository;

(2) The security-based swap data repository's criteria for those seeking to connect to or link with the security-based swap data repository;

(3) A description of the security-based swap data repository's policies and procedures regarding its safeguarding of data and operational reliability, as described in Rule 13n-6;

(4) A description of the security-based swap data repository's policies and procedures reasonably designed to protect the privacy of any and all security-based swap transaction

information that the security-based swap data repository receives from a security-based swap dealer, counterparty, or any registered entity, as described in Rule 13n-9(b)(1);

(5) A description of the security-based swap data repository's policies and procedures regarding its non-commercial and/or commercial use of the security-based swap transaction information that it receives from a market participant, any registered entity, or any other person;

(6) A description of the security-based swap data repository's dispute resolution procedures involving market participants, as described in Rule 13n-5(b)(6);

(7) A description of all the security-based swap data repository's services, including any ancillary services;

(8) The security-based swap data repository's updated schedule of any dues; unbundled prices, rates, or other fees for all of its services, including any ancillary services; any discounts or rebates offered; and the criteria to benefit from such discounts or rebates; and

(9) A description of the security-based swap data repository's governance arrangements.

§ 240.13n-11 Chief compliance officer of security-based swap data repository; compliance reports and financial reports.

(a) In general. Each security-based swap data repository shall identify on Form SDR (17 CFR 249.1500) a person who has been designated by the board to serve as a chief compliance officer of the security-based swap data repository. The compensation, appointment, and removal of the chief compliance officer shall require the approval of a majority of the security-based swap data repository's board.

(b) Definitions. For purposes of this section –

(1) Board means the board of directors of the security-based swap data repository or a body performing a function similar to the board of directors of the security-based swap data

repository.

(2) Director means any member of the board.

(3) EDGAR Filer Manual has the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11).

(4) Interactive Data Financial Report has the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11).

(5) Material change means a change that a chief compliance officer would reasonably need to know in order to oversee compliance of the security-based swap data repository.

(6) Material compliance matter means any compliance matter that the board would reasonably need to know to oversee the compliance of the security-based swap data repository and that involves, without limitation:

(i) A violation of the federal securities laws by the security-based swap data repository, its officers, directors, employees, or agents;

(ii) A violation of the policies and procedures of the security-based swap data repository by the security-based swap data repository, its officers, directors, employees, or agents; or

(iii) A weakness in the design or implementation of the policies and procedures of the security-based swap data repository.

(7) Official filing has the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11).

(8) Senior officer means the chief executive officer or other equivalent officer.

(9) Tag (including the term tagged) has the same meaning as set forth in Rule 11 of Regulation S-T (17 CFR 232.11).

(c) Duties. Each chief compliance officer of a security-based swap data repository shall:

(1) Report directly to the board or to the senior officer of the security-based swap data repository;

(2) Review the compliance of the security-based swap data repository with respect to the requirements and core principles described in Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder;

(3) In consultation with the board or the senior officer of the security-based swap data repository, take reasonable steps to resolve any material conflicts of interest that may arise;

(4) Be responsible for administering each policy and procedure that is required to be established pursuant to Section 13 of the Act (15 U.S.C. 78m) and the rules and regulations thereunder;

(5) Take reasonable steps to ensure compliance with the Act and the rules and regulations thereunder relating to security-based swaps, including each rule prescribed by the Commission under Section 13 of the Act (15 U.S.C. 78m);

(6) Establish procedures for the remediation of noncompliance issues identified by the chief compliance officer through any --

(i) Compliance office review;

(ii) Look-back;

(iii) Internal or external audit finding;

(iv) Self-reported error; or

(v) Validated complaint; and

(7) Establish and follow appropriate procedures for the handling, management response, remediation, retesting, and closing of noncompliance issues.

(d) <u>Compliance reports</u>.

(1) In general. The chief compliance officer shall annually prepare and sign a report that contains a description of the compliance of the security-based swap data repository with respect to the Act and the rules and regulations thereunder and each policy and procedure of the security-based swap data repository (including the code of ethics and conflicts of interest policies of the security-based swap data repository). Each compliance report shall also contain, at a minimum, a description of:

(i) The security-based swap data repository's enforcement of its policies and procedures;

(ii) Any material changes to the policies and procedures since the date of the preceding compliance report;

(iii) Any recommendation for material changes to the policies and procedures as a result of the annual review, the rationale for such recommendation, and whether such policies and procedures were or will be modified by the security-based swap data repository to incorporate such recommendation; and

(iv) Any material compliance matters identified since the date of the preceding compliance report.

(2) Requirements. A financial report of the security-based swap data repository shall be filed with the Commission as described in paragraph (g) of this section and shall accompany a compliance report as described in paragraph (d)(1) of this section. The compliance report shall include a certification by the chief compliance officer that, to the best of his or her knowledge and reasonable belief, and under penalty of law, the compliance report is accurate and complete. The compliance report shall also be filed in a tagged data format in accordance with the instructions contained in the EDGAR Filer Manual, as described in Rule 301 of Regulation S-T (17 CFR 232.301).

(e) The chief compliance officer shall submit the annual compliance report to the board for its review prior to the filing of the report with the Commission.

(f) Financial reports. Each financial report filed with a compliance report shall:

(1) Be a complete set of financial statements of the security-based swap data repository that are prepared in accordance with U.S. generally accepted accounting principles for the most recent two fiscal years of the security-based swap data repository;

(2) Be audited in accordance with the standards of the Public Company Accounting Oversight Board by a registered public accounting firm that is qualified and independent in accordance with Rule 2-01 of Regulation S-X (17 CFR 210.2-01);

(3) Include a report of the registered public accounting firm that complies with paragraphs (a) through (d) of Rule 2-02 of Regulation S-X (17 CFR 210.2-02);

(4) If the security-based swap data repository's financial statements contain consolidated information of a subsidiary of the security-based swap data repository, provide condensed financial information, in a financial statement footnote, as to the financial position, changes in financial position and results of operations of the security-based swap data repository, as of the same dates and for the same periods for which audited consolidated financial statements are required. Such financial information need not be presented in greater detail than is required for condensed statements by Rules 10-01(a)(2), (3), and (4) of Regulation S-X (17 CFR 210.10-01). Detailed footnote disclosure that would normally be included with complete financial statements may be omitted with the exception of disclosures regarding material contingencies, long-term obligations, and guarantees. Descriptions of significant provisions of the security-based swap data repository's long-term obligations, mandatory dividend or redemption requirements of redeemable stocks, and guarantees of the security-based swap data repository shall be provided

along with a five-year schedule of maturities of debt. If the material contingencies, long-term obligations, redeemable stock requirements, and guarantees of the security-based swap data repository have been separately disclosed in the consolidated statements, then they need not be repeated in this schedule; and

(5) Be provided as an official filing in accordance with the EDGAR Filer Manual and include, as part of the official filing, an Interactive Data Financial Report filed in accordance with Rule 407 of Regulation S-T (17 CFR 232.407).

(g) Reports filed pursuant to paragraphs (d) and (f) of this section shall be filed within 60 days after the end of the fiscal year covered by such reports.

(h) No officer, director, or employee of a security-based swap data repository may directly or indirectly take any action to coerce, manipulate, mislead, or fraudulently influence the security-based swap data repository's chief compliance officer in the performance of his or her duties under this section.

§ 240.13n-12—Exemption from requirements governing security-based swap data repositories for certain non-U.S. persons.

(a) Definitions. For purposes of this section—

(1) Non-U.S. person means a person that is not a U.S. person.

(2) U.S. person shall have the same meaning as set forth in Rule 3a71-3(a)(4)(i) of the Act (17 CFR 240.3a71-3(a)(4)(i)).

(b) A non-U.S. person that performs the functions of a security-based swap data repository within the United States shall be exempt from the registration and other requirements set forth in Section 13(n) of the Act (15 U.S.C. 78m(n)), and the rules and regulations thereunder, provided that each regulator with supervisory authority over such non-U.S. person has entered into a memorandum of understanding or other arrangement with the Commission that addresses the confidentiality of data collected and maintained by such non-U.S. person, access by the Commission to such data, and any other matters determined by the Commission.

10. Section 240.24b-2 is amended by:

a. In the first sentence of paragraph (b), revising "paragraph (g)" to read "paragraphs (g) and (h)"; and

b. Adding paragraph (h).

The amendment reads as follows:

§ 240.24b-2 Nondisclosure of information filed with the Commission and with any exchange.

* * * * *

(h) A security-based swap data repository shall not omit the confidential portion from the material filed in electronic format pursuant to Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder. In lieu of the procedures described in paragraph (b) of this section, a security-based swap data repository shall request confidential treatment electronically for any material filed in electronic format pursuant to Section 13(n) of the Act (15 U.S.C. 78m(n)) and the rules and regulations thereunder.

PART 249 – FORMS, SECURITIES EXCHANGE ACT OF 1934

11. The authority citation for Part 249 continues to read, in part, as follows:

Authority: 15 U.S.C. 78a et seq. and 7201 et seq.; 12 U.S.C. 5461 et seq.; and 18 U.S.C. 1350, unless otherwise noted.

* * * * *

12. Subpart P consisting of § 249.1500 is added to read as follows:

Subpart P – FORMS FOR REGISTRATION OF SECURITY-BASED SWAP DATA REPOSITORIES

§ 249.1500 Form SDR, for application for registration as a security-based swap data repository, amendments thereto, or withdrawal from registration.

[Note: The text of Form SDR does not, and the amendments will not, appear in the Code of Federal Regulations.]

The form shall be used for registration as a security-based swap data repository, and for the amendments to and withdrawal from such registration pursuant to Section 13(n) of the Exchange Act (15 U.S.C. 78m(n)).

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM SDR

APPLICATION OR AMENDMENT TO APPLICATION FOR REGISTRATION OR WITHDRAWAL FROM REGISTRATION AS SECURITY-BASED SWAP DATA REPOSITORY UNDER THE SECURITIES EXCHANGE ACT OF 1934

GENERAL INSTRUCTIONS FOR PREPARING AND FILING FORM SDR

1. Form SDR and exhibits thereto are to be filed electronically in a tagged data format through EDGAR with the Securities and Exchange Commission by an applicant for registration as a security-based swap data repository, by a registered security-based swap data repository amending its application for registration, or by a registered security-based swap data repository withdrawing its registration, pursuant to Section 13(n) of the Securities Exchange Act of 1934 ("Exchange Act") and Rules 13n-1 and 13n-2 thereunder. The electronic filing requirements of Regulation S-T will apply to all such filings.

2. With respect to an applicant for registration as a security-based swap data repository, Form SDR also constitutes an application for registration as a securities information processor. An amendment or withdrawal on Form SDR also constitutes an amendment or withdrawal of securities information processor registration pursuant to Section 11A of the Exchange Act and the rules and regulations thereunder. Applicants for registration as a securities information processor not seeking to become dually-registered as a security-based swap data repository and a securities information processor, or registered securities information processors that are not dually-registered as a security-based swap data repository and a securities information processor, should continue to file on Form SIP.

3. Upon the filing of an application for registration, the Commission will publish notice of the filing and afford interested persons an opportunity to submit written data, views, and arguments. No application for registration shall be effective unless the Commission, by order, grants such registration.

4. Individuals' names shall be given in full (last name, first name, middle name).

5. Form SDR shall be signed by a person who is duly authorized to act on behalf of the security-based swap data repository.

6. If Form SDR is being filed as an application for registration, all applicable items must be answered in full. If any item is not applicable, indicate by "none" or "N/A" as appropriate.

7. Disclosure of the information specified on this form is mandatory prior to processing of an application for registration as a security-based swap data repository and a securities information processor. The information will be used for the principal purpose of determining whether the Commission should grant or deny registration to an applicant. Except in cases where confidential treatment is requested by the applicant and granted by the Commission pursuant to the Freedom of Information Act and the rules of the Commission thereunder, information supplied on this form may be made available on the Commission's website, will be included routinely in the public files of the Commission, and will be available for inspection by any interested person. A form that is not prepared and executed in compliance with applicable requirements may be deemed as not acceptable for filing. Acceptance of this form, however, shall not constitute any finding that it has been filed as required or that the information submitted is true, current, or complete. Intentional misstatements or omissions of fact constitute federal criminal violations (see 18 U.S.C. 1001 and 15 U.S.C. 78ff(a)).

8. Rule 13n-1(d) under the Exchange Act requires a security-based swap data repository to amend promptly Form SDR if any information contained in items 1 through 17, 26, and 48 of this application, or any amendment thereto, is or becomes inaccurate for any reason. Rule 13n-1(d) under the Exchange Act also requires a security-based swap data repository to file annually an amendment on Form SDR within 60 days after the end of each fiscal year of such security-based swap data repository. Rule 13n-2 under the Exchange Act requires a security-based swap data repository that seeks to withdraw from registration to file such withdrawal on Form SDR.

9. For the purposes of this form, the term "applicant" includes any applicant for registration as a security-based swap data repository or any registered security-based swap data repository that is amending Form SDR or withdrawing its registration as a security-based swap data repository. In addition, the term "applicant" includes any applicant for registration as a securities information processor.

10. Applicants filing Form SDR as an amendment (other than an annual amendment) need to update any information contained in items 1 through 17, 26, and 48 that has become inaccurate since the security-based swap data repository's last filing of Form SDR. An applicant submitting an amendment (other than an annual amendment) represents that all unamended information contained in items 1 through 17, 26, and 48 remains true, current, and complete as filed.

11. Applicants filing a withdrawal need to update any items or exhibits that are being amended since the security-based swap data repository's last filing of Form SDR. An applicant submitting a withdrawal represents that all unamended items and exhibits remain true, current, and complete as filed.

12. Applicants filing an annual amendment must file a complete form, including all pages, answers to all items, together with all exhibits. Applicants filing an annual amendment must indicate which items have been amended since the last annual amendment, or, if the security-based swap data repository has not yet filed an annual amendment, since the security-based swap data repository's application for registration.

DEFINITIONS: Unless the context requires otherwise, all terms used in this form have the same meaning as in the Exchange Act, as amended, and in the rules and regulations of the Commission thereunder.

This collection of information will be reviewed by the Office of Management and Budget in accordance with the clearance requirements of 44 U.S.C. 3507. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number. The Commission estimates that the average burden to respond to Form SDR will be between 12 and 482 hours depending upon the purpose for which the form is being filed. Any member of the public may direct to the Commission any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden. It is mandatory that a security-based swap data repository file all notifications, updates, and reports required by Rules 13n-1 and 13n-2 using Form SDR.

____

Or check here to confirm that there is no inaccurate information to update . . . .

GENERAL INFORMATION

1. Name under which business is conducted, if different than name specified herein: ____________________

____

2. If name of business is amended, state previous business name: ____________________

3. Mailing address:

(Number and Street)

(City) (State/Country) (Mailing Zip/Postal Code)

4. List of principal office(s) and address(es) where security-based swap data repository and securities information processor activities are conducted:

Office	Address

5. If the applicant is a successor (within the definition of Rule 12b-2 under the Exchange Act) to a previously registered security-based swap data repository, please complete the following:

   a. Date of succession: ______________________

   b. Full name and address of predecessor security-based swap data repository:

   (Name)

   (Number and Street)

   (City) (State/Country) (Mailing Zip/Postal Code)

   c. Predecessor's CIK ____________

6. List all asset classes of security-based swaps for which the applicant is collecting and maintaining data or for which it proposes to collect and maintain data.

7. Furnish a description of the function(s) that the applicant performs or proposes to perform. ____________

8. Applicant is a: Corporation

Partnership

Other Form of Organization (Specify) ______________________

9. If the applicant is a corporation or other form of organization (besides a partnership):

a. Date of incorporation or organization

____

b. Place of incorporation or state/country of organization

____

10. If the applicant is a partnership:

a. Date of filing of partnership agreement ______________________

b. Place where partnership agreement was filed ______________________

11. Applicant understands and consents that any notice or service of process, pleadings, or other documents in connection with any action or proceeding against the applicant may be effectuated by certified mail to the officer specified or person named below at the U.S. address given. Such officer or person cannot be a Commission member, official, or employee.

(City) (State/Country) (Mailing Zip/Postal Code)

(Area Code) (Telephone Number)

b. If different from above, provide address(es) where such books and records will be located.

(Number and Street)

(City) (State/Country) (Mailing Zip/Postal Code)

13. SIGNATURE: Applicant has duly caused this application, amendment, or withdrawal to be signed on its behalf by the undersigned, hereunto duly authorized, on this date: ________________.
Applicant and the undersigned hereby represent that all information contained herein is true, current, and complete. Intentional misstatements or omissions of fact constitute federal criminal violations (see 18 U.S.C. 1001 and 15 U.S.C. 78ff(a)). It is understood that all required items and exhibits are considered integral parts of this form and that the submission of any amendment or withdrawal represents that all unamended items and exhibits remain true, current, and complete as previously filed and that the submission of any amendment (other than an annual amendment) represents that all unamended information contained in items 1 through 17, 26, and 48 remains true, current, and complete as filed. If the applicant is a non-resident security-based swap data repository, the applicant and the undersigned further represent that the applicant can, as a matter of law, and will provide the Commission with prompt access to the applicant's books and records and that the applicant can, as a matter of law, and will submit to an onsite inspection and examination by the Commission. For purposes of this certification, "non-resident security-based swap data repository" means (i) in the case of an individual, one who resides in or has his principal place of business in any place not in the United States; (ii) in the case of a corporation, one incorporated in or having its principal place of business in any place not in the United States; or (iii) in the case of a partnership or other unincorporated organization or association, one having its principal place of business in any place not in the United States.

(Name of Applicant)

(Signature of General Partner, Managing Agent, or Principal Officer)

(Title)

EXHIBITS — BUSINESS ORGANIZATION

14. List as Exhibit A any person as defined in Section 3(a)(9) of the Exchange Act that owns 10 percent or more of the applicant's stock or that, either directly or indirectly, through agreement or otherwise, in any other manner, may control or direct the management or policies of the applicant. State in Exhibit A the full name and address of each such person and attach a copy of the agreement or, if there is none written, describe the agreement or basis upon which such person exercises or may exercise such control or direction.

15. Attach as Exhibit B the following information about the chief compliance officer who has been appointed by the board of directors of the applicant or a person or group performing a function similar to such board of directors:

   a. Name
   b. Title

c. Date of commencement and, if appropriate, termination of present term of position
d. Length of time the chief compliance officer has held the same position
e. Brief account of the business experience of the chief compliance officer over the last five years
f. Any other business affiliations in the securities industry or derivatives industry
g. Details of:

  (1) any order of the Commission with respect to such person pursuant to Sections 15(b)(4), 15(b)(6), 19(h)(2), or 19(h)(3) of the Exchange Act;
  (2) any conviction or injunction of a type described in Sections 15(b)(4)(B) or (C) of the Exchange Act within the past ten years;
  (3) any action of a self-regulatory organization with respect to such person imposing a final disciplinary sanction pursuant to Sections 6(b)(6), 15A(b)(7), or 17A(b)(3)(G) of the Exchange Act;
  (4) any final action by a self-regulatory organization with respect to such person constituting a denial, bar, prohibition, or limitation of membership, participation, or association with a member, or of access to services offered by such organization or a member thereof; and
  (5) any final action by another federal regulatory agency, including the Commodity Futures Trading Commission, any state regulatory agency, or any foreign financial regulatory authority resulting in:
    i. a finding that such person has made a false statement or omission, or has been dishonest, unfair, or unethical;
    ii. a finding that such person has been involved in a violation of any securities-related regulations or statutes;
    iii. a finding that such person has been a cause of a business having its authorization to do business denied, suspended, revoked, or restricted;
    iv. an order entered, in the past ten years, against such person in connection with a securities-related activity; or
    v. any disciplinary sanction, including a denial, suspension, or revocation of such person's registration or license or otherwise, by order, a prevention from associating with a securities-related business or a restriction of such person's activities.

16. Attach as Exhibit C a list of the officers, directors, governors, and persons performing similar functions, and the members of all standing committees grouped by committee of the applicant or of the entity identified in item 19 that performs the security-based swap data repository and securities information processor activities of the applicant, indicating for each:

  a. Name
  b. Title
  c. Dates of commencement and, if appropriate, termination of present term of office or position
  d. Length of time each present officer, director, governor, persons performing similar functions, or member of a standing committee has held the same office or position
  e. Brief account of the business experience of each officer, director, governor, persons performing similar functions, or member of a standing committee over the last five years
  f. Any other business affiliations in the securities industry or derivatives industry
  g. Details of:

    (1) any order of the Commission with respect to such person pursuant to Sections 15(b)(4), 15(b)(6), 19(h)(2), or 19(h)(3) of the Exchange Act;
    (2) any conviction or injunction of a type described in Sections 15(b)(4)(B) or (C) of the Exchange Act within the past ten years;
    (3) any action of a self-regulatory organization with respect to such person imposing a final disciplinary sanction pursuant to Sections 6(b)(6), 15A(b)(7), or 17A(b)(3)(G) of the Exchange Act;
    (4) any final action by a self-regulatory organization with respect to such person constituting a denial, bar, prohibition, or limitation of membership, participation, or association with a member, or of access to services offered by such organization or a member thereof; and
    (5) any final action by another federal regulatory agency, including the Commodity Futures Trading Commission, any state regulatory agency, or any foreign financial regulatory authority resulting in:

i. a finding that such person has made a false statement or omission, or has been dishonest, unfair, or unethical;
ii. a finding that such person has been involved in a violation of any securities-related regulations or statutes;
iii. a finding that such person has been a cause of a business having its authorization to do business denied, suspended, revoked, or restricted;
iv. an order entered, in the past ten years, against such person in connection with a securities-related activity; or
v. any disciplinary sanction, including a denial, suspension, or revocation of such person's registration or license or otherwise, by order, a prevention from associating with a securities-related business or a restriction of such person's activities.

17. Attach as Exhibit D a copy of documents relating to the governance arrangements of the applicant, including, but not limited to, the nomination and selection process of the members on the applicant's board of directors, a person or group performing a function similar to a board of directors (collectively, "board"), or any committee that has the authority to act on behalf of the board; the responsibilities of the board and each such committee; the composition of the board and each such committee; and the applicant's policies and procedures reasonably designed to ensure that the applicant's senior management and each member of the board or such committee possess requisite skills and expertise to fulfill their responsibilities in the management and governance of the applicant, to have a clear understanding of their responsibilities, and to exercise sound judgment about the applicant's affairs.

18. Attach as Exhibit E a copy of the constitution, articles of incorporation or association with all amendments thereto, existing by-laws, rules, procedures, and instruments corresponding thereto, of the applicant.

19. Attach as Exhibit F a narrative and/or graphic description of the organizational structure of the applicant. Note: If the security-based swap data repository or securities information processor activities of the applicant are conducted primarily by a division, subdivision, or other segregable entity within the applicant's corporation or organization, describe the relationship of such entity within the overall organizational structure and attach as Exhibit F the description that applies to the segregable entity.

20. Attach as Exhibit G a list of all affiliates of the applicant and indicate the general nature of the affiliation. For purposes of this application, an "affiliate" of an applicant means a person that, directly or indirectly, controls, is controlled by, or is under common control with the applicant.

21. Attach as Exhibit H a brief description of any material pending legal proceeding(s), other than ordinary and routine litigation incidental to the business, to which the applicant or any of its affiliates is a party or to which any of its property is the subject. Include the name of the court or agency in which the proceeding(s) are pending, the date(s) instituted, the principal parties to the proceeding, a description of the factual basis alleged to underlie the proceeding(s), and the relief sought. Include similar information as to any such proceeding(s) known to be contemplated by any governmental agencies.

22. Attach as Exhibit I copies of all material contracts with any security-based swap execution facility, clearing agency, central counterparty, or third party service provider. To the extent that form contracts are used by the applicant, submit a sample of each type of form contract used. In addition, include a list of security-based swap execution facilities, clearing agencies, central counterparties, and third party service providers with whom the applicant has entered into material contracts.

23. Attach as Exhibit J procedures implemented by the applicant to minimize conflicts of interest in the decision-making process of the applicant and to resolve any such conflicts of interest.

EXHIBITS — FINANCIAL INFORMATION

24. Attach as Exhibit K a statement of financial position, results of operations, statement of sources and application of revenues and all notes or schedules thereto, as of the most recent fiscal year of the applicant. If statements

certified by an independent public accountant are available, such statements shall be submitted as Exhibit K. Alternatively, a financial report, as described in Rule 13n-11(f) under the Exchange Act, may be filed as Exhibit K.

25. Attach as Exhibit L a statement of financial position and results of operations for each affiliate of the applicant as of the end of the most recent fiscal year of each such affiliate. Alternatively, identify, if available, the most recently filed annual report on Form 10-K under the Exchange Act for any such affiliate as Exhibit L.

26. Attach as Exhibit M the following:

    a. A complete list of all dues, fees, and other charges imposed, or to be imposed, as well as all discounts or rebates offered, or to be offered, by or on behalf of the applicant for its services, including the security-based swap data repository's services, securities information processor's services, and any ancillary services, and identify the service(s) provided for each such due, fee, other charge, discount, or rebate;

    b. A description of the basis and methods used in determining at least annually the level and structure of the services as well as the dues, fees, other charges, discounts, or rebates listed in paragraph a of this item; and

    c. If the applicant differentiates, or proposes to differentiate, among its customers, or classes of customers in the amount of any dues, fees, or other charges imposed or any discount or rebate offered for the same or similar services, then state and indicate the amount of each differential. In addition, identify and describe any differences in the cost of providing such services, and any other factors, that account for such differences.

EXHIBITS — OPERATIONAL CAPABILITY

27. Attach as Exhibit N a narrative description, or the functional specifications, of each service or function listed in item 7 and performed as a security-based swap data repository or securities information processor. Include a description of all procedures utilized for the collection and maintenance of information or records with respect to transactions or positions in, or the terms and conditions of, security-based swaps entered into by market participants.

28. Attach as Exhibit O a list of all computer hardware utilized by the applicant to perform the security-based swap data repository or securities information processor functions listed in item 7, indicating:

    a. Name of manufacturer and manufacturer's equipment identification number;

    b. Whether such hardware is purchased or leased (If leased, state from whom leased, duration of lease, and any provisions for purchase or renewal); and

    c. Where such equipment (exclusive of terminals and other access devices) is physically located.

29. Attach as Exhibit P a description of the personnel qualifications for each category of professional, non-professional, and supervisory employees employed by the applicant or the division, subdivision, or other segregable entity within the applicant as described in item 19.

30. Attach as Exhibit Q a description of the measures or procedures implemented by the applicant to provide for the security of any system employed to perform the functions of the security-based swap data repository or securities information processor. Include a general description of any physical and operational safeguards designed to prevent unauthorized access (whether by input or retrieval) to the system. Describe any circumstances within the past year in which the described security measures or safeguards failed to prevent any such unauthorized access to the system and any measures taken to prevent a reoccurrence. Describe any measures used by the applicant to satisfy itself that the information received or disseminated by the system is accurate.

31. Where security-based swap data repository or securities information processor functions are performed by automated facilities or systems, attach as Exhibit R a description of all backup systems or subsystems that are designed to prevent interruptions in the performance of any such function as a result of technical malfunctions or otherwise in the system itself, in any permitted input or output system connection, or as a result of any independent source.

32. Attach as Exhibit S the following:

   a. For each of the security-based swap data repository or securities information processor functions described in item 7:

      (1) quantify in appropriate units of measure the limits on the applicant's capacity to receive (or collect), process, store, or display (or disseminate for display or other use) the data elements included within each function (e.g., number of inquiries from remote terminals); and

      (2) identify the factors (mechanical, electronic, or other) that account for the current limitations reported in answer to (1) on the applicant's capacity to receive (or collect), process, store, or display (or disseminate for display or other use) the data elements included within each function.

   b. If the applicant is able to employ, or presently employs, its system(s) for any use other than for performing the functions of a security-based swap data repository or securities information processor, state the priorities of assignment of capacity between such functions and such other uses, and state the methods used or able to be used to divert capacity between such functions and other uses.

EXHIBITS — ACCESS TO SERVICES AND DATA

33. Attach as Exhibit T the following:

   a. State the number of persons who subscribe, or who have notified the applicant of their intention to subscribe, to the applicant's services.

   b. For each instance during the past year in which any person has been prohibited or limited with respect to access to services offered or data maintained by the applicant, indicate the name of each such person and the reason for the prohibition or limitation.

   c. For each of such services that involves the supply of information to a quotation board, ticker device, electronic information terminal, or other such device, state the total number of devices to which information is, or will be supplied ("serviced") and any minimum and or maximum number of devices required or permitted by agreement or otherwise to be serviced by the applicant. In addition, define the data elements for each service.

   d. For each service that is furnished in machine-readable form, state the storage media of any service furnished and define the data elements of such service.

34. Attach as Exhibit U copies of all contracts governing the terms by which persons may subscribe to the security-based swap data repository services, securities information processor services, and any ancillary services provided by the applicant. To the extent that form contracts are used by the applicant, submit a sample of each type of form contract used.

35. Attach as Exhibit V a description of any specifications, qualifications, or other criteria that limit, are interpreted to limit, or have the effect of limiting access to or use of any security-based swap data repository or securities information processor services offered or data maintained by the applicant and state the reasons for imposing such specifications, qualifications, or other criteria.

36. Attach as Exhibit W any specifications, qualifications, or other criteria required of persons who supply security-

based swap information to the applicant for collection, maintenance, processing, preparing for distribution, and publication by the applicant or of persons who seek to connect to or link with the applicant.

37. Attach as Exhibit X any specifications, qualifications, or other criteria required of any person, including, but not limited to, regulators, market participants, market infrastructures, venues from which data could be submitted to the applicant, and third party service providers, who requests access to data maintained by the applicant.

38. Attach as Exhibit Y policies and procedures implemented by the applicant to review any prohibition or limitation of any person with respect to access to services offered or data maintained by the applicant and to grant such person access to such services or data if such person has been discriminated against unfairly.

EXHIBITS — OTHER POLICIES AND PROCEDURES

39. Attach as Exhibit Z policies and procedures implemented by the applicant to protect the privacy of any and all security-based swap transaction information that the applicant receives from a market participant or any registered entity.

40. Attach as Exhibit AA a description of safeguards, policies, and procedures implemented by the applicant to prevent the misappropriation or misuse of (a) any confidential information received by the applicant, including, but not limited to, trade data, position data, and any nonpublic personal information about a market participant or any of its customers; (b) material, nonpublic information; and/or (c) intellectual property by applicant or any person associated with the applicant for their personal benefit or the benefit of others.

41. Attach as Exhibit BB policies and procedures implemented by the applicant regarding its use of the security-based swap transaction information that it receives from a market participant, any registered entity, or any person for non-commercial and/or commercial purposes.

42. Attach as Exhibit CC procedures and a description of facilities of the applicant for effectively resolving disputes over the accuracy of the transaction data and positions that are recorded in the security-based swap data repository.

43. Attach as Exhibit DD policies and procedures relating to the applicant's calculation of positions.

44. Attach as Exhibit EE policies and procedures implemented by the applicant to prevent any provision in a valid security-based swap from being invalidated or modified through the procedures or operations of the applicant.

45. Attach as Exhibit FF a plan to ensure that the transaction data and position data that are recorded in the applicant continue to be maintained after the applicant withdraws from registration as a security-based swap data repository, which shall include procedures for transferring the transaction data and position data to the Commission or its designee (including another registered security-based swap data repository).

46. Attach as Exhibit GG all of the policies and procedures required under Regulation SBSR.

47. If the applicant has a rulebook, then the applicant may attach the rulebook as Exhibit HH.

EXHIBIT — LEGAL OPINION

48. If the applicant is a non-resident security-based swap data repository, then attach as Exhibit II an opinion of counsel that the security-based swap data repository can, as a matter of law, provide the Commission with prompt access to the books and records of such security-based swap data repository and that the security-based swap data repository can, as a matter of law, submit to onsite inspection and examination by the Commission.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74249 / February 11, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16383

In the Matter of **CHARLES L. HILL, JR.,** **Respondent.**	**ORDER INSTITUTING CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTION 21C OF THE SECURITIES EXCHANGE ACT OF 1934 AND NOTICE OF HEARING**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate that cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 21C of the Securities Exchange Act of 1934 ("Exchange Act") against Charles L. Hill, Jr. ("Hill" or the "Respondent").

II.

After an investigation, the Division of Enforcement alleges that:

A. <u>SUMMARY</u>

1. Hill engaged in insider trading, in violation of Section 14(e) of the Exchange Act and Rule 14e-3 thereunder, in connection with securities of Radiant Systems, Inc. ("Radiant").

2. In May 2011, NCR Corporation ("NCR"), a point-of-sale technology company based in Duluth, Georgia, began discussions with Radiant, another point-of-sale technology company based in Alpharetta, Georgia, about NCR's potential acquisition of Radiant. Radiant's Chief Operating Officer ("COO"), who first learned details about the acquisition in May 2011, discussed material, nonpublic information about the acquisition, ultimately structured to include a tender offer, in confidence with his close personal friend of approximately 40 years ("Radiant's COO's friend," or the "COO's friend"). Radiant's COO's friend, in turn, relayed the material, non-public information he learned from Radiant's COO to Hill. Radiant's COO's friend had also been a close friend of Hill's for approximately 20 years.

3. At the time Hill received material, non-public information concerning NCR's acquisition of Radiant from the COO's friend, Hill was aware of the friendship between Radiant's COO's friend and Radiant's COO, and of Radiant's COO's position at Radiant.

4. Between June 1, 2011, and July 8, 2011, before news of the potential acquisition became public, Hill purchased 101,600 shares of Radiant stock for approximately $2.1 million.

5. On July 11, 2011, after the close of the markets, NCR and Radiant announced that NCR would acquire Radiant in a tender offer. On July 12, 2011, Radiant's stock price increased by more than 30 percent on the news. That same day, Hill sold all of his Radiant stock, realizing gains of approximately $744,000.

B. RESPONDENT

6. **Hill**, age 54, is a resident of Atlanta, Georgia. Hill is a self-employed real estate developer. Hill has never been registered with the Commission.

C. OTHER RELEVANT INDIVIDUALS AND ENTITIES

7. **Radiant**, a Georgia corporation, was headquartered in Alpharetta, Georgia. Its common stock was registered with the Commission pursuant to Section 12(b) of the Exchange Act and traded on NASDAQ. On August 24, 2011, Radiant was acquired by NCR. In connection with the acquisition, Radiant's stock was delisted from NASDAQ and deregistered with the Commission.

8. **NCR**, a Maryland corporation, is headquartered in Duluth, Georgia. Its common stock is registered with the Commission pursuant to Section 12(b) of the Exchange Act and trades on the New York Stock Exchange.

9. **Radiant's COO's friend**, age 52, is a resident of Brooklyn, New York. Between May 2011 and August 2011, Radiant's COO's friend resided in Atlanta, Georgia. Radiant's COO's friend is a self-employed artist. Radiant's COO's friend has never been registered with the Commission.

10. **Radiant's COO**, age 50, is a resident of Atlanta, Georgia. Radiant's COO is currently a Senior Vice President at NCR. Radiant's COO has never been registered with the Commission.

D. RADIANT'S COO LEARNS DETAILS ABOUT THE CONTEMPLATED ACQUISITION OF RADIANT BY NCR

11. In early May 2011, NCR's Chief Executive Officer, ("NCR's CEO") called Radiant's Chief Executive Officer ("Radiant's CEO") to express an interest in a potential business combination.

12. On May 12, 2011, NCR sent a letter to Radiant expressing a non-binding indication of interest concerning the acquisition of Radiant at a price of $24 to $26 per share, and requesting a period of exclusive negotiation rights. At that time, Radiant was trading at approximately $20 per share.

13. On May 24, 2011, Radiant's board of directors convened for a special meeting to discuss a potential transaction with NCR, and authorized continued negotiations with NCR, including allowing NCR to conduct due diligence, and the engagement of an investment bank to ascertain whether there were other parties interested in acquiring Radiant.

14. On June 2, 2011, NCR began conducting due diligence in connection with the potential acquisition of Radiant.

15. On June 13, 2011, NCR made a written offer to Radiant to acquire Radiant stock at $26 per share.

16. On June 30, 2011, Radiant's board of directors approved a related exclusivity agreement with NCR.

17. On July 11, 2011, Radiant and NCR executed a related merger agreement, which was structured to include a tender offer from NCR for Radiant stock.

18. Radiant's COO first learned material, nonpublic information concerning NCR's contemplated acquisition of Radiant in early May 2011 after his brother, who then served as Radiant's CEO and as a member of Radiant's board of directors, told him about NCR's CEO's expression of interest in a potential business combination.

19. Beginning in May 2011, Radiant's CEO continued to discuss details concerning the evolving transaction with Radiant's COO. Radiant's COO was also directly involved in the related due diligence process during the negotiations between NCR and Radiant.

20. In connection with the potential acquisition, Radiant's COO also negotiated his employment terms with NCR in the event the merger was consummated.

E. RADIANT'S COO SHARED MATERIAL, NON-PUBLIC INFORMATION WITH THE COO'S FRIEND

21. Radiant's COO and the COO's friend have maintained a close personal friendship since childhood. They both attended the University of Georgia, where they were members of the same fraternity. After college, they remained close personal friends, both residing in Atlanta, Georgia. Given this close relationship, Radiant's COO considered the COO's friend to be like a close family member. Radiant's COO and the COO's friend routinely shared confidential, personal information with each other.

22. In 2011, Radiant's COO's friend was aware of Radiant COO's position at Radiant.

23. During the period from early May to July 11, 2011 (the "relevant period"), Radiant's COO and the COO's friend frequently communicated via telephone or text message, and on some days exchanged multiple telephone calls and text messages. Also during the relevant period, Radiant's COO and the COO's friend, who both resided in the Atlanta metropolitan area, met in person.

24. During the relevant period, Radiant's COO shared material, nonpublic information with the COO's friend concerning NCR's potential acquisition of Radiant.

F. RADIANT'S COO'S FRIEND SHARED MATERIAL, NON-PUBLIC INFORMATION LEARNED FROM RADIANT'S COO WITH HILL

25. Radiant's COO's friend and Hill have been close friends for more than 20 years. During the relevant period, Radiant's COO's friend and Hill frequently communicated via telephone or text message, and on some days exchanged multiple telephone calls and texts. During the relevant period, Radiant's COO's friend and Hill also periodically met in person as they both resided in the Atlanta metropolitan area.

26. During the relevant period, Hill was aware of the relationship between the COO's friend and Radiant's COO, as well as Radiant's COO's position at Radiant. The COO's friend also knew that Hill was an acquaintance of the Radiant COO.

27. During the relevant period, Radiant's COO's friend shared material, non-public information that he had learned from Radiant's COO with Hill concerning the potential acquisition of Radiant by NCR.

28. Hill knew or had reason to know that the information acquired from Radiant's COO's friend concerning NCR's potential acquisition of Radiant was nonpublic, and had been acquired directly or indirectly from Radiant, or an officer or employee thereof.

G. HILL TRADED RADIANT STOCK

29. Prior to May 2011, Hill previously had never traded Radiant securities, and had not purchased a security for at least four years prior to purchasing Radiant stock.

30. In late May 2011, Hill opened two new brokerage accounts, intending to purchase Radiant stock in those accounts.

31. From June 1, 2011 through July 8, 2011, Hill purchased shares of Radiant stock in his two newly opened brokerage accounts, and in each of his three daughters' custodial brokerage accounts, for which Hill was authorized to make trading decisions.

32. On June 1, 2011, Hill purchased 4,500 shares of Radiant stock.

33. On June 3, 2011, Hill purchased 50,000 shares of Radiant stock. These purchases represented over 10% of the total Radiant trading volume that day (467.4 thousand shares)

34. On June 24, 2011, Hill purchased 13,000 shares of Radiant stock.

35. On July 1, 2011, Hill purchased 20,000 shares of Radiant stock.

36. On July 5, 2011, Hill purchased 4,100 shares of Radiant stock.

37. On July 8, 2011, Hill purchased 10,000 shares of Radiant stock.

38. Hill purchased all Radiant stock at prices ranging between approximately $19.97 per share and $21.95 per share.

39. As of July 8, 2011, the last trading day before the acquisition announcement, Hill's Radiant shares, including those shares in his daughters' accounts, were valued at approximately $2.2 million dollars. This represented a significant portion of both his liquid and his overall net worth, and was substantially more than his annual income.

40. Hill purchased all Radiant stock while in possession of material information related to NCR's tender offer for Radiant stock.

41. Hill purchased all Radiant stock knowing, or with reason to know, that the information concerning the tender offer was nonpublic.

42. Hill purchased all Radiant stock knowing, or with reason to know, that the information had been acquired directly or indirectly from Radiant, or an officer, director or employee thereof.

43. Hill purchased all Radiant stock after NCR had taken substantial steps to commence a tender offer for Radiant stock.

44. On July 11, 2011, Radiant stock closed at $21.45 per share. After market close, the merger agreement between Radiant and NCR was publicly announced via press releases.

45. On July 12, 2011, Radiant stock price increased by more than 30 percent. That day, Hill sold the entirety of his 101,600 Radiant shares at prices ranging from $27.98 to $28.03, realizing illicit gains of approximately $744,000.

H. VIOLATIONS

46. As a result of the conduct described above, Hill violated Section 14(e) of the Exchange Act and Rule 14e-3 thereunder, which prohibit any fraudulent, deceptive, or manipulative acts or practices in connection with any tender offer.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it appropriate that cease-and-desist proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations; and

B. Whether, pursuant to Section 21C of the Exchange Act, Respondent should be ordered to cease and desist from committing or causing violations of and any future violations of Section 14(e) of the Exchange Act and Rule 14e-3 thereunder, whether Respondent should be ordered to pay a civil penalty pursuant to Section 21B(a) of the Exchange Act, and whether Respondent should be ordered to pay disgorgement, including prejudgment interest, pursuant to Sections 21B(e) and 21C(e) of the Exchange Act.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened not earlier than 30 days and not later than 60 days from service of this Order at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 300 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74261 / February 11, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16384 / February 11, 2015

In the Matter of **NICHOLAS TOMS,** **Respondent.**	**ORDER INSTITUTING CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTION 21C OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate that cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 21C of the Securities Exchange Act of 1934 ("Exchange Act"), against Nicholas Toms ("Respondent" or "Toms").

II.

After an investigation, the Division of Enforcement alleges that:

A. SUMMARY

1. Toms, while the chairman, chief executive officer ("CEO"), and president of a public company, owned and sold millions of shares of his employer's stock through a nominee and concealed it from investors. He received proceeds of over $897,000 from his secret sales.

2. From November 2009 through at least mid-2014, Toms beneficially owned and sold more than 2.3 million shares of his employer's stock. To do so, he used his long-time secretary as a nominee on an account held by an entity he controlled. He concealed his true stock ownership and sales from his employer, who consequently made materially false filings with the Commission. Toms falsely certified the accuracy of these filings.

3. Toms defrauded investors through these false filings. The filings materially understated Toms' ownership of his employer's stock and led investors to believe that he was increasing his stock position when in fact he, the company's top officer, was selling substantial amounts of the company's stock.

B. RESPONDENT

4. **Toms**, 66, is a resident of Boca Raton, Florida. From 2003 through mid-2014, Toms was chairman, CEO, and president of DecisionPoint Systems, Inc. ("DecisionPoint"). From 1981 through 1989, Toms was an associate at a prominent New York law firm, where he was then a self-described expert on the federal securities laws. He still remains licensed to practice law in New York. At all times, Toms owned at least 10% of Edwardstone & Co., Inc. ("Edwardstone"), and, until at least June 2009, he was Edwardstone's CEO. In June 2014, Toms resigned as the chairman of DecisionPoint. On August 15, 2014, he resigned as its CEO and president and as a member of its Board of Directors.

C. OTHER RELEVANT ENTITIES AND INDIVIDUALS

5. **Edwardstone** is a Delaware corporation. Since 2009, it has been located at Toms' former Manhattan residence. Toms controls Edwardstone and at all times has owned at least 10% of it. From at least 2009 through the present, Edwardstone has had no operations.

6. **DecisionPoint** is a Delaware corporation with its headquarters in Foothill Ranch, California. DecisionPoint's common stock is currently traded under the symbol DPSI on the OTC market.

7. **Barbara Martorano ("Martorano")**, age 57, is a resident of Polk City, Florida. From at least 1999 through 2014, she was Toms' secretary at several different employers.

D. BACKGROUND

8. Since 1989, Toms has been associated with Edwardstone. At all relevant times, Toms has controlled Edwardstone and used it as a vehicle for his personal finances.

9. In 1999, Martorano began working for Toms as his secretary. Toms then worked at Cape Systems, Inc.

10. In April 2009, Toms purchased a majority of the stock of Canusa Systems, Inc. ("Canusa"), a shell company not registered under Section 12.

11. In June 2009, DecisionPoint merged into Canusa. The resulting entity changed its name to DecisionPoint. DecisionPoint voluntarily filed annual reports with the Commission on Form 10-K.

12. In June 2009, Toms became DecisionPoint's chairman, CEO, and president. Martorano continued to work as Toms' secretary.

13. In approximately 2009, Toms changed Edwardstone's address to his townhouse in Manhattan.

E. TOMS USED MARTORANO AS A NOMINEE

14. In October 2009, Toms directed Martorano to open an account in Edwardstone's name at Broker A, then a registered broker-dealer firm.

15. Toms directed Martorano to identify herself to Broker A as Edwardstone's vice president.

16. Martorano faxed account opening documents to Broker A that identified her as Edwardstone's vice president and the "primary account holder." Her fax contained instructions for wiring the proceeds of stock sales out of the account. The instructions identified a single recipient of such proceeds: a bank account in Edwardstone's name (the "Edwardstone Bank Account"). Toms and his wife were the only signatories for that account.

17. Martorano in fact had no decision-making authority for Edwardstone. At all times, Martorano merely followed Toms' trading instructions in the Edwardstone account and communicated with Broker A on Toms' behalf. Martorano never took direction from anyone other than Toms as to Edwardstone's Broker A account.

18. Toms used Edwardstone's Broker A account only to sell DecisionPoint stock. Broker A sent all proceeds from these sales to the Edwardstone Bank Account.

F. EDWARDSTONE OBTAINED AND SOLD DECISIONPOINT STOCK AT TOMS' DIRECTION AND FOR HIS BENEFIT

19. On June 30, 2009, in connection with DecisionPoint's merger with Canusa, Red Lodge Ltd., a privately-held company Toms controlled, received 1,386,000 shares of DecisionPoint stock from Canusa's minority shareholders. At Toms' direction, Martorano identified herself as Red Lodge's corporate secretary and directed DecisionPoint's transfer agent to transfer 786,000 shares from Red Lodge to Edwardstone. Again at Toms' direction, Martorano subsequently deposited these shares into Edwardstone's Broker A account.

20. On September 29, 2009, Toms sent DecisionPoint's transfer agent a letter requesting that an additional 760,000 DecisionPoint shares then held by Canusa minority

shareholders be transferred to Edwardstone and sent to Martorano. On October 7, 2009, at Toms' direction, Martorano sent a letter to DecisionPoint's transfer agent identifying herself as Edwardstone's corporate secretary. Her letter directed the transfer agent to transfer 660,000 of these shares to Edwardstone's Broker A account. The shares were later deposited into the account.

21. In January and April 2010, approximately 554,500 additional DecisionPoint shares were deposited into Edwardstone's Broker A account.

22. On September 17, 2010, DecisionPoint issued 881,512 shares to Toms when he exercised certain DecisionPoint stock options. On September 28, 2010, Toms directed DecisionPoint's transfer agent to transfer these shares to an individual lender as collateral for a $70,000 loan to Toms. Toms later defaulted on the loan but nevertheless received some DecisionPoint shares back from the lender. On March 11, 2011, Toms had 365,000 of these returned shares deposited into Edwardstone's Broker A account.

23. In total, from June 2009 through March 2011, 2,365,500 shares of DecisionPoint stock passed through Edwardstone's Broker A account.

24. Between November 2009 and March 2011, Toms directed Martorano to sell all of the shares in thirty-four separate transactions. Edwardstone's proceeds from those sales totaled $898,705.74.

25. After each sale, Toms instructed Martorano to have Broker A wire the proceeds to the Edwardstone Bank Account. In total, Broker A wired virtually all of the proceeds, $897,593.76, to the Edwardstone Bank Account.

26. Toms controlled the Edwardstone Bank Account and treated it as his personal account.

27. Toms commingled the DecisionPoint stock sale proceeds with other deposits in the Edwardstone Bank Account.

28. Toms spent a substantial portion of the DecisionPoint stock sale proceeds on his own personal expenses. These expenses included transfers to Toms' personal checking account, home utility bills, home repair expenses, medical expenses, pet supplies, contributions for his daughter's trip to Italy, association fees for a club in the Bahamas, designer clothing, shoes, and health club dues.

G. DECISIONPOINT FILED MATERIALLY FALSE ANNUAL REPORTS AND TOMS FALSELY CERTIFIED THEIR ACCURACY

29. On March 31, 2010, DecisionPoint voluntarily filed an annual report on Form 10-K with the Commission for the year that had ended on December 31, 2009 (the "2009 10-K"). The 2009 10-K reported that Toms owned 3,521,170 DecisionPoint shares. It failed to report the additional 1,296,000 DecisionPoint shares Toms beneficially owned

through Edwardstone's Broker A account on December 31, 2009. The 2009 10-K therefore underreported Toms' ownership of DecisionPoint shares by over 36%.

30. Toms certified the accuracy of the 2009 10-K, while knowing it falsely underreported his beneficial ownership of DecisionPoint shares.

31. On March 16, 2011, DecisionPoint voluntarily filed a Form 10-K with the Commission for the year that ended on March 15, 2011 (the "2010 10-K"). The 2010 10-K reported that Toms owned 3,684,899 DecisionPoint shares. It failed to report the additional 524,512 shares that Toms beneficially owned through Edwardstone's Broker A account on March 15, 2011. The 2010 10-K therefore underreported Toms' ownership of DecisionPoint shares by over 14%.

32. Toms certified the accuracy of the 2010 10-K, while knowing it falsely underreported his beneficial ownership of DecisionPoint shares.

33. On December 22, 2011, DecisionPoint filed a Form 10-K-A amendment with the Commission for the year that ended on March 15, 2011 (the "2010 10-K-A"). Like the 2010 10-K, the 2010 10-K-A reported that Toms owned 3,684,899 DecisionPoint shares, when in fact he beneficially owned an additional 524,512 shares through Edwardstone's Broker A account on March 15, 2011. The 2010 10-K-A therefore underreported Toms' ownership of DecisionPoint shares by over 14%.

34. Toms certified the accuracy of the 2010 10-K-A, while knowing it falsely underreported his beneficial ownership of DecisionPoint shares.

35. The disclosures in the 2009 and 2010 10-Ks and the 2010 10-K-A not only materially understated Toms' beneficial ownership of DecisionPoint shares but also materially misrepresented that Toms had increased his holdings of DecisionPoint shares. In fact, he had significantly reduced them.

H. TOMS CONTINUED TO TRADE THROUGH A NOMINEE IN A SECOND EDWARDSTONE BROKERAGE ACCOUNT

36. In June 2011, Broker A sold its brokerage business to Broker B, another registered broker-dealer firm. Broker A transferred the Edwardstone brokerage account to Broker B. At the time, the account held 17,400 shares of DecisionPoint stock.

37. On June 16, 2011, the DecisionPoint shares in the new Broker B account were canceled pursuant to a reverse stock split and replaced with 2,175 new DecisionPoint shares.

38. Martorano continued serving as Edwardstone's nominal officer and taking direction from Toms on the Broker B account. At Toms' direction, Martorano placed Edwardstone's orders and directed Broker B to wire Edwardstone's DecisionPoint stock sale proceeds to the Edwardstone Bank Account.

39. On August 18 and October 21, 2011, Edwardstone sold 2000 and 160 shares, respectively, of DecisionPoint stock at Toms' direction.

40. On May 10, 2013, Edwardstone sold 10,000 shares of DecisionPoint stock, again at Toms' direction.

41. As of June 30, 2014, Edwardstone's Broker B account held 7,745 shares of DecisionPoint stock, worth approximately $3,500.

I. VIOLATIONS

42. As a result of the conduct described above, Toms violated, and Toms caused DecisionPoint's violation of, Section 10(b) of the Exchange Act and Rule 10b-5 thereunder, which make it unlawful for any person, directly or indirectly, to employ any device, scheme, or artifice to defraud, to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading, or to engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person, in connection with the purchase or sale of any security.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it appropriate that cease-and-desist proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations; and

B. Whether, pursuant to Section 21C of the Exchange Act, Respondent should be ordered to cease and desist from committing or causing violations of and any future violations of Section 10(b) of the Exchange Act and Rule 10b-5 thereunder, whether Respondent should be ordered to pay a civil penalty pursuant to Section 21B(a) of the Exchange Act, and whether Respondent should be ordered to pay disgorgement pursuant to Sections 21B(e) and 21C(e) of the Exchange Act.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened not earlier than 30 days and not later than 60 days from service of this Order at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 300 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

Release No. 3637 / February 11, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-15965

In the Matter of **CHILD, VAN WAGONER & BRADSHAW, PLLC, RUSSELL E. ANDERSON, CPA, and MARTY VAN WAGONER, CPA,** **Respondents.**	**ORDER MAKING FINDINGS AND IMPOSING REMEDIAL SANCTIONS PURSUANT TO SECTIONS 4C AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934 AND RULE 102(e) OF THE COMMISSION'S RULES OF PRACTICE**

I.

On July 8, 2014, the Securities and Exchange Commission ("Commission") instituted public administrative and cease-and-desist proceedings against Child, Van Wagoner & Bradshaw, PLLC ("CVB"), Russell E. Anderson, CPA ("Anderson"), and Marty Van Wagoner, CPA ("Van Wagoner") (collectively "Respondents"), pursuant to Sections 4C and 21C of the Securities Exchange Act of 1934 ("Exchange Act") and Rule 102(e)(1)(ii) of the Commission's Rules of Practice and also against CVB and Anderson pursuant to Rule 102(e)(1)(iii) of the Commission's Rules of Practice. Respondents have submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept.

II.

Solely for the purpose of settling these proceedings, and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, Respondents consent to the entry of this Order Making Findings and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offer, the Commission finds[1] that:

SUMMARY

1. Between March 2010 and June 2011, CVB, an accounting firm based in Salt Lake City, Utah, and Anderson and Van Wagoner, two of its partners, served as the independent auditors of Yuhe International, Inc. ("Yuhe"), a China-based company whose stock was previously registered with the Commission and traded on Nasdaq. These proceedings arise from Respondents' failures to comply with Public Company Accounting Oversight Board ("PCAOB") Auditing Standards ("PCAOB Standards") in their 2009 and 2010 audits of Yuhe. Among other failures, CVB and Anderson failed to: (a) properly plan the audits and supervise assistants; (b) properly assess audit risk and materiality; (c) properly consider fraud and illegal acts; and (d) act with due professional care. In his role as engagement quality review partner, Van Wagoner failed to act with due professional care because he was aware, or should have been aware, of audit deficiencies but did not address them. Additionally, by virtue of his failure to comply with professional standards during Yuhe's 2010 audit, Van Wagoner also violated the engagement quality review standard set forth in AS 7.

2. The Respondents' failures in the 2009 audit arose principally because CVB and Anderson effectively performed no audit work of their own and instead relied on the audit work papers of Yuhe's prior auditor which had begun the 2009 audit, but then abruptly resigned without completing it. Even though neither CVB nor Anderson planned, performed, or supervised the prior firm's audit work, they took that firm's work papers, performed at best a cursory review of them, and then issued an audit report containing an unqualified opinion on Yuhe's financial statements—all within only approximately three weeks of accepting the Yuhe engagement.

3. CVB and Anderson also performed a deficient audit of Yuhe's 2010 financial statements. During planning for the 2010 audit, CVB and Anderson assessed Yuhe as lacking effective internal controls such that no controls reliance could be utilized in performing the audit. Specifically, they documented within CVB's planning work papers that "the auditor is concerned about the risk of material misstatement" due to Yuhe's "inability to perform proper procedures necessary to produce a reliable financial statement." They also noted that Yuhe personnel appeared to lack the experience and ability to create financial statements using accounting principles generally accepted in the United States ("US GAAP"). Yet, despite this assessment, CVB and Anderson failed to implement auditing procedures that addressed the risks identified. They performed an audit based upon the basic audit procedures within their prescribed checklists without modification, failed to extend procedures to address the known risk of material misstatement, and relied heavily on management representations. They also failed to provide meaningful direction and supervision to the foreign audit staff CVB hired to perform fieldwork in China (hereafter, "Foreign Audit Staff"). Despite these deficiencies, and without the application of

[1] The findings herein are made pursuant to Respondents' Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

due professional care in his role as engagement quality reviewer, Van Wagoner provided his concurrence on the issuance of the audit report.

RESPONDENTS

4. Child, Van Wagoner & Bradshaw, PLLC, located during the pertinent period in Salt Lake City, Utah, is a Utah professional limited liability company and public accounting firm formerly registered with the PCAOB. CVB acted as Yuhe's independent auditor initially from March 12, 2008 to December 7, 2009, and then again from March 9, 2010 to June 17, 2011. CVB performed public company audits[2] of, and issued audit reports containing unqualified opinions on, the financial statements of Yuhe for Yuhe's fiscal years ending December 31, 2008, December 31, 2009, and December 31, 2010. CVB resigned as Yuhe's independent auditor on June 17, 2011, following public disclosure by Yuhe that a purported business acquisition by Yuhe had, in fact, never occurred. During the time of its Yuhe audits, CVB had four audit partners and two non-audit partners. CVB ceased to do public company audits as of August 1, 2012. CVB is no longer registered with the PCAOB, but remains "active" and in "good standing" in the records of the State of Utah Division of Corporations and Commercial Code.

5. Russell E. Anderson, age 53, is a Certified Public Accountant ("CPA") licensed to practice in Utah. Anderson served as CVB's engagement partner for the 2008, 2009, and 2010 Yuhe audits and was responsible for making all significant decisions regarding the engagements. During 2009 and 2010, Anderson was also CVB's "quality control partner." He is a resident of West Valley City, Utah.

6. Marty Van Wagoner, age 52, is a CPA licensed to practice in Utah. Van Wagoner served as CVB's engagement quality review partner for the 2008, 2009 and 2010 audits of Yuhe. He is a resident of Eagle Mountain, Utah.

RELEVANT ENTITY

7. Yuhe International, Inc. is a Nevada corporation whose principal offices are located in Weifang, Shandong Province, People's Republic of China.[3] Yuhe sells day-old chicken broilers, *i.e.*, chickens that are bred and raised for meat production, and claims to be the largest supplier of day-old broilers in China. All of Yuhe's operations are carried out in China. Its common stock was registered with the Commission pursuant to Section 12(b) of the Exchange Act, and was traded on the Nasdaq Capital Market. On October 20, 2010, Yuhe completed a registered public offering in the United States of more than four million shares of its common stock at a price of $7 per share, raising approximately $27 million. On July 21, 2011, Nasdaq suspended trading of Yuhe's common stock, and, on December 16, 2011, Nasdaq filed a Form 25 with the

[2] A public company audit is defined as an engagement to audit the financial statements of an "issuer" as that term is defined in Section 3(a)(8) of the Exchange Act.

[3] On October 18, 2013, the Commission filed a civil injunctive action against Yuhe and its Chief Executive Officer ("CEO"), alleging violations of the antifraud provisions of the Securities Act of 1933 and the Exchange Act, as well as the books and records, internal controls, and reporting provisions of the Exchange Act. *SEC v. Yuhe Int'l, Inc. and Gao Zhentao*, Civil Action No. 1:13-CV-01598-RCL (D.D.C., filed Oct. 18, 2013).

Commission to delist the common stock, which is now quoted on OTC Link. Yuhe's fiscal year ends on December 31.

FACTS

Background

8. CVB audited Yuhe's financial statements for its fiscal year ending December 31, 2008, and issued an audit report containing an unqualified opinion. In order to perform field work in China for this audit, CVB contracted with accounting personnel in a Shanghai, China independently owned member firm of an international public accounting network firm (hereafter, "Shanghai Office"). In conducting Yuhe's 2008 audit, CVB did not place any reliance on Yuhe's internal controls due to CVB's assessment that Yuhe's internal controls were ineffective. As a result, CVB conducted a fully substantive audit and did not reduce any substantive testing in its audit procedures based upon assessment or testing of internal controls.

9. CVB continued its engagement as Yuhe's auditor for Yuhe's 2009 fiscal year, and conducted interim reviews of Yuhe's financial statements for that fiscal year's first, second, and third quarters. However, in late 2009 during Yuhe's fourth fiscal quarter, the Shanghai Office was acquired by another international public accounting firm (hereafter, the "Acquiring Firm").

10. Following this acquisition, on December 7, 2009, the Audit Committee of Yuhe's Board of Directors appointed the Acquiring Firm as Yuhe's independent auditor. Under the engagement agreement, the Acquiring Firm was to perform the 2009 year-end audit and opine on the 2009 financial statements. Thereafter, from December 2009 through February 2010, the individuals who were formerly the Shanghai Office personnel working on Yuhe's audits, but now employees of the Acquiring Firm, planned and executed the Yuhe audit under the Acquiring Firm's supervision and in accordance with the Acquiring Firm's audit approach.

11. During its audit procedures and fieldwork, the Acquiring Firm identified in Yuhe's books and records, as of February 2010, ongoing related party transactions which Yuhe had earlier asserted in a public filing would be discontinued by December 31, 2009. In the prior year, Yuhe's management had concluded that the related party transactions constituted violations of Section 402 of the Sarbanes-Oxley Act of 2002 and that a material weakness existed over the lack of review and approval of related party loans, due to Yuhe's management permitting these transactions without Board of Director approval. On March 5, 2010, the Acquiring Firm resigned from the engagement, and Yuhe's Form 8-K filing cited the prohibited related party loan, the material weakness over the review and approval of such loans, and a material weakness related to Yuhe's inability to properly close its books as the reasons for the Acquiring Firm's resignation. At the time of its resignation, the Acquiring Firm's audit field work for the 2009 audit of Yuhe was incomplete.

12. Yuhe's due date for filing its 2009 Form 10-K with the Commission was March 31, 2010, less than a month after the Acquiring Firm's resignation. With such a short time period before its filing deadline, Yuhe approached CVB to return as its independent auditor and complete the 2009 audit. Respondents accepted Yuhe's request and, on March 9, 2010, CVB re-engaged as

Yuhe's independent auditor. Only twenty-one days later, on March 30, 2010, Anderson, with Van Wagoner's concurrence, issued CVB's audit report containing an unqualified opinion on Yuhe's financial statements for the 2009 fiscal year.

CVB and Anderson's 2009 Audit of Yuhe

13. Auditing standards require an auditor to adequately plan and perform an audit and properly supervise assistants. AU § 311.01.[4] Audit planning involves developing an overall strategy for the expected conduct and scope of the audit. The nature, extent, and timing of planning vary with the size and complexity of the entity, experience with the entity, and knowledge of the entity's business. In planning the audit, the auditor should consider, among other matters, the entity's business, accounting policies and procedures, and planned assessed level of control risk. AU § 311.03. Supervision involves directing the efforts of assistants who are involved in accomplishing the objectives of the audit and determining whether those objectives are accomplished. AU § 311.01, .11-.13. Elements of supervision include, among others, instructing assistants, keeping informed of significant problems encountered, and reviewing the work performed. AU § 311.11-.13.

14. After reengaging as Yuhe's auditor for the 2009 audit, CVB and Anderson did not perform their own audit of Yuhe. Instead, CVB and Anderson sought and obtained the audit work papers of the Acquiring Firm from its incomplete fieldwork for the short period it was Yuhe's auditor. Between approximately March 9 and March 30, 2010, CVB's acting audit manager for the 2009 Yuhe audit, a senior associate at CVB who was not a CPA, collected and reviewed the incomplete audit work papers of the Acquiring Firm. The acting audit manager did not request that any additional audit procedures be performed, and did not provide review notes for additional clarification or documentation to be added to the substantive audit procedures. In fact, no additional meaningful substantive audit procedures were performed for the Yuhe audit by CVB or Anderson or anyone acting at their direction.

15. As a result of not performing their own audit of Yuhe, neither CVB nor Anderson participated in the planning, execution, or supervision of any audit procedures performed for Yuhe's 2009 audit. Neither CVB nor Anderson formulated a specific audit plan for Yuhe's 2009 audit, or conducted formal audit planning meetings. Moreover, neither CVB nor Anderson made sufficient inquiry into Yuhe's business, recent developments, accounting policies and procedures, or control risk. Additionally, CVB and Anderson did not provide direction or guidance to the accounting staff in China who performed the audit field work.

16. The auditor should consider audit risk and materiality both in (a) planning the audit and designing auditing procedures and (b) evaluating whether the financial statements taken as a whole are presented fairly, in all material respects, in conformity with generally accepted accounting principles. The auditor should consider audit risk and materiality in the first circumstance to obtain sufficient competent evidential matter on which to properly evaluate the financial statements in the second circumstance. AU § 312.12.

---

[4] References to auditing standards in this Order are to PCAOB Standards in effect at the time the audit work was performed.

17. As a result of not performing their own audit of Yuhe, neither CVB nor Anderson participated in assessing audit risk or materiality for Yuhe's 2009 audit. CVB and Anderson simply accepted the assessment of materiality that the Acquiring Firm had documented without any consideration of how the amounts were established or if those amounts were appropriate. As part of the work that CVB and Anderson had done for the quarterly reviews, there was no planning or assessments documented that correspond to the procedures that were ultimately performed.

18. The audit approach used by the Acquiring Firm for Yuhe's 2009 audit differed significantly from that of CVB and Anderson's audit approach in the 2008 audit of Yuhe. For the 2009 audit, the Acquiring Firm's audit approach contemplated an intended reliance on Yuhe's internal controls which, if effective, would have allowed the Acquiring Firm to reduce its substantive testing. However, for the 2008 audit, CVB and Anderson had assessed Yuhe's internal control over financial reporting as weak to the point of planning to obtain no audit comfort from testing them. Further, the testimony of Anderson shows that he and CVB continued to place no reliance on controls for the 2009 audit. When CVB re-engaged as Yuhe's auditor, CVB and Anderson failed to adjust the audit approach used by the Acquiring Firm, or explain in their work papers why reliance on Yuhe's internal controls was appropriate.

19. Auditing standards require an auditor to plan and perform an audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud. AU § 316.01. Among other things, members of the audit team should discuss the potential for material misstatement due to fraud. Discussions should include an exchange of ideas or "brainstorming" among the audit team members, including the auditor with final responsibility for the audit, about how and where they believe the entity's financial statements might be susceptible to material misstatement due to fraud, how management could perpetrate and conceal fraudulent financial reporting, and how assets of the entity could be misappropriated. AU § 316.14. Auditing standards require an auditor to make inquiries of management and others within the entity to obtain their views about the risks of fraud and how they are addressed. AU §316.14-.27.

20. By not planning or performing the 2009 audit of Yuhe, CVB and Anderson did not seek to obtain reasonable assurance that Yuhe's financial statements were free of material misstatement, whether by error or fraud. CVB and Anderson did not consider the risks of material misstatement due to fraud at Yuhe, did not meet to discuss the susceptibility of Yuhe's financial statements to material misstatement due to fraud, and did not inquire of Yuhe management or its employees about fraud in connection with CVB and Anderson's issuance of its 2009 audit report.

21. AU § 317 notes that audit procedures applied for the purpose of forming an opinion on the financial statements may bring possible illegal acts to the auditor's attention. Examples of these procedures include reading minutes; inquiring of the client's management and legal counsel concerning litigation, claims, and assessments; and performing substantive tests of details of transactions or balances. Auditing standards require an auditor to make inquiries of management concerning the client's compliance with laws and regulations, including, where applicable, the client's policies relative to the prevention of illegal acts. AU § 317.08.

22. There is no documentary evidence suggesting any inquiries by CVB or Anderson of Yuhe's management concerning Yuhe's policies related to the prevention of illegal acts and compliance with laws and regulations. Here, such inquiries would have been appropriate, given (i) the resignation of the prior auditor; (ii) the continued existence of prohibited loans; (iii) the number and type of audit adjustments included in the Acquiring Firm's incomplete audit work papers that CVB obtained, which indicated a lack of knowledge within Yuhe of financial reporting practices common to the United States; (iv) the weak or non-existent control environment; and (v) the use of personal bank accounts for Yuhe payments, which would have indicated higher risk and potentially triggered additional procedures and inquiries.

23. Auditing standards also require an auditor to consider the risks surrounding related party transactions. AU § 334. An auditor should obtain an understanding of management responsibilities, the relationship of each component to the total entity, the business purpose served by the various components of the entity, and the controls over management activities. AU § 334.05. After identifying related party transactions, the auditor should apply the procedures he considers necessary to obtain satisfaction concerning the purpose, nature, and extent of these transactions and their effect on the financial statements. The procedures should be directed toward obtaining and evaluating sufficient competent evidential matter and should extend beyond inquiry of management. AU § 334.09.

24. CVB and Anderson did not consider the risks surrounding related party transactions during the 2009 Yuhe audit. Instead, CVB and Anderson relied upon work performed and assessments made by the Acquiring Firm whose work papers were incomplete. CVB and Anderson did not inquire of management independently as part of their audit, nor did they hold any discussions with the Audit Committee concerning related party transactions.

25. Under auditing standards, the observation of inventories is mandated as a generally accepted auditing procedure. AU § 331.01. CVB and Anderson did not perform an inventory observation during the 2009 audit of Yuhe. An inventory observation was done by the Acquiring Firm. Moreover, when the Acquiring Firm performed the observation, it only performed limited counts because it placed some reliance on Yuhe's internal controls relating to inventory.

26. Auditing standards require auditors to exercise due professional care throughout the audit. AU § 230. Due professional care requires that the auditor exercise professional skepticism, which means a questioning mind and a critical assessment of audit evidence. Moreover, gathering and objectively evaluating audit evidence requires the auditor to consider the competency and sufficiency of the evidence. Since evidence is gathered and evaluated throughout the audit, professional skepticism should be exercised throughout the audit process. By failing to adhere to the auditing standards set forth above, CVB and Anderson failed to exercise due professional care during the 2009 Yuhe audit.

27. Van Wagoner, as engagement quality review partner, also failed to exercise due professional care in Yuhe's 2009 audit. Van Wagoner had responsibility for reviewing the audit work for the 2009 audit. He was aware that CVB and Anderson had not planned, conducted, or supervised an audit of Yuhe and had instead taken, and were relying upon, the work papers of a different audit firm. Despite having this knowledge, Van Wagoner concurred in CVB's issuance

of an audit report containing an unqualified opinion on Yuhe's financial statements for fiscal year 2009.

28. Under the third standard of field work, sufficient competent evidential matter is to be obtained through inspection, observation, inquiries, and confirmations to afford a reasonable basis for an opinion regarding the financial statements under audit. AU § 326.01. CVB and Anderson did not contribute or provide supervision in the inspection, observation, inquiry, or confirmation processes of the 2009 audit of Yuhe—all of which were done by the Acquiring Firm.

29. Audit documentation is the written record of the basis for the auditor's conclusions that provides the support for the auditor's representations in the auditor's report. Audit documentation also is the basis for the review of the quality of the work because it provides the reviewer with written documentation of the evidence supporting the auditor's significant conclusions. Among other things, audit documentation includes records of the planning and performance of the work, the procedures performed, evidence obtained, and conclusions reached by the auditor. AS 3, ¶ 2.

30. CVB and Anderson failed to properly document the 2009 audit. They failed to document how they accepted and utilized the work of another firm, how they were able to supervise assistants performing audit procedures before CVB was engaged on the audit, how they obtained evidence, and how they reached conclusions.

31. Obtaining representations from management is required for audits performed in accordance with PCAOB Standards, as outlined in AU § 333. While such representations are part of the evidence obtained by an independent auditor, they cannot substitute for the application of the auditing procedures needed to afford a reasonable basis for an opinion regarding the financial statements under audit. AU § 333.02. In the 2009 audit of Yuhe, CVB and Anderson obtained written representations without applying auditing procedures which would have been necessary to form a basis for their opinion.

CVB and Anderson's 2010 Audit of Yuhe

32. Yuhe engaged CVB to conduct an audit of its 2010 financial statements. CVB and Anderson documented that Yuhe presented a significant risk of material misstatement because Yuhe lacked the ability to perform the proper procedures necessary to produce reliable financial statements, and Yuhe personnel lacked the experience and ability to create financial statements in accordance with US GAAP, understand Yuhe's transactions, and account for them properly. Accordingly, citing a weak controls environment, CVB and Anderson planned their audit assuming no controls reliance.

33. For the 2010 audit, CVB *increased* the planning materiality threshold to over 230% of the prior year's number, even though CVB and Anderson continued to believe that they could not rely on Yuhe's internal controls and there was not a proportionate increase in net income. Additionally, CVB and Anderson did not document their rationale for increasing materiality in 2010.

34. Despite assessing a weak controls environment, CVB and Anderson's approach to the audit consisted mostly of a perfunctory completion of checklists and certain substantive testing procedures, along with a review of those checklists by CVB and Anderson and did not include a proper consideration of risk and materiality.

35. For the 2010 Yuhe audit, CVB and Anderson contracted with personnel in China to perform fieldwork on CVB's behalf. However, CVB and Anderson did not play a substantive role in audit supervision and, instead, sent checklists to the Foreign Audit Staff to use without specific instructions, detailed work plans, or appropriate modifications based on identified risks. CVB and Anderson failed to provide the Foreign Audit Staff specific guidance on the procedures to be performed, the audit objectives to be accomplished, or the need to maintain proper audit documentation in accordance with AU § 311 and AS 3.

36. CVB's audit manager gave the work papers created by the Foreign Audit Staff only a cursory review with no follow up or substantive dialogue as to their content or findings. Neither CVB nor Anderson questioned the substantive work performed by the Foreign Audit Staff or provided any review comments or requests for additional procedures. CVB and Anderson failed to comply with the provisions of AU § 311 as outlined in paragraph 13.

37. Whenever the auditor has concluded that there is significant risk of material misstatement of the financial statements, the auditor should consider this conclusion in determining the nature, timing, or extent of procedures; assigning staff; or requiring appropriate levels of supervision. The knowledge, skill, and ability of personnel assigned significant engagement responsibilities should be commensurate with the auditor's assessment of the level of risk for the engagement. Ordinarily, higher risk requires more experienced personnel or more extensive supervision by the auditor with final responsibility for the engagement during both the planning and the conduct of the engagement. Higher risk may cause the auditor to expand the extent of procedures applied, apply procedures closer to or as of year end, particularly in critical audit areas, or modify the nature of procedures to obtain more persuasive evidence. AU § 312.17.

38. CVB and Anderson documented during the fraud risk discussion concerns about the risk of material misstatement due to Yuhe's inability to perform proper procedures necessary to produce reliable financial statements. Despite CVB and Anderson having assessed Yuhe's internal controls as ineffective and its personnel as lacking in experience to produce US GAAP financial statements, CVB and Anderson failed to properly consider the risk of material misstatement and design appropriate audit procedures to address the identified risks.

39. CVB and Anderson failed to properly consider the possibility of fraud or modify and extend the audit procedures based on such considerations in 2010. CVB and Anderson also identified as a risk the use of personal bank accounts to transact company business and the risk of personal funds being intermingled with business funds. To address the risk identified, CVB and Anderson assigned two Hong Kong based individuals on the Foreign Audit Staff to perform procedures to address these risks. However, neither CVB nor Anderson supervised or reviewed the procedures carried out by these two individuals. AU § 312.17 states that higher risk requires more experienced personnel or more extensive supervision by the auditor with final

responsibility for the engagement during both the planning and the conduct of the engagement. AU § 316.01 requires an auditor to plan and perform an audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud. By not properly addressing the risks that were identified, or supervising the staff assigned to the task, CVB and Anderson failed to properly consider and address the risk associated with fraud on the financial statements.

40. Even though CVB and Anderson assessed Yuhe's internal controls as ineffective and its personnel as lacking in experience to produce US GAAP financial statements, CVB and Anderson relied on discussions with management by the Foreign Audit Staff and on evidence supplied by management throughout their audit as their sole basis for audit evidence in certain areas. CVB and Anderson's overreliance on management's representations, especially in light of their assessment of management's abilities, was inappropriate. While such representations from management are part of the evidential matter the independent auditor obtains, they are not a substitute for the application of those auditing procedures necessary to afford a reasonable basis for an opinion regarding the financial statements under audit. AU § 333.02.

41. In late March 2011, CVB and Anderson completed Yuhe's 2010 audit and issued an audit report containing an unqualified opinion on Yuhe's financial statements for fiscal year 2010.

42. Under the auditing standard governing engagement quality review which was effective for Yuhe's 2010 audit, the engagement quality reviewer should evaluate the significant judgments made by the engagement team and the related conclusions reached in forming the overall conclusion on the engagement and in preparing the engagement report. AS 7, ¶ 9. The engagement quality reviewer should evaluate the significant judgments that relate to engagement planning, including the consideration of the auditing firm's recent engagement experience with the company and risks identified in connection with the firm's client acceptance and retention process, the consideration of the company's business, recent significant activities, and related financial reporting issues and risks, and the judgments made about materiality and the effect of those judgments on the engagement strategy. AS 7, ¶ 10. To evaluate such judgments and conclusions, the engagement quality reviewer should, to the extent necessary to satisfy the requirements, hold discussions with the engagement partner and other members of the engagement team and review documentation. AS 7, ¶ 9. In an audit, the firm may grant permission to the client to use the engagement report only after the engagement quality reviewer provides concurring approval of issuance. AS 7, ¶ 13.

43. Van Wagoner failed to fulfill the requirements of AS 7 for Yuhe's 2010 audit. Specifically, the work papers do not evidence any communications between the audit team and Van Wagoner throughout the year or during the audit process. The emails among team members show that the vast majority of Van Wagoner's communications appear perfunctory and lacking in substantive information or commentary. There is no evidence that he reviewed or evaluated the audit planning process, the assessment of materiality, or the consideration and assessment of fraud risks in a manner that would fulfill professional responsibilities.

Yuhe's Public Offering and Fraud

44. On June 2, 2010, Yuhe filed its Form S-3 Registration Statement and Prospectus with the Commission, which became effective on June 23, 2010. On October 19, 2010, Yuhe filed its Preliminary Prospectus Supplement, and, on October 20, 2010, it filed its Final Prospectus Supplement. CVB's audit report containing an unqualified opinion for 2009 was included in those filings, as each incorporated Yuhe's 2009 Form 10-K. From October 20, 2010 to November 2, 2010, Yuhe conducted a public offering, selling 4.14 million newly issued shares of common stock at a price of $7.00 per share, and receiving net proceeds in excess of $27 million.

45. On December 31, 2009, and January 4, 2010, Yuhe filed Forms 8-K announcing that on December 24, 2009, it had entered into an agreement with Waifang Dajiang Corporation to purchase thirteen breeder farms for an aggregate price of approximately $15.2 million. Prior to the acquisition, Yuhe owned only fourteen breeder farms, which meant the acquisition would increase Yuhe's capacity by 60%. From January 2010 through June 2011, in press releases and filings with the Commission, Yuhe provided numerous updates concerning the status of the acquired farms. However, on June 17, 2011, Yuhe hosted a conference call during which Yuhe disclosed for the first time that the acquisition had never been completed and that the funds had, instead, been placed in a private account controlled by the CEO. On the same day shortly after the conference call, CVB resigned as Yuhe's independent auditor, stating that reliance should no longer be placed on its previously issued audit report for 2010.

VIOLATIONS

Section 4C of the Exchange Act and Rule 102(e) of the Commission's Rules of Practice

46. As a result of the conduct described above, Respondents engaged in improper professional conduct within the meaning of Section 4C(a)(2) of the Exchange Act and Rule 102(e)(1)(ii) of the Commission's Rules of Practice. Section 4C(a)(2) of the Exchange Act and Rule 102(e)(1)(ii) provide, in pertinent part, that the Commission may censure or deny, temporarily or permanently, the privilege of appearing or practicing before the Commission to any person who is found by the Commission to have engaged in improper professional conduct. Section 4C(b) and Rule 102(e)(1)(iv) define improper professional conduct with respect to persons licensed to practice as accountants.

47. Under Section 4C(b) and Rule 102(e)(1)(iv)(B), the term "improper professional conduct" means one of two types of negligent conduct: (1) a single instance of highly unreasonable conduct in circumstances for which heightened scrutiny is warranted; or (2) repeated instances of unreasonable conduct that indicate a lack of competence.

48. Respondents' failures to abide by PCAOB Standards during the 2009 and 2010 Yuhe audits constitute repeated instances of unreasonable conduct. Additionally, the actions of CVB and Anderson during the 2009 Yuhe audit constitute a single instance of highly unreasonable conduct in circumstances in which heightened scrutiny was warranted. As a result, the Respondents have demonstrated a lack of competence to practice before the Commission.

49. As a result of the conduct described above, CVB willfully violated and Anderson willfully aided and abetted CVB's violations of Section 10A(a)(1) and (2) of the Exchange Act and Rule 2-02(b)(1) of Regulation S-X within the meaning of Section 4C(a)(3) of the Exchange Act and Rule 102(e)(1)(iii) of the Commission's Rules of Practice. Section 4C(a)(3) of the Exchange Act and Rule 102(e)(1)(iii) of the Commission's Rules of Practice provide, in pertinent part, that the Commission may censure or deny, temporarily or permanently, the privilege of appearing or practicing before the Commission to any person who is found by the Commission to have willfully violated, or willfully aided and abetted the violation of, any provision of the securities laws or the rules and regulations issued thereunder.

CVB Violated and Anderson Caused CVB's Violations of Section 10A(a)(1) and (2) of the Exchange Act and Rule 2-02(b)(1) of Regulation S-X

50. Under Section 21C of the Exchange Act, the Commission may enter a cease and desist order against any person who commits a violation or is or was a "cause" of another's primary violation if the person knew or should have known that his act or omission would contribute to the primary violation. Negligence is sufficient to establish "causing" liability under Section 21C of the Exchange Act when a person is alleged to have caused a primary violation that does not require scienter. *See KPMG LLP v. SEC*, 289 F.3d 109, 112 (D.C. Cir. 2002).

51. Sections 10A(a)(1) and (2) of the Exchange Act require that each audit of the financial statements of an issuer by a registered public accounting firm must include, in accordance with generally accepted auditing standards ("GAAS"), procedures designed to detect illegal acts and identify related party transactions that are material to the financial statements. "[R]eferences in Commission rules and staff guidance and in the federal securities laws to GAAS or to specific standards under GAAS, as they relate to issuers, should be understood to mean the standards of the PCAOB plus any applicable rules of the Commission." *See* SEC Release No. 34-49708 (May 14, 2004).

52. As a result of the conduct described above, CVB violated Sections 10A(a)(1) and (2) of the Exchange Act by not designing procedures to detect illegal acts and identify related party transactions that were material to the financial statements, and Anderson caused CVB's violations of Sections 10A(a)(1) and (2) of the Exchange Act.

53. Rule 2-02(b)(1) of Regulation S-X requires an accountant's report to state whether the audit was made in accordance with generally accepted auditing standards. "Thus, an auditor violates Regulation S-X Rule 2-02(b)(1) if it issues a report stating that it had conducted its audit in accordance with PCAOB Standards when it had not." *See In re Andrew Sims*, CPA, Rel. No.34-59584, AAER No. 2950 (Mar. 17, 2009).

54. As a result of the conduct described above, CVB violated Rule 2-02(b)(1) of Regulation S-X by issuing an audit report stating that it had conducted its audit in accordance with PCAOB Standards when it had not, and Anderson caused CVB's violation of, Rule 2-02(b)(1) of Regulation S-X.

FINDINGS

55. Based on the foregoing, the Commission finds that Respondents engaged in improper professional conduct within the meaning of Section 4C(a)(2) of the Exchange Act and Rule 102(e)(1)(ii) of the Commission's Rules of Practice.

56. Based on the foregoing, the Commission finds that CVB willfully violated and Anderson willfully aided and abetted CVB's violations of Sections 10A(a)(1) and (2) of the Exchange Act and Rule 2-02(b)(1) of Regulation S-X within the meaning of Section 4C(a)(3) of the Exchange Act and Rule 102(e)(1)(iii) of the Commission's Rules of Practice.

57. Based on the foregoing, the Commission finds that CVB violated Sections 10A(a)(1) and (2) of the Exchange Act, and Anderson caused CVB's violations of Sections 10A(a)(1) and (2) of the Exchange Act.

58. Based on the foregoing, the Commission finds that CVB violated Rule 2-02(b)(1) of Regulation S-X, and Anderson caused CVB's violation of Rule 2-02(b)(1) of Regulation S-X.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in the Respondents' Offer.

Accordingly, it is hereby ORDERED that:

A. CVB shall cease and desist from committing or causing any violations and any future violations of Sections 10A(a)(1) and (2) of the Exchange Act.

B. CVB shall cease and desist from committing or causing any violations and any future violations of Rule 2-02(b)(1) of Regulation S-X.

C. CVB is denied the privilege of appearing or practicing before the Commission as an accountant.

D. Anderson shall cease and desist from committing or causing any violations and any future violations of Sections 10A(a)(1) and (2) of the Exchange Act.

E. Anderson shall cease and desist from committing or causing any violations and any future violations of Rule 2-02(b)(1) of Regulation S-X.

F. Anderson is denied the privilege of appearing or practicing before the Commission as an accountant. After three years from the date of this Order, Anderson may request that the Commission consider his reinstatement by submitting an application (attention: Office of the Chief Accountant) to resume appearing or practicing before the Commission as:

1. a preparer or reviewer, or a person responsible for the preparation or review, of any public company's financial statements that are filed with the Commission. Such an application must satisfy the Commission that Anderson's work in his practice before the Commission will be reviewed either by the independent audit committee of the public company for which he works or in some other acceptable manner, as long as he practices before the Commission in this capacity; and/or

2. an independent accountant. Such an application must satisfy the Commission that:

(a) Anderson, or the public accounting firm with which he is associated, is registered with the PCAOB in accordance with the Sarbanes-Oxley Act of 2002, and such registration continues to be effective;

(b) Anderson, or the registered public accounting firm with which he is associated, has been inspected by the PCAOB and that inspection did not identify any criticisms of or potential defects in Anderson's or the firm's quality control system that would indicate that the respondent will not receive appropriate supervision;

(c) Anderson has resolved all disciplinary issues with the PCAOB, and has complied with all terms and conditions of any sanctions imposed by the PCAOB (other than reinstatement by the Commission); and

(d) Anderson acknowledges his responsibility, as long as Anderson appears or practices before the Commission as an independent accountant, to comply with all requirements of the Commission and the PCAOB, including, but not limited to, all requirements relating to registration, inspections, concurring partner reviews and quality control standards.

G. The Commission will consider an application by Anderson to resume appearing or practicing before the Commission provided that his state CPA license is current and he has resolved all other disciplinary issues with the applicable state boards of accountancy. However, if state licensure is dependent on reinstatement by the Commission, the Commission will consider an application on its other merits. The Commission's review may include consideration of, in addition to the matters referenced above, any other matters relating to Anderson's character, integrity, professional conduct, or qualifications to appear or practice before the Commission.

H. CVB and Anderson shall pay, jointly and severally, disgorgement of $78,000 and prejudgment interest of $12,506.81, and Anderson shall pay a civil money penalty in the amount of $40,000, within 60 days of the entry of this Order, to the United States Treasury. If timely payment is not made, additional interest shall accrue pursuant to 31 U.S.C. § 3717. Payment must be made in one of the following ways:

(1) Respondents may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

(2) Respondents may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-deliver or mail to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying CVB and/or Anderson as Respondents in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Edward G. Sullivan, Senior Trial Counsel, Division of Enforcement, 950 East Paces Ferry Road, N.E., Suite 900, Atlanta, Georgia 30326.

I. Van Wagoner is denied the privilege of appearing or practicing before the Commission as an accountant. After three years from the date of this Order, Van Wagoner may request that the Commission consider his reinstatement by submitting an application (attention: Office of the Chief Accountant) to resume appearing or practicing before the Commission as:

1. a preparer or reviewer, or a person responsible for the preparation or review, of any public company's financial statements that are filed with the Commission. Such an application must satisfy the Commission that Van Wagoner's work in his practice before the Commission will be reviewed either by the independent audit committee of the public company for which he works or in some other acceptable manner, as long as he practices before the Commission in this capacity; and/or

2. an independent accountant. Such an application must satisfy the Commission that:

(a) Van Wagoner, or the public accounting firm with which he is associated, is registered with the PCAOB in accordance with the Sarbanes-Oxley Act of 2002, and such registration continues to be effective;

(b) Van Wagoner, or the registered public accounting firm with which he is associated, has been inspected by the PCAOB and that inspection did not identify any criticisms of or potential defects in Van Wagoner's or the firm's quality control system that would indicate that the respondent will not receive appropriate supervision;

(c) Van Wagoner has resolved all disciplinary issues with the PCAOB, and has complied with all terms and conditions of any sanctions imposed by the PCAOB (other than reinstatement by the Commission); and

(d) Van Wagoner acknowledges his responsibility, as long as Van Wagoner appears or practices before the Commission as an independent accountant, to comply with all requirements of the Commission and the PCAOB, including, but not limited to, all requirements relating to registration, inspections, concurring partner reviews and quality control standards.

J. The Commission will consider an application by Van Wagoner to resume appearing or practicing before the Commission provided that his state CPA license is current and he has resolved all other disciplinary issues with the applicable state boards of accountancy. However, if state licensure is dependent on reinstatement by the Commission, the Commission will consider an application on its other merits. The Commission's review may include consideration of, in addition to the matters referenced above, any other matters relating to Van Wagoner's character, integrity, professional conduct, or qualifications to appear or practice before the Commission.

UNITED STATES OF AMERICA
Before the
SECURITIES AND EXCHANGE COMMISSION

INVESTMENT COMPANY ACT OF 1940
Release No. 31455 / February 12, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16385

In the Matter of **Water Island Capital LLC,** **Respondent.**	**ORDER INSTITUTING CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTION 9(f) OF THE INVESTMENT COMPANY ACT OF 1940, MAKING FINDINGS, AND IMPOSING A CEASE-AND-DESIST ORDER**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 9(f) of the Investment Company Act of 1940 against Water Island Capital LLC ("Water Island" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over it and the subject matter of these proceedings, which are admitted, Respondent consents to the entry of this Order Instituting Cease-and-Desist Proceedings Pursuant to Section 9(f) of the Investment Company Act of 1940, Making Findings, and Imposing a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that

1. Water Island, founded in 2000 and based in New York, New York, is, and at all times relevant herein has been, a registered investment adviser with the Securities and Exchange Commission. Water Island currently serves as the investment adviser to several registered open-

end management investment companies, commonly known as mutual funds. Water Island, which currently manages approximately $3.5 billion in assets, engages in specialized trading strategies including, among others, merger arbitrage.[1] To carry out its strategies, Water Island trades equities and derivatives including swaps. Because of the trading strategies employed by Water Island, the investment companies managed by it (the "Funds") are commonly referred to as alternative mutual funds.

2. All registered investment companies are subject to the Investment Company Act of 1940 ("Investment Company Act") and the rules and regulations thereunder [15 U.S.C. § 80a-1 *et seq*.]. Investment companies, as defined by statute, are "affected with a national public interest."

3. A focus of the Investment Company Act is to protect investment company assets.

4. The Investment Company Act requires all registered management investment companies to comply with strict rules governing custody of fund assets. The Funds maintained custody with a qualified bank. Section 17(f)(5) of the Investment Company Act generally provides that if an investment company maintains its securities and similar investments in the custody of a qualified bank, the cash proceeds from the sale of such securities and similar investments and other cash assets of the investment company shall likewise be kept in the custody of such a bank. In accordance with this section, the Funds' compliance procedures during at least 2012 – which designated Water Island with the responsibility for overseeing compliance with the Funds' custody requirements – provided that each Fund "shall maintain its securities and similar investments, the cash proceeds from the sale of such securities and similar investments and other cash assets … in the custody of a qualified bank."

5. From at least January to September 2012, however, Water Island did not ensure that certain assets of the Funds were maintained in the custody of the Funds' qualified bank. The Funds' broker-dealer counterparties instead held assets consisting of roughly $247 million in cash collateral. Water Island caused the Funds to post the contractually required cash collateral relating to certain total return and portfolio return swaps. Water Island did not ensure the transfer of these assets to the Funds' qualified bank as required by Section 17(f)(5) of the Investment Company Act and the Funds' policies and procedures.[2]

6. The Investment Company Act and its rules provide further protections for fund assets, including provisions governing the use of fund assets to pay broker-dealers and others for the sale or distribution of fund shares.

---

1 Merger arbitrage frequently involves purchasing shares of an announced acquisition target company at a discount to their expected value upon completion of the merger.

2 The cash collateral could have, for example, been maintained with the Funds' custodian bank subject to a tripartite agreement, that is, a three-way agreement between the custodial bank, the counterparty, and the Fund. These agreements are standard industry practice.

7. Use of fund brokerage, or amounts used to effect portfolio securities transactions, to pay for expenses related to the distribution of fund shares implicates Rule 12b-1 under the Investment Company Act. While fund advisers choose which broker or dealer will effect securities transactions on behalf of a fund, fund brokerage is an asset of the fund. Rule 12b-1 under the Investment Company Act regulates the use of fund assets to pay for distribution expenses, and Section 12(b) of the Investment Company Act prohibits funds from distributing their own shares (except through a principal underwriter) in contravention of Commission rules. Under Rule 12b-1(h), funds are prohibited from compensating a broker-dealer for promoting or selling fund shares by directing brokerage transactions to that broker. Rule 12b-1(h) recognizes, however, that for some portfolio transactions, the broker-dealer that can provide best execution may also sell the fund's shares.[3] Therefore, a fund is permitted to direct fund portfolio transactions to brokers that sell fund shares only if the fund or its adviser has implemented policies and procedures reasonably designed to, among other things, ensure that the selection of brokers for portfolio securities transactions is not influenced by considerations about the sale of shares of that or any other fund.

8. The Funds' policies and procedures concerning Rule 12b-1(h) were not implemented following their adoption. As required by the relevant policies and procedures concerning Rule 12b-1(h), Water Island had the responsibility for implementing the policies and procedures designed to ensure that any broker selected to execute securities transactions was chosen in accordance with the Rule. Water Island failed to create and maintain an approved list of executing brokers for the Funds pursuant to the Rule 12b-1(h) policies and procedures, and also failed to maintain documentation reflecting monitoring of the Funds' compliance with the Rule 12b-1(h) policies and procedures, as required by the policies and procedures themselves.

9. As a result of the conduct described above, Water Island caused the Funds to violate Sections 12(b) and 17(f) of, and Rule 12b-1(h) under, the Investment Company Act.

10. Rule 38a-1 under the Investment Company Act requires registered investment companies to adopt and implement written policies and procedures reasonably designed to prevent violations of the federal securities laws, and to review those policies and procedures at least annually for their adequacy and the effectiveness of their implementation. As described above, the Funds violated Section 17(f) of the Investment Company Act and did not implement their policies and procedures concerning Section 17(f) of, as well as Rule 12b-1(h) under, the Investment Company Act. As a result, the Funds violated Rule 38a-1 under the Investment Company Act, and Water Island caused the Funds' violations of Rule 38a-1 under the Investment Company Act.

---

3 Prohibition on the Use of Brokerage Commissions to Finance Distribution, Investment Company Act Rel. No. 26591 (Sept. 2, 2004) at Section II.B.

Remedial Efforts

In determining to accept the Offer, the Commission considered remedial acts promptly undertaken by Respondent and cooperation afforded the Commission staff.

IV.

In view of the foregoing, the Commission deems it appropriate to impose the sanctions agreed to in Respondent's Offer.

Accordingly, pursuant to Section 9(f) of the Investment Company Act, it is hereby ORDERED that:

A. Respondent cease and desist from committing or causing any violations and any future violations of Sections 12(b) and 17(f) of the Investment Company Act, and Rules 12b-1 and 38a-1 promulgated under the Investment Company Act.

B. Respondent shall, within ten days of the entry of this Order, pay a civil money penalty in the amount of $50,000 to the Securities and Exchange Commission. If timely payment is not made, additional interest shall accrue pursuant to 31 U.S.C. § 3717. Payment must be made in one of the following ways:

(1) Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

(3) Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Water Island Capital LLC as a Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Amelia A. Cottrell, Associate Director, Division of Enforcement, Securities and Exchange Commission, 200 Vesey Street, Suite 400, New York, New York 10281.

OPINION OF THE COMMISSION

REGISTERED SECURITIES ASSOCIATION—REVIEW OF DISCIPLINARY PROCEEDINGS

Violations of Securities Laws and Conduct Rules

Unfair and Fraudulent Markups

Interpositioning

Failure to Supervise and Deficient Supervisory Procedures

Failure to Provide Requested Information

Conduct Inconsistent with Just and Equitable Principles of Trade

Registered representative of former member firm of registered securities association interpositioned controlled accounts between member firm and its customers, resulting in excessive and, in some instances, fraudulent markups to the customers. Registered representative's supervisor failed reasonably to supervise representative and prepared deficient written supervisory procedures. Both registered representative and his supervisor failed to provide information requested by registered securities association. *Held*, registered securities association's findings of violations and sanctions are *sustained*.

APPEARANCES:

Robert Marcus Lane and *Jeffrey Griffin Lane*, *pro se*.

Alan Lawhead and *Michael Garawski*, for the Financial Industry Regulatory Authority, Inc.

Appeal filed: January 28, 2014
Last brief received: May 12, 2014

Robert Marcus Lane and Jeffrey Griffin Lane (together, "Applicants") appeal from FINRA disciplinary action.[1] FINRA found that Marcus Lane, on eleven occasions over a six-month period, interpositioned two accounts he owned and controlled between the Firm and two of its retail customers, charging the customers excessive and, in some cases, fraudulent markups, in violation of Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder,[2] and NASD Conduct Rules 2110, 2120, 2320(b), 2440, and IM-2440.[3] For these violations,

---

[1] On July 26, 2007, the Commission approved a proposed rule change filed by NASD to amend NASD's Restated Certificate of Incorporation to reflect its name change to Financial Industry Regulatory Authority, Inc., or FINRA, in connection with the consolidation of NASD and the member-regulation, enforcement, and arbitration functions of the New York Stock Exchange. *See* Securities Exchange Act Release No. 56146, 2007 WL 5185331 (July 26, 2007). Because much of the conduct at issue here occurred before this date, NASD Conduct Rules that were in effect at the time apply, except as noted herein.

[2] 15 U.S.C. § 78j(b); 17 C.F.R. § 240.10b-5. FINRA also found that Marcus Lane's "willful violation of Exchange Act Section 10(b) gives rise to a statutory disqualification." The Securities Acts Amendments of 1975 introduced the concept of a "statutory disqualification." *Robert D. Tucker*, Exchange Act Release No. 68210, 2012 WL 5462896, at *10 & n.49 (Nov. 9, 2012) (citation omitted). Under Article III, § 3 of FINRA's By-Laws, a person subject to a statutory disqualification cannot become or remain associated with a FINRA member unless the disqualified person's member firm applies for and is granted, in FINRA's discretion, relief from the statutory disqualification. *Joseph S. Amundsen*, Exchange Act Release No. 69406, 2013 WL 1683914, at *1 n.4 (Apr. 18, 2013). A person is subject to a statutory disqualification under Exchange Act Section 3(a)(39)(F) if, among other things, he "has willfully violated any provision of the Exchange Act." 15 U.S.C. § 78c(a)(39)(F) (stating that a person is subject to a statutory disqualification if, among other things, he has committed any act enumerated in Exchange Act Section 15(b)(4)(D), 15 U.S.C. § 78o(b)(4)(D), which refers, among other things, to willful violations of the Exchange Act).

[3] NASD Conduct Rule 2110 required members to observe "high standards of commercial honor and just and equitable principles of trade," and we have repeatedly held that a violation of the Exchange Act and any FINRA rule constitutes a violation of Rule 2110. *E. Magnus Oppenheim & Co.*, Exchange Act Release No. 51479, 2005 WL 770880, at *2 (Apr. 6, 2005). NASD Conduct Rule 2120 prohibited members from effecting transactions, or inducing the

(continued...)

FINRA barred Marcus Lane from associating with any FINRA member firm in all capacities and directed him to pay disgorgement of $218,582, plus prejudgment interest, to the affected customers.

FINRA also found that Jeffrey Lane violated NASD Conduct Rule 3010 by failing to establish and maintain reasonable written supervisory procedures and failing reasonably to supervise Marcus Lane.[4] For these violations, FINRA barred Jeffrey Lane from associating with any member firm in a principal capacity.[5]

FINRA further found that Applicants failed to respond in a timely manner to FINRA's requests for information under Rule 8210.[6] FINRA did not impose a sanction on Marcus Lane for this violation in light of the bar it imposed for his other violations, but it imposed on Jeffrey Lane a two-year suspension in all capacities and a $25,000 fine.

On appeal, Applicants contend that the markups Marcus Lane charged were fair and reasonable in light of the type of securities involved, that Jeffrey Lane prepared adequate supervisory procedures and that his supervision of Marcus Lane was reasonable, and that Applicants provided the information that FINRA requested in connection with its investigation.

(...continued)
purchase or sale of a security, by means of any manipulative, deceptive, or fraudulent device. Conduct Rule 2320 generally prohibited members from interpositioning a third party between the member and the best available market. Conduct Rule 2440 required members to buy securities from and sell securities to customers at prices that are fair, taking into consideration all relevant circumstances. IM-2440 deemed it a violation of NASD Conduct Rules 2110 and 2440 "for a member to enter into any transaction with a customer in any security at any price not reasonably related to the current market price of the security."

4 NASD Conduct Rule 3010(b) required, among other things, member firms' written supervisory procedures to "set forth the supervisory system," including "the responsibilities of each supervisory person" and to maintain records relating to these procedures. Conduct Rule 3010(d) required member firms to establish written procedures designed reasonably to supervise each registered representative by reviewing all transactions and to maintain evidence that such review has occurred.

5 FINRA found that Jeffrey Lane "failed reasonably to supervise [Marcus Lane], with a view to preventing violations of Section 10(b) of the Exchange Act and the rules thereunder" and, as a result, that he, too, was subject to a statutory disqualification. *See* 15 U.S.C. § 78c(a)(39)(F) (stating that a person is subject to a statutory disqualification if, among other things, he has committed any act enumerated in Exchange Act Section 15(b)(4)(E), 15 U.S.C. § 78o(b)(4)(E), which refers, among other things, to the failure "reasonably to supervise, with a view to preventing violations . . . ").

6 NASD Conduct Rule 8210 required associated persons to provide information or documents in an investigation.

For the reasons set forth below, we sustain FINRA's findings of violations and imposition of sanctions.

I. Background

A. Applicants

During the relevant period, brothers Marcus Lane and Jeffrey Lane were general securities representatives associated with Greenwich High Yield, LLC ("Greenwich" or the "Firm").[7] Marcus Lane owned eighty percent of the Firm and Jeffrey Lane owned twenty percent. Marcus Lane was the Firm's chief executive officer and sole trader, and he was the sole owner of High Yield Partners, LLC and High Yield Partners Income, LLC, which Marcus Lane described as "separate trading account[s]" or "inventory account[s]" for the Firm (together, the "Controlled Accounts"). Jeffrey Lane was the principal responsible for supervision, the Firm's Chief Compliance Officer, and the Firm's registered Financial and Operations Principal ("FINOP"). He also was responsible for drafting all aspects of the Firm's Written Supervisory Procedures ("WSPs").

B. Marcus Lane charged two customers undisclosed markups ranging from 6.45 percent to 40.93 percent on eleven trade sets.

Between October 20, 2006, and May 2, 2007, Marcus Lane, trading for the Firm, executed eleven separate sets of transactions in corporate bonds issued by three companies in the automotive supply industry, as set forth in the attached Appendix (the "Trade Sets").[8] The Trade Sets followed a similar, multi-step pattern, which occurred over a short period of time: (1) the Firm purchased the bonds from a broker-dealer; (2) the Firm immediately sold the bonds with a markup to one of the Controlled Accounts owned by Marcus Lane and used by the Firm for inventory; (3) the Firm purchased the bonds back from the Controlled Account with a second markup; and (4) the Firm sold the bonds to one of its retail customers with a third markup. Ten out of the eleven Trade Sets were completed in their entirety within one hour, and the other was

---

7 Greenwich became a FINRA member on November 23, 1994 and terminated its FINRA membership on June 23, 2009. Both Marcus Lane and Jeffrey Lane became registered with FINRA in 1995 and terminated their registrations in April 2009.

8 The bonds were issued by Collins & Aikman Corporation, Werner Enterprises, Inc., and RJ Tower Corporation. FINRA's opinion states that the record does not include the full corporate names of the issuers of the bonds at issue, but the parties do not dispute the identity of the issuers. The clearing firm's trade confirmations included in the record support the Lanes' characterization of the bonds as "distressed securities." According to those trade confirmations, both the Werner and Collins & Aikman bonds were rated "D" by Standard & Poor's, which indicates "payments default on financial commitments." The Tower bonds, which were denominated in Euros, were not rated by Standard & Poor's, but the trade confirmations state that the bonds were "in default."

completed in 138 minutes; all were completed on the same trading day.[9] The aggregate markup (*i.e.*, the percentage difference between the Firm's initial purchase price for the bonds from a broker-dealer and the final sale price to the customer) ranged from a low of 6.45 percent to a high of 40.93 percent , and the total profits for all eleven Trade Sets (for the Firm and the Controlled Accounts) amounted to $317,030.70.[10] All but three of the markups exceeded 10 percent. The Firm's profits in the Trade Sets represented a significant percentage of its total revenues during the applicable period.[11]

Trade Set 8 illustrates the pattern that ran through all eleven Trade Sets. The Firm initially purchased 2,000,000 Tower bonds from a broker-dealer at 11:35 a.m. on March 29, 2007, at a price of 7.33.[12] Within one minute, the Firm sold the bonds to a Controlled Account at

---

9 Trade Set 3, on October 31, 2006, was divided into two separate sales to the same retail customer, which occurred simultaneously, but at different prices. This resulted in two separate markups. The record does not indicate why this Trade Set was divided in this way; all the other Trade Sets involved a single sale to the applicable retail customer. A markup was charged at every leg of each of the Trade Sets, except for two of the Trade Sets, in which one of the four legs was executed at a price equal to the previous leg. None of the Trade Sets included any markdowns in price.

10 Trade Set 1 occurred at a 15.11 percent markup for an aggregate profit (for the Firm and Controlled Accounts) of $13,387.50. Trade Set 2 occurred at an 11.76 percent markup for an aggregate profit of $15,000.00. Trade Set 3 involved two separate multi-step transactions, the first of which occurred at a 7.46 percent markup for an aggregate profit of $12,500.00 and the second of which occurred at a 13.43 percent markup for an aggregate profit of $11,250.00. Trade Set 4 occurred at a 7.41 percent markup for an aggregate profit of $2,825.00. Trade Set 5 occurred at a 6.45 percent markup for an aggregate profit of $5,000.00. Trade Set 6 occurred at a 10.34 percent markup for an aggregate profit of $14,250.00. Trade Set 7 occurred at a 20.02 percent markup for an aggregate profit of $42,600.00. Trade Set 8 occurred at a 40.93 percent markup for an aggregate profit of $60,000.00. Trade Set 9 occurred at a 39.92 percent markup for an aggregate profit of $76,950.00. Trade Set 10 occurred at a 20 percent markup for an aggregate profit of $52,068.20. Trade Set 11 occurred at a 14.53 percent markup for an aggregate profit of $11,200.00.

11 During the first quarter of 2007, Trade Sets 5 through 10 (the only Trade Sets that occurred during that quarter) generated aggregate profits (for the Firm and Controlled Accounts) totaling $250,868.20, of which the Firm itself (as opposed to the Controlled Accounts) retained approximately $92,000. This amount represented over 20 percent of the Firm's total revenues during that quarter.

We further note, because it relates to contentions discussed below, that, although the Firm was subject to a net capital requirement of $100,000, it maintained excess net capital of over $2,000,000 during the first two quarters of 2007.

12 Bond prices are stated in "points," with each point representing ten percent ($10) of the bond's par value. Thus, a stated price of 7.33 for a $1,000 par value bond is $73.33.

a price of 7.65. Less than thirty minutes later, at 12:01 p.m., the Firm bought the bonds back from the Controlled Account at a price of 9.91. The Firm then immediately re-sold the bonds to a retail customer at a price of 10.33. The aggregate markup for this twenty-six-minute Trade Set was 40.93 percent for a total markup amount of $60,000.

The markups were not disclosed to customers. Order tickets did not reflect the markups, nor did any other communication to customers, such as account statements.[13] Further, customers could not have discovered or determined the markups. Although FINRA was able to generate "audit trails" for the periods immediately before and after certain Trade Sets,[14] these audit trails were based on information provided by broker-dealers to FINRA's Trade Reporting and Compliance Engine ("TRACE").[15] There is no evidence that this information or similar audit trails are available to the public.

Even if a retail customer could have accessed TRACE audit trails, those audit trails lacked important information about the nature of the transactions at issue. For example, although the four legs of the transactions appeared on the audit trail with price information from which markup percentages could be calculated, the two legs involving the Controlled Accounts were identified by Applicants with a "C" for customer. Therefore, the transactions with the Controlled Accounts were represented on the audit trail as customer transactions, as opposed to transactions

---

13 FINRA senior regulatory analyst Derrick Leak reviewed a number of the Trade Sets, describing the timing and pricing of the component transactions. Among other things, Leak noted in his testimony during the hearing that the order tickets the customers received included no disclosure of the markups, and he pointed out that, for several of the Trade Sets, there were no intervening transactions in the market for those securities between the time of the Firm's initial purchase and the time of the final sale to retail customers, which meant that "other broker-dealers were not participating in the [applicable] market, thus the price was not affected."

14 Leak testified that an audit trail "shows all the activity in a certain [bond] and a certain designated time frame" and that FINRA staff selected the time frame "so we could get an accurate picture of what was happening in the market over an extended time frame." In addition to the audit trails, FINRA's Department of Market Regulation introduced the order tickets and confirmations for all of the Firm's transactions at issue.

15 FINRA "introduced TRACE in July 2002 in an effort to increase price transparency in the U.S. corporate debt market. The system captures and disseminates consolidated information on secondary market transactions in publicly traded TRACE-eligible securities (investment grade, high yield and convertible corporate debt)—representing all over-the-counter market activity in these bonds."
http://www.finra.org/Industry/Compliance/MarketTransparency/TRACE/CorporateBondData/.
The Tower bonds, which were denominated in Euros, were not entered into the TRACE system.

with inventory accounts wholly owned by Marcus Lane. There was no other information that disclosed their identity.[16]

C. The Firm's Written Supervisory Procedures, drafted by Jeffrey Lane, did not address interpositioning and indicated that NASD's 5% Policy did not apply to transactions involving distressed bonds.

The Firm's Written Supervisory Procedures ("WSPs"), for which Jeffrey Lane was responsible, did not address interpositioning—the channeling of a customer's transaction through another broker-dealer or person in a similar position—which is a violation of NASD Rule 2320(b), "unless [a FINRA member or registered representative] can show that by so doing he reduced the costs of the transactions to the customer." Further, the WSPs and the Firm's Markup Policy did not specify who was responsible for reviewing the Firm's markups to ensure compliance with FINRA Rules, how such a review would be conducted (although the WSPs included a list of six factors to be considered), how often they would occur, and how the reviews

---

16 The audit trails show that market activity in the bonds at issue varied considerably during the relevant period; at times, several days passed without any trades in the bonds. Even during periods when there was trading activity on a daily basis, fewer than ten trades typically occurred on any given day. The audit trails for the dates surrounding the Trade Sets show that there was some price volatility in the bonds at issue, but much of this price volatility correlates closely with the volume of the transactions at issue: transactions involving a smaller quantity of bonds tended to occur at higher prices, whereas larger-quantity, so-called "Round Lot" transactions (such as all of the transactions in the Trade Sets), tended to occur at lower prices.

The audit trails for Trade Sets 3, 4, and 5 included no other same-day transactions at prices higher than the Firm's initial purchase price. Trade Sets 1, 2, and 6 had same-day transactions at a higher price than the Firm's initial purchase price. But in Trade Set 1, the only other same-day transaction occurred over four hours *after* the Firm's initial purchase, in a much lower volume transaction than the Firm's purchase. In Trade Set 2, although the higher-priced transactions occurred before the Firm's initial purchase of the bonds, the higher-priced transactions involved much lower volumes than the Firm's transactions, and other large-volume transactions closer to the time of the Firm's transactions occurred at lower prices than the Firm's transactions. In Trade Set 6, which took place on a day in which there was more trading activity than usual in the Werner bonds, there was only one transaction at a higher price than the Firm's initial purchase price, and that transaction involved a much smaller volume than the Firm's initial purchase; further, the trades closest in time to the Firm's purchase all occurred at lower prices than the Firm's purchase price. In addition, there is no evidence in the record to indicate whether these transactions were inter-dealer or involved retail customers of the firms involved. Some of the Trade Sets had no intervening inter-dealer trades between the time of the Firm's initial purchase of the bonds and the eventual sale to a Firm retail customer (giving the Firm no outside basis for its pricing determinations), and those that did have such intervening transactions all occurred at lower prices than the Firm's purchase price.

would be documented. Jeffrey Lane testified that he "didn't feel that [supervisory] steps actually had to be written out."

Despite the lack of procedures or guidance regarding how the Firm would review markups, the WSPs incorporated some of the general considerations included in FINRA's Markup Policy in effect at the time, IM-2440-1. But the WSPs omitted two key considerations under IM-2440-1(a): (1) "In the absence of other bona fide evidence of the prevailing market, a member's own contemporaneous cost is the best indication of the prevailing market price of a security"; and (2) "a mark-up pattern of 5% or even less may be considered unfair or unreasonable under the '5% Policy.'" Further, the WSPs included the assertions, without supporting authority, that "[i]t is difficult to post a profitable transaction in distressed bond securities costing less than $10 without exceeding the '5% Policy'" and "a higher percentage of mark-up customarily applies to a distressed bond transaction than for an investment grade bond transaction" because "[t]he high yield marketplace is known for illiquid markets in low priced securities for which customers are inclined to trade by appointment with member firms that provide useful research advice." The 2006-07 version of the WSPs stated that the Firm had "addressed to NASD in prior exit interviews" its belief that the 5% Policy did not apply to trades of distressed bonds. That version further stated that "NASD has consistently neglected to render any additional opinion or adopt any stricter standard that could be reasonably applied across the board as a rule (example: no mark-up may exceed four points)."[17]

D. Jeffrey Lane processed all of the transactions at issue without modification.

Jeffrey Lane prepared the order tickets for all of the transactions at issue without modification and reported the transactions to TRACE. He was aware that Marcus Lane owned the Controlled Accounts and set the markup prices for all legs of the Trade Sets, and he knew the timing of the various legs of each Trade Set. Jeffrey Lane discussed the markup amounts with Marcus Lane, and he acknowledged in his hearing testimony that he had encouraged Marcus Lane to charge a markup on the second leg of the Trade Set because "[i]t would not be fair to [the Firm] not to make a profit on those trades." But Jeffrey Lane never questioned Marcus Lane's use of the Controlled Accounts in the Trade Sets, stating, "When [Marcus Lane] bought bonds he said, now I own them, I have to go sell them, and no, I did not question." In addition, Jeffrey Lane acknowledged that none of the Firm's other customer accounts (*i.e.*, those owned by customers other than Marcus Lane) received the benefit of a markup when they sold securities to the Firm.

In reviewing the markup amounts, Jeffrey Lane looked only to the markup charged at each leg of the Trade Sets, and not to the amount of the aggregate markup over the initial purchase price the Firm paid when it first bought the bond from a broker-dealer. Although he claimed not to know what interpositioning was, he acknowledged that Marcus Lane regularly

---

[17] As discussed above, bond prices are listed in "points," rather than dollar amounts, with one point equal to $10 of the bond's par value. *See supra* note 12.

had been conducting transactions for years in which the Controlled Accounts purchased bonds from the Firm and then sold them back before the Firm re-sold them to a retail customer. Jeffrey Lane testified that he was aware that his obligation in reviewing transactions for markup violations was to ensure that customers received fair prices, not that the Firm could make a profit on transactions.

E. FINRA investigated the Firm's markups and requested information pursuant to Rule 8210.

FINRA initiated an investigation in 2007 after detecting, through its electronic surveillance system, that certain of the Firm's trades made during the fourth quarter of 2006 appeared to include excessive markups. In 2007 and 2008, FINRA requested information from the Firm pursuant to Rule 8210, and Applicants responded fully to those requests. Based on that information, FINRA narrowed its focus to the Trade Sets because it appeared that, with respect to those transactions, the Firm had interpositioned the Controlled Accounts between the market and the Firm's customers, resulting in excessive markups. At that time, FINRA knew that one of the Controlled Accounts shared the same address as the Firm. But FINRA believed that the Controlled Accounts were customer accounts and did not know who owned or had investment authority over them.

From March 6, 2009, to July 6, 2009, FINRA made a series of Rule 8210 requests asking for information about the ownership of those accounts, their account opening documents, Firm communications regarding the transactions at issue, and electronic communications sent and received by Marcus Lane. As described in more detail below, Applicants failed to respond in a timely manner and did not provide certain information until October 2009, after FINRA had issued a Notice of Suspension and assigned a Hearing Officer.

F. FINRA charged Marcus Lane and Jeffrey Lane, alleging markup, supervisory, and failure-to-respond violations.

On April 6, 2011, FINRA filed a complaint alleging markup, supervisory, and failure-to-respond violations. FINRA held a hearing on February 28 and 29, 2012, before a three-person Hearing Panel. On July 12, 2012, the Hearing Panel found that Applicants committed the violations alleged and imposed sanctions. On July 25, 2012, Applicants timely appealed the Hearing Panel decision to the National Adjudicatory Council ("NAC"). On December 26, 2013, the NAC issued a decision affirming the findings of violations and imposing the sanctions listed above. This appeal followed.

II. Analysis

A. Standard of Review

We base our findings on an independent review of the record and apply the preponderance of the evidence standard for self-regulatory organization disciplinary actions.[18] Pursuant to Exchange Act Section 19(e)(1), in reviewing an SRO disciplinary action, we determine whether the aggrieved person engaged in the conduct found by the SRO, whether such conduct violates the SRO's rules, and whether such SRO rules are, and were applied in a manner, consistent with the purposes of the Exchange Act.[19]

B. Marcus Lane's Violations

1. Marcus Lane's execution of the Trade Sets violated NASD Rule 2320(b)'s prohibition on interpositioning.

We sustain FINRA's findings that Marcus Lane violated NASD Rule 2320(b), which was in effect at the time of the transactions at issue.[20] Under NASD Rule 2320(b), "[a] member's obligations to his customer are generally not fulfilled when he channels transactions through another broker/dealer or some person in a similar position, unless he can show that by doing so he reduced the costs of the transactions to the customer."[21] We find that Marcus Lane engaged

---

18 *See David M. Levine*, Exchange Act Release No. 48760, 2003 WL 22570694, at *9 n.42 (Nov. 7, 2003).

19 15 U.S.C. § 78s(e)(1).

20 These violations also constitute violations of Rule 2110, which required members to observe "high standards of commercial honor and just and equitable principles of trade." *See supra* note 3. Rule 2110 reflects the mandate of Exchange Act Section 15A(b)(6), which requires, among other things, that FINRA design its rules to "promote just and equitable principles of trade." 15 U.S.C. § 78o-3(b)(6). As we have stated, "[t]his general ethical standard . . . is broader and provides more flexibility than prescriptive regulations and legal requirements. NASD Rule 2110 protects investors and the securities industry from dishonest practices that are unfair to investors or hinder the functioning of a free and open market, even though those practices may not be illegal or violate a specific rule or regulation. NASD Rule 2110 has proven effective through nearly 70 years of regulatory experience." *Notice of Filing of a Proposed Rule Change*, Exchange Act Release No. 58095, 2008 WL 2971979, at *2 (July 3, 2008), *Rule Change Approved Without Modification*, 2008 WL 4468749 (Sept. 25, 2008). We therefore find that Rule 2110 is, and that FINRA applied the rule in a manner, consistent with the purposes of the Exchange Act.

21 In 2009, after the dates of the Trade Sets, NASD Rule 2320(b) was amended and incorporated into NASD Rule 2320(a). *See FINRA Regulatory Notice 09-58*, 2009 FINRA LEXIS 161 (Oct. 2009).

in this practice of interpositioning in each of the eleven Trade Sets when he channeled transactions through the Controlled Accounts.

An applicant who channels transactions through another broker-dealer or person in a similar position has prima facie failed to meet his obligation to obtain the most favorable price for his customers.[22] An applicant may rebut this presumption by "showing that the customer's total cost or proceeds of the transaction is the most favorable obtainable under the circumstances."[23] As we have observed, "[p]ersons engaged in the securities business cannot be unaware of their obligation to serve the best interests of their customers, and that interpositioning is bound to result in increased prices or costs."[24] Marcus Lane failed to show that the Firm's customers received the most favorable prices obtainable under the circumstances. Instead, as discussed below, Marcus Lane charged customers excessive markups in each of the eleven Trade Sets.

2. Marcus Lane's markups on the Trade Sets were excessive and violated NASD Rule 2440.

We sustain FINRA's findings that Marcus Lane charged the retail customers excessive markups, in violation of its rules.[25] NASD Conduct Rule 2440 stated, "if a member . . . sells for his own account to his customer, he shall . . . sell at a price which is fair, taking into consideration all relevant circumstances, including market conditions with respect to such security at the time of the transaction, the expense involved, and the fact that he is entitled to a profit."

To clarify what constitutes an excessive markup, FINRA published IM-2440, its Markup Policy, in which it adopted what is commonly referred to as the "5% Policy." Among other things, the 5% Policy stated that a markup is excessive and violates Rules 2110 and 2440 if the price of a security is not reasonably related to its current market price and that "a mark-up pattern

Star*, Exchange Act Release No. 15577, 47 SEC 58, 1979 WL 173680, at *2 (Feb. 22, 1979) ("[W]here interpositioning has occurred, the burden is on the member to demonstrate that his action resulted in the customer being charged a lower price than that prevailing in the inter-dealer market.")).

24 *Gonchar*, 2009 WL 2488067, at *9.

25 These violations also constitute violations of Rule 2110. *See supra* notes 3 and 20.

of 5% or even less may be considered unfair or unreasonable under the '5% Policy.'"[26] Absent countervailing evidence, the best indicator of the current market price is a member firm's contemporaneous cost of acquiring the security, and a firm's contemporaneous cost is the price upon which member firms should calculate their markup amounts.[27] Wholesale trades between dealers are a better indicator of prevailing market price than retail transactions between firms and their customers.[28] We have held consistently that markups greater than five percent (as every markup here was) are "acceptable in only the most exceptional cases."[29] Once evidence has been presented that markups are five percent or more above a firm's contemporaneous cost, the burden shifts to the firm, or its associated persons, to explain why contemporaneous cost is not an

Lehl*, Exchange Act Release No. 34196, 1994 WL 268782, at *2 (June 10, 1994) (holding that a firm that is not a market maker must base its prices on its own contemporaneous cost), *aff'd*, 90 F.3d 1483 (10th Cir. 1996); *F.B. Horner & Assocs., Inc. v. SEC*, 994 F.2d 61, 63 (2d Cir. 1993) (affirming contemporaneous cost of acquiring bonds as an appropriate gauge of the market price for purposes of determining markups); *David Disner*, Exchange Act Release No. 38234, 52 SEC 1217, 1997 WL 47268, at *2 n.8 (Feb. 4, 1997) (citing *Alstead, Dempsey & Co.*, Exchange Act Release No. 20825, 47 SEC 1034, 1984 WL 50800, at *1 (Apr. 5, 1984)); *George Salloum*, Exchange Act Release No. 35563, 52 SEC 208, 1995 WL 215268, at *3 (Apr. 5, 1995) (using contemporaneous cost to conclude that applicant had charged customers fraudulently excessive markups)).

It is undisputed that the Firm was not a market maker in any of the bonds at issue. Section 3(a)(38) of the Exchange Act, 15 U.S.C. § 78c(a)(38), in relevant part, defines "market maker" as "any dealer who, with respect to a security, holds himself out (by entering quotations in an inter-dealer communications system or otherwise) as being willing to buy or sell such security for his own account on a regular or continuous basis."

28 *See, e.g.*, *Michael H. Novick*, Exchange Act Release No. 34640, 51 SEC 1258, 1994 WL 499291, at *3 (Sept. 2, 1994) (stating that "the prevailing market price (on the basis of which retail markups are computed) means the contemporaneous price at which dealers are trading with one another (*i.e.*, the current inter-dealer market)"); *First Honolulu Secs., Inc.*, Exchange Act Release No. 32933, 51 SEC 695, 1993 WL 380039, at *2 (Sept. 21, 1993) ("[t]he prices paid for a security by a dealer in actual transactions closely related in time to its sales are normally a highly reliable indication of the prevailing market").

29 *Inv. Planning, Inc.*, Exchange Act Release No. 32687, 51 SEC 592, 1993 WL 289728, at *2 (July 28, 1993).

appropriate measure of the prevailing market price or to present facts otherwise justifying higher markups.[30]

In this matter, Marcus Lane does not dispute the markup percentages in the attached Appendix and concedes that he calculated those markups. Since all of the markups exceeded five percent, the burden shifts to Marcus Lane to justify the markups.

Marcus Lane has not satisfied this burden, despite his contentions that the markups were justified based on his allegations that: (1) the Firm was at risk while it held the bonds; (2) the Firm had conducted significant research identifying these specific securities for its customers; (3) the Firm had significant general research expenses and needed to be profitable; (4) the customers were sophisticated investors and would not have accepted the markup prices if they were not fair and that the pricing information "was on TRACE so they could figure it out"; (5) FINRA examiners were aware of the Controlled Accounts; and (6) the prices the Firm charged its customers were "within the constraints of the market."

---

30 *Gonchar*, 2009 WL 2488067, at *7 n.25 (citing *Mark David Anderson*, Exchange Act Release No. 48352, 56 SEC 840, 2003 WL 21953883, at 87 n.41 (Aug. 15, 2003) (noting that the applicant "had the burden of producing evidence to support his claim that his pricing was not excessive"); *First Honolulu*, 1993 WL 380039, at *4 n.23 ("Once the NASD presented evidence of the markups, the burden shifted to applicants to refute this evidence.")); *Dennis Todd Lloyd Gordon*, Exchange Act Release No. 57655, 2008 WL 1697151, at *11 n.62 (Apr. 11, 2008) (citing *Steven P. Sanders*, Exchange Act Release No. 40600, 53 SEC 889, 1998 WL 741105, at *4 (Oct. 26, 1998)).

For example, in sustaining FINRA findings of excessive markups, we have held that applicants may provide "countervailing evidence that showed a change in the market between when Applicants acquired the bonds and when they later sold the bonds to their customers" to overcome the long-recognized presumption in favor of contemporaneous cost as the proper basis for calculating markup amounts. *Gonchar*, 2009 WL 2488067, at *8. And although we have recognized that other factors, such as extra efforts or expenses, may be considered in evaluating whether a markup is excessive, we have faulted applicants who failed to document extra efforts or expenses associated with trades. *Gordon*, 2008 WL 1697151, at *12. This follows from NASD's instruction to members that they must provide "adequate documentation" to justify markups greater than five percent. *Notice to Members 92-16*, 1992 WL 1319225, at *3 (Apr. 1992).

Among the factors to be considered in determining whether a markup is excessive are: "the expense associated with effectuating the transaction; the reasonable profit fairly earned by the broker or dealer; the expertise provided by the broker or dealer; the total dollar amount of the transaction; the availability of the financial product in the market; the price or yield of the instrument; the resulting yield after the subtraction of the markup compared to the yield on other securities of comparable quality, maturity, availability, and risk; and the role played by the broker or dealer." *Press v. Chem. Inv. Servs. Corp.*, 166 F.3d 529, 535 (2d Cir. 1999).

Marcus Lane claims that the markups were justified because the Controlled Accounts took risks by purchasing the bonds from the Firm and that, as a result, the Controlled Accounts were entitled to "compensation" for "committing risk capital." According to this argument, one purpose of the transactions was to create "inventory" for the Firm's retail customers, which put the Firm (and, presumably, the Controlled Accounts) at risk while they held the bonds. Marcus Lane further argues that, because of the risk levels involved, it would not be profitable for any broker to sell low-priced securities unless the broker could charge markups exceeding five percent.

But the existence of general market risk in the distressed bond market does not permit the Firm to charge its customers a price that is not in accordance with the prevailing market.[31] We have consistently found that "markups above 5% generally are not justified even in the sale of lower-priced securities."[32] Further, as set forth in the Appendix, the Firm did not struggle to make money on these transactions; in one instance it made over $75,000 on a Trade Set. We have acknowledged that a markup greater than five percent conceivably may be appropriate in transactions involving low-priced securities, but "only if the size of the total transaction is small and the total compensation charged is equal to or less than a reasonable minimum ticket charge."[33] Here, the dollar amounts of the transactions were large, and the compensation the Firm received was far greater than a reasonable minimum ticket charge.[34]

In any event, the evidence contradicts Marcus Lane's claims that the Firm was at risk in these transactions. Although Marcus Lane asserted in his hearing testimony that he and the Firm were "at risk" on these trades—which, in his view, helped to justify the markups—Marcus Lane acknowledged that he "assume[d] he probably did" receive indications that the customers at issue "would be interested in these bonds" and knew that the customers were knowledgeable about the

---

[31] *See, e.g.*, *Frank L. Palumbo*, Exchange Act Release No. 36427, 1995 WL 630926, at *6 & n.44 (Oct. 26, 1995) ("We have repeatedly stated that market risk does not justify excessive markups.") (citing *G.K. Scott*, Exchange Act Release No. 33485, 1994 WL 17114, at *4 n.25 (Jan. 14, 1994)).

[32] *Sanders*, 1998 WL 741105, at *5.

[33] *Century Capital Corp. of South Carolina*, Exchange Act Release No. 31206, 50 SEC 1208, 1992 WL 252170, at *3 & n.10 (Sept. 21, 1992). This precedent is consistent with the testimony of Patrick S. Geraghty, discussed *infra* in note 47.

[34] Marcus Lane also argues that the "point" amounts of the markups were small, repeatedly stating that the range of markups ranged from "0.25 to 1.375 points," which he claims indicated that the markups were "fair and reasonable." But even if the "point" amount of the markup might appear to be small, the percentages of the markups ranged from 6.45 percent to 40.93 percent. Marcus Lane cites no authority to support using "points," rather than percentages, to evaluate markup amounts. As discussed, the 5% Policy and numerous courts and the Commission have analyzed markups on a percentage basis. We are aware of no authority that would suggest that markups should be evaluated based on the "point" value of the markup.

bonds at issue.[35] And the very short time periods between the Firm's initial purchase and the eventual sale to the customers support FINRA's position that the risk, if any, was minimal.[36] Further, Marcus Lane was the sole owner of the Controlled Accounts; thus, Marcus Lane did not truly shift any of the economic risk of the transactions when he sold the bonds back and forth between entities he owned.[37]

Marcus Lane's claim that risk justified the markups also does not explain why he charged "layered" markups in a multi-step Trade Set—even if the initial markup compensated the Firm for purchasing the securities from a broker-dealer, this would not explain why the Firm charged the customers markups for the third and fourth legs of the Trade Sets. As discussed above, markups were added to the price of the bonds at issue at nearly every leg of each Trade Set, and no markdowns were charged. As FINRA argued in its pre-hearing brief below, "At most, the customers should have paid the price [the Controlled Accounts] paid to [the Firm]. . . . Instead, the customers incurred one or two additional markups above the initial markup charged."[38] Marcus Lane provides no explanation why, once the Controlled Accounts (which Applicants commonly refer to as Firm "trading accounts") charged a markup to the Firm, it was necessary to assess two additional markups before the sale of the bonds to the retail customer.[39]

---

35 Applicants conceded that these customers had purchased the bonds at issue from the Firm previously and that "there was a readily identifiable competitive market for [the bonds]."

36 *See Lake Sec., Inc.*, Exchange Act Release No. 31823, 51 SEC 19, 1992 WL 296794, at *3 (describing any risk that member firm endured as "minimal" where markup transaction occurred within two hours of firm's initial purchase).

37 Marcus Lane contends that it was important to "position" the Controlled Accounts because of unspecified "broker dealers that have . . . been liquidated because of trades blowing up." But he does not explain why the impact of a trade "blowing up" would be mitigated through his use of the Controlled Accounts, since he owned 100 percent of the Controlled Accounts and 80 percent of the Firm.

38 Such an alternative approach would have resulted in much smaller markups to the customers, which may have compensated the Firm fairly without violating FINRA's Rules. As FINRA notes, if Marcus Lane considered the risk of the transactions to be too great without charging excessive markups, "he could have effected riskless principal trades, or declined to execute the trades altogether." In riskless principal transactions, the firm "buys only to fill orders already in hand, and immediately 'books' the shares it buys to its customers." In such a transaction, "the firm serves as an intermediary for others who have assumed the market risk." *Gonchar*, 2009 WL 2488067, at *2 & n.11 (citing *Kevin B. Waide*, Exchange Act Release No. 30561, 50 SEC 932, 1992 WL 90342, at *3 (Apr. 7, 1992)).

39 As discussed above, on appeal, FINRA correctly notes that Jeffrey Lane "argues that [the Firm] properly charged [the Controlled Accounts] a mark-up 'as it would . . . another customer,' but he does not address why the firm did not also charge a mark-down when purchasing the bonds back." A markup at this stage, where a customer is selling rather than buying a security, is not typical. Instead, a firm ordinarily would mark down the security—that is, reduce the price it

(continued…)

In addition, Applicants claim that it was necessary to interposition the Controlled Accounts in order to protect the Firm's net capital position, but the Firm maintained a net capital position of over twenty times its required net capital during the period at issue (*i.e.*, although the Firm was subject to a net capital requirement of $100,000, it maintained excess net capital of over $2,000,000 during the first two quarters of 2007), and none of these transactions would have put the Firm at risk of failing to maintain the required levels of net capital if the Firm itself had sold the bonds to the customers without interpositioning the Controlled Accounts.[40]

The purported costs incurred by the Firm also do not justify the markups here. Marcus Lane testified at the hearing that the Firm had conducted significant "analysis of the auto supply [distressed bond market] prior to [the dates of the Trade Sets]," which it provided to the retail customers at issue, enabling the customers to identify opportunities for advantageous purchases of the bonds. Marcus Lane further testified that distressed debt broker-dealers, like the Firm, "have a lot of analytical expenses" and needed to make a profit. Marcus Lane also claims that he "provided extensive credit analysis and valuable services that were indirectly paid for only through bond transactions . . . especially given the capital risk." Marcus Lane provides no support for this claim. But even if he had established that he provided such services, there is nothing in FINRA's Markup Policy that would allow a member firm to charge excessive markups on a specific bond transaction to compensate the member for expenses associated with general customer services it provided. Likewise, Applicants claim, without supporting evidence, that the Firm lost money on other distressed bond transactions during this time period, but a firm may not charge excessive markups to compensate for losses in other transactions.[41]

(...continued)
pays to a selling customer for the security to cover the cost of the transaction and make a profit on it. *See generally*, *Gonchar*, 2009 WL 2488067, at *5; *Mark David Anderson*, Exchange Act Release No. 48352, 2003 WL 21953883, at *1-2 (Aug. 15, 2003); *The Law and Finance of Broker-Dealer Mark-ups*, Allen Ferrell (Apr. 6, 2011) (Discussion paper), available at: http://ssrn.com/abstract=1805131. By charging a markup instead of a markdown on the third leg of each Trade Set, Marcus Lane suffered no lost profit because that profit remained in the Controlled Account (*i.e.*, with him). Then, in the fourth leg, he achieved an even greater profit by charging the true customer a markup based on the third leg's marked up price, rather than what should have been a marked down price (*i.e.*, a lower price at the third leg).

40 *See supra* note 11.

41 *Horner*, 994 F.2d at 63 ("The facts that [the respondent firm] sometimes lost money on other transactions for the same clients or that some of its markups paid the firm's costs in other transactions does not justify an excessive markup in any one transaction."); *Inv. Planning*, 1993 WL 289728, at *4 ("A lack of profit on some transactions for a customer cannot justify excessive markups on others.").

In his opening statement at the FINRA hearing, Marcus Lane expressed his belief that it could be fair to charge an excessive markup, stating: "Now, occasionally, let's say when a bond falls from 10 – 20 to 15 to 10 to 5 and you buy them at 6 and you can sell them at 9 or something

(continued...)

Marcus Lane claims that the retail customers at issue were highly sophisticated and knowledgeable about market prices and that the customers would not have accepted the prices he charged unless those prices matched the customers' own analysis of the bonds at issue, but this does not justify charging excessive markups. He noted that the customers had made a great deal of money on the transactions at issue, in one instance describing a customer's returns as "excessive." Marcus Lane's claim that the customers made a large amount of money on these and other transactions using the Firm as a broker also does not justify the markups he charged. We have held that each individual transaction with a customer must be at a fair price under Rule 2440; fairness is not assessed based on the average markup charged per customer in all transactions over time.[42]

We reject Marcus Lane's further argument that there was no violation because the Firm's retail customers had "full transparency" with respect to five of the eleven Trade Sets via TRACE, but nevertheless did not complain about the markups because they "achieved extraordinary returns."[43] First, customers did not have access to the TRACE reports, and even if they did have

---

(...continued)
like that and get, you know, more than you – you know, once every couple of years you can do that, once every year, you know, once a year maybe, and that's only facilitated by your risking capital. This is necessary to offset your losses from situations you buy which don't work out." Apparently based on this belief, Applicants argue that they should have been permitted to introduce evidence to show that the Controlled Accounts lost money on transactions involving other bonds (not those involved in the Trade Sets) during the relevant period. The Hearing Panel did not admit such evidence, but the NAC found that such evidence "may have shed additional light on whether any market risk was assumed." Ultimately, however, the NAC found that the error was "harmless" because "the presence of some market volatility is not a ground for charging excessive markups." Based on the authority discussed above, we agree with the NAC's finding. As discussed, in order to justify these markups, Marcus Lane could not simply point to losses on other transactions; he had to present adequate documentation explaining why it was necessary for the Firm to charge prices that deviated significantly from the prevailing market price at the time of these specific transactions.

42 *Thomas F. White & Co., Inc.*, Exchange Act Release No. 33477, 51 SEC 932, 1994 WL 17044, at *2 & n.21 (Jan. 14, 1994) (citing *Inv. Planning*, 1993 WL 289728, at *4); *Horner*, 994 F.2d at 63 (stating that using the average markup per customer to evaluate fairness of pricing "is not consistent with well-established law").

43 Marcus Lane claims that the six Trade Sets involving Tower bonds were "outside FINRA regulatory authority" because they were "foreign bonds." The record contains limited information about the Tower bonds, but the parties do not dispute that they were purchased and sold in the United States. Accordingly, FINRA has jurisdiction. *See Morrison v. Nat'l Australia Bank*, 130 S. Ct. 2869, 2884 (2010) (finding that the focus of the Exchange Act is "upon purchases and sales of securities in the United States" and holding that Exchange Act Section 10(b) applies to "transactions in securities listed on domestic exchanges, and domestic transactions in other securities"). To the extent that Applicants argue that *Morrison* does not

(continued...)

access, those reports contained misleading information. Second, it is irrelevant that the affected customers did not complain to FINRA about the markups. Customers make decisions about whether to file formal complaints for numerous reasons, but it is well established that FINRA maintains the authority to enforce its Rules regardless of whether customers have complained.[44]

Marcus Lane also claims that the Firm had discussed the Controlled Accounts with FINRA examiners on multiple occasions, which led him to conclude that FINRA had "approved" the transactions at issue.[45] But he also acknowledges that he had no documentation to substantiate this claim. Further, any awareness FINRA had of the Controlled Accounts would not have relieved Marcus Lane of the burden of providing documentary evidence supporting the fairness of his pricing. As FINRA argues on appeal, "Marcus Lane does not claim that FINRA staff ever informed him that he would not have to demonstrate *why* a markup exceeding 5% was fair." Applicants also claim that the Trade Sets were reviewed by FINRA district examiners in

---

(...continued)
apply because it was decided after the conduct at issue, they are incorrect. *See Rivers v. Roadway Exp., Inc.*, 511 U.S. 298, 312-13 (1994) ("A judicial construction of a statute is an authoritative statement of what the statute meant before as well as after the decision of the case giving rise to that construction."); *Harper v. Virginia Dept. of Taxation*, 509 U.S. 86, 97 (1993) ("When this Court applies a rule of federal law to the parties before it, that rule is the controlling interpretation of federal law and must be given full retroactive effect in all cases still open on direct review and as to all events, regardless of whether such events predate or postdate our announcement of the rule."); *see also Kuhn v. Fairmont Coal Co.,* 215 U.S. 349, 372 (1910) ("Judicial decisions have had retrospective operation for near a thousand years.") (Holmes, J., dissenting).

44 *See Maximo Justo Guevara*, Exchange Act Release No. 42793, 54 SEC 655, 2000 WL 679607, at *6 (May 18, 2000) (finding that "NASD's power to enforce its rules is independent of a customer's decision not to complain"); *Bernard D. Gorniak*, Exchange Act Release No. 35996, 52 SEC 371, 1995 WL 442063, at *2 n.5 (July 20, 1995) (same and noting that customer decisions about whether to complain "may be influenced by many factors"); *Raymond M. Ramos*, Exchange Act Release No. 26007, 49 SEC 868, 1988 WL 902244, at *4 (Aug. 18, 1988) (finding violations of NASD Rules against misappropriating customer funds despite the fact that affected customer had written to NASD requesting leniency for applicant).

45 In support of the claim that FINRA was aware of the Controlled Accounts, Applicants introduced a January 1997 letter from the Firm to NASD, which stated that the Firm planned to fund its "inventory account" because "in conjunction with its regular trading activities, [the Firm] does occasionally buy and sell positions in the companies we are following." The letter does not disclose the Firm's use of the Controlled Accounts to interposition and charge markups to retail customers. Notably, the account opening documents for the Controlled Accounts, which were dated August 2003, indicate that those accounts did not exist at the time of the 1997 letter. Further, the letter says nothing about the Firm's trading accounts or how its use of such accounts would affect the Firm's markups.

annual reviews, but the record indicates that FINRA staff looked at only one leg of one Trade Set. And as we have held, FINRA's failure to identify a deficiency during an examination does not excuse a violation.[46] The responsibility for complying with regulatory requirements cannot be shifted to regulatory authorities.

Finally, Marcus Lane claims that the prices he charged the customers were "within the constraints of the market," but these claims lack merit.[47] Marcus Lane testified that trades published on TRACE are a "good definer of the constraints of the marketplace," but he does not cite any transactions reported on TRACE that would indicate a different prevailing market price than the Firm's initial purchase price in each of the Trade Sets.[48] As discussed above, to the extent there were any same-day transactions at a higher price than the Firm's initial purchase price, those transactions either occurred hours after the completion of the relevant Trade Set or involved significantly smaller volumes than the Round Lot transactions of the Firm here.[49] Thus,

---

46 *Sanders*, 1998 WL 741105, at *6.

47 On appeal, Marcus Lane references testimony of Patrick S. Geraghty, a FINRA staff member in charge of fixed income products. Marcus Lane correctly notes that Geraghty acknowledged that it was possible that markups on distressed securities, under certain limited circumstances, could exceed five percent without being excessive. But the circumstances that Geraghty cited were "if the overall dollar profit associated with the transaction is going to be relatively small otherwise" and would not "cover the costs of the transaction." As discussed above, the record does not support the conclusion the Applicants had a basis for similar concerns when they included the multi-layer markups in the Trade Sets.

48 Among other attempts to justify the markups the Firm charged, Jeffrey Lane claims that FINRA's expert witness, Charles Myers, testified that the prices in the Trade Sets were "in line with the market both before and after the cited trades." Jeffrey Lane mischaracterizes Myers's testimony. The only trades that Myers described in such a way were not part of the Trade Sets, but rather were cited by Myers in showing how he determined what the applicable contemporaneous market prices were on or around the relevant dates. It was in this portion of Myers's testimony, in fact, that he noted that prices in the surrounding days (such as the ones being discussed in the quoted passage referenced by Jeffrey Lane) were *not* an appropriate measure of the prevailing market price. In any event, the NAC did not rely upon his testimony, and neither do we.

Similarly, Jeffrey Lane claims on appeal that the prices the Firm charged to customers for the Euro-denominated Tower bonds were the "same or less" as the market price of unspecified "Tower corporate bonds." Jeffrey Lane, however, introduced no evidence to support this claim, nor did he cite any authority or evidence to support the theory that the contemporaneous market price of a security can be determined by looking to the prices of another security, even if issued by the same company. *Cf. Sanders*, 1998 WL 741105, at *5-6 (rejecting arguments that prices charged for warrants correlated with prices of common stock and units because evidence indicated that market for common stock and units was controlled by one firm).

49 *See supra* note 16.

those trades do not provide a useful indication of the prevailing market price. Absent evidence to the contrary, the Firm's contemporaneous cost of obtaining the bonds in the initial purchase from a broker-dealer is the best indicator of prevailing market prices because the initial purchase transaction occurred "between informed market professionals."[50] Further, Marcus Lane cannot cite transactions between the Firm and the Controlled Accounts (at prices he set) as indicators of the prevailing market price. Applicants also claim that these trading practices are widespread in the industry, but they cite no evidence to support this assertion; nor would such a claim excuse violative conduct.

3. Marcus Lane's excessive markups on nine of the Trade Sets were fraudulent and violated Exchange Act Section 10(b) and Rule 10b-5 thereunder and NASD Rule 2120.

In addition to violating Rules 2110 and 2440, undisclosed excessive markups are fraudulent when they are done with scienter.[51] We sustain FINRA's findings that, with respect to the nine Trade Sets with aggregate markups of ten percent or higher, Marcus Lane violated Exchange Act Section 10(b), Rule 10b-5 thereunder, and NASD Rule 2120, which prohibit

---

50 *Salloum*, 1995 WL 215268, at *3.

Jeffrey Lane defends the markups, claiming that Marcus Lane "went in to buy bonds with below the market bids and that in assuming the risk he is free to mark up the bonds and offer them to customers still within the confines of the current bids and offers." But we have held that "[q]uotations only propose a transaction and do not reflect the actual result of a completed arm's-length sale" and "may have little value as evidence of the current market." *Adams Sec., Inc.*, Exchange Act Release No. 34028, 51 SEC 1092, 1994 WL 186827, at *2 (May 9, 1994).

51 *See Gonchar*, 2009 WL 2488067, at *7 (finding that interpositioning resulted in fraud where it was done with scienter and resulted in the charging of excessive and undisclosed markups).

Based on the finding that Marcus Lane charged fraudulently excessive markups, FINRA also found that Marcus Lane is subject to a statutory disqualification. *See supra* note 2. We have sustained FINRA findings that an applicant is subject to statutory disqualification where, as here, the applicant acted willfully. *See, e.g.*, *Richard A. Neaton*, Exchange Act Release No. 65598, 2011 WL 5001956, at *7-10 (Oct. 20, 2011); *Scott Mathis*, Exchange Act Release No. 61120, 2009 WL 4611423, at *12 & n.40 (Dec. 7, 2009), *aff'd*, *Mathis v. SEC*, 671 F.3d 210 (2d Cir. 2012). It is well established that a willful violation of the securities laws means "intentionally committing the act which constitutes the violation" and does not require that the actor "also be aware that he is violating one of the Rules or Acts." *Wonsover v. SEC*, 205 F.3d 408, 414 (D.C. Cir. 2000) (internal quotation marks and citation omitted). The record demonstrates that Marcus Lane intentionally applied the markups to the transactions at issue without disclosing the details of those markups. We therefore agree with FINRA that he acted willfully.

material misrepresentations or omissions or the use of any manipulative or fraudulent device in connection with the purchase or sale of a security.[52]

The Supreme Court has defined scienter as "a mental state embracing intent to deceive, manipulate, or defraud."[53] Scienter includes recklessness, defined as conduct that is "an extreme departure from the standards of ordinary care ... to the extent that the danger [of deceiving investors] was either known to the [applicant] or so obvious that the [applicant] must have been aware of it."[54]

We have held that, "[w]here a dealer knows the circumstances indicating the prevailing inter-dealer market price for the securities, knows the retail price that it is charging . . . and knows or recklessly disregards the fact that its markup is excessive . . . the scienter requirement is satisfied."[55] In order to further clarify which markups provide the basis for a finding of fraud, we have held generally that undisclosed markups of more than ten percent over the prevailing market price are so egregiously excessive that the markups themselves are evidence of scienter.[56]

---

[52] FINRA determined that the Firm's markups of less than ten percent were not fraudulent because it found that "the fact that these transactions involved distressed securities provided a thin basis on which [Marcus Lane] could believe—albeit unreasonably—that these three markups were fair." We will not disturb FINRA's findings on this point. *But see infra* note 56.

[55] *Meyer Blinder*, Exchange Act Release No. 31095, 1992 WL 216702, at *9 (Aug. 26, 1992). If markups are excessive, then a broker-dealer has an implied duty to disclose them. *See Gonchar*, 2009 WL 2488067, at *7 & n.20 (citing *Starr ex rel. Estate of Sampson v. Georgeson S'holders, Inc.*, 412 F.3d 103, 111 (2d Cir. 2005) (quoting *Grandon v. Merrill Lynch & Co., Inc.*, 147 F.3d 184, 192 (2d Cir. 1998)); *see also SEC v. First Jersey Sec., Inc.*, 101 F.3d 1450, 1469 (2d Cir. 1996) (holding that a failure to disclose excessive markups violated Rule 10b-5); *Ettinger v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 835 F.2d 1031, 1033 (3d Cir. 1987) ("The SEC has established through its enforcement actions the principle that charging undisclosed excessive commissions constitutes fraud.").

[56] *A.S. Goldmen*, 2001 WL 588039, at *3 ("We further have held that markups of more than 10 percent over the prevailing market price are evidence of scienter and have held such markups to be fraudulent."); *D.W. Wine Invs., Inc.*, Exchange Act Release No. 43929, 2001 WL 98581, at *2 (Feb. 6, 2001) ("[M]arkups on equity securities of more than 10% generally are fraudulent.").

We note that we have found markups of less than ten percent to be fraudulent, under certain circumstances. *See, e.g.*, *Gonchar*, 2009 WL 2488067, at *9 (finding that undisclosed markups under ten percent on certain convertible bond transactions were fraudulent where applicants recklessly disregarded that the markups were not reasonably related to the prevailing market price); *David E. Lynch*, Exchange Act Release No. 46439, 2002 WL 1997953, at *2-3

(continued...)

In nine of the Trade Sets, Marcus Lane charged markups exceeding ten percent. Marcus Lane charged the markups without disclosing them to the customers. There is no dispute that the written confirmations received by the retail customers failed to disclose the markups and that Marcus Lane did not inform the customers himself. Contrary to Marcus Lane's argument that the TRACE audit trails provided the requisite disclosure, the record supports a finding that they did not: even if the retail customers had access to the audit trails, they would have been misled into believing that the Controlled Accounts were other customers rather than proprietary accounts; and the five Tower bond Trade Sets did not appear on TRACE at all. Marcus Lane knew that there were no intervening inter-dealer trades regarding the bonds reported to TRACE; and the record does not demonstrate that he made an effort to ascertain the prevailing market price at the time he purchased the Tower bonds. Although Marcus Lane directed the pricing structure of the Trade Sets, he betrayed the customers' trust by concealing the fact that he was charging excessive markups.[57] His conduct was at least reckless and strongly supports a finding that he violated the antifraud provisions.

4. NASD Rules 2320, 2440, and 2120 are, and were applied in a manner, consistent with the Exchange Act.

Each of the NASD Rules regarding the markups at issue in this matter were consistent with the Exchange Act because, as required under Section 15A(b)(6) of the Exchange Act, the rules at issue were "designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, . . . , and, in general, to protect investors and the public interest."

Rule 2320 was consistent with the purposes of the Exchange Act because it prohibited member firms and associated persons from engaging in a type of conduct that generally harms investors—interpositioning a third party between the member and the best available market. This conduct denies the investor the best available price for the securities at issue and, therefore, reduces the investor's profits. When we approved a change to Rule 2320 in 2009, we noted that the rule would continue to prohibit interpositioning "that is unnecessary or violates a member's general best execution obligations—either because of unnecessary costs to the customer or

(...continued)
(Aug. 30, 2002) (finding that undisclosed markups under ten percent on certain collateralized mortgage obligation transactions were fraudulent where trader knew that the markups were not reasonably related to the prevailing market price). Indeed, undisclosed, excessive markups constituting any percentage may be fraudulent if done with scienter.

57 *See Gonchar*, 2009 WL 2488067, at *9 (finding that applicants acted with scienter where customers relied on applicants' pricing and applicants exacerbated the lack of transparency by not disclosing the interpositioning and markups).

improperly delayed executions."[58] Further, we find that FINRA applied Rule 2320 here in a manner consistent with the purposes of the Exchange Act. As described above, Marcus Lane's interpositioning harmed the Firm's customers and resulted in excessive prices.

Rule 2440 also was consistent with Section 15A(b)(6) of the Exchange Act. The rule protected investors by requiring member firms to charge customers a fair price, taking into account all relevant circumstances.[59] Charging a fair price promotes just and equitable principles of trade and is designed to prevent fraud or conduct that harms investors. Because we sustain FINRA's finding that Marcus Lane charged the Firm's customers unfair and excessive markups that were not correlated to the contemporaneous market price for the securities at issue, we find that FINRA applied Rule 2440 in a manner consistent with the purposes of the Exchange Act.

Finally, Rule 2120 was designed to prevent fraudulent and manipulative acts and practices because it prohibited members and their associated persons from effecting transactions in, or inducing the purchases or sale of, any security by means of any manipulative, deceptive, or other fraudulent device or contrivance. Therefore, it was consistent with the purposes of the Exchange Act.[60] This rule, which has remained unchanged for approximately seventy years, enabled NASD (now FINRA) to "continue to enforce these overarching provisions that express FINRA's core regulatory objectives and allow FINRA to effectively protect investors and the public interest."[61] FINRA properly found that Marcus Lane fraudulently charged excessive markups. We therefore find that FINRA applied Rule 2120 in a manner consistent with the purposes of the Exchange Act.

61 *Id.*

C. Jeffrey Lane's Supervisory Violations

1. Jeffrey Lane violated NASD Conduct Rule 3010 when he prepared deficient WSPs.

We sustain FINRA's findings that Jeffrey Lane violated NASD Conduct Rule 3010 when he prepared deficient WSPs. Rule 3010 required member firms to "establish and maintain" a supervisory system "reasonably designed to achieve" regulatory compliance.

We have held that a member firm violated Rule 3010 where its supervisory procedures relating to the pricing of securities did not explain "the manner in which Firm personnel were to make" a determination about whether an independent market for the security existed and whether the price charged was consistent with the prevailing market price.[62] Likewise, we have emphasized the importance of members providing a "mechanism" to detect violations of the markup rules, as well as to detect interpositioning.[63] This is consistent with FINRA's articulation that WSPs "serve as a 'frontline' defense to protect investors from fraudulent trading practices and help to ensure that members are complying with rules designed to promote the transparency and integrity of the market."[64] The WSPs that Jeffrey Lane prepared did not identify the individual responsible for supervision at the Firm and also did not set forth how and when the designated supervisor should conduct supervisory reviews. As a result, as the NAC found, the WSPs did not help to protect investors.

As the NAC found, the WSPs were also deficient because they did not address interpositioning, even though the Firm regularly engaged in that practice. Such a failure is inconsistent with Rule 3010(b)(3)'s requirement that WSPs "shall include the . . . responsibilities of each supervisory person as these relate *to the types of business engaged in* . . . ." (Emphasis added). The failure of the WSPs to cover a topic that was regularly implicated by its trading practices contradicts Jeffrey Lane's argument on appeal that the supervisory system was appropriately tailored for a firm of its size and was "written to emphasize the nature of the firm's business."

Finally, as discussed above, the WSPs repeatedly characterized FINRA's 5% Policy as optional, but omitted crucial FINRA guidance on how to apply the 5% Policy, including FINRA statements that markup patterns of "5% or even less" could be considered unfair and that members needed to provide "bona fide evidence" to counter the presumption that its contemporaneous cost was the prevailing market price of a security.[65] As discussed, the Firm

---

62 *Sanders*, 1998 WL 741105, at *7.

63 *Sheldon*, 1992 WL 353048, at *14.

64 *Notice to Members 98-96*, 1998 NASD LEXIS 121, at *2 (Dec. 1998).

65 Jeffrey Lane contends that his omission of these aspects of the 5% Policy was "meant to intend a heightened awareness of the 5% markup policy and in no way 'strongly suggest' that

(continued...)

repeatedly charged markups exceeding five percent and failed to provide evidence justifying those markups. Given the inclusion in the WSPs of statements suggesting that the 5% Policy was unreasonable for distressed bonds (which the Firm routinely traded), these omissions increased the likelihood of violative markups and provide an additional basis for finding the WSPs deficient. Accordingly, we find that Jeffrey Lane violated Rule 3010 by preparing deficient WSPs.

Jeffrey Lane argues that the Firm's WSPs "had been tested and approved by the NASD District Office in its Annual Examinations" and claims that examiners had only identified one deficiency in the WSPs, which was not related to markups. But we have rejected similar arguments, noting that associated persons cannot shift their compliance burden to FINRA.[66]

Jeffrey Lane contends that FINRA *Notice to Members 98-96*, which was referenced in the NAC's decision, is "simply an advisory" and does not provide "authority for establishing violations" because it has not been "incorporated into the Rule regarding supervisory procedures [since the Notice was issued in 1998]."[67] The NAC considered the notice as a "source of guidance," which the NAC is entitled to do. Although the notice contains specific recommendations about the kinds of information that FINRA believes should be included in WSPs, it does not "mandate[e] any particular type or method of supervision."[68] For example, the notice suggests that WSPs (1) identify the individual responsible for supervision; (2) describe the supervisory steps and reviews to be undertaken by that individual; (3) describe the frequency of such reviews; and (4) describe the manner in which the reviews are to be documented.[69] The NAC considered these four factors, finding that the WSPs addressed none of them. But, as discussed above, the NAC also considered other factors and other authority in reaching its determination that Jeffrey Lane violated Rule 3010(a). Given the nature of the Firm's business,

---

(...continued)
trades 'would often' exceed the 5% guideline." But we fail to see how omitting elements of the 5% Policy from the Firm's WSPs indicates increased concern about its adherence to the policy.

66 *Rita H. Malm*, Exchange Act Release No. 35000, 1994 WL 665963, at *8 n.40 (Nov. 23, 1994) (rejecting contention that "because the NASD noted no markup, pricing, or other 'exceptions' during its audit . . . NASD was subsequently precluded from bringing markup or supervisory charges").

67 Jeffrey Lane also contends that he complied with the requirements of the Notice to Members regarding the identification of supervisory personnel, in that he was designated as the Firm's principal in charge of supervision, but he conceded in his hearing testimony that the WSPs he drafted did not contain the other specifications set forth in *Notice to Members 98-96*.

68 *NASD Notice to Members 98-96*, 1998 NASD LEXIS 121, at *8.

69 *Id.*

we find no impropriety in the NAC's use of the notice in supporting its findings, coupled with its analysis of additional authority and record evidence.[70]

2. Jeffrey Lane failed reasonably to supervise Marcus Lane when he approved the transactions without reviewing the aggregate markup for each Trade Set.

In addition to requiring WSPs that are reasonably designed to achieve compliance, we have held that "[t]he duty of supervision includes the responsibility to investigate 'red flags' that suggest that misconduct may be occurring and to act upon the results of such investigation."[71] The duty to supervise requires "reasonable" supervision, which is "determined based on the particular circumstances of each case."[72] We have held that supervisors violate supervisory requirements if a firm violates FINRA's markup rules, even where the WSPs did not set forth specific requirements for the review of markups.[73] Based on the circumstances discussed above, Jeffrey Lane's supervision of Marcus Lane was not reasonable.

Jeffrey Lane was the principal responsible for supervision, and he does not dispute the relevant facts regarding his supervisory role. Instead, he attempts to justify the fairness of the markups, rather than specifically address the quality of his supervision of Marcus Lane. He states that he approved the Trade Sets for a number of reasons we have rejected above in the discussion of Marcus Lane's markup violations.[74] With respect to his supervisory role, he claims that he acted reasonably by reviewing each transaction within the Trade Sets individually, evaluating whether a given stage complied with the 5% Policy rather than looking at the aggregate markup for an entire Trade Set.[75]

---

70 *See Castle Sec. Corp.*, Exchange Act Release No. 52580, 2005 WL 2508169, at *2-3 & n.10 (Oct. 11, 1985) (discussing the specifications in *Notice to Members 98-96*, along with other record evidence, in support of finding that a firm's supervisory procedures lacked necessary provisions).

71 *Ronald Pellegrino*, Exchange Act Release No. 59125, 2008 WL 5328765, at *10 n.22 (Dec. 19, 2008) (setting forth the supervisory responsibilities of NASD members under Rule 3010).

72 *Id.* at *10 n.26.

73 *See Palumbo*, 1995 WL 630926, at *6 n.54 (Oct. 26, 1995).

74 These reasons include the need to protect the Firm's net capital position and that the Firm's approach to pricing was consistent with industry practice.

75 In addition to his attempts to justify the markups themselves, Jeffrey Lane contends that he had conducted his supervisory duties properly in other respects (by, for example, preparing annual supervisory reports). But such a claim is irrelevant to our consideration of his failure to supervise with respect to the transactions at issue here. *See Albert Vincent O'Neal*, Exchange Act Release No. 34116, 1994 WL 234316, at *5 (May 26, 1994) (finding that "the test is whether

(continued...)

As discussed above, Jeffrey Lane conceded that he was aware of all elements of the Trade Sets, including the timing of each individual leg, the amounts of the markups at each step, and the fact that Marcus Lane set the prices for the relevant transactions by using the Controlled Accounts. Given this awareness, Jeffrey Lane was obligated to question the aggregate amounts of the markups from the point of the Firm's initial purchase price, not merely at each individual leg of the Trade Set. We find that Jeffrey Lane violated Rule 3010 by failing reasonably to supervise Marcus Lane after the Firm repeatedly charged its customers fraudulent and excessive markups.[76]

3. Rule 3010 is, and was applied in a manner, consistent with the Exchange Act.

Rule 3010 required that FINRA member firms implement and maintain supervisory systems designed to prevent violations of rules and statutory provisions such as the markup provisions at issue here. We have found that Rule 3010 was consistent with the purposes of the Exchange Act, under which the rules of a registered securities association must "prevent fraudulent and manipulative acts and practices, [and] promote just and equitable principles of trade," and reaffirm that finding here.[77] In finding Rule 3010 to be consistent with the purposes of the Exchange Act, we noted that the Commission "has long emphasized that the responsibility of broker-dealers to supervise their employees is a critical component of the federal regulatory scheme."[78] Based on our determination to sustain FINRA's finding that Jeffrey Lane's supervisory failures did not provide the Firm's customers protections against fraudulent or unfair trading practices, we find that FINRA applied Rule 3010 here in a manner consistent with the purposes of the Exchange Act.

(...continued)
[respondent's] supervision was reasonably designed to prevent the violations at issue, not . . . whether, if all the many other supervisory functions he performed were taken into account, his overall supervisory performance somehow earned him a hypothetical passing grade"). He further claims that the customers "have realized tremendous returns on the vast majority of the securities that [the Firm] sold to them," without explanation how such a claim relates to the quality of his supervision.

76 As discussed, Jeffrey Lane's violation of Rule 3010 also resulted in his violation of Rule 2110. *See supra* note 3. And, as FINRA found, because Jeffrey Lane failed reasonably to supervise Marcus Lane with a view to preventing his violations of the antifraud provisions of the federal securities laws, he is subject to a statutory disqualification. *See supra* note 5.

77 *See Order Granting Approval of a Proposed Rule Change to Adopt Rules Regarding Supervision in the Consolidated FINRA Rulebook, as Modified by Amendment No. 1*, Exchange Act Release No. 71179, 2013 WL 6794111, at *31-32 & n.230 (Dec. 23, 2013).

78 *Id.*

D. Applicants' Rule 8210 Violations

1. FINRA investigated the Firm's markups and requested information pursuant to Rule 8210.

On March 6, 2009, FINRA requested that the Firm provide, by March 27, 2009, nine categories of information regarding the trades at issue. On May 27, 2009, FINRA received responsive documents for only five of the nine categories. FINRA did not receive documents or information that responded to four categories: (1) "the ownership breakdown and the identity of the individuals with investment authority for" the Controlled Accounts; (2) a "list identifying any and all [Firm] accounts involved in each transaction, as well as copies of the respective New Account Form and subsequent updates, if any"; (3) copies of all communications regarding the trades at issue, including, among other things, Bloomberg messages; and (4) all electronic communications sent and received by Marcus Lane from January 1, 2006 through December 31, 2007.

Instead of providing information responsive to those four categories, Jeffrey Lane sent FINRA a letter on March 23, 2009, stating that he had "already provided significantly all the information that is currently being requested," that he "could send all of [the Firm's] boxes containing all of [the Firm's] historical records" because the Firm was out of business, and that he could "provide assent to Bloomberg for them to provide . . . the messages" because the Firm had terminated its Bloomberg services. According to an Assistant Director in FINRA Market Regulation's Fixed Income Group, who filed a declaration in the proceeding below, FINRA needed information about the outstanding four categories "to determine what information, if any, Marcus Lane relied on when he priced the [Trade Sets], whether he communicated with the customers or Jeffrey Lane about the transactions, and who the beneficial owners were of the [Controlled Accounts]."

In late June 2009, FINRA requested that Applicants provide information regarding the remaining four categories by July 3, 2009. The letter clarified that the only manner in which FINRA could obtain the Bloomberg messages was for one of the Applicants to sign and return an enclosed form. The letter advised Applicants that "Bloomberg has agreed to waive charges for processing the messages" and instructed them to "not make any changes to the form's standard language." Marcus Lane e-mailed FINRA on July 1, but did not provide the requested information. Instead, the e-mail stated that he had "provided all records requested," that "FINRA's Bloomberg representative" told him that FINRA should subpoena the Bloomberg messages, and that he already "offered to send all records for the 15 years [the Firm] acted as a broker dealer."

FINRA staff, in a July 6 e-mail to Marcus Lane, explained that it could not obtain the Bloomberg messages in the manner he suggested because it does not have subpoena power and reiterated the need for one of the Applicants to sign the authorization form previously provided. On that same date, FINRA again requested that Applicants provide information about the same four outstanding categories by July 17, 2009. FINRA's request reminded Applicants of the process for obtaining the Bloomberg messages and asked Applicants to submit the authorization form by July 13, 2009. The request also asked Applicants to contact FINRA by July 17, 2009, so that it could copy and return a hard drive containing Firm communications that FINRA understood to be in Marcus Lane's possession.

On July 15, 2009, Marcus Lane e-mailed FINRA but did not provide the requested information. Instead, he stated that FINRA already had access to all the requested information during fifteen previous annual audits, that he would not sign the Bloomberg authorization form because he would be obligated to pay $2,000 in fees, and that "the nature of [the Controlled Accounts] . . . has been provided on several occasions in the annual audit." In response, on July 16, 2009, FINRA explained that information obtained during previous audits did not excuse Applicants' obligation to provide information requested pursuant to Rule 8210, that FINRA still needed the outstanding information, that a signed Bloomberg authorization form was still required, and that Bloomberg would not charge fees for accessing the messages.

Applicants did not respond. Consequently, on July 31, 2009, FINRA issued a Notice of Suspension to each Applicant, to become effective on August 24, 2009, if they did not provide information about the remaining four categories. In August 2009, Applicants requested a hearing and insisted that they already had provided all requested information, except for the Bloomberg authorization form, which they continued to refuse to sign.

On September 26, 2009, Marcus Lane e-mailed FINRA, stating that he would sign the Bloomberg authorization form, provide FINRA with access to the Firm's hard drive, and ask Jeffrey Lane to "look for the new account forms."[79] Marcus Lane also disclosed the ownership details of the Controlled Accounts, stating: "During 2006 and 2007 I was responsible for risk management and investments in [the Firm and the Controlled Accounts] and ownership was 80% myself and 20% for Jeff."[80] In October 2009, after FINRA received the Firm's Bloomberg messages and copied the Firm's hard drives, a FINRA Hearing Officer granted FINRA's motion to dismiss the suspension proceeding without prejudice.

---

79 The record contains a new account form for only one of the Controlled Accounts, although FINRA found that "the Lanes satisfied [the] request [for the other Controlled Account's new account form] in some other fashion."

80 Applicants, in delivering this information, did not explain the inconsistency with their earlier position that they already had provided all information.

2. Applicants violated FINRA Rules 8210 and 2010 by failing to respond to FINRA's requests in a timely manner.

Rule 8210(a)(1) requires a person subject to FINRA's jurisdiction to provide information upon FINRA's request.[81] From March to August 2009, FINRA sent multiple Rule 8210 requests to Applicants seeking information about the Trade Sets.[82] The record supports FINRA's findings that Applicants failed to provide the requested information by the various deadlines set in the successive Rule 8210 requests and failed to provide all information until almost seven months after the initial request. We therefore sustain FINRA's finding that Applicants failed to respond in a timely manner in violation of Rules 8210 and 2010.[83]

Applicants argue that they responded fully and timely. But the record contradicts their assertion, and they offer no evidence otherwise. Applicants state that they responded to all Rule 8210 requests made in 2007 and 2008. While that may be true, the conduct at issue in this proceeding relates to Applicants' failure to respond in a timely manner to Rule 8210 requests that were made in 2009.[84] Applicants argue that they had provided authorization to retrieve Bloomberg messages in connection with FINRA's Rule 8210 request made in 2007. But the 2007 authorization covered a shorter period of time (October 1, 2006 through December 31, 2006) than the authorization sought by FINRA in 2009, which covered January 1, 2006 through

---

81 *Morton Bruce Erenstein*, Exchange Act Release No. 56768, 2007 WL 3306103, at *4 (Nov. 8, 2007).

82 Applicants terminated their respective registrations on April 24, 2009 and therefore were under FINRA's jurisdiction when the requests were made, because FINRA's jurisdiction continues for two years after such termination. *See* NASD Bylaws, Article V, Section 4 (providing that, within two years after the effective date of termination of registration, a "person whose association with a member has been terminated . . . shall continue to be subject to the filing of a complaint . . . based upon conduct that commenced prior to the termination . . . or upon such person's failure . . . to provide information requested"); *Lee Gura*, Exchange Act Release No. 11414, 2004 WL 2363871, at *2 n.7 (Oct. 20, 2004) (finding that applicant was subject to NASD's jurisdiction where Rule 8210 request was made within two years after applicant terminated his registration).

83 *See Erenstein*, 2007 WL 3306103, at *6-7 (finding that applicant's production of tax returns after deadline set forth in Rule 8210 request was failure to provide timely response in violation of Rule 8210). Jeffrey Lane's Rule 8210 violation also constitutes conduct inconsistent with just and equitable principles of trade. *Supra* note 3.

84 Jeffrey Lane seeks to admit into the record FINRA's 2007 and 2008 Rule 8210 requests along with his responses to those requests. But as we have made clear, Applicants' compliance during 2007 and 2008 is not in dispute or the basis for the Rule 8210 violation. We therefore reject his request.

December 31, 2007 and specifically focused on the Trade Sets.[85] Likewise, Marcus Lane argues that FINRA already had ownership information about the Controlled Accounts after having conducted annual audits of the Firm. But he does not point to any record evidence in support of that claim.

Jeffrey Lane argues that he provided all information that was within his control and that the only outstanding items included the Bloomberg authorization form and the Firm's hard drive, both of which were under Marcus Lane's control. But FINRA's Rule 8210 requests, which were sent to both Applicants, instructed that either of the Lanes could sign the Bloomberg authorization form, and it is undisputed that neither signed the form until approximately three months later. Moreover, FINRA did not receive timely ownership information about the Controlled Accounts, which either of the Applicants could have provided.

Rule 8210 is the principal means by which FINRA obtains information from FINRA member firms and associated persons in order to detect and address industry misconduct.[86] The rule therefore is consistent with the purposes of the Exchange Act.[87] Here, FINRA found that

---

85 The NAC did not include Applicants' failure to produce the Bloomberg authorization form in its findings regarding the Rule 8210 violation. The NAC found that "Market Regulation agreed to modify its request based on cost considerations, and the Lanes provided the Bloomberg authorization form once Market Regulation addressed those cost concerns in a clear manner." But we find the record demonstrates otherwise. Beginning with the June 26, 2009 Rule 8210 request, FINRA staff made it clear that either of the Applicants needed only to sign a Bloomberg authorization form in order for FINRA to gain access to the Firm's Bloomberg messages and that any charges Bloomberg ordinarily would assess would be waived. Over the next three months, FINRA staff repeatedly explained the circumstances to Applicants, but Applicants refused to cooperate. As with the other outstanding categories of information, the record demonstrates that Applicants could have responded much sooner than they did, and this provides additional support for the NAC's finding of a Rule 8210 violation.

86 *Charles C. Fawcett, IV*, Exchange Act Release No. 56770, 2007 WL 3306105, at *6 (Nov. 8, 2007) (stating that SROs lack subpoena power and instead must rely on Rule 8210 as a "vitally important" tool to acquire information and satisfy an obligation to police the activities of its members and associated persons).

87 *See* Exchange Act Section 15A(b)(6) (requiring that registered securities association's rules be designed to prevent fraudulent and manipulative practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating securities, and, in general, to protect investors and the public interest); *Order Approving Proposed Rule Change*, Exchange Act Release No. 42036, 1999 WL 961340, at *2 (Oct. 19, 1999) (finding that amending the definition of "person associated with a member" in the By-Laws of the NASD would expand Rule 8210's applicability and thereby "promote the objectives of Section 15A(b)(6) of the Act by helping the NASD obtain necessary information to conduct its regulatory investigations and proceedings").

Marcus Lane violated Rule 8210 by hampering FINRA's ability to investigate possible improprieties with respect to the Trade Sets. We therefore find that FINRA applied Rule 8210 in a manner consistent with the purposes of the Exchange Act.

E. Procedural Arguments

Applicants make various challenges to the fairness of these proceedings, including that the panel members who considered the case were incompetent and biased against them; that FINRA's procedures were (and the statutory scheme that provides for Commission review is) weighted in favor of Market Regulation staff; and that resolution of the matter was, according to Jeffrey Lane, "unreasonably delay[ed]" due to FINRA staff's "negligence in pursuing an extended fishing expedition . . . ." As discussed below, we find no merit to Applicants' various arguments.

Jeffrey Lane claims that the chief hearing officer "displayed an unusual bias and hostility towards the Petitioners at the same time exhibiting a favored bias toward" FINRA staff who, he further claims, were "determined to manufacture a case against Petitioner[s] to validate its authority." According to Jeffrey Lane, FINRA "has pursued the case as a vendetta for challenging the conduct of its review . . . ." He also asserts that Market Regulation "dominated over 80% of the time allowed for the Hearing" and "had at least four witnesses, PowerPoint presentations and four attorneys burning the time." As discussed above, we believe there was a strong basis for the allegations against Applicants. We also find that the proceedings were conducted in a fair manner and that Applicants were given a full opportunity to develop a defense to FINRA's allegations.[88]

---

88 Jeffrey Lane claims that Applicants were prevented from "drawing out the glaring dissimilarities between the present case and the cases upon which FINRA provided for authority and upon which they based their case." But, as FINRA pointed out in its opposition brief, the transcript page count demonstrates that Applicants' cross-examination was more than fifty percent longer than Market Regulation's direct examination. Moreover, Applicants were able to cross-examine witnesses on both days of the hearing and were afforded latitude in their manner of cross-examination. As the NAC noted, "when [Marcus Lane's] questioning of a FINRA analyst drew objections, the Hearing Officer explained at length why his questioning was inappropriate and guided him on what proper questioning would consist of." Applicants also had the opportunity to distinguish authority cited by Market Regulation by including such arguments in their briefs. Rule 9235 grants the hearing panelists broad discretion to "do all things necessary and appropriate to discharge his or her duties," including "regulating the course of the hearing" and "resolving any and all procedural and evidentiary matters." It is also well established that "[a]dverse rulings, by themselves, generally do not establish improper bias." *Mitchell M. Maynard*, Advisers Act Release No. 2875, 2009 WL 1362796, at *9 (May 15, 2009) (citing *Scott Epstein*, Exchange Act Release No. 59238, 2009 WL 223611, at *18 (Jan. 30, 2009), *aff'd*, No. 09-1550 (3rd Cir. 2010)).

Nor is there support for Marcus Lane's contention that the panel members were not qualified to decide the case because of their lack of expertise regarding the kind of distressed debt securities at issue in the case. Indeed, there is nothing in the record regarding the panel members' background or experience. The panel's decision, moreover, was well-reasoned, suggesting that the panel was qualified. Further, only the NAC's decision is before us.[89] And in any event, Applicants had a full opportunity to introduce evidence regarding the particular circumstances surrounding the trades at issue and the market for such securities—but largely declined to do so. Moreover, we have carefully reviewed the record and, as discussed, find ample support for FINRA's findings of violation.[90]

Applicants also complain generally about the regulatory structure governing FINRA disciplinary actions. Marcus Lane stated that "the plaintiff's organization hire[d] the judge and jury to support monetary awards for itself," and Jeffrey Lane asserted that, because the Commission is "supportive" of FINRA, Applicants cannot get a fair hearing. But courts repeatedly have rejected such challenges to the FINRA disciplinary structure, and Applicants have offered no supportable basis for a contrary conclusion.[91]

Finally, although there was an extended period between when FINRA's investigation began and when the final FINRA decision was issued, as discussed above, at least some of the fault for that delay rests with Applicants, who failed to cooperate with FINRA staff. Marcus

---

89 "'[I]t is the decision of the NAC, not the decision of the Hearing Panel, that is the final action of [FINRA] which is subject to Commission review.'" *Erenstein*, 2007 WL 3306103, at *8 n.26 (citing *Philippe N. Keyes*, Exchange Act Release No. 54723, 2006 WL 4958612 (Nov. 8, 2006)). Marcus Lane supports his claim of FINRA's incompetence by observing that FINRA's "convoluted multi-leg trading analysis also illustrates [its] lack of understanding in trading." As indicated above, we consider FINRA's approach in analyzing the pricing at issue entirely appropriate.

90 The NAC conducted a *de novo* review of the record and made its own independent findings, including a determination to reduce the sanctions imposed on Applicants. As we have noted, the Hearing Panel decision is largely irrelevant in an appeal before the Commission. Moreover, our *de novo* review mitigates any harm that may have resulted. *Erenstein*, 2007 WL 3306103, at *8 (rejecting applicant's challenges to Hearing Panel decision and noting that the NAC conducted its own *de novo* review, which coupled with the Commission's review, mitigates any harm that may have resulted).

91 *See Siegel v. SEC*, 592 F.3d 147, 152-53 (D.C. Cir. 2010) (discussing statutory provisions authorizing NASD to conduct disciplinary proceedings against its members, subject to the requirement that it provide fair process, and noting the Commission's oversight of such proceedings); *see also Saad v. SEC*, 718 F.3d 904, 907 (D.C. Cir. 2013) (acknowledging FINRA's power to "adopt rules governing the conduct of its members and of persons associated with its members," and to "bring[ ] disciplinary proceedings to adjudicate violations, which are subject to review by the Commission").

Lane also delayed the proceedings when he requested that the hearing be rescheduled.[92] We also note that, while Jeffrey Lane asserts generally that "the more time that passes the harder it becomes to represent any defense," he identifies no specific instances in which Applicants were prejudiced, and we are unaware of any.[93]

III. Sanctions

Exchange Act Section 19(e)(2) directs us to sustain FINRA's sanctions unless we find, having due regard for the public interest and the protection of investors, that the sanctions are excessive or oppressive or impose an unnecessary or inappropriate burden on competition.[94] As discussed below, we find the sanctions imposed on both Applicants to be consistent with the statutory requirements and sustain them.

A. FINRA's bar of Marcus Lane in all capacities and its order that he pay disgorgement of $218,582, plus prejudgment interest, is neither excessive nor oppressive.

We agree with FINRA's characterization of Marcus Lane's markup violations as egregious and, based on our assessment of all factors bearing on the remedial nature of the sanctions FINRA imposed, we find them to be neither excessive nor oppressive. As we have stated, "[t]he charging of excessive markups [i]s a serious breach of [an applicant's] obligation to deal fairly with its customers."[95] Marcus Lane's interpositioning of the Controlled Accounts between the market and the Firm's retail customers, which resulted in excessive and fraudulent

---

92 In order to accommodate Marcus Lane's request, FINRA continued a pre-hearing conference and rescheduled the hearing, resulting in a delay of approximately five months.

93 *See Pellegrino*, 2008 WL 5328765, at *16 & n.58 (finding no prejudice resulted from length of proceeding and rejecting applicant's claim that passage of time was unfair) (citing *Mark H. Love*, Exchange Act Release No. 49248, 2004 WL 283437, at *4 (Feb. 13, 2004) (evaluating whether length of delay in filing NASD complaint prejudiced applicant and finding no prejudice where applicant's ability to present a defense was not harmed by the passage of time since the alleged misconduct)); *Larry Ira Klein*, Exchange Act Release No. 37835, 1996 WL 597776, at *6 (Oct. 17, 1996) (finding no prejudice resulted from NASD's three-year investigation). We note that FINRA proceedings are not subject to any statute of limitations. *William J. Murphy*, Exchange Act Release No. 69923, 2013 WL 3327752, at *22 (July 2, 2013) (finding that "the disciplinary authority of private self-regulatory organizations ('SROs') such as [FINRA] is not subject to any statute of limitation") (citation omitted), *petition denied*, 751 F.3d 472 (7th Cir. 2014).

94 15 U.S.C. § 78s(e)(2). Applicants do not allege, and the record does not show, that FINRA's sanctions imposed an undue burden on competition.

95 *Nicholas A. Codispoti*, Exchange Act Release No. 24946, 48 SEC 842, 1987 WL 755546, at *4 (Sept. 29, 1987).

markups, showed a complete disregard for this obligation.[96] Marcus Lane acted with scienter, committed repeated violations over the course of several months, and benefitted financially from the violations, as the owner of the Controlled Accounts and eighty percent owner of the Firm.

There are no mitigating circumstances that warrant reducing the sanctions FINRA imposed. Marcus Lane contends that we should treat as mitigating that the customers "generated extraordinary returns" on these transactions, but the customers would have made even more money if he had not charged fraudulent, excessive markups. FINRA treated the sophistication of the customers as somewhat mitigating,[97] but such a finding does not justify the violations Marcus Lane committed and does not cause us to question FINRA's decision to bar him.[98] Under the circumstances, Marcus Lane's actions pose too great a risk to the markets and investors to allow him to remain in the securities industry.

Marcus Lane also challenges FINRA's disgorgement order, which was based on the amount of money that Marcus Lane personally gained from the markups,[99] by claiming that "taxes were paid on the compensation [disgorgement amount] [FINRA] is seeking to extort."[100]

---

96 *See, e.g., Sheldon*, 1992 WL 353048, at *13 (finding that "interpositioning of favored accounts between the dealer market and non-favored accounts [that] resulted in fraudulent, effective markups of as much as ten percent" was "particularly egregious"); *Palumbo*, 1995 WL 630926, at *9 (stating that recklessly overcharging customers without justification demonstrates "a marked insensitivity to [the] obligation to deal fairly with customers").

97 *See FINRA Sanction Guidelines*, at 7 (listing as one of the principal considerations in determining sanctions, as a potentially mitigating factor, "the level of sophistication of the injured or affected customer").

Although the Commission is not bound by FINRA's Sanction Guidelines, we use them as a benchmark in conducting our review under Exchange Act Section 19(e)(2). *John Joseph Plunkett*, Exchange Act Release No. 69766, 2013 WL 2898033, at *11 (June 14, 2013). We also acknowledge that the Sanction Guidelines "do not prescribe fixed sanctions for particular violations" and "are not intended to be absolute." *Guidelines*, at 1.

98 *See Lester Kuznets*, Exchange Act Release No. 23525, 48 SEC 551, 1986 SEC LEXIS 1001, at *7 (Aug. 12, 1986) (holding that the fact that customers were "experienced investors" does not give a registered representative "license to make fraudulent representations"), *aff'd*, 28 F.2d 844 (D.C. Cir. 1987).

99 FINRA calculated the disgorgement amount by adjusting all profits that exceeded a five percent markup (which FINRA found "might still be excessive"), to reflect Marcus Lane's ownership of eighty percent of the Firm and 100 percent of the Controlled Accounts, resulting in a "reasonable approximation of [Marcus Lane's] ill-gotten gains" at $218,582, to which it added prejudgment interest.

100 In cases where, as here, the record demonstrates that the respondent obtained a financial benefit from his misconduct, the Sanction Guidelines state that adjudicators may properly "order

(continued...)

But we have held that a registered representative is entitled to no modification "based upon taxes . . . paid."[101] He also contends that the disgorgement order "disregards the need to fund operations," but as discussed above, the Firm cannot use excessive markups to make up for losses on other transactions.

In assessing the appropriate sanction to impose on Marcus Lane, FINRA looked to its Sanction Guidelines, which it promulgated to achieve greater consistency, uniformity, and fairness in its sanctions.[102] The Guidelines do not address interpositioning violations directly, but they discuss violations involving excessive markups and fraudulent or reckless omissions. FINRA appropriately looked to the Guidelines for excessive markups and fraud in fashioning its sanction for Marcus Lane's violations for the markups the Firm charged in the Trade Sets. For excessive markups, the Guidelines recommend a 30-day suspension or, in egregious cases, up to two years or a bar, plus a fine of $5,000 to 10,000, plus the gross amount of the excessive markups. For fraudulent or reckless omissions, such as Marcus Lane's failure to disclose the markups at issue here, the Guidelines recommend a fine of $10,000 to 100,000 and, in egregious cases, a bar. For all of the violations at issue here (including interpositioning), FINRA also looked to the principal considerations applicable to all sanction determinations under the Guidelines. We agree that the sanctions FINRA imposed on Marcus Lane are consistent with the Guidelines. We further find that the sanctions will "have the salutary effect of deterring others from engaging in the same serious misconduct."[103]

(...continued)
that the respondent's ill-gotten gain be disgorged and that the financial benefit . . . derived by the respondent be used to redress harms suffered by customers." *Guidelines*, at 5. The Guidelines also recommend disgorgement in cases, such as this one, where "the case involves widespread, significant, and identifiable customer harm and the respondent has retained substantial ill-gotten gains." *Guidelines*, at 10.

On appeal, Marcus Lane further contends that disgorgement is inappropriate because none of the customers is requesting "reimbursement" and that the customers "would have difficulty claiming any damages" in a court of law. The assertion that the customers would not be able to establish damages from Marcus Lane's misconduct is disputable. But, in any event, the purpose of a disgorgement order is to deny the respondent the benefit of ill-gotten gains. *See, e.g., Rodney R. Schoemann*, Securities Act Release No. 9076, 2009 WL 3413043, at *13 n.51 (Oct. 23, 2009) (citing *SEC v. Bilzerian*, 29 F.3d 689, 697 (D.C. Cir. 1994) (quoting *SEC v. Blatt*, 583 F.2d 1325, 1335 (5th Cir. 1978)), *aff'd*, 398 F. App'x 603 (D.C. Cir. 2010).

101 *Laurie Jones Canady*, Exchange Act Release No. 41250, 54 SEC 65, 1999 WL 183600, at *10 (Apr. 5, 1999), *aff'd*, 230 F.3d 362 (D.C. Cir. 2000).

102 *Neaton*, 2011 WL 5001956, at *12 & n.38.

103 *Gordon*, 2008 WL 1697151, at *13 & n.75 ("[W]e are mindful that although 'general deterrence is not, by itself, sufficient justification for expulsion or suspension . . . it may be considered as part of the overall remedial inquiry.'" (quoting *PAZ Sec., Inc.*, 494 F.3d 1059, 1066 (D.C. Cir. 2007))).

B. Jeffrey Lane's bar from associating with member firms in a principal capacity is neither excessive nor oppressive.

We also find barring Jeffrey Lane in a principal capacity for his supervisory failures to be neither excessive nor oppressive. As discussed above, the Firm's WSPs contained no provision for interpositioning, nor did they include specific procedures for the review of markups, including the specific steps and reviews to be undertaken by supervisory personnel and the frequency of such reviews. FINRA correctly found that these omissions "may have played some part in allowing Marcus Lane's violative conduct to escape detection." As discussed above, the lack of such provisions in the WSPs denied investors of crucial "frontline" defenses to help prevent the types of violations that occurred here.[104] Jeffrey Lane also failed reasonably to supervise Marcus Lane by ignoring numerous red flags. Jeffrey Lane reviewed all of the Trade Sets and was aware of the markup amounts Marcus Lane was charging to customers by interpositioning the Controlled Accounts he wholly owned between the Firm and its customers. The underlying violations were repeated, involved a significant amount of money, and occurred over a span of several months, involving eleven separate Trade Sets.

FINRA's Sanction Guidelines set out sanction recommendations for violations of Rule 3010 for both deficient WSPs and failure to supervise, the two types of violations we have found that Jeffrey Lane committed here.[105] The Guidelines recognize the following principal considerations in determining sanctions for deficient WSPs: (1) whether deficiencies allowed violative conduct to occur or to escape detection; and (2) whether the deficiencies made it difficult to determine the individual or individuals responsible for specific areas of supervision or compliance.[106] The Guidelines recognize the following principal considerations in determining sanctions for a failure to supervise: (1) whether the respondent ignored "red flag" warnings that should have resulted in additional supervisory scrutiny and whether individuals responsible for

---

104 *See supra* note 64 and accompanying text.

105 For deficient WSPs, the Guidelines recommend a fine of $1,000 to $25,000 and, in egregious cases, recommend suspending the individual responsible in any or all capacities for up to one year. For failure to supervise, the Guidelines recommend a fine of $5,000 to $50,000 and, in egregious cases, recommend suspending the responsible individual in any or all capacities for up to two years or barring the responsible individual. *Guidelines*, at 104.

106 *Id.* As discussed above, we agree with FINRA that the deficient WSPs allowed Marcus Lane's violations to occur, in that they did not address interpositioning and included language (without supporting authority) indicating that the 5% Policy did not apply in sales of distressed bonds.

Although the WSPs did not specifically identify Jeffrey Lane as the person responsible for supervision at the Firm, because Jeffrey Lane was designated as the Firm's FINOP and Chief Compliance Officer—coupled with the fact that Jeffrey Lane was one of only two principals at the Firm—we do not find that the deficient WSPs made it difficult to determine that he was in charge of supervision. Jeffrey Lane does not dispute his supervisory role.

underlying misconduct attempted to conceal misconduct from the respondent; (2) the nature, extent, size, and character of the underlying misconduct; and (3) the quality and degree of the supervisor's implementation of the firm's supervisory procedures and controls.[107]

As discussed above, this case presented numerous red flags that should have resulted in additional supervisory scrutiny of Marcus Lane's trading practices. Jeffrey Lane was aware of all elements of the Trade Sets, including the timing of each leg, the amounts of the markups at each step, and the fact that Marcus Lane alone set the prices for the relevant transactions by using the Controlled Accounts. Further, Jeffrey Lane owned twenty percent of the Firm, so his supervisory failures resulted in personal financial gain, which is an aggravating factor.[108]

There are no mitigating factors. Jeffrey Lane's claim of appropriate supervision with respect to other elements of the Firm's business—which we cannot assess based on the record before us—would not excuse his failures here. Likewise, his claim that he was not aware of what interpositioning was, even if true, does not provide any mitigation because participants in the securities industry "cannot be excused for lack of knowledge, understanding, or appreciation of [compliance] requirements."[109] Jeffrey Lane himself acknowledges that he "had over twenty years of experience in working with the NASD and FINRA as a FINOP and Compliance Officer." He also acknowledged that the Firm regularly engaged in transactions in which the Controlled Accounts purchased distressed bonds from the Firm and sold them back to the Firm before the bonds were sold to retail customers. This experience further undermines any argument that he was unaware of the rules regarding interpositioning.

C. The suspension and fine imposed for Jeffrey Lane's violations of Rule 8210 are neither excessive nor oppressive.

Rule 8210 "provides a means, in the absence of subpoena power, for [FINRA] to obtain from its members information necessary to conduct investigations."[110] This rule is at the "heart of the self-regulatory system for the securities industry"[111] and is an "essential cornerstone of [FINRA's] ability to police the securities markets and should be rigorously enforced."[112] "Failures to comply are serious violations because they subvert [FINRA's] ability to carry out its

regulatory responsibilities," threatening investors and the markets.[113] Rather than respond to FINRA's Rule 8210 requests, Applicants repeatedly asked FINRA to explain why it was requesting the information and offered up the entirety of the Firm's records without reviewing those records themselves. It is well established that an individual may not "second guess [ ]" a Rule 8210 request or "set conditions on their compliance."[114] The suspension and fine imposed on Jeffrey Lane is remedial because those sanctions will protect the investing public by encouraging timely cooperation essential to the prompt discovery and remediation of industry misconduct.[115] The sanctions also will deter others from ignoring FINRA's information requests.

The sanctions imposed on Jeffrey Lane are consistent with the Sanction Guidelines. If the violation is one in which "mitigation exists, or the person did not respond in a timely manner" to a request made pursuant to Rule 8210, the Guidelines recommend suspending an individual "in any or all capacities for up to two years" and imposing a fine of $2,500 to $25,000.[116] The Guidelines identify three principal considerations for determining sanctions: the "[i]mportance of the information requested as viewed from FINRA's perspective"; the "[n]umber of requests made and the degree of regulatory pressure required to obtain a response"; and the "[l]ength of time to respond."[117]

We agree with FINRA that, "[f]rom FINRA's perspective, obtaining the requested ownership and investment authority information was critical to its investigation of the interpositioning scheme."[118] We acknowledge that Jeffrey Lane responded fully to FINRA's 2007 and 2008 Rule 8210 requests and belatedly provided some information a couple of months after FINRA's March 2009 Rule 8210 request, but he failed to provide timely information in response to four outstanding categories of information requested. The information covered by those categories was necessary to aid FINRA's investigation of the Controlled Accounts and how trades in the accounts affected the customers involved. Indeed, it was only after Applicants finally provided the outstanding information that FINRA was able to discern that the Controlled Accounts were proprietary and used in a manner that resulted in the violations at issue.

115 The NAC determined not to sanction Marcus Lane in light of the bar that it imposed on him for the interpositioning and excessive and fraudulent markups.

116 *Guidelines*, at 33.

117 *Id.*

118 NAC Decision at 36.

We also agree with FINRA that the degree of regulatory pressure required to obtain a response "was substantial and is a highly aggravating factor."[119] FINRA made five Rule 8210 requests between March and July 2009 in an attempt to get responses to four of the categories of information requested. It took the institution of a disciplinary proceeding, the threat of an imminent suspension, and another Rule 8210 request before Applicants provided the responsive information several months later, in October 2009. That responsive information consisted of two sentences explaining ownership details about the Controlled Accounts, a signature on a Bloomberg authorization form, access to the Firm's hard drives, and production of a new account form for one of the Controlled Accounts.[120] Jeffrey Lane fails to offer any persuasive reason why he could not have provided this information in March 2009.

Jeffrey Lane argues on appeal that the $25,000 fine is a "misguided attempt to force [him] to pay FINRA's costs for manufacturing these false charges . . . ." But nothing in the record supports his argument. As discussed above, the record amply supports the imposition of a fine. Moreover, FINRA is entitled to, and did, assess costs separate and apart from the fine. The complaint informed Jeffrey Lane that he might be ordered to "bear such costs of [the] proceeding as are deemed fair and appropriate under the circumstances in accordance with FINRA Rule 8330." We find that FINRA acted well within its discretion in assessing the costs following the decision.[121]

---

119 NAC Decision at 36-37.

120 As discussed above, these are the only documents included in the record, but FINRA found that Marcus Lane and Jeffrey Lane provided the new account form for the second Controlled Account "in some other fashion." *See supra* note 79.

121 *See* FINRA Rule 8330 (stating that disciplined member shall bear such costs of the proceeding as the Adjudicator deems fair and appropriate under the circumstances); *Oppenheim*, 2005 WL 770880, at *5 & n.26 (citing *John M. W. Crute*, Exchange Act Release No. 40474, 53 SEC 1112, 1998 WL 652110, at *5 (Sept. 24, 1998), *aff'd*, 208 F.3d 1006 (5th Cir. 2000) recognizing NASD's broad discretion to impose costs and upholding imposition of costs)).

We find the sanctions imposed on Jeffrey Lane to be neither excessive nor oppressive.

An appropriate order will issue.[122]

Joseph A. Caramadre, CPA

Respondent.

ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934 AND SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940 AND NOTICE OF HEARING

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against Joseph A. Caramadre ("Respondent").

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT

1. From 1995 through at least December 2010, Respondent was the President, Chief Executive Officer and majority owner of Estate Planning Resources, Inc. For a portion of the time in which he engaged in the conduct underlying the plea agreement described below, Respondent was also a registered representative of registered broker-dealers, several of whom were

also registered as investment advisers, making him an associated person of the investment advisers. Specifically, the Respondent was a registered representative during the following periods: from October 1997 through September 1998; from April 1999 through March 2001; from February 2002 through August 2003; and from July 2005 through December 2005. Respondent is 54 years old and is a former resident of Cranston, Rhode Island, and is currently incarcerated at FMC Devens in Ayers, Massachusetts.

B. RESPONDENT'S CRIMINAL CONVICTION

2. On November 19, 2013, Caramadre pled guilty to one count of wire fraud in violation of Title 18 United States Code, Section 1343 and one count of conspiracy in violation of Title 18 United States Code, Section 371 before the United States District Court for the District of Rhode Island, in United States v. Joseph Caramadre, 11cr186-S. On December 16, 2013, a judgment in the criminal case was entered against him. He was sentenced to a prison term of six years followed by three years of supervised release. On February 3, 2014, Caramadre was ordered to make restitution in the amount of $46,330,077.61.[1]

3. In connection with that plea, Respondent admitted that from 1995 through August 2010, he executed a scheme to defraud financial institutions and terminally-ill individuals. On his own behalf and on the behalf of investors, friends and family members, Caramadre purchased variable annuities from insurance companies and designated terminally-ill individuals as annuitants. Caramadre fraudulently obtained significant sums of money from the insurance companies that issued these variable annuity policies by making or causing to be made material misrepresentations and omissions to terminally-ill individuals, their family members and care-givers, in order to obtain identity information and signatures for the annuity opening documents. Indeed, Caramadre concealed from the terminally-ill individuals and their family members that their identities would be used on annuities that Caramadre and others purchased. Caramadre also took steps to prevent the terminally-ill individuals from understanding the nature of the documents they were signing.

4. Further, Caramadre made or caused to be made material misrepresentations and omissions to various insurance companies, falsely informing the insurance companies that some of the annuity owners were "friends," "clients" or "acquaintances" of the terminally-ill individuals who were named as annuitants.

5. Caramadre's was convicted of a felony involving the purchase or sale of a security and arose out of the conduct of the business of a broker-dealer. His misconduct occurred when he was a registered representative of registered broker-dealers, several of whom were also registered as investment advisers, making him an associated person of the investment advisers.

[1] The court found that Caramadre and his co-defendant, Raymour Radhakrishnan, were jointly and severally liable for $33,197,425.26 and Caramadre was solely liable for the remaining $13,132,652.35 because these losses were sustained before Radhakrishnan's involvement in the scheme.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate in the public interest that public administrative proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations;

B. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 15(b) of the Exchange Act;

C. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 203(f) of the Advisers Act; and

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 210 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

ADMINISTRATIVE PROCEEDING
File No. 3-16386

In the Matter of

TRACI J. ANDERSON, CPA,
TIMOTHY W. CARNAHAN,
AND
CYIOS CORPORATION

Respondents.

ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTION 8A OF THE SECURITIES ACT OF 1933, SECTIONS 4C AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934, AND RULE 102(e) OF THE COMMISSION'S RULES OF PRACTICE

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted against: (i) Traci J. Anderson, CPA ("Anderson") pursuant to Sections 4C[1] and 21C of the Securities Exchange Act of 1934 ("Exchange Act") and 102(e)(1)(iii)[2] of the Commission's

---

1 Section 4C provides, in relevant part, that:

> The Commission may censure any person, or deny, temporarily or permanently, to any person the privilege of appearing or practicing before the Commission in any way, if that person is found . . . (1) not to possess the requisite qualifications to represent others . . . (2) to be lacking in character or integrity, or to have engaged in unethical or improper professional conduct; or (3) to have willfully violated, or willfully aided and abetted the violation of, any provision of the securities laws or the rules and regulations thereunder.

2 Rule 102(e)(1)(iii) provides, in pertinent part, that:

> The Commission may censure a person or deny, temporarily or permanently, the privilege of appearing or practicing before it . . . to any person who is found...to have willfully violated, or

Rules of Practice; and (ii) Timothy W. Carnahan ("Carnahan") and CYIOS Corporation ("CYIOS") pursuant to Section 8A of the Securities Act of 1933 ("Securities Act") and Section 21C of the Exchange Act.

II.

After an investigation, the Division of Enforcement and the Office of the Chief Accountant allege that:

A. RESPONDENTS

1. **Traci J. Anderson, CPA,** age 46 and a resident of Charlotte, North Carolina, has functioned as a contract CFO to CYIOS Corporation since July 2007. From 2003 through August 2010 Anderson was the sole proprietor of a PCAOB-registered public accounting firm and was engaged as CYIOS Corporation's auditor from September 2005 until she resigned in July 2007 to become the company's internal accountant. Anderson consented to a PCAOB order dated August 12, 2010 pursuant to which she was barred from being an associated person of a registered public accounting firm. Additionally, Anderson consented in January 2012 to an order pursuant to which she forfeited her CPA license in North Carolina. Anderson remains licensed as a CPA in Florida.

2. **Timothy W. Carnahan,** age 47 and a resident of Pompano Beach, Florida, is the founder and is disclosed as the sole officer and director of CYIOS. Between 2006 and November 2012, Carnahan signed and certified each of CYIOS's periodic filings in the capacities of principal executive and principal financial officer.

3. **CYIOS Corporation,** a Nevada corporation headquartered in Washington D.C., is a Department of Defense contractor providing: systems integration; web and database development; business process management and improvement; and solutions for compliance with Sarbanes-Oxley regulations and Defense Contract Audit Agency and performance-based contracting for government contractors. Its common stock was registered under Section 12(g) of the Exchange Act and was traded on the OTC Bulletin Board (Symbol: CYIO). After receiving a letter dated May 12, 2014 from the Commission's Division of Corporation Finance informing CYIOS that it was not in compliance with its reporting requirements under Section 13(a) of the Exchange Act, CYIOS filed a Form 15-12G on May 30, 2014 terminating the registration of its common stock.

B. ANDERSON WAS UNLAWFULLY ASSOCIATED WITH CYIOS AFTER THE PCAOB BARRED HER FROM ASSOCIATING WITH A REGISTERED PUBLIC ACCOUNTING FIRM

4. Section 105(c)(7)(B) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley") states that it is "unlawful for any person that is ... barred from being associated with a registered public accounting firm [...] willfully to become or remain associated with any issuer [...] in an accountancy or financial management capacity [...] without the consent of the [PCAOB] or the

---

willfully aided and abetted the violation of any provision of the Federal securities laws or the rules and regulations thereunder.

Commission." Section 105(c)(7)(B) also states that it is unlawful for any "issuer [...] that knew, or in the exercise of reasonable care should have known, of such suspension or bar, to permit such an association, without the consent of the Board or the Commission."

5. On August 12, 2010, the PCAOB filed a settled action against Anderson and her firm, Traci Jo Anderson, for multiple deficiencies in audit work performed between 2007 and 2009 on public companies engagements unrelated to CYIOS (the "PCAOB Order").[3] The PCAOB Order, which was and is available on its website, revoked the registration of her accounting firm and barred Anderson from being an associated person of a registered public accounting firm.

6. Following the issuance of the PCAOB Order, Anderson advised each of her firm's public company audit clients that she must withdraw because she had been barred by the PCAOB as a result of violations of PCAOB rules and auditing standards.

7. Around the same time, Anderson orally notified Carnahan—who was already aware of the PCAOB's investigation of Anderson— and CYIOS's then Director of Finance about the existence of the PCAOB Order and directed him to the PCAOB website. Consequently, CYIOS and Carnahan knew or, in the exercise of reasonable care, should have known that Anderson had been barred from associating with a registered public accounting firm.

8. After the PCAOB Order was issued, Anderson continued to perform accountancy and financial management services for CYIOS. It was Carnahan's decision to maintain CYIOS's business relationship with Anderson. Anderson's services included providing CFO and general accounting services, assisting CYIOS's CEO in preparing Commission filings – including Forms 10-Q and 10-K – as well as other prohibited services. CYIOS paid Anderson at least $244,035 for her services between August 2010 and June 2014.

9. Anderson never requested or received consent from the PCAOB or the Commission to remain associated with CYIOS in this capacity.

C. <u>CYIOS FAILED TO MAKE PERIODIC FILINGS REQUIRED UNDER SECTION 13(A) OF THE EXCHANGE ACT</u>

10. Section 13(a) of the Exchange Act and the rules promulgated thereunder require issuers with classes of securities registered pursuant to Section 12 of the Exchange Act to file periodic and other reports with the Commission. Rules 13a-1 and 13a-13 require, respectively, the filing of accurate annual and quarterly reports (i.e., Forms 10-K and 10-Q).

11. CYIOS ceased making filings required under Section 13(a) of the Exchange Act after it filed its third quarter 2012 Form 10-Q in November 2012. Specifically, CYIOS failed to file its 2012 Form 10-K, its 2013 Forms 10-Q and 10-K, and its first quarter 2014 Form 10-Q.[4] CYIOS filed a Form 15-12g on May 30, 2014 which terminated the registration of its common

---

[3] *See* PCAOB Release No. 105-2010-007, available at http://pcaobus.org/Enforcement/Decisions/Documents/Traci_Jo_Anderson.pdf.

[4] CYIOS filed Forms 12b-25 to disclose it was unable to file its 2012 Form 10-K or first quarter 2013 Form 10-Q when due, but did not do so for subsequently due filings.

stock. Carnahan authorized each filing CYIOS made with the Commission and was responsible for CYIOS not making filings required under Section 13(a) of the Exchange Act.

D. CARNAHAN FAILED TO ASSESS INTERNAL CONTROLS

i. Legal Requirements

12. In relevant part, Rule 13a-15(a) states that every issuer with a class of securities registered under Section 12 of the Exchange Act and was either required to file an annual report pursuant to Section 13(a) or 15(d) of the Exchange Act for the prior fiscal year or had filed an annual report for the prior fiscal year, must maintain internal control over financial reporting ("ICFR"). Rule 13a-15(f) defines ICFR as process designed by the issuer's executive management to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

13. Rule 13a-15(c) requires management of such issuers to evaluate, with the participation of the principal executive and principal financial officers (or persons performing similar functions) the effectiveness of the issuer's ICFR as of the end of each fiscal year. Rule 13a-15(c) states that there are many different ways to conduct an evaluation of internal controls over financial reporting to meet the requirements of this rule, and that an issuer can comply with this requirement by conducting an evaluation in accordance with interpretive guidance issued by the Commission in Release No. 34-55929, *Commission Guidance Regarding Management's Report on Internal Control Over Financial Reporting Under Section 13(a) or 15(d) of the Securities Exchange Act of 1934*, (the "2007 Guidance").

14. The registrant "must maintain evidential matter, including documentation, to provide reasonable support for management's assessment of the effectiveness of the registrant's internal control over financial reporting," as stated in the instructions to Regulation SK, Item 308, *Internal Control over Financial Reporting*. The 2007 Guidance similarly states "Management is responsible for maintaining evidential matter, including documentation to provide reasonable support for its assessment.

15. Rule 13a-14, *Certification of Disclosure in Annual and Quarterly Reports*, requires each Form 10-Q and 10-K to include certifications signed by each principal executive and principal financial officer of the issuer (or persons performing similar functions). Among other things, the certifying officers must confirm that the report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by [the] report.

ii. Carnahan's Assessments of Internal Control over Financial Reporting

16. CYIOS's Forms 10-K for the fiscal years ended December 31, 2009, 2010, and 2011 include management's report on ICFR, as required by Exchange Act Rule 13a-15(c) and Item 308 of Regulation S-K. CYIOS also included management's report on ICFR in its 2010, 2011, and

2012 Forms 10-Q.[5] CYIOS stated in each report that management had assessed ICFR using the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in Internal Control – Integrated Framework (the "COSO Framework").

17. These statements were false. CYIOS either did not evaluate ICFR, or did not evaluate ICFR using the COSO Framework.

18. In addition, CYIOS did not maintain any documentation of management's assessments of ICFR. As discussed in the 2007 Guidance and stated in the instructions to Regulation S-K, Item 308, a registrant "must maintain evidential matter, including documentation, to provide reasonable support for management's assessment of the effectiveness of the registrant's internal control over financial reporting."

19. For these reasons, Carnahan's certifications that CYIOS had assessed ICFR using the COSO Framework were false.

E. <u>OFFERS AND SALES OF SECURITIES</u>

20. After filing its 2009 Form 10-K on February 26, 2010, CYIOS issued, in exchange for consulting services and debt conversions, common stock under a registration statement filed on Form S-8 (No. 333-147695, filed November 29, 2007). This registration statement incorporated by reference subsequent filings, including CYIOS's 2009 Form 10-K and 2010 Forms 10-Q.

F. <u>VIOLATIONS</u>

21. As a result of the conduct described above, Anderson willfully violated, CYIOS violated, and Carnahan caused CYIOS's violation of, Section 105(c)(7)(B) of Sarbanes-Oxley, which prohibits a person barred from associating with a registered public accounting firm from willfully becoming or remaining associated with an issuer in an accountancy or financial management capacity without consent of the PCAOB or the Commission and prohibits an issuer that knew or, in the exercise of reasonable care, should have known of such a bar, to permit such an association, without the consent of the PCAOB or the Commission.

22. As a result of the conduct described above, CYIOS violated, and Carnahan caused CYIOS's violations of, Sections 17(a)(2) and 17(a)(3) of the Securities Act. Section 17(a)(2) makes it unlawful to, in the offer or sale of securities, obtain money or property by means of any untrue statement of a material fact or any omission to state a material fact necessary in order make the statements made, in light of the circumstances under which they were made, not misleading. Section 17(a)(3) makes it unlawful to engage in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon the purchaser.

23. As a result of the conduct described above, CYIOS violated, and Carnahan caused CYIOS's violations of, Section 13(a), and Rules 13a-1 and 13a-13 thereunder, which require

---

[5] Issuers are not required to disclose its assessment of ICFR in quarterly filings, but CYIOS nonetheless included and asserted in each 2012 Form 10-Q that management had conducted an assessment of ICFR and concluded that it was "effective."

issuers with classes of securities registered pursuant to Section 12 of the Exchange Act to file periodic and other reports with the Commission.

24. As a result of the conduct described above, Carnahan violated Rule 13a-14 of the Exchange Act, which requires an issuer's principal executive and principal financial officer to attest that the company's "report does not contain any untrue statement of a material fact."

25. As a result of the conduct described above, Carnahan violated Rule 13a-15(c) of the Exchange Act, which requires each issuer's management, with the participation of the principal executive and principal financial officer, or persons performing similar functions, to perform an evaluation of the company's ICFR as of the end of each fiscal year.

III.

In view of the allegations made by the Division of Enforcement and the Office of the Chief Accountant, the Commission deems it necessary and appropriate in the public interest that public administrative and cease-and-desist proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford each Respondent an opportunity to establish any defenses to such allegations;

B. Whether, pursuant to Section 21C of the Exchange Act, Respondents should be ordered to cease and desist from committing or causing any violation and any future violation of Section 105(c)(7)(B) of Sarbanes-Oxley.

C. Whether, pursuant to Section 8A of the Securities Act, CYIOS and Carnahan should be ordered to cease and desist from committing or causing any violation and any future violation of Sections 17(a)(2) and 17(a)(3) of the Securities Act;

D. Whether, pursuant to Section 21C of the Exchange Act, CYIOS and Carnahan should be ordered to cease and desist from committing or causing any violation and any future violation of Section 13(a) of the Exchange Act and Rules 13a-1 and 13a-13 thereunder;

E. Whether, pursuant to Section 21C of the Exchange Act, Carnahan should be ordered to cease and desist from committing or causing any violation and any future violation of Rules 13a-14 and 13a-15;

F. Whether, pursuant to Section 4C of the Exchange Act and Rule 102(e) of the Commission's Rules of Practice, Anderson should be censured or denied, temporarily or permanently, the privilege of appearing or practicing before the Commission as an accountant;

G. Whether, pursuant to Section 8A of the Securities Act and Section 21B of the Exchange Act, civil penalties should be levied against Respondents; and

H. Whether, pursuant to Section 8A of the Securities Act and Sections 21B and 21C, respectively, of the Exchange Act, CYIOS and Anderson should be subject to disgorgement with prejudgment interest.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened not earlier than 30 days and not later than 60 days from service of this Order at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If a Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondents as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 300 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

ADMINISTRATIVE PROCEEDING
File No. 3-16387

In the Matter of **SHIVBIR S. GREWAL, Esq.,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO RULE 102(e) OF THE COMMISSION'S RULES OF PRACTICE, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted against Shivbir S. Grewal, Esq. ("Respondent" or "Grewal") pursuant to Rule 102(e)(3)(i) of the Commission's Rules of Practice.[1]

[1] Rule 102(e)(3)(i) provides, in relevant part, that:

The Commission, with due regard to the public interest and without preliminary hearing, may, by order, . . . suspend from appearing or practicing before it any attorney . . . who has been by name . . . permanently enjoined by any court of competent jurisdiction, by reason of his or her misconduct in an action brought by the Commission, from violating or aiding and abetting the violation of any provision of the Federal securities laws or of the rules and regulations thereunder.

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Section III, paragraph 3, below, which are admitted, Respondent consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Rule 102(e) of the Commission's Rules of Practice, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Grewal, age 54, is and has been an attorney admitted to practice law in the State of California. Grewal served as outside counsel to Spectrum Pharmaceuticals, Inc. ("Spectrum") from at least January 1, 2010 through at least March 31, 2013. Spectrum is a biotechnology company engaged in the business of acquiring, developing, and commercializing drug products, including an oncology drug known as FUSILEV.

2. Spectrum is a Delaware corporation with its principal place of business in Henderson, Nevada. At all relevant times, Spectrum's common stock was registered with the Commission pursuant to Section 12(g) of the Securities Exchange Act of 1934 ("Exchange Act"), and traded on the NASDAQ National Market.

3. On January 19, 2015, a final judgment was entered against Grewal, permanently enjoining him from future violations of Section 10(b) of the Exchange Act, Rule 10b-5 thereunder, and Section 17(a) of the Securities Act of 1933 ("Securities Act") in the civil action entitled <u>Securities and Exchange Commission v. Shivbir S. Grewal et al.</u>, Civil Action Number SACV 14-02026-JLS (DFMx), in the United States District Court for the Central District of California. In addition, Grewal was ordered to pay $30,343.17 in disgorgement, $997.68 in prejudgment interest, and a civil money penalty of $30,343.17.

4. The Commission's complaint alleged, among other things, that Grewal, in his capacity as outside counsel to Spectrum, learned on March 5, 2013 that Spectrum expected sales of FUSILEV – by far Spectrum's best selling drug – to be significantly lower in 2013 than previously anticipated; that Grewal sold 8,000 shares of Spectrum stock on March 7, 2013 based on that information; that Spectrum announced its reduced expectations concerning FUSILEV sales to the public on March 12, 2013, before which that information was non-public; that the price of Spectrum's common stock fell approximately thirty-seven percent following that announcement; and that Grewal avoided $30,343.17 in losses by selling Spectrum stock when he did. The Complaint also alleged that Grewal tipped his wife to sell Spectrum stock before the

March 12, 2013 announcement and that his wife sold 3,500 shares of Spectrum stock on March 11, 2013, thereby avoiding $14,499.05 in losses.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanction agreed to in Respondent's Offer.

Accordingly, it is hereby ORDERED, effective immediately, that Grewal is suspended from appearing or practicing before the Commission as an attorney.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-74277; File No. 4-681]

Proxy Voting Roundtable

AGENCY: Securities and Exchange Commission

ACTION: Notice of roundtable discussion; request for comment.

SUMMARY: The Securities and Exchange Commission will host a roundtable to explore ways to improve the proxy voting process. The roundtable will focus on universal proxy ballots and retail participation in the proxy process. Roundtable panelists will discuss the state of contested director elections and whether changes should be made to the federal proxy rules to facilitate the use of universal proxy ballots by management and proxy contestants. In addition, panelists will discuss the state law, logistical and disclosure issues presented by a possible universal proxy ballot process. Roundtable panelists also will discuss strategies for increasing retail shareholder participation in the proxy process, including how technology might affect retail participation and whether the format of disclosure could be improved to increase the engagement of shareholders and how the mechanics of voting could be improved to affect retail shareholder participation.

The roundtable discussion will be held in the multi-purpose room of the Securities and Exchange Commission headquarters at 100 F Street, NE, Washington DC on February 19, 2015 from 9:30 a.m. to approximately 1:00 p.m. The public is invited to observe the roundtable discussion. Seating will be available on a first-come, first-serve basis. The roundtable discussion will also be available via webcast on the Commission's website at www.sec.gov.

DATES: The roundtable discussion will take place on February 19, 2015. The Commission will accept comments regarding issues addressed at the roundtable until March 31, 2015.

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic Comments:

- Use the Commission's internet comment form (http://sec.gov/rules/other.shtml); or
- Send an email to rule-comments@sec.gov. Please include File Number 4-681 on the subject line.

Paper Comments:

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090.

All submissions should refer to File Number 4-681. This file number should be included on the subject line if e-mail is used. To help us process and review your comments more efficiently, please only use one method. The Commission will post all comments on the Commission's Internet Web site (http://www.sec.gov/rules/other.shtml). Comments are also available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. All comments received will be posted without change; we do not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

FOR FURTHER INFORMATION CONTACT: Christina Chalk, Senior Special Counsel, Division of Corporation Finance, at 202-551-3440, or Raymond Be, Special Counsel, Division of Corporation Finance, at 202-551-3500, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

SECURITIES AND EXCHANGE COMMISSION
(Release No. 34-74299; File No. SR-NASDAQ-2014-065)

February 18, 2015

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Order Approving a Proposed Rule Change, as Modified by Amendment No. 1 Thereto, to Adopt New Rule 5713 and List Paired Class Shares Issued by AccuShares® Commodities Trust I

I. Introduction

On June 11, 2014, The NASDAQ Stock Market LLC ("NASDAQ" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b-4 thereunder,[2] a proposed rule change to: (1) adopt listing standards for Paired Class Shares in new Rule 5713; and (2) list and trade Paired Class Shares ("Shares") issued by AccuShares® Commodities Trust I ("Trust") relating to the following funds pursuant to new Rule 5713: (a) AccuShares S&P GSCI® Spot Fund; (b) AccuShares S&P GSCI® Agriculture and Livestock Spot Fund; (c) AccuShares S&P GSCI® Industrial Metals Spot Fund; (d) AccuShares S&P GSCI® Crude Oil Spot Fund; (e) AccuShares S&P GSCI® Brent Oil Spot Fund; (f) AccuShares S&P GSCI® Natural Gas Spot Fund; and (g) AccuShares Spot CBOE® VIX® Fund (each individually, "Fund," and, collectively, "Funds").

The proposed rule change was published for comment in the Federal Register on June 23, 2014.[3] On August 6, 2014, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule

1 15 U.S.C. 78s(b)(1).

2 17 CFR 240.19b-4.

change, or institute proceedings to determine whether to approve or disapprove the proposed rule change.[5] On September 18, 2014, the Commission instituted proceedings to determine whether to approve or disapprove the proposed rule change,[6] and on December 16, 2014, the Commission extended the deadline for Commission action until February 18, 2015.[7] The Commission received six comment letters regarding the proposal, including one from the Exchange and two from AccuShares Investment Management LLC ("Sponsor"), the sponsor of the Funds.[8] On February 10, 2015, the Exchange submitted Amendment No. 1 to the proposed rule change.[9]

This order approves the proposed rule change, as modified by Amendment No. 1 thereto.

---

5 See Securities Exchange Act Release No. 72779, 79 FR 47162 (Aug. 12, 2014). The Commission designated a longer period within which to take action on the proposed rule change and designated September 19, 2014 as the date by which it should approve, disapprove, or institute proceedings to determine whether to disapprove the proposed rule change.

6 See Securities Exchange Act Release No. 73142, 79 FR 57150 (Sept. 24, 2014) ("OIP").

Allen to Commission (Oct. 11, 2014) ("Allen Letter"); Letter from Mark Kassner to Commission (Oct. 13, 2014) ("Kassner Letter"); E-mail from Ned Cataldo, Chief Operating Officer and Co-Founder of the Sponsor, to Heather Seidel, Associate Director, Commission (Oct. 24, 2014) ("Sponsor E-mail"); Letter from Jurij Trypupenko, Associate General Counsel, Exchange, to Brent J. Fields, Secretary, Commission (Oct. 28, 2014) ("Exchange Letter"). All comment letters are available at: http://www.sec.gov/comments/sr-nasdaq-2014-065/nasdaq2014065.shtml.

9 In Amendment No. 1, the Exchange (a) corrected references to the entity that will be calculating and publishing the CBOE Volatility Index®, (b) deleted Commentary .05 to Rule 5713 due to its inapplicability to Paired Class Shares, and (c) made technical re-numbering changes to Rule 5713 as a result of the deletion of Commentary .05. Amendment No. 1 provided clarification to the proposed rule change, and because it does not materially affect the substance of the proposed rule change, Amendment No. 1 is not subject to notice and comment.

II. Description of the Proposal

The Exchange proposes to adopt new Rule 5713, which permits the listing of Paired Class Shares, and to list and trade Shares of the Funds.

A. General Description of Paired Class Shares[10]

Paired Class Shares will be structured with the objective of providing investors with exposure to changes in an index or other numerical variable ("Underlying Benchmark"). Paired Class Shares will be issued by a trust on behalf of a fund, and each fund will be a segregated series of that trust.[11] Paired Class Shares will have values that are based on an Underlying Benchmark where the value of the underlying benchmark reflects the value of assets, prices, price volatility, or other economic interests ("Reference Asset").[12]

The trust for each fund of Paired Class Shares will always issue and redeem Paired Class Shares in pairs of shares of opposing classes of each fund: Up Shares and Down Shares. The values of the opposing classes will move in opposite directions as the value of the fund's Underlying Benchmark varies from its starting level. Up Shares will be positively linked to the fund's Underlying Benchmark, and Down Shares will be negatively linked to the fund's Underlying Benchmark.[13] The rate of linkage or leverage of a fund's Up Shares and Down Shares performance to the performance of the fund's referenced Underlying Benchmark will be

---

10 A complete description of Rule 5713 and Paired Class Shares can be found in the Notice, supra note 3.

11 See NASDAQ Rule 5713(c).

12 See id. The Exchange states that other economic interests would include, for example, currencies, interest rates, non-investable economic indices, and other measures of financial instrument value. See Notice, supra note 3, 79 FR at 35611, n.11. The Exchange will file separate proposals under Section 19(b) of the Act before listing and trading each series of Paired Class Shares. See Commentary .02 to NASDAQ Rule 5713.

13 See NASDAQ Rule 5713(c).

one-to-one.[14] Each fund will use a mathematical formula to calculate the liquidation value attributable to each of its classes of Paired Class Shares ("Class Value") and to each share of each class ("Class Value per Share").[15]

Each fund will engage in regular distributions[16] and may also engage in special distributions[17] or corrective distributions.[18] Immediately after each distribution, the fund's

---

14 See Notice, supra note 3, 79 FR at 35611.

15 See id. The Exchange represents that the mathematical formula is based on the following factors: (1) the value of the fund's assets; (2) the allocation of that value based on changes in the level of the fund's Underlying Benchmark, which may be limited, reduced, capped, or otherwise modified according to formula or pre-set parameters; and (3) the daily accrual of gain and income or loss on the assets of the fund, less the liabilities of the fund, as such gains, income losses, and liabilities are allocated to each class of the fund. See id. at n.12.

16 On a scheduled basis, funds would make regular distributions, paying a dividend to the class of shares that had increased in value since the last distribution. According to the Exchange, regular and special distributions will be made in the form of cash during the first six months of trading in Paired Class Shares. Thereafter, each fund will pay all or any part of any regular or special distribution in Paired Class Shares instead of cash, where further cash distributions would adversely affect the liquidity of the market for the fund's shares or impact the fund's ability to meet minimum Exchange distribution requirements. See id. at 35619 (further stating that all payments made in Paired Class Shares will be made in equal numbers of Up and Down Shares, and that, to the extent a share distribution would result in the distribution of fractional Paired Class Shares, cash in an amount equal to the value of the fractional Paired Class Shares will be distributed rather than fractional Paired Class Shares).

17 Funds would make special distributions when movement in the Underlying Benchmark exceeded a specified rate of change since the previous distribution. Special Distributions are designed to prevent rapid movements in the Underlying Benchmark from transferring all value in the fund either to the Up Shares or to the Down Shares. See id. (describing regular and special distributions to be made in the form of cash during the first six months of trading in Paired Class Shares, and thereafter, in Paired Class Shares instead of cash).

18 Funds would make corrective distributions when the trading price of a class of shares deviates from its class value by a specified amount for a specified period. Corrective distributions are designed to prevent the Up Shares and Down Shares from becoming locked in a persistent state of equal and opposite deviations from class value. In a

Underlying Benchmark participation or exposure will be reset, and the fund's Class Value per Share for each of its classes will be set to equal the lowest Class Value per Share of the two classes of Paired Class Shares.

Paired Class Shares of a fund will be created and redeemed in specified aggregations of equal quantities of Up Shares and Down Shares[19] at their respective Class Values per Share. Paired Class Shares can only be created or redeemed by authorized participants ("Authorized Participants").[20] Paired Class Shares creation and redemption transactions will only occur (a) for cash consideration, and (b) in equal pre-determined quantities of Up Shares and Down Shares.

B. The Exchange's Description of the Funds

The Exchange has made the following representations and statements in describing, among other things, the Funds, the corresponding Underlying Benchmarks, arbitrage, and distributions.[21]

The Shares will be offered by the Trust, which is a Delaware statutory trust.[22] Wilmington Trust, N.A., a national banking association, will serve as the trustee ("Trustee") and

---

corrective distribution, a fund will issue each holder of Up Shares an equal number of Down Shares, and each holder of Down Shares an equal number of Up Shares.

19 A Creation Unit for each Fund will comprise 25,000 Up Shares and 25,000 Down Shares. See id. at 35612, n.14.

20 See id. at 35612.

21 The Commission notes that additional information regarding the Trust, the Funds, and the Shares, including risks, information relating to the Underlying Benchmarks and Reference Assets, Class Value and Class Value per Share calculations, creation and redemption procedures, trading halts and pauses, applicable Exchange trading rules, surveillance, information circulars, fees, disclosure policies, distributions, and taxes, among other information, is included in the Notice and the Registration Statement, as applicable. See Notice, supra note 3, and Registration Statement, infra note 22, respectively.

22 The Exchange states that the offer and sale of Paired Class Shares of each Fund will be registered with the Commission by means of the Trust's registration statement on Form

the investment advisor ("Investment Advisor") for each Fund. The Investment Advisor, which is chosen by the Sponsor, is responsible for investing each Fund's available cash in bills, bonds, and notes issued and guaranteed by the United States Treasury ("United States Treasury Securities") with remaining maturities of 90 days or less ("Eligible Treasuries") and over-night repurchase agreements collateralized by United States Treasury Securities ("Eligible Repos," and together with cash and Eligible Treasuries, collectively, "Eligible Assets"). State Street Bank and Trust Company ("State Street"), a Massachusetts trust company, will serve as the custodian, administrator, and transfer agent ("Custodian," "Administrator," or "Transfer Agent") for each Fund.[23]

The Underlying Benchmark of each Fund, other than the AccuShares Spot CBOE VIX Fund ("VIX Fund"), is constructed, calculated, and published by S&P® Dow Jones Indices LLC ("Index Provider").[24] The CBOE Volatility Index® ("VIX"), which is the Underlying

---

S-1 under the Securities Act of 1933 ("Securities Act"). According to the Exchange, the Registration Statement was filed on March 18, 2014 and will be effective as of the date of such offer and sale. See Notice, supra note 3, 79 FR at 35615. The Commission notes that a pre-effective amendment No. 1 to the registration statement ("Registration Statement") was filed on July 17, 2014 (File No. 333-194666).

23 The Custodian will hold each Fund's securities and cash and will perform each Fund's Class Value and Class Value per Share calculations. As Administrator, State Street will, among other things, perform or supervise the performance of services necessary for the operation and administration of the Funds (other than making investment decisions or providing services provided by other service providers), including accounting and other fund administrative services. As Transfer Agent, State Street will, among other things, provide transfer agent services with respect to the creation and redemption of Creation Units. The Transfer Agent will receive from Authorized Participants creation and redemption orders and deliver acceptances and rejections of such orders to Authorized Participants as well as coordinate the transmission of such orders and instructions among the Sponsor and the Authorized Participants.

24 The Underlying Benchmarks for all of the Funds other than the VIX Fund are: (1) the S&P GSCI Spot index; (2) the S&P GSCI Agricultural and Livestock Spot index; (3) the S&P GSCI Industrial Metals Spot index; (4) the S&P GSCI Crude Oil Spot index; (5) the

Benchmark of the VIX Fund, is calculated and published by CBOE. According to the Exchange, both the Index Provider and CBOE are unaffiliated with the Trust and the Sponsor.[25] To the extent that an Underlying Benchmark is maintained by a broker-dealer or investment advisor, such broker-dealer or investment advisor will erect a "firewall" around personnel who have access to information concerning changes and adjustments to the Underlying Benchmark.[26]

As described above, the Trust will issue Shares on behalf of each Fund in offsetting pairs, where one constituent of the pair, the Up Shares, is positively linked to the Fund's Underlying Benchmark, and the other constituent, the Down Shares, is negatively linked to the Fund's Underlying Benchmark. Once created, a Fund's Paired Class Shares will trade independently of each other on the Exchange. The cash proceeds from the creation of Paired Class Shares may be held by a Fund only in Eligible Assets designed to preserve capital while earning an investment return that is consistent with the preservation of capital. Upon any redemption of a Fund's Creation Units by an Authorized Participant, the cash of the Fund will be used to pay the proceeds of the redemption to the redeeming Authorized Participant.

Each Fund engaging in a regular distribution,[27] a special distribution,[28] a corrective distribution,[29] or a net income distribution[30] will provide at least three business days' advance

---

S&P GSCI Brent Crude Oil Spot index; and (6) the S&P GSCI Natural Gas Spot index, (collectively, "S&P GSCI Commodity Indices").

25 See Notice, supra note 3, 79 FR at 35615.

26 See id.

27 See supra note 16.

28 See supra note 17.

29 See supra note 18.

30 In a net income distribution, cash is distributed to investors based on income (after expenses) from the financial instruments held by the Fund.

notice (or longer advance notice as may be required by the Exchange)[31] of such an event. Each Fund engaging in a share split[32] will provide at least ten calendar days' advance notice (or longer advance notice as may be required by the Exchange) of such an event. In each instance, the Sponsor will notify the Exchange, and post a notice of such event and its details on the Sponsor's website (www.AccuShares.com). For regular distributions that occur on schedule, the Sponsor will cause a press release to be issued identifying the receiving class, the amount of cash, the amount of Paired Class Shares (if any), and any other information the Sponsor deems relevant regarding the distribution and will post this information on the Sponsor's website. With respect to special distributions, corrective distributions, and share splits, the information provided will include the relevant ex-, record, and payment dates for each such event and relevant data concerning each such event. These events will also be reported in press releases, on the Sponsor's website, and in current reports on Form 8-K as material events, as well as in the Fund's periodic reports.

C. Summary of the Comments

In the OIP, the Commission posed questions regarding the proposed rule change. Commenters responded to those questions and offered other comments as well. The comments are summarized below.

---

[31] The Exchange states that it may determine that a longer notice is advisable in certain circumstances (e.g., an extended, or unexpected, market break).

[32] Reverse share splits will be declared to maintain a positive Class Value per Share for either the Up Shares or the Down Shares of an AccuShares Fund should the Class Value per Share of either class approach zero. Reverse share splits are expected to occur in the context of special distributions and are expected to be triggered after Class Value per Share declines below a specified dollar threshold as set forth in the applicable Fund prospectus.

1. The Effect of the Distributions on the Premiums and Discounts Between the Trading Price and Class Value Per Share

In response to Commission questions about the effect of the Funds' distributions on premiums and discounts,[33] the Sponsor asserts that the presence of regular, special, and corrective distributions will aid in the reduction of premiums and discounts.[34] With regard to both regular and special distributions, the Sponsor asserts that a Fund will make these types of distributions based on the movement of the Underlying Benchmark since the last distribution date, and will then reset the index to the current market level.[35] According to the Sponsor, two positive effects relating to potential discounts or premiums from regular and special distributions are: (1) an investor will enjoy an actual distribution relating to the index move rather than having to rely on trading out of an intrinsic gain that could be subject to market lags, frictions, or a lack of realizable trading price responsiveness; and (2) the index reset will re-equate the intrinsic share prices, having the effect of further highlighting any deviations between trading prices and Class Values, and consequently all investors (not just market professionals) will more clearly observe any premium or discount, and any investor can execute a trade in response to these deviations.[36]

---

33 See OIP, supra note 6, 79 FR at 57157.

34 See Sponsor Letter, supra note 8, at 4. Similarly, the Exchange states that the corrective distribution feature is designed to prevent losses that have occurred in other ETPs in the past. See Exchange Letter, supra note 8, at 22-23. See also Notice, supra note 3, 79 FR at 35611 ("Immediately after each regular, special and corrective distribution, the Fund's Underlying Benchmark participation or exposure will be reset and the Fund's Class Value per Share for each of its classes will be set to equal the lowest Class Value per Share of the two classes of Paired Class Shares.").

35 See Sponsor Letter, supra note 8, at 4.

36 See id.

The Sponsor states its view that almost all premium and discount combinations of the Up Shares and Down Shares of a Fund will be readily cured by conventional arbitrage. According to the Sponsor, the corrective distribution is an investor safety feature, above and beyond conventional arbitrage, designed to remedy those unique scenarios where the material discount amount of one Fund share is exactly equal to the material premium amount of the opposing share.[37]

The Sponsor states that the corrective distribution[38] is expected to have both a preventative effect and a curative effect relating to premiums and discounts between trading prices and Class Values per Share.[39] The Sponsor asserts that the possibility of a corrective distribution will disincentivize market participants from buying or selling shares at material premiums or discounts to the Class Values per Share.[40] Relating to the curative impact, the Sponsor states that following the corrective distribution: (1) the discount class holder, potentially stranded by low available bid prices, would have the correct aggregate value (inclusive of index movements) in a 50/50 position in the discount shares and premium shares; and (2) a premium class holder would also have the correct aggregate value (inclusive of index movements) in a 50/50 position in discount shares and premium shares.[41] The Sponsor asserts that these positions would be unaffected by a single share class premium or discount, and would be readily saleable

---

37 See id.

38 A corrective distribution will result in: (1) the investors holding the share class associated with the favorable index move to realize a gain equal to the realized move in the index; and (2) all investors receiving an equal quantity of each share class of a Fund. See id. at 5.

39 See id. at 4.

40 See id.

41 See id. at 5.

at a stable and readily identifiable price (especially because the Fund is limited to holding cash equivalents).[42] Authorized Participants, the Sponsor notes, may redeem these positions in sufficient aggregate amount.[43]

One commenter, who recommends that the Commission approve the proposed rule change, asserts that the regular, special, and corrective distributions will help prevent the significant premiums and discounts that have occurred in other ETPs in recent years.[44]

Another commenter expressed concern that the structure of Paired Class Shares will result in persistent premiums and discounts that will fundamentally invalidate the premise of the products in the market, making them misleading to investors.[45] This commenter asserts that the arbitrage mechanism will not work to keep each of the products trading closely to its intrinsic value; instead, the commenter argues that the arbitrage mechanisms will, in theory, keep the sum of the discount on one class and the premium on the other at zero. The commenter states its view that it is not economically possible to maintain intrinsic value in the secondary market, and predicts that any attempt to do so will lead to massive speculation in the products until they are pushed to a breaking point, at which point less-sophisticated investors will suffer significant losses.[46] To support these conclusions, the opposing commenter provides a number of hypothetical situations involving the trading relationship between the VIX index, VIX futures,

---

42 See id.

43 See id.

44 See Whaley Letter, supra note 8, at 1-2.

45 See Kassner Letter, supra note 8, at 1.

46 See id. This commenter further states that, while his assertions regarding the possibility of persistent premiums and discounts and the potential failure of an effective arbitrage mechanism for Paired Class Shares focus on the proposed VIX Fund and VIX futures, the commenter points out that the same economic principles apply to any futures. See id.

and the proposed VIX Fund.[47] According to the commenter, the core of the issue is that the products are simply not hedgeable.[48] The commenter predicts that there will be very significant arbitrage pressures attempting to exploit the "economic perversity of the products" and significant activity around prices that reflect a corrective distribution.[49]

The Exchange asserted that underlying the opposing commenter's arguments regarding ineffective arbitrage is the misunderstanding that spot levels and futures levels are equivalent and interchangeable.[50] The Exchange agrees that global markets will be broadly inter-related, including spot markets, futures markets, stock markets, and bond markets, but argues that, in the case of volatility, and VIX in particular, the spot market is not "in line" and directly comparable with VIX futures prices.[51] To support this assertion, the Exchange cites guidance from the CBOE VIX Primer Basics on the educational section of CBOE's website.[52] Additionally, the Exchange states that, contrary to the assumptions implicit in the opposing commenter's numerical examples, the Fund's creations, redemptions, and other operations are not limited by VIX futures expiration dates.[53] The Exchange asserts that, uniquely, the intrinsic Class Values of the Funds

---

47 See id. at 1-3.

48 See id. at 2.

49 See id.

50 See Exchange Letter, supra note 8, at 17.

51 See id. at 18. The Exchange asserts that the willingness of market participants to trade options overlying both the spot VIX and VIX futures demonstrates that the market understands the differences between spot VIX and the range of VIX futures prices. See id. at 19.

52 See id. at 18.

53 See id. at 16, n.28, 18.

are not dependent upon successful trading, rolling, or otherwise rebalancing of securities or futures contracts.[54]

The Exchange also asserts that one part of the arbitrage process for Paired Class Shares will operate the same way as it does for all exchange-traded funds ("ETFs"); namely, a share trading above or below an intrinsic Class Value can be transacted, hedged, and traded. Paired Class Shares have an additional arbitrage mechanism, according to the Exchange: intra-fund arbitrage—through the valuation and trading of both Up and Down Shares—limits the discounts, premiums, or any combination thereof of the share classes to a value indicated by the readily determinable net asset value of the Fund's cash equivalent assets.[55] The Exchange argues that arbitrage opportunities are uniquely easy to identify because of the direct observability of the Underlying Benchmark, the direct linkage of the intrinsic Class Values to the Underlying Benchmark, and the simplicity and very limited number of the moving parts in a creation or redemption—i.e., the two Fund Share prices versus the readily determinable value of the Fund's cash equivalent assets.[56]

2. The Ability of Investors to Understand the Operation of the Funds

The Sponsor asserts that retail investors and other market participants will be able to understand the Fund's redemption mechanics and the types and timing of distributions.[57] Generally, the Sponsor states that the Funds' distributions are limited to scheduled dates or the

54 See id. at 17.

55 See id.

56 See id.

57 See Sponsor Letter, supra note 8, at 6.

occurrence of large and rare underlying index moves.[58] The Sponsor asserts that movements of the underlying indexes will be easy to track using public sources and therefore concludes that investors will have the information necessary to transact in the Shares and respond to distributions.[59] In addition, the Sponsor represents that the consensus of qualified investors and market makers is that the frequency of the Funds' distributions is consistent with customary review (e.g., monitoring prices and returns) and customary reevaluation of share positions.[60]

The Sponsor states that the prospectus contains detailed examples, and the Funds' website will contain infographics describing each distribution as well as the courses of action available to investors.[61] The Sponsor also states that, except in limited and unanticipated conditions (listed in the prospectus), regular and special distributions will be made to shareholders in cash, and therefore investors will generally be making a straightforward decision with respect to deploying or maintaining received cash.[62] With respect to corrective distributions, the Sponsor states that they are a direct response to retail investor experiences in ETPs where obscure technical forces or market illiquidity have caused both large premiums and large discounts to persist.[63] The Sponsor asserts that these distributions, as a self-policing and self-

---

58 See id. at 2.

59 See id.

60 See id. The Sponsor states that its opinions and views expressed in the Sponsor Letter were informed by conversations with the Exchange, prospective authorized participants, other market makers, traders, and qualified investors. See id.

61 See id. at 6.

62 See id.

63 See id.

corrections measure, are an alternative to real-time estimates of indicative portfolio values, which investors may not necessarily consider before transacting in ETP shares.[64]

The Sponsor also states that: (1) corrective distributions are expected to be rare; (2) without them, retail investors otherwise may be exposed to either paying a material premium relating to a purchase or suffering a material discount relating to a sale of Shares; (3) before receipt of a distribution, investors will see a Form 8-K, a notice from the Exchange, and a notice on the Fund's website; and (4) upon receipt of a corrective distribution, investors may take any of the following actions, all of which the Sponsor asserts are not materially different from the options available to investors upon the receipt of cash or shares from any distribution or traditional corporate action: (a) sell their entire positions for cash, (b) sell a portion of their positions for cash for a modulated exposure to the Fund index, or (c) sell part of a position and reinvest proceeds to maximize a particular market exposure.[65] According to the Sponsor, prospective investors view the corrective distribution feature as an effective balance of "newness" and "benefit" for the entire range of Fund shareholders.[66] The Sponsor states that the corrective distribution is expected to encourage more active and accurate market making and more liquidity-enhancing position-taking by Authorized Participants, all of which are more likely to actually reduce the likelihood and occurrences of a corrective distribution declaration.[67]

---

64 See id.

65 See id. at 6-7.

66 Specifically, the Sponsor states that, while prospective participants with expertise in retail investing believed the corrective distribution feature to be engineered solely for the benefit of the retail investor and questioned whether institutional traders would lose profitable trading opportunities, market makers (including Authorized Participants) applauded the addition of a corrective distribution. See id. at 7. See supra note 60 (regarding with whom the Sponsor consulted).

67 See id.

The opposing commenter asserts that, because of the persistent premiums and discounts he predicts, investors would have to be extremely diligent in tracking their positions because the Up Shares might frequently turn into both Up Shares and Down Shares, which would result in inattentive investors paying fees to the issuer but not receiving any notional exposure whatsoever.[68] According to the commenter, an investor in the Shares would require extensive knowledge of the financial markets to understand why, when being required to re-enter the market after a distribution to reestablish a position, the product could be trading already at a significant premium or discount.[69] The commenter also states its view that the investor would have to have intimate knowledge of the VIX futures market to understand from where the premium or discount was actually derived.[70] The opposing commenter states that investors would likely receive Shares with the opposite economics for some distributions, and predicts that this would confuse them.[71] The commenter distinguishes regular share distributions, with which the commenter concedes investors are familiar, by stating that Share distributions would include Shares with the opposite economics and different tickers.[72] Further, the opposing commenter asserts that, unlike products that trade at or close to their intrinsic value, an investor in Shares needs to know a considerable amount of information at every point in time when investing in the product, including for example the coefficient of variation and the number of days there has been a premium or discount (in light of the corrective distribution threshold).[73] The opposing

68 See Kassner Letter, supra note 8, at 3.

69 See id.

70 See id.

71 See id.

72 See id.

73 See id. at 4.

commenter also asserts that the investor also must check his or her account every day, to see if there has been a Special Distribution, and on every Distribution Date, to see what is in his or her account (i.e., whether there is cash or a neutral basket, which may be subject to fees).[74]

3. The Ability of Investors to Understand the Funds' "Resets" to the Then-Current Reference Index Value

The Sponsor states its view that the Funds are similar to comparable ETPs in the market and that, accordingly, it expects that both retail investors and other market participants will understand the effect of resets (which will occur when regular, special, or corrective distributions are made) on their investments in a Fund.[75] The Sponsor states that in other comparable ETFs and exchange-traded notes ("ETNs") the impact of resetting comes through the re-trading of futures, options, or other contracts either daily, monthly, or on another cycle, and that this conventional resetting has transaction costs that are often difficult to isolate within the context of overall fund performance.[76] Additionally, according to the Sponsor, because the traditional method of resetting is accomplished through the trading of underlying positions at telegraphed times under prescribed fund rules, ETFs and ETNs can be disadvantaged from having to be a "price taker" in possibly adverse or challenging markets.[77] The Sponsor states that the Funds' resets allow the Funds to reduce their transaction expenses and eliminate the need to transact in underlying positions. The Sponsor also asserts that individual investors will be able to more easily track and monitor the resets of the Funds than the resetting impact in conventional funds.[78]

---

74 See id.

75 See id. at 7.

76 See id.

77 See id. at 7-8.

78 See id. at 8.

A supporting commenter asserts that the Funds would deliver exact holding period returns, which he contrasts to the returns of levered and inverse funds that implicitly rebalance daily and which he asserts can be a source of confusion for retail customers.[79]

4. The Adequacy of the Exchange's Suitability Rules

The Sponsor states its view that the Exchange's rules governing sales practices adequately ensure the suitability of recommendations regarding the Shares and that enhancement is unnecessary.[80] The Sponsor states that NASDAQ Rule 2111A requires that an exchange member have a reasonable basis to believe that a recommended transaction or investment strategy involving a security or securities is suitable for the customer, based on the information obtained through the reasonable diligence of the exchange member to ascertain the customer's investment profile.[81] According to the Sponsor, a customer's investment profile would, in general, include the customer's age, other investments, financial situation and needs, tax status, investment objectives, investment experience, investment time horizon, liquidity needs, and risk tolerance.[82] The Sponsor also states that the rule explicitly covers recommended investment strategies involving securities, including recommendations to "hold" securities.[83]

The Sponsor also discusses the Exchange's information circular. Prior to the commencement of trading of Fund shares, the Exchange will inform its members through an information circular of the suitability requirements of NASDAQ Rule 2111A. Specifically the information circular will remind members that, in recommending transactions in Shares, they

---

79 See Whaley Letter, supra note 8, at 2.

80 See Sponsor Letter, supra note 8, at 8, 9.

81 See id. at 8.

82 See id.

83 See id.

must: (1) have a reasonable basis to believe that (a) the recommendation is suitable for a customer given reasonable inquiry concerning the customer's investment objectives, financial situation, needs, and any other information known by such member, and (b) the customer can evaluate the special characteristics and is able to bear the financial risks of an investment in the shares; and (2) make reasonable efforts to obtain the following information: (a) the customer's age; (b) the customer's other investments; (c) the customer's financial situation and needs; (d) the customer's tax status; (e) the customer's investment objectives, experience, time horizon, liquidity needs and risk tolerance; and (f) such other information used or considered to be reasonable by such members or registered representatives in making recommendations to the customer.[84]

5. The Relationship Between the Funds' Holdings and Their Investment Objective

The Sponsor states its view that investors will understand that the Funds hold cash and cash equivalent securities, and the Cash Values per Share will be directly responsive to changes in the underlying index.[85] The Sponsor asserts that ETNs are similar to the Shares in that an ETN does not have identified "portfolio assets" and that this aspect of ETNs has been well understood.[86]

The Sponsor asserts that the Funds' structure is appropriate, and will result in certain advantages: (1) lower fund operating costs, because the Class Value per Share amounts are

---

84 See id. at 8-9. In its comment letter, the Exchange repeated the Sponsor's statements regarding the Exchange's rules and information circular. See id. at 13-14.

85 See id. at 9.

86 See id. The Sponsor, however, distinguishes the Shares from ETNs in that, with ETNs, an investor is subject to the performance risk of the obligor and a market maker is subject to ETN creation and redemptions processes which are sometimes less standardized than ETF processes. See id. at 10.

directly related to an independent and readily observable index and there is no need for a Fund to incur trading costs over assets in an effort to track the index; (2) improved fund performance transparency, because the return of Shareholders will not be impacted by transactions costs that are difficult to observe and underlying assets whose pricing is opaque; (3) a higher certainty of redemption values because the Shares will be readily created and redeemed at a certain and readily determinable value, thereby eliminating the frictions often caused where (a) a potentially large number of in-kind securities are challenging to value or (b) a cash creation or redemption is based on trading illiquid securities or trading securities in a fast-moving market; and (4) direct indexing, which the Sponsor states prospective investors believe to be more easily followed through readily observable and free data services.[87]

6. Other Comments

One commenter recommends that the Commission approve the proposed rule change because, in its view, the AccuShares' products are simple and transparent, and will provide investors, institutions and retail customers alike with the returns that they want.[88] He also recommends approval of the proposed rule change because: (1) the Shares would provide exposure to spot market benchmarks that are popular to large segments of the asset management community; (2) the Up Shares and Down Shares are direct investments that track readily-observable spot market benchmarks, unlike the futures indexes, which he characterizes as complicated dynamic futures trading strategies; (3) changes in the values of the Up Shares and Down Shares would be purely mechanical and would correspond directly to the price changes in the underlying index, which is distinctly different from many current products; (4) unlike ETNs,

---

87 See id. at 9-10.

88 See Whaley Letter, supra note 8, at 2.

investors in the Funds would have no credit risk; and (5) actively-managed products add market complexity, and the Paired Class Shares would not be actively-managed.[89]

Similarly, another commenter asserts that the Funds would be both highly relevant to a wide range of investors and highly approachable to all of them.[90] He asserts that indexes underlying the Funds are arguably better for individual investors because they are easier to follow than the indexes that underlie some existing products.[91] This commenter also asserts that the market has been clamoring for better spot market proxies since the beginning of the ETF market.[92] Further, the commenter recommends approval of the proposed rule change because the "best ETFs also help solve existing structural problems for traders and investors regarding term structure of price and/or volatility, beta to cash prices and tracking errors, and rebalancing inefficiencies…"[93]

The opposing commenter asserts that the premiums and discounts, which he predicts will result in corrective distributions that are more frequent than the Exchange has suggested, will

---

89 See id. at 1-2.

90 See Allen Letter, supra note 8.

91 See id.

92 See id.

93 Id.

result in high implicit fees and large tracking errors.[94] He argues that the products are not suitable for any investor.[95]

In response, the Exchange asserts that the Daily Amount is not a charge, fee, or amount that leaves the Fund, but rather is an amount applied to both share classes.[96] The Exchange characterizes the Daily Amount as "one of the unique structural features of the Funds which leads to complete transparency of intrinsic Class Value entitlements."[97]

III. Discussion and Commission's Findings

After careful consideration, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[98] In particular, and as discussed further below, the Commission finds that the proposed rule change is consistent with: (1) the requirements of Section 6(b)(5) of the Act,[99] which requires, among other things, that the Exchange's rules be designed to promote just and equitable principles of trade; to foster cooperation and coordination with persons

---

94 See Kassner Letter, supra note 8, at 3. For example, the commenter characterizes the "Daily Amount" as a fee. During any single distribution measurement period that starts with the prior distribution date and to create a balanced market for the Up Shares and Down Shares of the VIX Fund, the Class Value per Share of each Up Share of the VIX Fund will be reduced and the Class Value per Share of each Down Share of the VIX Fund will be increased by an additional daily amount, the "Daily Amount." See Notice, supra note 3, 79 FR at 35617. The opposing commenter asserts that the investors in the Up Shares of the VIX Fund will be charged will be charged 4.5% in Daily Amount charges.

95 See Kassner Letter, supra note 8, at 3.

96 See Exchange Letter, supra note 8, at 19.

97 Id. at 22.

98 In approving this proposed rule change, the Commission notes that it has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

99 15 U.S.C. 78f(b)(5).

engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities; to remove impediments to and perfect the mechanism of a free and open market and a national market system; and, in general, to protect investors and the public interest; and (2) Section 11A(a)(1)(C)(iii) of the Act,[100] which sets forth Congress' finding that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities.

A. NASDAQ Rule 5713

NASDAQ Rule 5713 sets forth provisions regarding the listing and trading of Paired Class Shares on the Exchange. The rule defines Paired Class Shares,[101] establishes specific recordkeeping and reporting requirements for registered market makers in Paired Class Shares,[102]

---

100 15 U.S.C. 78k-1(a)(1)(C)(iii).

101 See NASDAQ Rule 5713(c). The operation of Paired Class Shares is described above. See supra section II.A.

102 In accordance with NASDAQ Rule 5713(h), market makers in Paired Class Shares must file with the Exchange and keep current a list identifying all accounts for trading in the applicable securities or physical commodities included in, or options, futures or options on futures on, the Reference Asset of the Underlying Benchmark of any Paired Class Shares or any other derivatives based on such Reference Asset or based on any security or Reference Asset included in the Underlying Benchmark, which the registered market maker may have or over which it may exercise investment discretion. In addition, market makers are prohibited from trading in the applicable securities or physical commodities included in, or options, futures or options on futures on, the Reference Asset of the Underlying Benchmark of any Paired Class Shares or any other derivatives based on such Reference Asset or based on any security or Reference Asset included in the Underlying Benchmark, in an account in which a market maker, directly or indirectly, controls trading activities, or has a direct interest in the profits or losses thereof. See NASDAQ Rule 5713(h)(i). In addition, market makers in Paired Class Shares are required to make available to the Exchange any and all books, records, or other information pertaining to transactions by such entity or registered or non-registered employee affiliated with such entity for its or their own accounts for trading the applicable securities or physical commodities included in, or options, futures or options on futures on, the Reference Asset

and sets forth initial and continued listing criteria, some of which are more fully discussed below.[103] In addition, Commentary .05 to Nasdaq Rule 5713 states that the Exchange will implement written surveillance procedures for trading Paired Class Shares.[104]

---

of the Underlying Benchmark of any Paired Class Shares or any other derivatives based on such Reference Asset or based on any security or Reference Asset included in the Underlying Benchmark, as may be requested by the Exchange. See NASDAQ Rule 5713(h)(ii).

103 The Commission notes that any securities listed in the future under NASDAQ Rule 5713 must be the subject of a rule filing by the Exchange under Section 19(b) of the Exchange Act—providing the Commission with the opportunity to review and to approve or disapprove that rule filing—and that all securities listed under NASDAQ Rule 5713 will be subject to the full set of bylaws and other rules and procedures of the Exchange. While Nasdaq Rule 5713(e) provides that Paired Class Shares may have values based on assets, prices, price volatility, or other economic interests, such as currencies, interest rates, non-investable economic indices, and other measures of financial instrument value, the specific products approved for listing pursuant to this order will have values based on price volatility and commodity indices. The Commission staff will consider any future proposals to list products under Nasdaq Rule 5713 with values based on these and other types of benchmarks and reference assets, evaluating the specific facts and circumstances associated with each proposal under Section 19(b) of the Exchange Act. Further, the Commission staff will continue to analyze the development of exchange-traded products and their impact on market structure and will monitor the development of the market for Paired Class Shares.

104 The Exchange stated that trading in Paired Class Shares will be subject to the existing trading surveillances, administered by both the Exchange and FINRA on behalf of the Exchange, which are designed to detect violations of Exchange rules and applicable federal securities laws. See Notice, supra note 3, 79 FR at 35621. FINRA surveils trading on the Exchange pursuant to a regulatory services agreement, and the Exchange is responsible for FINRA's performance under this regulatory services agreement. See Notice, supra note 3, 79 FR at 35621, n.51. The Exchange represented that FINRA, on behalf of the Exchange, will communicate as needed regarding trading in the Paired Class Shares and in the securities in which the Fund will invest with other markets and other entities that are members of the Intermarket Surveillance Group ("ISG") or with which the Exchange has in place a comprehensive surveillance sharing agreement. See Notice, supra note 3, 79 FR at 35621. Additionally, the Exchange represented that FINRA may obtain trading information regarding trading in the Shares from markets and other entities that are members of the ISG or with which the Exchange has in place a comprehensive surveillance sharing agreement. See Notice, supra note 3, 79 FR at 35621. For a list of the current members of ISG, see http://www.isgportal.org/.

Pursuant to NASDAQ Rule 5713(f)(i)(B), the Exchange will obtain a representation from the Trust on behalf of each Fund that the Class Value per Share of each of its Up Shares and Down Shares will be calculated daily and that these Class Values per Share and information about the assets of the Fund will be made available to all market participants at the same time.[105] NASDAQ Rule 5713(f)(ii)(B) permits the Exchange to suspend trading in or remove from listing Paired Class Shares whose Underlying Benchmark, or a substitute or replacement Underlying Benchmark based on the same Reference Asset,[106] is no longer calculated or available on at least a 15-second delayed basis during the Regular Market Session from a major market data vendor unaffiliated with the sponsor, the custodian, the trustee of the Trust, the Fund, or NASDAQ. Further, NASDAQ Rule 5713(f)(ii)(C) permits the Exchange to suspend trading in or remove from listing Paired Class Shares whose Class Value per Share becomes no longer available on a daily basis to all market participants at the same time. NASDAQ Rule 5713(f)(ii)(D) permits the Exchange to suspend trading in or remove from listing Paired Class Shares whose Intraday Indicative Value is no longer made available on at least a 15-second delayed basis by a major market vendor during the Exchange's Regular Market Session. The Commission also notes that

---

105 The Commission notes that these requirements are substantively identical to provisions applicable to other exchange-traded derivative securities products, including Managed Fund Shares under NASDAQ Rule 5735(d)(1)(B). See Securities Exchange Act Release No. 57962 (June 13, 2008), 73 FR 35175 (June 20, 2008) (SR-NASDAQ-2008-039) (approving NASDAQ listing standards applicable to Managed Fund Shares). For a specific product approved for listing under NASDAQ Rule 5735, see Securities Exchange Act Release No. 73480 (October 31, 2014), 79 FR 66022 (November 6, 2014) (SR-NASDAQ-2014-090) (approving the listing and trading of Shares of the Validea Market Legends ETF under NASDAQ Rule 5735).

106 Commentary .04 to Rule 5713 states that, prior to a substitute or replacement Underlying Benchmark being selected for the Fund, NASDAQ must file a related proposed rule change pursuant to Rule 19b-4 under the Exchange Act to continue trading the Paired Class Shares.

NASDAQ Rules 5713(f)(i)(C) and 5713(f)(ii)(E) require the establishment of information barriers concerning changes and adjustments to the Underlying Benchmark.[107]

Based on the foregoing, the Commission believes that the requirements of NASDAQ Rule 5713, taken together with other NASDAQ Rules regarding the trading of equity securities on the Exchange, are consistent with the requirement of Section 6(b)(5) of the Act that requires that the Exchange's rules be designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market, and to promote just and equitable principles of trade and to protect investors and the public interest.

B. Issues Raised by the Opposing Commenter

1. Effectiveness of Arbitrage

In the OIP, the Commission asked for commenters' views on the effect that Paired Class Share distributions would have on premiums and discounts between the trading price of the Paired Class Shares and their respective Class Value per Share.[108]

The opposing commenter asserts that the structure of Paired Class Shares will result in significant and persistent premiums and discounts because "it is not economically possible to construct a two sided market for spot exposure that does not trade in line with VIX futures prices."[109] This commenter argues that the arbitrage mechanism of the Funds will not work to keep Up Shares and Down Shares trading close to their intrinsic value, but will instead "in theory

---

[107] The Commission notes that these provisions are substantively identical to the firewall requirements in NASDAQ Rule 5705(b)(2)(B)(i), which governs the listing and trading of Index Fund Shares.

[108] See OIP, supra note 6, 79 FR at 57157.

[109] Kassner Letter, supra note 8, at 1. See also supra notes 45-48 and accompanying text.

keep the sum of the premium on one and the discount on the other at zero."[110] To support these conclusions, the opposing commenter provides a number of hypothetical situations involving the trading relationship between the VIX index, VIX futures, and the proposed VIX Fund.[111] Further, the opposing commenter argues that the "daily amount" applied to the VIX Fund—a 15 basis point amount transferred from Up Shares to Down Shares when the VIX is at 30 or below—means that investors in Up Shares will suffer a 4.5% loss over a 30-day period, even if the VIX does not move.[112] The opposing commenter also argues that, because the arbitrage mechanism will not work as described by the Exchange, multiple corrective distributions will be required per year, causing investors to incur reinvestment expenses to maintain their desired position.[113]

The Exchange argues in response that, underlying this commenter's argument is a mistaken assumption that spot levels and futures levels are equivalent and interchangeable.[114] The Exchange agrees that markets such as spot markets, futures markets, stock markets, and bond markets will be broadly inter-related, but argues that, in the case of volatility in general and VIX in particular, the spot market is not "in line" and directly comparable with VIX futures prices. The Exchange cites the willingness of market participants to trade options overlying both the spot VIX and VIX futures as evidence that the market would understand the differences between spot VIX and the range of VIX futures prices. The Exchange notes that the website of CBOE, the provider of the VIX, states, "The price of a VIX futures contract can be lower, equal

---

110 Id.

111 See Kassner Letter, supra note 8.

112 Id.

113 Id. at 2-3.

114 See Exchange Letter, supra note 8, at 17.

to or higher in the 30-day forward period covered by the VIX futures contract than in the 30-day spot period covered by VIX."[115] The Exchange also notes that, unlike VIX futures, "because the shares of the Fund are both available for creation and redemption daily, the Fund provides for spot VIX positions to be created or redeemed daily, and for returns to be realized on a daily basis."[116]

Additionally, the Exchange argues that the existence of the Daily Amount applied to the VIX Fund is disclosed clearly and referenced more than 90 times in the prospectus for the VIX Fund, and the Exchange argues that the amount of the Daily Amount is closely aligned with the estimates of several market experts as to the roll cost incurred by long positions in volatility futures (e.g., VIX futures).[117] As a result, the Exchange argues, the expected premiums and discounts encountered by the VIX Fund should be substantially less that the opposing commenter predicts.[118] The Exchange also argues that the corrective distribution mechanism is designed to prevent the type of investor losses that occurred when an ETN designed to track the VIX moved substantially away from the value of the VIX.[119]

The Commission believes that the Exchange has met its burden to demonstrate that its proposal is consistent with the Act. The Exchange has reasonably explained in the Notice, the Exchange's response letter,[120] and, as to the VIX Fund, in the Registration Statement for the VIX

---

115 Id. at 18.

116 Id. at 21.

117 See id. at 20-21.

118 See id. at 21.

119 See id. at 22-23.

120 See Exchange Letter, supra note 8.

Fund,[121] the methodology for the calculation of the Underlying Benchmarks and the differences between the value of the Underlying Benchmark indexes and the prices of the relevant near-month futures contracts. In particular the Exchange explains that, with respect to the VIX Fund, the purpose and derivation of the 0.15% Daily Amount by which the Up Shares will be reduced and the Down Shares increased, which, as cited by the Exchange, is consistent with price patterns historically observed when comparing VIX futures and spot prices.[122] The Exchange further notes the extent to which the Registration Statement discloses the Daily Amount transfer.[123] The Exchange has also reasonably explained the operation of the Funds; the creation and redemption process and procedures; the regular, special, and corrective distributions to be employed by the Funds; and the resulting resetting process.

In addition, with respect to arbitrage in Fund Shares, and, consistent with Section 11A(a)(1)(C)(iii) of the Act,[124] which sets forth Congress' finding that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities, the Commission notes that market information regarding the value of the Shares and of the Underlying Benchmarks will be continuously available to market participants. Quotation and last-sale information for the Shares will be available via NASDAQ proprietary quote and trade services, as well as in accordance with any UTP plans for a Fund's

---

121 See Registration Statement, supra note 22.

122 See Exchange Letter, supra note 8, at 22.

123 See id.

124 15 U.S.C. 78k-1(a)(1)(C)(iii).

Shares.[125] Additionally, information regarding market price and volume of the Shares will be continually available on a real-time basis throughout the day on brokers' computer screens and other electronic services.[126] Further, information regarding the previous day's closing price and trading volume information for the Shares will be published daily in the financial section of newspapers.[127]

The value of each Fund's Underlying Benchmark, as well as information about each Fund's Underlying Benchmark constituents, the weighting of the constituents, the Underlying Benchmark's methodology, and the Underlying Benchmark's rules, will be available at no charge on the Index Provider's website at us.spindices.com or, in the case of the VIX Fund, the CBOE's Web site at www.cboe.com/VIX.[128] The value of each Fund's Underlying Benchmark also will be published by one or more major market data vendors on at least a 15-second delayed basis during the Regular Market Session.[129] An Intraday Indicative Value for each Fund will be disseminated and made available by a major market vendor, and will be updated and widely disseminated and broadly displayed on at least a 15-second delayed basis during the Regular Market Session.[130] Class Values and Class Values per Share of each Fund will be calculated by the Fund's Custodian at the end of each Regular Market Session.[131]

---

125 See Notice, supra note 3, 79 FR at 35621.

126 See id.

127 See id.

128 See id.

129 See NASDAQ Rule 5713(f)(2)(B).

130 See Notice, supra note 3, 79 FR at 35622.

131 NASDAQ Rule 5713(f)(ii)(C) is designed to ensure that the Class Values and Class Values per Share of each Fund will be made available to all market participants at the same time.

Under NASDAQ Rule 5713(f)(i)(B), the Exchange will obtain a representation from the Trust on behalf of each Fund that the Class Value per Share of each of its Up Shares and Down Shares will be calculated daily and that these Class Values per Share and information about the assets of the Fund will be made available to all market participants at the same time.[132] In addition, NASDAQ Rule 5713(f)(2)(B) permits the Exchange to suspend trading in or remove from listing Paired Class Shares whose Underlying Benchmark, or a substitute or replacement Underlying Benchmark based on the same Reference Asset,[133] is no longer calculated or available on at least a 15-second delayed basis during the Regular Market Session from a major market data vendor unaffiliated with the sponsor, the custodian, the trustee of the Trust, the Fund or NASDAQ.

The Commission believes that, in light of the continuous dissemination of information about the Shares' current market prices, the Funds' Underlying Benchmarks, and the Funds' intraday estimated Class Value per Share, arbitrage opportunities will be readily identifiable to market participants. The Commission also believes that the creation and redemption process, which, under Rule 5713(c), uses a neutral basket of Up Shares and Down Shares, is reasonably designed to allow market participants to arbitrage away premiums and discounts that may

---

132 The Commission notes that these requirements are substantively identical to provisions applicable to other exchange-traded derivative securities products, including Managed Fund Shares under NASDAQ Rule 5735(d)(1)(B).

133 Commentary .04 to Rule 5713 states that, prior to a substitute or replacement Underlying Benchmark being selected for the Fund, NASDAQ must file a related proposed rule change pursuant to Rule 19b-4 under the Act to continue trading the Paired Class Shares.

develop, as long as the Up Shares and Down Shares do not become locked in a persistent state of approximately equal and opposite premiums or discounts.[134]

The Commission acknowledges, however, that the normal arbitrage mechanism of the Funds will not be effective if equal and opposite premiums and discounts persist between the Up Shares and Down Shares of a Fund. Because no existing exchange-traded products use a paired-class structure, the Commission does not have a basis for comparison from which to predict how frequently such conditions are likely to occur. As noted above, however, the Funds would provide for a corrective distribution when the magnitude of the equal and opposite premiums and discounts exceeds a certain threshold.[135] The Exchange has represented that, "[e]ven if a corrective distribution is not triggered, the existence of a Fund's corrective distribution feature is expected to modify investor and Authorized Participant behavior to prevent persistent and material premium and discount conditions for Paired Class Shares from becoming locked."[136] Based on the Exchange's representation, the Commission believes that the corrective distribution mechanism is reasonably designed to limit the magnitude of such premiums and discounts and that, when triggered, it will provide investors with a market neutral position that should allow them to exit the affected Fund at Class Value. Further, the underlying value of the Funds and the extent of the premiums and discounts would not be subject to uncertainty, because, as explained

---

134 Because the funds would create and redeem their shares only in equal amounts of Up Shares and Down Shares, if one class of shares traded at a premium, and the other class traded at an approximately equal discount, arbitrage using the creation or redemption process could not eliminate those price deviations. For example, if Up Shares traded at a $0.50 premium, and down shares traded at a $0.50 discount, the value per share of a creation unit, composed of equal amounts of each class, would be equal to the NAV of the fund (i.e., the premium would cancel out the discount).

135 See supra note 18.

136 See Notice, supra note 3, at 9, 79 FR at 35612.

above,[137] the Funds' market prices, Class Values per Share, and reference benchmark values and methodologies would be publicly available in real time. In addition, and significantly, to the extent that equal and opposite premiums and discounts persist within a Fund's threshold for a corrective distribution, all investors in the affected Fund would be subject to the same pricing conditions, and Authorized Participants would not be able to use the creation and redemption process to trade in the primary market for the shares at prices more favorable than those available to investors trading at market prices on the Exchange.

Thus, for the reasons described above, the Commission believes that the Exchange's rules are reasonably designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

2. Investor Understanding and Suitability

In the OIP, the Commission solicited comments about whether retail investors and other market participants would be able to understand the types and timing of distributions as well as the periodic resets of Paired Class Shares' exposure to their Underlying Benchmarks.[138]

The opposing commenter argues that the operational complexity of Paired Class Shares renders them unsuitable for any investor. As discussed above, this commenter argues that extreme diligence would be required of investors in tracking their positions because the Up Shares might frequently turn into both Up Shares and Down Shares, and that investors would

---

137 See supra text accompanying notes 125-133.

138 See OIP, supra note 6, 79 FR at 57157.

need to know a considerable amount of information at every point in time when holding Shares.[139]

The Sponsor asserts that retail investors and other market participants will be able to understand the types and timing of fund distributions. The Sponsor states that the Registration Statement contains detailed examples, and the Funds' website will contain infographics describing each distribution, as well as the courses of action available to investors. According to the Sponsor, distributions will generally be limited to scheduled dates or the occurrence of large and rare underlying index moves, and movements of the underlying indexes will be easy to track using public sources. The Sponsor states that the consensus of qualified investors and market makers to whom it has spoken is that the frequency of the Funds' distributions is consistent with customary review (e.g., monitoring prices and returns) and customary re-evaluation of share positions. Additionally, the Sponsor states that, except in limited and unanticipated conditions which are identified in the Registration Statement, regular and special distributions will be made to shareholders in cash, and therefore investors generally will face a straightforward decision with respect to deploying or maintaining received cash. With respect to corrective distributions (in which a fund would issue each holder of Up Shares an equal number of Down Shares, and each holder of Down Shares an equal number of Up Shares), the Sponsor asserts that such distributions are expected to be rare and to encourage among Authorized Participants both more active and accurate market making and more liquidity-enhancing position-taking. The Sponsor also argues that corrective distributions, as a self-policing and self-correcting measure, are a better alternative to detailed disclosures about premiums and discounts in prospectuses, which investors may not necessarily read and which would require affirmative investor action, and the

139 See Kassner Letter, supra note 8, at 3-4.

dissemination of real-time estimates of indicative portfolio values, which investors may not necessarily consider before transacting in other types of ETP shares. Further, the Sponsor states that prospective investors to whom it has spoken believe that the corrective distribution will benefit the entire range of shareholders.

With respect to the resets, the Sponsor states that the Funds are similar to comparable ETPs in the market and that it expects that both retail investors and other market participants will understand the effect of Paired Class Share resets on their investments.[140] The Sponsor also asserts that individual investors will be able to more easily track and monitor Paired Class Share resets than the resetting impact in other types of ETPs.

The Sponsor also argues that the Exchange's sales practice rules adequately ensure the suitability of sales recommendations regarding the Funds' Shares, citing NASDAQ Rule 2111A, which requires that an exchange member have a reasonable basis to believe that a recommended transaction or investment strategy is suitable for a given customer, based on information obtained through reasonable diligence.[141] Additionally, the Sponsor notes that, before trading in the

---

140 Specifically, the Sponsor states that for comparable ETPs that seek commodity or volatility exposure through trading in derivative products, the impact of resetting comes through the "re-trading" of futures, options, or other contracts. These ETFs effect the resetting either daily, monthly, or on another cycle. This conventional resetting has transaction costs, which are often difficult to isolate within the context of overall fund performance. The Sponsor adds that, since the traditional method of resetting is accomplished through the trading of underlying positions at telegraphed times under prescribed fund rules, ETFs can be disadvantaged from having to be a "price taker" in possibly adverse or challenging markets. The Sponsor asserts that these resetting considerations in these other types of ETPs are well known by retail investors. See Sponsor Letter, supra note 8, at 7-8.

141 See id. at 8-9.

Shares begins, the Exchange will inform its members in an information circular of the special characteristics and risks associated with trading Paired Class Shares.[142]

The Commission notes that the Exchange's suitability rule, NASDAQ Rule 2111A, requires that Exchange members and associated persons of a member comply with Financial Industry Regulatory Authority ("FINRA") Rule 2111, which requires member firms and their associated persons to "have a reasonable basis to believe" that a transaction or investment strategy involving securities that they recommend is suitable for the customer. Specifically, this reasonable belief must be based on the information obtained through the reasonable diligence of the firm or associated person to ascertain the customer's investment profile. The rule requires firms and associated persons to seek to obtain information about the customer's age; other investments; financial situation and needs, which might include questions about annual income and liquid net worth; tax status, such as marginal tax rate; investment objectives, which might include generating income, funding retirement, buying a home, preserving wealth, or market speculation; investment experience; investment time horizon, such as the expected time available to achieve a particular financial goal; liquidity needs, which is the customer's need to convert investments to cash without incurring significant loss in value; and risk tolerance, which is a

142 The Exchange has represented that the information circular will discuss (a) the procedures for purchases and redemptions of Paired Class Shares; (b) Rule 2111A, which imposes suitability obligations on Exchange members with respect to recommending transactions in Paired Class Shares to customers; (c) how information regarding the Underlying Benchmark and Intraday Indicative Value is disseminated; (d) the risks involved in trading Paired Class Shares during the Pre-Market and Post-Market sessions when an updated Underlying Benchmark and Intraday Indicative Value will not be calculated or publicly disseminated; (e) the requirement that members deliver a prospectus to investors purchasing newly issued Paired Class Shares; (g) trading information; and (h) how information regarding distributions and share splits is disseminated and the requirements of public notification of these events.

customer's willingness to risk losing some or all of the original investment in exchange for greater potential returns.

Additionally, the Commission notes that the Funds will issue specific, public notifications regarding the unique distributions that the Funds would provide. Each Fund engaging in a regular distribution,[143] a special distribution, a corrective distribution, or a net income distribution[144] will provide at least three business days' advance notice (or longer advance notice as may be required by the Exchange)[145] of such an event. Each Fund engaging in a share split will provide at least ten calendar days' advance notice (or longer advance notice as may be required by the Exchange)[146] of such an event. In each instance, the Sponsor will notify the Exchange and post a notice of the event and its details on the Sponsor's website.

The Commission further notes that the prospectus disclosures for the Funds state prominently that the Funds are not suitable for all investors, and include the following disclosures: (1) stating that the funds may not be suitable for all investors; (2) describing the

---

143 With respect to regular distributions, the information provided will consist of the schedule of distributions and associated distribution dates, and a notification, as of the record date for such regular distribution, on the Sponsor's website (www.AccuShares.com) as to whether or not the regular distribution will occur. See Notice, supra note 3, 79 FR at 35620. For regular distributions that occur on schedule, the Sponsor will cause a press release to be issued identifying the receiving class, the amount of cash, the amount of Paired Class Shares (if any), and any other information the Sponsor deems relevant regarding the distribution and post such information on the Sponsor's website. See id.

144 With respect to special distributions, corrective distributions, and share splits, the information provided will include the relevant ex-, record, and payment dates for each such event and relevant data concerning each such event. In addition, notice of net income distributions for each class of a Fund, if any, will also be included in the notifications of regular, special, and corrective distributions. See id.

145 The Exchange may determine that longer notice is advisable in some circumstances (e.g., an extended, or unexpected, market break). See id. at 35620, n.46.

146 See id.

effect of distributions on an investor's exposure; and (3) stating that "Investors who do not intend to actively manage and monitor their Fund investments at least as frequently as each distribution date should not buy shares of the Fund." (Emphasis in original.)

Based on all of the foregoing, the Commission believes that the Exchange has adequately responded to the opposing commenter's concerns about investor understanding and suitability, and that the Exchange's proposal is consistent with the public interest and the protection of investors.

For the foregoing reasons, the Commission finds that the Exchange's proposal to adopt NASDAQ Rule 5713 and to list and trade the Funds pursuant to that rule is consistent with the Act and the rules and regulations thereunder applicable to a national securities exchange.[147]

IV. Conclusion

IT IS THEREFORE ORDERED, pursuant to Section 19(b)(2) of the Act,[148] that the proposed rule change (SR-NASDAQ-2014-065), as modified by Amendment No. 1 thereto, be, and it hereby is, approved.

By the Commission.

Brent J. Fields
Secretary

---

147 This approval order is based on all of the Exchange's representations, including those set forth above and in the Notice.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74248 / February 11, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16382

In the Matter of EFSTRATIOS "ELIAS" D. ARGYROPOULOS, Respondent.	ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") against Efstratios "Elias" D. Argyropoulos ("Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over him and the subject matter of these proceedings and the findings contained in Section III.2. below, which are admitted, Respondent consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 15(b) of the Securities Exchange Act of 1934, Making Findings, And Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Argyropoulos, age 67, is a resident of Santa Barbara, California. Argyropoulos is Prima Capital Group, Inc.'s ("Prima") founder, president and sole shareholder. He passed Series 000 and 1 exams in 1972, a Series PC exam in 1977, and a Series 63 exam in 1985. Argyropoulos is not currently associated with a broker-dealer or investment adviser and the last time he was associated with a broker-dealer was in 1993. In 1983, the NASD censured and fined Argyropoulos $500 for depositing personal funds into a customer's account to cover losses generated in the account. In 1995, the NASD censured, barred, and fined Argyropoulos $200,000 for use of discretion over customer accounts without written authority, unauthorized and unsuitable transactions, sharing and guaranteeing against customers' losses, and manipulation and deceptive practices.

2. On January 6, 2015, a judgment was entered by consent against Argyropoulos, permanently enjoining him from future violations of Section 17(a) of the Securities Act of 1933 ("Securities Act") and Sections 10(b) and 15(a)(1) of the Exchange Act and Rule 10b-5 thereunder, in the civil action entitled <u>Securities and Exchange Commission v. Efstratios "Elias" D. Argyropoulos, et al.</u>, Civil Action Number 2:14-cv-09800, in the United States District Court for the Central District of California.

3. The Commission's complaint alleged, among other things, that Argyropoulos perpetrated a fraud in the sale of pre-IPO Facebook and Twitter shares on the secondary market and acted as an unregistered broker-dealer. From October 2010 through October 2013, Argyropoulos raised $3,435,406 from 143 investors and received transaction-based compensation. Beginning in October 2010, Argyropoulos offered investors the ability to pool their money with Prima to purchase Facebook shares through two entities that facilitated the purchase of Facebook shares in the secondary market. Argyropoulos then failed to deliver virtually any of the shares. Instead of informing his investors that one of the entities had refunded Prima's investment in pre-IPO Facebook stock, Argyropoulos transferred nearly half of the refunded amount to Prima's brokerage account and used the proceeds to day trade stocks and options. Similarly, in July 2012, without informing any investors, Argyropoulos sold two-thirds of the Facebook shares Prima had purchased through the other entity, and used them to day trade stocks and options in companies other than Facebook. From July 2013 through October 2013, Prima and Argyropoulos solicited investment in pre-IPO Twitter shares through a similar arrangement. Prima and Argyropoulos never purchased Twitter shares and have not refunded any money to the Twitter investors. Instead, Argyropoulos transferred most of the Twitter investors' funds to Prima's brokerage account and used them for his personal trading.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Argyropoulos' Offer.

Accordingly, it is hereby ORDERED pursuant to Section 15(b)(6) of the Exchange Act, that Respondent Argyropoulos be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; and

Pursuant to Section 15(b)(6) of the Exchange Act Respondent Argyropoulos be, and hereby is barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

By the Commission.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74300 / February 19, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16161

In the Matter of

SABA SOFTWARE, INC.

Respondent.

ORDER MAKING FINDINGS AND REVOKING REGISTRATION OF SECURITIES PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors to accept the Offer of Settlement submitted by Saba Software, Inc. ("Saba" or "Respondent") pursuant to Rule 240(a) of the Rules of Practice of the Commission for the purpose of settlement of these proceedings instituted against Respondent on September 24, 2014, pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act").

II.

Saba has submitted an Offer of Settlement of Saba Software Regarding Administrative Proceedings Pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Offer"). Solely for the purpose of these proceedings, and any other proceedings brought by or on behalf of the Commission or in which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over it and the subject matter of these proceedings, which are admitted, Saba consents to the entry of this Order Making Findings and Revoking Registration of Securities Pursuant to Section 12(j) of the Exchange Act of 1934 ("Revocation Order") as set forth below:

III.

On the basis of this Revocation Order and Saba's Offer, the Commission finds[1] that:

A. Saba Software, Inc. is a Delaware corporation based in Redwood Shores, California. At all relevant times, Saba's common stock has been registered pursuant to Section 12 of the Exchange Act. From its IPO in April 2000 until July 31, 2006, its common stock was registered pursuant to Section 12(g). Thereafter, until June 2013, it was registered pursuant to Section 12(b). It traded on the Nasdaq Global Market until it was suspended on April 9, 2013, and then it was delisted effective June 17, 2013 for failure to remain compliant with its SEC reporting obligations. Upon its delisting and deregistration from Section 12(b), it reverted to its previous Section 12(g) registration. Its common stock is currently registered pursuant to Section 12(g) and traded on the OTC Markets. Saba has not filed any periodic reports since January 6, 2012, when it filed its Form 10-Q for the quarter ended November 30, 2011.

B. Saba has failed to comply with Exchange Act Section 13(a), and Rules 13a-1 and 13a-13 thereunder, because it has not filed any periodic reports since it filed on January 6, 2012 its Form 10-Q for the period ending November 30, 2011.

IV.

Section 12(j) of the Exchange Act provides that the Commission is authorized, by order, as it deems necessary or appropriate for the protection of investors to deny, to suspend the effective date of, to suspend for a period not exceeding twelve months, or to revoke the registration of a security, if the Commission finds, on the record after notice and opportunity for hearing, that the issuer of such security has failed to comply with any provision of this title or the rules and regulations thereunder. No member of a national securities exchange, broker, or dealer shall make use of the mails or any means or instrumentality of interstate commerce to effect any transaction in, or to induce the purchase or sale of, any security the registration of which has been and is suspended or revoked pursuant to the preceding sentence.

In view of the forgoing, the Commission deems it necessary and appropriate for the protection of investors to impose the sanction specified in Saba's Offer.

Accordingly, it is hereby ORDERED that, pursuant to Section 12(j) of the Exchange Act, registration of each class of Saba's securities registered pursuant to Section 12 of the Exchange Act be, and hereby is, revoked.

By the Commission.

ADMINISTRATIVE PROCEEDING
File No. 3-16389

In the Matter of

VCAP Securities, LLC, and
Brett Thomas Graham,

Respondents.

ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS, PURSUANT TO SECTIONS 15(b)(4), 15(b)(6), AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934, SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, AND SECTION 9(b) OF THE INVESTMENT COMPANY ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Sections 15(b)(4) and 21C of the Securities Exchange Act of 1934 ("Exchange Act") against VCAP Securities, LLC ("VCAP"), and Sections 15(b)(6) and 21C of the Exchange Act, Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act"), and Section 9(b) of the Investment Company Act of 1940 ("Investment Company Act") against Brett Thomas Graham ("Graham").

II.

In anticipation of the institution of these proceedings, VCAP and Graham (collectively, "Respondents") have submitted Offers of Settlement ("Offers") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, and except as provided herein in Section V, Respondents consent to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings, Pursuant to Sections 15(b)(4), 15(b)(6), and 21C of the Securities Exchange Act of 1934, Section 203(f) of the Investment Advisers Act of 1940, and Section 9(b) of the Investment Company Act of 1940, Making Findings, and Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offers, the Commission finds[1] that:

Summary

1. This matter involves a scheme by VCAP and Graham to acquire certain securities from auctions of collateralized debt obligations ("CDOs") that VCAP was conducting as liquidation agent. VCAP and Graham's actions in the auctions improperly benefitted funds managed by Vertical Capital, LLC ("Vertical"), VCAP's affiliated investment adviser. The conduct involved Graham arranging for a separate broker-dealer ("Third-Party B-D") to place bids on behalf of Vertical in the CDO liquidations run by VCAP, as VCAP and its affiliates were not permitted to bid under the terms of the relevant engagement agreements. As the liquidation agent for the auctions, VCAP had access to confidential bidding information from other bidders. Taking advantage of this access and information, Graham waited for the majority of the bids to come in from the other auction participants, and then instructed Third-Party B-D to bid on the bonds Graham wanted for Vertical-managed funds, at prices that were often slightly higher than the highest bid from other participants. After winning the bonds in the auction, Third-Party B-D would then immediately sell the bonds to the Vertical funds at a small markup.

2. In the course of this conduct, Graham and VCAP made material misrepresentations to the trustees of the various CDOs for which VCAP served as liquidation agent. Graham executed, on behalf of VCAP, various engagement agreements in which he falsely represented that VCAP and its affiliates would not bid in the auctions and would not misuse confidential information and/or bidding information afforded to VCAP as the liquidation agent. At the time he executed the final agreements, however, Graham had already communicated multiple times with Third-Party B-D about submitting bids on behalf of Vertical. VCAP also provided the various trustees with documents that did not disclose that its affiliate Vertical was the winning bidder.

3. In addition, in one particular auction, Graham provided one non-affiliated bidder with favorable treatment with respect to a security that that bidder was very interested in obtaining.

---

[1] The findings herein are made pursuant to Respondents' Offers of Settlement and are not binding on any other person or entity in this or any other proceeding.

Although the sales person at the bidding entity told Graham that his traders were anxious to win the bond, and that the bidder could increase its bid if necessary, Graham instead instructed him to cut the bid in half. Graham neither sought permission from the trustee nor informed it about his instructions to halve the bid. As a result, the trustee received half as much in proceeds for that bond as it would have otherwise.

Respondents

4. VCAP Securities, LLC ("VCAP") is a broker-dealer registered with the Commission. On December 24, 2014, it filed a Form BD-W. It was organized in Georgia, and maintains its principal place of business in New York, New York. VCAP is over 99% indirectly owned by Graham through a holding company called BD Partner Holdings, LLC. The economic interest in and control over VCAP are shared by Graham and three other partners.

5. Brett Thomas Graham ("Graham") is currently the CEO of VCAP, and the managing partner, Chief Investment Officer, and a portfolio manager of Vertical. He has no disciplinary history. Graham indirectly owns over 99% of VCAP and 55.8% of Vertical, and has an economic interest of 33% and a voting interest of 25% in each. He holds Series 7, 24, and 63 licenses. Graham is 51 years old, and a resident of New York, New York.

Other Relevant Entities

6. Vertical Capital, LLC ("Vertical") is a registered investment adviser. It is organized in Delaware, and maintains its principal place of business in New York, New York. Vertical is wholly owned by VCAP Partners LLC, which is 55.8% owned by Graham. The economic interest in and control over Vertical are shared by Graham and the same three partners that also share in the economic interest and control of VCAP.

Background

7. This matter concerns five auctions that VCAP conducted as liquidation agent during 2012. For each of these auctions, VCAP was hired to liquidate the assets of a CDO by the respective CDO trustees. Prior to each liquidation, VCAP entered into an agreement with the trustee governing the terms of VCAP's role as liquidation agent. As the CEO of VCAP, Graham had the primary responsibility for reviewing and executing these agreements on behalf of VCAP.

8. During the relevant time period, Graham was a portfolio manager and the chief investment officer of Vertical, a registered investment adviser and asset manager. The main focus of Vertical's investment management activities has been two private funds: Resolution Credit Opportunities Fund I, which was formed in the fall of 2009, and Resolution Credit Opportunities Fund II, which was formed in late 2011 (collectively, the "Funds"). In addition, during the relevant time period, Vertical served as the investment manager for four separately managed accounts (collectively, the "SMAs").

Vertical Bidding in VCAP-Run Liquidations

9. Since their inception, Vertical's Funds and SMAs have generally invested in illiquid, non-agency mortgage-backed securities. Graham has been principally responsible for these investment decisions. These same types of securities were often included in the CDOs that VCAP was hired to liquidate.

10. Graham knew or was reckless in not knowing that VCAP and its affiliates could not bid in a liquidation for which VCAP served as liquidation agent. The liquidation agent agreements that Graham signed as CEO on behalf of VCAP for each of the five CDO liquidations all prohibited VCAP or its affiliates from bidding in the liquidations, and required VCAP to keep the bidding information it received confidential during the auction. One of the agreements also expressly prohibited giving preferential or favorable treatment to any bidder.

11. In addition to the prohibitions in the liquidation agent agreements, VCAP's own compliance manual also prohibited bidding by VCAP and its affiliates. The VCAP compliance manual, dated December 19, 2011, provided, among other things, the following:

> *Possible Conflicts of Interest*
> To prevent even the appearance of any conflict of interest, VCAP and its affiliates and employees will not bid in an auction liquidation run by VCAP.

VCAP's compliance manual was provided to each employee of VCAP on at least an annual basis.

12. To carry out his plan to have Vertical bid in VCAP-run auctions, Graham contacted an individual that he had worked with previously ("Broker"), who currently worked at Third-Party B-D, which was based in the United Kingdom. Graham never consulted with counsel or with VCAP's chief compliance officer to discuss the permissibility of the arrangement. Nor did Graham or anyone else at VCAP discuss with any of the CDO trustees that hired VCAP whether Vertical could bid in the VCAP-run auctions through Third-Party B-D.

13. Before the first liquidation in which Third-Party B-D bid on behalf of Vertical, Broker asked Graham whether the trustee was aware of the arrangement. Broker asked, "[W]ill the seller know or care that a B/D maybe be [sic] biddin for some of your funds?" To which, Graham responded, "[N]o…Auction, so high bid wins. Auction was published in WSJ." Broker understood Graham's response to mean that the arrangement was permissible.

14. A few weeks thereafter, Broker inquired a second time about the permissibility of the arrangement. Broker asked, "[Third-Party B-D's compliance] understands the confidentiality issue and why you are in the middle, but wants to confirm therefore your seller allows your funds to bid in the bwic, for us to facilitate…"[2] Graham responded, "[Y]es," even though Graham had never asked any of the CDO trustees whether this arrangement was permissible.

---

[2] The term "bwic" means, "bid wanted in competition."

15. Graham generally followed the same pattern with respect to each of the five CDO liquidations in which he had Third-Party B-D bid on behalf of Vertical. Graham generally waited until he had received the majority of the bids from the other auction participants, and then would tell Third-Party B-D which bonds in the CDO liquidation to bid on and at what price. Having access to the other auction participants' bids, Graham was able to, and in several instances did, give bid prices to Third-Party B-D that were slightly higher than the highest bid from the other bidders. This conduct is illustrated in Table 1 below, which shows the time and amounts for some of Vertical's bids through Third-Party B-D in an auction list from one of the five CDO liquidations at issue.

TABLE 1

	Bidder	Bid	Time
Bond A	Bidder A1	8.0781	2:24 p.m.
	Third-Party B-D	8.5000	2:58 p.m.
Bond B	Bidder B1	3.0156	2:24 p.m.
	Third-Party B-D	3.2500	2:59 p.m.
Bond C	Bidder C1	7.59375	2:23 p.m.
	Third-Party B-D	7.75000	3:04 p.m.

As demonstrated above, Third-Party B-D bid after the other auction participants' bids were received by VCAP. In addition, Third-Party B-D's bids were often slightly higher than the high bid from the other auction participants, ensuring that Vertical would win the bonds Graham wanted but not pay too much.

16. After receiving instructions from Graham, Third-Party B-D would then submit the bids in the same manner as all of the other auction participants. However, unbeknownst to the trustees, Third-Party B-D was bidding on behalf of Vertical. Third-Party B-D was usually the last, or one of the last, participants to submit its initial bids in the auction.

17. At times, another auction participant would submit or improve a bid after Graham had given his instructions to Third-Party B-D. If a later bid was higher than Third-Party B-D's bid for a bond that Graham was interested in winning, Graham at times instructed Third-Party B-D to resubmit its bid at an amount higher than that other bid. This conduct is illustrated in Table 2 below, which shows some of Third-Party B-D's bids for another list in one of the five CDO liquidations at issue. On this list, Graham instructed Third-Party B-D to resubmit bids in several instances, in order to top subsequent higher bids from other auction participants.

TABLE 2

	Bidder	Bid	Time
Bond A	Third-Party B-D	42.01	11:25 a.m.
	Bidder A1	45	11:33 a.m.
	Third-Party B-D	45.15	12:01 p.m.
Bond B	Bidder B1	43.03125	10:48 a.m.
	Third-Party B-D	43.25	11:30 a.m.
	Bidder B2	43.375	12:10 p.m.
	Third-Party B-D	43.45	12:20 p.m.
Bond C	Third-Party B-D	34.01	11:23 a.m.
	Bidder C1	34.53125	11:29 a.m.
	Third-Party B-D	34.625	11:50 a.m.

18. In one particular instance, Graham instructed Third-Party B-D to resubmit its bid for a lower amount because Graham subsequently received bidding information indicating that the next high bid for that particular bond had decreased. Thus, he knew that Third-Party B-D could win the bond for less than what it had initially bid. This is illustrated in Table 3 below.

TABLE 3

	Bidder	Bid	Time
Bond X	Third-Party B-D	28.50	11:21 a.m.
	Bidder X1	24.00	12:00 p.m.
	Third-Party B-D	24.50	12:09 p.m.

19. Immediately after each auction, Vertical's Funds and SMAs purchased from Third-Party B-D any of the bonds that Third-Party B-D won in the auction, in allocations designated by Graham and at a slight mark-up as determined by Graham.

20. At the conclusion of the auction for each list, VCAP sent an e-mail to the trustee attaching a spreadsheet listing the winner and second highest bid for each bond, as well as listing each participant and their final bids. This was the manner in which VCAP communicated the bids to the trustee, and requested the trustee's approval for awarding the winners. Graham never told the trustee that Third-Party B-D was bidding on behalf of Vertical, nor did he inform the trustee that he was using pricing information from other bids to determine the amount of the bid price for Third-Party B-D.

21. Overall, Vertical's Funds and SMAs acquired 23 securities, paying nearly $12 million, through the 5 CDO liquidations by placing prohibited bids. In total, VCAP received

$1,182,839 in fees from the CDO trustees for conducting the 5 liquidations, and Graham personally received 10% of this amount, approximately $120,000, for originating the business.

VCAP Gives An Auction Participant Preferential Treatment

22. During the course of a CDO liquidation for which VCAP was the liquidation agent, Graham gave preferential treatment to one auction participant ("Preferred Participant") that resulted in lower proceeds to the trustee.

23. After the start of the auction, the sales person at Preferred Participant ("Salesman") who was responsible for covering Vertical, sent a Bloomberg instant message to inform Graham that Preferred Participant was especially interested in winning a particular bond. Salesman messaged Graham that the bond was very important to Preferred Participant, and asked Graham to let him know where Preferred Participant needed to be in order to win, indicating that Preferred Participant would be willing to bid higher if necessary. Graham, seeing that the other bids for that particular bond were just fractions of Preferred Participant's bid, responded to Salesman and told him to cut Preferred Participant's bid in half.

24. Preferred Participant thereafter changed its bid for the bond to half of its original bid, and resubmitted the bid. Preferred Participant won the bond at the reduced price, which was about 10 points higher than the next highest bid.

25. Prior to instructing Preferred Participant to cut its bid in half, Graham did not seek permission from the trustee of the CDO that was being liquidated. Graham also never informed the trustee that it was receiving half of what it would have otherwise received for the bond, had Graham not instructed Preferred Participant to cut its bid in half.

26. As a result of the conduct described above, VCAP willfully violated Section 10(b) of the Exchange Act and Rule 10b-5 thereunder, which make it unlawful, in connection with the purchase or sale of any security, to employ any device, scheme, or artifice to defraud; or to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading; or to engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person.

27. As a result of the conduct described above, Graham willfully violated Section 10(b) of the Exchange Act and Rule 10b-5 thereunder, which make it unlawful, in connection with the purchase or sale of any security, to employ any device, scheme, or artifice to defraud; or to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading; or to engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person.

Civil Penalties

28. VCAP has submitted a sworn Statement of Financial Condition dated November 21, 2014, and other evidence and has asserted its inability to pay a civil penalty.

Undertakings

29. Graham has undertaken to provide written certification, signed by Graham under penalty of perjury, that he is in compliance with item IV.C. below. Such certification must be provided to the Commission staff every ninety days from the date of entry of this Order, for a period of one year thereafter.

30. Graham has undertaken to retain, not at the Commission's expense, a qualified independent consultant (the "Consultant") not unacceptable to the Commission staff to do the following:

a. Provide a memorandum that is to be distributed to all employees and partners of Vertical prior to or by the date of entry of this Order: (i) outlining the parameters of Graham's limited role in Vertical, as specified in item IV.C. below, and (ii) giving instructions that each employee and partner of Vertical must strictly comply with the terms of such limited role by Graham.

b. Provide training to all Vertical employees and partners regarding the limitations and restrictions placed on Graham's conduct with respect to Vertical, as specified in item IV.C. below.

c. Submit a report concerning Graham's compliance with the terms of item IV.C. below, to the Commission staff every ninety days from the date of entry of this Order, for a period of one year thereafter. In connection with the preparation of such reports, and to confirm that Graham is in compliance with item IV.C. below, Consultant will, at least: (i) conduct a review of all e-mail communications and instant messages to or from Graham, and (ii) interview Graham and the employees and partners of Vertical about Graham's activities.

d. Establish an e-mail hotline for Vertical employees and partners to report any potential violations of Graham's limited role with Vertical, as specified in item IV.C. below. Consultant will investigate any reports of potential violations, and disclose any such reports or investigations in its periodic reports to the Commission staff.

e. Require Consultant to enter into an agreement that provides that for the period of engagement and for a period of two years from completion of the engagement, Consultant shall not enter into any employment, consultant, attorney-client, auditing or other professional relationship with Vertical, or any of its present or former affiliates, directors, officers, employees, or agents acting in their capacity. The agreement will also provide that Consultant will require that any firm with which he/she is affiliated or of which he/she is a member, and any person engaged to assist Consultant in performance of its duties under this Order shall not, without prior written consent of the Commission staff, enter into any employment, consultant, attorney-client, auditing or other professional relationship with Vertical, or any of its present or former affiliates, directors, officers, employees, or agents acting in their capacity as such for the period of the engagement and for a period of two years after the engagement.

31. Graham shall certify, in writing, compliance with the undertakings set forth above in items 30 and 31. The certification shall identify the undertakings, provide written evidence of compliance in the form of a narrative, and be supported by exhibits sufficient to demonstrate compliance. The Commission staff may make reasonable requests for further evidence of compliance, and Graham agrees to provide such evidence. The certification and supporting material shall be submitted to Andrew Sporkin, with a copy to the Office of Chief Counsel of the Enforcement Division, no later than sixty (60) days from the date of the completion of the undertakings.

32. In determining whether to accept the Offers, the Commission has considered these undertakings.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondents' Offers.

Accordingly, pursuant to Sections 15(b)(4), 15(b)(6), and 21C of the Exchange Act, Section 203(f) of the Advisers Act, and Section 9(b) of the Investment Company Act, it is hereby ORDERED that:

A. VCAP cease and desist from committing or causing any violations and any future violations of Section 10(b) of the Exchange Act and Rule 10b-5 thereunder.

B. Graham cease and desist from committing or causing any violations and any future violations of Section 10(b) of the Exchange Act and Rule 10b-5 thereunder.

C. Graham be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; prohibited from serving or acting as an employee, officer, director, member of an advisory board, investment adviser or depositor of, or principal underwriter for, a registered investment company or affiliated person of such investment adviser, depositor, or principal underwriter; and barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock; with the right to apply for reentry after three years to the appropriate self-regulatory organization, or if there is none, to the Commission;

a. provided however, that Graham may, for a period of one year from the entry of this Order, continue to be employed by Vertical solely for the purpose of assisting Vertical in the sale, or transfer to independent managers, of securities and positions held by any funds or accounts managed by Vertical, as of the date of the entry of this Order. During the one-year carve-out period, all sales by Graham shall be subject to review and approval by Vertical prior to execution. During this one-year period of limited employment at Vertical, Graham may not carry out his employment activities on the premises of Vertical, and he must be located offsite from Vertical. Notwithstanding this limited employment role, the following restrictions will be placed upon Graham as of the date of the entry of this Order: (i) Graham may not serve on Vertical's Board of Directors, or in any officer, executive, or management role at Vertical; (ii) Other than for the limited purpose of selling securities and positions held by any funds or accounts managed by Vertical, as of the date of the entry of this Order, Graham may not have any role, input, authority, duties, or discussions as to the management of Vertical, any entity affiliated with Vertical, or any of Vertical's clients; (iii) Graham may not have any role in formulating, summarizing, discussing, or memorializing Vertical's marketing or management strategy; (iv) Graham may not have any authority to hire or fire employees of Vertical, or to negotiate or bind Vertical in any contracts; (v) Graham may not have any contact with current or prospective investors in any funds or accounts managed by Vertical regarding anything concerning Vertical or VCAP (other than current and former employees of Vertical who are also Vertical investors); (vi) Graham may not solicit capital on behalf of Vertical; (vii) Graham may not participate, consult, or assist with any purchase of securities; and (viii) Graham may not participate, consult, or assist with any sales of assets or positions that were purchased or acquired after the date of entry of this Order. Nothing herein shall prevent Graham from communicating with Vertical partners and counsel regarding any outstanding legal actions in which Vertical is a party.

D. VCAP is censured.

E. Any reapplication for association by Graham will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against Graham, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

F. VCAP shall, within ten (10) days of the entry of this Order, pay disgorgement of $1,064,555 and prejudgment interest of $85,044 to the Securities and Exchange Commission. If timely payment is not made, additional interest shall accrue pursuant to SEC Rule of Practice 600. Payment must be made in one of the following ways: (1) Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request; (2) Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or (3) Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying VCAP as a Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Andrew Sporkin, Division of Enforcement, Securities and Exchange Commission, 100 F St., NE, Washington, DC 20549-6013.

G. Based upon VCAP's sworn representations in its Statement of Financial Condition dated November 21, 2014, and other documents submitted to the Commission, the Commission is not imposing a penalty against VCAP.

H. Graham shall, within ten (10) days of the entry of this Order, pay disgorgement of $118,284, prejudgment interest of $9,449, and a civil money penalty in the amount of $200,000 to the Securities and Exchange Commission. If timely payment is not made, additional interest shall accrue pursuant to SEC Rule of Practice 600 or 31 USC §3717. Payment must be made in one of the following ways: (1) Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request; (2) Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or (3) Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch

HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Graham as a Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Andrew Sporkin, Division of Enforcement, Securities and Exchange Commission, 100 F St., NE, Washington, DC 20549-6013.

I. The Division of Enforcement ("Division") may, at any time following the entry of this Order, petition the Commission to: (1) reopen this matter to consider whether VCAP provided accurate and complete financial information at the time such representations were made; and (2) seek an order directing payment of disgorgement and pre-judgment interest, and/or the maximum civil penalty allowable under the law. No other issue shall be considered in connection with this petition other than whether the financial information provided by VCAP was fraudulent, misleading, inaccurate, or incomplete in any material respect. VCAP may not, by way of defense to any such petition: (1) contest the findings in this Order; (2) assert that payment of disgorgement and interest, or a penalty should not be ordered; (3) contest the amount of disgorgement and interest to be ordered; (4) contest the imposition of the maximum penalty allowable under the law; or (5) assert any defense to liability or remedy, including, but not limited to, any statute of limitations defense.

J. Pursuant to Section 308(a) of the Sarbanes-Oxley Act of 2002, as amended by the Dodd-Frank Act, a Fair Fund is created for the disgorgement, interest and penalties referenced in paragraphs F and H above. Regardless of whether any such Fair Fund distribution is made, amounts ordered to be paid as civil money penalties pursuant to this Order shall be treated as penalties paid to the government for all purposes, including all tax purposes. To preserve the deterrent effect of the civil penalty, Graham agrees that in any Related Investor Action, he shall not argue that he is entitled to, nor shall he benefit by, offset or reduction of any award of compensatory damages by the amount of any part of Graham's payment of a civil penalty in this action ("Penalty Offset"). If the court in any Related Investor Action grants such a Penalty Offset, Graham agrees that he shall, within 30 days after entry of a final order granting the Penalty Offset, notify the Commission's counsel in this action and pay the amount of the Penalty Offset to the Securities and Exchange Commission. Such a payment shall not be deemed an additional civil penalty and shall not be deemed to change the amount of the civil penalty imposed in this proceeding. For purposes of this paragraph, a "Related Investor Action" means a private damages action brought against Respondents by or on behalf of one or more investors based on substantially the same facts as alleged in the Order instituted by the Commission in this proceeding.

K. Graham shall comply with the undertakings enumerated in Section III, items 29 through 31 above.

V.

It is further Ordered that, solely for purposes of exceptions to discharge set forth in Section 523 of the Bankruptcy Code, 11 U.S.C. §523, the findings in this Order are true and admitted by Graham, and further, any debt for disgorgement, prejudgment interest, civil penalty or other amounts due by Graham under this Order or any other judgment, order, consent order, decree or settlement agreement entered in connection with this proceeding, is a debt for the violation by Graham of the federal securities laws or any regulation or order issued under such laws, as set forth in Section 523(a)(19) of the Bankruptcy Code, 11 U.S.C. §523(a)(19).

By the Commission.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4027 / February 19, 2015

INVESTMENT COMPANY ACT OF 1940
Release No. 31460 / February 19, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16390

In the Matter of

LOGICAL WEALTH MANAGEMENT, INC. and DANIEL J. GOPEN,

Respondents.

ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTIONS 203(e), 203(f) AND 203(k) OF THE INVESTMENT ADVISERS ACT OF 1940, AND SECTION 9(b) OF THE INVESTMENT COMPANY ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Sections 203(e), 203(f) and 203(k) of the Investment Advisers Act of 1940 ("Advisers Act"), and Section 9(b) of the Investment Company Act of 1940 ("Investment Company Act") against Logical Wealth Management, Inc. ("Logical Wealth") and Daniel J. Gopen ("Gopen" collectively with Logical Wealth, "Respondents").

II.

In anticipation of the institution of these proceedings, Respondents have submitted Offers of Settlement (the "Offers") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, Respondents consent to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings Pursuant to Sections 203(e), 203(f) and 203(k) of the Investment Advisers Act of 1940, and Section 9(b) of the Investment Company Act of 1940, Making Findings, and Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offers, the Commission finds that:

Summary

This proceeding arises out of improper registration, compliance, and recordkeeping by Logical Wealth, an investment adviser registered with the Commission. Between 2006 and 2011, Logical Wealth overstated its assets under management in filings with the Commission, thereby creating the appearance that it qualified for registration with the Commission when it did not. In June 2012, Logical Wealth falsely represented that its principal office and principal place of business was in Wyoming, a state that does not regulate investment advisers, to maintain the firm's Commission registration after rules went into effect restricting such registration to advisers with more assets under management. In addition, although Logical Wealth had registered as an investment adviser with the Commission, it failed to adopt and implement required compliance policies and procedures and to maintain and make available to the Commission's staff books and records required under the Advisers Act. Logical Wealth's owner, Daniel Gopen, was responsible for all of Logical Wealth's filings, compliance procedures, and recordkeeping, and aided and abetted and caused all of its violations.

Respondents

1. Logical Wealth Management, Inc. is a Wyoming corporation and conducts its business from offices in Nevada and New Jersey. Logical Wealth has been registered with the Commission as an investment adviser from 2006 to the present.

2. Daniel J. Gopen, age 49, is a resident of Sparks, Nevada. Gopen is the owner, President and Chief Compliance Officer of Logical Wealth.

Respondents Misrepresented Logical Wealth's Qualifications to Register with the Commission

3. In 2002, Gopen's father organized Logical Wealth as a Massachusetts corporation and operated it from Massachusetts. Following the death of his father in 2006, Gopen assumed ownership of the firm and registered Logical Wealth with the Commission as an investment adviser.

4. Logical Wealth was never qualified for Commission registration. Between 2006 and 2012, Gopen prepared and filed with the Commission Forms ADV for Logical Wealth claiming false bases for registration with the Commission.

5. Gopen reported in Item 2.A.3 of Part 1A of Logical Wealth's Form ADV filed on September 7, 2006, September 19, 2006, March 27, 2007, September 25, 2007, March 31, 2008,

June 1, 2009, September 23, 2009, May 17, 2010, and June 30, 2011 that Logical Wealth's basis for registration with the Commission was having assets under management of over $25 million.[1] This statement was false, and Logical Wealth never had more than $25 million in assets under management. Logical Wealth was prohibited from registering with the Commission as an investment adviser during this period.

6. In 2010, the Advisers Act was amended to increase the threshold for an investment adviser's assets under management required for registration with the Commission. However, registration with the Commission was still required for advisers not regulated by the states where they maintained their principal offices and places of business. Because Wyoming does not regulate investment advisers, any investment adviser with a principal office and place of business in Wyoming, regardless of its assets under management, is required to register with the Commission.

7. On June 23, 2011, shortly before the Advisers Act amendment became effective, Gopen registered Logical Wealth as a Wyoming corporation. In Item 1.F of Part 1A of Logical Wealth's Form ADV filed on June 28, 2012, Logical Wealth claimed its principal office and principal place of business was in Cheyenne, Wyoming, and based its continued registration with the Commission on its Wyoming location. However, Logical Wealth has never operated from any location in Wyoming. Because Logical Wealth did not have a principal office or place of business in Wyoming and had no other basis for Commission registration, it was prohibited from registering with the Commission as an investment adviser.

8. Gopen was solely responsible for preparing, signing, and filing Logical Wealth's filings with the Commission. Gopen was aware of the value of the firm's assets under management and the location of the firm's principal office or place of business. Accordingly, Gopen knew that the representations in Item 2.A.3 of Logical Wealth's Forms ADV filed on September 7, 2006, September 19, 2006, March 27, 2007, September 25, 2007, March 31, 2008, June 1, 2009, September 23, 2009, May 17, 2010, and June 30, 2011 and the representations in Item 1.F. of Logical Wealth's Form ADV filed on June 28, 2012 were false when filed and that Logical Wealth was not eligible for SEC registration.

Compliance/Code of Ethics Failures

9. Despite Logical Wealth's registration as an investment adviser, throughout the relevant period, the firm failed to adopt and maintain written compliance policies and procedures reasonably designed to prevent violations of the Advisers Act and failed to establish, maintain and enforce a written code of ethics.

---

1 During this period, Section 203A of the Advisers Act prohibited investment advisers from registering with the Commission unless they managed at least $25 million in assets or met a designated exemption. Effective July 21, 2011, Section 203A increased the minimum amount of assets under management for most advisers to qualify for SEC registration from $25 million to $100 million. *See* Advisers Act Section 203A(a)(2) amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, 124 Stat. 1376 (2010); *Final Rule; Rules Implementing Amendments to the Investment Advisers Act of 1940*, Investment Advisers Act Release No. 3221 (June 22, 2011).

10. In Items 11 and 17 of Logical Wealth's Form ADV Part 2A filed on June 28, 2012, Logical Wealth falsely stated that it had adopted written trading policies and procedures, written policies and procedures governing voting of client securities, and a formal code of ethics. The written trading policies and procedures, however, did not exist. In addition, Logical Wealth could not produce its code of ethics.

11. Gopen was responsible for Logical Wealth's compliance policies and procedures and knew that Logical Wealth had not adopted and maintained such policies and procedures. Gopen acknowledged that, if Logical Wealth ever had a code of ethics, Logical Wealth had not reviewed or updated it for at least a decade.

Books and Records Failures

12. Logical Wealth failed to maintain certain books and records including, among other things, general ledgers and financial statements relating to its business, and records of accounts in which it was vested with discretionary power.

13. Gopen was responsible for Logical Wealth's books and records and knew that Logical Wealth failed to maintain these records.

Failures to Produce

14. Logical Wealth failed to make available to the Commission's staff certain books and records including, among other things, records relating to the firm's calculations of its assets under management. Logical Wealth also failed to respond within a reasonable time frame to other requests for books and records required to be kept under Rule 204-2 of the Advisers Act.

15. Gopen was responsible for Logical Wealth's books and records and knew that Logical Wealth failed to produce certain records.

Violations

16. As a result of the conduct described above, Logical Wealth willfully violated Section 203A of the Advisers Act by improperly registering with the Commission. Gopen willfully aided and abetted and caused Logical Wealth's violations.

17. As a result of the conduct described above, Logical Wealth and Gopen willfully violated Section 207 of the Advisers Act, which makes it "unlawful for any person willfully to make any untrue statement of a material fact in any registration application or report filed with the Commission . . . or willfully to omit to state in any such application or report any material fact which is required to be stated therein."

18. As a result of the conduct described above, Logical Wealth willfully violated Section 206(4) of the Advisers Act and Rule 206(4)-7 promulgated thereunder, which require, among other things, that an investment adviser: (a) adopt and implement written policies and

procedures reasonably designed to prevent violations of the Advisers Act and its rules; and (b) review at least annually its written policies and procedures and the effectiveness of their implementation. Gopen willfully aided and abetted and caused Logical Wealth's violations.

19. As a result of the conduct described above, Logical Wealth willfully violated Section 204(a) of the Advisers Act, which requires that investment advisers "make and keep" certain records and furnish copies thereof, and make and disseminate such reports as the Commission, by rule, may prescribe as necessary or appropriate in the public interest or for the protection of investors. All records of the investment adviser are subject to periodic examinations by the Commission. Gopen willfully aided and abetted and caused Logical Wealth's violations.

20. As a result of the conduct described above, Logical Wealth willfully violated Rules 204-2(a)(2), 204-2(a)(6), and 204-2(a)(8) adopted under Section 204(a) of the Advisers Act. Rule 204-2 requires that an investment adviser "make and keep, true, accurate and current" books and records relating to its advisory business. Rule 204-2(a)(2) requires an investment adviser to keep "general and auxiliary ledgers (or other comparable records) reflecting asset, liability, reserve, capital, income, and expense accounts." Rule 204-2(a)(6) requires an investment adviser to keep "all trial balances, financial statements, and internal audit working papers relating to the business of such investment adviser." Rule 204-2(a)(8) requires an investment adviser to keep a "list or other record of all accounts in which the investment adviser is vested with any discretionary power with respect to the funds, securities or transactions of any client." Gopen willfully aided and abetted and caused Logical Wealth's violations.

21. As a result of the conduct described above, Logical Wealth willfully violated Section 204A of the Advisers Act and Rule 204A-1 adopted thereunder. Section 204A requires an investment adviser to "establish, maintain, and enforce written policies and procedures reasonably designed" to prevent the misuse of material, non-public information. Rule 204A-1 requires an investment adviser to "establish, maintain and enforce a written code of ethics." Gopen willfully aided and abetted and caused Logical Wealth's violations.

IV.

In view of the foregoing, the Commission deems it appropriate, in the public interest to impose the sanctions agreed to in Respondents' Offers.

Accordingly, pursuant to Sections 203(e), 203(f) and 203(k) of the Advisers Act, and Section 9(b) of the Investment Company Act, it is hereby ORDERED that:

A. Respondents Logical Wealth and Gopen cease and desist from committing or causing any violations and any future violations of Sections 203A, 204(a), 204A, 206(4) and 207 of the Advisers Act and Rules 204-2(a)(2), 204-2(a)(6), 204-2(a)(8), 204A-1 and 206(4)-7 promulgated thereunder.

B. Respondent Logical Wealth's registration as an investment adviser be, and hereby is, revoked.

C. Respondent Gopen be, and hereby is:

barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization;

prohibited from serving or acting as an employee, officer, director, member of an advisory board, investment adviser or depositor of, or principal underwriter for, a registered investment company or affiliated person of such investment adviser, depositor, or principal underwriter;

D. Any reapplication for association by Respondent Gopen will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

E. Respondent Gopen shall pay civil penalties of $25,000 to the Securities and Exchange Commission. Payment shall be made in the following installments:

a. $2,500 within 10 days of the entry of this Order;
b. $2,500 within 40 days of the entry of this Order;
c. $2,500 within 70 days of the entry of this Order;
d. $2,500 within 100 days of the entry of this Order;
e. $2,500 within 130 days of the entry of this Order;
f. $2,500 within 160 days of the entry of this Order;
g. $2,500 within 190 days of the entry of this Order;
h. $2,500 within 220 days of the entry of this Order;
i. $2,500 within 250 days of the entry of this Order;
j. $2,500 plus interest on the payments described in Section IV.E(a)-(j) pursuant to 31 U.S.C. 3717 within 280 days of the entry of this Order.

Prior to making the payment described in Section IV.E(j), Respondent Gopen shall contact the Commission staff to ensure the inclusion of interest. If any payment is not made by the date the payment is required by this Order, the entire outstanding balance of civil penalties, plus any additional interest accrued pursuant to 31 U.S.C. 3717, shall be due and payable immediately, at the discretion of the Commission staff, without further application. Payment must be made in one of the following ways:

(1) Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

(3) Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Daniel J. Gopen as a Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Thomas J. Krysa, Division of Enforcement, Securities and Exchange Commission, 1961 Stout Street, Suite 1700, Denver, CO 80294.

V.

It is further Ordered that, solely for purposes of exceptions to discharge set forth in Section 523 of the Bankruptcy Code, 11 U.S. C. §523, the findings in this Order are true and admitted by Respondent Gopen, and further, any debt for disgorgement, prejudgment interest, civil penalty or other amounts due by Respondent Gopen under this Order or any other judgment, order, consent order, decree or settlement agreement entered in connection with this proceeding, is a debt for the violation by Respondent Gopen of the federal securities laws or any regulation or order issued under such laws, as set forth in Section 523(a)(19) of the Bankruptcy Code, 11 U.S.C. §523(a)(19).

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Rel. No. 74315 / February 19, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-15851

IN THE MATTER OF	:	**ORDER MAKING FINDINGS, IMPOSING REMEDIAL SANCTIONS PURSUANT TO RULE 102(e)(3), AND TERMINATING ADMINISTRATIVE PROCEEDING**
	:	
BRIAN WILLIAMSON, Esq.	:	
	:	
	:	

I.

On April 22, 2014, the Commission instituted public administrative proceedings and temporarily suspended Brian Williamson ("Williamson" or "Respondent") from appearing or practicing before the Commission as an attorney pursuant to Rule 102(e)(3)(i)(B) of the Commission's Rules of Practice.[1] On May 21, 2014, Williamson filed a Petition to Lift Temporary Suspension Pursuant to Rule 102(e)(3)(ii) of the Commission's Rules of Practice. On June 19, 2014, the Commission denied that motion and directed that the proceeding be set down for a public hearing before an administrative law judge.

II.

Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over him and the subject matter of these proceedings and the findings contained in Section III.1 thru III.5 below, which are admitted, Respondent consents to the entry of this Order Making Findings and Imposing Remedial Sanction ("Order"), as set forth below.

[1] Rule 102(e)(3)(i) provides, in relevant part:

> The Commission, with due regard to the public interest and without preliminary hearing, may, by order, . . . suspend from appearing or practicing before it any attorney . . . who has been by name ... (B) ... found by the Commission in any administrative proceeding to which he or she is a party to have violated (unless the violation was found not to have been willful) or aided and abetted the violation of any provision of the Federal securities laws or of the rules and regulations thereunder.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Williamson, age 43, is an attorney with an inactive license to practice law in Pennsylvania and New Jersey. He is not currently eligible to practice law in either of those states because his status is "Retired."

2. Williamson was employed by Oppenheimer & Co. Inc. ("OPCO") and Oppenheimer Asset Management ("OAM"), and was a Managing Director at Oppenheimer Alternative Investment Management ("OAIM"). In those roles, he was the portfolio manager of Oppenheimer Global Resource Private Equity Fund I, L.P. ("OGR"), a fund of private equity funds.

3. On August 20, 2013, the Commission instituted an administrative proceeding against Williamson alleging that he made material false and misleading statements and omissions to investors and prospective investors concerning the valuation of OGR. *In the Matter of Brian Williamson*, Admin. Proc. File No. 3-15430, Exchange Act Release No. 34-70234.

4. On January 22, 2014, the Commission entered a consent Order Making Findings and Imposing Remedial Sanctions and a Cease-and-Desist Order Pursuant to Section 8A of the Securities Act of 1933, Sections 15(B) and 21C of the Securities Exchange Act of 1934, Sections 203(f) and 203(k) of the Investment Advisers Act of 1940, and Section 9(b) of the Investment Company Act of 1940 ("Order") against Williamson. The Commission found that Williamson made material false and misleading statements and omissions to investors and prospective investors concerning the valuation of OGR. Williamson did not admit or deny the findings. Exchange Act Release No. 34-71364.

5. The Commission also found that, through his conduct detailed in the Order and summarized above, Williamson willfully violated Section 17(a) of the Securities Act; Section 10(b) of the Exchange Act and Rule 10b-5 thereunder; and Section 206(4) of the Advisers Act and Rule 206(4)-8 thereunder. *Id.*

6. Williamson was thus found to have violated or aided and abetted the violation of the federal securities laws, rules, or regulations within the meaning of Rule 102(e)(3)(i)(B).

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanction agreed to in Respondent Williamson's Offer.

Accordingly, it is hereby ORDERED pursuant to Rule 102(e)(3)(i) of the Commission's Rules of Practice, effective immediately, that:

A. Williamson is suspended from appearing or practicing before the Commission as an attorney for two (2) years beginning January 22, 2014.

B. After two years from January 22, 2014, Respondent may request that the Commission consider his application to resume appearing and practicing before the Commission as an attorney. The application should be sent to the attention of the Office of the General Counsel.

C. In support of such an application, Respondent must provide a certificate of good standing from each state bar where Respondent is admitted.

D. In support of such an application, Respondent must also submit an affidavit truthfully stating, under penalty of perjury:

1. that Respondent has complied with the Order;

2. that Respondent:

   a. is not currently suspended or disbarred as an attorney by a court of the United States (or any agency of the United States) or the bar or court of any state, territory, district, commonwealth, or possession; and

   b. since the entry of the Order, has not been suspended as an attorney for an offense involving moral turpitude by a court of the United States (or any agency of the United States) or the bar or court of any state, territory, district, commonwealth, or possession, except for any suspension concerning the conduct that was the basis for the Order;

3. that Respondent, since the entry of the Order, has not been convicted of a felony or misdemeanor involving moral turpitude as set forth in Rule 102(e)(2) of the Commission's Rules of Practice; and

4. that Respondent, since the entry of the Order:

   a. has not been found by the Commission or a court of the United States to have committed a violation of the federal securities laws, except for any finding concerning the conduct that was the basis for the Order;

   b. has not been charged by the Commission or the United States with a violation of the federal securities laws, except for any charge concerning the conduct that was the basis for the Order;

   c. has not been found by a court of the United States (or any agency of the United States) or any state, territory, district, commonwealth, or possession, or any bar thereof, to have committed an offense involving moral turpitude, except for any finding concerning the conduct that was the basis for the Order; and

d. has not been charged by the United States (or any agency of the United States) or any state, territory, district, commonwealth, or possession, or any bar thereof, with having committed an offense involving moral turpitude, except for any charge concerning the conduct that was the basis for the Order.

E. If Respondent provides the documentation required in Paragraphs C and D, and the Commission determines that he truthfully attested to each of the items required in his affidavit, he shall by Commission order be permitted to resume appearing and practicing before the Commission as an attorney.

F. If Respondent is not able to truthfully attest to the statements required in Subparagraphs D(2)(b) or D(4), Respondent shall provide an explanation as to the facts and circumstances pertaining to the matter and the Commission may hold a hearing to determine whether there is good cause to permit him to resume appearing and practicing before the Commission as an attorney.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION
(Release No. 34-74323; File No. 4-631)

February 19, 2015

Joint Industry Plan; Order Approving the Eighth Amendment to the National Market System Plan to Address Extraordinary Market Volatility by BATS Exchange, Inc., BATS Y-Exchange, Inc., Chicago Board Options Exchange, Incorporated, Chicago Stock Exchange, Inc., EDGA Exchange, Inc., EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, The Nasdaq Stock Market LLC, National Stock Exchange, Inc., New York Stock Exchange LLC, NYSE MKT LLC, and NYSE Arca, Inc.

I. Introduction

On December 24, 2014, Financial Industry Regulatory Authority, Inc. ("FINRA"), on behalf of the following parties to the National Market System Plan: BATS Exchange, Inc., BATS Y-Exchange, Inc., Chicago Board Options Exchange, Incorporated, Chicago Stock Exchange, Inc., EDGA Exchange, Inc., EDGX Exchange, Inc., NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, the Nasdaq Stock Market LLC, National Stock Exchange, Inc., New York Stock Exchange LLC, NYSE MKT LLC, and NYSE Arca, Inc. (collectively with FINRA, the "Participants"), filed with the Securities and Exchange Commission ("Commission") pursuant to Section 11A of the Securities Exchange Act of 1934 ("Act")[1] and Rule 608 thereunder,[2] a proposal to amend the Plan to Address Extraordinary Market Volatility ("Plan").[3] The proposal represents the eighth amendment to the Plan ("Eighth Amendment"), and reflects proposed changes unanimously approved by the Participants. The Eighth Amendment was published for comment in the Federal Register on January 27, 2015.[4] The Commission has

received no comment letters regarding the Eighth Amendment. This order approves the Eighth Amendment to the Plan.

II. Description of the Proposal

A. Eighth Amendment to the Plan

The Eighth Amendment includes two proposed changes to the Plan. First, the Participants propose to amend the Plan to establish a requirement for the Participants to submit a Supplemental Joint Assessment to the Commission by May 29, 2015. Second, the Participants propose to extend the end date of the pilot period of the Plan from February 20, 2015 to October 23, 2015.

B. Background and Purpose of the Plan

The Plan, approved by the Commission in March 2012,[5] establishes a market-wide limit up-limit down mechanism that is intended to address extraordinary market volatility in "NMS Stocks," as defined in Rule 600(b)(47) of Regulation NMS under the Act.[6] The Plan sets forth limit up-limit down requirements designed to prevent trades from occurring outside specified Price Bands.[7] These limit up-limit down requirements are coupled with Trading Pauses, as defined in the Plan, to accommodate more fundamental price moves (as opposed to erroneous trades or momentary gaps in liquidity). The limit up-limit down mechanism is intended to reduce the negative impacts of sudden, unanticipated price movements in NMS Stocks, such as those experienced on May 6, 2010, thereby protecting investors and promoting a fair and orderly

7 See Section V of the Plan.

market. The initial date of Plan operations was April 8, 2013.[8]

III. Discussion and Commission Findings

After careful review, the Commission finds that the Eighth Amendment is consistent with the requirements of the Act and the rules and regulations thereunder.[9] Specifically, the Commission finds that the Eighth Amendment is consistent with Section 11A of the Act[10] and Rule 608 thereunder[11] in that it is appropriate in the public interest, for the protection of investors and the maintenance of fair and orderly markets, and that it removes impediments to, and perfects the mechanism of, a national market system.

The Supplemental Joint Assessment will evaluate the impact of the Plan using the measures set forth in Appendix B of the Plan[12] and provide the Commission with an extensive

---

8 See Securities Exchange Act Release No. 68953 (February 20, 2013), 78 FR 13113 (February 26, 2013).

9 In approving the Eighth Amendment, the Commission has considered its impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

10 15 U.S.C. 78k-1.

11 17 CFR 242.608.

12 Appendix B of the Plan requires the Participants to: (a) assess the statistical and economic impact on liquidity of approaching Price Bands; (b) assess the statistical and economic impact of the Price Bands on erroneous trades; (c) assess the statistical and economic impact of the appropriateness of the Percentage Parameters used for the Price Bands; (d) assess whether the Limit State is the appropriate length to allow for liquidity replenishment when a Limit State is reached because of a temporary liquidity gap; (e) evaluate concerns from the options markets regarding the statistical and economic impact of Limit States on liquidity and market quality in the options markets; (f) assess whether the process for entering a Limit State should be adjusted and whether Straddle States are problematic; (g) assess whether the process for exiting a Limit State should be adjusted; and (h) assess whether the Trading Pauses are too long or short and whether the reopening procedures should be adjusted.

These areas are intended to capture the key measures necessary to assess the impact of the Plan and, if and where appropriate, to support recommendations relating to the calibration of the Percentage Parameters to help ensure that the stated objectives of the Plan are achieved.

cross-market data analysis using methodology agreed upon by the Participants.[13] The Participants stated that they intend to engage a third-party consultant to assist in conducting the cross-market analysis and preparing the Supplemental Joint Assessment.[14] The Participants believe that the Supplemental Joint Assessment will facilitate the development of unified recommendations, if and where appropriate, regarding operation of the Plan.[15] The Participants also state that they intend to make the Supplemental Joint Assessment publicly available.[16]

The Participants further believe that extending the end date of the pilot period will: (i) provide the Participants with time to use the information collected during the operation of the Plan to perform further analysis and recommend further amendments to the Plan, as necessary; (ii) provide a reasonable period of time for the public to comment on the Supplemental Joint Assessment and recommendations; and (iii) allow the Commission and the public adequate time to review the Supplemental Joint Assessment and any recommendations provided by the Participants, and to determine if any modifications to the Plan are appropriate.[17]

The Commission believes that the Supplemental Joint Assessment and any resulting recommendations for modifications to the Plan from the Participants, along with any public comment in response thereto, will assist the Commission in assessing the operation of the Plan and in considering any future determinations regarding the Plan.

---

13 See Notice, supra, note 4 at 4323.

14 See id. More recently, however, the Participants notified Commission staff that they have engaged a third-party consultant. Telephone conversation between Chris Grobbel, Attorney-Adviser, Commission, and Thushara Therrien, Director - Transparency Services, FINRA (February 3, 2015).

15 See Notice, supra, note 4 at 4323.

16 See id.

17 See id.

For the reasons noted above, the Commission finds that the Eighth Amendment to the Plan is consistent with Section 11A of the Act[18] and Rule 608 thereunder.[19] The Commission reiterates its expectation that the Participants will continue to monitor the scope and operation of the Plan and study the data produced, and will propose any modifications to the Plan that may be necessary or appropriate.[20]

IV. Conclusion

IT IS THEREFORE ORDERED, pursuant to Section 11A of the Act[21] and Rule 608 thereunder,[22] that the Eighth Amendment to the Plan (File No. 4-631) be, and it hereby is, approved.

Brent J. Fields
Secretary

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74327 / February 20, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16394

In the Matter of **Innovative Software Technologies, Inc., National Health Partners, Inc., The Laguna Group, Inc. (a/k/a Eco Energy Pumps, Inc.), and TYIN Group Holdings Limited,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against the Respondents named in the caption.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS[1]

1. Innovative Software Technologies, Inc. ("INIV") (CIK No. 1084047) is a Delaware corporation located in Tampa, Florida with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). INIV is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended March 31, 2010, which reported a net loss of $393,992 for the prior year. As of February 12, 2015, the common stock of INIV was quoted on OTC Link operated by OTC Markets Group Inc. (formerly "Pink Sheets") ("OTC Link"), had eight market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

[1] The short form of each issuer's name is also its stock symbol.

2. National Health Partners, Inc. ("NHPR") (CIK No. 1306109) is an Indiana corporation located in Horsham, Pennsylvania with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). NHPR is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2012, which reported a net loss of $603,397 for the prior nine months. As of February 12, 2015, the common stock of NHPR was quoted on OTC Link, had ten market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. The Laguna Group, Inc. (a/k/a Eco Energy Pumps, Inc.) ("EEPU") (CIK No. 1458725) is a Nevada corporation located in Carson City, Nevada with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). EEPU is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended April 30, 2011, which reported a net loss of $62,970 for the prior six months. As of February 12, 2015, the common stock of EEPU was quoted on OTC Link, had three market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

4. TYIN Group Holdings Limited ("TYIN") (CIK No. 1512693) is a Nevada corporation located in Yuen Long, New Territories, Hong Kong with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). TYIN is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended December 31, 2012. As of February 12, 2015, the common stock of TYIN was quoted on OTC Link, had four market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

5. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

6. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires issuers to file quarterly reports.

7. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74325 / February 20, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16393

In the Matter of **Calypte Biomedical Corporation,** **EC Development, Inc., and** **Information Architects Corporation** **(n/k/a Dakota Creative Group Corporation),** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against the Respondents named in the caption.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS[1]

1. Calypte Biomedical Corporation ("CBMC") (CIK No. 899426) is a Delaware corporation located in Portland, Oregon with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). CBMC is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended December 31, 2012, which reported a net loss of $1,076,000 for the prior year. As of February 12, 2015, the common stock of CBMC was quoted on OTC Link operated by OTC Markets Group Inc. (formerly "Pink Sheets") ("OTC Link"), had eleven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

[1]The short form of each issuer's name is also its stock symbol.

2. EC Development, Inc. ("ECDI") (CIK No. 761034) is a delinquent Delaware corporation located in Shawnee, Oklahoma with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). ECDI is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2012, which reported a net loss of $1,333,296 for the prior nine months. As of February 12, 2015, the common stock of ECDI was quoted on OTC Link, had ten market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. Information Architects Corporation (n/k/a Dakota Creative Group Corporation) ("IACH") (CIK No. 1018336) is a North Carolina corporation located in Orlando, Florida with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). IACH is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2012, which reported a net loss of $1,397,232 for the prior nine months. On August 19, 2014, IACH changed its name to Dakota Creative Group Corporation without reporting the change to the Commission as required by Commission rules. As of February 12, 2015, the common stock of IACH was quoted on OTC Link, had eight market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

4. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

5. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires issuers to file quarterly reports.

6. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74329 / February 20, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16395

In the Matter of **Revonergy Inc.,** **Siberian Energy Group Inc.,** **Tao Minerals Ltd.** **(n/k/a Canam Gold Corp.), and** **Todays Alternative Energy Corp.,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against Respondents Revonergy Inc., Siberian Energy Group Inc., Tao Minerals Ltd. (n/k/a Canam Gold Corp.), and Todays Alternative Energy Corp.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS

1. Revonergy Inc. (CIK No. 1452274) is a revoked Nevada corporation located in London, England with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Revonergy is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended September 30, 2011, which reported a net loss of $2,369,784 from the company's April 9, 2008 inception through September 30, 2011. As of February 10, 2015, the company's stock (symbol "RNRG") was quoted on OTC Link (previously "Pink Sheets") operated by OTC Markets Group Inc. ("OTC Link"), had four market

makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

2. Siberian Energy Group Inc. (CIK No. 1301299) is a revoked Nevada corporation located in New York, New York with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Siberian Energy Group is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended June 30, 2012, which reported a net loss of $16,537,118 for the prior six months. As of February 10, 2015, the company's stock (symbol "SIBN") was quoted on OTC Link, had six market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. Tao Minerals Ltd. (n/k/a Canam Gold Corp.) (CIK No. 1320338) is a defaulted Nevada corporation located in Medellin, Columbia with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Tao Minerals is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended October 31, 2011, which reported a net loss of $2,409,262 for the prior nine months. As of February 10, 2015, the company's stock (symbol "TAON") was quoted on OTC Link, had ten market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

4. Todays Alternative Energy Corp. (CIK No. 1128581) is a revoked Nevada corporation located in Newark, New Jersey with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Todays Alternative Energy is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended July 31, 2012, which reported a net loss of $3,481,399 from the company's November 1, 2007 inception through July 31, 2012. As of February 10, 2015, the company's stock (symbol "TAEC") was quoted on OTC Link, had eight market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

5. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

6. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires domestic issuers to file quarterly reports.

7. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and/or 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against them upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to

notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74331 / February 20, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16396

In the Matter of Akesis Pharmaceuticals, Inc., Skye International, Inc., Stellar Resources, Ltd., and Thwapr, Inc., Respondents.	ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against Respondents Akesis Pharmaceuticals, Inc., Skye International, Inc., Stellar Resources, Ltd., and Thwapr, Inc.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS

1. Akesis Pharmaceuticals, Inc. (CIK No. 1042420) is a revoked Nevada corporation located in La Jolla, California with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Akesis Pharmaceuticals is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2008, which reported a net loss of $4,109,185 for the prior nine months. As of February 10, 2015, the company's stock (symbol "AKESQ") was quoted on OTC Link, had five market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3). On January 30, 2009, the company filed a Chapter 7 petition in the U.S. Bankruptcy Court for the District of Delaware, and the case was closed on December 27, 2013.

2. Skye International, Inc. (CIK No. 1095751) is a revoked Nevada corporation located in Scottsdale, Arizona with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Skye International is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2010, which reported a net loss of $1,435,326 for the prior nine months. On December 16, 2009, the company filed a Chapter 11 petition in the U.S. Bankruptcy Court for the District of Nevada, and the case was closed on December 24, 2010. On April 28, 2011, the company filed a Chapter 7 petition in the U.S. Bankruptcy Court for the District of Nevada, and the case was still pending as of December 2, 2014.

3. Stellar Resources, Ltd. (CIK No. 1217027) is a Nevada corporation located in Las Vegas, Nevada with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Stellar Resources is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended January 31, 2012, which reported a net loss of $630,595 for the prior six months. As of February 10, 2015, the company's stock (symbol "SRRL") was quoted on OTC Link, had nine market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

4. Thwapr, Inc. (CIK No. 1451598) is a revoked Nevada corporation located in Las Vegas, Nevada with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Thwapr is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended June 30, 2012, which reported a net loss of $27,850,094 from the company's March 14, 2007 inception through June 30, 2012. As of February 10, 2015, the company's stock (symbol "THWI") was quoted on OTC Link, had ten market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

5. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

6. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires domestic issuers to file quarterly reports.

7. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and/or 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against them upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to

notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74346 / February 20, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16397

In the Matter of

JUAN JOSE ALVAREZ DE LUGO AZPURUA,

Respondent.

ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934 MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") against Juan Jose Alvarez De Logo Azpurua ("Alvarez De Lugo" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent consents to the Commission's jurisdiction over him and the subject matter of these proceedings and to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 15(b) of the Securities Exchange Act of 1934 Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. From approximately 2005 until January 2013, Alvarez De Lugo held himself out as the president of multiple successful businesses specializing in real estate development programs. Alvarez De Lugo regularly solicited and sold to numerous persons investments (*i.e.*, "Promissory Notes") in these businesses that promised a return of 20% per year. In fact, other than soliciting investors and selling these notes, Alvarez De Lugo performed no substantial other duties for his purported businesses. Alvarez De Lugo received at least $2 million from 10 investors. Instead of investing the money as promised, Alvarez De Lugo compensated himself by spending the invested funds on his own personal expenses and enriched himself and relatives. After the funds had been spent, Alvarez De Lugo wrote a letter to the victims that falsely claimed payments were delayed because one of his companies needed an "investor/broker license" before the plan could be put into effect. As a result of this conduct, Alvarez De Lugo was engaged in the business of effecting transactions in securities for the accounts of others and acted as a broker-dealer. Alvarez De Lugo was a resident of Branford, Connecticut, and is currently incarcerated.

2. On September 18, 2013, Alvarez De Lugo pled guilty to one count of wire fraud before the United States District Court for the District of Connecticut, [United States v. Juan Jose Alvarez De Lugo Azpurua, No.3: 13 CR-00177] and on February 4, 2014 was sentenced to 48 months in prison.

3. The count of the criminal information to which Alvarez De Lugo pled guilty alleged, inter alia, that Alvarez De Lugo made materially false representations to investors, did not invest the money as promised, and spent investment money on his own personal expenses.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Alvarez De Lugo's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 15(b)(6) of the Exchange Act that Respondent Alvarez De Lugo be, and hereby is:

barred from association with any broker, dealer, investment adviser, municipal securities dealer, or transfer agent.

barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

By the Commission.

Admin. Proc. File No. 3-15255

In the Matter of JOHN THOMAS CAPITAL MANAGEMENT GROUP LLC d/b/a PATRIOT28 LLC and GEORGE R. JARKESY, JR.	ORDER DENYING MOTION TO STAY ADMINISTRATIVE PROCEEDING

In December 2014, we granted the petition of respondents John Thomas Capital Management Group LLC d/b/a Patriot28 LLC ("JTCM") and George R. Jarkesy, Jr. for review of an administrative law judge's initial decision.[1] Respondents have now filed a Motion to Stay Administrative Proceeding, which requests that the Commission stay the review proceeding until their federal appeal is resolved. We deny the motion for the reasons set forth herein.

I.

We begin by providing some context for respondents' motion.[2] At the outset, this administrative proceeding involved two other respondents (the "Settling Respondents") that later

---

1 *John Thomas Capital Mgmt. Grp. LLC*, Securities Exchange Act Release No. 73819, 2014 WL 6985130 (Dec. 11, 2014).

2 In three previous orders, the Commission has set forth the background of this proceeding in more detail. *See John Thomas Capital Mgmt. Grp. LLC*, Exchange Act Release No. 73375, 2014 WL 5282156 (Oct. 16, 2014) (*John Thomas III*) (denying interlocutory review with respect to law judge order rejecting respondents' request that the initial decision be maintained under seal until resolution of federal appeal); *John Thomas Capital Mgmt. Grp. LLC*, Exchange Act Release No. 71415, 2014 WL 294551 (Jan. 28, 2014) (*John Thomas II*) (denying interlocutory review with respect to law judge order rejecting prejudgment claim); *John Thomas Capital Mgmt. Grp.*

(footnote continued . . .)

submitted an offer of settlement to the Commission. The Commission's order accepting the settlement (the "Settlement Order") stated that the "findings herein are made pursuant to [the Settling Respondents'] Offer of Settlement and are not binding on any other person or entity in this or any other proceeding."[3]

In January 2014, JTCM and Jarkesy sought disqualification of the Commission on the basis that the Commission, in issuing the Settlement Order, purportedly had "conclusively prejudged the case" against them. The law judge denied the motion to disqualify and the Commission denied interlocutory review. The order denying review concluded, among other things, respondents' claims could effectively be reviewed following issuance of the initial decision in the event that it was adverse to them.[4] It also observed that respondents had not established that there was a "substantial ground for difference of opinion" because the Commission had in past decisions rejected claims of prejudgment premised upon its acceptance of settlements in multi-respondent proceedings, and respondents had not addressed or distinguished those decisions.[5] This precedent established that no prejudgment of the non-settling respondent's case occurs even though the agency may have acquired some familiarity with the underlying events at another stage of the proceedings involving other respondents.[6]

Later in January 2014, JTCM and Jarkesy sought a temporary restraining order ("TRO") from the United States District Court for the District of Columbia, seeking to stay the hearing before the law judge. Respondents advanced the prejudgment claim as well as claims based on asserted violations of the Due Process Clause, the Equal Protection Clause, and other constitutional provisions. The district court denied their request for a TRO, finding that its jurisdiction was doubtful; that respondents had failed to show that judicial review after the Commission's issuance of a final order would be an inadequate remedy; and that respondents had not established that they would be irreparably harmed.[7] Subsequently, in June 2014, the district court dismissed the case for lack of subject matter jurisdiction. The court observed that Section 25 of the Securities Exchange Act of 1934 confers federal-court jurisdiction over only "*final*

order[s]" of the Commission, and that it was undisputed that the Commission had not yet issued such a final order.[8] The court concluded that, although respondents asserted "violations of their constitutional rights[,] . . . those claims are inextricably intertwined with . . . the very enforcement proceeding," and that respondents would "have the opportunity to seek judicial review if they are aggrieved by the SEC's final order."[9]

JTCM and Jarkesy's appeal from the district court's ruling is pending in the United States Court of Appeals for the District of Columbia. In November 2014, the D.C. Circuit denied the Commission's motion for summary affirmance, directed that the appeal be calendared for oral argument in the present term, and set a briefing schedule that provides for respondents' final brief to be filed in mid-February 2015.

Meanwhile, the law judge held the hearing as scheduled and issued the initial decision in October 2014. Respondents petitioned for review and the Division cross-petitioned for review. The Division also requested expedited treatment of the review proceeding on the basis of asserted concerns about the ongoing disposition of assets in the funds. On December 11, 2014, the Commission granted review and granted the Division's request for expedited treatment consistent with the Commission's other responsibilities. Although the order granting review stated that "no motions for extensions of time to file briefs will be entertained," the briefing schedule afforded the parties more time to file briefs than they ordinarily would have received under Rule of Practice 450.[10]

In light of subsequent orders directing additional briefing and otherwise extending the briefing schedule, this review proceeding is not expected to be fully briefed until April 20, 2015.[11] Additionally, concurrently with the instant motion to stay, respondents also filed two other motions, a motion to adduce additional evidence and a renewed motion to recuse the Commission on prejudgment grounds, both of which remain pending.

II.

Respondents request that the Commission "stay the proceedings on review of the Initial Decision pending the decision" of the D.C. Circuit. Our Rules of Practice contain no specific

---

provision governing stays of an administrative proceeding pending a related civil proceeding.[12] We accordingly construe respondents' motion as a request for a postponement or adjournment under Rule of Practice 161.[13] We adhere to a "'policy of strongly disfavoring such requests'" absent a strong showing of substantial prejudice and consider the "pendency of an appeal generally . . . an insufficient basis upon which to prolong a Commission proceeding."[14]

Respondents here assert that a stay is necessary to "mitigate any obstruction of the jurisdiction" of the D.C. Circuit and that a "Commission Final Decision entered prior to the decision of the Court of Appeals will effectively defeat the jurisdiction of that court." They also argue that continuation of administrative proceedings will cause them irreparable injury. We do not find these arguments persuasive.

To begin with, JTCM and Jarkesy have it backwards: Far from *defeating* the jurisdiction of the federal courts, the eventual issuance of a final Commission decision in this proceeding—assuming hypothetically that it was adverse to respondents—would *vest* the court of appeal with jurisdiction to resolve respondents' claims.[15] Section 25 of the Exchange Act provides that any

---

12 *Cf.* Rules of Practice 161(c)(2), 210(c)(3), 401(c), 17 C.F.R. §§ 201.161(c)(2) (stay pending Commission consideration of an offer of settlement), 201.210(c)(3) (stay pending criminal investigation or prosecution), 201.401(c) (stay of effectiveness of final Commission order pending judicial review of that order).

13 *See, e.g.*, *Paul Free*, Exchange Act Release No. 66260, 2012 WL 266986, at *2 (Jan. 26, 2012); *Joseph John VanCook*, Exchange Act Release No. 59550, 2009 WL 605322, at *2 (Mar. 10, 2009); *Michael J. Markowski*, Exchange Act Release No. 40748, 1998 WL 960587, at *2 (Dec. 4, 1998). We note that respondents' stay motion does not cite any Rule of Practice.

14 *Paul Free*, 2012 WL 266986, at *2 (quoting Rule of Practice 161(b)(1), 17 C.F.R. § 201.161(b)(1)) (denying motion to stay proceedings); *cf. Michael S. Steinberg*, Investment Advisers Act Release No. 4008, 2015 WL 331125, at *1-2 (Jan. 27, 2015) (granting respondent's unopposed motion to postpone briefing where the Second Circuit granted his unopposed motion to hold his criminal appeal in abeyance pending en banc proceedings in *United States v. Newman* and where respondent argued that, "unless the panel's decision [in *Newman*]. . . is either vacated or modified, he will be entitled to reversal of his conviction . . . , thereby vitiating the basis for the bar imposed by the law judge").

15 If the Commission's eventual decision were *favorable* to respondents, they could not, of course, seek judicial review. But this does not mean that respondents' claims would be insulated from review in any pertinent sense. *FTC v. Standard Oil Co. of Cal.*, 449 U.S. 232, 244 & n.11 (1980). Indeed, "the possibility that [respondents'] challenge may be mooted in adjudication warrants the requirement that [they] pursue adjudication, not shortcut it." *Id.* at 244 n.11; *cf. Deaver v. Seymour*, 822 F.2d 66, 71 (D.C. Cir. 1987) ("That [the plaintiff's] challenge . . . [has] constitutional implications does not support his argument for accelerated and unorthodox judicial review. Indeed, it substantially weakens it.").

"person aggrieved by a final order of the Commission . . . may obtain review of the order in the [appropriate] United States Court of Appeals."[16] As the D.C. district court stated in its order dismissing respondents' federal action for lack of jurisdiction, there "is no dispute that [JTCM and Jarkesy] will have the opportunity to raise all of their constitutional claims before a Court of Appeals should . . . the Commission issue orders adverse to them."[17]

Respondents have argued in other papers that issuance of a Commission decision would in practice foreclose *meaningful* judicial review of their constitutional claims because the administrative process, in their view, denies them the ability to develop an adequate record for a court to review.[18] They assert that there is "no procedural mechanism for the necessary development of evidence" in our Rules of Practice or under the Administrative Procedure Act. We cannot agree. Although the *law judge* did deny respondents' requests for the issuance of subpoenas regarding, *inter alia*, their prejudgment, *Brady*, and equal-protection claims—on the ground that the requests were unreasonable, untimely, and sought privileged material—they are free to seek *Commission* review of her rulings.

And JTCM and Jarkesy have done exactly that, both in their opening brief with the Commission and in their motion to adduce additional evidence pertaining to the asserted constitutional violations. They have argued, for example, that the law judge erred because "Rule [of Practice] 232 [governing the issuance of subpoenas] does not preclude the issuance of a subpoena after the hearing has begun" and because the scope of the subpoenas was "not unreasonable" within the meaning of Rule 232.[19] In short, respondents *thus far* have been unable to obtain the information that they seek because of the law judge's context-specific discovery rulings—which they can challenge on appeal to us—*not* because of a limitation inherent to the Commission's administrative procedures that would categorically place such discovery off limits.

We are not bound by the law judge's evidentiary or discovery rulings.[20] Nor would our prior denials of interlocutory review as to those rulings, *see supra* note 2, preclude respondents

18 *E.g.*, Respondents' Motion to Adduce Additional Evidence at 6 (filed Jan. 13, 2015); Respondents' Opening Brief at 30-33 (filed Jan. 13, 2015).

19 Respondents' Motion to Adduce Additional Evidence at 4-5 (citing Rule of Practice 232, 17 C.F.R. § 201.232).

20 *See* 5 U.S.C. § 557(b); 15 U.S.C. § 78d-1(b); Rules of Practice 326, 411(a), 17 C.F.R. §§ 201.326, 201.411(a); S. Rep. No. 776 at p. 3, 87th Cong., Pub. L. No. 87-592 (Aug. 24, 1961); *Adopting Release, Rules of Practice*, 60 Fed. Reg. 32738, 32774-75 (June 23, 1995); *cf.*

(footnote continued . . .)

from renewing their arguments before the Commission now.[21] As a consequence, in the event that we were to conclude that we could not resolve respondents' constitutional claims on the present record, we could provide relief in the course of our review process. We have the authority, for example, to direct that the record be supplemented pursuant to Rule of Practice 452 and allow additional briefing before issuing a final Commission decision.[22] We also have the authority to remand for a new hearing before the law judge at which the parties would have access to all the evidence to which they are entitled.[23] For these reasons, the contention that as-applied constitutional claims turn on "extrinsic evidence [that] cannot be 'explored' within the administrative proceeding" lacks merit.[24]

Even assuming—again, solely for purposes of discussion—that the *Commission* ultimately were to reject respondents' attempts to expand the record and their other defenses, and then issue a final decision that was adverse to them, their claims still would be subject to meaningful *judicial* review. JTCM and Jarkesy could argue to the court of appeals that the administrative record was improperly limited; Section 25(a)(5) of the Exchange Act authorizes the reviewing court to "remand the case to the Commission for further proceedings," including the taking of new evidence before the Commission, if the evidence is shown to be material and other conditions are satisfied.[25] A judicial-review provision like this, the Supreme Court has explained, allows a "record which [otherwise] would be inadequate for [judicial] review" to be "made adequate" by the court of appeals, foreclosing any argument that agency "unlawfulness will be 'insulated' because the reviewing court will lack an adequate record."[26] Put another way,

(footnote continued . . .)

respondents' constitutional claims—including any claim relating to their purported inability to develop an adequate record before the Commission—will be "ripe for appellate examination in due course in the event that [they] lose in the administrative arena."[27]

Finally, we do not believe that JTCM and Jarkesy have made a sufficient showing that irreparable harm (or, for that matter, any cognizable prejudice) would result from the Commission's continued consideration of this matter. Distilled to its essence, respondents' position is that they should not be forced to participate in the instant proceeding because they believe the Commission is an improper and biased decision-maker. But the Supreme Court long has recognized the "expense and disruption of defending . . . [a] protracted adjudicatory proceeding[]" does not constitute irreparable harm, even when the party questions the lawfulness of the agency's proceedings.[28] Generally speaking, the "burden of being haled" into an allegedly improper forum does not constitute an irreparable injury warranting interruption of an ongoing proceeding.[29] Review instead must be deferred until the proceeding has come to an end. That conclusion holds whether the forum is challenged on prejudgment,[30] due process,[31] equal protection,[32] Seventh Amendment,[33] separation of powers,[34] or some other venue or

jurisdictional ground.[35] Respondents have failed to justify a departure from this established legal principle.

We are not convinced that respondents have marshalled any sound reasons for arresting the Commission's ongoing review process. Quite the contrary, we believe that allowing that process to play out—*e.g.*, through the completion of briefing on the petition and the cross-petition, the presentation of oral argument before the Commission,[36] the disposition of respondents' other pending motions, and the issuance of a final decision by the Commission—will provide all parties with a fair opportunity to present their arguments and ensure that the issues in this proceeding are fully considered.[37]

In the Matter of

ANTHONY FIELDS, CPA d/b/a
ANTHONY FIELDS & ASSOCIATES and d/b/a
PLATINUM SECURITIES BROKERS

OPINION OF THE COMMISSION

BROKER-DEALER PROCEEDING

INVESTMENT ADVISER PROCEEDING

CEASE-AND-DESIST PROCEEDING

Grounds for Remedial Action

Antifraud Violations

Registration Violations

Respondent, the founder, chief executive officer, chief compliance officer, and sole control person of a registered investment adviser and a formerly registered broker-dealer, made material misrepresentations and omissions in the offering for sale of fictitious "prime bank" instruments via social media websites. Respondent also registered his firm as an investment adviser without satisfying the requirements for Commission registration and made material misstatements in registration filings and other communications. *Held*, it is in the public interest to: (i) enter a cease-and-desist order; (ii) bar respondent from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; (iii) revoke the investment adviser's registration; and (iv) assess a $150,000 third-tier civil money penalty.

APPEARANCES:

Anthony Fields, pro se.

Duane K. Thompson and *Donna K. Norman*, for the Division of Enforcement.

Appeal filed: December 27, 2012
Last brief received: April 4, 2013

I.

This administrative proceeding presents a new twist (the use of social media websites such as LinkedIn and TradeKey to reach potential victims) on an old scam (the offering of fictitious "prime bank" securities promising impossibly high returns at no risk). Anthony Fields appeals from an administrative law judge's initial decision finding that he had committed numerous violations of the securities laws.[1] Conducting an independent review of the record with respect to the findings challenged on appeal, we find that Fields fraudulently offered nonexistent "bank guarantees" and "medium-term notes." We find also that Fields acted as an unregistered broker, registered one of his sole proprietorships as an investment adviser without satisfying the requirements for Commission registration, operated that firm without a compliance manual, and made material misstatements in his filings with the Commission and in other communications. For these violations, we conclude that it is in the public interest to impose rigorous sanctions, including a bar and a $150,000 civil money penalty.

II.

A. Fields and his sole proprietorships, Anthony Fields & Associates and Platinum Securities Brokers

Fields resides in Illinois and is an accountant whose license as a Certified Public Accountant lapsed in 2003. With the exception of $100 in U.S. Treasury bills that he purchased

---

1 *Anthony Fields, CPA d/b/a Anthony Fields & Associates and d/b/a Platinum Securities Brokers*, Initial Decision Release No. 474, 2012 WL 6042354 (Dec. 5, 2012).

on TreasuryDirect in 2009 or 2010 to, in his words, "see how the system worked," he has never owned any publicly traded stocks or bonds.[2]

Fields did business as two sole proprietorships, Anthony Fields & Associates ("AFA"), a registered investment adviser, and Platinum Securities Brokers ("Platinum"), a formerly registered broker-dealer. Fields was AFA's founder, chief executive officer, chief compliance officer, and control person. In years past, AFA provided accounting and tax preparation services and, in that connection, employed a number of accountants, bookkeepers, and secretaries. However, as of March 2010, when Fields registered AFA as an investment adviser with the Commission, AFA had no paid employees and operated out of Fields's personal residence. AFA's sole employee was Fields's ex-wife, who was AFA's titular vice president but performed no services. AFA did not have (and never has had) any investment advisory clients, assets under management, or revenues from investment advisory services. Fields testified that two entities, "First Traders Group" and another one whose name Fields could not recall, supposedly made overtures about signing up with AFA. It is undisputed that neither entity received any investment advice from, deposited any funds for management by, or paid any fees to AFA.

Also in March 2010, Fields registered Platinum as a broker-dealer with the Commission. He withdrew Platinum's registration in September 2010 when FINRA informed him that Platinum—which had at most $5,000 in capital—did not meet the net capital requirements. Although Fields testified that he later resubmitted Platinum's application to the Commission, he offered no evidence in support of this assertion and the Commission's records do not reflect any re-application. As with AFA, Fields is Platinum's founder, chief executive officer, chief compliance officer, and control person. Platinum was operated out of Fields's residence and has never had any employees besides Fields's ex-wife, who was listed as Platinum's secretary but did no work. Platinum had no revenue and never provided brokerage services to any client.

B. Prime bank investment schemes

An overview of prime bank investment schemes will help situate the remainder of this discussion.[3] Prime bank schemes have attracted significant attention from regulators, in part

---

2 The TreasuryDirect website allows individuals to buy and redeem Treasury securities directly from the government in paperless electronic form.

3 We discuss prime bank schemes in more detail *infra* at pages 10-15. *See also* U.S. Securities and Exchange Commission, *How Prime Bank Frauds Work, available at* http://www.sec.gov/divisions/enforce/primebank/howtheywork.shtml (last visited Feb. 19, 2015). Both here and elsewhere, we (like the law judge) have taken official notice of statements published by federal agencies pursuant to Rule of Practice 323. *See* 17 C.F.R. § 201.323; *520 S. Michigan Ave. Assocs., Ltd. v. Shannon*, 549 F.3d 1119, 1137 n.14 (7th Cir. 2008) ("A court may take judicial notice of . . . documents contained in the public record[] and reports of administrative bodies . . . .") (quotation marks omitted); *Interstate Natural Gas Co. v. S. Cal. Gas Co.*, 209 F.2d 380, 385 (9th Cir. 1953) (holding that judicial notice of "records and reports

(continued on next page)

because their victims collectively have lost billions of dollars worldwide. Although the details of these schemes vary, the broad outlines are the same. Potential investors are told that their money will be used to purchase instruments supposedly representing obligations of well-known international banks—which the promoters call "prime banks"—at a steep discount. The schemes derive their credibility from supposed association with reputable financial institutions, while at the same time their promoters often insist on secrecy, thereby making it impossible to verify the claims with the banks themselves. Other common features of prime bank schemes include the use of complex-sounding jargon (*e.g.*, "rolls," "tranches," "fresh cut," "slightly seasoned"); the involvement of many layers of participants and intermediaries; and the very large size of the purported transactions (often running into the hundreds of millions and billions of dollars).

Prime bank instruments promise implausibly high returns at no risk. The purported instruments go by many different names; for example, the Division's expert had encountered prime bank schemes peddling "bank guarantees," "letters of credit," "bank notes," "bank debentures," and a "hodgepodge of similar-sounding" products. He explained that the perpetrators of prime bank frauds frequently change the names of the instruments offered to avoid regulatory scrutiny. As we shall explain, whatever the nomenclature, the prime bank instruments offered in these fraudulent schemes are imaginary, as is the secondary market on which they purportedly trade.

C. Fields's social media postings offering prime bank instruments

The fictitious prime bank instruments at issue in this proceeding are "bank guarantees" (or BGs) and "mid-term notes" (or MTNs) offered by Fields in postings on the social media websites LinkedIn and TradeKey.[4]

LinkedIn is a social networking site. After establishing a profile on LinkedIn, an individual or company can join discussion groups and post messages that will be disseminated to all of the groups' members. Fields began using LinkedIn to make postings about bank guarantees and mid-term notes in October 2010 and continued to do so until "[s]ometime in 2011." The LinkedIn postings were undated, and Fields does not recall when exactly in 2010 or 2011 he made them.

(. . . continued)

of administrative bodies" is proper). We also have drawn upon the hearing testimony of the Division's expert.

4 During the hearing, Fields admitted that he also advertised that he had access to BGs and MTNs on E-2/Commerce, an online business-to-business marketplace. He claimed that his failure to produce copies of those postings to the Division during the investigation was an unintentional "oversight."

For example, Fields posted a message with the subject "FRESH CUT BGs" to the LinkedIn group "Trade Platforms – Private Placement Programs (PPPs) – High Yield." This message stated:

> Bank Guarantees, Cash Backed, Deutsche Bank, Credit Suisse, HSBC, JP Morgan Chase, BNP Paribas, UBS, RBS or Barclays. One (1) year and one (1) day, Fresh Cut USD 500 Billion (USD 500,000,000,000) with Rolls and Extensions 40% or better plus 1% commission fee to be paid, to buy side and sell side consultants 50/50. First Tranche: 500M USD. If you are interested you can email for particulars at [Fields's email address].

Fields explained that a price quoted as "40% plus 1%" meant that the purported instrument—in this case, $500 billion in bank guarantees in "tranches" (or batches) of $500 million each—was available for purchase at 40% of the face value of the instrument, plus a commission of one percent to be paid to "consultants," including himself.

Another of Fields's postings to the same LinkedIn discussion group with the subject "FRESH CUT MTNs 30+1" stated:

> Medium Term Notes, Cash Backed, Deutsche Bank, Credit Suisse, HSBC, JPMorgan Chase, BNP Paribas, UBS, RBS or Barclays, Ten (10) years and one (1) day. Fresh Cut 7.5% coupon. USD 500 Billions (USD 500,000,000,000) with Rolls and Extensions. 30% or better plus 1% Commission Fees to be paid, to Buy Side and Sell Side consultants 50/50. First Tranche 500 M USD. All interested parties can email me for particulars at [Fields's email address].

Fields testified that this posting was intended to advertise the availability of $500 billion in mid-term notes paying 7.5% interest rate for purchase at "better" than (*i.e.*, less than) 30% of their face value, plus a one percent commission.

Fields also posted a notice to the over 1,000 members of a LinkedIn discussion group named "Real Deals for MTN's and BG's" that advertised that he was:

> [D]irect to seller of fresh cut BGs 40+1 and slightly seasoned BGs at 57+1, cash backed, top 10 world banks, 50B contracts.

According to Fields, this message was meant to convey that $50 billion in bank guarantees was available for purchase at 40% of face value (for "fresh cut" bank guarantees) or 57% of face value (for "slightly seasoned" bank guarantees), and that there would be a one percent commission.

TradeKey is an online business-to-business marketplace that allows companies to connect with and do business with one another. As with LinkedIn, members of TradeKey create profiles and then post messages that can be viewed by other TradeKey users. On October 13, 2010, Fields posted an advertisement on TradeKey that read:

> My name is Anthony Fields. I'm a CPA in the United States and I have a client interested in buying $50 billion bank guarantees. If this is something that you are interested in, please call me at [Fields's telephone number.]

The "From" indicator of the message read "Company: Anthony Fields & Associates." Fields testified that he expected to receive one-third of one percent of $50 billion—*i.e.*, over $166 million—in commissions upon the completion of this proposed transaction.

Fields received a total of approximately twenty to forty responses to his postings on LinkedIn and TradeKey. No purchases or sales of BGs or MTNs were ever actually carried out, and Fields never obtained any funds from potential investors.

D. Fields's statements regarding AFA and Platinum

In AFA's filings with the Commission, Fields made a number of representations regarding AFA's assets under management, clients, and other operational characteristics. Both AFA and Platinum also had websites that were publicly accessible until at least May 2011. The content of these websites, which were designed and controlled by Fields, is described below. Fields testified that these statements were intended to reach potential clients and reflected his "marketing concept" about AFA and Platinum.

1. AFA's Form ADV

Form ADV is the uniform form used by investment advisers to register with the Commission. The effective version of AFA's Form ADV, which Fields filed with the Commission on July 15, 2010, stated that AFA had four clients and more than $25 million in assets under management. It also stated that AFA had $400 million under management, half in discretionary accounts and half in non-discretionary accounts, and that AFA's clients included high-net-worth individuals, pooled investment vehicles, and hedge funds. Attached to the Form ADV was AFA's brochure, which similarly stated that AFA "provides discretionary and nondiscretionary advisory services . . . to high net worth individuals and institutional investors." The brochure described AFA's affiliation with Platinum, and asserted that Platinum was a "broker/dealer registered with the U.S. Securities and Exchange Commission."

2. AFA's website

AFA's website stated that "Anthony Fields & Associates is Registered with the Securities And Exchange Commission as Investment Advisors." Its "About Us" page asserted that AFA was "organized to take advantage of the need to fulfill a gap in the Government securities market" and a supposed "$2.5 billion contract." That page also stated that "[o]ur group of investment professionals are on hand when you need them!" On the left-hand side of every page was the text "Anthony Fields & Associates has acquired a $50 billion contract."[5] Below that was the text "Anthony Fields has established a securities brokerage firm 'Platinum Securities Brokers' in a bold effort to reduce brokerage fees!" AFA's website also touted its "arrangement with the 45th primary dealer"—which Fields testified was intended to be a reference to Platinum—through which AFA's clients supposedly could purchase U.S. Treasury securities.[6]

3. Platinum's website

Platinum's website described itself as a "top institutional brokerage firm" that was "registered with the Securities and Exchange Commission." It stated that Platinum had "a dedicated team of Government securities researchers waiting for your call 24 hours a day." According to the website, Platinum had "a portfolio of over 25,000 U.S. Government securities."

D. Proceedings below

We issued an Order Instituting Proceedings on January 4, 2012.[7] The law judge held a two-day hearing on May 21 and 22, 2012. Fields testified in the Division's case and in his own case. The Division also presented the testimony of John Stark, whom the law judge accepted as

---

5 The purported $50 billion contract was introduced into evidence at the hearing and specified AFA as the seller and "East West Trading, LLC" as the purchaser of $50 billion of U.S. Treasury Strips (with "possible rolls and extension[s]") to be sold in initial "Minimum Test Tranche[s]" of $1 million and then followed by additional tranches ranging from $500 million to $2.504 billion. The price was indicated as 22% of the face value of the instruments plus a one percent commission, and the contract specified that the purchaser's funds were to be wired to AFA's bank account. Fields did not do any due diligence on East West Trading or its representative, a man named Vincent Bach. Fields testified that he believed that Bach was a banker in Washington, D.C. and that Bach's grandfather owned a diamond mine in South Vietnam. AFA did not have any securities to sell East West and never received any funds from East West.

6 Primary dealers trade government debt directly with the Federal Reserve Bank and purchase the majority of the U.S. Treasury securities sold at auction. *See* Federal Reserve Bank of New York, *Administration of Relationships with Primary Dealers*, *available at* http://www.newyorkfed.org/markets/pridealers_policies.html (last visited Feb. 19, 2015). Currently there are 21 primary dealers; Platinum is not (and never has been) a primary dealer. *See* Federal Reserve Bank of New York, *Primary Dealers List*, *available at* http://www.newyorkfed.org/markets/pridealers_current.html (last visited Feb. 19, 2015).

7 *Anthony Fields, CPA d/b/a Anthony Fields & Associates and d/b/a Platinum Securities Brokers*, Exchange Release No. 66091, 2012 WL 19759 (Jan. 4, 2012).

an expert on prime bank frauds.[8] There were no other witnesses. The Division introduced a number of documents into evidence, including Fields's social media postings, printouts of Fields's websites, and copies of the purported contracts that Fields arranged. For his part, Fields introduced a purported bank guarantee issued by Credit Suisse and a purported Bloomberg screenshot of a mid-term note issued by Deutsche Bank. On December 5, 2012, the law judge issued an initial decision finding violations and imposing sanctions on Fields. This appeal followed.

III.

A. Antifraud violations

We find that Fields willfully committed violations of the antifraud provisions of the Securities Act and the Investment Advisers Act.

1. Securities Act Sections 17(a)(1) and 17(a)(3)

Securities Act Section 17 makes it unlawful for any person to engage in certain conduct in the "offer or sale of any securities" by the use of any means or instrumentality of interstate commerce. Specifically, Section 17(a)(1) prohibits "employ[ing] any device, scheme, or artifice to defraud" and Section 17(a)(3) prohibits "engag[ing] in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon the purchaser."[9] For the reasons that follow, we find the Fields willfully violated both these subsections.

a. *Fictitious prime bank instruments are "securities."*

The bank guarantees and mid-term notes that Fields offered are, notwithstanding their fictitious character, securities subject to the antifraud provisions of the securities laws.[10] The "fraud provisions are not defeated by the fact that a security purportedly traded is nonexistent or

---

[8] Stark is a lawyer with Stroz Friedberg, an international risk management and consulting firm. Prior to joining Stroz Friedberg, Stark was the chief of the Office of Internet Enforcement at the Commission from 1998 to 2009. In that capacity, he oversaw hundreds of investigations into fraudulent prime bank schemes and created the Prime Bank Fraud Information Center, an initiative designed to educate investors about such schemes.

[9] 15 U.S.C. § 77q(a). Reliance is "not an element of an administrative proceeding alleging violation" of the antifraud provisions. *E.g.*, *SEC v. Rana Research, Inc.*, 8 F.3d 1358, 1363-64 (9th Cir. 1993); *SEC v. Blavin*, 760 F.2d 706, 711 (6th Cir. 1985).

[10] *See, e.g.*, *Brian A. Schmidt*, Exchange Act Release No. 45330, 2002 WL 89028, at *6 (Jan. 24, 2002); *Martin R. Kaiden*, Exchange Act Release No. 41629, 1999 WL 507860, at *1, *3 (July 20, 1999) (finding that fictitious prime bank guarantees and standby letters of credit were securities).

fictitious"[11] and "apply even though the securities at issue [are] a sham."[12] This must be so, lest it be the case that "the worse the securities fraud, the less applicable the securities laws."[13]

Thus, for "purposes of determining whether the instruments offered are securities," we look to Fields's "representations with respect to their characteristics," regardless of whether the instruments in fact exist.[14] Viewed in that light, it is plain that the instruments offered by Fields are indeed securities. Section 2(a)(1) of the Securities Act defines the term "security" to include a "note" or other "evidence of indebtedness."[15] The bank guarantees and mid-term notes were represented by Fields to be evidence of a debt: They promised payment of a definite sum of money with interest at a specified time in the future, and there is no suggestion that they fall within any exception to the presumption that notes are securities.[16]

b. *Fields offered prime bank instruments through a means or instrumentality of interstate commerce.*

It is settled that the use of the Internet—such as making postings on a website—is *per se* sufficient to satisfy the interstate jurisdictional element of the securities laws.[17] Fields nonetheless argues that he never claimed to be the actual seller of the prime bank instruments, that he merely passed information from potential buyers to potential sellers (and vice versa), and

17 *E.g.*, *SEC v. GMC Holding Corp.*, No. 6:08-cv-275, 2009 WL 506872, at *4 (M.D. Fla. Feb. 27, 2009) (holding that use of the "[I]nternet . . . in connection with the offer or sale of securities . . . satisfie[s] the jurisdictional element of a violation of . . . section 17(a)"); *SEC v. Phoenix Telecom, LLC*, 239 F. Supp. 2d 1292, 1298 (N.D. Ga. 2000) (holding that use of an Internet web site "satisfies the jurisdictional means requirement"); *see also United States v. Lewis*, 554 F.3d 208, 214-16 (1st Cir. 2009) (holding that use of the Internet, "standing alone," constitutes "interstate commerce"); *United States v. Trotter*, 478 F.3d 918, 921 (8th Cir. 2007) (holding that "the Internet is an instrumentality and channel of interstate commerce").

that no money ever changed hands as a result of his postings. None of this affects our conclusion that Fields "offered" the prime bank instruments through his LinkedIn and TradeKey postings.

Section 2(a)(3) of the Securities Act defines "offer" to include "every attempt or offer to dispose of, or *solicitation of an offer to buy*, a security or interest in a security, for value."[18] This statutory language, which has been given an "expansive interpretation" by the courts and by the Commission,[19] extends "beyond the common law contract concept of an offer."[20] Of particular relevance here, the term is broad enough "to encompass the entire selling process, including the seller/agent transaction,"[21] and even a person who is not the "actual owner" may nonetheless "offer" securities by locating potential buyers for the owner, so long as he or she is "motivated at least in part by a desire to serve his own financial interests or those of the securities owner."[22]

Here, it is plain on the face of Fields's postings that he sought to locate potential buyers of bank guarantees and mid-term notes. Fields invited "[i]nterested parties" to email him to receive "particulars" about the contemplated transaction. Indeed, Fields admits that his purpose in making the postings was to "provide the seller with buyers of the financial instruments." Furthermore, Fields expected to receive substantial financial compensation—typically, a third of a percent of the face value of the purported instruments, which would amount to billions of dollars—for his role in facilitating these transactions. To be sure, the prime bank instruments in question did not actually exist. But that means only that the offered transactions could not successfully have been consummated—not that there was never an offer in the first place.

c. *Fields employed a scheme to defraud and engaged in transactions and practices that would operate as a fraud.*

The Commission and the federal courts have uniformly held that participation in prime bank frauds violates the Securities Act.[23] We adhere to that conclusion here and find that Fields

employed a "device, scheme or artifice to defraud" and engaged in a "transaction, practice, or course of business which . . . would operate as a fraud" and, in so doing, willfully violated Securities Act Sections 17(a)(1) and 17(a)(3).

We begin with Fields's offers to transact in fictitious prime bank instruments.[24] His LinkedIn and TradeKey postings contained what we have called the "most fundamental" misrepresentation of all: "[T]hat these instruments exist[ed]," when in fact they were entirely fictitious.[25] Such "misrepresentations were obviously material," for there can be "'no question a reasonable investor would consider important the fact that the security at issue did not exist.'"[26]

On appeal, Fields disputes neither that he made the statements at issue nor that the existence of the offered prime bank instruments is material. Instead, he challenges the law judge's finding of falsity and argues that he provided "clear and convincing evidence that Bank Guarantees did exist as well as Mid Term Notes." Based on an independent review of the record,

(. . . continued)

24 We impute Fields's conduct to AFA and Platinum—sole proprietorships that Fields founded, owned, and controlled—and vice versa. Fields admitted that he was responsible for everything that was said and done in their name. *See, e.g.*, *C.E. Carlson, Inc. v. SEC*, 859 F.2d 1429, 1435 (10th Cir. 1988); *SEC v. Manor Nursing Ctrs., Inc.*, 458 F.2d 1082, 1096-97 nn.16-18 (2d Cir. 1972); *Kirlin Sec., Inc.*, Exchange Act Release No. 61135, 2009 WL 4731652, at *13 n.80 (Dec. 10, 2009). Moreover, Fields's LinkedIn profile referenced and linked to the AFA and Platinum websites and Fields's TradeKey profile likewise provided Fields's affiliation with AFA and noted AFA's registration with the Commission.

25 *Kaiden*, 1999 WL 507860, at *5; *see also United States v. Dazey*, 403 F.3d 1147, 1157 (10th Cir. 2005) ("The prime bank financial instruments that [the defendant] purported to invest in do not exist. The secretive, exclusive market in which such instruments are traded . . . is also purely imaginary."); *Lauer*, 52 F.3d at 670 ("Prime Bank Instruments do not exist.").

26 *SEC v. Gallard*, Case No. 95 Civ. 3099(HB), 1997 WL 767570, at *3 (S.D.N.Y. Dec. 10, 1997); *see also SEC v. Asset Recovery & Mgmt. Trust, S.A.*, Case No. 2:02-CV-1372-WKW, 2008 WL 4831738, at *7 (M.D. Ala. Nov. 3, 2008) ("The misrepresentations were material because a reasonable investor would want to know that the investments in question did not exist . . . . 'An elementary form of such misrepresentation is misrepresenting an interest as a security when it is nothing of the kind.'") (quoting *Lauer*, 52 F.3d at 670-71); *Kaiden*, 1999 WL 507860, at *5 n.25 ("We believe a reasonable investor would consider the existence of the instruments . . . material.").

we find that the Division has met its burden of establishing by a preponderance of the evidence that the securities offered by Fields did not exist.[27]

As a preliminary matter, we acknowledge that *legitimate* bank guarantees (and similar instruments, such as letters of credit) do exist and often find use in, for example, international sales transactions. The basic function of a bank guarantee or letter of credit is to make it possible for a seller to ship goods to a buyer whose creditworthiness is unknown with the confidence that payment for the goods will be made.[28] In exchange for a fee, the bank, which has conducted due diligence on the buyer, guarantees payment to the seller once the conditions set forth in the guarantee or letter of credit (*e.g.*, delivery of the goods) are satisfied. In effect, the letter of credit "substitut[es] the credit of the bank for that of one of the contracting parties," and allows the seller to look to the bank directly for payment.[29]

But nothing like the prime bank instruments *offered by Fields* actually exists.[30] To begin with, Fields admitted that he did not have any bank guarantees—let alone billions of dollars' worth of them—when he made the postings in question. Likewise, Fields admitted that he did

---

27 Fields's briefing exhibits confusion about the burden of proof; at times, he insists that *he* has proven the existence of prime bank instruments "beyond a reasonable doubt," while on other occasions, he argues that the *Division* has failed to prove by "clear and convincing evidence" that they do not exist. He is wrong regarding the burden of proof. The "Division is required to demonstrate a violation of the securities law by [a] preponderance of the evidence," which includes showing that the offered prime bank "instruments do not exist by a preponderance of the evidence." *Kaiden*, 1999 WL 507860, at *5 (citing *Steadman v. SEC*, 450 U.S. 91, 102 (1981)). The Division need not "conclusively prove" their nonexistence. *Id.* Fields additionally accuses the Division of changing its position about the existence of prime bank instruments. We have reviewed the record and find this argument to be without merit. From the Order Instituting Proceedings onwards, the Division has consistently argued that the bank guarantees and mid-term notes offered by Fields were fictitious—not that there is no such thing as a "bank guarantee." *E.g.*, *Anthony Fields*, 2012 WL 19759, at *1, 5-6.

28 *See, e.g.*, James J. White & Robert S. Summers, *Uniform Commercial Code* § 26-1 (5th ed. 2008); *see also Tudor Dev. Grp., Inc. v. U.S. Fid. & Guar. Co.*, 968 F.2d 357, 360 (3d Cir. 1992) ("In short, a letter of credit is an engagement by an issuer, usually a bank, made at the request of a customer for a fee, to honor a beneficiary's drafts or other demands for payment upon satisfaction of the conditions set forth in the letter of credit."); *Am. Ins. Ass'n v. Clarke*, 865 F.2d 278, 282 (D.C. Cir. 1988).

29 *Am. Ins. Ass'n*, 865 F.2d at 282.

30 Fields's postings referred to "bank guarantees" and "mid-term notes," and did not use the precise phrase "prime bank instruments." As noted above, the purported instruments traded in prime bank schemes go by different names, but whether called prime bank guarantees, bank guarantees, letters of credit, mid-term notes, bank debentures, or some variation thereof, they all purport to represent bank obligations that are wholly fictitious.

not have any mid-term notes and had never brokered a transaction involving them. Further, there is no secondary market for such instruments, so they cannot be bought and sold in the manner that Fields represented. Fields's LinkedIn postings advertised that he was "direct to [the] seller" of the bank guarantees, and that any buyer who could "PROVIDE MT103.32"[31] could "GET THE PAPER." Yet legitimate bank guarantees and letters of credit are the product of private, negotiated transactions between a buyer and its bank; thus, it is not possible to transfer them on a secondary market. Fields himself acknowledged that any potential purchaser would be subject to due diligence by the bank and would need to obtain the bank's authorization. In short, Fields's admissions at the hearing are inconsistent with the representations made in his postings.

The testimony of the Division's expert,[32] who explained that Fields's LinkedIn and TradeKey postings displayed all the indicia of fraudulent prime bank schemes, also independently supports our finding that the securities he offered are fictitious.[33] These indicia include: (1) the use of jargon typically associated with prime bank frauds, such as "tranches" of securities, "SWIFT 760" bank transfers, "Top 10 world banks," and "fresh cut" and "slightly seasoned" instruments; (2) the implausibly large size of the described transactions, which in Fields's case ran into the hundreds of millions or billions of dollars; (3) the existence of mysterious foreign counterparties whom Fields never met; (4) the insistence on secrecy; and (5) the promise of extraordinary large and risk-free profits. The Division's expert concluded that the securities offered by Fields are "wholly fictional" and a "complete and utter fraud." We unreservedly agree. To state the obvious, the described transactions are patently irrational from an economic perspective—there is no reason that an established bank would agree to repay a

---

31 Fields testified that this was meant to convey that the buyer would commit to transferring money conditional upon transfer of the securities.

32 Over Fields's objection, the law judge accepted the Division's expert on the subject of prime bank schemes. "Law judges have broad discretion in deciding whether to admit evidence, including expert testimony," and having reviewed the testimony in question, "we conclude that the law judge did not abuse her broad discretion in admitting" it. *Steven Altman, Esq.*, Exchange Act Release No. 63306, 2010 WL 5092725, at *18 (Nov. 10, 2010). As the law judge explained, Fields's challenge to the Division's expert was premised essentially on his disagreement with the expert's conclusions, which is not a proper basis for an expert's exclusion. Thus, in resolving the issues here, we have "given such weight to the expert testimony as we consider is indicated." *Guy P. Riordan*, Exchange Act Release No. 61153, 2009 WL 4731397, at *13 n.63 (Dec. 11, 2009) (quotation marks omitted).

33 *See Dazey*, 403 F.3d at 1171 (affirming admission of testimony by expert who "carefully explained the source of his extensive knowledge of prime bank frauds and explained what attributes these schemes . . . often share"); *Milan Trading Grp., Inc.*, 962 F. Supp. 2d at 194 (relying on expert testimony that the "investments described in the materials . . . are not legitimate but resemble and are classic instances of Prime Bank . . . Schemes"); *Graulich*, 2013 WL 3146862, at *4 (relying on "thorough expert report" to grant summary judgment in favor of the Commission in prime bank case).

dollar (plus interest) for something for which it received only 30 or 40 cents on the dollar—and could not possibly exist.[34]

Finally, our finding that the bank guarantees and mid-term notes offered by Fields do not exist is confirmed by the "various regulatory alerts issued by the Commission and federal financial institution supervisory agencies . . . warning of Prime Bank schemes" and other "judicial determinations . . . finding that such instruments were fraudulent and fictitious."[35] The Commission and other federal agencies, including the Federal Bureau of Investigation, the U.S. Treasury, the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision, have issued alerts warning of prime bank schemes.[36] Fields's postings contain many of the "warning signs" and "red flags" that these alerts have identified, including promises of "unrealistic returns at no risk,"[37] the trading of supposed

37 *See* Securities and Exchange Commission, *How Prime Bank Fraud Works, supra* note 36.

financial instruments "in manners that are not realistic,"[38] and the use of confusing terms and opaque jargon.[39]

In arguing otherwise, Fields relies upon a purported "Letter of Guarantee" from Credit Suisse. The law judge considered this document to be a clumsy fake, and we agree. Testimony at the hearing established that the text of the purported "Letter of Guarantee" was based on a template from the website of an entity called "KYC Consultants," which has no connection to Credit Suisse. Moreover, as the Division's expert testified, the KYC Consultants website itself had all the hallmarks of involvement in a prime bank scheme, including references to the supposed availability of "fresh cut" mid-term notes. Additionally, the letter is littered with typographical errors and internal inconsistencies that would not be present in a genuine bank guarantee. For example, it is dated "Nov. 4 201" (in the heading) and "04nd day of October 201" (in the body) and states that it "shall by [sic] duly honoured" by the bank.

Fields also relies upon a purported Bloomberg screenshot of a mid-term note issued by Deutsche Bank. This, too, has a highly untrustworthy provenance. As the Division's expert explained, the same International Securities Identification Number[40] depicted in the screenshot, XS0422717727, is found on many "lists" of purported prime bank instruments distributed on the Internet, which contain many of the hallmarks (*e.g.*, characteristic jargon and implausibly large transaction sizes) of prime bank schemes.[41] And in any event, the note depicted in the purported screenshot paid only 4.78% interest—not the implausibly high returns promised by the instruments that Fields's LinkedIn and TradeKey postings offered. All in all, Fields's documentary evidence fails to convince us that the bank guarantees and mid-term notes that he offered were real. Indeed, its suspect nature reinforces our finding that they do not exist.

The Division argued to the law judge that Fields's fraudulent misrepresentations about the existence of the offered prime bank instruments by themselves suffice to establish liability under Securities Act Sections 17(a)(1) and 17(a)(3). In particular, the Division urged that it was not required to show that Fields engaged in deceptive or fraudulent conduct apart from making the

39 *See* U.S. Dep't of the Treasury, *Prime Bank Investment Fraud*, *supra* note 36.

40 An International Securities Identification Number, or ISIN, is a code that uniquely identifies a security. "ISIN and CUSIP are interrelated designations, since CUSIP numbers can be converted into ISIN numbers by adding the United States or Canada's country code to the beginning of each particular CUSIP code and digital designation of the instrument at the end of such CUSIP." *Murakush Caliphate of Amexem Inc. v. New Jersey*, 790 F. Supp. 2d 241, 256 n.14 (D.N.J. 2011).

41 For example, one such list advertises "369 . . . available offers of BG, MTN, SBLC [standby letters of credit], CD [certificates of deposit], and bonds," and describes "seasoned" mid-term notes supposedly available for 57 cents on the dollar.

misrepresentations. Fields did not challenge the Division's argument regarding the applicable legal standard before the law judge; the initial decision—which found that Fields committed antifraud violations "by his material misrepresentations and omissions *and* by his involvement in a scheme to defraud"[42]—does not make clear whether the law judge endorsed in all respects the Division's interpretation of Section 17(a); and Fields does not raise the issue on appeal. For all these reasons, there ordinarily would be no need to go further; we could simply stop here and affirm the initial decision's bottom-line finding of liability.[43] Given the importance of providing clear interpretative guidance regarding the securities laws, however, and the fact that we recently and at length announced our considered views as to the proper construction of Section 17(a) in *John P. Flannery*,[44] we will explain in detail why we have concluded that Fields's conduct triggers liability under both Section 17(a)(1) and 17(a)(3).[45]

We have long recognized that the subsections of Section 17(a) are "mutually supporting rather than mutually exclusive."[46] As the Supreme Court has explained, "each subparagraph of § 17(a) 'proscribes a distinct category of misconduct. Each succeeding prohibition is meant to cover additional kinds of illegalities—not to narrow the reach of the prior sections.'"[47] In *Flannery*, we held that Section 17(a)(1)'s prohibition against "employ[ing] any device, scheme, or artifice to defraud" reaches any defendant who (with scienter) makes, drafts, or devises a material misstatement or uses a misstatement made by others to defraud investors.[48] We specifically rejected as inapplicable to our analysis of claims arising under Section 17(a)(1) any requirement—found in some of the case law considering claims arising under Rule 10b-5(a) and (c)—that the misconduct be inherently manipulative or deceptive or that the misconduct involve more than a simple misstatement.[49] Because (as we find elsewhere) Fields acted with scienter,

---

42 The law judge found, and Fields does not dispute, that a program to trade non-existent prime bank instruments would "clearly [be] a scheme to defraud within the meaning of Securities Act Section 17(a)." As discussed above, Fields's only defense was that the offered prime bank instruments were, in fact, real.

43 *See* Rule of Practice 410(b), 17 C.F.R. § 201.410(b) ("Any exception to an initial decision not stated in the petition for review . . . may, at the discretion of the Commission, be deemed to have been waived by the petitioner.").

48 *Flannery*, 2014 WL 7145625, at *17-18.

Fields's material misrepresentations as to the availability and characteristics of the nonexistent prime bank instruments in his LinkedIn and TradeKey posts offering those securities are alone enough to support our finding that Fields violated Section 17(a)(1).

Although Section 17(a)(2) also allows liability to be premised upon a material misstatement or omission—and does not require scienter—it adds the proviso that money or property be obtained "by means of" the misstatement or omission.[50] Accordingly, as we explained in *Flannery*, liability under Section 17(a)(2) is proper only when the respondent has used or employed a material misstatement or omission to directly or indirectly obtain money or property.[51] In this case, Fields was not charged with a violation of Section 17(a)(2), presumably because no money or property ever changed hands as a result of his misstatements.

Finally, Section 17(a)(3) makes it unlawful to "engage in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon the purchaser."[52] Scienter is not necessary to find a violation of Section 17(a)(3); nor is it necessary that the respondent obtain money or property.[53] Yet as we held in *Flannery*, an isolated misstatement unaccompanied by other conduct does not give rise to liability under this provision.[54] This follows from the ordinary meaning of the operative words in the phrase "transaction, practice, or course of business." We would be hard pressed to say that a single misstatement, without more and never acted upon, constitutes a "transaction."[55] Likewise, the ordinary meaning of "practice"

(. . . continued)

49 *Id.* at *16-17 & n.90.

50 15 U.S.C. § 77q(a)(2); *see also Aaron*, 446 U.S. at 696 ("[T]he language of § 17(a)(2) . . . is devoid of any suggestion whatsoever of a scienter requirement.").

51 *Flannery*, 2014 WL 7145625, at *11; *see also SEC v. Tambone*, 597 F.3d 436, 444 (1st Cir. 2010) (en banc). In *Flannery*, we explained that the test for liability under Section 17(a)(2) is broader than that which applies under Rule 10b-5(b). In particular, like the First Circuit in *Tambone*, we interpreted the "by means of" requirement to mean that an individual may be primarily liable under Section 17(a)(2) if he uses a misstatement to obtain money or property, even if he or she has not personally "'made a false statement in connection with the offer or sale of a security.'" *Flannery*, 2014 WL 7145625, at *11 (quoting *Tambone*, 550 F.3d at 127-28).

52 15 U.S.C. § 77q(a)(3).

53 *See Aaron*, 446 U.S. at 697 ("[T]he language of § 17(a)(3) . . . quite plainly focuses upon the effect of particular conduct on members of the investing public, rather than upon the culpability of the person responsible."); *Kaiden*, 1999 WL 507860, at *6 n.35 (lack of pecuniary loss immaterial to violation of Section 17(a)(3), which prohibits conduct in the "*offer* or sale" of securities that operates or "*would* operate as a fraud or deceit") (emphasis added).

54 *Flannery*, 2014 WL 7145625, at *18.

55 *Id.* at *18 & n.97 (citing Webster's New International Dictionary 2688 (def. 2a) (2d ed. 1934)). To be sure, a single misstatement or omission made in connection with (or otherwise

(continued on next page)

and "course of business" denotes routine, customary, or repeated conduct, and therefore would exclude liability based upon a single, isolated misstatement.[56] Having said that, we also noted in *Flannery* that "one who repeatedly makes or drafts . . . misstatements over a period of time may well have engaged in a fraudulent 'practice' or 'course of business.'"[57]

We need not in this case delimit the outer contours of liability under Section 17(a)(3) because it is clear that Fields's recurrent and systematic misconduct—which went far beyond one-off misstatements—falls squarely within the heartland of that provision's proscription against engaging in "any transaction, practice, or course of business which . . . would operate as a fraud" on potential purchasers.

To begin with, at least four times over a two-year period, Fields posted offers on social media websites to transact in fictitious prime bank instruments. He received twenty to forty responses, corresponded with a number of potential investors, and took other concrete steps to arrange and further these inherently deceptive transactions. For example, his conduct in matching up potential buyers with potential sellers was essential to locating new victims for the fraud and keeping it going.[58] Once someone responded to his postings, Fields took additional steps to advance the fraud. Among other things, he obtained sensitive personal information—including passport numbers and social security numbers—from potential investors and then

---

(. . . continued)
used to induce) a contract, exchange, or other kind of business dealing could well constitute engaging in a "transaction." *See FTC v. Ken Roberts Co.*, 276 F.3d 583, 589 (D.C. Cir. 2001) ("As it is generally understood, the word 'transactions' conveys a reciprocity, a mutual exchange . . . ."); *Hawthorne v. Mac Adjustment, Inc.*, 140 F.3d 1367, 1371 (11th Cir. 1998) ("The ordinary meaning of 'transaction' necessarily implies some type of business dealing between parties. In other words, when we speak of 'transactions,' we refer to consensual or contractual arrangements . . .") (citations omitted).

57 *Flannery*, 2014 WL 7145625, at *18.

58 *Schmidt*, 2002 WL 89028, at *8 (finding liability under Section 17(a) where the respondent had, among other things, "introduced" the key players to one another and "participated in telephone calls and transmitted documents" between them); *see also SEC v. Pentagon Capital Mgmt. PLC*, 725 F.3d 279, 287 (2d Cir. 2013) (finding liability under Section 17(a) appropriate when the defendant not only communicated "late trades," but also "[found] brokers and a clearing system that would allow late trades"); *VanCook v. SEC*, 653 F.3d 130, 139 (2d Cir. 2011), *aff'g*, *Joseph John VanCook*, Exchange Act Release No. 61039A, 2009 WL 4026291, at *10 (Nov. 20, 2009).

conveyed it to the sellers of the fictitious securities. And Fields meant to play an integral and ongoing role in the fictitious transactions, as evidenced by the purported contracts that he prepared. One such "Pay Order" specifies that a $200 million bank guarantee would be posted into AFA's account and that Fields would receive $2.5 million "for services rendered in brokerage for participating" in the transaction. In sum, it is not a close question that Fields engaged in a transaction, practice, and course of business that would operate as a fraud on investors in violation of Section 17(a)(3).

4. *Fields acted with scienter.*

We must find scienter—a mental state embracing an intent to deceive, manipulate, or defraud—to conclude that there was a violation of Section 17(a)(1) of the Securities Act.[59] "Scienter includes recklessness, defined as conduct that is 'an extreme departure from the standards of ordinary care . . . to the extent that the danger was either known to the [respondent] or so obvious that the [respondent] must have been aware of it.'"[60] Thus, the "scienter element can be satisfied by a strong showing of reckless disregard for the truth," as well as actual knowledge of falsity.[61] It may be proven "by inference from circumstantial evidence," which "can be more than sufficient" to establish the requisite state of mind.[62] Scienter is not required to establish a violation of Section 17(a)(3) of the Securities Act.[63]

---

59 *Aaron*, 446 U.S. at 697. Fields asserts that the Division failed to satisfy the pleading standards established in the Private Securities Litigation Reform Act ("PSLRA"), which requires private litigants to state with particularity facts giving rise to a "strong inference" that the defendant acted with scienter in order to survive a motion to dismiss under Federal Rule of Civil Procedure 12(b)(6). This argument misses the mark in two separate respects. First, the pleading standards articulated in the PSLRA apply only to *private* plaintiffs (and are wholly distinct from the pleading standards governing the Division under our Rule of Practice 200(b)). 15 U.S.C. § 78u-4(a)(1) ("The provisions of this subsection shall apply in each private action arising under this chapter."). Second, the PSLRA did not change the substantive law regarding what constitutes scienter under the federal securities laws. *See, e.g.*, *Howard v. Everex Sys., Inc.*, 228 F.3d 1057, 1064 (9th Cir. 2000); *In re Reserve Fund Sec. & Derivative Litig.*, 732 F. Supp. 2d 310, 318-19 (S.D.N.Y. 2010).

(continued on next page)

We find that Fields acted with scienter when he offered bank guarantees and mid-term notes that did not actually exist. In light of his business experience and professional training, Fields must have "understood that he had to verify the existence and legitimacy" of the instruments that he offered.[64] In Fields's briefing to us, for example, Fields touts his 30 years of experience as an accountant (and through 2003, his licensure as a CPA in Illinois), his operation of an accounting business under the AFA name since 1989, and his efforts to prepare for the FINRA Series 7 and Series 63 examinations.[65]

Even taken at face value, Fields's testimony confirms that he recklessly promoted nonexistent securities. We have found that a promoter's failure "to contact any bank or other institution to verify" the existence of the offered prime bank instruments is evidence of recklessness.[66] Here, too, Fields admitted that he never verified the existence of the offered prime bank instruments with the banks that his LinkedIn postings identified as their supposed issuers. For example, he testified that his only contact with HSBC was an alleged conversation with a woman named Alina Pitman, supposedly a "director of HSBC" living somewhere in Chicago, who stated that she had access to bank guarantees and mid-term notes. He had never met Ms. Pitman and he did not recall who introduced her to him. Fields never discussed with Ms. Pitman the instruments offered in his postings. Fields also admitted that he never brought up the topic of prime bank instruments with anyone at any other bank.

Further, Fields never met any of the individuals who supposedly had access to billions of dollars in bank guarantees and mid-term notes. He testified that he believed that the seller in one of his postings to the "Trade Platforms" discussion group on LinkedIn was a man named "Don Morgan," who supposedly was located in Switzerland and a grandson of J.P. Morgan, the famed financier. Fields purportedly was placed in touch with Don Morgan through "a very close associate" who was "compliance director for a trading platform," whose name Fields could not recall. Fields admitted that had never met, spoken with, or corresponded directly with "Don Morgan." Instead he had corresponded with Morgan's representative—"Lars Gunnerson, or

---

(. . . continued)
direct or circumstantial evidence" and that "the objective unreasonableness of a defendant's conduct may give rise to an inference of scienter").

66 *Kaiden*, 1999 WL 507860, at *5.

something to that effect"—whose whereabouts Fields again could not recall. According to Fields, he received a "letter of intent" from "Don Morgan," but he offered no such letter into evidence at the hearing. Fields did not remember the name of any of the other purported sellers of bank guarantees and mid-term notes. These investigative efforts—especially given Fields's suspect memory—were manifestly insufficient to support Fields's representations about the offered instruments.[67]

We acknowledge Fields's assertion that he really did believe that the offered instruments were real. But that does not alter our finding that Fields, at the very least, consciously disregarded the very great risk—which would have been clear to any reasonable person and which must have been clear to Fields—that the securities he offered were fictitious. Promised returns far too good to be true (such as acquiring a ten-year note paying 7.5% issued by a well-known bank for 30% of its face value) are a classic indication of fraud. Yet Fields failed to perform a meaningful inquiry into the existence of those securities despite these obvious warning signs and red flags.[68] As "[m]any courts have held, . . . because Prime Bank schemes claim to offer a combination of high returns with no risk, the deal is inconceivable on its face and imposes a heightened duty on the promoter to investigate."[69] And "an egregious refusal to see the obvious, or to investigate the doubtful, may . . . give rise to an inference of . . . recklessness."[70] Here, Fields's asserted belief in the securities' existence did not "warrant his making exaggerated and unfounded representations and predictions to others."[71] In short, considering (but finding

71 *James E. Cavallo*, Exchange Act Release No. 26639, 1989 WL 991979, at *3 (Mar. 17, 1989), *pet. denied*, 993 F.2d 913 (D.C. Cir. 1993) (table).

insufficient) Fields's "protestations that [he] genuinely believed"[72] that the securities existed in light of the overwhelming circumstantial evidence bearing on his actual state of mind, we find that he acted with at least extreme recklessness, and thus with the requisite scienter.[73]

We reject as unpersuasive Fields's arguments to the contrary. Fields first argues that there is "no recklessness or intent to defraud if the respondent purchased the securities for his own benefit." To support this proposition, he cites Exhibit D to his petition for review, which purports to be a "letter of request," dated February 12, 2012, supposedly sent by Fields on behalf of "Royal International Airlines Ghana Limited" to acquire at least €10 billion (and up to €100 billion) in "Fresh Cut" bank guarantees issued by "A++ RATED" banks for 38% of the face value of the instruments. Although Fields had the opportunity to do so, this document was not adduced at the hearing and therefore is not properly before us.[74]

In any event, even if we were to consider the document, we would find that Fields's reliance upon it is unavailing. To be sure, investment of one's own money in a phony enterprise may in the appropriate circumstances be one factor potentially weighing against a finding of

---

72 *See, e.g.*, *Gebhart*, 595 F.3d at 1043 (holding that the Commission "correctly applied the appropriate scienter standard" by "consider[ing] the [respondents'] arguments that they acted in good faith" and then determining, "[b]ased on the evidence as a whole," that these "assertions of good faith were 'not plausible' and lacked 'credibility'").

73 *Asset Recovery & Mgmt. Trust, S.A.*, 2008 WL 4831738, at *8; *see also SEC. v. Lyttle*, 538 F.3d 601, 603-04 (7th Cir. 2008) (affirming summary judgment against defendants in prime bank fraud and holding that no "reasonable jury could doubt that they had acted with scienter"); *Graulich*, 2013 WL 3146862, at *6 (agreeing that the "fraudulent character of the [prime bank] scheme . . . is so patent" that any person involved in perpetrating them "is either deliberately making a fraudulent statement or is acting recklessly"); *Wilde*, 2012 WL 6621747, at *5 ("Because 'prime bank' instruments do not exist, courts have repeatedly held that the promoters of such schemes acted, at a minimum, recklessly.").

74 *See* Rule of Practice 460(c), 17 C.F.R. § 201.460(c). Fields has not sought leave to adduce the Letter of Request as additional evidence pursuant to our Rule of Practice 452. *See id.* § 201.452 (allowing submission of additional evidence if the party seeking to introduce such evidence "show[s] with particularity that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence previously"). Fields attached three other exhibits to his petition for review. Exhibit A is an empty tab. Exhibit B is the purported Bloomberg screenshot already discussed. Exhibit C, which appears to be a fragment of a news release by the International Chamber of Commerce and a fragment of a term sheet outlining Credit Suisse's "standard conditions" for the issuance of legitimate bank guarantees, was not offered at the hearing. These documents do not appear material, and Fields has not explained his failure to introduce them earlier. We decline, therefore, to include them in the record or to discuss them further.

scienter,[75] but in this case, there is no evidence that Fields *actually* put any of his own money at stake in this purported Ghanaian airline venture. Furthermore, even assuming that Fields did personally invest in bank guarantees, the evidence detailed above leaves us confident that Fields must have known when he made his misrepresentations that his actions presented an unacceptable danger of misleading potential investors.[76] That Fields stood to gain financially from his fraudulent conduct—in the form of hundreds of millions, if not billions, of dollars in commissions—further reinforces our finding that he acted with a high degree of scienter.[77] It would be entirely rational for someone to invest a relatively small amount of his or her own assets in a fraudulent investment with the hope of lulling into complacency potential investors from whom he or she expected to earn much more money. As Fields put it, he expected to make "big bucks" out of his "cut" of the commissions that the buyers' and sellers' representatives and consultants were supposed to share among themselves once a deal was consummated. Finally, the "letter of request" contains significant indicia of untrustworthiness and, if anything, confirms Fields's recklessness. The letter is strewn with typos, ungrammatical and haphazardly capitalized, and describes a transaction that is economically nonsensical and incredible.

Fields's second argument fares no better. He insists at some length that his conduct cannot be considered reckless because he intended to serve only "high net worth and institutional investors" and to target his postings to "accredited investors," not retail investors.[78] According to Fields, accredited investors have access to "privileged information," and therefore have the ability to do their own "due diligence to determine the viaboloty [sic] of the posts made." We are skeptical that Fields meant to target his postings so narrowly; for example, one of the LinkedIn discussion groups in question had over 1,000 members, and there is no indication that

---

75 *See Hoffman v. Estabrook & Co.*, 587 F.2d 509, 517 (1st Cir. 1978).

76 *Gebhart*, 2008 WL 4936788, at *10 (rejecting respondents' argument that they lacked scienter because it was "implausible to suggest that the [the respondents] knew or suspected that [the company] would be unable to repay these loans while, at the same time, loaning it money" given the abundance of other circumstantial evidence of scienter).

77 *Riordan*, 2009 WL 4731397, at *9 n.49 (finding that a "pecuniary motive for engaging in the . . . scheme" is "further circumstantial evidence of . . . scienter"); *see also Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 325 (2007) (stating that "motive can be a relevant consideration, and personal financial gain may weigh heavily in favor of a scienter inference").

78 The term "accredited investor" has a number of different definitions, and Fields does not identify which he has in mind. For illustrative purposes, Rule 501 of Regulation D, generally speaking, defines that term to include institutional investors as well as natural persons whose individual net worth exceeds $1 million or whose individual income exceeds $200,000. *See* 17 C.F.R. § 230.501(a). Offers of securities made solely to accredited investors may, under certain circumstances, be exempt from registration, but that does not constitute an exemption from other provisions of the securities laws, including the antifraud provisions. *See generally* 17 C.F.R. § 230.500; *Kevin D. Kunz*, Exchange Act Release No. 45290, 2002 WL 54819, at *4 n.14, *7-8 (Jan. 16, 2002); *see also infra* note 114.

membership in that group was limited to accredited investors. At any rate, we find no merit to Fields's contention that individuals are free to offer fictitious securities to accredited investors because such investors are more likely to be able to ferret out the fraud on their own. As we have explained, "a sophisticated person is entitled to the protection of the antifraud provisions of the securities laws" as well.[79]

For all of the foregoing reasons, we conclude that the preponderance of the evidence establishes that Fields acted with scienter and, furthermore, willfully violated Sections 17(a)(1) and (a)(3) of the Securities Act.[80]

2. Advisers Act Sections 206(1), 206(2), and 206(4) and Rule 206(4)-1(a)(5)

We find that Fields also violated the antifraud provisions of the Advisers Act. In particular, Section 206(1) of that Act makes it unlawful for an investment adviser to employ any device, scheme, or artifice to defraud any client or prospective client; Section 206(2) makes it unlawful for an investment adviser to engage in any transaction, practice, or course of business that operates as a fraud or deceit on any client or prospective client; and Section 206(4) makes it unlawful for an investment adviser to engage in any act, practice, or course of business that is fraudulent, deceptive, or manipulative.[81] Rule 206(4)-1(a)(5) provides that it is fraudulent within the meaning of Section 206(4) for any investment adviser to distribute any advertisement "which contains any untrue statement of a material fact, or which is otherwise false or misleading."[82] Together, these sections prohibit investment advisers from misstating material facts or omitting facts necessary to make a prior statement non-misleading in promotional literature and other communications to clients or prospective clients.[83] Scienter is required for violations of Section 206(1), but not for violations of Sections 206(2) or 206(4).[84]

(continued on next page)

a. Fields is an investment adviser.

The Advisers Act defines an "investment adviser" as "any person who, for compensation, engages in the business of advising others, either directly or through publications or writings, as to the value of securities or as to the advisability of investing in, purchasing, or selling securities, or who, for compensation and as part of a regular business, issues or promulgates analyses or reports concerning securities," subject to several exceptions inapplicable here.[85] This aptly describes AFA, which, according to the Form ADV filed by Fields, was organized to provide "[f]inancial planning" and "[p]ortfolio management" services in exchange for compensation based on a percentage of assets under management. Fields's activities as AFA's president, chief compliance officer, and control person bring him within the "broad" definition of "investment adviser" under the Advisers Act.[86] As discussed above, Fields admitted that he controlled AFA and was solely responsible for everything that AFA did and said. Thus, he is an "investment adviser" within the meaning of the Advisers Act, and it is appropriate to hold him personally and primarily liable for violations of that Act.[87]

b. Fields made numerous material misrepresentations to potential investment adviser clients.

Via AFA's Form ADV and AFA's and Platinum's websites, Fields disseminated false and material information to prospective clients.[88] We catalogue here some of the more flagrant misrepresentations:

(. . . continued)

1968). Notably, because investment advisers and their associated persons are fiduciaries, they are charged with the affirmative duty of "utmost good faith, and full and fair disclosure of all material facts" and the obligation "to employ reasonable care to avoid misleading" their clients through half-truths or incompletely volunteered information. *SEC v. Capital Gains Research Bureau, Inc.*, 375 U.S. 180, 191, 194 (1963); *e.g.*, *Conrad P. Seghers*, Advisers Act Release No. 2656, 2007 WL 2790633, at *7 & n.44 (Sept. 26, 2007).

86 *Warwick Capital Mgmt., Inc.*, 2008 WL 149127, at *9 & n.37.

87 *Id.*; *John J. Kenny*, Exchange Act Release No. 47847, 2003 WL 21078085, at *17 & n.54 (May 14, 2003); *SEC v. Berger*, 244 F. Supp. 2d 180, 193 (S.D.N.Y. 2001) ("Because [the defendant] effectively controlled [the investment advisory firm] and its decisionmaking, [the defendant] is also properly labeled an investment adviser within the meaning of the Advisers Act.").

88 AFA's website advertised its relationship to Platinum, which it described as an "affiliated company" established to "reduce brokerage fees." AFA's website also promoted its "relationship with the 45th primary dealer" of U.S. Treasury Securities, an intended reference to Platinum.

- Fields represented that AFA was registered as an investment adviser with the Commission. In reality, AFA was ineligible to register as an investment adviser because it lacked sufficient assets under management.[89]

- Fields represented that AFA had assets under management of $400 million. In reality, as Fields admitted during the hearing, AFA did not actually have any assets under management; Fields merely "anticipated" later getting them. Fields nonetheless argues that the Form ADV's statements were true because he had entered into contracts that supposedly gave him a "reasonable expectation" that he would receive such assets to manage. We do not agree. The Form ADV provides clear instructions about how an investment adviser must calculate "assets under management." Consistently with the statute, it defines "assets under management" in the present tense as including only "portfolios for which you [*i.e.*, the adviser] *provide* continuous and regular supervisory or management services *as of the date of filing*."[90] Assets that an adviser expects to manage in the future do not count.[91]

- Fields represented that AFA had acquired a $50 billion contract. In reality, the purported contract was nonsensical on its face.[92] That contract provided for AFA to sell East West Trading $50 billion of U.S. Treasury Strips at a mere 22% of the face value of the instruments plus a one percent commission. Yet Fields did not have any Treasury Strips and lacked the funding to acquire them.[93] Although (as Fields argues) it is literally correct that AFA "did have a $50 Billion contract" with East West Trading, it was fraudulent and misleading for Fields to fail to

---

89 *See infra* pages 28-29.

90 *See* Form ADV: Instructions for Part 1A, Item 5.F (emphasis added); *see also* 15 U.S.C. § 80b-3a(a)(3).

91 Additionally, it was patently unreasonable to suppose that any of Fields's contracts, which made no economic sense, would result in the acquisition of assets under management and, like the law judge, we find that Fields's explanation was simply not credible.

92 *See supra* note 5.

93 Fields testified that he was planning to obtain $200 million via a purported "Joint Venture Agreement" with Lakeshore Ventures Group, Inc. dated March 27, 2010. But that document—which is also absurd on its face—actually calls for *Fields*, not Lakeshore, to "procure the funds . . . required for the [joint venture] . . . in tranches of not less than $200 million." Fields acknowledged that "that's what that [*i.e.*, the agreement] says, but that is not the way" he supposedly envisioned the venture as being structured. We do not view this purported "joint venture agreement" with Lakeshore as a sufficient basis for Fields to represent that AFA had acquired a $50 billion contract.

disclose the additional—and highly material—facts showing that the purported contract could not possibly have been carried out.[94]

- Fields represented that AFA's client base included high net worth individuals and hedge funds. In reality, AFA had no investment advisory clients.

- Fields represented that Platinum was a "primary dealer" in government securities and that Platinum had "a portfolio of over 25,000 U.S. Government securities." In reality, Platinum was not a primary dealer and did not have any securities in its inventory.[95]

- Fields represented that AFA and Platinum had an "expert" and "experienced" investment team. In reality, AFA and Platinum did not have any employees who provided investment-related services other than Fields himself.

These false statements were material because they "conveyed a false impression of [AFA's and Platinum's] size and investor asset base and of the professional qualifications" of those affiliated with the firms.[96] They made AFA "appear to be larger" than it actually was, and a reasonable investor would have wanted to know the truth because investors routinely consider an adviser's "attractiveness to other investors" when making investment decisions.[97]

c. *Fields acted with scienter.*

We find that Fields's misrepresentations about AFA and Platinum were knowing and intentionally calculated to deceive others. As their sole proprietor, Fields inescapably had first-hand, personal knowledge about the size and extent of their operations and the falsity of his representations concerning them. Further, as stated previously, Fields had a "motive for overstating [AFA's] assets," which provides additional circumstantial evidence of his scienter.[98]

---

94 *See Capital Gains Research Bureau, Inc.*, 375 U.S. at 200 (explaining that fraud by an investment adviser fiduciary embraces the "[f]ailure to disclose material facts").

95 We reject Fields's explanation that Platinum was affiliated with other companies—*e.g.*, Pershing, Fidelity, and Merrill Lynch—and *those* entities, some of which were primary dealers, had over 25,000 securities in *their* inventories. A reasonable investor would surely find it important to making an investment decision whether Platinum *itself* possessed the inventory or whether it merely had access to *others'* inventory.

98 *Id.*

B. Sections 203A and 207 of the Advisers Act

We also find that Fields violated Section 203A of the Advisers Act, which, at the time Fields registered AFA, prohibited an adviser that is regulated or required to be regulated as an investment adviser in the State in which it maintains its principal office and place of business from registering with the Commission, unless it had assets under management in excess of $25 million or advises a registered investment company.[99] Fields admits in his briefing that AFA lacked the "required qualifications to meet the standards of registration." AFA's principal office and place of business was in Illinois, which had a regulatory regime for investment advisers. Because AFA had no assets under management, it was ineligible to register with the Commission.

Yet Fields contends that the Commission is actually to blame for his violation of Section 203A because AFA's eligibility "was supposed to be determined by the Commission" and AFA should have "been properly screened" before it was allowed to register. Of course, it was *Fields himself* who fraudulently misrepresented AFA's qualifications to register and thus induced the Commission to accept AFA's registration. We are unmoved by this baseless argument.[100]

For much the same reasons, we find that Fields violated Section 207 of the Advisers Act, which makes it unlawful for any person to willfully make any untrue statement of a material fact or to willfully omit any required fact in any registration application or report filed with the Commission.[101] AFA's Form ADV stated that AFA had assets under management of $400 million and four clients. In reality, AFA had no assets under management and no clients—

---

99 15 U.S.C. § 80b-3a(a)(1). The Dodd-Frank Act raised the threshold for Commission registration to $100 million for most investment advisers by creating a new category of "mid-sized advisers." *Id.* § 80b-3a(a)(2). Section 203A "exempts an adviser from this prohibition if, at the time of registration, the adviser . . . has a reasonable expectation that it would be eligible for Commission registration within 120 days after the date its registration becomes effective." *David Henry Disraeli*, Exchange Act Release No. 57027, 2007 WL 4481515, at *11 (Dec. 21, 2007). However, this exemption must be explicitly invoked on Schedule D of Form ADV and, moreover, the adviser must withdraw the registration if it remains ineligible to register after 120 days. 17 C.F.R. § 275.203A-2(c)(2). Fields did not invoke this exemption, did not withdraw AFA's registration in light of AFA's continuing ineligibility to register, and AFA would not, in any event, have qualified for the exemption because, as we observe *supra* notes 91-94 and accompanying text, Fields could not have had a reasonable expectation that AFA would acquire any assets under management as a result of these facially absurd contracts.

100 *See, e.g.*, *Hans N. Beerbaum*, Exchange Act Release No. 55731, 2007 WL 1376365, at *5 n.22 (May 9, 2007) (explaining that the Commission has repeatedly held that industry participants cannot shift responsibility for compliance to regulators).

101 15 U.S.C. § 80b-7. Scienter is not required to support a Section 207 violation. *E.g.*, *Disraeli*, 2007 WL 4481515, at *13.

misstatements that were material in that they bore on whether AFA satisfied the requirements for Commission registration. These misstatements were also willful: Fields had sole responsibility for AFA's registration form and knew that its contents were false when he submitted it.

C. Rule 206(4)-7 of the Advisers Act

Rule 206(4)-7(a) of the Advisers Act requires, among other things, that an investment adviser adopt and implement written policies and procedures reasonably designed to prevent violations by the investment adviser or its supervised persons of the Advisers Act and the rules adopted thereunder.[102] Fields admitted that AFA did not have any written procedures when he first registered AFA with the Commission in March 2010. It was only in October 2010 that Fields purchased a template for a compliance manual from a vendor called National Regulatory Services. Based on the undisputed fact that Fields did not have any compliance manual prior to that date, we find that Fields violated Rule 206(4)-7(a).

Moreover, we are doubtful that Fields's eventual adoption of the off-the-shelf compliance manual from National Regulatory Services cured the violation. In adopting Rule 206(4)-7, we stressed that "[e]ach adviser should adopt policies and procedures that take into consideration the nature of *that firm's operations*" and that advisers should "identify conflicts and other compliance factors creating risk exposure . . . in light of the firm's *particular operations*, and then design policies and procedures that address *those* risks."[103] It is evident that Fields did not tailor the manual to the particular risks of AFA's operations. Fields testified that he spent about an hour answering yes-or-no questions and filling in the template. He admitted that he did not edit the resultant document in any fashion and that he never read the manual in its entirety. Indeed, during the investigative interview, Fields was surprised by the presence of a provision—which required advertisements to be reviewed by someone "other than the individual who prepared [the] material"—that he conceded he did not even mean to include in the manual.

We find that Fields's violation of Rule 206(4)-7(a) was willful. Although Fields claimed that he "didn't know [he] needed a compliance code," there is no doubt that he intended to operate AFA as an investment advisor and that Fields did so without a compliance code. Thus, Fields "intentionally commit[ted] the act which constitutes the violation," which is sufficient to establish willfulness.[104]

104 *Wonsover*, 205 F.3d at 414; *see also supra* note 80.

D. Section 15(a) of the Exchange Act

Section 15(a)(1) of the Exchange Act prohibits a broker or dealer from making use of any means or instrumentality of interstate commerce to effect, induce, or attempt to induce any transactions in any security (other than an exempted security)[105] unless the person is registered with the Commission or is associated with a registered firm.[106] This provision "ensure[s] that customers . . . receive either the regulatory protections that result from a salesman being registered himself or the protections that stem from the salesman being supervised by a registered firm."[107] Scienter is not required to prove a violation of Section 15(a)(1).[108]

Platinum was not registered with the Commission after September 2010. Fields withdrew Platinum's registration effective in September 2010 when he was informed by FINRA that Platinum did not meet the net capital requirements to be a broker-dealer. Fields claimed that he resubmitted Platinum's registration later that month, but because there is no record of such a submission in the Commission's records and Fields presented no other corroborating evidence, we do not credit Fields's account. It is undisputed, in any event, that Fields was never licensed as a registered representative of Platinum.

We also find that Fields engaged in activities after September 2010 that required him to register as a broker. Section 3(a)(4) of the Exchange Act defines a "broker" as any person "engaged in the business of effecting transactions in securities for the account of others."[109] The phrase "engaged in the business" means a "level of participation in purchasing and selling securities involv[ing] more than a few isolated transactions"; there is "no requirement . . . that

---

105 Section 3 of the Exchange Act defines "exempted security" to include government securities. 15 U.S.C. § 78c(12)(A)(i). A broker-dealer whose business consists "*primarily* of transactions in exempted securities" still must register with the Commission if it conducts *any* business in "non-exempt securities." *See Burley & Co.*, 28 SEC 126, Exchange Act Release No. 4109, 1948 WL 69443, at *2 (June 22, 1948) (emphasis added). We base our finding that Fields violated Section 15(a)(1)'s broker-dealer registration requirement exclusively upon Fields's holding himself out as a broker and his attempts to induce transactions in non-exempted securities (and not on his attempts to induce transactions in government securities). We note that a distinct registration regime applies to government securities brokers, which is not at issue in this proceeding.. *See* 15 U.S.C. § 78o-5.

106 15 U.S.C. § 78o(a)(1).

107 *Charles A. Roth*, Exchange Act Release No. 31085, 1992 WL 216693, at *4 (Aug. 25, 1992).

108 *SEC v. Martino*, 255 F. Supp. 2d 268, 283 (S.D.N.Y. 2003).

109 15 U.S.C. § 78c(a)(4).

such activity be a person's principal business or the principal source of income."[110] Activities that are indicative of being a broker include holding oneself out as a broker-dealer, recruiting or soliciting potential investors, handling client funds and securities, negotiating with issuers, and receiving transaction-based compensation.[111]

Fields, AFA, and Platinum explicitly held themselves out as brokers and providing brokerage services, and that is by itself sufficient to trigger Section 15(a)(1)'s registration requirement.[112] AFA's website (which was active through at least May 2011) told readers that Fields had "established a securities brokerage firm 'Platinum Securities Brokers.'" Platinum's website (which also remained publicly accessible until at least that date) described Platinum as a "top institutional brokerage firm" that provided "prime brokering" services, including "securities lending, . . . leveraged trade executions, and cash management." According to Platinum's website, Platinum's customers could buy, among other things, "bonds" and "mutual funds" by, among other things, "calling one of [Platinum's] representatives." The website stated that Platinum was "registered with the Securities and Exchange Commission."

Although the foregoing itself required Fields and Platinum to register as a broker, Fields also repeatedly attempted to induce transactions in securities for other individuals by soliciting potential investors and arranging transactions on their behalf.[113] For example, Fields's October 13, 2010 TradeKey posting stated that Fields had a "client interested in buying $50 billion [in] bank guarantees." In one series of emails, Fields described himself as the "Mandate/Representative" of "Westminster International Corp." seeking to purchase €500 billion in medium-term notes, a transaction for which Fields was to receive a one percent commission.

111 *See, e.g.*, *SEC v. George*, 426 F.3d 786, 797 (6th Cir. 2005); *SEC v. Art Intellect, Inc.*, Case No. 2:11-CV-357, 2013 WL 840048, at *20 (D. Utah Mar. 6, 2013); *Kenton Capital, Ltd.*, 69 F. Supp. 2d at 12-13; *Strengthening the Commission's Requirements Regarding Auditor Independence*, Exchange Act Release No. 47265, 68 Fed. Reg. 6006, 6014 & n.82 (Feb. 5, 2003).

112 *E.g.*, *Kenton Capital, Ltd.*, 69 F. Supp. 2d at 13 ("In its representations to investors, [the broker] held itself out as being engaged in the business . . . ."); *Strengthening the Commission's Requirements Regarding Auditor Independence*, 68 Fed. Reg. at 6014 n.82 ("A person may be 'engaged in the business,' among other ways, . . . by holding itself out as a broker-dealer.").

113 *E.g.*, *George*, 426 F.3d at 797 (individual who "regularly involved in communications with and recruitment of investors for the purchase of securities" found to be a broker); *Kenton Capital, Ltd.*, 69 F. Supp. 2d at 13 (individual who "actively solicit[ed] participation" in transactions was found to be a broker); *SEC v. Deyon*, 977 F. Supp. 510, 518 (D. Me. 1997) (individual who "solicited investors" and "distributed sales circulars in the hope that potential investors" would invest in prime bank scheme found to be a broker); *SEC v. Nat'l Exec. Planners, Ltd.*, 503 F. Supp. 1066, 1073 (M.D.N.C. 1980) (individual who "solicited clients actively" found to be a broker).

In another series of emails, Fields reported to "Steve Dills," an individual who had expressed interest in purchasing mid-term notes, that he had "spoke to the sellers rep" and that he looked forward to a "very sound business relationship." At the hearing, Fields readily agreed that he was "basically" trying to "broker a purchase and sale" of the securities in question and that he expected to receive a commission if the sale went through.[114]

We therefore find that the evidence is overwhelming that Fields acted as an unregistered broker in violation of Section 15(a)(1) of the Exchange Act.

IV.

In scattershot fashion, Fields argues for the first time in his reply brief that the conduct of the proceedings by the law judge denied him due process. These contentions are waived;[115] they also are devoid of merit.

Denial of a continuance to obtain counsel: Fields argues that the law judge's denial of his request for a continuance to obtain counsel deprived him of due process. We have carefully reviewed the record and find no basis for relief. We issued the Order Instituting Proceedings in

---

114 Fields nevertheless argues that the contemplated transactions involved "private placements," not public offerings. Generally speaking, a private placement refers to the sale of a security that is exempt from the Securities Act's registration requirements. *See Kunz*, 2002 WL 54819, at *7; *e.g.*, *SEC v. Ralston Purina Co.*, 346 U.S. 119, 126 (1953); *Doran v. Petroleum Mgmt. Corp.*, 545 F.2d 893, 899-900 (5th Cir. 1977). We find Fields's argument flawed in two independent respects. In the first place, exemptions from these requirements "are construed narrowly," and Fields has failed to carry his "burden of demonstrating [his] entitlement to an exemption." *Kunz*, 2002 WL 54819, at *7. For example, Fields has not demonstrated that his offers were limited to only accredited investors or that they satisfied the conditions for exemption under Regulation D or Section 4(2) of the Securities Act. *See supra* note 78; 17 C.F.R. § 230.501 (defining accredited investor); *id.* §§ 230.502 (general conditions for all exemptions under Regulation D), 230.504-.506 (specific exemptions); *SEC v. Murphy*, 626 F.2d 633, 645 (9th Cir. 1980) (four-factor test for exemption under Section 4(2)). Moreover, even if an exemption were applicable, that at most would mean that the *sales of the securities* themselves need not be registered—not that a person (such as Fields) attempting to engage in those securities transactions was exempt from registration as a broker. *See, e.g.*, 17 C.F.R. § 230.500 ("Regulation D relates to transactions exempted from the registration requirements of [S]ection 5 of the Securities Act . . . Such transactions are not exempt from the antifraud, civil liability, or other provisions of the federal securities laws.").

115 Under our Rules of Practice, "[a]ny exception to an initial decision not stated in the petition for review . . . . may, at the discretion of the Commission, be deemed to have been waived." Rule of Practice 410(b), 17 C.F.R. § 201.410(b). Moreover, arguments for reversal not made in the opening brief are waived because "[r]eply briefs shall be confined to matters in opposition briefs of other parties." Rule of Practice 450(b), *id.* § 201.450(b).

this matter on January 4, 2012. On January 6, the law judge issued a scheduling order, attached to which was a document informing Fields that he was "entitled to be represented by counsel of [his] choice" and "encourage[d] . . . to retain legal counsel." The document also reminded Fields that "[a]ll parties, including pro se litigants, are expected to be familiar with and abide by the applicable procedural Rules." The hearing was ultimately set for May 21, 2012. That morning, immediately before the hearing was to commence, Fields for the first time sought a continuance so that he could "to try to hire an attorney." By Fields's own account, he did not take any steps to obtain counsel until 30 days before the hearing. The law judge denied Fields's request for a continuance on the ground that it came too late.

"We have stated that our inquiry on review of a denial of a postponement or continuance is whether the denial constituted an unreasoning and arbitrary insistence upon expeditiousness in the face of a justifiable request for delay."[116] Fields's eleventh-hour bid for a continuance to obtain counsel plainly did not constitute a "justifiable request for delay," especially in view of his conceded inaction on that front in the period leading up to the hearing. Fields had almost four months to find a lawyer from when he received the OIP on January 31, 2012.[117] "[W]hile a respondent has the right to be represented by counsel, the law does not require endless postponements of judicial proceedings while respondents attempt to secure legal representation."[118] Under the circumstances, we find no error in the law judge's decision to deny Fields's motion for a continuance.[119]

Delay in issuance of initial decision: Fields asserts without elaboration that the "7 month delay in the Administrative Law Judge's decision" from the completion of the hearing was unlawful. We disagree. The initial decision was issued on December 5, 2012, within 300 days of February 21, 2012, the date that Fields effectively waived service of the OIP by filing an answer.[120] We have rejected similar arguments for dismissal even in the face of far longer

116 *Gregory M. Dearlove*, Exchange Act Release No. 57244, 2008 WL 281105, at *35 (Jan. 31, 2008) (quotation marks omitted).

117 In fact, Fields has been aware of the issues raised in this proceeding since May 25, 2011, when the Division first requested documents from him. Moreover, at a June 17, 2011 investigative interview, Fields was specifically advised that he had the right to be represented by counsel.

118 *Dearlove*, 2008 WL 281105, at *35 n.155 (quotation marks omitted).

119 *See also David Post*, Exchange Act Release No. 37613, 1996 WL 498554, at *3 (Aug. 28, 1996) (finding that the hearing board acted "within its discretion in refusing to continue the hearing indefinitely to give [the pro se respondent] the opportunity to retain counsel" when he had "four weeks between notice of the hearing and the hearing date"); *Underhill Sec. Corp.*, Exchange Act Release No. 7668, 42 SEC 689, 1965 WL 87065, at *8 (1965) (affirming denial of requested continuance when need was occasioned by the respondents' "own dilatory conduct").

120 The OIP specified that the initial decision was to be filed within 300 days from the date of service of the OIP. *Cf.* Rule of Practice 360(a)(2), 17 C.F.R. § 201.360(a)(2) (noting that such

(continued on next page)

delays.[121] Fields has "not even hinted at the existence" of any sort of "lackadaisical conduct on the part of the Commission or of any improper reason for the delay" that might conceivably present grounds for abating the proceedings.[122] Nor has Fields "suggested, let alone demonstrated, as [he] would be required to do, any prejudice to [him] or to [his] ability to defend [himself] caused by the allegedly undue delay."[123]

Hearsay and denial of the right to cross-examination: Fields also argues that the Division introduced inadmissible evidence in the form of hearsay by a "witness that [he] was not able to cross examine." Fields's brief does not identify the challenged statements (or the individual who supposedly made them) and it does not appear that Fields made a contemporaneous objection to any testimony on hearsay grounds at the hearing.[124] Our review of the record also shows that the law judge gave Fields great latitude in cross-examination of the Division's expert, the only witness (other than Fields himself) who testified at the hearing. In any event, "hearsay is admissible in administrative proceedings, and we evaluate such evidence based on its probative value, its reliability, and the fairness of its use."[125] Fields does not argue that the (unidentified) testimony lacks reliability or probative force. Finally, and in any event, our de novo review cures any evidentiary error that the law judge may have made.[126]

Malicious prosecution: Fields asserts without elaboration that he was the victim of "malicious prosecution." To establish a claim for selective prosecution, the respondent must

(. . . continued)

"deadlines confer no substantive rights "). The service copy of the OIP was mailed to Fields via U.S. Express Mail on January 4, 2012 to the address that Fields provided in his registration forms filed with the Commission. The U.S. Postal Service unsuccessfully attempted delivery, and the mailing was unclaimed. The Division then hired a process server to attempt to serve Fields at his registered address and at a nearby address to which Fields's neighbors directed the process server; these attempts, too, were unsuccessful. It appears that Fields eventually obtained the OIP from the Commission's website upon his return from an out-of-country trip at the end of January 2012 and filed an answer that did not challenge the sufficiency of service.

demonstrate not only that he was "unfairly singled out," but also that his "prosecution was motivated by improper considerations such as race, religion, or the desire to prevent the exercise of a constitutionally-protected right."[127] Fields has not alleged any facts, nor can we find any in the record before us, that suggest he was singled out or that his prosecution was motivated by such considerations.

In short, we find no merit to Fields's contentions that he was deprived of due process.

V.

We now turn to the issue of sanctions. "[I]n determining an appropriate sanction in the public interest, we consider the egregiousness of the defendant's actions, the isolated or recurrent nature of the infraction, the degree of scienter involved, the sincerity of the defendant's assurances against future violations, the defendant's recognition of the wrongful nature of his conduct, and the likelihood that the defendant's occupation will present opportunities for future violations."[128] Fields principally argues that sanctions are unwarranted because there "was no securities fraud," the prime bank instruments he offered were real, and the proceedings against him were "all a lie orchestrated by the Division." For the reasons set forth above, we have found that Fields willfully committed violations of the securities laws, and we conclude that these violations warrant the imposition of stringent sanctions.

A. Cease-and-Desist Order

Section 8A(a) of the Securities Act, Section 21C of the Exchange Act, and Section 203(k) of the Advisers Act authorize us to impose a cease-and-desist order upon a person who "is violating, has violated, or is about to violate" any provision of these statutes or any rule or regulation thereunder.[129] "In determining whether a cease-and-desist order is an appropriate sanction, we look to whether there is some risk of future violations," and even a "single egregious violation can be sufficient to indicate some risk of future violation."[130] Indeed, "[i]n the ordinary case, and absent evidence to the contrary, a finding of past violation raises a risk of future violation sufficient to support our ordering a respondent to cease and desist."[131] Fields made numerous material misrepresentations and omissions to prospective investors, such as his

repeated pretensions to have access to nonexistent prime bank instruments. Moreover, as his sole argument that a cease-and-desist order is unwarranted, he continues to insist that he has "proven beyond a reasonable doubt that the financial instruments do actually exist." Given Fields's "lack of recognition of the wrongful nature of [his] conduct," we find that there is a sufficient risk that he will commit future violations, and that the public interest warrants imposing a cease-and-desist order.[132]

B. Bar Order

Section 925 of the Dodd-Frank Act enlarged the scope of bars available in administrative proceedings by authorizing us to impose collateral bars—that is, bars prohibiting individuals from associating in capacities other than those in which the respondent was associated at the time of the misconduct.[133] Thus, as amended, Section 15(b)(6) of the Exchange Act and Section 203(f) of the Advisers Act authorize us to bar a person who has willfully violated any provision of the Securities Act, Exchange Act, Investment Advisers Act, or Investment Company Act from being associated with a broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization if we find such a sanction to be in the public interest.[134] Section 9(b) of the Investment Company Act authorizes us to prohibit any person from serving or acting in certain capacities with respect to an investment company when similar conditions are satisfied.[135]

Although the Division sought the full breadth of collateral bars available under Dodd-Frank, the law judge did not grant its request—Fields was barred only from association with any broker, dealer, investment adviser, municipal securities dealer, transfer agent, or investment company, and not from association with a municipal advisor or nationally recognized statistical rating organization. The initial decision does not explain the basis for this decision. The Division did not appeal the initial decision and neither party has addressed the scope of the bar on appeal. Nonetheless, as our order granting Fields's petition for review makes clear, we have determined on our own initiative to review the sanctions imposed pursuant to Rule of Practice 411(d), including the scope of the bar.[136]

135 15 U.S.C. § 80a-9(b)(2); *see, e.g.*, *Brendan E. Murray*, Advisers Act Release No. 2809, 2008 WL 4964110, at *10 (Nov. 21, 2008).

136 *See* Order Granting Petition For Review and Scheduling Briefs, at 1 (Jan. 18, 2012); 17 C.F.R. § 201.411(d). We took a similar course in *Alfred Clay Ludlum, III*, 2013 WL 3479060, at *4 n.34, *5 n.56.

Having done so, we find that imposition of a collateral bar in all capacities is in the public interest. As we have held, "conduct that violates the antifraud provisions of the federal securities laws is especially serious and subject to the severest of sanctions under the securities laws."[137] Fields's fraudulent conduct was egregious and recurrent. He repeatedly tried to broker transactions with potential investors involving nonexistent prime bank securities, and this by itself has warranted the imposition of a bar in prior cases.[138] He deceived potential clients about AFA's background, assets under management, operational experience, and size. There is no question, moreover, that his conduct was willful. Fields admitted that he intended to make, and was solely responsible for, all of the representations in his social media postings and on his websites. He has no regrets—"[n]one at all," Fields proclaims—for his conduct. Further, as set forth in our discussion of scienter, the wrongfulness of Fields's conduct was obvious and manifested a high degree of scienter.[139] Fields "ignored numerous red flags," and his "failure to conduct a searching inquiry . . . evinces a disregard for regulatory requirements that calls into serious question [his] ability to function as [a] securities professional[]."[140]

Moreover, it is apparent from Fields's testimony at the hearing and his briefing to us that he remains unwavering in the belief that the bank guarantees and mid-term notes he offered actually exist. He testified that the "secondary market [for such prime bank instruments] is everywhere" and that, going forward, he would continue to "buy them for [him]self." He has made clear that it is his "aspiration[]" and intent to remain in the securities industry as an investment adviser and broker if given the chance. He insists that he still has a contract to broker the sale of $50 billion in U.S. Treasury Strips and that he has the "potential to do [that] deal."[141] That even now, Fields does not appear to "grasp the wrongful nature of [his] conduct,"[142] convinces us that permitting him to remain in the securities industry in any of the capacities

139 *Murray*, 2008 WL 4964110, at *10.

140 *Carley*, 2008 WL 268598, at *22.

141 Fields was adamant on this point at the hearing, insisting "I do have a 50 billion dollar contract."

142 *Murray*, 2008 WL 4964110, at *10; *Schmidt*, 2002 WL 89028, at *9 ("He has not taken responsibility for his actions and appears to lack contrition."); *see also Lawton*, 2012 WL 6208750, at *12 & n.64 ("[F]ailure[] to recognize the wrongfulness of his conduct presents a significant risk that, given th[e] opportunity, he would commit further misconduct in the future.").

covered by Exchange Act Section 15(b)(6) and Advisers Act Section 203(f) "will present opportunities for future violations."[143] For essentially the same reasons, permitting Fields to associate with or provide services to investment companies also would present an unacceptably high risk of future violations.[144]

We do not find mitigation in Fields's sundry contentions that a bar will "destroy his ability to invest in his family's future" and the "future of his grandchildren," that a bar will impair Fields's purported investments in a Ghanaian airline, and that a bar is too severe a penalty given that he has "several friends who are investment advisers." How a respondent might in other respects suffer as a result of his or her misconduct or the sanctions that follow—*e.g.*, loss of money, unemployment, or harm to reputation—is not a mitigating factor.[145] The fact that Fields apparently never profited directly from his misrepresentations also does not justify a reduced sanction in light of his serious misconduct.[146] In short, the "hardship [Fields] asserts he has and will continue to suffer is outweighed by the necessity of ensuring that public investors are protected from him."[147]

Finally, we note that some of Fields's misconduct predated the July 21, 2010 enactment of the Dodd-Frank Act. That is immaterial to our determination of sanctions, however, because we have held that collateral bars premised upon pre-Dodd-Frank conduct are not impermissibly retroactive.[148] In any event, we would find that Fields's post-Dodd-Frank acts of misconduct—for example, making postings on LinkedIn that solicited potential buyers of bank guarantees and mid-term notes, which continued until at least "[s]ometime in 2011," and maintaining the AFA and Platinum websites, which were active until at least May 20, 2011—are by themselves sufficient to warrant a collateral bar under the circumstances of this case.

148 *Clifton*, 2013 WL 3487076, at *13; *Lawton*, 2012 WL 6208750, at *10.

More than a decade ago, we observed that "a person who refuses to acknowledge the fictitious nature of prime bank instruments has no place in the securities industry."[149] That is all the more true today given the opportunities to reach a large audience that have been created by new avenues of communication. As the Division's expert put it, social media makes perpetrating prime bank schemes especially easy and inexpensive since the technology can automatically make connections to potential victims. Given Fields's egregious and deliberate pattern of violative conduct and his unwillingness to acknowledge the wrongfulness of this conduct or to offer credible assurances against future violations, "we find ample evidence of his ongoing unfitness and risk that he would engage in further misconduct if given future opportunities in the industry."[150] Thus, we have determined to bar Fields from associating with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization, and to prohibit him from serving or acting in any of the statutorily enumerated capacities with respect to an investment company.[151] Imposing such a bar serves the public interest and will protect investors from the threat that Fields poses and, just as importantly, deter others from engaging in the same serious misconduct.[152]

C. Revocation of Registration

Section 203(e) of the Advisers Act authorizes us to revoke an investment adviser's registration if it, or any person associated with it, has willfully violated the securities laws and if revocation is in the public interest.[153] We may also revoke an investment adviser's registration if it "has willfully made or caused to be made in any application for registration or report required to be filed with the Commission . . . any statement" that was materially false or misleading and

149 *Kaiden*, 1999 WL 507860, at *7.

150 *Lawton*, 2012 WL 6208750, at *13 (imposing full collateral bar); *see also Clifton*, 2013 WL 3487076, at *15 (imposing full collateral bar "[g]iven the scope and severity of [the respondent's] misconduct," which "evidences an unfitness to participate in the securities industry that goes beyond the professional capacity in which he was acting when he engaged in the misconduct underlying these proceedings"); *Alfred Clay Ludlum, III*, Advisers Act Release No. 3628, 2013 WL 3479060, at *5-6 (July 11, 2013) ("imposing a broad industry-wide bar" given the respondent's "extended, egregious violations of the law," which "demonstrate[] that allowing him to enter the securities industry in *any capacity* would create too great a risk that future efforts to detect securities violations would be impaired, causing harm to the public") (quotation marks omitted; emphasis in original).

151 15 U.S.C. § 80a-9(b)(2).

152 *See Paz Sec., Inc. v. SEC*, 494 F.3d 1059, 1066 (D.C. Cir. 2007) ("[G]eneral deterrence . . . may be considered as part of the overall remedial inquiry[.]") (quoting *McCarthy v. SEC*, 406 F.3d 179, 189 (2d Cir. 2005)).

153 15 U.S.C § 80b-3(e)(5).

revocation is in the public interest.[154] We find that revocation of AFA's registration as an investment adviser is appropriate and in the public interest. Fields (who is AFA's sole proprietor) committed multiple violations of the securities laws; AFA's Form ADV contains numerous material misrepresentations; and AFA, which does not have any assets under management, is statutorily prohibited from registering with the Commission by Section 203A(a) of the Advisers Act.[155] Moreover, there can be no question that these violations were willful, given that Fields undisputedly intended to submit the registration forms with full knowledge of the misstatements contained therein. Fields himself concedes that AFA's registration should be revoked because AFA does not have the "required qualifications to meet the standards of registration."

D. Civil penalties

Section 8A(g) of the Securities Act, Section 21B(a) of the Exchange Act, and Section 203(i) of the Advisers Act authorize us to impose civil money penalties when a respondent has violated a provision of each respective statute, and assessing such penalties is in the public interest.[156] In determining whether a penalty is in the public interest, we consider (1) whether the violation involved fraud, deceit, or manipulation, or deliberate or reckless disregard of a regulatory requirement, (2) the resulting harm to other persons, (3) any unjust enrichment and prior restitution, (4) the respondent's prior regulatory record, (5) the need to deter the respondent and other persons, and (6) such other matters as justice may require.[157] If we determine that the imposition of a civil penalty is in the public interest, a three-tier system establishes the maximum such penalty that may be imposed for each violation found. For each act or omission involving fraud or deceit that additionally resulted in (or created a significant risk) of substantial losses to other persons or that resulted in substantial gains to the wrongdoer, a third-tier penalty may be

---

154 *Id.* § 80b-3(e)(1).

155 *Id.* § 80b-3A(a).

156 15 U.S.C. §§ 77h-1(g), 78u-2(a), 80b-3(i). Section 929P(a) of the Dodd-Frank Act conferred upon the Commission the authority to impose civil penalties in cease-and-desist proceedings. In such proceedings, no additional findings of willfulness are required; we need find only that the respondent "is violating or has violated" any provision of the applicable statute or "is or was a cause" of such violation to impose a civil penalty. We have no occasion in this case to address any retroactive effect of Section 929P because we find that Fields's misconduct postdating the enactment of the Dodd-Frank Act standing alone warrants the imposition of civil penalties and, moreover, that Fields's misconduct throughout was willful.

157 15 U.S.C. §§ 78u-2(c); 80b-3(i)(3); *see, e.g., Fundamental Portfolio Advisors, Inc.*, 2003 WL 21658248, at *17.

warranted.[158] For the time period at issue here, the maximum third-tier penalty for a natural person was $150,000 for each violation.[159]

The law judge prescribed a single, third-tier civil penalty of $150,000. The Division's position is that a "$150,000 penalty is appropriate." Fields himself agrees that the Commission should "keep the civil money sanction as it is at $150,000," although elsewhere he asserts in passing that the penalty should "not be as excessive as that which is handed down from a judge to a convicted murderer." We understand this to be an argument that the penalty is disproportionate to the gravity of Fields's misconduct, and, so construed, reject it. It is clear that "disproportionate penalties are irrelevant to the appropriateness of a sanction if the sanction is within the SEC's discretion."[160] We note, in any event, that we have imposed a third-tier civil penalty in other cases involving schemes to offer nonexistent securities.[161]

Considering all the circumstances, we find that a penalty is in the public interest and that a third-tier penalty is warranted because Fields's misconduct involved fraud and created a significant risk of losses to prospective investors. Fields's social media postings reached thousands, if not more, of potential victims.[162] A credulous individual taken in by them might

---

158 15 U.S.C. §§ 77h-1(g)(2)(C), 78u-2(b)(3), 80b-3(i)(2)(C).

159 17 C.F.R. § 201.1004 sets forth the inflation-adjusted maximum civil penalty amounts for violations occurring after March 3, 2009 but before March 5, 2013.

160 *Seghers v. SEC*, 548 F.3d 129, 135 (D.C. Cir. 2008); *cf. Craig*, 2008 WL 5328784, at *6 ("[B]ecause the appropriate remedial action depends on the facts and circumstances of each particular case, the proper sanction cannot be precisely determined by comparison with action taken in other cases.") (quotation marks omitted).

161 *Schmidt*, 2002 WL 89028, at *10 & n.52 (finding that a "fraudulent and deceitful" scheme to lease fictional securities was "a classic example of the type of behavior against which [the securities laws were] intended to protect" and that a "severe penalty . . . is necessary").

162 Although the statutory text provides that a penalty may be imposed for "each act or omission," it leaves the precise unit of violation undefined. Throughout, this case has been litigated on the Division's premise that all of Fields's misconduct "may be considered as one course of action" constituting a single act for purposes of assessing a civil penalty. For present purposes, and because no party has urged a different view, we accept this position. *Cf. Rapoport v. SEC*, 682 F.3d 98, 108 (D.C. Cir. 2012). We accordingly have no occasion to determine whether an alternative way of tallying up the number of violative acts or omissions—for example, counting each distinct violative posting or each distinct potential investor to whom Fields made misrepresentations—might also present an appropriate basis for the determination of civil money penalties. *See generally Brown*, 2012 WL 625874, at *17 & n.59 ("[T]his was not a single act that defrauded multiple customers, but rather separate interactions, where each customer presented a unique opportunity to violate the securities laws."); *Guy P. Riordan*, 2009 WL 4731397, at *22 (imposing separate civil money penalty for each violative transaction).

have pursued an investment in nonexistent prime bank instruments; investors not infrequently have been deceived by similar prime bank schemes: The Federal Reserve, for example, reports that prime bank frauds "have defrauded investors out of nearly $10 billion."[163] The fortunate happenstance that nobody *actually* lost money in this case does not negate the significant *risk* of substantial losses that Fields's violations created.[164] The severity of Fields's misconduct underscores the need for a very significant penalty to deter Fields and others from recklessly peddling nonexistent securities.[165] We accordingly find that a penalty of $150,000 is appropriate and in the public interest.

An appropriate order will issue.[166]

ORDER IMPOSING REMEDIAL SANCTIONS

On the basis of the Commission's opinion issued this day, it is

ORDERED that Anthony Fields cease and desist from committing or causing any violations or future violations of Sections 17(a)(1) and 17(a)(3) of the Securities Act of 1933, Section 15(a) of the Securities Exchange Act of 1934, and Sections 203A, 206(1), 206(2), 206(4), and 207 of the Investment Advisers Act of 1940, and Rules 206(4)-1(a)(5) and 206(4)-7 thereunder; and it is further

ORDERED that Anthony Fields be barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; and it is further

ORDERED that Anthony Fields is prohibited, permanently, from serving or acting as an employee, officer, director, member of an advisory board, investment adviser or depositor of, or principal underwriter for, a registered investment company or affiliated person of such investment adviser, depositor, or principal underwriter; and it is further

ORDERED that the investment adviser registration of Anthony Fields & Associates be revoked; and it is further

ORDERED that Anthony Fields pay a civil money penalty in the amount of $150,000.

Payment of the civil money penalty shall be made by United States postal money order, certified check, bank cashier's check, wire transfer, or bank money order; payable to the Securities and Exchange Commission. The payment and a cover letter identifying the respondent and file number of this proceeding shall be mailed or hand-delivered to: Enterprises Services Center, Accounts Receivable Branch, HQ Bldg., Room 181, AMZ-341, 6500 South MacArthur Bld., Oklahoma City, Oklahoma 73169. A copy of the cover letter and instrument of payment shall be sent to the Commission's Division of Enforcement, directed to the attention of counsel of record.

By the Commission.

ADMINISTRATIVE PROCEEDING
File No. 3-16398

In the Matter of **SANDRA DYCHE,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTION 8A OF THE SECURITIES ACT OF 1933, SECTIONS 15(b) AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934, AND SECTION 9(b) OF THE INVESTMENT COMPANY ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 8A of the Securities Act of 1933 ("Securities Act"), Sections 15(b) and 21C of the Securities Exchange Act of 1934 ("Exchange Act"), and Section 9(b) of the Investment Company Act of 1940 ("Investment Company Act") against Sandra Dyche ("Dyche" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over her and the subject matter of these proceedings, which are admitted, and except as provided herein in Section V, Respondent consents to the entry of this Order Instituting Administrative and Cease-And-Desist Proceedings Pursuant to

Section 8A of the Securities Act of 1933, Sections 15(b) and 21C of the Securities Exchange Act of 1934, and Section 9(b) of the Investment Company Act of 1940, Making Findings, and Imposing Remedial Sanctions and a Cease-And-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds[1] that:

SUMMARY

1. This case involves the misappropriation of investor funds by Premiere Power, LLC ("Premiere") CEO John Jankovic, Chairman Jerry Jankovic, and board member Sandra Dyche. The Jankovics formed Premiere in 2009 to pursue energy-related projects on Native American land. Soon after Premiere's inception, Dyche and the Jankovics agreed that Dyche would use approximately half the funds raised from investors for use in connection with an unrelated lawsuit against Jerry Jankovic and Dyche. As a result of this agreement, Dyche diverted \$1 million out of a total of \$1.95 million she raised for Premiere. The Premiere offering materials Dyche used to solicit investments failed to disclose that approximately half of the money raised would be diverted to unrelated third parties and would not be available to Premiere.

RESPONDENT

2. Sandra Dyche, age 62, is a resident of New York, New York. During the relevant period, Dyche was a Premiere board member and also raised funds for Premiere.

OTHER RELEVANT ENTITIES AND PERSONS

3. Premiere Power, LLC is a Delaware limited liability company with its principal place of business in Las Vegas, Nevada. Since its formation by Jerry and John Jankovic in 2009, Premiere's business plan has been to develop power plants in the central and southwestern United States. Premiere ran out of cash in 2011.

4. John Jankovic, age 39, is a resident of Irvine, California. He served as Premiere's CEO and director from the company's formation until the summer of 2011. John Jankovic has an MBA from the University of Michigan. The Commission has charged John Jankovic for his role in the misconduct described in this Order.

5. Jerry Jankovic, age 73, and father of John Jankovic, is a resident of Tulsa, Oklahoma. At all relevant times, he served as Chairman of Premiere's Board and voting majority member and since 2011 has also been its CEO. He previously reached a settlement with the

---

[1] The findings herein are made pursuant to Respondent's Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

British Columbia Securities Commission after failing to disclose that he was using prospectus funds from an unsuccessful Canadian corporation to develop a different American corporation. The Commission has charged Jerry Jankovic for his role in the misconduct described in this Order.

FACTS

Jerry Jankovic's and Dyche's History of Misappropriating Investor Funds

6. In December 2006, two investors sued Jerry Jankovic and Dyche in connection with their investment in an energy company Jerry Jankovic and Dyche formed in 2001 (the "2001 venture"). Among other things, the investors alleged that Jerry Jankovic and Dyche fraudulently induced them to purchase shares by representing that the proceeds would be used to build a power plant and casino on Native American land (neither of which ever broke ground). The investors claimed — in a striking parallel to the current allegations involving Premiere — that Jerry Jankovic and Dyche instead diverted about half of their $1.2 million investment to Jerry Jankovic, who used the funds to settle a prior lawsuit. The prior suit had alleged that Jerry Jankovic had defrauded an investor in yet another company that was also supposedly pursuing power generation projects.

7. The court entered a default judgment against Jerry Jankovic for the allegations related to the 2001 venture in August 2007. In 2012, the jury found that Dyche had knowingly or recklessly made false representations with the intent of securing their investment. The jury awarded the investors $1.2 million in rescission and $1.2 million in punitive damages.

The Jankovics Form Premiere Power

8. While the litigation related to the 2001 venture was proceeding, the Jankovics formed Premiere in July 2009 to pursue energy-related opportunities, with its primary focus on building power plants on Native American land. At all relevant times, Jerry Jankovic was Premiere's Chairman of the Board and voting majority member. Dyche was one of Premiere's Board members.

9. Premiere successfully negotiated an agreement with the Osage Nation in Oklahoma to build a power plant on Osage territory. However, Premiere failed to obtain the bank financing required for the project, which, like the 2001 venture, never broke ground. John Jankovic attributed this failure directly to Premiere's inability to raise $2 million in interim financing, an amount he testified would have allowed Premiere to complete the steps necessary to obtain permanent financing. Premiere never earned any revenue and ran out of cash in 2011.

The Jankovics and Dyche Divert Investor Funds from Premiere

10. Among other materials in their non-public offering, Premiere used a "Preliminary Information Memorandum" and an accompanying "Term Sheet" to solicit investments. The PIM discusses two power plants Premiere planned to develop in Oklahoma. The Term Sheet includes

the following disclosure regarding the use of offering proceeds: "the capital raised . . . will directly support due diligence fees, legal and contract fees, engineering and regulatory documents, nation credit ratings and any other expenses incurred to complete the financing of the [power plants]." None of the offering documents disclose that investments in Premiere may be used for anything other than Premiere business.

11. Prior to raising any money, however, Jerry Jankovic, John Jankovic, and Dyche agreed that any investment would be "split," with 52 percent going to Premiere and 48 percent being "transferred" for use in connection with the lawsuit related to the 2001 venture. The intent of the split appears to have been for Dyche to provide the diverted funds to the investors in the 2001 venture who had sued her and Jerry Jankovic.

12. Dyche, who was neither a registered broker nor affiliated with a registered broker, actively solicited investors for Premiere, described the investment to the investors, and subsequently took possession of customer funds. Premiere paid Dyche in Premiere shares based on the size of the investment she secured.

13. In December 2009, Dyche raised $1.5 million for Premiere from an investor. Dyche told the investor that her funds would be for Premiere and did not disclose the agreement with the Jankovics to divert funds away from Premiere. After arranging for $500,000 to be wired to Premiere, Dyche kept the remaining $1 million to use in connection with the litigation related to the 2001 venture.

14. In January 2010, John Jankovic issued and Dyche provided the investor stock certificates and welcome letters that made it appear that her entire $1.5 million had been invested in Premiere. These documents were consistent with the investor's executed subscription agreement, which Dyche had the investor sign and John Jankovic received on December 13, 2009. The subscription agreement reflected a $1.5 million Premiere investment and included wiring instructions to Premiere's bank account.

15. The investor visited New York in December 2009 to meet with John Jankovic and Dyche. John Jankovic made a personal presentation to the investor and other potential Premiere investors. In these discussions, John Jankovic used a PowerPoint presentation that tracked the language in the offering materials. John Jankovic explained that investor funds raised would be for Premiere. Neither John Jankovic nor Dyche disclosed their plan to divert funds away from Premiere.

16. In addition to the $1.5 million, Dyche subsequently raised an additional $450,000 from two investors, one of whom invested $300,000 after attending the December 2009 meeting in New York.[2] The entirety of that $450,000 went to Premiere. However, no disclosures were made to any investors that Premiere's principals were diverting funds away from the company.

---

[2] Premiere's offering was exempt from Section 5's registration requirements because it was not "public," and accordingly, was exempt under Securities Act Section 4(a)(2).

VIOLATIONS

17. As a result of the conduct described above, Dyche violated Securities Act Section 17(a) and Exchange Act Section 10(b) and Rule 10b-5 thereunder, which prohibit fraudulent conduct in connection with the offer or sale of securities and in connection with the purchase or sale of securities. Dyche also wilfully violated Exchange Act Section 15(a), which makes it unlawful for any "broker or dealer" to effect any securities transactions unless, in the case of a natural person, she is associated with a registered broker-dealer.

UNDERTAKINGS

18. Respondent has undertaken to forgo directly or indirectly soliciting or accepting funds from any person or entity in an unregistered offering of securities for a period of five years.

19. In connection with this action and any related judicial or administrative proceeding or investigation commenced by the Commission or to which the Commission is a party, Respondent (i) agrees to appear and be interviewed by Commission staff at such times and places as the staff requests upon reasonable notice; (ii) will accept service by mail or facsimile transmission of notices or subpoenas issued by the Commission for documents or testimony at depositions, hearings, or trials, or in connection with any related investigation by Commission staff; (iii) appoints Respondent's undersigned attorney as agent to receive service of such notices and subpoenas; (iv) with respect to such notices and subpoenas, waives the territorial limits on service contained in Rule 45 of the Federal Rules of Civil Procedure and any applicable local rules, provided that the party requesting the testimony reimburses Respondent's travel, lodging, and subsistence expenses at the then-prevailing U.S. Government per diem rates; and (v) consents to personal jurisdiction over Respondent in any United States District Court for purposes of enforcing any such subpoena.

In determining whether to accept the Offer, the Commission has considered these undertakings.

IV.

In view of the foregoing, the Commission deems it appropriate to impose the sanctions agreed to in Respondent Dyche's Offer.

Accordingly, pursuant to Section 8A of the Securities Act, Sections 15(b) and 21C of the Exchange Act, and Section 9(b) of the Investment Company Act, it is hereby ORDERED that:

A. Respondent Dyche cease and desist from committing or causing any violations and any future violations of Securities Act Section 17(a) and Exchange Act Sections 10(b) and 15(a) and Rule 10b-5 thereunder.

B. Respondent Dyche be, and hereby is:

1. barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization;

2. prohibited from serving or acting as an employee, officer, director, member of an advisory board, investment adviser or depositor of, or principal underwriter for, a registered investment company or affiliated person of such investment adviser, depositor, or principal underwriter; and

3. barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock

with the right to apply for reentry after five (5) years to the appropriate self-regulatory organization, or if there is none, to the Commission.

C. Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

D. Respondent shall pay disgorgement of $1 million, which represents profits gained as a result of the conduct described herein, prejudgment interest of $164,000 and civil penalties of $250,000, to the Securities and Exchange Commission. Payment shall be made in equal installments of $353,500 according to the following schedule: (1) Within 14 days of the entry of this Order; (2) June 30, 2015; (3) September 30, 2015; and (4) December 31, 2015. If any payment is not made by the date the payment is required by this Order, the entire outstanding balance of disgorgement, prejudgment interest, and civil penalties, plus any additional interest accrued pursuant to SEC Rule of Practice 600 or pursuant to 31 U.S.C. 3717, shall be due and payable immediately, without further application. Payment must be made in one of the following ways:

1. Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

2. Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

3. Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Dyche as a Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Stephen L. Cohen, Division of Enforcement, Securities and Exchange Commission, 100 F St., NE, Washington, DC 20549.

E. Pursuant to Section 308(a) of the Sarbanes-Oxley Act of 2002, as amended, a Fair Fund is created for the disgorgement, prejudgment interest, and penalties referenced in paragraph D above. Regardless of whether any such Fair Fund distribution is made, amounts ordered to be paid as civil money penalties pursuant to this Order shall be treated as penalties paid to the government for all purposes, including all tax purposes. To preserve the deterrent effect of the civil penalty, Respondent agrees that in any Related Investor Action, she shall not argue that she is entitled to, nor shall she benefit by, offset or reduction of any award of compensatory damages by the amount of any part of Respondent's payment of a civil penalty in this action ("Penalty Offset"). If the court in any Related Investor Action grants such a Penalty Offset, Respondent agrees that she shall, within 30 days after entry of a final order granting the Penalty Offset, notify the Commission's counsel in this action and pay the amount of the Penalty Offset to the Securities and Exchange Commission. Such a payment shall not be deemed an additional civil penalty and shall not be deemed to change the amount of the civil penalty imposed in this proceeding. For purposes of this paragraph, a "Related Investor Action" means a private damages action brought against Respondent by or on behalf of one or more investors based on substantially the same facts as alleged in the Order instituted by the Commission in this proceeding.

F. Respondent shall comply with the undertaking enumerated in Paragraph 18 above.

V.

It is further Ordered that, solely for purposes of exceptions to discharge set forth in Section 523 of the Bankruptcy Code, 11 U.S.C. § 523, the findings in this Order are true and admitted by Respondent, and further, any debt for disgorgement, prejudgment interest, civil penalty or other amounts due by Respondent under this Order or any other judgment, order, consent order, decree or settlement agreement entered in connection with this proceeding, is a debt for the violation by Respondent of the federal securities laws or any regulation or order issued under such laws, as set forth in Section 523(a)(19) of the Bankruptcy Code, 11 U.S.C. § 523(a)(19).

By the Commission.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74350 / February 23, 2015

ACCOUNTING AND AUDITING ENFORCEMENT
Release No. 3639 / February 23, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16399

In the Matter of **Halpern & Associates LLC** **and Barbara Halpern, CPA,** **Respondents.**	**ORDER INSTITUTING PUBLIC ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTIONS 4C AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934 AND RULE 102(e) OF THE COMMISSION'S RULES OF PRACTICE**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate that public administrative and cease-and-desist proceedings be, and hereby are, instituted against Halpern & Associates LLC and Barbara Halpern (collectively, "Respondents") pursuant to Sections 4C[1] and

1 Section 4C provides, in relevant part:

> The Commission may censure any person, or deny, temporarily or permanently, to any person the privilege of appearing or practicing before the Commission in any way, if that person is found . . . (1) not to possess the requisite qualifications to represent others . . . (2) to be lacking in character or integrity, or to have engaged in unethical or improper professional conduct; or (3) to have willfully violated, or willfully aided and abetted the violation of, any provision of the securities laws or the rules and regulations thereunder.

21C of the Securities Exchange Act of 1934 ("Exchange Act") and Rule 102(e)(1)(ii) of the Commission's Rules of Practice.[2]

II.

The Commission's public official files disclose that, at all relevant times, Lighthouse Financial Group, LLC ("Lighthouse" or "the firm") was registered with the Commission as a broker-dealer.

III.

After an investigation, the Division of Enforcement and the Office of the Chief Accountant allege that:

SUMMARY

1. These proceedings arise out of Respondents' improper professional conduct in their audit of Lighthouse's financial statements for the year ended December 31, 2009. Those financial statements were materially inaccurate in that they overstated the firm's assets, because its securities inventory as recorded in its financial statements was based on erroneous, and inflated, figures for the size of its positions in certain securities, and understated the firm's liabilities by omitting its liabilities to one of the broker-dealers through which it engaged in proprietary trading. Those errors caused the firm's reported net capital to be overstated by nearly $5 million, or over 350%. Respondents egregiously failed in several ways to adhere to Generally Accepted Auditing Standards ("GAAS") and did not detect those errors in their audit of the financial statements.

RESPONDENTS

2. **Halpern & Associates LLC** ("H&A") is an accounting and auditing firm based in Wilton, Connecticut. H&A was founded in 1982, has been registered with the PCAOB since 2004 and has twelve employees. Barbara Halpern is currently the sole owner and president of H&A. In 2014, H&A was the independent auditor to twenty-eight broker-dealers. In addition to serving as an independent auditor to broker-dealers and other entities, H&A provides tax advice and, on a consulting basis, provides broker-dealers with the services of individuals licensed to act

---

2 Rule 102(e)(1)(ii) provides, in pertinent part:

> The Commission may . . . deny, temporarily or permanently, the privilege of appearing or practicing before it . . . to any person who is found . . . to have engaged in unethical or improper professional conduct.

as a broker-dealer's financial and operations principal. H&A acted as the independent auditor for Lighthouse from 2002 until Lighthouse withdrew its registration as a broker-dealer in August 2010.

3. **Barbara Halpern**, age 61, of Weston, Connecticut, was the engagement partner on Lighthouse's 2009 audit. She is currently the sole owner and president of H&A; during the relevant period she was the 95% owner. During the relevant period, Barbara Halpern was a certified public accountant licensed to practice in New York and Connecticut. She is currently licensed in Connecticut. She has held a Series 27 license since 1998 and a Series 54 license since 1980.

OTHER RELEVANT ENTITY

4. Lighthouse was registered with the Commission as a broker-dealer from August 2, 2000 until October 23, 2010. In December 2010, Lighthouse filed a petition for liquidation under the U.S. Bankruptcy Code. At all relevant times, Lighthouse's principal place of business was New York, New York. During the relevant period, Lighthouse acted as an introducing broker for retail and institutional customers, engaged in proprietary trading and market-making, and acted as an underwriter or placement agent for equity and bond issuances. Lighthouse had clearing arrangements with several clearing brokers, including Penson Financial Services, Inc. ("Penson"), which at all relevant times was a registered broker-dealer with its principal place of business in Dallas, Texas.

FACTUAL ALLEGATIONS

Background

5. Section 15(c)(3) of the Exchange Act [15 U.S.C. § 78o(c)(3)] and Rule 15c3-1 thereunder [17 CFR 240.15c3-1] require that broker-dealers generally effecting transactions in securities "at all times have and maintain net capital." The rule is designed to require a broker-dealer to maintain sufficient liquid assets to meet all obligations to customers and counterparties and have adequate additional resources to wind down its business in an orderly manner without the need for a formal proceeding if the firm fails financially. The net capital rule requires different minimum amounts of net capital based on the nature of a firm's business and the method a firm uses in computing its net capital.

6. To compute its net capital for purposes of Rule 15c3-1, a broker-dealer first calculates its net worth, computed in accordance with generally accepted accounting principles ("GAAP"), deducts the value of certain illiquid assets, and then adds back certain qualifying subordinated loans. The final step is to deduct certain specified percentages, or haircuts, from the market value of the securities or other inventory it holds in its proprietary accounts. Rule 15c3-1 prescribes differing haircut amounts for a variety of classes of securities and other allowable assets.

7. Section 17(e) of the Exchange Act and Rule 17a-5 thereunder require registered broker-dealers to file with the Commission annual audited reports containing, among other things, the broker-dealer's financial statements for the fiscal year, a calculation of its net capital at fiscal year-end, and a report of an independent auditor on the financial statements.

8. On February 28, 2010, Lighthouse filed its annual audited report ("Annual Audited Report"), which contained Lighthouse's financial statements for the year ended December 31, 2009 ("2009 financial statements"). The 2009 Annual Audited Report also contained H&A's report on the financial statements.

9. The 2009 financial statements overstated the firm's net capital by approximately $4.9 million, or over 350%. The overstatement was primarily attributable to the following errors: [3]

a. First, the financial statements overstated Lighthouse's assets by incorrectly including approximately $2,052,257 in long securities positions in the firm's proprietary accounts at Penson;[4] and

b. Second, the financial statements understated Lighthouse's liabilities by omitting approximately $2,314,484 owed to Penson.[5]

Errors That Led to The Overstatement of Lighthouse's Long Securities Positions and Understatement of its Liabilities to Penson

10. The overstatement of the total market value of Lighthouse's long securities positions in its accounts at Penson was the result of the firm's use of erroneous – and overstated – numbers of shares of fifteen securities held in five accounts. Lighthouse calculated the total market value of its inventory in those accounts to be $3,489,971, whereas based on the actual size of the positions as shown in Penson's records, the total market value of Lighthouse's inventory in its Penson accounts was only $1,437,714. The 2009 financial statements thus overstated the value of Lighthouse's long securities positions by approximately $2,052,257.

---

3 The firm's reported net capital was also overstated as result of the application of erroneous and insufficient haircuts to Lighthouse's assets.

4 The $2,052,257 figure also takes into account a $251,317 understatement of the value of the firm's long securities position that resulted from Lighthouse's failure to include any of the inventory in one of the firm's proprietary accounts.

5 In addition to the amounts due to Penson discussed at paragraph 11 below, this figure includes a $113,002 understatement of Lighthouse's exposure on short positions in Penson accounts.

11. The 2009 financial statements also understated, by approximately $2,314,484, Lighthouse's payables to brokers as a result of the firm's failure to include negative balances in a Lighthouse account at Penson. The account, named "Lighthouse Financial Group F/X Account" ("F/X account"), was one of several Lighthouse administrative accounts at Penson that were used to hold deposits, resolve failed settlement transactions, and pay clearing balances. Positive balances in those accounts represented amounts *due from* Penson to Lighthouse while negative balances represented amounts *due to* Penson from Lighthouse.

The Audit of Lighthouse's 2009 Financial Statements

12. In its Independent Auditors' report, which was authorized for issuance by Barbara Halpern, H&A stated that it had audited Lighthouse's 2009 financial statements in accordance with GAAS and expressed its opinion that the financial statements fairly presented, in all material respects, the financial position of Lighthouse as of December 31, 2009. As the engagement partner on the audit, Barbara Halpern was responsible for supervising the audit and she signed off on all the work papers.

13. In fact, the audit was not conducted in accordance with GAAS and the financial statements contained in the 2009 Annual Audited Report did not fairly present, in all material respects, the financial position of Lighthouse as of December 31, 2009 because they reflected the errors described above.

14. The audit was not conducted in accordance with GAAS because, among other things, Respondents failed to adhere to the most fundamental GAAS requirements: the requirement to exercise due professional care in planning and performing the audit, which includes the requirements to properly staff and supervise the audit, to obtain sufficient appropriate audit evidence to support the auditor's opinion, and to exercise professional skepticism in evaluating the audit evidence obtained.

15. Respondents failed to exercise due care in planning the Lighthouse auditand performing the Lighthouse audit, as the auditing standards require. AU § 230.01. The requirement to exercise due professional care includes the requirement to staff the audit appropriately: "Auditors should be assigned to tasks and supervised commensurate with their level of knowledge, skill, and ability so that they can evaluate the audit evidence they are examining." AU § 230.06.[6] The individual who was responsible for the testing of Lighthouse's securities inventory and its balances with banks and brokers – the "senior auditor" – lacked the knowledge necessary to evaluate the audit evidence obtained concerning Lighthouse's proprietary trading. At the time of the audit, he had only been with H&A for six months, had only six months of experience doing audit work of any kind, had never audited a broker-dealer, had no understanding of Lighthouse's

---

6 Citations to "AU" are citations to Statements on Auditing Standards in effect at the time of the audit. Those statements were issued by the Auditing Standards Board of the American Institute of Certified Public Accountants ("AICPA").

proprietary trading, and was not familiar with the professional literature concerning auditing broker-dealers. By assigning the senior auditor the critical responsibility of testing Lighthouse's securities inventory and its balances with banks and brokers despite his lack of knowledge in these areas, and by failing to properly supervise him, Respondents failed to exercise due care in planning and performing the audit.

16. Respondents also failed to obtain sufficient appropriate audit evidence concerning Lighthouse's inventory held at Penson and the firm's balances with Penson. The audit team sent Penson an open, *i.e.* blank, confirmation request seeking "[a]n itemized statement for each of [Lighthouse's] accounts with you showing security positions and balances as of December 31, 2009." Penson did not send anything to the audit team concerning the proprietary trading accounts. Penson did send monthly account statements for the F/X account and the other administrative accounts to the audit team. Because the monthly statements reported on a settlement date basis and Lighthouse's financial statements reported on a trade date basis, the audit team did not view them as appropriate audit evidence.

17. Having been unable to confirm the firm's inventory and balances, Respondents should have performed alternative procedures adequate to obtain sufficient appropriate audit evidence to support an unqualified opinion, AU § 330.31("When the auditor has not received replies to positive confirmation requests, he or she should apply alternative procedures to the nonresponses to obtain the evidence necessary to reduce audit risk to an acceptably low level."), but they failed to do so.

18. The alternative procedure chosen by Barbara Halpern was to rely on information provided by Lighthouse, which the audit team mistakenly – and unreasonably – viewed as information obtained from Penson. Specifically, Barbara Halpern and the senior auditor obtained from Lighthouse schedules of the firm's December 31, 2009 trade date inventory at Penson and trade date money balances with Penson. They referred to those schedules – incorrectly – as a "screen print" and a "screen shot" of on-line Penson reports.

19. Respondents failed to exercise due care and professional skepticism in considering the reliability of those client-provided records, and they failed to obtain audit evidence about their accuracy and completeness.

The Audit Procedures Regarding Lighthouse's Securities Positions

20. The purported screen shot of a Penson trade date inventory report provided by Lighthouse was not a confirmation because it was not a communication received directly from a third party. AU § 330.04 ("Confirmation is the process of obtaining and evaluating a direct communication from a third party in response to a request for information about a particular item affecting financial statement assertions.")

21. The purported screen shot of a Penson inventory report was also not in fact a report obtained from Penson's website but rather a schedule that Lighthouse personnel had created. As a

client-produced record, in order to provide sufficient appropriate audit evidence for the existence of the securities on the balance sheet, the inventory schedule needed to be – but was not – subjected to audit procedures. AU §326.08 ("Audit evidence is more reliable when it is obtained from knowledgeable independent sources outside the entity."). Respondents failed to consider the reliability of the information. AU § 326.09 ("The auditor should consider the reliability of the information to be used as audit evidence, for example, photocopies; facsimiles; or filmed, digitized, or other electronic documents, including consideration of controls over their preparation and maintenance where relevant."). Moreover, Respondents failed to obtain audit evidence about the accuracy and completeness of the client-produced record. AU § 326.10 ("When information produced by the entity is used by the auditor to perform further audit procedures, the auditor should obtain audit evidence about the accuracy and completeness of the information.").

22. Respondents failed to perform adequate procedures to determine whether Lighthouse's accounts at Penson actually held the securities listed on the inventory schedule, whether the share quantities shown on the schedule were accurate, or whether Lighthouse had additional securities positions at Penson that were not shown on the schedule. Relatedly, they failed to perform adequate procedures to test their belief that the schedule was in fact a copy of a Penson-created record. In fact, the schedule was not a copy of a Penson-created record and it overstated the size of fifteen of the firm's long securities positions in its accounts at Penson, and thus overstated Lighthouse's assets by approximately $2 million.

23. Barbara Halpern knew that the purported screen shot of a Penson inventory report had been provided by the client. She failed to exercise due care and professional skepticism in evaluating the quality of that audit evidence and thus its sufficiency and appropriateness to support the auditor's opinion.

The Audit Procedures Regarding Lighthouse's Balances with Penson

24. The 2009 financial statements included among Lighthouse's assets monies due from Penson to Lighthouse in connection with transactions in five currencies in the F/X account. The financial statements failed to include, however, amounts *due to* Penson from Lighthouse. Those unreported liabilities totaled $2,314,484.

25. The balances in the F/X account appeared on a variety of Penson reports including the December monthly account statements, copies of which Penson had sent directly to Respondents in response to a confirmation request. Having concluded that the account statements were not sufficient appropriate audit evidence because they reported on a settlement date, rather than trade date, basis, and having been unable to obtain a reconciliation of the statements and Lighthouse's trade date records, the senior auditor and Barbara Halpen disregarded the account statements in testing Lighthouse's balances with Penson.

26. To test Lighthouse's money balances with Penson, Barbara Halpern and the senior auditor relied on a document bearing the title "Penson Money Line," which they knew had been

provided by Lighthouse personnel. The senior auditor labelled the document "screen print" and Respondents treated the document as a screen shot of a report obtained from Penson's website.

27. The purported screen print of a Penson money line report provided by Lighthouse was not a confirmation because it was not a communication directly from a third party. AU § 330.04 ("Confirmation is the process of obtaining and evaluating a direct communication from a third party in response to a request for information about a particular item affecting financial statement assertions.")

28. The purported screen print of a Penson money line report was also not obtained from Penson's website, but instead was a schedule prepared by Lighthouse personnel. As a client-produced record, in order to provide sufficient appropriate audit evidence for the accuracy and completeness of Lighthouse's balances with Penson on the balance sheet, the purported screen print needed to be – but was not – subjected to audit procedures. AU §326.08 ("Audit evidence is more reliable when it is obtained from knowledgeable independent sources outside the entity."); AU § 326.09 ("The auditor should consider the reliability of the information to be used as audit evidence, for example, photocopies; facsimiles; or filmed, digitized, or other electronic documents, including consideration of controls over their preparation and maintenance where relevant."); AU § 326.10 ("When information produced by the entity is used by the auditor to perform further audit procedures, the auditor should obtain audit evidence about the accuracy and completeness of the information.").

29. Barbara Halpern was aware that there were differences between the balances shown on Lighthouse's records and the balances shown on the December monthly account statements that the audit team had received from Penson. Lighthouse's records showed only positive balances, *i.e.* amounts *due to* Lighthouse *from* Penson. For the F/X account, they showed a total positive trade date balance for the account of $2,284,644, whereas the account statements for the F/X account reported a total value for the account of *negative* $22,305. The December monthly account statements also showed that, in addition to positive balances, there were negative balances in the F/X account totaling approximately $2.3 million.[7]

30. Barbara Halpern assumed that the differences she could not account for were the result of pending trades, *i.e.* trades that had been executed but had not yet settled. She did not request a pending trade report from Penson or otherwise attempt to verify this assumption, however.

31 Nevertheless, the December account statements for the F/X account – which Respondents had obtained from Penson – reported pending trades. Specifically, the account statements showed that there was only one trade pending settlement on December 31, 2009 for the

---

7 For the F/X account, there were multiple positive and multiple negative balances because balances were calculated separately for each different currency. The Penson account statements, like the schedule prepared by Lighthouse, reported the balances in both local currency and U.S. Dollars.

F/X account: a transaction in Euros at a total cost in U.S. dollars of only $42,838, which would not account for the discrepancies known to Barbara Halpern.

32. After receiving from Lighthouse the purported screen print of a Penson money line report that reflected only positive balances, Barbara Halpern failed to perform, or to have the audit team perform, adequate procedures to test her belief that the client-produced document was in fact a copy of a Penson-created record. She also failed to perform, or have the audit team perform, adequate procedures to test whether Lighthouse in fact had no negative balances with Penson or that it had positive balances in the amounts shown on the purported screen print. In fact, the purported screen print she relied upon was not a copy of a Penson-created record and on December 31, 2009, Lighthouse had *negative* balances in the F/X account totaling approximately $2,314,484 in addition to the positive balances that appeared on the purported screen shot that had been supplied by the client.

33. Barbara Halpern knew that the purported screen print of a Penson money line report had been provided by the client. She nevertheless relied upon the document without testing the completeness and accuracy of the information and without understanding what criteria had been used to generate the document. By relying upon a client-produced record without obtaining audit evidence about its accuracy and completeness, Barbara Halpern failed to exercise due care and professional skepticism in considering the reliability of that information and its sufficiency and appropriateness to support the auditor's opinion.

LEGAL ANALYSIS

Respondents Engaged in Improper Professional Conduct and Caused Lighthouse's Violations of Section 17 of the Exchange Act and Rule17a-5(a) thereunder

34. As a result of the conduct described above, Respondents engaged in improper professional conduct. Regarding accountants, Rule 102(e)(1)(iv)(B) and Section 4C(b) provide that the following two types of negligent conduct may constitute "improper professional conduct":

(1) A single instance of highly unreasonable conduct that results in a violation of applicable professional standards in circumstances in which an accountant knows, or should know, that heightened scrutiny is warranted, or

(2) Repeated instances of unreasonable conduct, each resulting in a violation of applicable professional standards, that indicate a lack of competence to practice before the Commission.

"Applicable professional standards" for auditors primarily refers to GAAP, GAAS, the AICPA Code of Professional Conduct, and Commission regulations. *See Amendment to Rule 102(e) of the Commission's Rules of Practice,* Securities Act Release No. 7593 (Oct. 19, 1998) ("*Rule 102(e) Release*"). With respect to audits of broker-dealer financial statements, the GAAS in effect during the relevant period is embodied in various Statements on Auditing Standards ("SAS"), as well as the Codification of Statements on Auditing Standards, both issued by the Auditing Standards Board of the AICPA.

35. Barbara Halpern failed to adhere to the most fundamental auditing standards: the standards that require an auditor to exercise due professional care in planning and performing an audit, AU § 230.01, by properly staffing and supervising the audit, AU § 230.06, by obtaining sufficient appropriate audit evidence, AU § 326.01, and by maintaining an attitude of professional skepticism, which includes "a questioning mind and a critical assessment of audit evidence[,]" AU §§ 230.07-08. An auditor must "obtain sufficient appropriate audit evidence by performing audit procedures to afford a reasonable basis for an opinion regarding the financial statements under audit." AU § 326.01. "The auditor should use professional judgment and should exercise professional skepticism in evaluating the quantity and quality of audit evidence, and thus its sufficiency and appropriateness, to support the audit opinion." AU § 326.13.

36. Barbara Halpern also failed to adhere to auditing standards concerning confirmation, AU § 330, the reliability of audit evidence, including audit evidence in the form of electronic documents, AU § 326.09, and audit evidence provided by the client, AU §326.08, and the need to obtain audit evidence about the completeness and accuracy of client-produced information used to perform audit procedures. AU § 326.10.

37. As a result of the conduct alleged above, Barbara Halpern failed to adhere to GAAS in planning and performing the audit of Lighthouse's 2009 financial statements and preparing the audit report on those statements. Moreover, those failures occurred in the most critical areas of the audit – the testing of Lighthouse's holdings in its proprietary accounts and its liabilities to one of the broker-dealers through which it engaged in proprietary trading.

38. Accordingly, Barbara Halpern engaged in at least a single instance of highly unreasonable or, at a minimum, repeated instances of unreasonable conduct within the meaning of Rule 102(e)(1)(iv)(B).

39. Barbara Halpern's improper professional conduct may be attributed to H&A.

40. Section 17 of the Exchange Act requires registered broker-dealers to make and disseminate certain financial and operational reports. Rule 17a-5(a) requires that certain broker-dealers file an annual audited report that contains the broker-dealer's year-end financial statements and a report on those statements by an independent auditor. Implicit in the requirement that a registered broker-dealer file financial reports is the requirement that the information contained in those reports be accurate. *See Nikko Securities Co. International, Inc.,* Exchange Act Release No. 32331 (May 19, 1993).

41. As described above, Lighthouse failed to file an accurate annual audited report for the year ended December 31, 2009. The firm therefore violated Section 17 and Rule 17a-5(a) thereunder.

42. As a result of the conduct alleged above, Respondents were each a cause of Lighthouse's violations of Section 17 of the Exchange Act and Rule17a-5(a) thereunder.

IV.

In view of the allegations made by the Division of Enforcement and the Office of the Chief Accountant, the Commission deems it necessary and appropriate that public administrative and cease-and-desist proceedings be instituted to determine:

Whether the allegations set forth in Section III hereof are true and, in connection therewith, to afford Respondents an opportunity to establish any defenses to such allegations;

What, if any, remedial action is necessary and appropriate against Respondents pursuant to Rule 102(e) of the Commission's Rules of Practice; and

Whether, pursuant to Section 21C of the Exchange Act, Respondents should be ordered to cease and desist from committing or causing violations and any future violations of Section 17 of the Exchange Act and Rule 17a-5 thereunder and whether Respondents should be ordered to pay disgorgement pursuant to Section 21C(e) of the Exchange Act.

V.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section IV hereof shall be convened not earlier than 30 days and not later than 60 days from service of this Order at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondents fail to file the directed answer, or fail to appear at a hearing after being duly notified, they may be deemed in default and the proceedings may be determined against them upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310.

This Order shall be served forthwith upon Respondents as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 300 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

Admin. Proc. File No. 3-15842

In the Matter of TOTAL WEALTH MANAGEMENT, INC., JACOB KEITH COOPER, NATHAN MCNAMEE, and DOUGLAS DAVID SHOEMAKER	ORDER GRANTING EXTENSION

Chief Administrative Law Judge Brenda P. Murray has moved, pursuant to Commission Rule of Practice 360(a)(3),[1] for an extension of six months to issue the initial decision in these proceedings. As discussed below, we grant her motion.

On April 15, 2014, we issued an Order Instituting Administrative and Cease-and-Desist Proceedings ("OIP") against Total Wealth Management, Inc. ("Total Wealth"), a registered investment adviser; Jacob Keith Cooper, the co-founder, sole owner, and CEO of Total Wealth; Nathan McNamee, the current president and chief compliance officer of Total Wealth; and Douglas David Shoemaker, the co-founder and former chief compliance officer of Total Wealth.[2] The OIP alleges that Total Wealth, Cooper, McNamee, and Shoemaker violated federal securities anti-fraud provisions by, among other things, directing client money to investment

---

[1] 17 C.F.R. § 201.360(a)(3).

[2] *Total Wealth Mgmt., Inc.*, Securities Exchange Act Release No. 71948, 2014 WL 1438614 (Apr. 15, 2014).

funds that paid revenue-sharing fees and by collecting, and concealing their receipt of, those fees.[3]

The initial decision in these proceedings is currently due by February 17, 2015. In requesting an extension, Chief Judge Murray asserts that she has not yet held a hearing because she had stayed the proceedings for a prolonged period to allow for settlement negotiations and because of other settlement-related procedures.[4] She requests an extension "to allow for further settlement negotiations and for a hearing if settlement proves impossible."

We adopted Rule of Practice 360(a) to enhance the timely and efficient adjudication and disposition of Commission administrative proceedings by setting deadlines for issuance of an initial decision.[5] That rule provides, however, for deadline extensions under certain circumstances if supported by a motion from the Chief Administrative Law Judge and if it appears, as here, that "additional time is necessary or appropriate in the public interest."[6]

---

[3] The OIP specifically alleges that: (i) Total Wealth, Cooper, McNamee, and Shoemaker willfully violated Section 17(a) of the Securities Act of 1933, Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder, and Section 207 of the Investment Advisers Act of 1940; (ii) Total Wealth and Cooper willfully violated Advisers Act Sections 206(1), 206(2), and 206(4), and Rule 206(4)-8 thereunder; and (iii) Total Wealth willfully violated Advisers Act Section 206(4) and Rule 206(4)-2 thereunder. The OIP also alleges that: (i) McNamee and Shoemaker willfully aided and abetted and caused Total Wealth and Cooper's violations of Exchange Act Section 10(b) and Rule 10b-5(b) and Advisers Act Sections 206(1), 206(2), and 206(4) and Rule 206(4)-8; (ii) Cooper willfully aided and abetted and caused Total Wealth's violations of Exchange Act Section 10(b) and Rule 10b-5(b); and (iii) Cooper and McNamee willfully aided and abetted and caused Total Wealth's violations of Advisers Act Section 206(4) and Rule 206(4)-2.

[4] Chief Judge Murray explains that on August 7, 2014, she stayed proceedings "based on the representation that the parties had reached an agreement in principle to settle the allegations in the OIP." She asserts that, on October 23, 2014, the Division of Enforcement notified her "that it had withdrawn the Offer of Settlement from Commission consideration based on new information it had received," and that she granted the Division "additional time to review documents regarding the source of Respondents' settlement funds." Chief Judge Murray asserts that she also set a prehearing conference for January 6, 2015, during which the Division stated that it was still unable to recommend settlement. Chief Judge Murray then ordered the parties to confer and report by January 16, 2015, whether settlement "was possible within the given schedule," and the Division reported back that it was "still unable to recommend settlement."

[5] *See Adopting Release*, Exchange Act Release No. 48018, 2003 WL 21354791, at *2 (June 11, 2003) ("[T]he Commission has determined that timely completion of proceedings can be achieved more successfully through the adoption of mandatory deadlines and procedures designed to meet these deadlines.").

[6] 17 C.F.R. § 201.360(a)(3).

Accordingly, IT IS ORDERED that the deadline for filing the initial decision in these proceedings is extended to August 17, 2015.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74354 / February 23, 2015

Admin. Proc. File No. 3-15824

In the Matter of the Application of

STEVEN ROBERT TOMLINSON

For Review of Disciplinary Action Taken By FINRA

ORDER DENYING REQUEST FOR RECONSIDERATION

Steven Robert Tomlinson, a registered representative with Wells Fargo Advisors, LLC, filed a letter, dated January 8, 2015, concerning our December 11, 2014 opinion and order (the "December 11 Order") sustaining FINRA disciplinary action against him.[1] We have construed Tomlinson's letter as a request for reconsideration of the December 11 Order and, for the reasons set forth below, reject the request on two independent grounds: it is untimely and lacks merit.

I. Background

In the December 11 Order, we sustained FINRA's findings that Tomlinson violated just and equitable principles of trade by downloading, without authorization, confidential nonpublic information concerning more than 2,000 customers from his former broker-dealer firm's computer system and sharing that information with Wells Fargo. We also sustained FINRA's sanction of a ninety-day suspension. We stated that Tomlinson's misconduct "implicates quintessential ethical considerations and reflects negatively on his ability to comply with fundamental regulatory requirements."[2] We further stated that the sanction "reflects the importance of a security professional's obligation to safeguard confidential customer information, and is a measured response to Tomlinson's careless breach of that obligation."[3]

[1] *Steven Robert Tomlinson*, Exchange Act Release No. 73825, 2014 WL 6985131 (Dec. 11, 2014).

[2] *Id.* at *6.

[3] *Id.* at *11.

On January 8, 2015, Tomlinson responded by letter to the December 11 Order, complaining that we failed to use our "power" to request information that would have been "beneficial to the decision making process." Specifically, Tomlinson asserted that we failed to request that FINRA provide the written recommendations of two subcommittee members of FINRA's National Adjudicatory Council ("NAC"); that the Corning Credit Union (the "Credit Union") and the National Credit Union Administration ("NCUA") produce information regarding data breaches for the period of January 2008 through September 2013; and that Raymond James Financial Services, Inc. produce a copy of his son's Uniform Transfers to Minors Act account client agreement and the privacy statement in force in November 2008.

II. Analysis

A. Tomlinson's request for reconsideration is untimely.

We have construed Tomlinson's letter as a request for reconsideration and reject his request on two independent grounds: it is untimely and lacks merit. Rule of Practice 470 provides, in relevant part, that a motion for reconsideration "shall be filed within 10 days after service of the order complained of."[4] Tomlinson was served with a copy of the December 11 Order on December 15, 2014 and received it on December 22, 2014, but his letter was not filed until January 9, 2015, which was beyond the ten-day period provided in Rule 470. As a result, Tomlinson's request for reconsideration of the December 11 Order was untimely.

B. Tomlinson's request for reconsideration lacks merit.

Even if Tomlinson's request for reconsideration had been timely filed, it would be unavailing.[5] FINRA was not required to provide Tomlinson with written recommendations of NAC subcommittee members because, as we stated in the December 11 Order, "[a] respondent is not entitled to obtain internal [FINRA] staff memoranda."[6] Moreover, Tomlinson's assertions that we failed to send "requests for information" to FINRA, the Credit Union, the NCUA, and Raymond James were raised for the first time in his request for reconsideration, and therefore were forfeited.[7] In any event, there is no basis to believe that the information Tomlinson seeks would

---

4 17 C.F.R. § 201.470.

5 We note that reconsideration is intended to be an "exceptional" remedy. *See Johnny Clifton*, Exchange Act Release No. 70639, 2013 WL 5553865, at *1 (Oct. 9, 2013) (denying motions for reconsideration and a stay).

6 *Tomlinson*, 2014 WL 6985131, at *8.

7 *See KPMG Peat Marwick LLP*, Exchange Act Release No. 44050, 2001 WL 223378, at *1 n.7 (Mar. 8, 2001) (denying request for reconsideration, in part, on grounds that a party is foreclosed from resurrecting an argument that it failed to raise in its appeal to the Commission). Furthermore, Tomlinson does not point to, nor are we aware of, any rule that allows us to make

(continued...)

have changed the outcome given, as we found earlier, that Tomlinson "understood the types of customer information that were protected as 'personally identifiable information,' but that . . . he 'carelessly' granted Wells Fargo 'unfettered' access to that information."[8] As we found, Tomlinson's action was a clear breach of his duty to safeguard clients' information and was done to further "his own financial purpose and benefit."[9] We further found that "[t]he facts and circumstances of this case fully support a ninety-day suspension."[10]

Accordingly, it is ORDERED that the request for reconsideration of the December 11, 2014 opinion and order filed by Steven Robert Tomlinson is hereby denied.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74356 / February 24, 2015

ACCOUNTING AND AUDITING ENFORCEMENT
Release No. 3640 / February 24, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16400

In the Matter of **THE GOODYEAR TIRE & RUBBER COMPANY,** **Respondent.**	**ORDER INSTITUTING CEASE-AND-DESIST PROCEEDINGS, PURSUANT TO SECTION 21C OF THE SECURITIES EXCHANGE ACT OF 1934, MAKING FINDINGS, AND IMPOSING A CEASE-AND-DESIST ORDER**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate that cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 21C of the Securities Exchange Act of 1934 ("Exchange Act") against The Goodyear Tire & Rubber Company ("Goodyear" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over it and the subject matter of these proceedings, which are admitted, Respondent consents to the entry of this Order Instituting Cease-and-Desist Proceedings Pursuant to Section 21C of the Exchange Act, Making Findings, and Imposing a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds[1] that:

Summary

1. This case involves violations of the books, records, and internal control provisions of the Foreign Corrupt Practices Act ("FCPA") by Goodyear. Goodyear, headquartered in Akron, Ohio, is one of the world's largest tire companies. From 2007 through 2011, Goodyear subsidiaries in Kenya (Treadsetters Tyres Ltd., or "Treadsetters") and Angola (Trentyre Angola Lda., or "Trentyre") routinely paid bribes to employees of government-owned entities and private companies to obtain tire sales. These same subsidiaries also paid bribes to police, tax, and other local authorities. In all, between 2007 and 2011, Goodyear subsidiaries in Kenya and Angola made over $3.2 million in illicit payments.

2. All of these bribery payments were falsely recorded as legitimate business expenses in the books and records of these subsidiaries which were consolidated into Goodyear's books and records. Goodyear did not prevent or detect these improper payments because it failed to implement adequate FCPA compliance controls at its subsidiaries in sub-Saharan Africa.

Respondent

3. **Goodyear**, an Ohio corporation headquartered in Akron, Ohio, is one of the world's largest tire manufacturers. Goodyear has manufacturing facilities in 22 countries and sells tires in most countries around the world. Goodyear's common stock is registered with the Commission pursuant to Section 12(b) of the Exchange Act and is listed on The NASDAQ Stock Market.

Other Relevant Entities

4. **Magister Ltd.** ("Magister") is a wholly-owned subsidiary of Goodyear incorporated in Mauritius, and headquartered in South Africa. Magister holds the shares and oversees the operations of the Goodyear subsidiaries in sub-Saharan Africa. During the relevant time period this included Treadsetters in Kenya and Trentyre in Angola.

5. **Treadsetters** is a retail tire distributor incorporated and located in Kenya. During the relevant time period, Treadsetters was an indirect subsidiary of Goodyear, and had annual revenues of approximately $20 million. Goodyear divested its ownership interest in Treadsetters in 2013.

6. **Trentyre** is a retail tire distributor incorporated and located in Angola. Trentyre is a wholly owned subsidiary of Goodyear. During the relevant time period, Trentyre had annual revenues between $6 million and $20 million.

---

[1] The findings herein are made pursuant to Respondent's Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

Improper Payments in Kenya

7. Treadsetters is a retail tire distributor in Kenya. In 2002, Goodyear acquired a minority ownership interest in Treadsetters. By 2006, Goodyear had acquired a majority ownership interest in the company, though the day-to-day operations of Treadsetters continued to be run by Treadsetters' founders and the local general manager. During the relevant time period, Treadsetters had annual revenues of approximately $20 million.

8. From 2007 through 2011, Treadsetters' management regularly authorized and paid bribes to employees of government-owned or affiliated entities, and private companies, to obtain business. The practice was routine and appears to have been in place prior to Goodyear's acquisition of Treadsetters. The bribes generally were paid in cash and falsely recorded on Treadsetters' books as expenses for promotional products.

9. Treadsetters' general manager and finance director were at the center of the scheme. They approved payments for phony promotional products, and then directed the finance assistant to write-out the checks to cash. Treadsetters' staff then cashed the checks and used the money to make improper payments to employees of customers, which included both government-owned entities and private companies.

10. Between 2007 and 2011, Treadsetters paid over $1.5 million in bribes in connection with the sale of tires. This included improper payments to employees of government-owned or affiliated entities including the Kenya Ports Authority, the Armed Forces Canteen Organization, the Nzoia Sugar Company, the Kenyan Air Force, the Ministry of Roads, the Ministry of State for Defense, the East African Portland Cement Co., and Telkom Kenya Ltd. During that same time period, Treadsetters also made approximately $14,457 in improper payments to local government officials in Kenya, including city council employees, police, and building inspectors.

11. Goodyear did not detect or prevent these improper payments because it failed to conduct adequate due diligence when it acquired Treadsetters, and failed to implement adequate FCPA compliance training and controls after the acquisition.

Improper Payments in Angola

12. Trentyre was incorporated in 2007, and is a wholly-owned subsidiary of Goodyear. Trentyre is primarily engaged in selling new tires for mining equipment. During the relevant time period, Trentyre had annual revenues between $6 million and $20 million.

13. From 2007 through 2011, Trentyre paid over $1.6 million in bribes to employees of government-owned or affiliated entities, and private companies, to obtain tire sales. Trentyre paid approximately $1.4 million of these bribes to employees of government-owned or affiliated entities in Angola, including the Catoca Diamond Mine, UNICARGAS, Engevia Construction and Public Works, the Electric Company of Luanda, National Service of Alfadega, and Sonangol. A majority of these improper payments were paid to employees of Trentyre's largest customer at the time, the Catoca Diamond Mine, which is owned by a consortium of mining interests, including Endiama E.P., Angola's national mining company, and ALROSA, a Russian mining

company. During the same time period, Trentyre also made approximately $64,713 in improper payments to local government officials in Angola, including police and tax authorities.

14. The bribery scheme was put in place by Trentyre's former general manager. To hide the scheme and generate funds for the improper payments, Trentyre falsely marked-up the costs of its tires by adding to its invoice price phony freight and customs clearing costs. On a monthly basis, as tires were sold, the phony freight and clearing costs were reclassified to a balance sheet account. Trentyre made improper payments to employees of customers both in cash and through wire transfers. As bribes were paid, the amounts were debited from the balance sheet account, and falsely recorded as payments to vendors for freight and clearing costs.

15. Goodyear did not prevent or detect these improper payments because it failed to implement adequate FCPA compliance training and controls at this subsidiary.

Legal Standards and Violations

16. Under Section 21C(a) of the Exchange Act, the Commission may impose a cease-and-desist order upon any person who is violating, has violated, or is about to violate any provision of the Exchange Act or any rule or regulation thereunder, and upon any other person that is, was, or would be a cause of the violation, due to an act or omission the person knew or should have known would contribute to such violation.

17. Under Section 13(b)(2)(A) of the Exchange Act issuers are required to make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and disposition of the assets of the issuer. [15 U.S.C. §78m(b)(2)(A)].

18. Under Section 13(b)(2)(B) of the Exchange Act issuers are required to devise and maintain a system of internal accounting controls sufficient to provide reasonable assurances that (i) transactions are executed in accordance with management's general or specific authorization; (ii) transactions are recorded as necessary (I) to permit preparation of financial statements in conformity with generally accepted accounting principles or any other criteria applicable to such statements, and (II) to maintain accountability for assets; (iii) access to assets is permitted only in accordance with management's general or specific authorization; and (iv) the recorded accountability for assets is compared with the existing assets at reasonable intervals and appropriate action is taken with respect to any differences. [15 U.S.C. §78m(b)(2)(B)].

19. As described above, Goodyear subsidiaries in Kenya and Angola made improper payments to employees of government-owned entities and private companies to obtain business. These improper payments were falsely recorded as legitimate business expenses in the books and records of these subsidiaries which were consolidated into Goodyear's books and records. Accordingly, Goodyear violated Section 13(b)(2)(A) of the Exchange Act. As described above, Goodyear also violated Section 13(b)(2)(B) of the Exchange Act by failing to devise and maintain sufficient accounting controls to prevent and detect these improper payments.

Goodyear's Cooperation and Remedial Efforts

20. In determining to accept the Offer, the Commission considered remedial acts promptly undertaken by Respondent and cooperation afforded the Commission staff. After receiving information about the bribes, Goodyear promptly halted the improper payments and reported the matter to Commission staff. Goodyear also provided significant cooperation with the Commission's investigation. This included voluntarily producing documents and reports and other information from the company's internal investigation, and promptly responding to Commission staff's requests for information and documents. These efforts assisted the Commission in efficiently collecting evidence including information that may not have been otherwise available to the staff.

21. Goodyear also has undertaken remedial efforts. In Kenya, Goodyear divested its ownership interest in Treadsetters, and ceased all business dealings with the company. In Angola, after Goodyear halted the improper payments its subsidiary lost its largest customer. Goodyear is now in the process of divesting this subsidiary.

22. Goodyear also undertook disciplinary action against certain employees, including executives of its Europe, Middle East and Africa region who had oversight responsibility, for failing to ensure adequate FCPA compliance training and controls were in place at the company's subsidiaries in sub-Saharan Africa.

23. Goodyear also implemented improvements to its compliance program, both specific to its operations in sub-Saharan Africa, and globally. In Africa, the improvements include expanded on-line and in-person anti-corruption training for subsidiary management, sales, and finance personnel; regular audits, by internal audit, specifically focused on corruption risks; quarterly self-assessment questionnaires required of each subsidiary regarding business with government-affiliated customers; quarterly management certifications from every subsidiary that cover among other things controls over financial reporting; and annual testing of internal controls at each subsidiary. To increase oversight, Goodyear also put in place a new regional management structure, and added new compliance, accounting, and audit positions. Goodyear is also making technology improvements, where possible, to electronically link subsidiaries in sub-Saharan Africa to its global network. At the parent company, Goodyear created a new senior position of Vice President of Compliance and Ethics, which further elevated the compliance function within the company. Goodyear has also expanded on-line and in-person anti-corruption and ethics training at its other subsidiaries, and implemented a new Integrity Hotline Web Portal, which enhanced users' ability to file anonymous online reports to its hotline system. With that system, Goodyear is also implementing a new case management system for legal, compliance and internal audit to document and track complaints, investigations and remediation. Goodyear also has updated its policies governing third-party agents and vendors, and is in the process of implementing a new third-party due diligence software tool.

IV.

In view of the foregoing, the Commission deems it appropriate to impose the sanctions agreed to in the Respondent Goodyear's Offer.

Accordingly, it is hereby ORDERED that:

A. Pursuant to Section 21C of the Exchange Act, Respondent Goodyear cease and desist from committing or causing any violations and any future violations of Sections 13(b)(2)(A) and 13(b)(2)(B) of the Exchange Act.

B. Respondent shall, within 10 days of the entry of this Order, pay disgorgement of $14,122,525 and prejudgment interest of $2,105,540 to the United States Treasury. If timely payment is not made, additional interest shall accrue pursuant to SEC Rule of Practice 600. Payments must be made in one of the following ways:

1) Respondent may transmit payment electronically to the Commission, which shall provide detailed ACH transfer/Fedwire instructions upon request;

2) Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

3) Respondent may pay by certified check, bank cashier's check, or United States postal money order, payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Goodyear as the Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Brian O. Quinn, Assistant Director, Division of Enforcement, Securities and Exchange Commission, 100 F Street, N.E., Washington, DC 20549.

C. Respondent shall report to the Commission staff periodically, at no less than twelve-month intervals during a three-year term, the status of its remediation and implementation of compliance measures. Should respondent discover credible evidence, not already reported to the Commission staff, that questionable or corrupt payments or questionable or corrupt transfers of property or interests may have been offered, promised, paid, or authorized by Respondent entity or person, or any entity or person while working directly for Respondent, or that related false books and records have been maintained, Respondent shall promptly report such conduct to the

Commission staff. During this three-year period, Respondent shall: (1) conduct an initial review and submit an initial report, and (2) conduct and prepare at least two (2) follow-up reviews and reports, as described below:

1) Respondent shall submit to the Commission staff a written report within one (1) year of the entry of this Order setting forth a complete description of its FCPA and anti-corruption related remediation efforts to date, its proposals reasonably designed to improve the policies and procedures of Respondent for ensuring compliance with the FCPA and other applicable anti-corruption laws, and the parameters of the subsequent reviews (the "Initial Report"). The Initial Report shall be transmitted to Brian O. Quinn, Assistant Director, Division of Enforcement, Securities and Exchange Commission, 100 F Street, N.E., Washington, DC 20549. Respondent may extend the time period for issuance of the Initial Report with prior written approval of the Commission staff.

2) Respondent shall undertake at least two (2) follow-up reviews, incorporating any comments provided by the Commission staff on the previous report, to further monitor and assess whether the policies and procedures of Respondent are reasonably designed to detect and prevent violations of the FCPA and other applicable anti-corruption laws (the "Follow-up Reports").

3) The first Follow-up Report shall be completed by no later than one (1) year after the Initial Report. The second Follow-up Report shall be completed by no later than one (1) year after the completion of the first Follow-up Report. Respondent may extend the time period for issuance of the Follow-up Reports with prior written approval of the Commission staff.

4) The periodic reviews and reports submitted by Respondent will likely include proprietary, financial, confidential, and competitive business information. Public disclosure of the reports could discourage cooperation, impede pending or potential government investigations or undermine the objectives of the reporting requirement. For these reasons, among others, the reports and the contents thereof are intended to remain and shall remain non-public, except (1) pursuant to court order, (2) as agreed by the parties in writing, (3) to the extent that the Commission staff determines in its sole discretion that disclosure would be in furtherance of the Commission's discharge of its duties and responsibilities, or (4) is otherwise required by law.

D. Respondent acknowledges that the Commission is not imposing a civil penalty based upon its cooperation in a Commission investigation and related enforcement action. If at any time following the entry of the Order, the Division of Enforcement ("Division") obtains information indicating that Respondent knowingly provided materially false or misleading information or materials to the Commission or in a related proceeding, the Division may, at its sole discretion and with prior notice to the Respondent, petition the Commission to reopen this matter and seek an order directing that the Respondent pay a civil money penalty. Respondent may contest by way of defense in any resulting administrative proceeding whether it knowingly provided materially false or misleading information, but may not: (1) contest the findings in the Order; or (2) assert any defense to liability or remedy, including, but not limited to any statute of limitations defense.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74366 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16401

In the Matter of **Energiz Renewable, Inc., Iron Eagle Group, Inc., and MedClean Technologies, Inc.,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against the Respondents named in the caption.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS[1]

1. Energiz Renewable, Inc. ("ERIP") (CIK No. 859313) is a dissolved Florida corporation located in Keyport, New Jersey with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). ERIP is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2011, which reported a net loss of $936,682 for the prior nine months. As of February 23, 2015, the common stock of ERIP was quoted on OTC Link operated by OTC Markets Group Inc. (formerly "Pink Sheets") ("OTC Link"), had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

2. Iron Eagle Group, Inc. ("IEAG") (CIK No. 1043825) is a void Delaware corporation located in New York, New York with a class of securities registered with the

[1]The short form of each issuer's name is also its stock symbol.

Commission pursuant to Exchange Act Section 12(g). IEAG is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended June 30, 2012, which reported a net loss of $1,126,202 for the prior six months. As of February 23, 2015, the common stock of IEAG was quoted on OTC Link, had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. MedClean Technologies, Inc. ("MCLN") (CIK No. 40528) is a delinquent Delaware corporation located in Bethlehem, Pennsylvania with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). MCLN is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2012, which reported a net loss of $720,524 for the prior nine months. As of February 23, 2015, the common stock of MCLN was quoted on OTC Link, had eight market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

4. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

5. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires issuers to file quarterly reports.

6. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74369 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16402

In the Matter of **China Yili Petroleum Company,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against the respondent named in the caption.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT [1]

1. China Yili Petroleum Company ("CYIP") (CIK No. 1339854) is a permanently revoked Nevada corporation located in Tongliao, China with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). CYIP is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended June 30, 2012, which reported a net loss of $118,799 for the prior six months. As of February 23, 2015, the common stock of CYIP was quoted on OTC Link operated by OTC Markets Group, Inc. (formerly "Pink Sheets"), had four market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

[1] The short form of the issuer's name is also its ticker symbol.

B. DELINQUENT PERIODIC FILINGS

2. As discussed in more detail above, the Respondent is delinquent in its periodic filings with the Commission, has repeatedly failed to meet its obligations to file timely periodic reports and failed to bring its filings current in response to the delinquency letter sent to it by the Division of Corporation Finance requesting compliance with its periodic filing obligations.

3. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires domestic issuers to file quarterly reports.

4. As a result of the foregoing, the Respondent failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondent an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondent identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of the Respondent.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that the Respondent shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If the Respondent fails to file the directed Answer, or fails to appear at a hearing after being duly notified, the Respondent, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of the Respondent, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon the Respondent personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74372 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16403

In the Matter of **Defense Industries International, Inc., EvCarCo, Inc., and Island Breeze International, Inc.** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against the Respondents named in the caption.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS[1]

1. Defense Industries International, Inc. ("DFNS") (CIK No. 1069563) is a defaulted Nevada corporation located in Petach Tikva, Israel with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). DFNS is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2011, which reported a net loss of $3,462,076 for the prior nine months. As of February 23, 2015, the common stock of DFNS was quoted on OTC Link operated by OTC Markets Group Inc. (formerly "Pink Sheets") ("OTC Link"), had eight market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

2. EvCarCo, Inc. ("EVCA") (CIK No. 1459003) is a revoked Nevada corporation located in Fort Worth, Texas with a class of securities registered with the Commission pursuant

[1]The short form of each issuer's name is also its stock symbol.

to Exchange Act Section 12(g). EVCA is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2012, which reported a net loss of $1,639,545 for the prior nine months. As of February 23, 2015, the common stock of EVCA was quoted on OTC Link, had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. Island Breeze International, Inc. ("IBII") (CIK No. 1419886) is a void Delaware corporation located in Bellmawr, New Jersey with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). IBII is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2012, which reported a net loss of $1,191,769 for the prior nine months. As of February 23, 2015, the common stock of IBII was quoted on OTC Link, had six market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

4. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

5. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires issuers to file quarterly reports.

6. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74374 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16404

In the Matter of **Dittybase Technologies, Inc.,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against the respondent named in the caption.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT[1]

1. Dittybase Technologies, Inc. ("DTTY") (CIK No. 1311170) is an Alberta corporation located in Victoria, British Columbia, Canada with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). DTTY is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 20-F for the period ended December 31, 2008, which reported a net loss and comprehensive loss of $449,461 Canadian for the prior year. As of February 23, 2015, the common shares of DTTY were quoted on OTC Link operated by OTC Markets Group, Inc. (formerly "Pink Sheets"), had three market makers, and were eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

[1] The short form of the issuer's name is also its ticker symbol.

B. DELINQUENT PERIODIC FILINGS

2. As discussed in more detail above, the Respondent is delinquent in its periodic filings with the Commission, has repeatedly failed to meet its obligations to file timely periodic reports and failed to bring its filings current in response to the delinquency letter sent to it by the Division of Corporation Finance requesting compliance with its periodic filing obligations.

3. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports.

4. As a result of the foregoing, the Respondent failed to comply with Exchange Act Section 13(a) and Rule 13a-1 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondent an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondent identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of the Respondent.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that the Respondent shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If the Respondent fails to file the directed Answer, or fails to appear at a hearing after being duly notified, the Respondent, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of the Respondent, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon the Respondent personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4032 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16405

In the Matter of **CAROLYN C. HOWARD,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against Carolyn C. Howard ("Respondent" or "Howard").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent consents to the Commission's jurisdiction over her and the subject matter of these proceedings and to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 203(f) of the Advisers Act, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Howard was a co-founder of Howard Interests, a New Hampshire unincorporated financial services firm, acting as an unregistered investment adviser. From 2002 to early 2009, Howard, together with Charles Howard, III, operated Howard Interests as an investment adviser to clients for compensation.

2. On August 20, 2014, Howard, in the case State of New Hampshire v. Carolyn C. Howard (No. 213-2014-CR-197), pled guilty to one count of being an unlicensed investment adviser in violation of New Hampshire Revised Statutes Annotated 421-B:6 (a misdemeanor), before the Superior Court of the State of New Hampshire. In a plea agreement, Howard agreed to a sentence of 12 months with that entire sentence deferred for a period of one year.

3. On August 20, 2014, the State of New Hampshire Bureau of Securities Regulation entered a consent order against Howard. The order alleged, among other things, that Howard assisted in the founding and management of an unlicensed investment adviser under the name Howard Interests. Howard, according to the state's order, also acted as an investment adviser representative in that she dealt with Howard Interests' clients and received payments from clients that, while payable to Howard Interests, were deposited to bank accounts solely in her name. The state's order contained a finding that Howard, in operating Howard Interests, "knew or in the exercise of reasonable care would know" that Howard Interests was operating as an unlicensed investment adviser. The New Hampshire order permanently barred Howard from any securities licensure in any capacity in the State of New Hampshire.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Howard's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 203(f) of the Advisers Act, that Respondent Howard be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization;

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

By the Commission.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74375 / February 25, 2015

INVESTMENT ADVISERS ACT OF 1940
Release No. 4033 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16406

In the Matter of **CHARLES H. HOWARD, III** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934 AND SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against Charles H. Howard, III ("Respondent" or "Howard").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent consents to the Commission's jurisdiction over him and the subject matter of these proceedings and to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 15(b) of the Exchange Act and Section 203(f) of the Advisers Act, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Howard was a founder of Howard Interests, a New Hampshire unincorporated financial services firm acting as an unregistered investment adviser and unregistered broker-dealer. From 2002 to early 2009, Howard, doing business as Howard Interests, provided investment advice to clients for compensation and traded stock on behalf of different brokerage firms' customers for transaction-based compensation. Howard, 69 years old, is a resident of Jaffrey, New Hampshire.

2. On August 20, 2014, Howard, in the case State of New Hampshire v. Charles H. Howard, III (No. 213-2014-CR-196) pled guilty to one count of conspiracy in violation of New Hampshire Revised Statutes Annotated 629:3 and one count of securities manipulation in violation of New Hampshire Revised Statutes Annotated 421-B:5 before the Superior Court of the State of New Hampshire. In a plea agreement, Howard agreed to a sentence of 7-20 years in prison and agreed to pay restitution in the amount of $600,000.

3. The criminal information to which Howard pled guilty alleged that Howard committed the crime of conspiracy to commit investment adviser fraud and, having received compensation for advising others of the value of securities and their purchase or sale, he employed devices, schemes and artifices to defraud and engaged in acts and practices which operated as a fraud and deceit on others.

4. In connection with that plea, Respondent admitted that:

   a) He failed to disclose to clients and prospective clients that he had prior criminal convictions for securities fraud, that he was subject to a federal court injunction from violating the federal securities laws, and that he had been barred from association with a broker-dealer or investment adviser;

   b) He effected transactions in securities by means of manipulative and deceptive practices including effecting a series of transactions in different brokerage firms' customers' accounts to create actual or apparent active trading to manipulate the price of a security; and

   c) He induced clients to purchase a security in unsuitably large amounts while concealing from those clients that he was attempting to manipulate the price of that security; and

5. On August 20, 2014, the State of New Hampshire Bureau of Securities Regulation entered a consent order against Howard. The order alleged, among other things, that Howard operated an unlicensed investment adviser and unlicensed broker-dealer under the name Howard Interests. The state's order contained a finding that Howard, in operating Howard Interests, engaged in fraudulent activity in connection with the purchase or sale of securities in that he failed to disclose to investors, among other things, that he was not licensed to provide the investment services he was providing, and that he had been barred in the past by the U.S. Securities and Exchange Commission. The New Hampshire order permanently barred Howard from any securities licensure in any capacity in the State of New Hampshire.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Howard's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 15(b)(6) of the Exchange Act and Section 203(f) of the Advisers Act that Respondent Howard be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization

Pursuant to Section 15(b)(6) of the Exchange Act Respondent Howard be, and hereby is barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

Release No. 4035 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16162

In the Matter of WILLIAM L. WALTERS, Respondent.	**ORDER MAKING FINDINGS AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") previously instituted public administrative proceedings pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against William L. Walters ("Respondent").

II.

Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent admits the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Sections III.3. and III.4. below, and consents to the entry of this Order Making Findings and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Walters, age 49, formerly resided in Honolulu, Hawaii, from 2000 to 2003, and then in Lone Tree, Colorado, through August 2006. He was the owner and operator of Samurai

Capital, Inc. ("Samurai") and Mana Trading Co., Inc. ("Mana Trading"), two alter ego entities. From 1993 through 1997, prior to the relevant time period, Walters was a registered representative associated with two successive broker-dealers.

2. From at least 2001 through 2006, Walters offered and sold securities to investors in connection with a purported "day trading" program. During the relevant period, Walters was not registered with the Commission in any capacity. Walters acted as an unregistered broker in these offers and sales in violation of Section 15(a) of the Exchange Act by: (1) soliciting investors to purchase securities; (2) negotiating the terms of sales to investors; and (3) receiving and handling investor funds. In connection with these offers and sales, Walters also received compensation tied to particular investments because he used the investor funds received for his personal expenses. During the same period, Walters acted as an investment adviser to the pooled day trading funds because he, for compensation, engaged in the business of advising the funds as to their purchase and sale of securities.

3. On April 15, 2011, Walters pleaded guilty to multiple counts of securities fraud and theft before the Colorado District Court. People v. Walters, Colo. Dist. Ct. Case No. 07-CR-408. On April 29, 2011, a judgment of conviction in the criminal case was entered against Walters. He was sentenced to a prison term of 40 years and ordered to make restitution in the amount of $9.5 million.

4. The counts of the criminal information to which Walters pleaded guilty alleged, among other things, that between 2001 and at least 2006, Walters defrauded investors by soliciting money for his purported "day trading" program through Samurai and Mana Trading. The indictment further alleged that the Samurai and Mana trading investments offered and sold by Walter, evidenced in part by promissory notes, involved the purchase and sale of securities. The indictment alleged that most of the investor tor funds were used by Walters for personal purposes and to make ostensible "interest payments" and payouts to other investors. The indictment further alleged that Walters made false and misleading statements to investors about the rates of return of his program, and failed to disclose to investors his trading losses and his use of investor funds to pay other investors.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Walter's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 15(b)(6) of the Exchange Act and Section 203(f) of the Advisers Act, that Respondent Walters be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; and

Pursuant to Section 15(b)(6) of the Exchange Act Respondent Walters be, and hereby is barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent, or other person who engages in activities with a broker, dealer, or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4034 / February 25, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16165

In the Matter of **David Scott Cacchione,** **Respondent.**	**ORDER MAKING FINDINGS AND IMPOSING REMEDIAL SANCTIONS PURSUANT TO SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest to enter this Order Making Findings and Imposing Remedial Sanctions Pursuant to Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against David Scott Cacchione ("Respondent").[1]

II.

Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent admits the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Sections III.5. and III.7. below, and consents to the entry of this Order Making Findings and Imposing Remedial Sanctions Pursuant to Section 203(f) of the Investment Advisers Act ("Order"), as set forth below.

[1] On September 25, 2014, the Commission instituted public administrative proceedings pursuant to Section 203(f) of the Advisers Act against Respondent David Scott Cacchione.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Cacchione, 49 years old, is a resident of Menlo Park, California. He is a Managing Member, Chief Compliance Officer, and owner of at least fifty percent interest in Montara Capital Management LLC ("Montara"). From 1989 to 2008, Cacchione was a registered representative associated with various registered broker-dealers and lastly with Merriman Curhan Ford & Co. ("Merriman").

2. Montara is a Delaware limited liability company with its principal place of business in Menlo Park, California.

3. On June 25, 2014, Montara filed an application on Form ADV with the Commission for registration as an investment adviser but withdrew its application on July 21, 2014.

4. Based on Cacchione's positions and ownership interest in Montara, and his efforts to remain associated with Montara, Cacchione is, or seeking to be, a "person associated with" an investment adviser as that term is defined in Section 202(a)(17) of the Advisers Act.

5. On March 24, 2009, the Commission filed a complaint alleging violations of the federal securities laws against Cacchione in the civil action entitled Securities and Exchange Commission v. David Scott Cacchione, Civil Action Number 3:09-CV-1259-CRB, in the United States District Court for the Northern District of California. On April 1, 2009, a final judgment was entered by consent against Cacchione, permanently enjoining him from future violations of 17(a) of the Securities Act and Section 10(b) of the Exchange Act and Rule 10b-5 thereunder. Subsequently, on April 22, 2009, the Commission also issued an order barring Cacchione from association with any broker-dealer under Section 15(b) of the Exchange Act. In the Matter of David Scott Cacchione, Exch. Act Release No. 59812, Admin. Proc. File No. 3-13455 (Apr. 22, 2009). In its order, the Commission included findings based upon the complaint's allegations.

6. The complaint alleged, among other things, that from 2007 to 2008, Cacchione supplied account statements of unknowing Merriman customers to William Del Biaggio knowing that Del Biaggio would fraudulently pledge the securities in the accounts as collateral to obtain more than $45 million in personal loans. The Commission's complaint also alleged that Cacchione engaged in a pattern of unauthorized trading in the customers' accounts.

7. On March 31, 2009, Cacchione pleaded guilty to one count of aiding and abetting securities fraud in violation of Title 18 United States Code, Sections 1348 and 2 before the United States District Court for the Northern District of California, in United States v. David Scott Cacchione, Crim. Information No. 3:09-CR-296. On October 13, 2009, a judgment in the criminal case was entered against Cacchione. He was sentenced

to a prison term of five years followed by three years of supervised release and ordered to make restitution in the amount of $47,542,887, jointly and severally with his co-defendant William Del Biaggio. Cacchione was released from custody on June 9, 2014. The joint and several restitution requirement of his sentence has not been fully satisfied.

8. The criminal information to which Cacchione pleaded guilty alleged, among other things, that Cacchione, while he was associated with a broker-dealer, aided and abetted a scheme to defraud lenders in connection with the fraudulent pledge of securities underlying the final judgment described in Paragraph 5 above and the related Commission complaint. Cacchione admitted in his plea agreement that while he was a registered representative with Merriman, (1) he signed falsified account control agreements that falsely gave the appearance that Del Biaggio owned and controlled Merriman clients' accounts when he did not; and (2) he provided account statements belonging to Merriman clients, knowing that Del Biaggio intended to and did falsify the account statements Cacchione provided.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Cacchione's Offer.

Accordingly, it is hereby ORDERED:

Pursuant to Section 203(f) of the Advisers Act, that Respondent Cacchione be, and hereby is barred from association with any investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74379 / February 26, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16407

In the Matter of DIANE GLATFELTER, Respondent.	ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") against Diane Glatfelter ("Glatfelter" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent admits the Commission's jurisdiction over her and the subject matter of these proceedings, and the findings contained in Sections III.2., below, and consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 15(b) of the Securities Exchange Act of 1934, Making Findings and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Glatfelter, age 48, is a resident of Billerica, Massachusetts. In the civil action entitled Securities and Exchange Commission v. K2 Unlimited, Inc., et al., Civil Action Number 1:11-cv-11629, in the United States District Court for the District of Massachusetts, the Commission alleged that Glatfelter offered clients of K2 Unlimited, Inc. and 211 Ventures, LLC securities without being registered as a broker or dealer in accordance with Section 15(b) of the Exchange Act [15 U.S.C. § 78o(b)].

2. On February 13, 2015, a final judgment was entered by consent against Glatfelter, permanently enjoining her from future violations of Sections 5(a), 5(c), and 17(a) of the Securities Act of 1933 ("Securities Act"), Section 10(b) of the Exchange Act and Rule 10b-5 thereunder, and Section 15(a) of the Exchange Act, and imposing an officer and director bar, in the civil action entitled Securities and Exchange Commission v. K2 Unlimited, Inc., et al., Civil Action Number 1:11-cv-11629, in the United States District Court for the District of Massachusetts.

3. The Commission's complaint alleged that Glatfelter, through K2 Unlimited, Inc. and through 211 Ventures, LLC, purported to offer venture capital financing to clients by the use of fictitious instruments called bank guarantees, and also offered clients direct investments in fraudulent and non-existent trading programs, promising high returns and guarantees against loss. The Commission alleged that Glatfelter, with others, defrauded investors of at least $2,225,000 by offering these fictitious investments.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Glatfelter's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 15(b)(6) of the Exchange Act that Respondent Glatfelter be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; and barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

In the Matter of THOMAS EDWARD KENT, Respondent.	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO RULE 102(e) OF THE COMMISSION'S RULES OF PRACTICE, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted against Thomas Edward Kent ("Respondent" or "Kent") pursuant to Rules 102(e)(2) and 102(e)(3)(i) of the Commission's Rules of Practice.[1]

[1] Rule 102(e)(2) provides, in relevant part, that:

> Any attorney who has been suspended or disbarred by a court of the United States or of any State. . . shall be forthwith suspended from appearing or practicing before the Commission. . . .

Rule 102(e)(3)(i) provides, in relevant part, that:

> The Commission, with due regard to the public interest and without preliminary hearing, may, by order, . . . suspend from appearing or practicing before it any attorney . . . who has been by name . . . permanently enjoined by any court of competent jurisdiction, by reason of his or her misconduct in an action brought by the Commission, from violating or aiding and abetting the violation of any provision of the Federal securities laws or of the rules and regulations thereunder.

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Section III.1 and 4 below, which are admitted, Respondent consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Rule 102(e) of the Commission's Rules of Practice, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Kent, age 56, was at all relevant times an attorney licensed to practice in the State of California. Kent was disbarred by the State of California effective August 30, 2014. At all relevant times, Kent was employed at the Law Offices of Lee & Kent in Los Angeles, California. He acted as legal counsel for Nexland, Inc., dba Nexland Investment Group ("Nexland") from at least some time in 2010 to August 2011. He also served as the executive vice president and general counsel of Nexsun Ethanol, LLC ("Nexsun"), and served on its Board of Directors from about 2008 to 2009. Kent resides in Granada Hills, California.

2. Nexland is a California Corporation which was at all relevant times headquartered in Los Angeles, California. Nexland is the managing member of three California limited liability companies which purported to offer investments eligible under the United States Government's EB-5 visa program, which is administered by the United States Citizenship and Immigration Service ("USCIS"), and provides immigrant investors conditional permanent residency status for a two-year period, followed by permanent residency if the required program conditions, including creation of full-time jobs, are met. Nexland was incorporated by Kent at the direction of Justin Moongyu Lee ("J. Lee"), its CEO and president, and a principal of Lee & Kent, and Kent acted as Nexland's legal counsel from 2010 to August 2011.

3. Nexsun is a Kansas limited liability company which was at all relevant times headquartered in Los Angeles, California. Nexsun was created to purportedly operate an ethanol plant in Kansas, which plant was the purported EB-5 eligible investment. At all relevant times, Kent was executive vice president and general counsel of Nexsun. Kent was also on the board of directors of Nexsun in or about 2008 through 2009.

4. On October 15, 2014, a judgment was entered against Kent, permanently enjoining him from future violations of Section 17(a) of the Securities Act of 1933 and Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder, in the civil action entitled

Securities and Exchange Commission v. Justin Moongyu Lee, et al., Civil Action Number 2:14 - CV-06865 RGK, in the United States District Court for the Central District of California.

5. The Commission's complaint alleged, among other things, that Kent participated in the fraudulent EB-5 scheme as follows.

a. Under the EB-5 program, an immigrant who invests capital in a "commercial enterprise" in the United States may petition USCIS and receive conditional permanent residency status for a two-year period. The immigrant must invest at least $500,000 in a "Targeted Employment Area" ("TEA") and thereby create at least ten full-time jobs for United States workers. If the immigrant satisfies these and other conditions within the two-year period, the immigrant may then petition the USCIS for permanent residency. To facilitate investment and job creation within a TEA, the EB-5 program allows entities to apply to USCIS to become approved "regional centers." To become a regional center, the entity must demonstrate, with supporting economic and statistical studies, how it will promote economic growth, including job creation.

b. First, Kent and J. Lee applied to USCIS in 2006 on behalf of Kansas Biofuel Regional Center , LLC ("Kansas Biofuel"), an entity for which they had prepared the business plan, for designation as a "regional center." Kent was the vice president of Kansas Biofuel. Among other representations, Kent and J. Lee claimed to USCIS that there would be "substantial economic benefit" to the area stemming from construction and operation of new ethanol plants by Nexsun, including "thousands" of new jobs.

c. Second, after USCIS approved the designation of Kansas Biofuel as a regional center, Kent and J. Lee created various companies through which to raise monies from immigrant investors. Kent reviewed all of the offering materials, and was thus aware of their content. The Defendants, including Kent, then proceeded to raise millions of dollars from immigrant investors by representing to them that their monies would be used to construct an ethanol plant in Kansas, and that this investment qualified the investors to obtain residency, and ultimately citizenship, in the United States.

d. In fact, however, as Kent knew, the ethanol plant was never built. No jobs were created, and J. Lee and his wife, Rebecca Taewon Lee, misappropriated and misused most of the $11.5 million raised in the offerings. These misuses of investor monies were neither permissible under the EB-5 program nor disclosed to investors.

e. To conceal the fraudulent use of funds and failure to construct the promised ethanol plant and create the jobs contemplated by the EB-5 program, Kent and the Lees submitted various false documents to USCIS. In particular, Kent wrote and signed cover letters for Form I-829 packages submitted to USCIS in 2010 and 2011 petitioning for removal of the conditions on specific investors' residency in the United States, which packages claimed that the job creation requirements of the EB-5 program had been met. Kent reviewed the packages before they were submitted to the USCIS. Those packages included Forms I-9 purporting to identify individual employees to be hired by Nexsun, even though no Nexsun plant had been built, and Nexsun employee lists. The lists were misleading because, among other things, they listed Kent's wife as a full-time Nexsun employee without disclosing that she lived in California, rather than in the Kansas TEA, and because they described her position as "Accountant," when at most she performed clerical functions for Nexsun. Additionally, in response to USCIS Requests for Additional Evidence in support of specific I-829 petitions ("RFEs"), Kent falsely represented that either twenty-one or twenty-six "full time direct jobs" were created by Nexsun as of the date of the investor's I-829 petition, that "construction of Nexsun's refinery is substantially underway and moving towards successful completion," and that the investor petitioner "currently expects that construction will be complete and commercial operations will commence by the first quarter of 2012," when he knew construction had in fact ceased in mid-2008.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanction agreed to in Respondent Kent's Offer.

Accordingly, it is hereby ORDERED, effective immediately, that:

Kent is suspended from appearing or practicing before the Commission as an attorney.

By the Commission.

UNITED STATES OF AMERICA
Before the
SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74386 / February 26, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16409

In the Matter of **Inova Technology, Inc.,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act"), against Inova Technology, Inc. ("Inova" or "Respondent").

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT

1. Inova Technology, Inc. (CIK No. 0001088211) is a defaulted Nevada corporation with a class of securities registered with the Commission pursuant to Section 12(g) of the Exchange Act. Inova has no assets, offices, officers, directors or employees. Inova is delinquent in its periodic filings with the Commission, having not filed its Forms 10-Q for the periods ended October 31, 2013, January 31, 2014, July 31, 2014, and October 31, 2014, or its Form 10-K for the fiscal year ended April 30, 2014. During the relevant period, the common stock of Inova (symbol "INVA") was quoted on OTC Link (previously "Pink Sheets") operated by OTC Markets Group Inc. On September 25, 2014, pursuant to Section 12(k) of the Exchange Act, the Commission suspended trading of Inova's securities for ten business days. Since the trading suspension ended, the company's securities have been traded on the over-the-counter markets in the "Grey Market".

B. DELINQUENT PERIODIC FILINGS

2. As discussed in more detail above, Respondent Inova is delinquent in its periodic filings with the Commission, having repeatedly failed to meet its obligations to file timely periodic reports.

3. Section 13(a) of the Exchange Act, and the rules promulgated thereunder, require issuers of securities registered pursuant to Section 12 of the Exchange Act to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires domestic issuers to file quarterly reports.

4. As a result of the foregoing, Respondent Inova failed to comply with Section 13(a) of the Exchange Act and Rules 13a-1 and 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that a public administrative proceeding be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford Respondent Inova an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke, the registration of each class of securities of Inova registered pursuant to Section 12 of the Exchange Act, and any successor under Rules 12b-2 or 12g-3 of the Exchange Act, and any new corporate names of Respondent Inova.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondent fails to file the directed Answer, or fails to appear at a hearing after being duly notified, the respondent, and any successor under Rules 12b-2 or 12g-3 of the Exchange Act, and any new corporate names of Respondent, may be deemed in default and the proceedings may be determined against it upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondent personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION
(Release No. 34-74387; File No. SR-OCC-2014-813)

February 26, 2015

Self-Regulatory Organizations; The Options Clearing Corporation; Notice of No Objection to Advance Notice Filing, as Modified by Amendment No. 1, Concerning a Proposed Capital Plan for Raising Additional Capital That Would Support The Options Clearing Corporation's Function as a Systemically Important Financial Market Utility

On December 29, 2014, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission ("Commission") the advance notice File No. SR-OCC-2014-813 pursuant to Section 806(e)(1)(A) of the Payment, Clearing, and Settlement Supervision Act of 2010 ("Payment, Clearing and Settlement Supervision Act")[1] and Rule 19b-4(n)(1)(i) under the Securities Exchange Act of 1934 ("Act").[2] On January 14, 2015, OCC filed Amendment No. 1 to the advance notice.[3] The advance

1 12 U.S.C. 5465(e)(1)(A). The Financial Stability Oversight Council designated OCC a systemically important financial market utility on July 18, 2012. *See* Financial Stability Oversight Council 2012 Annual Report, Appendix A, http://www.treasury.gov/initiatives/fsoc/Documents/2012%20Annual%20Report.pdf. Therefore, OCC is required to comply with the Payment, Clearing and Settlement Supervision Act and file advance notices with the Commission.

2 17 CFR 240.19b-4(n)(1)(i). As the Commission noted in the notice of filing of the advance notice, as modified by Amendment No. 1, OCC stated that the purpose of this proposal is, in part, to facilitate compliance with proposed Commission rules and address Principle 15 of the Principles for Financial Market Infrastructures ("PMFIs"). The proposed Commission rules are pending. *See* Securities Exchange Act Release No. 71699 (March 12, 2014), 79 FR 29508 (May 22, 2014) (S7-03-14). Therefore, the Commission has evaluated this advance notice under the Payment, Clearing and Settlement Supervision Act and the rules currently in force thereunder. *See* Securities Exchange Act Release No. 74202 (February 4, 2015), 80 FR 7056 (February 9, 2015) (SR-OCC-2014-813) at note 3.

3 According to OCC, OCC filed Amendment No. 1 to: (i) update OCC's plan for raising additional capital ("Capital Plan") in connection with negotiations between OCC and the options exchanges that own equity in OCC ("Stockholder Exchanges" or "stockholders") and that would contribute additional capital under

notice was published for comment in the Federal Register on February 9, 2015.[4] The Commission received eight comment letters on OCC's proposal.[5] This publication serves as a notice of no objection to proposal discussed in the advance notice.

Kramer on behalf of Belvedere Trading, CTC Trading Group, IMC Financial Markets, Integral Derivatives, Susquehanna Investment Group, and Wolverine Trading, (February 20, 2015) ("MM Letter"); Letter from Ellen Greene, Managing Director, Financial Services Operations, SIFMA, (February 20, 2015) ("SIFMA Letter"); Letter from James E. Brown, General Counsel, OCC, (February 23, 2015) (responding to BATS Letter and BOX Letter) ("OCC Letter I"); Letter from James E. Brown, General Counsel, OCC, (February 23, 2015) (responding to MM Letter) ("OCC Letter II"); Letter from Barbara J. Comly, Executive Vice President, General Counsel & Corporate Secretary, Miami International Securities Exchange, LLC (February 24, 2015) ("MIAX Letter"); Letter from James E. Brown, General Counsel, OCC, (February 24, 2015) (responding to SIFMA Letter) ("OCC Letter III"). Since the proposal was filed as both an advance notice and proposed rule change, the Commission considered all comments received on the proposal, regardless of whether the comments were submitted to the proposed rule change or advance notice. In its assessment of the advance notice, the Commission assessed whether the issues raised by the commenters relate to the level or nature of risks presented to OCC by the Capital Plan. *See* comments on the advance notice (File No. SR-OCC-2014-813), http://www.sec.gov/comments/sr-occ-2014-813/occ2014813.shtml and comments on the proposed rule change (File No. SR-OCC-2015-02), http://www.sec.gov/comments/sr-occ-2015-02/occ201502.shtml.

I. Description of the Advance Notice

Pursuant to this advance notice, OCC is implementing a Capital Plan under which the Stockholder Exchanges will make an additional capital contribution and commit to replenishment capital ("Replenishment Capital") in circumstances discussed below, and will receive, among other things, the right to receive dividends from OCC. In addition to the additional capital contribution and Replenishment Capital, the main features of the Capital Plan include: (i) a policy establishing OCC's clearing fees at a level that would be sufficient to cover OCC's estimated operating expenses plus a "business risk buffer" as described below ("Fee Policy"), (ii) a policy establishing the amount of the annual refund to clearing members of OCC's fees ("Refund Policy"), and (iii) a policy for calculating the amount of dividends to be paid to the options exchanges owning equity in OCC ("Dividend Policy"). OCC stated that it intends to implement the Capital Plan on or about February 27, 2015, subject to all necessary regulatory approvals.[6]

OCC states in its proposal that it is implementing this Capital Plan, in part, to increase significantly OCC's capital in connection with its increased responsibilities as a systemically important financial market utility. OCC's proposal includes an infusion of substantial additional equity capital by the Stockholder Exchanges to be made prior to February 27, 2015, subject to regulatory approval, that when added to retained earnings accumulated by OCC in 2014 will significantly increase OCC's capital levels as compared to historical levels. Additionally, the proposed change includes the Replenishment Capital commitment, which will provide OCC with access to additional

6 OCC filed a proposed rule change seeking approval of changes to its By-Laws, Certificate of Incorporation and relevant agreements, including its Stockholders Agreement, necessary to implement the Capital Plan. *See supra* note 4.

equity contributed by the Stockholder Exchanges should OCC's equity fall close to or below the amount that OCC determines to be appropriate to support its business and manage business risk.

A. Background

OCC is a clearing agency registered with the Commission and is also a derivatives clearing organization ("DCO") regulated in its capacity as such by the Commodity Futures Trading Commission ("CFTC"). OCC is a Delaware business corporation and is owned equally by the Stockholder Exchanges, five national securities exchanges for which OCC provides clearing services.[7] In addition, OCC provides clearing services for seven other national securities exchanges that trade options ("Non-Stockholder Exchanges"). In its capacity as a DCO, OCC provides clearing services to four futures exchanges. OCC also has been designated systemically important by the Financial Stability Oversight Council pursuant to the Payment, Clearing and Settlement Supervision Act, and the Commission is OCC's "Supervisory Agency" under Section 803(8) of the Payment, Clearing and Settlement Supervision Act.[8]

According to OCC, it has devoted substantial efforts during the past year to: 1) develop a 5-year forward looking model of expenses; 2) quantify maximum recovery and wind-down costs under OCC's recovery and wind-down plan; 3) assess and quantify OCC's operational and business risks; 4) model projected capital accumulation taking into account varying assumptions concerning business conditions, fee levels, buffer margin levels and refunds; and 5) develop an effective mechanism that provides OCC

7 The Stockholder Exchanges are: Chicago Board Options Exchange, Incorporated; International Securities Exchange, LLC; NASDAQ OMX PHLX LLC; NYSE MKT LLC; and NYSE Arca, Inc.

8 12 U.S.C. 5462(8).

access to replenishment capital in the event of losses. Incorporating the results of those efforts, the Capital Plan is intended to provide OCC with the means to increase its stockholder equity.

B. OCC's Projected Capital Requirement

According to OCC, using the methods described in detail below, OCC will annually determine a target capital requirement consisting of (i) a baseline capital requirement equal to the greatest of (x) six months operating expenses for the following year, (y) the maximum cost of the recovery scenario from OCC's recovery and wind-down plan, and (z) the cost to OCC of winding down operations as set forth in the recovery and wind-down plan ("Baseline Capital Requirement"), plus (ii) a target capital buffer linked to plausible loss scenarios from operational risk, business risk and pension risk ("Target Capital Buffer") (collectively, "Target Capital Requirement"). OCC determined that the appropriate Target Capital Requirement is $247 million, reflecting a Baseline Capital Requirement of $117 million, which is equal to six months of projected operating expenses, plus a Target Capital Buffer of $130 million. This Target Capital Buffer would provide a significant capital cushion to offset potential business losses.

According to OCC, it had total shareholders' equity of approximately $25 million as of December 31, 2013,[9] meaning that OCC proposes to add additional capital of $222 million to meet its 2015 Target Capital Requirement. OCC determined that a viable plan for Replenishment Capital should provide for a replenishment capital amount which

---

9 *See* OCC 2013 Annual Report, Financial Statements, Statements of Financial Condition, available on OCC's website, http://optionsclearing.com/components/docs/about/annual-reports/occ_2013_annual_report.pdf.

would give OCC access to additional capital as needed up to a maximum of the Baseline Capital Requirement ("Replenishment Capital Amount").[10] Therefore, OCC's Capital Plan will include the following in order to provide OCC in 2015 with ready access to approximately $364 million in equity capital:

Baseline Capital Requirement	$117,000,000
Target Capital Buffer	$130,000,000
Target Capital Requirement	$247,000,000
Replenishment Capital Amount	$117,000,000
Total OCC Capital Resources	$364,000,000

C. Procedures Followed in Order to Determine Capital Requirement

According to OCC, various measures were used in determining the appropriate level of capital. An outside consultant conducted a "bottom-up" analysis of OCC's risks and quantified the appropriate amount of capital to be held against each risk. The analysis was comprehensive across risk types, including credit, market, pension, operation, and business risk. Based on internal operational risk scenarios and loss modeling at or above the 99% confidence level, OCC's operational risk was quantified at $226 million and pension risk at $21 million, resulting in the total Target Capital Requirement of $247 million. Business risk was addressed by taking into consideration that OCC has the ability to fully offset potential revenue volatility and manage business risk to zero by adjusting the levels at which fees and refunds are set and by adopting a Business Risk Buffer of 25% when setting fees. Other risks, such as counterparty risk and on-balance sheet credit and market risk, were considered to be immaterial for

10 The obligation to provide Replenishment Capital will be capped at $200 million, which OCC projects will account for increases in its capital requirements for the foreseeable future.

purposes of requiring additional capital based on means available to OCC to address those risks that did not require use of OCC's capital. As discussed in more detail below in the context of OCC's Fee Policy, the Business Risk Buffer of 25% is achieved by setting OCC's fees at a level intended to achieve target annual revenue that will result in a 25% buffer for the year after paying all operating expenses.

Additionally, OCC determined that its maximum recovery costs would be $100 million and projected wind-down costs would be $73 million. OCC projected its expenses for 2015 will be $234 million, so that six months projected expenses are $234 million/2 = $117 million. The greater of recovery or wind-down costs and six months of operating expenses is therefore $117 million, and OCC's Baseline Capital Requirement (minimum regulatory requirement) is therefore $117 million. According to OCC, it then computed the appropriate amount of a Target Capital Buffer from operational risk, business risk, and pension risk, resulting in a determination that the current Target Capital Buffer should be $130 million. Thus, the Target Capital Requirement is $117 million + $130 million = $247 million.

D. Overview of, and Basis for, OCC's Proposal to Acquire Additional Equity Capital

According to OCC, in order to meet its Target Capital Requirement, and after consideration of alternatives, OCC's Board of Directors approved a proposal from OCC's Stockholder Exchanges pursuant to which OCC would meet its Target Capital Requirement of $247 million in early 2015 as follows:

Shareholders' Equity as of 1/1/2014	$ 25,000,000
Shareholders Equity Accumulated Through Retained Earnings[11]	$ 72,000,000
Additional Contribution from Stockholder Exchanges	$150,000,000
Target Capital Requirement	$247,000,000
Replenishment Capital Amount	$117,000,000
Total OCC Capital Resources	$364,000,000

The additional contribution of the Stockholder Exchanges will be made in respect of their Class B Common Stock on a *pro rata* basis. The Stockholder Exchanges will also commit to provide additional equity capital up to the Replenishment Capital Amount, which is currently $117 million, in the event Replenishment Capital is needed. While the Replenishment Capital Amount will increase as the Baseline Capital Requirement increases, under OCC's proposal, it would be capped at a total of $200 million, which could be outstanding at any point in time. OCC estimates that the Baseline Capital Requirement will not exceed this amount before 2022. When the limit is being approached, OCC will revise the Capital Plan as needed to address future needs. In consideration for their capital contributions and replenishment commitments, the Stockholder Exchanges will receive dividends as described in the Dividend Policy discussed below for so long as they remain stockholders, and maintain their contributed capital and commitment to replenish capital up to the Replenishment Capital Amount, subject to the $200 million cap.

11 According to OCC, "the $72 million is after giving effect to the approximately $40 million refund" expected to be made for 2014. Securities Exchange Act Release No. 74202 (February 4, 2015), 80 FR 7056, 7058 at note 15 (February 9, 2015) (SR-OCC-2014-813).

E. Fee, Refund, and Dividend Policies

Upon reaching the Target Capital Requirement, the Capital Plan requires OCC to set its fees at a level that utilizes a Business Risk Buffer of 25%. The purpose of this Business Risk Buffer is to ensure that OCC accumulates sufficient capital to cover unexpected fluctuations in operating expenses, business capital needs, and regulatory capital requirements. Furthermore, the Capital Plan requires OCC to maintain Fee, Refund, and Dividend Policies, described in more detail below, which are designed to ensure that OCC's shareholders' equity remains well above the Baseline Capital Requirement.

The required Business Risk Buffer of 25% is below OCC's 10-year historical pre-refund average buffer of 31%. The target will remain 25% so long as OCC's shareholders' equity remains above the Target Capital Requirement amount. The reduction in buffer margin from OCC's 10-year average of 31% to 25% reflects OCC's commitment to operating as an industry utility and ensuring that market participants benefit as much as possible from OCC's operational efficiencies in the future. This reduction will permit OCC to charge lower fees to market participants rather than maximize refunds to clearing members and dividend distributions to Stockholder Exchanges. OCC will review its fee schedule on a quarterly basis to manage revenue as closely to this target as possible.[12] For example, if the Business Risk Buffer is materially above 25% after the first quarter of a particular year, OCC may decrease fees for the

12 If OCC's fee schedule needs to be changed in order to achieve the 25% Business Risk Buffer, OCC would file a proposed rule change seeking approval of the revised fee schedule.

remainder of the year, and conversely if the Business Risk Buffer is materially below 25% at this time, OCC may increase fees for the remainder of the year.

The Capital Plan will allow OCC to refund approximately $40 million from 2014 fees to clearing members in 2015 and to reduce fees in an amount to be determined by OCC's Board of Directors, effective in the second quarter of 2015. OCC will announce new fee levels early in 2015 and will make such fees effective following notification to clearing members, making any necessary filings, and receiving any necessary approvals from the Commission. OCC will endeavor to provide clearing members with no less than 60-day notice in advance of the effectiveness of changes to fee levels, particularly those that result in increases to fee levels. No dividends will be declared until December 2015 and no dividends will be paid until 2016.

Changes to the Fee, Refund or Dividend Policies will require the affirmative vote of two-thirds of the directors then in office and approval of the shareholders of all of OCC's outstanding Class B Common Stock. The formulas for determining the amount of refunds and dividends under the Refund and Dividend Policies, respectively, which are described in more detail below, are based on, among other things, the current tax treatment of refunds as a deductible expense. The Refund and Dividend Policies will provide that in the event that refunds payable under the Refund Policy are not tax deductible, the policies would be amended to restore the relative economic benefits between the recipients of the refunds and the Stockholder Exchanges.

1. Fee Policy

Under the Fee Policy, in setting fees each year, OCC will calculate an annual revenue target based on a forward twelve months expense forecast divided by the difference between one and the Business Risk Buffer of 25% (*i.e.*, OCC will divide the expense forecast by .75). Establishing a Business Risk Buffer at 25% will allow OCC to manage the risk that fees may generate less revenue than expected due to lower-than-expected trading volume or other factors, or that expenses may be higher than projected. The Fee Policy also will include provisions from existing Article IX, Section 9, of OCC's By-Laws to effectively state that the fee schedule also may include additional amounts necessary to (i) maintain such reserves as are deemed reasonably necessary by OCC's Board of Directors to provide facilities for the conduct of OCC's business and to conduct development and capital planning activities in connection with OCC's services to the options exchanges, clearing members and the general public, and (ii) accumulate such additional surplus as the Board of Directors may deem advisable to permit OCC to meet its obligations to clearing members and the general public. However, OCC states that these provisions will be used only in extraordinary circumstances and to the extent that the Board of Directors has determined that the required amount of such additional reserves or additional surplus will exceed the full amount that will be accumulated through the Business Risk Buffer (prior to payment of refunds or dividends) so OCC's fees will ordinarily be based on its projected operating expenses and the Business Risk Buffer of 25%.

Under the advance notice proposal, OCC will use the following formula to calculate its annual revenue target as follows:

Annual Revenue Target = Forward 12 Months Expense Forecast/(1-.25).

Because OCC's clearing fee schedules typically reflect different rates for different categories of transactions, fee projections will include projections as to relative volume in each such category. The clearing fee schedule will therefore be set to achieve a blended or average rate per contract sufficient, when multiplied by total projected contract volume, to achieve the Annual Revenue Target. Under extraordinary circumstances, OCC will add any amount determined to be necessary for additional reserves or surplus and divide the resulting number by the projected contract volume to determine the applicable average fee per cleared contract needed to achieve the additional amounts required. Consistent with past practice, OCC will notify its clearing members of the fees OCC determines it will apply for any particular period by describing the change in an information memorandum distributed to all clearing members. Consistent with past practice, OCC also will notify regulators of the fees it determines would apply for any particular period by filing an amendment to its schedule of fees as a proposed rule change for immediate effectiveness under Section 19(b)(3)(A) of the Act and Rule 19b-4(f)(2) thereunder.

2. *Refund Policy*

Under the Refund Policy, except at a time when Replenishment Capital is outstanding as described below, OCC will declare a refund to clearing members in December of each year, beginning in 2015, in an amount equal to 50% of the excess, if any, of (i) the pre-tax income for the year prior to the refund over (ii) the sum of (x) the amount of pre-tax income after the refund necessary to produce after-tax income sufficient to maintain shareholders' equity at the Target Capital Requirement for the following year plus (y) the amount of pre-tax income after the refund necessary to fund any additional reserves or additional surplus not already included in the Target Capital Requirement. Such refund will be paid in the year following the declaration after the issuance of OCC's audited financial statements, provided that (i) the payment does not result in total shareholders' equity falling below the Target Capital Requirement, and (ii) such payment is otherwise permitted by applicable Delaware law and applicable federal laws and regulations. OCC will not be able to pay a refund on a particular date unless dividends were paid on the same date. If Replenishment Capital has been contributed and remains outstanding, OCC will not pay refunds until such time as the Target Capital Requirement is restored through the accumulation of retained earnings. Refunds in accordance with the Refund Policy will resume once the Target Capital Requirement is restored and all Replenishment Capital is repaid in full, provided that the restoration of the Target Capital Requirement and the repayment of Replenishment Capital occurred within 24 months of the issuance date of the Replenishment Capital. If within 24 months of the issuance date of any Replenishment Capital, such Replenishment Capital has not been repaid in full or shareholders' equity has not been restored to the Target Capital Requirement, OCC will no longer pay refunds to clearing members, even if the Target Capital Requirement is restored and all Replenishment Capital is repaid at a later date.

3. Dividend Policy

The Dividend Policy provides that, except at a time when Replenishment Capital is outstanding, OCC will declare a dividend on its Class B Common Stock in December of each year in an aggregate amount equal to the excess, if any, of (i) after-tax income for the year, after application of the Refund Policy (unless the Refund Policy has been eliminated, in which case the refunds shall be deemed to be $0) over (ii) the sum of (A) the amount required to be retained in order to maintain total shareholders' equity at the Target Capital Requirement for the following year, plus (B) the amount of any additional reserves or additional surplus not already included in the Target Capital Requirement. Such dividend will be paid in the year following the declaration after the issuance of OCC's audited financial statements, provided that (i) the payment does not result in total shareholders' equity falling below the Target Capital Requirement, and (ii) such payment is otherwise permitted by applicable Delaware law and applicable federal laws and regulations. If Replenishment Capital has been contributed and remains outstanding, OCC would not pay dividends until such time as the Target Capital Requirement is restored.

F. OCC's Status as an Industry Utility

According to OCC, OCC has always been operated on an "industry utility" model. The Stockholder Exchanges have contributed only minimal capital to OCC.[13] OCC's By-Laws currently require that OCC set its clearing fees at a level that is designed to cover operating expenses and to maintain such reserves and accumulate such additional capital as are deemed reasonably necessary for OCC to meet its obligations to its clearing members and the public. Clearing fees that are collected in excess of these amounts are refunded annually on a *pro rata* basis to the clearing members that paid them. Under this model, OCC has never paid dividends to the Stockholder Exchanges, but has paid significant refunds to clearing members each year. OCC is aware that some portion of those refunds may not be passed through by the clearing members to their end user customers. Accordingly, OCC believes that by adopting an approach that pays

[13] According to OCC, its common stock and paid in capital total $2,659,999. *See* OCC 2013 Annual Report, Financial Statements, Statements of Financial Condition, available on OCC's website, http://optionsclearing.com/components/docs/about/annual-reports/occ_2013_annual_report.pdf.

dividends to the Stockholder Exchanges, which have invested a significant amount of additional capital ($150 million), but that reduces the historical pre-refund average buffer of 31% by adopting a Business Risk Buffer of 25%, the approach outlined in its Capital Plan maintains, and perhaps better aligns with, an industry utility model.

According to OCC, given the very large increase in capital that OCC has determined to be appropriate and to meet the increased responsibilities imposed upon it as a systemically important financial market utility, OCC has decided that the best alternative available to it is to obtain a substantial further capital contribution from the Stockholder Exchanges. OCC believes that this cannot be accomplished without modification of the past practice of not providing dividends to stockholders. Accordingly, OCC is establishing a new Fee Policy, Refund Policy, and Dividend Policy. Because of the Business Risk Buffer being set at 25%, the combination of the Fee, Refund and Dividend Policies will effectively cap the dividends to be paid to the Stockholder Exchanges at a level that OCC's Board of Directors (with the advice of outside financial experts) has determined results in a reasonable rate of return on contributed capital, particularly in comparison to the implied cost of capital to the clearing members and their customers of an alternative approach considered by the Board of Directors that would require the accumulation of retained earnings through higher fees and no refunds for several years. OCC will continue to refund a percentage of excess clearing fees to clearing members, thereby benefiting both clearing members and their customers.

OCC believes that the Capital Plan therefore effectively preserves OCC's industry utility model of providing its services in an efficient manner, while also enhancing the benefits to the end user customers by charging lower initial fees due to the decrease in the buffer margin from OCC's 10-year average of 31% to 25%. OCC states that it believes clearing members and customers will benefit from the proposed Capital Plan because the plan will allow OCC to continue to provide clearing services at low cost, including through a significant refund of 2014 fees, a reduction of fees beginning in 2015 and projected continuing refunds and lower fees for the foreseeable future.

According to OCC, it believes that Stockholder Exchanges will benefit from the dividend they receive and, perhaps more importantly, they will be assured that OCC is in a position to provide clearing services for their markets on an on-going basis within the same basic structure that has served these markets well since their inception and without the need to radically change the structure to address potential demands of outside equity investors. Non-Stockholder Exchanges also will benefit by continuing to receive OCC's clearing services for their products on the same basis as they presently do.[14]

OCC also believes that the Capital Plan will better align the interests of Stockholder Exchanges and clearing members with respect to expenses, because changes to the level of operating expenses directly affect the Target Capital Requirement. In short, OCC believes that the present proposal represents a fair and reasonable balancing of the interests of the Stockholder Exchanges, the other exchanges for which OCC provides clearing services, clearing members, customers, and the general public while providing an immediate infusion of capital and a structure within which OCC can meet its obligations to the public as a systemically important financial market utility.

14 According to OCC, Non-Stockholder Exchanges contribute capital by purchasing a promissory note in the principal amount of $1,000,000. *See* Section 2 of Article VIIB of OCC's By-Laws. The required Capital Contribution of Non-Stockholder exchanges will not change under the Capital Plan.

G. Replenishment Capital Plan

OCC is establishing a Replenishment Capital Plan whereby OCC's Stockholder Exchanges are obligated to provide on a *pro rata* basis a committed amount of Replenishment Capital should OCC's total shareholders' equity fall below the hard trigger, as described below.[15] The aggregate committed amount for all five Stockholder Exchanges in the form of Replenishment Capital that could be outstanding at any time will be capped at the excess of (i) the lesser of (A) the Baseline Capital Requirement, which is currently $117 million, at the time of the relevant funding, or (B) $200 million, over (ii) amounts of outstanding Replenishment Capital ("Cap Formula"). The $200 million figure in the Cap Formula takes into account projected growth in the Baseline Capital Requirement for the foreseeable future. The commitment to provide Replenishment Capital will not be limited by time, but rather only by the Cap Formula. Replenishment Capital will be called in whole or in part after the occurrence of a "hard trigger" event described below. If the Baseline Capital Requirement approaches or exceeds $200 million, OCC's Board of Directors may consider, as part of its annual review of the Replenishment Capital Plan, alternative arrangements to obtain replenishment capital in excess of the $200 million committed under the Replenishment Capital Plan. In addition, the Refund Policy and the Dividend Policy will provide that, in the absence of obtaining any such alternative arrangements, the amount of the difference will be subtracted from amounts that would otherwise be available for the payment of refunds and dividends.

15 The Replenishment Capital Plan is a component of the Capital Plan.

Replenishment Capital contributed to OCC under the Replenishment Capital Plan will take the form of a new class of common stock ("Class C Common Stock") of OCC to be issued to the Stockholder Exchanges solely in exchange for Replenishment Capital contributions.

The Replenishment Capital Plan is a component of OCC's overall Capital Plan. In implementing the Replenishment Capital Plan, OCC's management would monitor OCC's levels of shareholders' equity to identify certain triggers, or reduced capital levels, that might require action. OCC has identified two key triggers – a soft trigger and a hard trigger – and proposes that OCC will take certain steps upon the occurrence of either. The "soft trigger" for re-evaluating OCC's capital will occur if OCC's shareholders' equity falls below the sum of (i) the Baseline Capital Requirement and (ii) 75% of the Target Capital Buffer. The soft trigger will be a warning sign that OCC's capital had fallen to a level that requires attention and responsive action to prevent it from falling to unacceptable levels. Upon a breach of the soft trigger, OCC's senior management and OCC's Board of Directors will review alternatives to increasing capital, and take appropriate action as necessary, including increasing fees or decreasing expenses, to restore shareholders' equity to the Target Capital Requirement.

The "hard trigger" for making a mandatory Replenishment Capital call will occur if shareholders' equity falls below 125% of the Baseline Capital Requirement ("Hard Trigger Threshold"). OCC considers that a breach of the Hard Trigger Threshold is a sign that significant corrective action, with a more immediate impact than increasing fees or decreasing expenses, should be taken to increase OCC's capital, either as part of a recovery plan or a wind-down plan for OCC's business. OCC's shareholders' equity will have to fall more than $100,000,000 below the fully funded capital amount described above in order to breach the Hard Trigger Threshold. As a result, OCC views the breach of the Hard Trigger Threshold as unlikely and occurring only as a result of a significant, unexpected event. In the event of such a breach, OCC's Board of Directors must determine whether to attempt a recovery, a wind-down of OCC's operations, or a sale or similar transaction, subject in each case to any necessary stockholder consent.[16] If the Board of Directors decides to wind-down OCC's operations, OCC will access the Replenishment Capital in an amount sufficient to fund the wind-down, as determined by the Board and subject to the Cap Formula. If the Board of Directors decides to attempt a recovery of OCC's capital and business, OCC will access the Replenishment Capital in an amount sufficient to return shareholders' equity to an amount equal to $20 million above the Hard Trigger Threshold, subject to the Cap Formula.

While Replenishment Capital is outstanding, no refunds or dividends will be paid and, if any Replenishment Capital remains outstanding for more than 24 months or the Target Capital Requirement is not restored during that period, changes to how OCC calculates refunds and dividends may be necessary (as described in more detail in OCC's Refund Policy and Dividend Policy). In addition, while Replenishment Capital is outstanding, OCC will first utilize the entire amount of available funds to repurchase, on a *pro rata* basis from each Stockholder Exchange, to the extent permitted by applicable Delaware and federal law and regulations, outstanding shares of Class C Common Stock as soon as practicable after completion of the financial statements following the end of

16 The requirement for stockholder consent would arise under OCC's Restated Certificate of Incorporation, which would provide that any decision to attempt a recovery would require separate approval by the stockholders, while a decision to wind-down would require separate approval by the stockholders.

each calendar quarter at a price equal to the original amount paid for such shares, plus an additional "gross up" amount to compensate the holders of the Class C Common Stock for taxes on dividend income (if any) that they may have to recognize as a result of such repurchase.[17] For this purpose, "Available Funds" will equal, as of the end of any calendar quarter, the excess, if any, of (x) shareholders' equity over (y) the Minimum Replenishment Level. The "Minimum Replenishment Level" will mean $20 million above the Hard Trigger Threshold, so that OCC's shareholders' equity will remain at or above the Minimum Replenishment Level after giving effect to the repurchase.

According to OCC, the capital base described above will permit OCC to hold at all times cash and other assets of high quality and sufficiently liquid to allow OCC to meet its current and projected operating expenses under a range of scenarios, including adverse market conditions. OCC expects it will hold at all times liquid net assets funded by equity sufficient to cover potential general business losses so that OCC can continue operations and services as a going concern if those losses materialize, which assets will always be greater than either (x) six months of the covered clearing agency's current operating expenses, or (y) the amount determined by the Board of Directors to be sufficient to ensure a recovery or orderly wind-down of critical operations and services. These assets will be held in addition to resources held to cover participant defaults, among other risks.[18]

---

17 According to OCC, based on current federal tax rates, if the full amount of the payment is classified as a dividend and the recipient is entitled to a dividends received deduction, this gross up is estimated to be approximately 12% of the payment.

18 OCC stated that these assets will be held in addition to resources held to cover participant defaults or other risks covered under certain credit risk standards and

II. Summary of Comments Received

The Commission received five comment letters on OCC's proposal and three comment letters from OCC responding to the issues raised by the commenters.[19] Three of the five commenters generally supported OCC's need to raise additional capital,[20] but all five commenters opposed how the Capital Plan raised the additional capital.[21] After careful review of those comments, the Commission has determined that most of the issues raised by the commenters do not relate to the nature or level of risks presented by OCC.

One commenter, however, raised the issue that the Replenishment Capital Plan may create a misalignment of interests between the exchanges and clearing members, which could in turn create an imbalance in the management of certain risks.[22] Specifically, this commenter stated that because no refunds are paid to clearing members while any portion of that Replenishment Capital remains outstanding and that refunds are discontinued permanently if the Replenishment Capital remains outstanding for two years, the plan effectively uses the fees to maximize and prioritize the dividends payable to the Stockholder Exchanges, which is at the expense of the clearing

liquidity risk standards set forth in proposed Commission rules. *See* Securities Exchange Act Release No. 74202 (February 4, 2015), 80 FR 7056 (February 9, 2015) (SR-OCC-2014-813).

19 The Commission received one comment letter on the proposed rule change and advance notice (*See* SIFMA Letter) and four comment letters on the proposed rule change only (*See* BOX Letter; BATS Letter; MM Letter; and MIAX Letter). *See supra* note 5.

20 *See* BOX Letter; SIFMA Letter; and MM Letter.

21 *See* BOX Letter; SIFMA Letter; BATS Letter; MM Letter; and MIAX Letter.

22 *See* SIFMA Letter.

members.[23] Further, this commenter notes that the proposed amendments to OCC's By-Laws would allow the Stockholder Exchanges to manage the risk of their Replenishment Capital being required by determining whether retained earnings could be used to compensate for a loss or deficiency in the clearing fund, thereby also allowing the Stockholder Exchanges to determine to fund clearing fund deficiencies through additional retained earnings rather than risk having to fund their required Replenishment Capital commitment.[24] As a result, this commenter believes that the Replenishment Capital Plan may create a misalignment of interests between the Stockholder Exchanges and clearing members, which could in turn create an imbalance in the management of certain risks.[25]

OCC asserts in its response that these concerns regarding Replenishment Capital are misplaced.[26] OCC contends that its By-Laws provide that in lieu of charging a loss or deficiency proportionately to the clearing fund computed contributions of non-defaulting clearing members, OCC may, in its discretion, and subject to the unanimous approval of the holders of Class A Common Stock and Class B Common Stock, elect to charge such loss or deficiency in whole or in part to OCC's current earning or retained earnings.[27] Accordingly, OCC considers the net effect of its Replenishment Capital Plan to be simply a timing effect, with Replenishment Capital treated as an advance against the refunds to

---

23 *Id.*

24 *Id.*

25 *Id.*

26 *See* OCC Letter III.

27 *Id.*

which Stockholder Exchanges otherwise would have been entitled.[28] OCC contends that it is neither the purpose nor the effect of the Replenishment Capital Plan to shift the potential loss from a clearing member default, which has always been mutualized, so long as OCC remains solvent.[29]

III. Discussion and Commission Findings

Although the Payment, Clearing and Settlement Supervision Act does not specify a standard of review for an advance notice, its stated purpose is instructive.[30] The stated purpose is to mitigate systemic risk in the financial system and promote financial stability by, among other things, promoting uniform risk management standards for systemically-important financial market utilities and strengthening the liquidity of systemically important financial market utilities.[31]

Section 805(a)(2) of the Payment, Clearing and Settlement Supervision Act[32] authorizes the Commission to prescribe risk management standards for the payment, clearing, and settlement activities of designated clearing entities and financial institutions engaged in designated activities for which it is the supervisory agency or the appropriate financial regulator. Section 805(b) of the Payment, Clearing and Settlement Supervision

29 *Id.*

30 *See* 12 U.S.C. 5461(b).

31 *Id.*

32 12 U.S.C. 5464(a)(2).

Act[33] states that the objectives and principles for the risk management standards prescribed under Section 805(a) shall be to:

- promote robust risk management;
- promote safety and soundness;
- reduce systemic risks; and
- support the stability of the broader financial system.

After carefully considering OCC's proposal, the comments received, and OCC's responses thereto, the Commission finds that OCC's Capital Plan is consistent with the objectives and principles described in Section 805(b) of the Payment, Clearing and Settlement Supervision Act.[34]

While most of the issues raised by the commenters do not relate to the nature or level of risks presented by OCC, one commenter raised a specific concern with respect to OCC's Replenishment Capital Plan. The Commission, however, believes that OCC's Capital Plan, when considered in its totality, does not adversely change the nature or level of risks presented by OCC. Although this commenter alleged a potential misalignment of interests between the Stockholder Exchanges and clearing members when Replenishment Capital is outstanding, decisions made regarding the capitalization of OCC are made by the Board of Directors. OCC's By-Laws address the use of capital to cover clearing member defaults in lieu of using the clearing fund and address the power of the Board of Directors to make decisions in such circumstances. Further, the Board of Directors' obligations under corporate law will require the Board of Directors to revisit on a

---

33 12 U.S.C. 5464(b).

34 *Id.*

periodic basis material provisions of the Capital Plan in the future, including those related to decisions regarding Replenishment Capital, and to review any credible new capital proposals that may be brought forward by management or members of the Board of Directors from time to time. The Commission believes such processes create a reasonable expectation that the potential concerns described by the commenter can be controlled by OCC, and therefore the Commission agrees with OCC that the commenter's contentions regarding the purpose and use of the Replenishment Capital are misplaced.

The Capital Plan will provide OCC with an immediate injection of capital and future committed capital to help ensure that it can continue to provide its clearing services if it suffers business losses as a result of a decline in revenues or otherwise. Given that OCC has been designated as a systemically important financial market utility, OCC's ability to provide its clearing services if it suffers business losses contributes to reducing systemic risks and supporting the stability of the broader financial system. In so doing, OCC's Capital Plan is consistent with the objectives of Section 805(b) of the Payment, Clearing and Settlement Supervision Act,[35] which are to promote robust risk management, promote safety and soundness, reduce systemic risks, and support the stability of the broader financial system.

[35] 12 U.S.C. 5464(b).

IV. Conclusion

IT IS THEREFORE NOTICED, pursuant to Section 806(e)(1)(I) of the Payment, Clearing and Settlement Supervision Act,[36] that the Commission DOES NOT OBJECT to advance notice proposal (File No. SR-OCC-2014-813) and that OCC is AUTHORIZED to implement the proposal as of the date of this notice or the date of an order by the Commission approving a proposed rule change that reflects rule changes that are consistent with this advance notice proposal (File No. SR-OCC-2015-02), whichever is later.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74391 / February 27, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16410

In the Matter of **Agent155 Media Corp.,** **QSound Labs, Inc.,** **STEN Corp., and** **Wind Energy America, Inc.,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against Respondents Agent155 Media Corp., QSound Labs, Inc., STEN Corp., and Wind Energy America, Inc.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS

1. Agent155 Media Corp. (CIK No. 1389405) is a Nevada corporation located in Denver, Colorado with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Agent155 Media is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended September 30, 2011, which reported a net loss of $364,327 for the prior nine months. As of February 12, 2015, the company's stock (symbol "AGMC") was quoted on OTC Link, (previously, "Pink Sheets") operated by OTC Markets Group, Inc. ("OTC Link"), had eleven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

2. QSound Labs, Inc. (CIK No. 840518) is an Alberta corporation located in Calgary, Alberta, Canada with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). QSound Labs is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 20-F for the period ended December 31, 2007, which reported a net loss of $1,306,067 for the prior twelve months. As of February 12, 2015, the company's stock (symbol "QSND") was quoted on OTC Link, had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. STEN Corp. (CIK No. 350557) is a Minnesota corporation located in Minnetonka, Minnesota with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). STEN is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended September 28, 2008, which reported a net loss of $8,021,386 for the prior twelve months. As of February 12, 2015, the company's stock (symbol "STEN") was quoted on OTC Link, had five market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

4. Wind Energy America, Inc. (CIK No. 351809) is an inactive Minnesota corporation located in Eden Prairie, Minnesota with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Wind Energy America is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended June 30, 2010, which reported a net loss of $5,394,342 for the prior twelve months. As of February 12, 2015, the company's stock (symbol "WNEA") was quoted on OTC Link, had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

5. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

6. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires domestic issuers to file quarterly reports.

7. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and/or 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against them upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to

notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS, PURSUANT TO SECTION 8A OF THE SECURITIES ACT OF 1933, SECTIONS 15(b) AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934, AND SECTION 9(b) OF THE INVESTMENT COMPANY ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 8A of the Securities Act of 1933 ("Securities Act"), Sections 15(b) and 21C of the Securities Exchange Act of 1934 ("Exchange Act"), and Section 9(b) of the Investment Company Act of 1940 ("Investment Company Act") against Hajime Sagawa ("Sagawa" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over him and the subject matter of these proceedings, which are admitted, Respondent consents to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings, Pursuant to Section 8A of the Securities Act of 1933, Sections 15(b) and 21C of the Securities Exchange Act of 1934, and Section 9(b) of the

Investment Company Act of 1940, Making Findings, And Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds[1] that:

Summary

1. These proceedings arise out of the involvement of Hajime Sagawa ("Sagawa"), the principal and minority owner of a now-defunct registered broker-dealer, in a cover-up of billions of dollars in losses by Olympus Corp. ("Olympus").

2. From the late 1990s to 2010, two Olympus executives hid billions of dollars in Olympus's losses by transferring them to a secret web of entities in the Caymans and British Virgin Isles (collectively, "Off B/S Entities") that they controlled but, contrary to Japanese GAAP at the time, did not consolidate in Olympus's financial statements. These Off B/S Entities "purchased" Olympus's soured investments at their historical cost with bank loans secured by collateral pledged by Olympus.

3. After completing these sham sales, the Olympus executives needed to find a way to repay the banks that had loaned the Off B/S Entities the amounts they had transferred to Olympus. To repay some of these loans, they retained Axes America, LLC ("Axes"), a registered broker-dealer partially owned by Sagawa, to serve as its financial advisor in connection with an acquisition. With Sagawa's assistance, the Olympus executives devised a scheme whereby Olympus would pay a disproportionate financial advisory fee to Axes that Axes would then transfer to the Off B/S Entities so that they could repay the bank loans.

4. Axes began advising Olympus on a possible acquisition of a manufacturer of medical devices which had shares of common stock that traded on the New York Stock Exchange. After talks with the manufacturer's Board of Directors broke down, Axes and Olympus identified Gyrus Group PLC ("Gyrus"), a UK company that specialized in endoscopes, as another possible target. In February 2008, Olympus acquired Gyrus for approximately $2 billion. Olympus then paid Axes an "advisory fee" in the form of cash and Gyrus preference shares worth approximately $687 million, i.e., 38% of the purchase price.

5. In 2008 and again in 2010, Sagawa offered the Gyrus preference shares back shares to Olympus. In April 2010, the Olympus Board of Directors approved the purchase of these shares for $622 million. Axes and an affiliate, Axam Investments, Ltd. ("Axam"), routed this $622

---

[1] The findings herein are made pursuant to Respondent's Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

million as well as other funds that Axes received to the Off B/S Entities, which in turn used the money to repay the bank loans they had used to purchase Olympus's soured investments.

Respondent

6. Hajime Sagawa, age 67, is a resident of Boca Raton, Florida. From 1997 to 2008, he was a registered representative, a founding member, minority owner, and a director of Axes as well as its President and CEO. From 2007 to 2010, Sagawa was also the sole director of Axam. From 2006 to 2010, Sagawa resided in the United States and lived at different times in New York, Connecticut, and Florida.

Other Relevant Entities

7. Olympus Corp. is a Japanese corporation that sells cameras, microscopes, endoscopes, and other medical equipment. Olympus's ordinary shares are listed on the Tokyo Stock Exchange.

8. Axes America, LLC was a Delaware corporation with a last known principal place of business at 420 Lexington Ave., Suite 225, New York, NY 10170. Axes was a registered broker-dealer from April 1997 to May 5, 2008, when it voluntarily withdrew its registration. Axes was dissolved on March 12, 2008.

9. Axam Investment, Ltd. is a Cayman Islands limited company that was established in November 2007 and struck from the Cayman Islands corporate registry in June 2010. While active, it appears to have had no business purpose other than transferring funds to Olympus. Sagawa was the sole director of Axam.

10. Olympus Executive No. 1 worked in the accounting department of Olympus from 1980 to 2009 and in 2011 was appointed as the company's internal auditor.

11. Olympus Executive No. 2 was an employee of Olympus from 1981 to 2011, and during most of this period was the subordinate of Olympus Executive No. 1. From 2005 to 2011, he served as the head of management planning.

Background

A. Olympus Accrues Losses

12. To combat a decrease in operating income due to a sharp rise in the Japanese yen beginning in the mid-1980s, Olympus's management began supplementing that income through *zaiteku*, a Japanese word for speculative investments. Over the next several years, Olympus conducted an aggressive financial asset management program led by Olympus Executive No. 1, then the company's assistant manager of the Finance Group. When the bubble burst in the Japanese economy in 1990, Olympus sustained substantial losses in these speculative investments. Olympus's response was to doubly commit to its strategy by making even riskier investments that

it hoped would wipe out its recent losses. This approach backfired, and at the end of 1990, Olympus's losses had piled up to approximately ¥100 billion ($691 million).[2]

13. Olympus Executives Nos. 1 and 2 avoided a mark-down of these assets by placing them in *tokkin* trusts.[3] These trusts held a basket of assets, and, under accounting rules at the time, Olympus was required to disclose losses only if the aggregate market value of the trust declined by 50% or more. Therefore, filling a *tokkin* trust with several assets that were performing well would obviate the need to disclose the substantial decline in value of other assets in the trust.

14. By 1995, the continuing decline in value of Olympus's assets in *tokkin* trusts made it increasingly difficult to offset them with other well-performing assets and thereby take advantage of the basket method of valuation.

B. <u>Olympus Moves Its Losses Off of Its Balance Sheet</u>

15. To avoid disclosing the losses incurred on soured investments held in the *tokkin* trusts, Olympus Executives Nos. 1 and 2 worked to transfer the failed investments to the Off B/S Entities, a secret web of entities in the Cayman Islands and British Virgin Isles that they created and controlled but did not consolidate in Olympus's financial disclosures. Through an exceedingly complex series of transactions that involved dozens of entities, Olympus "sold" its soured investments to the Off B/S Entities at prices that were roughly equivalent to their historical cost. In simplified form, these series of transactions took the following steps:

i. Olympus entered into lending agreements with several banks. Pursuant to these lending agreements, Olympus would deposit funds into a time deposit held by the banks, and the banks would use that deposit as collateral for a revolving credit facility that they extended to entities designated by Olympus.

ii. The banks extended the credit facilities to the *tokkin* trusts. In its financial statements, Olympus disclosed its deposits but did not disclose they were pledged as collateral for loans to the *tokkin* trusts.

iii. The *tokkin* trusts initially drew $535 million from the revolving credit facility and transferred these funds and their portfolios, which included Olympus's soured investments, to the Off B/S Entities. At the time of their transfer, the portfolios had a book value of approximately ¥68.3 billion ($625 million) and a market value of approximately ¥11.6 billion ($105 million). Therefore, the borrowed funds combined with the current market value of the portfolios were roughly equivalent to the investments' book value.

---

2 Dollar conversions of amounts in Japanese yen reflect historical exchange rates.

3 A *tokkin* trust is a trust created under Japanese law in which a registered investment advisor appointed by the trustor instructs the trustee regarding the investment of the trust assets.

iv. In exchange for the $535 million and the *tokkin* trusts' portfolios, the Off B/S Entities issued units to the *tokkin* trusts, which then became the sole owners of the Off B/S Entities. Accordingly, the *tokkin* trusts held units in entities whose NAVs were collectively higher than the value of the portfolios. By failing to disclose the relationships between the entities and Olympus as well as the fact that the cash held by the Off B/S Entities was effectively a loan to Olympus, Olympus evaded its obligation to disclose the unrealized investment losses.

16. Because the complex nature of the scheme required devoted advisors, lawyers, and bankers to execute it, the fees charged proved extremely costly. Consequently, the losses that initially prompted Olympus Executives Nos. 1 and 2 to embark on their loss-hiding endeavor were eclipsed by what Olympus paid in scheme maintenance fees, interest payments, and other costs. To pay these costs, Olympus entered into additional lending agreements with the above-referenced banks to create revolving credit facilities that the Off B/S Entities could use to cover these costs.

C. <u>The Repayment of Funds Borrowed through the Lending Arrangements</u>

17. Having sold much of its severely impaired assets at their historical cost to the Off B/S Entities, Olympus now needed to find a way to repay the banks for financing these sales and their associated costs. Because Olympus had not disclosed that its deposits with the banks were pledged as collateral, it could not use these deposits to repay amounts borrowed by the various Off B/S Entities. Rather, Olympus Executives Nos. 1 and 2 hatched a plan in which they would take advantage of Olympus's existing business strategy of growing through a series of corporate acquisitions. Specifically, the two executives planned to siphon some of the funds paid by Olympus in connection with one of its upcoming acquisitions, book the siphoned funds as part of the goodwill of the acquired entity, divert those funds to the banks that made the loans, and then depreciate the goodwill of the acquired entity or record an impairment to goodwill.[4] By transforming decades old losses into recently acquired goodwill, Olympus could account for the losses publicly and gradually over a twenty year amortization period.

18. In 2006, Olympus Executive No. 2 approached Sagawa, who had done work for Olympus in the past and at the time was Axes's principal and minority owner, with his idea of using an acquisition to hide Olympus's losses. Olympus Executive No. 2 proposed that they retain Axes as a financial advisor and then pay it an outsized financial advisory fee that could then be used to repay the loans extended to the Off B/S Entities.

19. On June 5, 2006, Sagawa, on behalf of Axes, and Olympus Executive No. 1, on behalf of Olympus, signed a financial advisory agreement whereby Olympus retained Axes to

---

[4] This plan took two forms: the payment of an inflated financial advisory fee in connection with the acquisition of Gyrus and the overpayment for the majority stake in three small Japanese companies. Sagawa was not involved in the overpayment for the stakes in the three Japanese companies. Therefore, this overpayment is not relevant to this proceeding.

serve as a financial advisor on the acquisition of two possible targets, Target No. 1 and Target No. 2, both of which manufactured medical devices and were headquartered in the United States. At the time, Target No. 1 had shares of common stock that were listed on the New York Stock Exchange. Target No. 2 was a privately held company.

20. The financial advisory agreement stated that Olympus would pay Axes's expenses and would pay an advisory fee that consisted of (1) an up-front fee of $3 million, (2) an additional fee of $2 million payable on June 5, 2007, and (3) a Completion Fee paid after the acquisition in the form of (a) a cash payment equivalent to approximately 0.2% of the value of the target and (b) share options of the stock of the target equivalent to 4.9% of the fully diluted share capital of the target. At the time, Olympus Executives Nos. 1 and 2 envisioned an acquisition price of ¥600–800 billion ($5.2–6.9 billion); therefore, the share options would be worth approximately $294 million. According to Olympus Executive No. 2, the hope was that these options would greatly increase in value over the following five years and then could be used to wipe out most of the hidden losses.

21. As the financial advisor to Olympus, Sagawa, through Axes, worked on a possible acquisition of a majority stake by Olympus in Target No. 1 shares. Specifically, he (i) retained an investment bank as a sub-advisor to consult and provide analyses on the possible acquisition and its benefits, (ii) advocated for the acquisition of a majority stake in Target No. 1 and argued that alternative strategies, such as a leveraged partnership or a spin-off, were less appealing, (iii) worked to bring the parties together by advising Olympus on positions it should take during the negotiations and by proposing that Olympus increase its offer "in order to encourage [Target No. 1] to accelerate their [sic] timing."

22. Despite Sagawa's efforts, the Board of Directors of Target No. 1 indicated in June 2007 that it was not in favor of the deal.

23. Afterwards, Olympus chose not to focus on Target No. 2, but instead identified Gyrus, a publicly-traded endoscope manufacturer based in the United Kingdom, as a possible acquisition target.

D. Sagawa Works to Complete the Scheme by Offering <u>Gyrus Preference Shares Back to Olympus</u>

24. Sagawa acted as a financial advisor on Olympus's acquisition of Gyrus. As part of Axes's advisory fee, it received 177 million Gyrus preference shares. Although the nominal face value of the preference shares was $1 per share and therefore $177 million in the aggregate, these shares paid a dividend of 85% of Gyrus's net profits and therefore were worth much more. Axes transferred its rights to these preference shares to Axam, an entity based in the Cayman Islands that Olympus Executives Nos. 1 and 2 controlled and that had Sagawa as its sole director.

25. On November 25, 2008, Sagawa, acting pursuant to the instruction of Olympus Executive No. 2, emailed a letter on behalf of Axam to Olympus requesting that Olympus buy back the preference shares or allow Axam to sell them to a third party. Sagawa was in New York

when he sent the letter. To obscure the true purpose of the offer, Sagawa falsely claimed in the letter that he was requesting that Olympus repurchase the preference shares "[d]ue to an unexpected indication of redemption request from our investors." In support of this request, Sagawa included two valuations for the preference shares, one of which estimated their value at $592 million and the other of which estimated their value as in between $522–$536 million. Around the same time, a broker retained by Olympus to assess the value of the preference shares had valued them at $557 million. On November 28, 2008, the Olympus Board of Directors approved a purchase price for the preference shares within the range of $530–$590 million.

26. While staged negotiations between Olympus Executive No. 2 and Sagawa dragged on, Olympus's auditors requested that Olympus revoke the November 28 board resolution to repurchase the Gyrus preference shares because it viewed the exorbitant fee to Axes/Axam as problematic. In response, on June 5, 2009, the Olympus Board withdrew its approval for the repurchase. The following month, Olympus replaced its auditors.

27. Shortly thereafter, Sagawa and Olympus Executive No. 2 exchanged emails in which each gave the appearance of negotiating on behalf of Axam and Olympus, respectively. On March 10, 2010, Sagawa, who was in New York at the time, emailed a letter on behalf of Axam to Olympus Executive No. 2 requesting that Olympus repurchase the preference shares for $730 million. Sagawa attributed the increase to the fact that the preference shares paid a dividend equivalent to 85% of Gyrus's net profits and that two years' worth of dividends had not yet been paid.

28. On March 19, 2010, the Olympus Board of Directors approved a repurchase of the preference shares at $622 million. Olympus wired this amount to Axam, which in turn wired it to the Off B/S Entities so that they could use it to repay the revolving credit facilities extended to them.

29. As a result of the conduct described above, Sagawa willfully violated Sections 17(a)(1) and 17(a)(3) of the Securities Act, which prohibits fraudulent conduct in the offer and sale of securities, and willfully aided and abetted and caused Axes's violation of Section 15(c)(1)(A) of the Exchange Act, which prohibits a broker or dealer from effecting transactions, or inducing or attempting to induce the purchase or sale of any security, by means of any manipulative, deceptive, or other fraudulent device or contrivance.

Respondent's Cooperation

30. In determining to accept the Offer, the Commission considered the cooperation Respondent afforded the Commission staff.

IV.

In view of the foregoing, the Commission deems it appropriate, in the public interest, to impose the sanctions agreed to in Respondent's Offer.

Accordingly, pursuant to Section 8A of the Securities Act, Sections 15(b) and 21C of the Exchange Act, and Section 9(b) of the Investment Company Act, it is hereby ORDERED that:

A. Respondent cease and desist from committing or causing any violations and any future violations of Sections 17(a)(1) and (a)(3) of the Securities Act and Section 15(c)(1)(A) of the Exchange Act.

B. Respondent be, and hereby is:

> barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization;
>
> prohibited from serving or acting as an employee, officer, director, member of an advisory board, investment adviser or depositor of, or principal underwriter for, a registered investment company or affiliated person of such investment adviser, depositor, or principal underwriter; and
>
> barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

C. Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

D. Respondent acknowledges that the Commission is not imposing a civil penalty based upon his cooperation in a Commission investigation. If at any time following the entry of the Order, the Division of Enforcement ("Division") obtains information indicating that Respondent knowingly provided materially false or misleading information or materials to the Commission or in a related proceeding, the Division may, at its sole discretion and with prior notice to the Respondent, petition the Commission to reopen this matter and seek an order directing that the Respondent pay a civil money penalty. Respondent may contest by way of defense in any resulting administrative proceeding whether it knowingly provided materially false or misleading information, but may not: (1) contest the findings in the Order; or (2) assert any defense to liability or remedy, including, but not limited to, any statute of limitations defense.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74393 / February 27, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16411

In the Matter of **China Pharmaceuticals, Inc., China Printing & Packaging, Inc., Silvan Industries, Inc., and Ziyang Ceramics Corp.,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS AND NOTICE OF HEARING PURSUANT TO SECTION 12(j) OF THE SECURITIES EXCHANGE ACT OF 1934**

I.

The Securities and Exchange Commission ("Commission") deems it necessary and appropriate for the protection of investors that public administrative proceedings be, and hereby are, instituted pursuant to Section 12(j) of the Securities Exchange Act of 1934 ("Exchange Act") against Respondents China Pharmaceuticals, Inc., China Printing & Packaging, Inc., Silvan Industries, Inc., and Ziyang Ceramics Corp.

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENTS

1. China Pharmaceuticals, Inc. (CIK No. 1341808) is a revoked Nevada corporation located in Xi'an, China with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). China Pharmaceuticals is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed an amended Form 10-Q for the period ended June 30, 2012, which reported a net loss of $1,764,687 for the prior six months. As of February 10, 2015, the company's stock (symbol "CFMI") was quoted on OTC Link, had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

2. China Printing & Packaging, Inc. (CIK No. 1422357) is a defaulted Nevada corporation located in Baoji City, China with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). China Printing & Packaging is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended June 30, 2012, which reported a net loss of $355,842 for the prior three months. As of February 10, 2015, the company's stock (symbol "CHPI") was quoted on OTC Link, had four market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

3. Silvan Industries, Inc. (CIK No. 1373683) is a revoked Nevada corporation located in Guiyang, China with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Silvan Industries is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-K for the period ended December 31, 2011. As of February 10, 2015, the company's stock (symbol "SLVA") was quoted on OTC Link, had five market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

4. Ziyang Ceramics Corp. (CIK No. 1093903) is a dissolved Florida corporation located in Zhucheng City, China with a class of securities registered with the Commission pursuant to Exchange Act Section 12(g). Ziyang Ceramics is delinquent in its periodic filings with the Commission, having not filed any periodic reports since it filed a Form 10-Q for the period ended June 30, 2012. As of February 10, 2015, the company's stock (symbol "ZYCI") was quoted on OTC Link, had seven market makers, and was eligible for the "piggyback" exception of Exchange Act Rule 15c2-11(f)(3).

B. DELINQUENT PERIODIC FILINGS

5. As discussed in more detail above, all of the Respondents are delinquent in their periodic filings with the Commission, have repeatedly failed to meet their obligations to file timely periodic reports, and failed to heed delinquency letters sent to them by the Division of Corporation Finance requesting compliance with their periodic filing obligations or, through their failure to maintain a valid address on file with the Commission as required by Commission rules, did not receive such letters.

6. Exchange Act Section 13(a) and the rules promulgated thereunder require issuers of securities registered pursuant to Exchange Act Section 12 to file with the Commission current and accurate information in periodic reports, even if the registration is voluntary under Section 12(g). Specifically, Rule 13a-1 requires issuers to file annual reports, and Rule 13a-13 requires domestic issuers to file quarterly reports.

7. As a result of the foregoing, Respondents failed to comply with Exchange Act Section 13(a) and Rules 13a-1 and/or 13a-13 thereunder.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate for the protection of investors that public administrative proceedings be instituted to determine:

A. Whether the allegations contained in Section II hereof are true and, in connection therewith, to afford the Respondents an opportunity to establish any defenses to such allegations; and,

B. Whether it is necessary and appropriate for the protection of investors to suspend for a period not exceeding twelve months, or revoke the registration of each class of securities registered pursuant to Section 12 of the Exchange Act of the Respondents identified in Section II hereof, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents.

IV.

IT IS HEREBY ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice [17 C.F.R. § 201.110].

IT IS HEREBY FURTHER ORDERED that Respondents shall file an Answer to the allegations contained in this Order within ten (10) days after service of this Order, as provided by Rule 220(b) of the Commission's Rules of Practice [17 C.F.R. § 201.220(b)].

If Respondents fail to file the directed Answers, or fail to appear at a hearing after being duly notified, the Respondents, and any successor under Exchange Act Rules 12b-2 or 12g-3, and any new corporate names of any Respondents, may be deemed in default and the proceedings may be determined against them upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f), and 310 of the Commission's Rules of Practice [17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f), and 201.310].

This Order shall be served forthwith upon Respondents personally or by certified, registered, or Express Mail, or by other means permitted by the Commission Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 120 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice [17 C.F.R. § 201.360(a)(2)].

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to

notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

之

证券交易监督委员会

《1934 年证券交易法》

发行号 74393 / February 27, 2015

行政程序

备案号 3-16411

就以下相对人之事项： **中国制药公司** **中国印刷包装公司** **西尔工业公司和** **紫阳陶瓷公司** **相对人。**	**依据《1934 年证券交易法》第 12(j) 条，** **送达行政程序启动** **暨听证通知令**

I.

证券交易监督委员会（“委员会”）认为，依据《1934 年证券交易法》（“证券法”）第 12(j) 条对相对人中国制药公司、中国印刷包装公司、西尔工业公司和紫阳陶瓷公司特此提起公共行政程序，对保护投资者是必要且适当的。

II.

经调查，执行部诉称：

A. 相对人

1. 中国制药公司 (CIK No. 1341808) 是中国西安市一家已被撤销的内华达州公司，依据证券法第 12(g) 条在委员会注册了一类证券。中国制药公司未按规定向委员会提交定期报告。自提交截止 2012 年 6 月 30 日的修正版 10-Q 表（称前六个月净亏损 1,764,687 美元）后，中国制药公司再未提交任何报告。截至 2015 年 2 月 10 日，该公司股票（代码“CFMI”）仍在 OTC Link 市场挂牌交易，并拥有七家做市商，且符合证券法 15c2-11 (f) (3) 规则中“捎带” (piggyback) 例外的资格。

2. 中国印刷包装公司 (CIK No. 1422357) 是中国宝鸡市一家已违约的内华达州公司，依据证券法第 12(g) 条在委员会注册了一类证券。中国印刷包装公司未按

规定向委员会提交定期报告。自提交截止 2012 年 6 月 30 日的 10-Q 表（称前三个月净亏损 355,842 美元）后，中国印刷包装公司再未提交任何报告。截至 2015 年 2 月 10 日，该公司股票（代码"CHPI"）仍在 OTC Link 市场挂牌交易，并拥有四家做市商，且符合证券法 15c2-11 (f) (3) 规则中"捎带" (piggyback) 例外的资格。

3. 西尔工业公司 (CIK 号 1373683) 是中国贵阳市一家已被撤销的内华达州公司，依据证券法第 12(g) 条在委员会注册了一类证券。西尔工业公司未按规定向委员会提交定期报告。自提交截止 2011 年 12 月 31 日的 10-K 表后，西尔工业公司再未提交任何报告。截至 2015 年 2 月 10 日，该公司股票（代码"SLVA"）仍在 OTC Link 市场挂牌交易，并拥有五家做市商，且符合证券法 15c2-11 (f) (3) 规则中"捎带" (piggyback) 例外的资格。

4. 紫阳陶瓷公司 (CIK 号 1093903) 是中国诸城市一家已解散的佛罗里达州公司，依据证券法第 12(g) 条在委员会注册了一类证券。紫阳陶瓷公司未按规定向委员会提交定期报告。自提交截止 2012 年 6 月 30 日的 10-Q 表后，紫阳陶瓷公司再未提交任何报告。截至 2015 年 2 月 10 日，该公司股票（代码"ZYCI"）仍在 OTC Link 市场挂牌交易，并拥有七家做市商，且符合证券法 15c2-11 (f) (3) 规则中"捎带" (piggyback) 例外的资格。

B. 未按规定提交定期报告

5. 正如上文详述，所有相对人均未按规定向委员会提交定期报告，屡次不履行按时提交定期报告的义务，且在收到企业金融部发出的催告函，要求其遵守定期申报义务后，仍不予理会，或因未按证监会的规定在证监会维护有效备案地址，从而未收到该等催告函。

6. 根据证券法第 13(a) 条及其发布的规定，依据证券法第 12 条注册的证券发行者，即使是根据第 12(g) 条自愿注册，亦应以定期报告的方式向委员会提交最新且准确之信息。具体而言，第 13a-1 条规定要求发行者提交年报，第 13a-13 条规定要求国内发行者提交季报。

7. 由于上述原因，相对人未遵守证券法第 13(a) 条和根据该法发布的第 13a-1 条和/或 13a-13 条之规定。

III.

鉴于执行部提出的诉称，委员会认为提起公共行政程序确定以下事项对保护投资者是有必要且适当的：

A. 本命令第 II 部分所包含的诉称是否属实，就该诉称而言，给予相对人对该等诉称进行抗辩的机会；以及

B. 就保护投资者而言，对本命令第 II 部分所指定相对人、证券法第 12b-2 条或第 12g-3 条规定下的任何继承人、采用新公司名称的相对人采取以下行为是否有必要且适当——暂停（不超过十二个月）或撤销其依据证券法第 12 条注册的各类证券；

IV.

特此命令，为对第 III 部分所述问题进行取证，应在待定的时间和地点召开公开听证，并由《美国证监会行为规范》第 110 条规定的进一步命令所指定的行政法法官主持[《美国联邦法规》第 17 编第 201.110 节]。

进一步命令，相对人应在本命令送达后十 (10) 日内，按《美国证监会行为规范》第 220(b) 条规定 [《美国联邦法规》第 17 编第 201.220(b) 节] 对本命令中所包含的诉称提交答辩状。

若相对人未提交所规定的答辩状，或在收到通知后未出席听证，则相对人及《美国证监会行为规范》第 12b-2 条或第 12g-3 条规定下的任何继承人，以及拥有新公司名称的相对人，将被视为缺席，且将针对其就命令中的事项确定相应程序，根据《美国证监会行为规范》第 155(a)、220(f)、221(f) 和 310 条规定 [《美国联邦法规》第 17 编第 201.155(a)、201.220(f)、201.221(f) 和 201.310 节]，命令中的诉称将被视为属实。

本命令应以直接送达的方式或通过特快专递或《美国证监会行为规范》允许的其它方式，立即送达相对人。

进一步命令，行政法法官应依据《美国证监会行为规范》第 360(a)(2) 条规定 [《美国联邦法规》第 17 编第 201.360(a)(2) 节]，在不晚于本命令送达之日起的 120 天内做出初始裁决。

如缺少相关弃权，则委员会在本程序或任何事实上相关的程序中从事调查或起诉职能的任何官员或雇员，均不得参加本事项的决策或对本事项的决策提出建议，但依据通知在诉讼中担任证人或律师的除外。
因本程序并非《行政诉讼法》第 551 节定义的“法规制定”，因此不受第 553 条规定的限制，无须推迟委员会任何最终决议的实行日期。

委员会。
