For Review of Action Taken by

FINRA

OPINION OF THE COMMISSION

REGISTERED SECURITIES ASSOCIATION — REVIEW OF ASSOCIATION ACTION DENYING REQUEST TO PROCESS CORPORATE ACTION

Registered securities association declined to process documents related to an issuer's proposed reverse stock split in the public interest because the issuer's corporate officers were the subject of a settled regulatory action involving securities laws violations. *Held*, review proceeding is *dismissed.*

APPEARANCES:

Frank Razzano and *Min Choi*, of Pepper Hamilton LLP, for mPhase Technologies, Inc.

Alan Lawhead, *Gary Dernelle*, and *Jante C. Turner*, for the Financial Industry Regulatory Authority, Inc.

Appeal filed: December 12, 2012
Last brief received: April 24, 2013

mPhase Technologies, Inc., an issuer of securities formerly quoted on the OTC Bulletin Board ("OTCBB"), appeals from FINRA's denial of mPhase's request that FINRA process and announce mPhase's reverse stock split on the OTCBB. FINRA found that mPhase's request was deficient and that processing the announcement was not in the public interest because mPhase's chief executive and chief operating officers were the subject of a "settled regulatory action related to . . . securities laws violations." mPhase does not dispute that its senior officers settled a Commission action in 2007 but argues that FINRA exceeded its regulatory authority in denying mPhase's request to process and announce its reverse stock split on the OTCBB. Based on an independent review of the record, we find that FINRA properly exercised its discretion in operating the OTCBB, relied on grounds that exist in fact, and denied mPhase's request in accordance with FINRA Rules and the purposes of the Securities Exchange Act of 1934. We accordingly dismiss the appeal.

I. Background

A. FINRA's operation of the OTCBB and processing of Company-Related Actions

FINRA owns and operates the OTCBB, an electronic inter-dealer quotation system that FINRA provides to its members that actively trade securities not listed on NASDAQ or a national securities exchange.[1] The OTCBB displays quotes, last-sale prices, and volume information for eligible equity securities. To be quoted on the OTCBB, an issuer's securities must be sponsored by a FINRA member and meet applicable quotation standards.[2] FINRA rules, including the 6000 Rule Series and Uniform Practice Code, govern the use and operation of FINRA's OTCBB service.[3]

As part of its operation of the OTCBB, FINRA processes requests to announce and publish certain corporate actions from issuers whose securities are quoted on the OTCBB.[4] These actions, generally referred to as "Company-Related Actions,"[5] include any stock

dividends, stock splits, or rights offerings, as well as "the issuance or change to a trading symbol or company name, merger, acquisition, dissolution or other company control transactions, bankruptcy or liquidation."[6] If FINRA elects to process an issuer's Company-Related Action, it will, in turn, announce the action on OTCBB's "Daily List," which "effectively announces the Company-Related Actions to the [OTC] market."[7]

In 2010, based on a "growing concern that FINRA's Company-Related Action processing services may potentially be used by certain parties to further fraudulent activities," FINRA proposed, and the Commission approved, FINRA Rule 6490 authorizing FINRA to deny an issuer's request that FINRA announce a Company-Related Action on the OTCBB under certain circumstances.[8] The Commission's 2010 Approval Order observed that, although "[h]istorically, FINRA has viewed its role in performing issuer-related functions as primarily ministerial" given its indirect relationship with issuers, Rule 6490 makes clear "the scope of its regulatory authority and . . . codif[ies] procedures that it will apply when reviewing requests to process Company-Related Actions."[9] The Rule authorizes FINRA's Department of Operations (the "Department") to conduct "in-depth reviews" of issuers' requests[10] and to deny a request upon finding that (1) the request is "deficient," based on a five-factor inquiry,[11] and (2) denial is "necessary for the

10 *Id.*

11 FINRA Rule 6490(d)(3). Under FINRA Rule 6490(d)(3), a Company-Related Action is "deficient" if "one or more" of the following factors exists:

(1) FINRA staff reasonably believes the forms and all supporting documentation . . . may not be complete, accurate or with proper authority;

(2) the issuer is not current in its reporting requirements . . . to the SEC or other regulatory authority;

(3) FINRA has actual knowledge that . . . officers [or] directors . . . connected to the issuer or the [Company-Related Action requested] . . . are the subject of a pending, adjudicated or settled regulatory action or investigation by a federal, state or foreign regulatory agency, or a self-regulatory organization; or a civil or criminal action related to fraud or securities laws violations;

(continued...)

protection of investors, the public interest and to maintain fair and orderly markets."[12] An issuer may appeal any denial by the Department to a subcommittee of FINRA's Uniform Practice Code Committee ("UPCC Subcommittee") and that subcommittee's decision becomes FINRA's final decision in the matter.[13]

B. mPhase

1. mPhase's application with FINRA

On July 6, 2012, mPhase, an OTCBB-quoted corporation specializing in microfluidics, micro-electro-mechanical systems, and nanotechnology,[14] filed an application with FINRA requesting that it process a Company-Related Action—specifically, an announcement on the OTCBB that mPhase was issuing a 1-200 reverse stock split.[15] According to mPhase, the reverse stock split sought to increase the share price of its common stock by reducing the number of

---

(...continued)

(4) a state, federal or foreign authority or self-regulatory organization has provided information to FINRA, or FINRA otherwise has actual knowledge indicating that the issuer, associated persons, officers, directors, transfer agent, legal adviser, promoters or other persons connected with the issuer or [Company-Related Action] may be potentially involved in fraudulent activities related to the securities markets and/or pose a threat to public investors; and/or

(5) there is significant uncertainty in the settlement and clearance process for the security.

13 FINRA Rule 6490(e).

14 mPhase Tech., Inc., Form 10-K for the year ended June 30, 2012, at 4, *available at* http://www.sec.gov/Archives/edgar/data/825322/000106299312003770/form10k.htm ("mPhase Form 10-K"). We take official notice of the information about mPhase provided in its Commission EDGAR filings and on the website of the Secretary of the State of Connecticut. *See* 17 C.F.R. § 210.323 (permitting official notice of "any material fact which might be judicially noticed by a [U.S.] district court" or "any matter in the public official records of the Commission") and Fed. R. Evid. 201(b) (stating that "judicially noticed fact must be one not subject to reasonable dispute in that it is . . . capable of accurate and ready determination by resort to sources whose accuracy cannot be reasonably questioned").

15 mPhase is a New Jersey corporation with its principal place of business in Norwalk, Connecticut. Its common stock is registered with the Commission under Section 12(g) of the Securities Act, and at all times relevant to FINRA's action, was quoted on the OTCBB under the ticker symbol "XDSL." On March 26, 2013, during the pendency of mPhase's appeal, mPhase became ineligible for OTCBB quotation "due to quoting inactivity." *OTCBB Daily List*, http://www.otcbb.com/dailylist/ (search "XDSL"). mPhase's stock is currently quoted on the OTC Pink, operated by OTC Markets Group, Inc. *See OTC Markets Group's Company Directory*, http://www.otcmarkets.com/stock/XDSL/quote.

mPhase's outstanding shares from approximately 4.48 billion to 22.4 million.[16] mPhase explained that it has long refrained "from attempting to increase its stock price through a reverse [stock] split rather than through fundamentals flowing from its operations" but that market conditions and its recent failure to secure financing necessitated the action.

2. mPhase officers Durando and Dotoli and their settlement with the SEC

Since mPhase's incorporation in 1996, Robert Durando has acted as its president and chief executive officer and Gustave Dotoli has acted as its chief operating officer. Durando and Dotoli both are on mPhase's board of directors and own 21.75% and 15.31% of the company's stock, respectively. In addition to their association with mPhase, Durando and Dotoli are officers of PacketPort.com, Inc., a Nevada corporation, of which Durando is the president and Dotoli the vice president. Durando is also majority owner of Microphase Corporation, a Connecticut corporation that is a part-owner of mPhase and provides mPhase with various administrative services. Microphase and Packetport both operate from the same business address as mPhase in Norwalk, Connecticut.[17]

On October 18, 2007, while they were officers of mPhase, Durando and Dotoli settled a Commission administrative proceeding (the "2007 Settlement Order"), in which they consented to findings that they violated several federal securities laws from 1999 to 2002.[18] The findings concerned violations related to their roles at Microphase and Packetport.com.[19] The 2007 Settlement Order stated that in early 1999 Durando and Dotoli acquired control of Linkon Corp., a failing Internet company.[20] In return for a cash infusion and settlement of Linkon's debt,

---

16 "A reverse stock split reduces the number of shares and increases the share price proportionately." *Reverse Stock Split*, http://www.sec.gov/answers/reversesplit.htm. mPhase initially requested that FINRA process and announce a 1-100 reverse stock split on the OTCBB but later revised the split ratio to 1-200.

17 *See* mPhase Form 10-K, *supra* note 14, at 72, 116 (noting that mPhase leases office space from Microphase and also compensates Microphase for "use of accounting personnel," "research and development," and "specific projects on a project-by-project basis"). According to the Form 10-K, Durando is a controlling owner of Microphase through his ownership of a related holding company. *Id.* at 72.

18 *PacketPort.com, Inc.*, Order Instituting Cease-and-Desist Proceedings, Making Findings and Imposing Remedial Sanctions and a Cease-and-Desist Order Pursuant to Section 8A of the Securities Act of 1933 and Section 21C of the Securities Exchange Act of 1934, Exchange Act Release No. 56672, 2007 WL 3033480, *1-2 (Oct. 18, 2007).

19 At the time, Durando was Packetport.com's chairman, president, and chief executive officer and Microphase's majority owner and chief operating officer. Dotoli was Packetport.com's secretary and a director on its board of directors. *Id.*

20 The 2007 Settlement Order stated that by May 1999 Linkon was in default on $1.9 million in debt notes, subject to an $802,500 civil judgment, and had ceased operations. *Id.* at *3.

Durando and Dotoli received stock in Linkon, which later became stock of PacketPort.com. The 2007 Settlement Order found that, in the course of this acquisition, (1) Durando, Dotoli, PacketPort.com, and Microphase offered or sold shares of PacketPort.com stock without a registration statement in effect in violation of Sections 5(a) and (c) of the Securities Act of 1933;[21] (2) Durando and Dotoli violated Exchange Act Section 16(a) and Rule 16a-3 by failing to timely file Forms 3 to reflect their beneficial ownership of more than ten percent of PacketPort.com's stock;[22] and (3) Durando violated Exchange Act Section 13(d) and Rule 13d-1 by failing to timely file a Schedule 13D after acquiring more than five percent of PacketPort.com's stock.[23]

The 2007 Settlement Order required Durando, Dotoli, Microphase, and Packetport.com to cease and desist from committing or causing future violations of the provisions they were found to have violated and ordered that Durando, Dotoli, and Microphase disgorge $150,000, $100,000, and $700,000, respectively, in ill-gotten gains.[24] The Commission also announced that it was withdrawing a parallel enforcement action pending in federal district court against respondents.[25] mPhase was not a party to the 2007 Settlement Order or the dismissed federal court action.

C. FINRA's denial of mPhase's request

On October 2, 2012, the Department notified mPhase that it had denied the company's request to process the reverse stock split pursuant to FINRA Rule 6490(d)(3) because mPhase's CEO and COO are the subject of a "settled regulatory action . . . related to fraud or securities laws violations" and that this misconduct "raised concerns for FINRA regarding the protection of

---

21 15 U.S.C. § 77e(a) (prohibiting the "sale" of any securities, in interstate commerce, unless a registration statement is in effect as to the offer or sale of such securities or there is an applicable exemption from the registration requirements); *id.* § 77e(c) (prohibiting the "offer for sale" of any securities, unless a registration statement has been filed as to such securities or an exemption is available).

22 15 U.S.C. § 78p(a) and 17 C.F.R. § 240.16a-3 (requiring directors and persons owning more than 10% of a registrant's stock to file a Form 4 within two business days of the acquisition or disposition of the security).

23 15 U.S.C. § 78m(d) and 17 C.F.R. § 240.13d-1 (requiring any beneficial owner of more than 5% of any Exchange Act registered securities to disclose the extent of his or her ownership stake).

24 *PacketPort.com*, 2007 WL 3033480, at *5-6.

25 *SEC v. PacketPort.com, Inc.*, Litig. Release No. 20339, 2007 WL 3033485, *1-2 (Oct. 18, 2007); *see also SEC v. PacketPort.com, Inc.*, Civil Action No. 3:05cv1747 (filed Nov.15, 2005); *Packetport.com, Inc.*, Litig. Release No. 19465, 2005 WL 3068110 (Nov. 16, 2005).

investors."[26] The Department stated that, as a result of its findings, it would "cease processing documentation related to [mPhase's] Company-Related Action and would make no announcement on the [OTCBB's] Daily List."

mPhase appealed the Department's decision to the UPCC Subcommittee, arguing that the 2007 Settlement Order against Durando and Dotoli "should not *per se* constitute a 'deficiency' under" Rule 6490. It sought to explain the circumstances surrounding Durando's and Dotoli's prior misconduct by blaming their violations on erroneous legal advice. mPhase described the 2007 Settlement Order as involving only "technical violations" of the securities laws, not antifraud violations, and imposing "only" financial penalties, not bars against Durando and Dotoli. mPhase noted that the 2007 Settlement Order was entered "almost 5 years" ago and claimed that since that time neither officer had been the subject of any regulatory action.

The UPCC Subcommittee affirmed the Department's decision, finding mPhase's request deficient based on the 2007 Settlement Order and that processing the request "present[ed] a threat to the investing public or the maintenance of fair and orderly markets." The Subcommittee stated that it "consider[ed] the substantive allegations" of the 2007 Settlement Order, to which Durando and Dotoli consented, and found that the 2007 Settlement Order involved "several serious violations of the federal securities laws" and disgorgement of significant amounts of ill-gotten gains.

The UPCC Subcommittee also cited concerns related to Durando and Dotoli's current circumstances. It stated that Durando and Dotoli currently occupy "significant roles" at mPhase, presenting them with opportunities for abuse without any meaningful supervisory oversight. It "highlight[ed] [ongoing] connection[s] between mPhase and Microphase . . . and Packetport," finding that the three entities currently share the same business address in Norwalk and a common high-ranking official, Durando.[27] Given these facts, the Subcommittee rejected

---

26 On August 22, 2012, before the Department's denial, mPhase disclosed to Department staff that Durando and Dotoli were subject to the 2007 Settlement Order by providing a copy of the Commission's 2007 press release announcing the settlement. *PacketPort.com,* 2007 WL 3033485. The record also shows that the Department conducted its own background investigation of the company and its officers, which is reflected in the record as a series of undated "screen shots" of various database searches. These materials include a screen shot of and the URL to the 2007 Settlement Order, but not the entire document. Pursuant to 17 C.F.R. § 210.323, we take official notice of the entire 2007 Settlement Order, a document that is publicly available on the Commission's website.

27 A "business inquiry" search of "Microphase," "PacketPort.com," and "mPhase Technologies" on the Connecticut Secretary's Secretary of State's website confirms this conclusion. *See* Connecticut Secretary of the State Business Inquiry, http://www.concord-sots.ct.gov/CONCORD/online?sn=PublicInquiry&eid=9740 (searching each entity). FINRA also attached this information, which mPhase does not contest, to its opposition brief for our consideration.

mPhase's claim that the age of the settlement and asserted recent compliance served as any mitigation. This appeal followed.[28]

II. Analysis

Exchange Act Section 19(f) governs our review of a self-regulatory organization's denial of access to services.[29] Here, FINRA denied mPhase's request for FINRA to process and announce a reverse stock split on FINRA's OTCBB. Under Section 19(f), we must dismiss mPhase's appeal of this denial if we find that (i) the specific grounds on which FINRA based its denial exist in fact, (ii) the denial was in accordance with FINRA rules, and (iii) those rules are, and were applied in a manner consistent with the purposes of the Exchange Act.[30] FINRA's denial meets these criteria.

A. The grounds on which FINRA based its denial of mPhase's request exist in fact.

FINRA Rule 6490(d)(3) requires FINRA to conduct a two-step analysis in determining whether to process a Company-Related Action request. First, FINRA must assess whether the issuer's request is deficient. As the Rule states, FINRA's deficiency determination "shall" be based "solely . . . [on] one or more" of the five enumerated factors, including as relevant here, that FINRA has "actual knowledge . . . that officers [or] directors . . . connected to the issuer or [the Company-Related Action] . . . are the subject of a . . . settled regulatory action . . . related to fraud or securities laws violations."[31] Second, in the event that FINRA deems an issuer's request deficient, FINRA then "may determine" not to process the issuer's request if it finds that denial "is necessary for the protection of investors, the public interest and to maintain fair and orderly markets."[32]

---

28 As part of its appeal, mPhase filed a motion to amend its reply brief filed with the Commission, requesting that the Commission strike two footnotes contained in that brief. mPhase's motion, which FINRA does not oppose, is granted.

29 15 U.S.C. § 78s(f) (authorizing Commission review of SRO action that prohibits or limits "any person with respect to access to services offered by the [SRO]"); *see also Intelispan, Inc.*, Exchange Act Release No. 42738, 2000 WL 511471, at *2 (May 1, 2000), *vacated*, 2000 WL 1424830 (May 30, 2000).

30 *Fog Cutter Capital Grp., Inc. v. SEC*, 474 F.3d 822, 825 (D.C. Cir. 2007). We previously found that FINRA Rule 6490 "is consistent with the [Exchange] Act and the rules and regulations thereunder applicable to a national securities association." 2010 Approval Order, *supra* note 5, at *5 (explaining that FINRA Rule 6490 is consistent with Exchange Act Sections 15A(b)(5) and (6)). Exchange Act Section 19(f) further requires that we set aside FINRA's action if we find that it imposes an undue burden on competition. 15 U.S.C. § 78s(f). mPhase does not claim, nor does the record suggest, that FINRA's action imposes such a burden.

31 FINRA Rule 6490(d)(3)(3).

32 FINRA Rule 6490(d)(3).

1. mPhase's Company-Related Action was deficient under FINRA Rule 6490(d)(3).

mPhase's request was deficient under FINRA Rule 6490(d)(3) because FINRA had "actual knowledge . . . that officers [or] directors . . . connected to" mPhase "are the subject of a . . . settled regulatory action . . . related to . . . securities laws violations."[33] Durando, mPhase's CEO, and Dotoli, its COO, are both officers and directors of mPhase. And their 2007 Settlement Order involved violations of the federal securities laws, specifically, Securities Act Section 5 and Exchange Act Sections 13 and 16 and Rules 13d-1 and 16a-3. The record also establishes that FINRA had actual knowledge of the 2007 Settlement Order as a result of its background investigation of mPhase's officers and information supplied by mPhase.

2. FINRA found that denying mPhase's request was necessary for the protection of investors, the public interest, and to maintain fair and orderly markets under FINRA Rule 6490(d)(3).

FINRA Rule 6490(d)(3) states that "where [a Company-Related Action] is deemed deficient," FINRA "may determine" not to process the request if doing so is "necessary for the protection of investors, the public interest and to maintain fair and orderly markets."[34] The Rule's use of the permissive term "may" vests FINRA with discretionary authority in deciding whether to process and announce a deficient Company-Related Action request on the OTCBB.[35] In the similar context of delisting appeals, we have long stated that "[t]o the extent that discretion enters into [FINRA's decision to deny inclusion on its systems] . . . the discretion in question is [FINRA's], not ours,"[36] and as in those cases, we will not substitute our judgment for FINRA's unless its decision is unsupported by the record.[37]

---

33 FINRA Rule 6490(d)(3)(3).

34 *Id.*

35 *See, e.g., United States v. Rodgers*, 461 U.S. 677, 706 (1983) (stating that, absent "indications of legislative intent to the contrary," "the word 'may,' when used in a statute, usually implies some degree of discretion"). The 2010 Approval Order lends further support for this reading and included, with approval, the following explanation by FINRA of the operation of Rule 6490: "[W]hen the Department reasonably believes that an issuer . . . has triggered one of the explicitly enumerated factors, . . . it would *have the discretion* not to process any such actions that are incomplete or when it determines that not processing such an action is necessary for the protection of investors." 2010 Approval Order, *supra* note 5, at *6 (emphasis added).

36 *Tassaway, Inc.*, Exchange Act Release No. 11291, 45 SEC 706, 1975 WL 160383, at *2 (Mar. 13, 1975) (discussing oversight of the OTC markets by FINRA, then the NASD).

37 *E.g., Cleantech Innovations, Inc.*, Exchange Act Release No. 69968, 2013 WL 3477086, at *6 & n.43 (July 11, 2013) (stating that "we are not free to substitute our discretion for NASDAQ's" but setting aside decision because "the record does not show that the grounds on which NASDAQ relied in delisting CleanTech exist in fact"); *Eagle Supply Grp., Inc.*, Exchange

(continued...)

Here, we find that the specific grounds on which FINRA based its findings that mPhase's action posed a threat to investors and market integrity exist in fact. Durando's and Dotoli's previous misconduct was serious. Durando and Dotoli consented to an order finding that they violated the registration and disclosure provisions of the federal securities laws, which are fundamental to the securities industry and the protection of investors. Securities Act Sections 5(a) and (c) prohibit the offer and sale of a security without a registration statement, the essential purpose of which is to "'protect investors by promoting full disclosure of information thought necessary to informed investment decisions.'"[38] Exchange Act Section 16(a) and rules thereunder are designed to apprise "investors of security transactions by insiders," so that "abuses resulting from the use of inside information may be averted."[39] The disclosures required by Exchange Act Section 13(d) and its rules "alert[] the marketplace to every large, rapid aggregation or accumulation of securities . . . , which might represent a potential shift in corporate control," as in a corporate takeover.[40] Failure to comply with these core registration and disclosure obligations deprives investors of information necessary to make informed investment decisions, and thus, to protect themselves against potential fraud.[41]

Act Release No. 39800, 1998 WL 133847, at *4 (remanding to NASD for a more definitive statement on its reasoning for denying issuer's inclusion on the NASDAQ SmallCap Market).

38 *World Trade Fin. Corp.*, Exchange Act Release No. 66114, 2012 WL 32121, at *7 (Jan. 6, 2012) (quoting *SEC v. Ralston Purina Co.*, 346 U.S. 119, 124 (1953)), *petition denied*, 739 F.3d 1243 (9th Cir. 2014).

39 *Securities and Exchange Commission Release Notice*, Exchange Act Release No. 2253, 1939 WL 37795, at *1 (Sept. 20, 1939); *see also Interpretive Release on Rules Applicable to Insider Reporting and Trading*, Exchange Act Release No. 18114, 1981 WL 31301, at *1 (Sept. 24, 1981) ("The intent of [Exchange Act Section 16(b)] is to deprive officers, directors and substantial stockholders of the incentive to utilize their positions to trade in the securities of their companies on the basis of inside information.").

40 *GAF Corp. v. Milstein*, 453 F.2d 709, 717 (2d Cir. 1971); *see also SEC v. First City Fin. Corp.*, 890 F.2d 1215, 1230 (D.C. Cir. 1989) (explaining that a violator of Exchange Act Section 13(d) improperly benefits by purchasing stock at an artificially low price, because disclosure of a "holding in excess of five percent of a company's stock suggests to the rest of the market a likely takeover and therefore may increase the price of the stock").

41 The importance of these provisions undermines mPhase's attempt to characterize their violations as merely "technical" in nature. *E.g.*, *Owen V. Kane*, Exchange Act Release No. 23827, 48 SEC 617, 1986 WL 626043, at *5 (Nov. 20, 1986) (rejecting claim that respondent's violations were mere "technical" violations because "[t]he registration provisions [of Securities Act Section 5] are a keystone of the entire system of securities regulation, and set forth basic requirements for the protection of investors" (internal punctuation and citation omitted)), *aff'd*, 842 F.2d 194 (8th Cir. 1988); *see also SEC v. Drexel Burnham Lambert, Inc.*, 837 F. Supp. 587, 607 (S.D.N.Y. 1993) (stating that "[Exchange Act] Section 13(d) is not a mere 'technical' reporting provision; it is, rather, the 'pivot' of a regulatory scheme that may represent 'the only
(continued...)

FINRA concluded that the imposition of $950,000 in disgorgement against Durando, Dotoli, and Microphase further highlighted the gravity of their past misconduct. The conclusion that the misconduct was grave also is supported by the 2007 Settlement Order's entry of cease-and-desist orders against Durando, Dotoli, Microphase, and Packetport.com. A cease-and-desist order cannot be entered unless the "person is violating, has violated, or is about to violate any provision of"[42] the securities laws, rules, or regulations and there is "some risk of future violations."[43]

FINRA also based its denial on its ongoing regulatory concerns about mPhase, Durando, and Dotoli, which mPhase does not contest on appeal. As FINRA found, Durando's and Dotoli's current positions as CEO and COO provide them "with substantial authority, placing them in roles with minimal supervisory oversight and presenting opportunities for abuse."[44] FINRA also found it troubling that mPhase continued to be associated with Packetport and Microphase, both of which are subject to the 2007 Settlement Order and continue to operate from the same business address as mPhase, and in the case of Microphase, remains a part-owner of mPhase. mPhase's briefs on appeal do not contest these findings and conclusions, and we find these uncontested grounds for FINRA's denial exist in fact.[45]

3. FINRA properly considered the findings of the 2007 Settlement Order in reaching its decision.

We reject mPhase's contention on appeal that FINRA improperly considered the factual findings set forth in the 2007 Settlement Order as a basis for its denial. mPhase cites to provisions in the 2007 Settlement Order stating that Durando and Dotoli neither "admitt[ed] or den[ied] the findings therein" and that "[t]he findings . . . [were] not binding on any other person or entity . . . [in] any other proceeding" and points out that mPhase was not a party to the 2007 Settlement Order.[46]

We find that FINRA properly considered the underlying factual findings of Durando and Dotoli's 2007 Settlement Order in assessing its interest in protecting investors and market integrity. By including a settled securities-related action as one of the specific grounds for deeming a Company-Related Action deficient in Rule 6490, FINRA made "a basic public interest determination about the seriousness" of such an action.[47] FINRA, as a general matter, has considered prior settlements in weighing the public interest in other contexts, such as in the evaluation of whether a person subject to a statutory disqualification should be permitted to return to the securities industry[48] and in assessing prior disciplinary history as part of its sanction analysis in a disciplinary action.[49] FINRA is required by Rule 6490(d)(3) to determine whether denying the Company-Related Action requested is "necessary for the protection of investors, the public interest, and maintenance of fair and orderly markets." FINRA must be able to consider

---

[46] mPhase did not make this claim before the UPCC Subcommittee; rather it urged the opposite position—that the Subcommittee review the findings of the 2007 Settlement Order and find that the order involved only "technical" violations. It asserted that the "purpose of FINRA Rule 6490 . . . is to enable FINRA to review the activities of parties related to the Company-Related Action that are subject to a prior consent decree." FINRA contends that mPhase has waived its new argument because Rule 6490(e) required it to "set forth with specificity any and all defenses" before the UPCC Subcommittee. We nonetheless consider mPhase's argument, in our discretion, as part of our review of FINRA's action.

[47] *See, e.g., Marshall E. Melton*, Investment Advisers Act Release No. 2151, 56 SEC 760, 2003 WL 21729839, at *7 (July 25, 2003) (stating that, by making an injunction a specific ground for commencing a follow-on proceeding, Congress intended that the allegations underlying a consent injunction be considered in the subsequent proceeding); *see also Michael Batterman*, Advisers Act Release No. 2334, 2004 WL 2785527, at *5 (Dec. 3, 2004) (same).

[48] *See, e.g., Eric J. Weiss*, Exchange Act Release No. 69177, 2013 WL 1122496, at *7 (Mar. 19, 2013) (sustaining FINRA's consideration of state consent order); *LaJolla Capital Corp.*, Exchange Act Release No. 41755, 1999 WL 624046, at *7 n.31 (Aug. 18, 1999) (same). mPhase attempts to distinguish *Weiss* because the *Weiss* consent order did not provide that the order was "not binding" on any other party but as discussed, *infra* text accompanying note 56, the provisions in the 2007 Settlement Order did not bar FINRA's consideration of it here.

[49] *See, e.g., Midas Sec., LLC*, Exchange Act Release No. 66200, 2012 WL 169138, at *16 (Jan. 20, 2012); *Wendell D. Beldon*, Exchange Act Release No. 47859, 2003 WL 21088079, at *5 (May 14, 2003).

the findings underlying the prior settlement to properly weigh the issuer's interests in having its action processed against those of the investing public.[50] We believe that consideration of the factual predicate for the settlement, rather than the existence of the settlement alone, is a necessary element of this analysis—both with respect to the issuer, which may seek to explain the circumstances of the past action, as mPhase did below, and the public, which may be adversely affected by a decision to deny or approve an announcement on the OTCBB.[51]

We have taken a similar approach in our follow-on administrative proceedings that are based on the entry of a consent injunction.[52] In a follow-on proceeding, we routinely consider the facts of the injunctive action in determining whether it is in the public interest to impose a remedial sanction against an enjoined individual. But, where the injunction is based on consent, often there are no court-ordered findings from which to assess the public interest.[53] We have accordingly "adopted the policy in administrative proceedings based on consent injunctions that the injunctive allegations may be given considerable weight in assessing the public interest."[54] This conclusion is predicated on "our belief that Congress, having made an injunction a [specific] ground for commencing a proceeding, [did not intend] for the parties to conduct the proceeding as if the injunction had never been entered, disregarding the allegations underlying the injunction."[55]

We find no error in FINRA's consideration of the settlement's findings in deciding that it was necessary for the protection of investors and market integrity to deny mPhase's Company-Related Action request. Several courts construing the "neither admit nor deny" provision and the provision stating that the findings are "not binding" on other parties have held that such provisions do not preclude the admissibility of the findings of the settled order in a subsequent

---

50 FINRA Rule 6490(d)(3) (requiring that FINRA determine after finding a deficiency factor whether denial is "necessary for the protection of investors, the public interest, and maintenance of fair and orderly markets").

51 As noted, mPhase's earlier position urged the Subcommittee to consider the facts of the 2007 Settlement Order. *See supra* note 46.

52 *E.g.*, Advisers Act Sections 203(e)(4) and 203(f), 15 U.S.C. §§ 80b-3(e)(4) and (f), and Exchange Act Sections 15(b)(4)(C) and 15(b)(6)(A)(iii), 15 U.S.C. §§ 78o(b)(4)(C) and (b)(6)(A)(iii).

55 *Melton*, 2003 WL 21729839, at *8.

proceeding, so long as they are not adduced to establish liability against a party.[56] In assessing mPhase's request, FINRA did not invoke the findings of the prior proceeding to establish any liability against mPhase, which was not a party to the 2007 Settlement Order, and FINRA imposed no sanction or penalty against mPhase. Rather, FINRA's denial of mPhase's request is but one of the several collateral consequences created by Durando's and Dotoli's settlement and consent to sanctions.[57]

Nor can it be said that 2007 Settlement Order was "binding" or had "legal force" on the outcome here, as mPhase suggests.[58] FINRA gave mPhase an opportunity to dispute the relevance of the 2007 Settlement Order to the Company-Related Action requested. Although FINRA ultimately found the 2007 Settlement Order, together with its ongoing concerns about mPhase, necessitated denial of its request, the 2007 Settlement Order did not require FINRA to deny the request. Rather, FINRA considered a number of factors in addition to the settlement in

---

56 *Cf., e.g., Option Res. Grp. v. Chambers Dev. Co.*, 967 F. Supp. 846, 848-49 (W.D. Pa. 1996) (allowing "findings, including the opinions and conclusions" from Commission administrative settlement into evidence in separate civil suit against non-settling party under Fed. R. Evid. 803(8)(C), even though settlement was "not binding" on any other person or entity); *SEC v. Pentagon Capital Mgmt. PLC*, No. 08 Civ. 3324, 2010 WL 985205, at *3-4 (S.D.N.Y. Mar. 17, 2010) (unreported) (holding that "factual findings" contained in Commission settled orders were admissible in subsequent litigation so long as "offered for a purpose other than to establish liability" (citing *United States v. Gilbert*, 668 F.2d 94, 97 (2d Cir. 1981))); *see also SEC v. Das*, No. 8:10-CV-102, 2010 WL 4615336, at *7 n.5 (D. Neb. Nov. 4, 2010) (unreported) (permitting use of an unrelated settlement order as precedent because "the SEC's findings in the administrative decision are still soundly reasoned"); *but see Carpenters Health & Wealth Fund v. Coca-Cola Co.*, No. 1:00-CV-2838-WBH, 2008 WL 9358563, at *4-5 (Apr. 23, 2008) (holding that settled order was inadmissible as hearsay under Fed. R. Evid. 408).

57 *See DHB Capital Grp., Inc.*, Exchange Act Release No. 37069, 52 SEC 740, 1996 WL 164315, at *3 (Apr. 5, 1996) ("[FINRA]'s decision to deny inclusion [of DHB on NASDAQ]—based in part on the fact that, upon finding that Brooks committed serious securities law violations, we barred him (with his consent) from the industry—is a collateral consequence of Brooks' misconduct . . . [and] a proper exercise of the [FINRA]'s authority under its Qualification Requirements By-Law.").

For example, although mPhase was not a party to the 2007 Settlement Order, the entry of the settlement had the collateral consequence of requiring mPhase to disclose the settlement for the next ten years in its periodic filings with the Commission—a requirement mPhase asserts in its briefs it has met since the entry of the 2007 Settlement Order. Item 401(f) of Reg. S-K, 17 C.F.R. § 229.401(f) (requiring disclosure of a director's, nominee's, or executive officer's involvement in specific legal proceedings "that are material to an evaluation of the ability or integrity" of such a person).

58 *See P.R. Tel. Co. v. Sprintcom, Inc.*, 662 F.3d 74, 96 (1st Cir. 2011) (defining "the word 'binding' . . . as 'having legal force'" (quoting *Black's Law Dictionary* 190 (9th ed. 2009))).

determining that denial was necessary to protect the investing public or the maintenance of fair and orderly markets.[59]

4. There is no credible evidence that FINRA considered the allegations of the dismissed federal complaint in reaching its decision.

We also reject mPhase's claim that FINRA improperly considered the allegations of the Commission's federal suit against Durando and Dotoli, a case mPhase asserts was dismissed with prejudice in connection with entry of the 2007 Settlement Order.[60] mPhase cites to evidence in the record showing that the dismissed complaint was reviewed by a Department of Operations "examiner" during the background investigation of mPhase. It contends that, because the case was dismissed, FINRA should not be able to use the dismissed complaint as a basis for its denial.

mPhase's claim is meritless. Although the dismissed complaint is part of FINRA's record before us and listed in the examiner's materials, it is the decision of the UPCC Subcommittee—not the Department's examiner—that constitutes the final action of FINRA subject to our review.[61] mPhase cites to no part of the Subcommittee decision evidencing that the Subcommittee considered the dismissed complaint in denying mPhase's Company-Related Action request.[62] Rather, as discussed, the Subcommittee based its denial on the 2007 Settlement Order and its ongoing concerns about mPhase and its continued association with Durando and Dotoli, all of which amply support denial.

For the foregoing reasons, we find that the grounds on which FINRA based its denial to process mPhase's Company-Related Action request existed in fact.

---

59 FINRA Rule 6490(d)(3); *see also supra* note 51 and accompanying text.

60 In its briefs, mPhase cites to the district court order dismissing the case for a failure to prosecute, *SEC v. PacketPort.Com, Inc.*, No. 3:05 CV 1747, 2007 WL 911900, at *7 (D. Conn. Mar. 21, 2007), but that order was vacated by the court's later decision on reconsideration. *SEC v. PacketPort.Com, Inc.*, 2007 WL 1521583, at *9 (D. Conn. May 23, 2007). As discussed, the Commission withdrew that federal action in connection with the entry of the 2007 Settlement Order. *PacketPort.com*, 2007 WL 3033485, at *1 (D. Conn. Oct. 18, 2007).

61 FINRA Rule 6490(e); *cf. Morton Bruce Erenstein*, Exchange Act Release No. 56768, 2007 WL 3306103, at *8 (Nov. 8, 2007) ("'[I]t is the decision of the NAC, not the decision of the Hearing Panel, that is the final action of [FINRA] which is subject to Commission review.'" (quoting *Philippe N. Keyes*, Exchange Act Release No. 54723, 2006 WL 3313843, at *6 n.17 (Nov. 8, 2006))), *petition denied*, 316 F. App'x 865 (11th Cir. 2008).

62 Although the dismissed complaint involved some of the same registration and disclosure charges found in the 2007 Settlement Order, it primarily involved allegations that Durando and Dotoli ran a pump-and-dump scheme to fraudulently obtain over $9 million in illicit profits from investors. Complaint, *SEC v. PacketPort.com, Inc.,* Civil Action No. 3:05cv1747 (filed Nov.15, 2005), *available at* http://www.sec.gov/litigation/complaints/comp19465.pdf. None of those fraud charges was a basis for the Subcommittee's denial.

B. FINRA's denial of mPhase's request was in accordance with its rules.

FINRA, a registered national securities association, adopted Rule 6490 pursuant to Exchange Act Section 15A(b).[63] That provision authorizes FINRA to adopt rules that, among other things, are "designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, [and] processing transactions in securities" and, in general, "to protect investors and the public interest."[64] As we stated in the 2010 Approval Order, FINRA adopted Rule 6490 in furtherance of these statutory principles based on FINRA's growing concern that its OTCBB services could be used for fraudulent practices.[65] We concluded that the Rule was designed to protect "the OTC marketplace and investors in OTC Securities" by permitting FINRA to deny a Company-Related Action request when there are "certain indicators of potential fraud."[66]

The plain language of FINRA Rule 6490(d)(3) makes clear FINRA's authority to deny a Company-Related Action in the circumstances presented here. Among the five deficiency factors that may form the basis for FINRA's denial is whether it has "actual knowledge" of a settled regulatory action against the issuer's officers for securities laws violations. If "one or more" of these factors is present, FINRA has the discretion to deny a request if denial is "necessary for the protection of investors, the public interest, and maintenance of fair and orderly markets."[67] As discussed, FINRA's denial satisfied these requirements.[68]

mPhase contends that FINRA exceeded its authority under FINRA Rule 6490. It argues that FINRA's ability to deny a Company-Related Action request under the Rule is proscribed by Section 10(b) of the Exchange Act and Rule 10b-17 thereunder, which mPhase claims are "the enabling statute and SEC Rule" for FINRA Rule 6490, and require that the company only give timely notice of its reverse stock split to FINRA.[69] Thus, according to mPhase, because it gave

---

63 2010 Approval Order, *supra* note 5, at *5.

64 15 U.S.C. § 78*o*-3(b)(6); *see also Fog Cutter*, 474 F.3d at 824 (discussing Exchange Act Section 15A(b) and stating that, "[a]s a self-regulatory organization, [FINRA] must maintain rules to protect investors and the public interest").

65 2010 Approval Order, *supra* note 5, at *2 (stating that FINRA proposed Rule 6490 "in furtherance of its authority to adopt rules to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, and protect investors and the public interest").

66 *Id.*

67 *See supra* note 35 and accompanying text (discussing FINRA's discretionary authority).

68 In addition to meeting these substantive requirements, we find, as mPhase does not dispute, that FINRA properly followed the procedures set forth in Rule 6490(d) and (e) in disposing of mPhase's request. *Michael Stegawski*, Exchange Act Release No. 59326, 2009 WL 223618, at *6 (Jan. 30, 2009).

69 17 C.F.R § 240.10b-17. Specifically, Exchange Act Rule 10b-17 requires issuers to give

(continued...)

sufficient notice of its stock split to FINRA, there is no basis for FINRA to deny processing and announcing its Company-Related Action on the OTCBB.

We disagree. As discussed, the enabling statute for FINRA Rule 6490 is Exchange Act Section 15A(b). Although we recognize that FINRA Rule 6490 cross references Exchange Act Rule 10b-17, we reject the contention that, because of this, FINRA may refuse to process a reverse stock split *only* if a company fails to timely give FINRA notice. Rule 6490 refers to Exchange Act Rule 10b-17 because, under subsection (b) of Rule 6490, issuers requesting to effectuate a Company-Related Action that is enumerated by Exchange Act 10b-17—*e.g.*, a reverse stock split—must provide FINRA with advance notice of the action consistent with the "timelines specified" by Exchange Act Rule 10b-17.[70] FINRA does not contest that such notice was made here. But mPhase's compliance with one part of Rule 6490 (subsection (b)) does not alter the fact that the 2007 Settlement Order triggered one of the five deficiency factors set forth in another part of the Rule (subsection (d)(3)).

mPhase raises additional textual arguments regarding Rule 6490(d)(3) to assert that FINRA possesses only "ministerial" power to process Company-Related Actions, despite statements to the contrary in the 2010 Approval Order.[71] Specifically, mPhase cites subsection (d)(3)(1), which allows FINRA to deem a Company-Related Action deficient if "FINRA staff reasonably believes the forms and all supporting documentation, in whole or in part, may not be complete, accurate or with proper authority."[72] mPhase also cites subsection (d)(3)(2), which allows FINRA to deem a Company-Related Action deficient if "the issuer is not current in its reporting requirements, if applicable, to the SEC or other regulatory authority."[73] mPhase claims these subsections address only instances where the issuer failed to disclose information to

(...continued)
FINRA, in a timely fashion, information relating to: (1) a dividend or other distribution in cash or in kind; (2) a stock split or reverse split; and (3) a rights or other subscription offering. Under Rule 10b-17, the issuer is required to provide this information to FINRA no later than 10 days before the record date or, in case of a rights subscription or other offering if such 10 days advance notice is not practical, on or before the record date, and in no event later than the effective date of the registration statement to which the offer relates. Pursuant to Rule 10b-17(b)(3), comparable notice given by the issuer of an exchange-listed security in accordance with the procedures of the national securities exchange upon which a security of such issuer is registered satisfies this requirement. *Id.*

70 FINRA Rule 6490(b)(2). As noted, *supra* note 6, Rule 6490 refers to Company-Related Actions enumerated under Exchange Act Rule 10b-17 as "SEA Rule 10b-17 Actions." In contrast, those corporate actions not enumerated by Exchange Act Rule 10b-17 (*i.e.*, "Other Company-Related Actions") must adhere to the timelines set by FINRA. FINRA Rule 6490(b)(3). Aside from this distinction, Rule 6490 treats all Company-Related Actions equally.

71 *See supra* text accompanying notes 9-14.

72 FINRA Rule 6490(d)(3)(1).

73 FINRA Rule 6490(d)(3)(2).

FINRA in its Company-Related Action application, and as a result, subsection (d)(3)(3) only allows FINRA to deny a request if the issuer failed to inform FINRA of the prior settled action.[74]

These arguments fail. Subsection (d)(3)(2) says nothing about nondisclosure of information to FINRA.[75] The fact that subsection (d)(3)(1) addresses an incomplete or inaccurate request has no bearing on subsection (d)(3)(3). It is a widely accepted principle of construction that, where a statute or regulation includes particular language in one section but omits it in another, the disparate inclusion or exclusion was intentional and purposeful.[76] Here, it would make little sense to apply the same basis for a deficiency under subsection (d)(3)(1) to the remaining four deficiency factors provided in the Rule. This is particularly true given that each factor constitutes a separate, independent ground for deeming a request deficient, a point made clear by the express language of Rule 6490(d)(3) stating that a request is deficient if FINRA finds "one or more of the [deficiency] factors" exists.

Equally unavailing is mPhase's contention that Rule 6490(d)(3)(3)'s requirement that FINRA have "actual knowledge" of a settled regulatory action means that FINRA can deny requests only when: (i) the issuer failed to disclose the settled action in its application and (ii) FINRA independently becomes aware of the settled action. mPhase's contention is premised on its argument—rejected above—that Rule 6490(d)(3) is a mere notice provision. Nor do we find that the Rule's use of the term "actual knowledge" compels this interpretation. Although "actual knowledge" is not defined by the Rule, the term has a common legal definition: that the actor has "'[d]irect and clear'" awareness of a particular fact.[77] And we find no expressed

---

74 mPhase's brief erroneously cites "subsections (d)(1) and (d)(2)" for this claim when the factors it paraphrases are from (d)(3)(1) and (d)(3)(2) of the Rule.

75 FINRA Rule 6490(d)(3)(2) (defining this factor as when "the issuer is not current in its reporting requirements, if applicable, to the SEC or other regulatory authority").

76 *See, e.g., Keene Corp. v. United States*, 508 U.S. 200, 208 (1993) ("'Where Congress includes particular language in one section of a statute but omits it in another . . . , it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.'" (continued...)

intention by FINRA to construe "actual knowledge" alternatively, as mPhase asserts. Requiring that FINRA have "actual knowledge" of a settled regulatory action—established here by the information mPhase provided FINRA and FINRA's background investigation—serves the important policy objective of ensuring that FINRA has an adequate, justifiable basis before denying an issuer's Company-Related Action request.[78]

mPhase further asserts that FINRA may not reject its Company-Related Action request because the 2007 Settlement Order did not involve fraud, an element that it contends is necessary. But subsection (d)(3)(3) explicitly uses the disjunctive "or," in providing that the previously settled action be "related to fraud *or* securities laws violations"—thus either basis suffices for deeming a request deficient.[79] As discussed, the 2007 Settlement Order resolving the case against Durando and Dotoli for violations of the registration and disclosure requirements constituted a sufficient basis for FINRA's deficiency determination here.

Accordingly, based on the foregoing reasons, we find that FINRA's denial was in accordance with FINRA Rules.

C. FINRA applied its rules in a manner consistent with the Exchange Act.

FINRA applied its rules in a manner consistent with the purposes of the Exchange Act. FINRA designed the OTCBB in response to the Securities Enforcement Remedies and Penny Stock Reform Act of 1990, where Congress directed the creation of "automated quotation systems for penny stocks . . . [t]o add visibility and regulatory and surveillance data to that market."[80] In enacting this legislation, Congress amended the federal securities laws by

United States*, 342 U.S. 246, 263 (1952) ("[W]here Congress borrows terms of art in which are accumulated the legal tradition and meaning of centuries of practice, it presumably knows and adopts the cluster of ideas that were attached to each borrowed word . . . ."); *United States v. McGoff*, 831 F.2d 1071, 1078 (D.C. Cir. 1987) (same).

78 *Spinney*, 65 F.3d at 236. Similar use of the term by FINRA is found in FINRA Rule 8210(d), requiring FINRA staff to follow certain procedures when they have "actual knowledge" of an out-of-date or inaccurate mailing address in the Central Registration Depository.

79 Emphasis added. *Accord Gary M. Kornman*, Exchange Act Release No. 59403, 2009 WL 367635, at *4 (Feb. 13, 2009) ("The statutes use the disjunctive 'or,' meaning that any one basis in the statute is sufficient to establish our authority to proceed."), *petition denied*, 592 F.3d 173 (D.C. Cir. 2010).

80 Pub. L. No. 101-429, 104 Stat. 931 (1990) (codified in the Exchange Act at 15 U.S.C. § 78q-2); *see also Order Approving and Notice of Filing and Order Granting Accelerated Approval of Amendment Nos. 3 and 4 to Proposed Rule Change Relating to the OTC Bulletin Board Service*, Exchange Act Release No. 38456, 1997 WL 152011, at *1, 4 (Mar. 31, 1997) (the "1997 Approval Order") ("While the potential for trading abuses is greater [on the OTCBB

(continued...)

"issu[ing] legislative directives with the intention of curbing the pervasive fraud and manipulation of the penny stock market."[81] FINRA Rule 6490 furthers these objectives by authorizing FINRA to deny processing and announcing a Company-Related Action on the OTCBB when it finds deficiencies with respect to an issuer's Company-Related Action, including "indicators of potential fraud," and that denial is "necessary for the protection of investors, the public interest and to maintain fair and orderly markets."[82]

Here, FINRA found that Durando's and Dotoli's settlement of federal securities laws violations and consent to sanctions, continued association with entities involved in that settlement, and mPhase's lack of supervisory oversight of Durando and Dotoli made denial of the company's request necessary to protect investors and the market integrity of the OTCBB. As we have stated in the context of FINRA's delisting of securities from its automated systems, investors in OTCBB securities are "entitled to assume that securities [on FINRA's] system meet the system's standards, and that the risk associated with investing in [OTCBB securities] is market risk rather than the risk that the promoter or other persons exercising substantial influence over the issuer is acting in an illegal manner."[83]

mPhase contends that FINRA lacks authority to deny its Company-Related Action request because FINRA has "no direct jurisdiction over issuers." But mPhase's argument ignores

Cir. 2007); *DHB Capital*, 1996 WL 164315, at *3 (denying issuer's listing on the SmallCap Market based on consent injunction entered against controlling shareholder, officer, and director).

the critical role that FINRA occupies in regulating the OTC market.[84] FINRA is the owner and operator of the OTCBB and as a result has "direct authority for the activities related . . . to the OTCBB."[85] With this comes an obligation to oversee the OTCBB and "protect the integrity of the market it is charged with maintaining."[86]

mPhase further contends that FINRA's denial is time-barred because the 2007 Settlement Order is over five years old and "the five-year [statute of] limitations period " of 28 U.S.C. § 2462 "has clearly passed."[87] The five-year statute of limitations set forth in 28 U.S.C. § 2462 applies only to "an action or proceeding for the enforcement of any civil fine, penalty, or forfeiture."[88] FINRA did not institute this action, it is not a disciplinary action, and FINRA does not seek imposition of a fine, penalty, or forfeiture.[89] Rather, this action arises solely from

(quoting *Tague Sec. Corp.*, Exchange Act Release 18510, 47 SEC 743, 1982 WL 32205, at *2 (Feb. 25, 1982))).

mPhase's request that FINRA provide it services on the OTCBB.[90] In any event, we have long held that FINRA, a private organization, is not subject to the requirements of 28 U.S.C. § 2462, applicable to government agencies.[91]

mPhase argues that FINRA's denial was inconsistent with the Exchange Act because it "amount[s] to a *de facto* and improper officer and director bar." mPhase is incorrect. As discussed, FINRA's denial imposed no sanction. FINRA's refusal to announce mPhase's Company-Related Action was a prophylactic measure designed to prevent potential fraud or abuse from occurring through use of the OTCBB, and it had no further reach than announcement on that particular FINRA facility.[92] Although mPhase contends that FINRA's denial effectively bars Durando and Dotoli from acting as officers and directors, we note that both remain officers and directors of mPhase and mPhase's stock continues to trade in the OTC market and is currently quoted on the OTC Pink, an alternative inter-dealer quotation system.[93]

---

90 We note that mPhase's current § 2462 claim contradicts its previous statement before FINRA that the 2007 Settlement Order was "almost five years old," which is a more accurate factual statement: The 2007 Settlement Order was entered on October 18, 2007, mPhase filed its application with FINRA on July 6, 2012, and FINRA's Department denied the application on October 2, 2012. Thus, even if we assume *arguendo* that the application or denial somehow served as "commence[ment]" of an action under 28 U.S.C. § 2462, that action would have started within the five-year limitations period. *Cf. Birkelbach v. SEC*, 751 F.3d 472, 479-80 (7th Cir. May 2, 2014) (finding that, even if § 2462 applied to FINRA disciplinary actions, "sufficient violative conduct" took place within the five-year period preceding action).

91 *William D. Hirsch*, Exchange Act Release No. 43691, 54 SEC 1068, 2000 WL 1800614 at *5 (Dec. 8, 2000) ("We have consistently held that no statute of limitations applies to the disciplinary actions of . . . self-regulatory organizations."); *Shamrock Partners, Ltd.*, Exchange Act Release No. 40663, 53 SEC 1008, 1998 WL 786953, at *5 n.15 (Nov. 12, 1998) ("The five-year statute of limitations discussed in *SEC v. Johnson*, 87 F.3d 484 (D.C. Cir. 1996), . . . does not apply to NASD proceedings."); *Henry James Faragalli*, Exchange Act Release No. 37991, 52 SEC 1132, 1996 WL 683707, at *10 & n.36 (Nov. 26, 1996) ("[I]t is well established that no statute of limitations applies to [SRO] actions . . . [because] SROs are not subject to the requirements applicable to a government agency.").

92 *Cf., e.g., United States v. O'Hagan*, 521 U.S. 642, 672-73 (1997) (describing Exchange Act Rule 14e-3(a) as "[a] prophylactic measure, because its mission is to prevent . . . [and it] encompasses more than the core activity prohibited").

93 *See supra* note 15. *Cf. Millenia Hope, Inc.*, Exchange Act Release No. 42739, 2000 WL 511439, at *1 (May 1, 2000) (denying stay of OTCBB delisting and stating that "the deletion [from the OTCBB] means only that there will be no prices for those securities quoted on the OTCBB," not that the securities must cease trading); *Cleantech Innovations, Inc.*, Exchange Act Release No. 66064, 2011 WL 6811202, at *3 (Dec. 28, 2011) (same).

For similar reasons, we reject mPhase's related arguments that are based on this contention, including that FINRA's action improperly intrudes on New Jersey corporate law, that the Commission is collaterally estopped from affirming an officer and director bar, and that

(continued...)

Finally, we reject mPhase's argument, made only in its application for review, that FINRA "improperly applied [FINRA Rule 6490] retroactively to punish conduct that occurred prior to the enactment of [Rule 6490]." mPhase has since abandoned this argument in subsequent briefs; in any event, we find it meritless. The United States Supreme Court has observed that "[a] statute 'is not made [impermissibly] retroactive merely because it draws upon antecedent facts for its operation.'"[94] Rather, a statute is impermissibly retroactive "when such application would 'tak[e] away or impai[r] vested rights acquired under existing laws, or creat[e] a new obligation, impos[e] a new duty, or attac[h] a new disability, in respect to transactions or considerations already past.'"[95] The Court has explained that statutes imposing requirements on previously convicted or sanctioned individuals to "address[] dangers that arise postenactment" are not impermissibly retroactive.[96] Even where application of such statutes could be construed to "unsettle expectations and impose burdens on past conduct," those statutes are not impermissibly retroactive because they "target a present danger."[97]

FINRA's action was not impermissibly retroactive for two independent reasons. First, FINRA considered the 2007 Settlement Order, along with its ongoing concerns about mPhase, to make a present determination of risk to investors and the public generally. Although FINRA drew on information predating Rule 6490's adoption, FINRA did so as part of a process in which it assessed the *present* risks posed by mPhase's request for public announcement on the OTCBB.[98] Under FINRA's process, while the existence of the 2007 Settlement Order caused mPhase's request to be deficient under FINRA Rule 6490(d)(3), FINRA, consistent with its Rule, allowed mPhase an opportunity to explain why the company's request should be processed

(...continued)
imposing a bar denies Durando and Dotoli due process. FINRA's denial of an announcement on the OTCBB and our affirmance of that decision imposes no bar; nor does the denial prevent mPhase from effectuating its corporate action outside of the OTCBB.

94 *Landgraf v. USI Film Prod.*, 511 U.S. 244, 269 (1994) (quoting *Cox v. Hart*, 260 U.S. 427, 435 (1922)); *see also Martin v. Hadix*, 527 U.S. 343, 357-58 (1998) ("The inquiry into whether a statute operates retroactively demands a commonsense, functional judgment about 'whether the new provision attaches new legal consequences to events completed before its enactment.' This judgment should be informed and guided by 'familiar considerations of fair notice, reasonable reliance, and settled expectations.'" (quoting *Landgraf*, 511 U.S. at 270)).

95 *Vartelas v. Holder*, 132 S. Ct. 1479, 1487 (2012) (quoting *Langraf*, 511 U.S. at 283) (holding that statutes authorizing prospective remedies may consider conduct pre-dating the statute without a genuinely retroactive effect).

96 *Id.* at 1489 n.7; *Johnny Clifton*, Exchange Act Release No. 69982, 2013 WL 3487076, at *13 (July 12, 2013) (holding that it is proper to consider respondent's conduct predating Dodd-Frank Act in assessing future risk to investing public).

97 *Vartelas*, 132 S. Ct. at 1489 (discussing various examples); *see also United States v. Shoulder*, 738 F.3d 948, 958 (9th Cir. 2012).

98 *Landgraf*, 511 U.S. at 270 n.24.

nonetheless.[99] Yet, after weighing the arguments and materials mPhase submitted against the perceived interests of the public, FINRA concluded that announcement of mPhase's reverse stock split on the OTCBB at this time posed too great a risk for the investing public and market integrity.[100] And as discussed, FINRA's assessment of that risk is supported by the record.

Second, nothing in FINRA's application of Rule 6490 impairs rights mPhase possessed when it acted, increases its liability for past conduct, or imposes new duties with respect "to transactions already completed."[101] mPhase has not asserted, nor do we find, that it had a vested right in having FINRA process and announce its Company-Related Actions.[102] mPhase filed its application more than two years after the adoption of Rule 6490. When mPhase did so, it was clear that its officers' 2007 Settlement Order could be a basis for FINRA to deny the request. FINRA's action therefore did not affect mPhase's reliance interest or settled expectations in having FINRA announce its corporate actions on the OTCBB.

mPhase also did not incur any new liability, duty, or disability from its own conduct predating Rule 6490's adoption because it was neither a party to the 2007 Settlement Order nor was it subject to any of its sanctions.[103] mPhase, in effect, is claiming an impermissible

---

99 *See supra* note 51 and accompanying text; *accord Boniface v. Dep't of Homeland Sec.*, 613 F.3d 282, 288 (D.C. Cir. 2010). In *Boniface*, the Court of Appeals for the D.C. Circuit rejected a similar retroactivity challenge, upholding the Transportation Security Administration's ("TSA") application of a new regulation to deny licensing of a hazardous materials endorsement ("HME") to a commercial trucker based on an event predating the regulation, the trucker's thirty-year-old conviction for transporting hazardous materials. The court reasoned that the TSA's denial did not trigger "any of the effects deemed retroactive [by the Supreme Court] in *Landgraf* because it does not bar an applicant with a disqualifying conviction from obtaining an HME but rather creates 'an evidentiary presumption' that an applicant with a disqualifying conviction in his past poses a security threat in the present; the applicant may rebut that presumption through the waiver process." *Id.* The presence of a deficiency factor here operated analogously.

101 *Landgraf*, 511 U.S. at 280.

102 *See, e.g.*, *Empresa Cubaexport v. Dept. of Treasury*, 638 F.3d 794, 799 (D.C. Cir. 2011) (holding that company had no vested right to perpetual renewal of its trademark; stating that "[a] law that merely 'upsets expectations based in prior law' . . . does not trigger the presumption against retroactivity" (quoting *Landgraf*, 511 U.S. at 269)); *Goodyear Tire & Rubber Co. v. Dep't. of Energy*, 118 F.3d 1531, 1536-38 (Fed. Cir. 1997) (holding that DOE's application of 1992 product eligibility rule was not retroactive because applicant had no vested right to have the pre-1992 rule applied and no vested right to have its claims approved).

103 *See, e.g.*, *Ohio Head Start Assoc. v. U.S. Dept. of Health and Human Svcs.*, 873 F. Supp. 2d 335, 347-48 (D.D.C. 2012) (discussing U.S. Supreme Court precedent and concluding that the principal focus for determining whether to allow "regulations [to] use antecedent information in

(continued...)

retroactive effect based on an antecedent event that relates only to the conduct of its officers. We have not found, nor has mPhase cited to, any authority suggesting that a statute or regulation is impermissibly retroactive when it triggers an outcome based on the earlier misconduct of a *different* person or entity. Accordingly, for all these reasons, we find that FINRA's denial was not impermissibly retroactive.

Based on the foregoing, we find that FINRA properly denied mPhase's Company-Related Action request and, accordingly, dismiss mPhase's appeal.

An appropriate order will issue.[104]

INVESTMENT ADVISERS ACT OF 1940
Release No. 4014 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16368

In the Matter of Wyoming Investment Management Services, LLC and Craig M. Scariot, Respondents.	ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS, PURSUANT TO SECTIONS 203(e), 203(f) AND 203(k) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Sections 203(e), 203(f) and 203(k) of the Investment Advisers Act of 1940 ("Advisers Act"), against Wyoming Investment Management Services, LLC ("WIMS") and Craig M. Scariot (collectively, "Respondents").

II.

In anticipation of the institution of these proceedings, Respondents have submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, and except as provided herein in Section V, Respondents consent to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings Pursuant to Sections 203(e), 203(f) and 203(k) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offer, the Commission finds that:

Summary

This proceeding arises out of improper registration and material misstatements made in Forms ADV by WIMS, an investment adviser registered with the Commission. Since February 2013, WIMS misrepresented that its principal office and place of business was in Wyoming, a state that does not regulate investment advisers. This was done at the time new rules went into effect restricting such registration to advisers with more assets under management. Scariot, WIMS' president and sole employee, was responsible for all of WIMS' filings, and aided and abetted and caused all of its violations.

Respondents

1. WIMS, a Wyoming Limited Liability Company, filed its initial Form ADV with the Commission in February 2013 and has approximately $70 million assets under management. From March 1, 2013, the date WIMS became registered as an investment adviser with the Commission, through December 31, 2013 WIMS' principal office and place of business was at the home of WIMS' president in Ft. Collins, Colorado.

2. Scariot, age 37, is currently a resident of Longmont, Colorado and is the president, portfolio manager, chief compliance officer, and sole employee of WIMS.

Background

3. In 2011, the Advisers Act was amended to increase the threshold for an investment adviser's assets under management required for registration with the Commission effective March 2012.[1] Registration with the Commission was still required, however, for advisers not regulated by the states where they maintained their principal offices and places of business. Currently, Wyoming is the only state that does not regulate investment advisers. So any investment adviser with a principal office and place of business in Wyoming, regardless of its assets under management, is required to register with the Commission.

4. Rule 222-1(b) under the Advisers Act states that the principal office and place of business of an investment adviser means the executive office of the investment adviser from which the officers, partners, or managers of the investment adviser direct, control, and coordinate the activities of the investment adviser.

5. In December 2012, Scariot organized WIMS as a Wyoming limited liability company, signed a lease for an office space in Cheyenne, Wyoming, and opened the WIMS' bank

---

[1] Previously, Section 203A of the Advisers Act prohibited investment advisers from registering with the Commission unless they managed at least $25 million in assets or met a designated exemption. Effective July 21, 2011, Section 203A increased the minimum amount of assets under management for most advisers to qualify for SEC registration from $25 million to $100 million. *See* Advisers Act Section 203A(a)(2) amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, 124 Stat. 1376 (2010); *Final Rule; Rules Implementing Amendments to the Investment Advisers Act of 1940*, Investment Advisers Act Release No. 3221 (June 22, 2011).

account there. On February 15, 2013, WIMS made its initial registration filing with the Commission on Form ADV. In Part 1A, Items 1F and 2A of the Form ADV, WIMS stated its principal office and place of business was in Cheyenne, Wyoming, and based its registration with the Commission on its Wyoming location. WIMS made the same representations about its principal office and place of business and basis for registration in its amendment to Form ADV filed on February 22, 2013, and in an annual amendment on Form ADV filed on February 12, 2014.

6. Scariot did not direct, control, or coordinate the activities of WIMS from Cheyenne, Wyoming from March 2013 through December 2013. During this time, Scariot resided in Ft. Collins, Colorado, and he used his residence there as a primary base of operations for WIMS while completing graduate school and undergoing intensive physical therapy. Scariot did not meet with clients in Wyoming and conducted business in the WIMS office space in Wyoming in 2013 on an infrequent basis. As disclosed in its Form ADV filings, WIMS' books and records were maintained in Santa Fe, New Mexico throughout 2013. Because WIMS did not maintain a principal office or place of business in Wyoming and had no other basis for Commission registration, it was prohibited from registering with the Commission as an investment adviser.

7. Scariot was responsible for preparing, signing, and filing WIMS' filings with the Commission.

Violations

8. As a result of the conduct described above, WIMS willfully[2] violated, and Scariot willfully aided and abetted and caused WIMS' violations of, Section 203A of the Advisers Act by WIMS improperly registering with the Commission based on its misrepresentation that WIMS' principal office and place of business was in Wyoming.

9. As a result of the conduct described above, Respondents willfully violated Section 207 of the Advisers Act which makes it "unlawful for any person willfully to make any untrue statement of a material fact in any registration application or report filed with the Commission . . . or willfully to omit to state in any such application or report any material fact which is required to be stated therein." In the relevant Form ADV filings, WIMS and Scariot misstated WIMS' principal office and place of business.

Undertakings

10. Respondents have undertaken to:

Establish WIMS' principal office and place of business in Wyoming by maintaining in Wyoming the executive office of WIMS from which the officers, partners, or managers of the investment adviser direct, control, and coordinate the activities of the investment adviser.

[2] A willful violation of the securities laws means merely "'that the person charged with the duty knows what he is doing.'" *Wonsover v. SEC*, 205 F.3d 408, 414 (D.C. Cir. 2000) (quoting *Hughes v. SEC*, 174 F.2d 969, 977 (D.C. Cir. 1949)).

Certify, in writing, compliance with the undertaking set forth above. The certification shall identify the undertaking, provide written evidence of compliance in the form of a narrative, and be supported by exhibits sufficient to demonstrate compliance. The Commission staff may make reasonable requests for further evidence of compliance, and Respondents agree to provide such evidence. The certification and supporting material shall be submitted to Mary S. Brady, Assistant Regional Director, with a copy to the Office of Chief Counsel of the Enforcement Division, no later than sixty (60) days from the date of the completion of the undertakings.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondents' Offer.

Accordingly, pursuant to Sections 203(e), 203(f) and 203(k) of the Advisers Act, it is hereby ORDERED that:

A. Respondents cease and desist from committing or causing any violations and any future violations of Sections 203A and 207 of the Advisers Act.

B. Respondents are censured.

C. Respondents shall, within 10 days of the entry of this Order, pay a civil money penalty, jointly and severally, in the amount of $10,000 to the Securities and Exchange Commission. If timely payment is not made, additional interest shall accrue pursuant to 31 U.S.C. 3717. Payment must be made in one of the following ways:

(1) Respondents may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) Respondents may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

(3) Respondents may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Wyoming Investment Management Services, LLC and Craig Scariot as Respondents in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Thomas J. Krysa, Associate Regional Director, Division of Enforcement, Securities and Exchange Commission, 1961 Stout Street, Suite 1700, Denver, CO 80294-1961.

D. Respondents shall comply with the undertakings enumerated in paragraph 10 above.

V.

It is further Ordered that, solely for purposes of exceptions to discharge set forth in Section 523 of the Bankruptcy Code, 11 U.S.C. §523, the findings in this Order are true and admitted by Respondents, and further, any debt for disgorgement, prejudgment interest, civil penalty or other amounts due by Respondent under this Order or any other judgment, order, consent order, decree or settlement agreement entered in connection with this proceeding, is a debt for the violation by Respondents of the federal securities laws or any regulation or order issued under such laws, as set forth in Section 523(a)(19) of the Bankruptcy Code, 11 U.S.C. §523(a)(19).

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

INVESTMENT ADVISERS ACT OF 1940
Release No. 4015 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16369

In the Matter of **Arete Ltd.,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTIONS 203(e) AND 203(k) OF THE INVESTMENT ADVISERS ACT OF 1940**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Sections 203(e) and 203(k) of the Investment Advisers Act of 1940 ("Advisers Act") against Arete Ltd. ("Arete" or "Respondent").

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT

1. Arete d/b/a Sky Peak Capital Management, is a Wyoming limited liability company, and filed its initial Form ADV with the Commission in November 2012. Arete's principal office and place of business is in Irvine, California.

B. IMPROPER REGISTRATION AND FALSE FORM ADV FILINGS

1. In 2011, the Advisers Act was amended to increase the threshold for an investment adviser's assets under management required for registration with the Commission effective March 2012.[1] Registration with the Commission was still

[1] Previously, Section 203A of the Advisers Act prohibited investment advisers from registering with the Commission unless they managed at least $25 million in assets or met a designated exemption. Effective July 21, 2011, Section 203A increased the minimum amount of assets under management for most advisers to qualify for SEC registration from $25 million to $100 million. *See* Advisers Act Section 203A(a)(2) amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, 124 Stat. 1376 (2010); *Final Rule;*

required, however, for advisers not regulated by the states where they maintained their principal offices and places of business. Currently, Wyoming is the only state that does not regulate investment advisers. So any investment adviser with a principal office and place of business in Wyoming, regardless of its assets under management, is required to register with the Commission.

2. Rule 222-1(b) under the Advisers Act states that the principal office and place of business of an investment adviser means the executive office of the investment adviser from which the officers, partners, or managers of the investment adviser direct, control, and coordinate the activities of the investment adviser.

3. In September 2012, the initial owner of Arete formed the company as a for profit corporation in Wyoming. On November 27, 2012, Arete made its initial filing with the Commission on Form ADV. In Part 1A, Items 1F and 2A of the Form ADV, Arete claimed its principal office and place of business was in Cheyenne, Wyoming, and based its registration with the Commission on its Wyoming location. Arete made the same representations about its principal office and place of business and basis for registration in its amendments to Form ADV filed on July 26, 2013, August 2, 2013, and October 2, 2013. Arete stopped conducting business in late 2013 and has not made any filings with the Commission since then.

4. No officer, partner, or manager of Arete directed, controlled, or coordinated the activities of Arete from Wyoming and Arete did not conduct any investment advisory business out of Wyoming. Arete's operations were conducted out of California. Because Arete did not have a principal office or place of business in Wyoming and had no other basis for Commission registration, it was prohibited from registering with the Commission as an investment adviser.

5. On February 28, 2013, the Securities Commissioner for the State of Colorado filed a complaint against the chief compliance officer ("CCO") of Arete, among others, for carrying out a scheme to defraud investors through the use of investments in a so-called "private equity fund." Arete's CCO was charged with violating Section 11-51-301, C.R.S, for the offer or sale of unregistered securities; Section 11-51-401, C.R.S., for acting as an unlicensed sales representative; and Section 11-51-501(1), C.R.S., for securities fraud. On December 9, 2013, Arete's CCO entered into a stipulation, on a neither admit nor deny basis, for an order of permanent injunction and other relief in connection with that case. On December 30, 2013, an order was entered granting the permanent injunction and other relief based on the alleged violations in the complaint.

6. Respondent did not amend its Form ADV to disclose in Part 1A, Item 11 the complaint filed against Arete's CCO, nor did it disclose in Part 2A, Item 9 the December 30, 2013 order entered against Arete's CCO.

Rules Implementing Amendments to the Investment Advisers Act of 1940, Investment Advisers Act Release No. 3221 (June 22, 2011).

C. VIOLATIONS

1. As a result of the conduct described above, Arete willfully violated Section 203A of the Advisers Act by improperly registering with the Commission.

2. As a result of the conduct described above, Arete willfully violated Section 207 of the Advisers Act which makes it "unlawful for any person willfully to make any untrue statement of a material fact in any registration application or report filed with the Commission . . . or willfully to omit to state in any such application or report any material fact which is required to be stated therein." Respondent misstated Arete's principal office and place of business.

3. As a result of the conduct described above, Arete willfully violated Section 204(a) of the Advisers Act and Rules 204-1(a)(1) and (2) thereunder, which require that investment advisers amend Forms ADV at least annually and more frequently if required by the instructions to Form ADV. The Form ADV instructions require that amendments to the Form ADV be filed promptly if information provided in response to Part 1A, Item 11 or Part 2A become materially inaccurate. Respondent failed to file any amendments to Arete's Forms ADV Part 1A disclosing the complaint filed against Arete's CCO by the Colorado Securities Commissioner, or any amendments to its Form ADV Part 2A disclosing the order entered against Arete's CCO by the Colorado district court.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate in the public interest that public administrative and cease-and-desist proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations;

B. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 203(e) of the Advisers Act including, but not limited to, a civil penalty pursuant to Section 203 of the Advisers Act; and

C. Whether, pursuant to Section 203(k) of the Advisers Act, Respondent should be ordered to cease and desist from committing or causing violations of and any future violations of Sections 203A, 204(a), and 207 of the Advisers Act and Rules 204-1(a)(1) and (2) thereunder.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened not earlier than 30 days and not later than 60 days from service of this Order at a time and place to be fixed, and before an

Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 300 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4017 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16371

In the Matter of **New Line Capital, LLC and David A. Nagler,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS, PURSUANT TO SECTIONS 203(e), 203(f) AND 203(k) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Sections 203(e), 203(f) and 203(k) of the Investment Advisers Act of 1940 ("Advisers Act"), against New Line Capital, LLC ("New Line") and David Nagler (collectively, "Respondents").

II.

In anticipation of the institution of these proceedings, Respondents have submitted Offers of Settlement (the "Offers") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, and except as provided herein in Section V, Respondents consent to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings Pursuant to Sections 203(e), 203(f) and 203(k) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offers, the Commission finds that:

Summary

This proceeding arises out of improper registration and material misstatements made in Forms ADV by New Line, an investment adviser registered with the Commission. Since 2012, New Line falsely represented that its principal office and place of business was in Wyoming, a state that does not regulate investment advisers, to maintain the firm's Commission registration after rules went into effect restricting such registration to advisers with more assets under management. New Line also overstated its assets under management in filings with the Commission. In addition, although New Line had registered as an investment adviser with the Commission, it failed to maintain and make available to the Commission's staff, books and records required under the Advisers Act. Nagler, New Line's owner, was responsible for all of New Line's filings and recordkeeping, and aided and abetted and caused all of its violations.

Respondents

1. New Line, is a Wyoming limited liability company and conducts business from offices in New Mexico. New Line filed an initial Form ADV with the Commission in April 2007. New Line's principal office and place of business is in Santa Fe, New Mexico.

2. Nagler, age 52, is a resident of Santa Fe, New Mexico and is the owner, managing member, portfolio manager, and chief compliance officer of New Line.

Background

3. Nagler organized New Line as a New Mexico company in 2007. On April 9, 2007, New Line filed its initial registration with the Commission on Form ADV, basing eligibility to file with the Commission on the fact that it had assets under management of $25 million or more.

4. In July 2011, the Advisers Act was amended to increase the threshold for an investment adviser's assets under management required for registration with the Commission from $25 million to $100 million.[1] Registration with the Commission was still required, however, for advisers not regulated by the states where they maintained their principal offices and places of business. Currently, Wyoming is the only state that does not regulate investment advisers. So any investment adviser with a principal office and place of business in Wyoming, regardless of its assets under management, is required to register with the Commission.

---

[1] Previously, Section 203A of the Advisers Act prohibited investment advisers from registering with the Commission unless they managed at least $25 million in assets or met a designated exemption. Effective July 21, 2011, Section 203A increased the minimum amount of assets under management for most advisers to qualify for SEC registration from $25 million to $100 million. *See* Advisers Act Section 203A(a)(2) amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, 124 Stat. 1376 (2010); *Final Rule; Rules Implementing Amendments to the Investment Advisers Act of 1940*, Investment Advisers Act Release No. 3221 (June 22, 2011).

5. Rule 222-1(b) under the Advisers Act states that the principal office and place of business of an investment adviser means the executive office of the investment adviser from which the officers, partners, or managers of the investment adviser direct, control, and coordinate the activities of the investment adviser.

6. On March 28, 2012, Nagler reorganized his company as a Wyoming entity. On March 29, 2012, New Line filed an amended Form ADV. In Part1A, Items 1F and 2A of the Form ADV, New Line claimed its principal office and place of business was in Wyoming and that it was eligible to register with the Commission as an investment adviser based on its Wyoming location. New Line made the same representations about its principal place of business and basis for registration in its Forms ADV filed on April 1, 2013, February 4, 2014, and March 25, 2014.

7. Nagler did not direct, control, or coordinate the activities of New Line from Wyoming. During all relevant times, Nagler resided in New Mexico and used his residence there as a base of operations. Nagler never met clients in Wyoming and rarely used the small office space that New Line rented in Wyoming. Nagler has not maintained New Line's books and records in Wyoming since August 2013. Because New Line did not have a principal office or place of business in Wyoming and had no other basis for Commission registration, it was prohibited from registering with the Commission as an investment adviser.

8. New Line also misrepresented its assets under management ("AUM") in Part 1A, Item 5F and Part 2A, Item 4 of the Form ADV in all of its filings since March 29, 2012. New Line filed a Form ADV Part 2A Brochure on March 29, 2012, April 1, 2013, and February 4, 2014. Nagler included in his calculation of New Line's AUM disclosed in the firm's Forms ADV, assets that were not securities portfolios, such as the value of real estate and operating enterprises. Nagler also included in his calculation of New Line's AUM, securities portfolios that he did not provide continuous and regular supervisory or management services, such as retirement accounts. New Line has no discretion over these accounts and is not responsible for "arranging or effecting" purchases or sales in the accounts. Although New Line did not charge advisory fees on these assets, by including these assets, New Line materially misrepresented its AUM.

9. New Line failed to make and keep true, accurate, and current financial and trading records relating to its advisory business, including financial records of the adviser such as cash receipts and disbursements journals, balance sheets, income statements, cash reconciliations or bills relating to the business of the investment adviser, trial balances, and financial statements; and trading records for accounts in which New Line had custody or possession of securities or funds of its clients. By virtue of its ability to deduct fees from its clients' brokerage accounts, New Line had custody of client funds.

10. Nagler was solely responsible for preparing, signing, and filing all of New Line's Forms ADV. Nagler was aware of the location of the firm's principal office or place of business. Accordingly, Nagler knew that representations in New Line's Forms ADV in Item 1F and 2A3 of New Line's Forms ADV were false when filed and that New Line was not eligible for SEC registration. Nagler was solely responsible for calculating New Line's reported assets under management. Nagler was also solely responsible for New Line's book and records and knew that New Line failed to maintain required records.

Violations

11. As a result of the conduct described above, New Line willfully violated, and Nagler willfully aided and abetted and caused New Line's violations of, Section 203A of the Advisers Act, by improperly registering with the Commission.

12. As a result of the conduct described above, Respondents willfully violated Section 207 of the Advisers Act which makes it "unlawful for any person willfully to make any untrue statement of a material fact in any registration application or report filed with the Commission . . . or willfully to omit to state in any such application or report any material fact which is required to be stated therein." New Line and Nagler misstated New Line's principal office and place of business and overstated New Line's AUM.

13. As a result of the conduct described above, New Line willfully violated, and Nagler willfully aided and abetted and caused New Line's violations of Section 204(a) of the Advisers Act and Rules 204-2(a) and 204-2(b) thereunder. Section 204(a) of the Advisers Act requires, among other things, that investment advisers "make and keep" certain records as the Commission, by rule, may prescribe as necessary or appropriate in the public interest or for the protection of investors. Rule 204-2(a)(1) requires registered advisers to "make and keep true, accurate and current . . . journals, including cash receipts and disbursements records, and any other records of original entry forming the basis of entries in any ledger." Rule 204-2(a)(2) requires an investment adviser to "make and keep true, accurate and current . . . general and auxiliary ledgers (or other comparable records) reflecting asset, liability, reserve, capital, income, and expense accounts." Rule 204-2(a)(4) requires registered advisers to "make and keep true, accurate and current . . . all check books, bank statements, cancelled checks and cash reconciliations of the investment adviser." Rule 204-2(a)(5) requires that investment advisers "make and keep, true, accurate and current . . . all bills or statements (or copies thereof), paid or unpaid, relating other business of the investment adviser as such." Rule 204-2(a)(6) requires an investment adviser to "make and keep true, accurate and current . . . all trial balances, financial statements, and internal audit working papers relating to the business of such investment adviser." Rule 204-2(b) requires advisers to make and keep "(1) a journal or other record showing all purchases, sales, receipts and deliveries of securities (including certificate numbers) for such accounts and all other debits and credits to such accounts; (2) a separate ledger account for each such client showing all purchases, sales, receipts and deliveries of securities, the date and price of each such purchase and sale, and all debits and credits; (3) copies of confirmations of all transactions effected by or for the account any such client; and (4) a record for each security in which any such client has a position, which record shall show the name of each such client having any interest in each security, the amount or interest of each such client, and the location of each such security."

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondents' Offer.

Accordingly, pursuant to Sections 203(e), 203(f) and 203(k) of the Advisers Act, it is hereby ORDERED that:

A. Respondents cease and desist from committing or causing any violations and any future violations of Sections 203A, 204(a) and 207 of the Advisers Act and Rules 204-2(a) and 204-2(b) thereunder.

B. Respondents are censured.

C. Respondents shall, within 10 days of the entry of this Order, pay a civil money penalty, jointly and severally, in the amount of $25,000 to the Securities and Exchange Commission. If timely payment is not made, additional interest shall accrue pursuant to 31 U.S.C. 3717. Payment must be made in one of the following ways:

(1) Respondents may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) Respondents may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

(3) Respondents may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying New Line and Nagler as Respondents in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to Thomas J. Krysa, Associate Regional Director, Division of Enforcement, Securities and Exchange Commission, 1961 Stout Street, Suite 1700, Denver, CO 80294-1961.

V.

It is further Ordered that, solely for purposes of exceptions to discharge set forth in Section 523 of the Bankruptcy Code, 11 U.S.C. §523, the findings in this Order are true and admitted by Respondents, and further, any debt for disgorgement, prejudgment interest, civil penalty or other amounts due by Respondent under this Order or any other judgment, order, consent order, decree or settlement agreement entered in connection with this proceeding, is a debt for the violation by Respondents of the federal securities laws or any regulation or order issued under such laws, as set forth in Section 523(a)(19) of the Bankruptcy Code, 11 U.S.C. §523(a)(19).

SECURITIES AND EXCHANGE COMMISSION

INVESTMENT ADVISERS ACT OF 1940
Release No. 4016 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16370

In the Matter of **Brenda L. Ridley,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS, PURSUANT TO SECTIONS 203(f) AND 203(k) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted pursuant to Sections 203(f) and 203(k) of the Investment Advisers Act of 1940 ("Advisers Act"), against Brenda L. Ridley ("Ridley" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, Respondent consents to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings Pursuant to Sections 203(f) and 203(k) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds[1] that:

[1] The findings herein are made pursuant to Respondent's Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

Summary

This proceeding arises out of improper registration and material misstatements and omissions made in Forms ADV by Arete, Ltd., an investment adviser registered with the Commission. Since November 2012, Arete falsely represented that its principal office and place of business was in Wyoming, a state that does not regulate investment advisers, to ensure the firm's Commission registration in light of new rules that went into effect restricting such registration to advisers with more assets under management. Arete also failed to disclose a disciplinary proceeding concerning its chief compliance officer.

Respondent

1. Brenda L. Ridley, age 51, is a resident of Bakersfield, California, and has been the sole employee and chief compliance officer of Arete Ltd., a registered investment adviser, since November 2012.

Other Relevant Entity

2. Arete Ltd., d/b/a Sky Peak Capital Management ("Arete"), is a Wyoming limited liability company, and filed its initial Form ADV with the Commission in November 2012. Arete's principal office and place of business is in Irvine, California.

Background

3. In 2011, the Advisers Act was amended to increase the threshold for an investment adviser's assets under management required for registration with the Commission effective March 2012.[2] Registration with the Commission was still required, however, for advisers not regulated by the states where they maintained their principal offices and places of business. Currently, Wyoming is the only state that does not regulate investment advisers. So any investment adviser with a principal office and place of business in Wyoming, regardless of its assets under management, is required to register with the Commission.

4. Rule 222-1(b) under the Advisers Act states that the principal office and place of business of an investment adviser means the executive office of the investment adviser from which the officers, partners, or managers of the investment adviser direct, control, and coordinate the activities of the investment adviser.

---

[2] Previously, Section 203A of the Advisers Act prohibited investment advisers from registering with the Commission unless they managed at least $25 million in assets or met a designated exemption. Effective July 21, 2011, Section 203A increased the minimum amount of assets under management for most advisers to qualify for SEC registration from $25 million to $100 million. *See* Advisers Act Section 203A(a)(2) amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, 124 Stat. 1376 (2010); *Final Rule; Rules Implementing Amendments to the Investment Advisers Act of 1940*, Investment Advisers Act Release No. 3221 (June 22, 2011).

5. In September 2012, the initial owner of Arete formed the company as a for profit corporation in Wyoming. On November 27, 2012, Arete made its initial registration filing with the Commission on Form ADV. In Part 1A, Items 1F and 2A of the Form ADV, Arete claimed its principal office and place of business was in Cheyenne, Wyoming, and based its registration with the Commission on its Wyoming location. Arete made the same representations about its principal office and place of business and basis for registration in its amendments to Form ADV filed on July 26, 2013, August 2, 2013, and October 2, 2013. Arete stopped conducting business in late 2013 and has not made any filings with the Commission since then.

6. No officer, partner, or manager of Arete directed, controlled, or coordinated the activities of Arete from Wyoming and Arete did not conduct any investment advisory business out of Wyoming. Arete's operations were conducted out of California. Because Arete did not have a principal office or place of business in Wyoming and had no other basis for Commission registration, it was prohibited from registering with the Commission as an investment adviser.

7. Ridley prepared, filed, and signed the October 2, 2013, amendment to Arete's Form ADV as chief compliance officer. That filing had the same misstatements as prior filings with the Commission regarding Arete's principal office and principal place of business and its Wyoming location being the basis for Arete's eligibility to register with the Commission.

8. On February 28, 2013, the Securities Commissioner for the State of Colorado filed a complaint against Ridley, among others, for carrying out a scheme to defraud investors through the use of investments in a so-called "private equity fund." Ridley was charged with violating Section 11-51-301, C.R.S, for the offer or sale of unregistered securities; Section 11-51-401, C.R.S., for acting as an unlicensed sales representative; and Section 11-51-501(1), C.R.S., for securities fraud. On December 9, 2013, Ridley entered into a stipulation, on a neither admit nor deny basis, for an order of permanent injunction and other relief in connection with that case. On December 30, 2013, an order was entered granting the permanent injunction and other relief based on the alleged violations in the complaint.

9. Arete did not amend its Form ADV to disclose in Part 1A, Item 11 the complaint filed against Ridley, nor did it disclose in Part 2A, Item 9 the December 30, 2013 order entered against Ridley. Since October 2, 2013 Ridley was responsible for filing Arete's Forms ADV and any necessary amendments thereto.

Violations

10. As a result of the conduct described above, Ridley willfully[3] aided and abetted and caused Arete's violations of Section 203A of the Advisers Act by Arete improperly registering with the Commission based on its false representation that Arete's principal office and place of business was in Wyoming.

[3] A willful violation of the securities laws means merely "'that the person charged with the duty knows what he is doing.'" *Wonsover v. SEC*, 205 F.3d 408, 414 (D.C. Cir. 2000) (quoting *Hughes v. SEC*, 174 F.2d 969, 977 (D.C. Cir. 1949)).

11. As a result of the conduct described above, Ridley willfully violated Section 207 of the Advisers Act which makes it "unlawful for any person willfully to make any untrue statement of a material fact in any registration application or report filed with the Commission . . . or willfully to omit to state in any such application or report any material fact which is required to be stated therein." Ridley filed Arete's October 2013 Form ADV falsely stating that Arete's principal office and place of business was in Wyoming.

12. As a result of the conduct described above, Ridley willfully aided and abetted and caused Arete's violations of Section 204(a) of the Advisers Act and Rules 204-1(a)(1) and (2) thereunder, which requires that investment advisers amend Forms ADV at least annually and more frequently if required by the instructions to Form ADV. The Form ADV instructions require that amendments to the Form ADV be filed promptly if information provided in response to Part 1A, Item 11 or Part 2A become materially inaccurate. Ridley failed to file any amendments to Arete's Forms ADV Part 1A disclosing the complaint filed against her by the Colorado Securities Commissioner, or any amendments to its Form ADV Part 2A disclosing the order entered against her by the Colorado district court.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent's Offer.

Accordingly, pursuant to Sections 203(f) and 203(k) of the Advisers Act, it is hereby ORDERED that:

A. Respondent cease and desist from committing or causing any violations and any future violations of Sections 203A, 204(a), and 207 of the Advisers Act and Rules 204-1(a)(1) and (2) thereunder.

B. Respondent be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization.

C. Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

INVESTMENT ADVISERS ACT OF 1940
Release No. 4019 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16373

In the Matter of MICHAEL R. DRILLING, Respondent.	ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against Michael R. Drilling ("Respondent" or "Drilling").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent admits the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Sections III.1, III.2, and III.3 below, and consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 203(f) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. From January 2010 through February 2014, Drilling, operating as Financial Advisory Partners LLC, was an unregistered investment adviser. Drilling, 47 years old, is presently on supervised release awaiting sentencing by the United District Court for the District of Minnesota.

2. On April 17, 2014, Drilling pled guilty to one count of securities fraud before the United States District Court for the District of Minnesota, in United States of America v. Michael Robert Drilling, (Cause No. 0:14-cr-00100-ADM). He is currently on supervised release awaiting sentencing.

3. The count of the criminal information to which Drilling pled guilty alleged, inter alia, that Drilling, in connection with the offer and sale of securities, by the use of means and instrumentalities of interstate commerce, directly and indirectly, employed a scheme and artifice to defraud, in violation of Sections 17(a) and 24 of the Securities Act of 1933 [15 U.S.C. §§ 77q(a) and 77x]. Specifically, the criminal information filed against Drilling alleged, inter alia, that, from January 2010 through February 2014, Drilling knowingly and intentionally devised and executed a scheme and artifice to defraud and to obtain money and property from investment advisory clients by means of material false and fraudulent pretenses, representations and promises. The criminal information also alleged that Drilling (i) diverted over $5.6 million in investment funds from thirteen investment advisory clients for his own use; (ii) falsely represented to these clients that he was placing their money in a larger pool of funds which he could manage more efficiently; and (iii) provided false information to his clients regarding their investment holdings, balances and performance.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Drilling's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 203(f) of the Advisers Act that Respondent Drilling be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION
(Release No. 34-74202; File No. SR-OCC-2014-813)

February 4, 2015

Self-Regulatory Organizations; The Options Clearing Corporation; Notice of Filing of an Advance Notice, as Modified by Amendment No. 1, Concerning a Proposed Capital Plan for Raising Additional Capital That Would Support The Options Clearing Corporation's Function as a Systemically Important Financial Market Utility

Pursuant to Section 806(e)(1) of Title VIII of the Dodd-Frank Wall Street Reform and Consumer Protection Act entitled the Payment, Clearing, and Settlement Supervision Act of 2010 ("Payment, Clearing and Settlement Supervision Act" or "Clearing Supervision Act")[1] and Rule 19b-4(n)(1)(i)[2] under the Securities Exchange Act of 1934 ("Act") notice is hereby given that on December 29, 2014, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission ("Commission") the advance notice as described in Items I and II below, which Items have been prepared by OCC.[3] On January 14, 2015, OCC filed Amendment No. 1 to the advance notice.[4] The Commission is publishing this notice to solicit comments on the advance notice from interested persons.

---

1 12 U.S.C. 5465(e)(1).

2 17 CFR 240.19b-4(n)(1)(i).

3 In Items I and II below, OCC states that the purpose of this proposal is in part to facilitate compliance with the SEC Proposed Rules (as defined below) and address Principle 15 of the Principles for Financial Market Infrastructures ("PMFIs"). The Commission notes that the SEC Proposed Rules are pending. The Commission will evaluate the advance notice under the Clearing Supervision Act and the rules currently in force thereunder.

4 According to OCC, Amendment No. 1 to the SR-OCC-2014-813 ("Filing"): (i) updates OCC's plan for raising additional capital ("Capital Plan") in connection with negotiations between OCC and the options exchanges that own equity in OCC ("Stockholder Exchanges" or "stockholders") and that would contribute additional capital under the Capital Plan, (ii) corrects typographical

I. Clearing Agency's Statement of the Terms of Substance of the Advance Notice

This advance notice is filed by OCC in order to set forth a proposed Capital Plan for raising additional capital that would support OCC's function as a systemically important financial market utility and facilitate OCC's compliance with new regulatory requirements applicable to systemically important financial market utilities that have been proposed by the Commission but have not yet been adopted.

II. Clearing Agency's Statement of the Purpose of, and Statutory Basis for, the Advance Notice

In its filing with the Commission, OCC included statements concerning the purpose of and basis for the advance notice and discussed any comments it received on the advance notice. The text of these statements may be examined at the places specified in Item IV below. OCC has prepared summaries, set forth in sections (A) and (B) below, of the most significant aspects of these statements.

(A) Clearing Agency's Statement on Comments on the Advance Notice Received from Members, Participants or Others

Written comments on the advance notice were not and are not intended to be solicited with respect to the advance notice and none have been received.

(B) Advance Notices Filed Pursuant to Section 806(e) of the Payment, Clearing and Settlement Supervision Act

The proposed change sets forth the Capital Plan under which the Stockholder Exchanges would make an additional capital contribution and commit to replenishment capital ("Replenishment Capital") in circumstances discussed below, and would receive, among other things, the right to receive dividends from OCC. In addition to the

---

errors in the Filing, and (iii) updates the Term Sheet included as an exhibit to the Filing, which summarizes material features of the Capital Plan.

additional capital contribution and Replenishment Capital, the main features of the Capital Plan are: (i) a policy establishing OCC's fees at a level that would be sufficient to cover OCC's estimated operating expenses plus a "Business Risk Buffer" as described below ("Fee Policy"), (ii) the Refund Policy [sic], and (iii) a policy for calculating the amount of dividends to be paid to the options exchanges owning equity in OCC ("Dividend Policy"). The Capital Plan is proposed to be implemented on or about February 27, 2015, subject to all necessary regulatory approvals.[5]

PURPOSE OF THE PROPOSED CHANGE

The purpose of this proposed change is to implement the Capital Plan, which would significantly increase OCC's capital in connection with its increased responsibilities as a systemically important financial market utility, and which OCC believes would facilitate OCC's compliance with new regulatory requirements applicable to such systemically important financial market utilities that have been proposed by the Commission but have not yet been adopted.[6] For purposes of this filing, OCC has used the working assumption that the new requirements contained in the Commission's proposed amendments to Rule 17Ad-22 of the SEC Proposed Rules will be adopted substantially as proposed. The proposed change is intended to ensure OCC's ability to comply with Rule 17Ad-22, specifically paragraph (e)(15) thereof, when the SEC

---

5 The material features of the Capital Plan are summarized in the Term Sheet that is included as Exhibit 3. Certain details of the Term Sheet may change as a result of further negotiations or changes in financial figures, but OCC does not anticipate any material changes to the Capital Plan. OCC intends to separately file a proposed rule change seeking approval of changes to its By-Laws, Certificate of Incorporation and relevant agreements, including its Stockholders Agreement, necessary to implement the Capital Plan.

6 *See* Securities Exchange Act Release No. 71699 (March 12, 2014), 79 FR 29507 (May 22, 2014) ("SEC Proposed Rules").

Proposed Rules become effective. In addition, it is intended to address Principle 15 of the Principles for Financial Market Infrastructures published by the Bank for International Settlements and the International Organization of Securities Commissions, which provides, among other things, that a financial market utility should identify, monitor and manage its general business risk and hold sufficient liquid net assets funded by equity to cover potential general business losses so that it can continue to operate as a going concern. The proposal includes an infusion of substantial additional equity capital by the Stockholder Exchanges to be made prior to February 27, 2015, subject to regulatory approval, that when added to retained earnings accumulated by OCC in 2014 will significantly increase OCC's capital levels as compared to historical levels. Additionally, the proposed change includes the Replenishment Capital commitment, which would provide OCC access to additional equity contributed by the Stockholder Exchanges should OCC's equity fall close to or below the amount that OCC determines to be appropriate to support its business and manage business risk in compliance with Rule 17Ad-22, as discussed more fully below.

Background

OCC is a clearing agency registered with the Commission and is also a derivatives clearing organization ("DCO") regulated in its capacity as such by the Commodity Futures Trading Commission ("CFTC"). OCC is a Delaware business corporation and is owned equally by the Stockholder Exchanges, five national securities exchanges for which OCC provides clearing services.[7] In addition, OCC provides

---

[7] The Stockholder Exchanges are: Chicago Board Options Exchange, Incorporated; International Securities Exchange, LLC; NASDAQ OMX PHLX LLC; NYSE MKT LLC; and NYSE Arca, Inc.

clearing services for seven other national securities exchanges that trade options ("Non-Stockholder Exchanges"). In its capacity as a DCO, OCC also provides clearing services to four futures exchanges.

OCC has been designated systemically important by the Financial Stability Oversight Council pursuant to the Payment, Clearing and Settlement Supervision Act, and the Commission is OCC's "Supervisory Agency" under Section 803(8) of the Payment, Clearing and Settlement Supervision Act. OCC is therefore a "covered clearing agency" ("CCA") as defined in proposed amendments to the Commission's Rule 17Ad-22(a)(7) and would be required to comply with the provisions of proposed Rule 17Ad-22 applicable to CCA's, including paragraph (e)(15) thereof.[8]

Proposed Rule 17Ad-22(e)(15) provides:

> Each covered clearing agency shall establish, implement, maintain and enforce written policies and procedures reasonably designed to, as applicable: . . . Identify, monitor, and manage the covered clearing agency's general business risk and hold sufficient liquid net assets funded by equity to cover potential general business losses so that the covered clearing agency can continue operations and services as a going concern if those losses materialize, including by:
>
> (i) Determining the amount of liquid net assets funded by equity based upon its general business risk profile and the length of time required to achieve recovery or orderly wind-down, as appropriate, of its critical operations and services if such action is taken;
>
> (ii) Holding liquid net assets funded by equity equal to the greater of either (x) six months of the covered clearing agency's current operating expenses, or (y) the amount determined by the board of directors to be sufficient to ensure a recovery or orderly wind-down of critical operations and services of the covered clearing

[8] *SEC Proposed Rules* at 32-33, FR 29507, 29515 (May 22, 2014).

agency, as contemplated by the plans established under paragraph (e)(3)(ii) of this section, and which:

(A) shall be in addition to resources held to cover participant defaults or other risks covered under the credit risk standard in paragraph (b)(3) or paragraph (e)(4)(i)-(iii) of this section, as applicable, and the liquidity risk standard in paragraph (e)(7)(i) and (ii) of this section; and

(B) Shall be of high quality and sufficiently liquid to allow the covered clearing agency to meet its current and projected operating expenses under a range of scenarios, including adverse market conditions; and

(iii) Maintaining a viable plan, approved by the board of directors and updated at least annually, for raising additional equity should its equity fall close to or below the amount required under paragraph (e)(15)(ii) of this section.[9]

Over the last nine months, OCC has devoted substantial efforts to: 1) develop a 5-year forward looking model of expenses; 2) quantify maximum recovery and wind-down costs under OCC's Recovery and Wind-Down Plan; 3) assess and quantify OCC's operational and business risks; 4) model projected capital accumulation taking into account varying assumptions concerning business conditions, fee levels, buffer margin levels and refunds; and 5) develop an effective mechanism that provides OCC access to replenishment capital in the event of losses that could cause OCC to be non-compliant with the SEC Proposed Rules. Incorporating the results of those efforts, the proposed change is intended to provide OCC with the means to increase its stockholder equity and, in particular, to obtain timely compliance with Rule 17Ad-22(e)(15)[10] as proposed by the

9 *SEC Proposed Rules* at 417-418, FR 29507, 29616 (May 22, 2014).

10 *SEC Proposed Rules* at 222-223, FR 29507, 29547-29548 (May 22, 2014).

Commission. A more detailed discussion of the manner in which the proposed change would allow OCC to comply with Rule 17Ad-22(e)(15) appears below.

OCC's Projected Capital Requirement

Using the methods described in detail below, OCC will annually determine a "Target Capital Requirement" consisting of (i) a "Baseline Capital Requirement" equal to the greatest of (x) six months operating expenses for the following year, (y) the maximum cost of the recovery scenario from OCC's Recovery and Wind-Down Plan, and (z) the cost to OCC of winding down operations as set forth in the Recovery and Wind-Down Plan, plus (ii) a "Target Capital Buffer" linked to plausible loss scenarios from operational risk, business risk and pension risk. OCC has determined that its currently appropriate "Target Capital Requirement" is $247 million, reflecting a Baseline Capital Requirement of $117 million, which is equal to six months of projected operating expenses, plus a Target Capital Buffer of $130 million. This Target Capital Buffer would provide a significant capital cushion to offset potential business losses.

As of December 31, 2013, OCC had total shareholders' equity of approximately $25 million,[11] meaning that OCC proposes to add additional capital of $222 million to meet its 2015 Target Capital Requirement. In addition, OCC would be obligated under paragraph (e)(15)(iii)[12] of proposed Rule 17Ad-22 to maintain "a viable plan" for raising additional equity should its equity fall close to or below the amount required under

11 *See* OCC 2013 Annual Report, Financial Statements, Statements of Financial Condition, available on OCC's website, http://optionsclearing.com/components/docs/about/annual-reports/occ_2013_annual_report.pdf.

12 *SEC Proposed Rules* at 418, FR 29507, 29616 (May 22, 2014).

paragraph (e)(15)(ii) of the Rule[13]; i.e., the Baseline Capital Requirement. OCC has determined that its viable plan for Replenishment Capital should provide for a "Replenishment Capital Amount" which would give OCC access to additional capital as needed up to a maximum of the Baseline Capital Requirement, which is currently $117 million.[14] Therefore, OCC's proposed Capital Plan would provide OCC in 2015 with ready access to approximately $364 million in equity capital as follows:

Baseline Capital Requirement	$117,000,000
Target Capital Buffer	$130,000,000
Target Capital Requirement	$247,000,000
Replenishment Capital Amount	$117,000,000
Total OCC Capital Resources	$364,000,000

Procedures Followed in Order to Determine Capital Requirement

Various measures were used in determining the appropriate level of capital necessary to comply with the SEC Proposed Rules. An outside consultant conducted a "bottom-up" analysis of OCC's risks and quantified the appropriate amount of capital to be held against each risk. The analysis was comprehensive across risk types, including credit, market pension, operation, and business risk. Based on internal operational risk scenarios and loss modeling at or above the 99% confidence level, OCC's operational risk was quantified at $226 million and pension risk at $21 million, resulting in the total Target Capital Requirement of $247 million. Business risk was addressed by taking into consideration that OCC has the ability to fully offset potential revenue volatility and

13 *SEC Proposed Rules* at 417, FR 29507, 29616 (May 22, 2014).

14 The obligation to provide Replenishment Capital will be capped at $200 million, which OCC projects will sufficiently account for increases in its capital requirements for the foreseeable future.

manage business risk to zero by adjusting the levels at which fees and refunds are set and by adopting a "Business Risk Buffer" of 25% when setting fees. Other risks, such as counterparty risk and on-balance sheet credit and market risk, were considered to be immaterial for purposes of requiring additional capital based on means available to OCC to address those risks that did not require use of OCC's capital. As discussed in more detail below in the context of OCC's Fee Policy, the Business Risk Buffer of 25% is achieved by setting OCC's fees at a level intended to achieve target annual revenue that will result in a 25% buffer for the year after paying all operating expenses.

An analysis was also performed to identify OCC's risk in terms of the regulatory requirements set forth in proposed Rule 17Ad-22(e)(15)(ii). This analysis estimated that, currently, OCC's maximum recovery costs would be $100 million and projected wind-down costs would be $73 million. OCC's projected expenses for 2015 are $234 million, so that six months projected expenses are $234 million/2 = $117 million. The greater of recovery or wind-down costs and six months of operating expenses is therefore $117 million, and OCC's Baseline Capital Requirement (minimum regulatory requirement) is therefore $117 million. OCC then computed the appropriate amount of a Target Capital Buffer from operational risk, business risk, and pension risk. This resulted in a determination that the current Target Capital Buffer should be $130 million. Thus, the Target Capital Requirement is $117 million + $130 million = $247 million.

Overview of, and Basis for, OCC's Proposal to Acquire Additional Equity Capital

In order to meet its Target Capital Requirement, and after consideration of available alternatives, OCC's Board approved a proposal from OCC's Stockholder

Exchanges under which OCC would meet its Target Capital Requirement of $247 million in early 2015 as follows:

Shareholders' Equity as of 1/1/2014	$ 25,000,000
Shareholders Equity Accumulated Through Retained Earnings[15]	$ 72,000,000
Additional Contribution from Stockholder Exchanges	$150,000,000
Target Capital Requirement	$247,000,000
Replenishment Capital Amount	$117,000,000
Total OCC Capital Resources	$364,000,000

The additional contribution of the Stockholder Exchanges would be made in respect of their Class B Common Stock on a *pro rata* basis. The Stockholder Exchanges will also commit to provide additional equity capital up to the Replenishment Capital Amount, which is currently $117 million, in the event Replenishment Capital is needed. While the Replenishment Capital Amount will increase as the Baseline Capital Requirement increases, it would be capped at a total of $200 million that could be outstanding at any point in time. OCC has estimated that the Baseline Capital Requirement would not exceed this amount before 2022. When the limit is being approached, OCC would revise the Capital Plan as needed to address future needs. In consideration for their capital contributions and replenishment commitments, the Stockholder Exchanges will receive dividends as described in the Dividend Policy discussed below for so long as they remain stockholders and maintain their contributed

15 *See* Proposed Rule Change by The Options Clearing Corporation to Reflect the Elimination of a Discount to the Clearing Fee Schedule, Securities Exchange Act Release No. 71769 (March 21, 2014), 79 FR 17214 (March 27, 2014) (SR-OCC-2014-05) (Filing for immediate effectiveness of a proposed rule change with the Commission to reinstate OCC's permanent clearing fee schedule for securities options and securities futures that became effective May 1, 2007 ("Permanent Schedule Reinstatement Filing")). The $72 million is after giving effect to the approximately $40 million refund referred to below.

capital and commitment to replenish capital up to the Replenishment Capital Amount, subject to the $200 million cap.

Fee, Refund, and Dividend Policies

Upon reaching the Target Capital Requirement, the Capital Plan requires OCC to set its fees at a level that utilizes a Business Risk Buffer of 25%. The purpose of this Business Risk Buffer is to ensure that OCC accumulates sufficient capital to cover unexpected fluctuations in operating expenses, business capital needs, and regulatory capital requirements. Furthermore, the Capital Plan requires OCC to maintain Fee, Refund, and Dividend Policies, described in more detail below, which are designed to ensure that OCC's shareholders' equity remains well above the Baseline Capital Requirement. The required Business Risk Buffer of 25% is below OCC's 10-year historical pre-refund average buffer of 31%. The target will remain 25% so long as OCC's shareholders' equity remains above the Target Capital Requirement amount. The reduction in buffer margin from OCC's 10-year average of 31% to 25% reflects OCC's commitment to operating as an industry utility and ensuring that market participants benefit as much as possible from OCC's operational efficiencies in the future. This reduction will permit OCC to charge lower fees to market participants rather than maximizing refunds to clearing members and dividend distributions to Stockholder Exchanges. OCC will review its fee schedule on a quarterly basis to manage revenue as closely to this target as possible.[16] For example, if the Business Risk Buffer is materially above 25% after the first quarter of a particular year, OCC may decrease fees for the

16 If OCC's fee schedule needs to be changed in order to achieve the 25% Business Risk Buffer, OCC would file a proposed rule change seeking approval of the revised fee schedule.

remainder of the year, and conversely if the Business Risk Buffer is materially below 25% at this time, OCC may increase fees for the remainder of the year.

The Capital Plan would allow OCC to refund approximately $40 million from 2014 fees to clearing members in 2015 and to reduce fees in an amount to be determined by the Board, effective in the second quarter 2015. OCC will announce new fee levels early in 2015 and will make them effective following notification to clearing members and any necessary approval by the Commission. OCC will endeavor to provide clearing members with no less than 60-day advance notice of the effectiveness of changes to fee levels, particularly those that result in increases to fee levels. No dividends will be declared until December 2015 and no dividends will be paid until 2016.

Changes to the Fee, Refund or Dividend Policies will require the affirmative vote of two-thirds of the directors then in office and approval of the holders of all of OCC's outstanding Class B Common Stock. The formulas for determining the amount of refunds and dividends under the Refund and Dividend Policies, respectively, which are described in more detail below, are based on, among other things, the current tax treatment of refunds as a deductible expense. The Refund and Dividend Policies would each provide that in the event that refunds payable under the Refund Policy are not tax deductible, the policies would be amended to restore the relative economic benefits between the recipients of the refunds and the Stockholder Exchanges.[17]

Fee Policy

---

17 This sentence and the previous sentence relate to a provision added to the Refund and Dividend Policies and designed to preserve the original business understanding between OCC and the Stockholder Exchanges even if refunds are no longer deductible.

Under the Fee Policy, in setting fees each year, OCC would calculate an annual revenue target based on a forward twelve months expense forecast divided by the difference between one and the Business Risk Buffer of 25%, *i.e.*, OCC will divide the expense forecast by .75. Establishing a Business Risk Buffer at 25% would allow OCC to manage the risk that fees would generate less revenue than expected due to lower-than-expected trading volume or other factors, or that expenses would be higher than projected. The Fee Policy also will include provisions from existing Article IX, Section 9 of the By-Laws to the effect that the fee schedule may also include additional amounts necessary to (i) maintain such reserves as are deemed reasonably necessary by the Board to provide facilities for the conduct of OCC's business and to conduct development and capital planning activities in connection with OCC's services to the options exchanges, Clearing Members and the general public, and (ii) accumulate such additional surplus as the Board may deem advisable to permit OCC to meet its obligations to Clearing Members and the general public; however, these provisions will be used only in extraordinary circumstances and to the extent that the Board has determined that the required amount of such additional reserves or additional surplus will exceed the full amount that will be accumulated through the Business Risk Buffer (prior to payment of refunds or dividends) so OCC's fees will ordinarily be based on its projected operating expenses and the Business Risk Buffer of 25%.

Under the proposed change, OCC would calculate its annual revenue target as follows:

Annual Revenue Target = Forward 12 Months Expense Forecast/(1-.25).

Because OCC's clearing fee schedules typically reflect different rates for different categories of transactions, fee projections would include projections as to relative volume in each such category. The clearing fee schedule would therefore be set to achieve a blended or average rate per contract sufficient, when multiplied by total projected contract volume, to achieve the Annual Revenue Target. Under extraordinary circumstances, OCC would then add any amount determined to be necessary for additional reserves or surplus and divide the resulting number by the projected contract volume to determine the applicable average fee per cleared contract needed to achieve the additional amounts required. Consistent with past practice, OCC would notify its clearing members of the fees it determines it would apply for any particular period by describing the change in an information memorandum distributed to all clearing members. Consistent with past practice, OCC would also notify regulators of the fees it determines it would apply for any particular period by filing an amendment to its Schedule of Fees as a proposed rule change for immediate effectiveness under Section 19(b)(3)(A) of the Act and Rule 19b-4(f)(2) thereunder.[18]

Refund Policy

Under the Refund Policy, except at a time when Replenishment Capital is outstanding as described below, OCC would declare a refund to Clearing Members in December of each year, beginning in 2015, in an amount equal to 50% of the excess, if any, of (i) pre-tax income for the year prior to the refund over (ii) the sum of (x) the

---

18 *See, e.g.*, the Permanent Schedule Reinstatement Filing, *supra* n. 14 [sic]; Proposed Rule Change by The Options Clearing Corporation to Reduce the Per Contract Clearing Fee for Routing Trades Executed in Accordance with the Options Order Protection and Locked/Crossed Market Plan to $.01 per Contract, Securities Exchange Act Release No. 68025 (October 12, 2012), 77 FR 63398 (October 16, 2012) (SR-OCC-2012-18).

amount of pre-tax income after the refund necessary to produce after-tax income sufficient to maintain shareholders' equity at the Target Capital Requirement for the following year plus (y) the amount of pre-tax income after the refund necessary to fund any additional reserves or additional surplus not already included in the Target Capital Requirement. Such refund will be paid in the year following the declaration after the issuance of OCC's audited financial statements, provided that (i) the payment does not result in total shareholders' equity falling below the Target Capital Requirement, and (ii) such payment is otherwise permitted by applicable Delaware law and applicable federal laws and regulations. OCC would not be able to pay a refund on a particular date unless dividends were paid on the same date. If Replenishment Capital has been contributed and remains outstanding, OCC would not pay refunds until such time as the Target Capital Requirement is restored through the accumulation of retained earnings. Refunds in accordance with the Refund Policy would resume once the Target Capital Requirement is restored and all Replenishment Capital is repaid in full, provided that the restoration of the Target Capital Requirement and the repayment of Replenishment Capital occurred within 24 months of the issuance date of the Replenishment Capital. If, within 24 months of the issuance date of any Replenishment Capital, such Replenishment Capital has not been repaid in full or shareholders' equity has not been restored to the Target Capital Requirement, OCC would no longer pay refunds to clearing members, even if the Target Capital Requirement is restored and all Replenishment Capital is repaid at a later date.

Dividend Policy

The Dividend Policy would provide that, except at a time when Replenishment Capital is outstanding as described below, OCC would declare a dividend on its Class B

Common Stock in December of each year in an aggregate amount equal to the excess, if any, of (i) after-tax income for the year, after application of the Refund Policy (unless the Refund Policy has been eliminated, in which case the refunds shall be deemed to be $0) over (ii) the sum of (A) the amount required to be retained in order to maintain total shareholders' equity at the Target Capital Requirement for the following year, plus (B) the amount of any additional reserves or additional surplus not already included in the Target Capital Requirement. Such dividend will be paid in the year following the declaration after the issuance of OCC's audited financial statements, provided that (i) the payment does not result in total shareholders' equity falling below the Target Capital Requirement, and (ii) such payment is otherwise permitted by applicable Delaware law and applicable federal laws and regulations. If Replenishment Capital has been contributed and remains outstanding, OCC would not pay dividends until such time as the Target Capital Requirement is restored.

OCC's Status as an Industry Utility

OCC has always been operated on an "industry utility" model. The Stockholder Exchanges have heretofore contributed only minimal capital to OCC.[19] OCC's By-Laws currently require that OCC set its clearing fees at a level that is designed to cover operating expenses and to maintain such reserves and accumulate such additional capital as are deemed reasonably necessary for OCC to meet its obligations to its clearing members and the public. Clearing fees that are collected in excess of these amounts are

---

19 OCC's common stock and paid in capital total $2,659,999. See OCC 2013 Annual Report, Financial Statements, Statements of Financial Condition, available on OCC's website, http://optionsclearing.com/components/docs/about/annual-reports/occ_2013_annual_report.pdf.

refunded annually on a *pro rata* basis to the clearing members who paid them. Under this model, OCC has never paid dividends to the Stockholder Exchanges. However, OCC has paid significant refunds to clearing members each year. OCC is aware that a portion -- possibly a significant portion -- of those refunds are not passed through by the clearing members to their end user customers. Accordingly, by adopting an approach that includes paying dividends to the Stockholder Exchanges that have invested a significant amount of additional capital ($150 million) but that also reduces the historical pre-refund average buffer of 31% by adopting a Business Risk Buffer of 25%, OCC believes that the proposed approach maintains, and perhaps better aligns with, an industry utility model.

Given the very large increase in capital that OCC has determined to be appropriate in order to assure compliance with regulatory requirements and meet the increased responsibilities imposed upon it as a systemically important financial market utility, OCC has determined that the best alternative available to it is to obtain a substantial further capital contribution from the Stockholder Exchanges. This cannot be accomplished without modification of the past practice of not providing dividends to stockholders. Accordingly, it would be necessary for OCC to establish the new Fee Policy, Refund Policy, and Dividend Policy. Because of the Business Risk Buffer being set at 25%, the combination of the Fee, Refund and Dividend Policies will effectively cap the dividends to be paid to the Stockholder Exchanges at a level that the Board (with the advice of outside financial experts) has determined results in a reasonable rate of return on contributed capital, particularly in comparison to the implied cost of capital to the clearing members and their customers of instead pursuing an approach which required the accumulation of retained earnings through higher fees and no refunds for several years. OCC will continue to refund a significant percentage of excess clearing fees to clearing members, thereby benefiting both clearing members and their customers. The Capital Plan therefore effectively preserves OCC's industry utility model of providing its services in an efficient manner, but enhances the benefits to the end user customers by charging lower initial fees as a result of the decrease in the buffer margin from OCC's 10-year average of 31% to 25%.

Clearing members and customers will benefit from the proposed Capital Plan because it will allow OCC to continue to provide clearing services at low cost. As noted, OCC expects that this capital infusion from stockholders will enable OCC to provide a significant refund of 2014 fees. OCC further expects that its current clearing fees will be reduced significantly based on the Business Risk Buffer of 25% beginning in 2015 with refunds restored, and that these lower fees will continue for the foreseeable future.

Stockholder Exchanges will benefit from the dividend return they receive and, perhaps more importantly, they will be assured that OCC will be in a position to provide clearing services for their markets on an on-going basis within the same basic structure that has served these markets well since their inception and without the need to radically change the structure to address potential demands of outside equity investors. Non-Stockholder Exchanges will also benefit by continuing to receive OCC's clearing services for their products on the same basis as they presently do.[20]

---

20 Non-Stockholder Exchanges contribute capital by purchasing a promissory note in the principal amount of $1,000,000. *See* Section 2 of Article VIIB of OCC's By-Laws. The required Capital Contribution of Non-Stockholder exchanges will not change under the Capital Plan.

OCC also believes that the Capital Plan will better align the interests of Stockholder Exchanges and clearing members with respect to expenses, since changes to the level of operating expenses directly affect the Target Capital Requirement. In sum, OCC believes that the present proposal represents a fair and reasonable balancing of the interests of the Stockholder Exchanges, the other exchanges for which OCC provides clearing services, clearing members, customers, and the general public while providing an immediate infusion of capital and a structure within which OCC can meet its obligations to the public as a systemically important financial market utility, as well as the requirements under the SEC Proposed Rules.

Replenishment Capital Plan

OCC proposes to put in place a Replenishment Capital Plan whereby OCC's Stockholder Exchanges are obligated to provide on a *pro rata* basis a committed amount of Replenishment Capital should OCC's total shareholders' equity fall below the hard trigger (as defined below). The aggregate committed amount for all five Stockholder Exchanges in the form of Replenishment Capital that could be outstanding at any time would be capped at the excess of (i) the lesser of (A) the Baseline Capital Requirement, which is currently $117 million, at the time of the relevant funding or (B) $200 million, over (ii) amounts of outstanding Replenishment Capital ("Cap"). The $200 million figure in the Cap formula takes into account projected growth in the Baseline Capital Requirement for the foreseeable future. The commitment to provide Replenishment Capital would not be limited by time, but only by the Cap. Replenishment Capital could be called in whole or in part after the occurrence of a "hard trigger" event described below, subject to the Cap. If the Baseline Capital Requirement approaches or exceeds

$200 million, the Board can consider, as part of its annual review of the Replenishment Capital Plan that is required by the SEC Proposed Rules, alternative arrangements to obtain replenishment capital in excess of the $200 million committed under the Replenishment Capital Plan. In addition, the Refund Policy and the Dividend Policy will provide that, in the absence of obtaining any such alternative arrangements, the amount of the difference will be subtracted from amounts that would otherwise be available for the payment of refunds and dividends.

Replenishment Capital contributed to OCC under the Replenishment Capital Plan would take the form of a new class of common stock ("Class C Common Stock") of OCC to be issued to the Stockholder Exchanges solely in exchange for Replenishment Capital contributions.

The Replenishment Capital Plan would be part of OCC's overall Capital Plan. In implementing the Replenishment Capital Plan, OCC's management would monitor OCC's levels of shareholders' equity to identify certain triggers, or reduced capital levels, that might require action. OCC has identified two key triggers – a soft trigger and a hard trigger – and proposes that OCC take certain steps upon the occurrence of either as described in more detail below.

The "soft trigger" for re-evaluating OCC's capital would occur if OCC's shareholders' equity falls below the sum of (i) the Baseline Capital Requirement and (ii) 75% of the Target Capital Buffer. The soft trigger would be a warning sign that OCC's capital had fallen to a level that required attention and responsive action to prevent it from falling to unacceptable levels. Upon a breach of the soft trigger, OCC's senior management and the Board would review alternatives to increasing capital, and take appropriate action as necessary, including increasing fees or decreasing expenses, to restore shareholders' equity to the Target Capital Requirement.

The "hard trigger" for making a mandatory Replenishment Capital call would occur if shareholders' equity falls below 125% of the Baseline Capital Requirement ("Hard Trigger Threshold"). The hard trigger would be a sign that corrective action more significant and with a more immediate impact than increasing fees or decreasing expenses should be taken to increase OCC's capital, either as part of a recovery plan or a wind-down plan for OCC's business. OCC's shareholders' equity would have to fall more than $100,000,000 below the fully funded capital amount described above in order for the Hard Trigger Threshold to be breached. As a result, OCC views the breach of the Hard Trigger Threshold as unlikely and occurring only as a result of a significant, unexpected event. Upon a breach of the Hard Trigger Threshold, the Board would have to determine whether to attempt a recovery, a wind-down of OCC's operations or a sale or similar transaction, subject in each case to any necessary stockholder consent.[21] If the Board decides to wind-down OCC's operations, OCC would access the Replenishment Capital in an amount sufficient to fund the wind-down, as such amount would be determined by the Board, and subject to the Cap described above. If the Board decides to attempt a recovery of OCC's capital and business, OCC would access the Replenishment Capital in an amount sufficient to return shareholders' equity to an amount equal to $20 million above the Hard Trigger Threshold, subject to the Cap described above.

21 The requirement for stockholder consent would arise under OCC's Restated Certificate of Incorporation, which would provide that any decision to attempt a recovery would require separate approval by the stockholders, while a decision to wind-down would require separate approval by the stockholders.

While Replenishment Capital is outstanding, no refunds or dividends would be paid and, if any Replenishment Capital remains outstanding for more than 24 months or the Target Capital Requirement is not restored during that period, changes would be made to how OCC calculates refunds and dividends, as described in more detail above under Refund Policy and Dividend Policy. In addition, while Replenishment Capital is outstanding, OCC would first utilize the entire amount of Available Funds to repurchase, on a *pro rata* basis from each Stockholder, to the extent permitted by applicable Delaware and federal law and regulations, outstanding shares of Class C Common Stock as soon as practicable after completion of the financial statements following the end of each calendar quarter at a price equal to the original amount paid for such shares, plus an additional "gross up" amount to compensate the holders of the Class C Common Stock for taxes on dividend income (if any) that they may have to recognize as a result of such repurchase.[22] For this purpose, "Available Funds" would equal, as of the end of any calendar quarter, the excess, if any, of (x) shareholders' equity over (y) the Minimum Replenishment Level. The "Minimum Replenishment Level" would mean $20 million above the Hard Trigger Threshold, so that OCC's shareholders' equity would remain at or above the Minimum Replenishment Level after giving effect to the repurchase.

Compliance with Rule 17Ad-22(e)(15)

The capital base described above will permit OCC to hold at all times cash and other assets of high quality and sufficiently liquid to allow OCC to meet its current and projected operating expenses under a range of scenarios, including adverse market

---

22 Based on current federal rates, if the full amount of the payment is classified as a dividend and the recipient is entitled to a dividends received deduction, this gross up is estimated to be approximately 12% of the payment.

conditions. In compliance with proposed Rule 17Ad-22(e)(15),[23] OCC proposes at all times to hold liquid net assets funded by equity sufficient to cover potential general business losses so that OCC can continue operations and services as a going concern if those losses materialize, which assets will always be greater than either (x) six months of the covered clearing agency's current operating expenses, or (y) the amount determined by the Board to be sufficient to ensure a recovery or orderly wind-down of critical operations and services of the covered clearing agency, as contemplated by the plans established under paragraph (e)(3)(ii)[24] of the proposed Rule. These assets will be held in addition to resources held to cover participant defaults or other risks covered under the credit risk standard in paragraph (b)(3) or paragraph (e)(4)(i)-(iii)[25] of proposed Rule 17Ad-22, as applicable, and the liquidity risk standard in paragraph (e)(7)(i) and (ii)[26] of that proposed rule.

OCC believes that the Replenishment Capital Plan described above together with OCC's ability to set fees and retain earnings as described above will assure OCC's ability to remain at all times in compliance with the requirements of proposed Rule 17Ad-22(e)(15),[27] including providing the basis for maintaining a viable capital plan for replenishment capital in compliance with subparagraph (e)(15)(iii)[28] of the rule.

STATUTORY BASIS FOR THE ADVANCE NOTICE

OCC believes that the proposed change is consistent with Section 805(b) of the Clearing Supervision Act[29] because the proposed change will reduce systemic risk.[30] OCC believes that implementation of the Capital Plan will provide OCC with an immediate injection of capital and future committed capital to help ensure that it can continue to provide its clearing services if it suffers business losses as a result of a decline in revenues or otherwise. OCC believes that the proposed change, as described above, is necessary for it to meet the capital requirements under the proposed amendments[31] to Rule 17Ad-22. For these same reasons, the proposed change will reduce systemic risk because it will promote confidence that OCC will be able continue operating even if it suffers business losses.

ANTICIPATED EFFECT ON AND MANAGEMENT OF RISK

OCC believes that the proposed change will reduce OCC's overall level of risk because it will help ensure that OCC will be able to continue to provide its clearing services even if it suffers significant business losses. As described above, the proposed change includes a significant infusion of permanent capital. In addition, each feature of the Capital Plan would help ensure that OCC's capital is sufficient on an ongoing basis to allow it to withstand business losses, whether resulting from a decline in revenue or otherwise. The Fee Policy would provide for the Business Risk Buffer, which is designed to ensure that fees will be sufficient to cover projected operating expenses. The

31 *See generally* Securities Exchange Act Release No. 71699 (March 12, 2014), 79 FR 29507 (May 22, 2014).

Refund Policy and Dividend Policy both would allow for refunds of fees or payment of dividends, respectively, only to the extent that they would allow OCC to maintain shareholders' equity at the Target Capital Requirement. They would also prohibit refunds and dividends when Class C Common Stock is outstanding under the Replenishment Capital Plan and OCC was in the process of rebuilding its capital base. In addition, the Replenishment Capital Plan would establish a mandatory mechanism for the contribution of additional capital by OCC's stockholder exchanges in the event capital fell below desired levels. Together these features of the Capital Plan help ensure that OCC maintains levels of capital sufficient to allow it to absorb substantial business losses and meet its increased responsibilities imposed upon it as a systemically important financial market utility, which in turn helps reduce OCC's overall level of risk.

III. Date of Effectiveness of the Advance Notice and Timing for Commission Action

The designated clearing agency may implement this change if it has not received an objection to the proposed change within 60 days of the later of (i) the date that the Commission receives the notice of proposed change, or (ii) the date the Commission receives any further information it requests for consideration of the notice. The designated clearing agency shall not implement this change if the Commission has an objection.

The Commission may, during the 60-day review period, extend the review period for an additional 60 days for proposed changes that raise novel or complex issues, subject to the Commission providing the designated clearing agency with prompt written notice of the extension. The designated clearing agency may implement a change in less than 60 days from the date of receipt of the notice of proposed change by the Commission, or the date the Commission receives any further information it requested, if the Commission notifies the designated clearing agency in writing that it does not object to the proposed change and authorizes the designated clearing agency to implement the change on an earlier date, subject to any conditions imposed by the Commission.

The designated clearing agency shall post notice on its website of proposed changes that are implemented.

The proposal shall not take effect until all regulatory actions required with respect to the proposal are completed.[32]

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Comments may be submitted by any of the following methods:

Electronic Comments:

- Use the Commission's Internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an e-mail to rule-comments@sec.gov. Please include File Number SR-OCC-2014-813 on the subject line.

Paper Comments:

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090.

All submissions should refer to File Number SR-OCC-2014-813. This file number should be included on the subject line if e-mail is used. To help the Commission process

32 *See* note 5, *supra*.

and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the advance notice that are filed with the Commission, and all written communications relating to the advance notice between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10:00 am and 3:00 pm. Copies of the filing also will be available for inspection and copying at the principal office of OCC and on OCC's website http://www.optionsclearing.com/about/publications/bylaws.jsp. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-OCC-2014-813 and should be submitted on or before [insert date 15 days from publication in the Federal Register].

UNITED STATES OF AMERICA
BEFORE THE
SECURITIES AND EXCHANGE COMMISSION

Securities Act of 1933
Release No. 9721 / February 4, 2015

Securities Exchange Act of 1934
Release No. 74203 / February 4, 2015

ORDER APPROVING PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD BUDGET AND ANNUAL ACCOUNTING SUPPORT FEE FOR CALENDAR YEAR 2015

The Sarbanes-Oxley Act of 2002, as amended (the "Sarbanes-Oxley Act"),[1] established the Public Company Accounting Oversight Board ("PCAOB") to oversee the audits of companies that are subject to the securities laws, and related matters, in order to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports. The PCAOB is to accomplish these goals through registration of public accounting firms and standard setting, inspection, and disciplinary programs. The PCAOB is subject to the comprehensive oversight of the Securities and Exchange Commission (the "Commission").

Section 109 of the Sarbanes-Oxley Act provides that the PCAOB shall establish a reasonable annual accounting support fee, as may be necessary or appropriate to establish and maintain the PCAOB. Under Section 109(f) of the Sarbanes-Oxley Act, the aggregate annual accounting support fee shall not exceed the PCAOB's aggregate "recoverable budget expenses," which may include operating, capital and accrued items. The PCAOB's annual budget and accounting support fee are subject to approval by the Commission.

---

[1] 15 U.S.C. 7201 et seq.

Section 982 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act")[2] amended the Sarbanes-Oxley Act to provide the PCAOB with explicit authority to oversee auditors of broker-dealers registered with the Commission. In addition, the PCAOB must allocate the annual accounting support fee among issuers and among brokers and dealers.

Section 109(b) of the Sarbanes-Oxley Act directs the PCAOB to establish a budget for each fiscal year in accordance with the PCAOB's internal procedures, subject to approval by the Commission. Rule 190 of Regulation P facilitates the Commission's review and approval of PCAOB budgets and annual accounting support fees.[3] This budget rule provides, among other things, a timetable for the preparation and submission of the PCAOB budget and for Commission actions related to each budget, a description of the information that should be included in each budget submission, limits on the PCAOB's ability to incur expenses and obligations except as provided in the approved budget, procedures relating to supplemental budget requests, requirements for the PCAOB to furnish on a quarterly basis certain budget-related information, and a list of definitions that apply to the rule and to general discussions of PCAOB budget matters.

In accordance with the budget rule, in March 2014 the PCAOB provided the Commission with a narrative description of its program issues and outlook for the 2015 budget year. In response, the Commission provided the PCAOB with economic assumptions and budgetary guidance for the 2015 budget year. The PCAOB subsequently delivered a preliminary budget and budget justification to the Commission. Staff from the Commission's Offices of the Chief

---

2 Pub. L. No. 111-203, 124 Stat. 1376 (2010).

3 17 CFR 202.190.

Accountant and Financial Management dedicated a substantial amount of time to the review and analysis of the PCAOB's programs, projects and budget estimates; reviewed the PCAOB's estimates of 2014 actual spending; and attended several meetings with management and staff of the PCAOB to further develop its understanding of the PCAOB's budget and operations. During the course of this review, Commission staff relied upon representations and supporting documentation from the PCAOB. Based on this review, the Commission issued a "pass back" letter to the PCAOB. On November 25, 2014, the PCAOB approved its 2015 budget during an open meeting, and subsequently submitted that budget to the Commission for approval.

After considering the above, the Commission did not identify any proposed disbursements in the 2015 budget adopted by the PCAOB that are not properly recoverable through the annual accounting support fee, and the Commission believes that the aggregate proposed 2015 annual accounting support fee does not exceed the PCAOB's aggregate recoverable budget expenses for 2015. The Commission also acknowledges the PCAOB's updated strategic plan and encourages the PCAOB to continue keeping the Commission and its staff apprised of developments throughout the PCAOB's implementation of its near-term priority projects. The Commission looks forward to providing views to the PCAOB as future updates are made to the plan.

The Commission is aware that some of the projects on the PCAOB's standard setting agenda to update auditing and quality control standards have been slow to advance. The Commission also understands that the Board intends to undertake a review of performance and management of the standard setting agenda. The Commission directs the PCAOB during 2015 to provide timely updates to the Commission's staff on the Board's evaluation of all aspects of its standard setting process including performance and management of the process and the potential actions being considered by the Board for process improvements. The Commission also directs the PCAOB, upon its finalization of a process improvement plan for the standard setting agenda, to include in its quarterly reports to the Commission updates on the Board's assessment of the improvements in the performance and management of the standard setting agenda.

Similarly, as part of its review of the 2015 budget, the Commission notes that the Center for Economic Analysis ("Center"), established in 2014, requires continued Board oversight to align its activities with the PCAOB's mission. The Commission directs the PCAOB during 2015 to provide timely updates to the Commission's staff on the activities of the Center, including with respect to defining its role and aligning its activities with the Board's mission. The Commission also directs the PCAOB to include in its quarterly reports to the Commission, updates on the Board's assessment of the performance of the Center.

The Commission understands that in recent years the PCAOB has taken significant and productive steps to improve its information technology ("IT") program. These steps include IT staffing changes, implementing stronger IT governance structures, and strengthening Board oversight of its IT program. Based upon updates provided by the PCAOB, the Commission also understands that these efforts are ongoing; and directs the Board to continue to provide in its quarterly reports to the Commission detailed information about the state of the PCAOB's IT program, including planned, estimated, and actual costs for IT projects, and the level of involvement of consultants. These reports also should continue to include: (a) a discussion of the Board's assessment of the progress and implementation of the Board actions mentioned above; and (b) the quarterly IT report that is prepared by PCAOB staff and submitted to the Board.

The Commission also directs the PCAOB during 2015 to continue to include in its quarterly reports to the Commission information about the PCAOB's inspections program. Such information is to include: (a) statistics relative to the numbers and types of firms budgeted and expected to be inspected in 2015, including by location and by year the inspections are required to be conducted in accordance with the Sarbanes-Oxley Act and PCAOB rules; (b) information about the timing of the issuance of inspections reports for domestic and non-U.S. inspections; and (c) updates on the PCAOB's efforts to establish cooperative arrangements with respective non-U.S. authorities for inspections required in those countries.

The Commission understands that the Office of Management and Budget ("OMB") has determined the 2015 budget of the PCAOB to be sequestrable under the Budget Control Act of 2011.[4] Unless legislation occurs that avoids sequestration, we expect the PCAOB will have approximately $1 million in excess funds available from the 2014 sequestration for spending in 2015. As such, the PCAOB has reduced its accounting support fee for 2015 by approximately $1 million.

---

[4] See "OMB Report to the Congress on the Joint Committee Reductions for Fiscal Year 2015", Appendix page 17 of 17 at: http://www.whitehouse.gov/sites/default/files/omb/assets/legislative_reports/sequestration_order_report_march2014.pdf

The Commission has determined that the PCAOB's 2015 budget and annual accounting support fee are consistent with Section 109 of the Sarbanes-Oxley Act. Accordingly,

IT IS ORDERED, pursuant to Section 109 of the Sarbanes-Oxley Act, that the PCAOB budget and annual accounting support fee for calendar year 2015 are approved.

By the Commission.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4018 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16372

In the Matter of **Douglas E. Hampton,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934 AND SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against Douglas E. Hampton ("Hampton" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent admits the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Sections III.1., III.2., III.3., III.4. and III.5. below, and consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 15(b) of the Securities Exchange Act of 1934 and Section 203(f) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that

1. Hampton was a registered representative and investment adviser representative associated with First Allied Securities, Inc. and First Allied Advisory Services, Inc. First Allied Securities, Inc. is registered with the Commission as a broker-dealer and investment adviser, and is headquartered in San Diego, California. First Allied Advisory Services, Inc. is an investment adviser registered with the Commission, and is headquartered in Chesterfield, Missouri. Hampton is 40 years old and a resident of Canton, Ohio.

2. On August 13, 2013, Hampton pled guilty to conspiracy to commit federal program bribery, honest services wire fraud, and money laundering, in violation of Title 18 United States Code, Sections 371 before the United States District Court for the Southern District of Ohio, in United States v. Douglas E. Hampton, Case No. 2:13-CR-180.

3. The count of the criminal information to which Hampton pled guilty alleged, inter alia, that Hampton willfully became a member of a conspiracy to, among other things: solicit benefits or accept things of value, and gave things of value, with the intent to influence and be influenced in connection with securities transactions; knowingly participated in a scheme to defraud the public, through material misrepresentations, false statements, false pretenses, or concealment of fact, of its right to the honest services of a public official through bribery or kickbacks transmitted by means of wire communication in interstate commerce; and engaged in monetary transactions involving property from unlawful activity which he knew to be criminally derived.

4. On June 30, 2014, Hampton submitted, and the Financial Industry Regulatory Authority ("FINRA") accepted, a Letter of Acceptance, Waiver and Consent ("Consent") entitled In Re: Douglas Eric Hampton, CRD No. 2797816. The FINRA Consent barred Hampton, in all capacities, from associating with any FINRA member.

5. The FINRA Consent found that Hampton, in 2009 and 2010, paid approximately $520,000 to the Chief Financial Officer and Deputy Treasurer in the Office of the Treasurer of the State of Ohio, and two other persons, as a kickback for state brokerage business that the State directed to Hampton. The FINRA Consent also found that Hampton received over $3 million in commissions as a result of executing 360 securities trades on behalf of accounts belonging to the Office of the Treasurer of the State of Ohio. In connection with the FINRA Consent, Hampton consented to a finding, without admitting or denying the finding, that he willfully violated Section 10(b) of the Securities Exchange Act of 1934.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Hampton's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 15(b)(6) of the Exchange Act, and Section 203(f) of the Advisers Act, that Respondent Hampton be, and hereby is barred from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization; and

Pursuant to Section 15(b)(6) of the Exchange Act Respondent Hampton be, and hereby is barred from participating in any offering of a penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock, or inducing or attempting to induce the purchase or sale of any penny stock.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

By the Commission.

Release No. 4020 / February 4, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16374

In the Matter of

DAVID R. WULF,

Respondent.

ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934, SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, AND NOTICE OF HEARING

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against David R. Wulf ("Respondent" or "Wulf").

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT

1. Wulf is 62 years old. From September 1999 through August 2013, Wulf was a registered representative with Moloney Securities Company, Inc. ("Moloney"), a broker-dealer and an investment adviser registered with the Commission. From February 1986 through August 2013, Wulf was also the Chief Executive Officer and an advisory representative of Wulf Bates & Murphy, Inc. ("Wulf Bates"), which was an investment adviser formerly registered with the Commission and the state of Missouri. Between June 1988 and August 1999, Wulf was a registered representative with Birchtree Financial Services, Inc., which was a broker-dealer previously registered with the Commission. Between February 1986 through June 1988, Wulf was a registered representative with American Capital Equities, Inc., which was a broker-dealer previously registered with the Commission. From December 1982 through February 1986, Wulf was a registered representative with Shearson Lehman Brothers Inc., which was a broker-dealer and investment adviser registered with the Commission. From April 1979 through December 1982, Wulf was a registered representative with Merrill Lynch, Pierce, Fenner & Smith Incorporated, which was a broker-dealer and investment adviser registered with the Commission. Finally, from January 1978 through November 1978, Wulf was a registered representative with Cigna Securities Inc., which was a broker-dealer registered with the Commission.

Thus, Wulf was associated with broker-dealers from June 1978 through August 2013. Likewise, Wulf was associated with investment advisers from February 1986 through August 2013. During the relevant time period, Wulf was a Missouri resident. On February 4, 2014, Wulf was committed to the custody of the US Bureau of Prisons in Terre Haute, Indiana.

B. RESPONDENT'S CRIMINAL CONVICTION

1. On August 22, 2013, a federal jury found Wulf guilty of eighteen counts of mail fraud, wire fraud, conspiracy to commit mail fraud affecting a financial institution, and conspiracy to commit wire fraud affecting a financial institution in violation of 18 U.S.C. §§ 1343, 1344, and 1349 before the United States District Court for the Eastern District of Missouri in U.S. v. Sutton et al., Case No. 4:09-cr-00509-JCH-6.

2. Wulf's conviction arose from his role as an investment adviser for National Prearranged Services, Inc. ("National Prearranged") through Wulf Bates. National Prearranged was in the business of selling contracts for prearranged funeral services. As National Prearranged's designated investment adviser, Wulf established trusts for these prearranged funeral services and maintained certain authority over the assets maintained in these trusts. The trustees were financial institutions and/or insurance companies.

3. The indictment against Wulf alleged, inter alia, that from approximately some time before 1992 and continuing until on or about May 14, 2008, Wulf conspired with his co-defendants and others regarding a scheme to defraud purchasers and trustees of National Prearranged's contracts and trusts. Moreover, Wulf was Chief Executive Officer of a registered investment adviser and associated with a dually registered broker-dealer and investment adviser

during the period of his misconduct. The underlying conduct that gave rise to Wulf's conviction includes, but is not limited to: (i) Wulf's failure to serve as an independent investment adviser for National Prearranged as mandated under state law and a binding consent decree; and (ii) Wulf enabling National Prearranged, and related entities and individuals, to assume the full power to administer, manage, control, remove, and/or use the assets in the preneed funeral trusts established by National Prearranged for their own benefit. Consequently, Wulf knowingly allowed nearly $600,000,000 of the money invested by purchasers to be misdirected for the use by National Prearranged, and related entities and individuals, for their own benefit. The indictment further alleged that Wulf and his co-defendants committed various federal offenses incidental to the misconduct described above including, but not limited to, conspiracy, mail fraud and wire fraud.

4. On November 18, 2013, the Court entered the judgment against Wulf based on the jury verdict. The Court sentenced Wulf to a prison term of 120 months followed by five years of supervised release. The Court further ordered Wulf to make restitution in the amount of $435,515,234.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate in the public interest that public administrative proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations;

B. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 15(b) of the Exchange Act; and

C. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 203(f) of the Advisers Act; and

D. Whether, pursuant to Section 15(b) of the Exchange Act, it is appropriate and in the public interest to bar Wulf from participating in any offering of penny stock, including: acting as a promoter, finder, consultant, agent or other person who engages in activities with a broker, dealer or issuer for purposes of the issuance or trading in any penny stock; or inducing or attempting to induce the purchase or sale of any penny stock.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent personally or by certified mail.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 210 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

ADMINISTRATIVE PROCEEDING
File No. 3-16375

In the Matter of **STEVEN NEIL, CPA,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO RULE 102(e) OF THE COMMISSION'S RULES OF PRACTICE, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted against Steven Neil ("Respondent" or "Neil") pursuant to Rule 102(e)(3)(i) of the Commission's Rules of Practice.[1]

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the

[1] Rule 102(e)(3)(i) provides, in relevant part, that:

The Commission, with due regard to the public interest and without preliminary hearing, may, by order, . . . suspend from appearing or practicing before it any . . . accountant . . . who has been by name . . . permanently enjoined by any court of competent jurisdiction, by reason of his or her misconduct in an action brought by the Commission, from violating or aiding and abetting the violation of any provision of the Federal securities laws or of the rules and regulations thereunder.

Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Section III.3 below, which are admitted, Respondent consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Rule 102(e) of the Commission's Rules of Practice, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Neil, age 62, is and has been a certified public accountant licensed to practice in the State of California. He served as Chief Financial and Administrative Officer of Diamond Foods, Inc. ("Diamond"), from 2008 until he was placed on administrative leave in February 2012 and terminated from his position in November 2012. Neil's California license is currently inactive.

2. Diamond was, at all relevant times, a Delaware corporation with its principal place of business in San Francisco, California. Diamond was engaged in the business of producing and selling packaged foods, including walnuts. At all relevant times, Diamond's common stock was registered with the Commission pursuant to Section 12(g) of the Securities Exchange Act of 1934 ("Exchange Act"), and traded on the NASDAQ National Market.

3. On January 9, 2014, the Commission filed a complaint against Neil in SEC v. Steven Neil (N.D. Cal. Civil Action No. 14-cv-122). On February 2, 2015, the court entered an order permanently enjoining Neil, by consent, from future violations of Sections 10(b) and 13(b)(5) of the Exchange Act and Rules 10b-5, 13b2-1, 13b2-2, and 13a-14 thereunder, and Section 17(a) of the Securities Act of 1933. Neil was also ordered to pay a $125,000.00 civil money penalty, and prohibited for five years from serving as an officer or director of any entity having a class of securities registered with the Commission pursuant to Section 12 of the Exchange Act or that is required to file reports pursuant to Section 15(d) of the Exchange Act.

4. According to the Commission's complaint, Neil directed an effort to fraudulently underreport money paid to walnut growers by delaying the recording of payments into later fiscal periods. By manipulating walnut costs, Diamond correspondingly reported higher net income and inflated earnings to exceed analysts' estimates for fiscal quarters in 2010 and 2011. After Diamond restated its financial results in November 2012 to reflect the true costs of acquiring walnuts, the company's stock price slid to just $17 per share from a high of $90 per share in 2011.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanction agreed to in Respondent Neil's Offer.

Accordingly, it is hereby ORDERED, effective immediately, that:

A. Neil is suspended from appearing or practicing before the Commission as an accountant.

B. After five years from the date of this order, Respondent may request that the Commission consider his reinstatement by submitting an application (attention: Office of the Chief Accountant) to resume appearing or practicing before the Commission as:

1. a preparer or reviewer, or a person responsible for the preparation or review, of any public company's financial statements that are filed with the Commission. Such an application must satisfy the Commission that Respondent's work in his practice before the Commission will be reviewed either by the independent audit committee of the public company for which he works or in some other acceptable manner, as long as he practices before the Commission in this capacity; and/or

2. an independent accountant. Such an application must satisfy the Commission that:

(a) Respondent, or the public accounting firm with which he is associated, is registered with the Public Company Accounting Oversight Board ("Board") in accordance with the Sarbanes-Oxley Act of 2002, and such registration continues to be effective;

(b) Respondent, or the registered public accounting firm with which he is associated, has been inspected by the Board and that inspection did not identify any criticisms of or potential defects in the respondent's or the firm's quality control system that would indicate that the respondent will not receive appropriate supervision;

(c) Respondent has resolved all disciplinary issues with the Board, and has complied with all terms and conditions of any sanctions imposed by the Board (other than reinstatement by the Commission); and

(d) Respondent acknowledges his responsibility, as long as Respondent appears or practices before the Commission as an independent accountant, to comply with all requirements of the Commission and the Board, including, but not limited to, all requirements relating to registration, inspections, concurring partner reviews and quality control standards.

C. The Commission will consider an application by Respondent to resume appearing or practicing before the Commission provided that his state CPA license is current and he has resolved all other disciplinary issues with the applicable state boards of accountancy. However, if state licensure is dependent on reinstatement by the Commission, the Commission will consider an application on its other merits. The Commission's review may include consideration of, in addition to the matters referenced above, any other matters relating to Respondent's character, integrity, professional conduct, or qualifications to appear or practice before the Commission.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION
Washington, D.C.

SECURITIES EXCHANGE ACT OF 1934
Release No. 74216 / February 5, 2015

Admin. Proc. File No. 3-15837

In the Matter of the Application of

POSITRON CORPORATION

For Review of Action Taken by

FINRA

OPINION OF THE COMMISSION

REGISTERED SECURITIES ASSOCIATION — REVIEW OF ASSOCIATION ACTION DENYING REQUEST TO PROCESS CORPORATE ACTIONS

Registered securities association found that it was in the public interest to decline to process documents related to an issuer's proposed reverse stock split and change of corporate domicile because the issuer's then chief executive officer and chairman was the subject of a settled regulatory action involving securities laws violations and a Commission administrative proceeding. *Held*, review proceeding is *dismissed*.

APPEARANCES:

Peter Campitiello, of Kane Kessler, P.C., for Positron Corporation

Alan Lawhead, *Gary Dernelle*, and *Jante C. Turner*, for the Financial Industry Regulatory Authority, Inc.

Appeal filed: April 11, 2014
Last brief received: July 31, 2014

12 of 71

Positron Corporation, an issuer of securities that are quoted on OTC Pink ("OTC Pink"), which is one of the tiers of OTC Market Group, Inc.'s OTC Link, appeals from FINRA's denial of Positron's request that FINRA process and announce Positron's reverse stock split and change of corporate domicile on FINRA's website.[1] FINRA found that Positron's request was deficient and that processing the announcement was not in the public interest because Patrick G. Rooney, who was then Positron's chief executive officer ("CEO") and chairman, had consented in federal district court to an injunction against future violations of the antifraud and disclosure provisions of the federal securities laws and was the subject of a then-pending Commission administrative proceeding to determine whether a securities industry suspension or bar against him was warranted.[2] Positron does not dispute Rooney's involvement in one settled and another then-pending regulatory action that alleged fraud and securities law violations, but argues that FINRA's determination was not in the public interest because, among other reasons, Positron's proposed reverse stock split and change in domicile would benefit its shareholders and Rooney's regulatory proceedings were unrelated to his role at Positron. Based on an independent review of the record, we find that FINRA properly exercised its discretion, relied on grounds that exist in fact, and denied Positron's request in accordance with FINRA Rules and the purposes of the Securities Exchange Act of 1934. We accordingly dismiss the appeal.

---

1 OTC Link is an alternative trading system that allows broker-dealers to post and disseminate their quotations (prices) to the marketplace and to negotiate trades at agreed-upon prices. *See* http://www.otcmarkets.com/learn/market-structure. OTC Link also is an interdealer quotation system, as defined in Rule 15c2-11 under the Exchange Act. *See* 17 C.F.R. § 240.15c2-11. OTC Pink is one of three "tiered marketplaces" within OTC Link. OTC Pink "offers trading in a wide spectrum of equity securities through any broker. [OTC Pink] is for all types of companies that are there by reasons of default, distress or design." Within OTC Pink, issuers are "further sub-categorized by the levels of information that they provide." *See* http://www.otcmarkets.com/learn/otc-market-tiers. At the time it filed this appeal, Positron was sub-categorized as "caveat emptor," indicating that "there [was] a public interest concern associated with the company, security, or control person which may include but is not limited to a spam campaign, questionable stock promotion, investigation of fraudulent or other criminal activity, regulatory suspensions, or disruptive corporate actions." Positron is now sub-categorized as "current," which is "based on the level of disclosure and is not a designation of quality or investment risk. This category includes shell or development stage companies with little or no operations as well as companies without audited financial statements and as such should be considered extremely speculative by investors." *Id.* (all websites last visited on January 5, 2015).

2 FINRA also noted that the district court had retained jurisdiction to determine the appropriate sanctions for Rooney's violations.

I. Background

A. FINRA's processing of Company-Related Actions

FINRA processes requests to announce and publish certain corporate actions by issuers whose securities are traded on the over-the-counter markets ("OTC Securities"). FINRA publishes these announcements on its website in a document known as the "Daily List."[3] These actions, generally referred to as "Company-Related Actions,"[4] include any stock dividends, stock splits, or rights offerings, as well as "the issuance or change to a trading symbol or company name, merger, acquisition, dissolution or other company control transactions, bankruptcy or liquidation."[5] If FINRA elects to process an issuer's Company-Related Action, it will, in turn, announce the action on the "Daily List," which "effectively announces the Company-Related Actions to the [OTC] market."[6]

In 2010, based on a "growing concern that FINRA's Company-Related Action processing services may potentially be used by certain parties to further fraudulent activities," FINRA proposed, and the Commission approved, FINRA Rule 6490, which authorizes FINRA to deny an issuer's request that FINRA announce a Company-Related Action on the Daily List under certain circumstances.[7] The Commission's 2010 Approval Order observed that, although "[h]istorically, FINRA has viewed its role in performing issuer-related functions as primarily ministerial" given its indirect relationship with issuers, Rule 6490 makes clear "the scope of its regulatory authority and . . . codif[ies] procedures that it will apply when reviewing requests to process Company-Related Actions."[8] The Rule authorizes FINRA's Department of Operations

---

3 *FINRA Regulatory Notice 10-38*, 2010 WL 3393960, at *1 (Aug. 27, 2010).

4 FINRA Rule 6490; *Order Approving Proposed FINRA Rule 6490 (Processing of Company-Related Actions) to Clarify Scope of FINRA's Authority When Processing Documents Related to Announcements for Company-Related Actions for Non-Exchange Listed Securities and to Implement Fees for Such Services*, Exchange Act Release No. 62434, 2010 WL 2641653, at *2 (July 1, 2010) (the "2010 Approval Order"); *see also* FINRA Regulatory Notice 10-38, 2010 WL 3393960, at *3.

5 FINRA Rule 6490 refers to the first category of Company-Related Actions as "SEA Rule 10b-17 Actions" and the second category as "Other Company-Related Actions." Positron's proposed reverse stock split is an SEA Rule 10b-17 Action, and the proposed change of domicile from Texas to Delaware is an Other Company-Related Action. As FINRA explains, this is because, "when an issuer initiates a change in domicile, it typically does so by merging with a shell company formed in the new state of incorporation. As a result of the merger with the shell company, the issuer recalls the current stock certificates to reissue the certificates in accordance with the securities laws, rules, and regulations of the new state of incorporation."

8 *Id.*

(the "Department") to conduct "in-depth reviews" of issuers' requests[9] and to deny a request upon finding that (1) the request is "deficient," based on a five-factor inquiry,[10] and (2) denial is "necessary for the protection of investors, the public interest and to maintain fair and orderly markets."[11] An issuer may appeal any denial by the Department to a subcommittee of FINRA's Uniform Practice Code Committee ("UPCC Subcommittee") and that subcommittee's decision becomes FINRA's final decision in the matter.[12]

B. Positron's then-CEO Rooney and the regulatory actions against him.

1. Positron

Positron is a "nuclear medicine healthcare company specializing in the field of cardiac Positron Emission Tomography imaging," and manufactures and sells medical imaging devices and radiopharmaceuticals.[13] Until September 5, 2014, Rooney was Positron's CEO and

---

9 *Id.*

10 FINRA Rule 6490(d)(3). Under FINRA Rule 6490(d)(3), a Company-Related Action is "deficient" if "one or more" of the following factors exists:

(1) FINRA staff reasonably believes the forms and all supporting documentation . . . may not be complete, accurate or with proper authority;

(2) the issuer is not current in its reporting requirements . . . to the SEC or other regulatory authority;

(3) FINRA has actual knowledge that . . . officers [or] directors . . . connected to the issuer or the [Company-Related Action requested] . . . are the subject of a pending, adjudicated or settled regulatory action or investigation by a federal, state or foreign regulatory agency, or a self-regulatory organization; or a civil or criminal action related to fraud or securities laws violations;

(4) a state, federal or foreign authority or self-regulatory organization has provided information to FINRA, or FINRA otherwise has actual knowledge indicating that the issuer, associated persons, officers, directors, transfer agent, legal adviser, promoters or other persons connected with the issuer or [Company-Related Action] may be potentially involved in fraudulent activities related to the securities markets and/or pose a threat to public investors; and/or

(5) there is significant uncertainty in the settlement and clearance process for the security.

11 *Id.*; 2010 Approval Order, *supra* note 4, at *6.

12 FINRA Rule 6490(e).

13 Positron Corporation, Form 10-K for the year ended December 31, 2013, at 2 ("Positron Form 10-K"). Positron is a Texas corporation with offices in Illinois, Indiana, Texas, and New York. Its common stock is registered with the Commission under Section 12(g) of the Securities Act, and at all times relevant to FINRA's action, was quoted on OTC Pink under the ticker

(continued...)

Chairman of its Board of Directors.[14] At the time of FINRA's March 27, 2014 determination that is the subject of this appeal, Rooney received a salary from Positron, and he owned common stock and securities convertible into common stock equal to seven percent of Positron's outstanding common stock. Rooney is also the founder, sole owner, and managing partner of Solaris Management, a Delaware limited liability company with its principal place of business in Illinois. Solaris Management is the general partner and investment adviser to Solaris Opportunity Fund, LP ("Solaris Opportunity Fund"), a hedge fund based in Delaware, which at the time of FINRA's determination owned 40.9 percent of Positron's outstanding common stock.[15] Through his personal ownership and the interest held by Solaris Opportunity Fund, Rooney controlled 47.9 percent of Positron's outstanding common stock.

2. The District Court Proceeding

On November 18, 2011, the Commission filed a Complaint in federal district court against Rooney and Solaris Management.[16] The Commission alleged that Rooney and Solaris Management "used [Solaris Opportunity Fund] as Positron's piggy bank." According to the

(...continued)

symbol "POSC." *See OTC Markets Group's Company Directory*, http://www.otcmarkets.com/stock/POSC/quote.

[14] On September 8, 2014, Positron filed a Form 8-K, which stated, "On September 5, 2014, Patrick G. Rooney tendered his resignation as our Chairman and Chief Executive Officer, effective immediately. Mr. Rooney will continue to pursue current and future strategic collaborations and expansion opportunities on behalf of the Company." On December 22, 2014, Positron filed another Form 8-K announcing that Yuri Perevalov had been appointed to the Company's Board of Directors. The December 22, 2014 Form 8-K states, "With the addition of Dr. Perevalov, the Company returns to a five member Board of Directors, filling the vacancy created by the resignation of Patrick Rooney on September 5, 2014. Dr. Perevalov's addition completes the transition of Mr. Rooney's exit. Accordingly, and as a result of the transfer of his ownership of the majority of his holdings of the Company's securities, Mr. Rooney has concluded his role with the Company as a control person, employee, consultant, or affiliate and the Company's [sic] presently has no plans to rehire Mr. Rooney in the future." We take official notice of the information about Positron provided in its Commission EDGAR filings. *See* 17 C.F.R. § 210.323 (permitting official notice of "any material fact which might be judicially noticed by a [U.S.] district court" or "any matter in the public official records of the Commission") and Fed. R. Evid. 201(b) (stating that "judicially noticed fact must be one not subject to reasonable dispute in that it is . . . capable of accurate and ready determination by resort to sources whose accuracy cannot be reasonably questioned").

[15] Rooney formed Solaris Opportunity Fund in mid-2003. As of December 2008, which is the last time that the hedge fund issued financial statements, Solaris Opportunity Fund had thirty investors and reported assets of nearly $16.3 million. Solaris Opportunity Fund promotes the use of "long, short, and neutral positions to hedge risk, generate income, and maintain equity growth over the long term." Solaris Opportunity Fund trades in equities, options, and futures.

[16] *SEC v. Rooney*, No. 1-11-cv-08264 (N.D. Ill. Nov. 18, 2011).

Complaint, Rooney and Solaris Management used undocumented private transactions and no-interest loans totaling over $3.6 million to cause Solaris Opportunity Fund to be invested wholly in Positron without informing Solaris Opportunity Fund's investors. The Complaint alleged that this investment of the entire fund in Positron was in contradiction of the fund's offering documents, which stated that its strategy was to "trade and establish long, short, and neutral positions in equities and indices." The Commission alleged that Rooney and Solaris Management did not disclose these investments or Rooney's ties to Positron to Solaris Opportunity Fund's investors for over four years and that when Rooney finally made the required disclosures, he misrepresented that he became the Chairman of Positron only to protect Solaris Opportunity Fund's investment. While Rooney failed to disclose the investment, the Commission also asserted that, "[i]n 2008, the year in which the Solaris Fund made its largest investments in Positron, six investors put in over $5.7 million into the Fund." The Complaint alleged that Rooney's and Solaris Management's conduct left Solaris Opportunity Fund with "a concentrated, undiversified, and illiquid position in a cash-poor company with a history of net losses [Positron]."[17] The Complaint further alleged that Rooney's misconduct benefited Positron, charging that Rooney "caused [Solaris Opportunity Fund] to finance Positron when it had no other sources of funding." It also noted that Rooney "approved these transactions on behalf of Positron" and "selected an interest rate of 0% because it was best for Positron." Based on Rooney's dual roles with Positron and Solaris Opportunity Fund, the Commission alleged that Rooney "had a conflict of interest" and had "engaged in self-dealing in violation of [his] fiduciary obligations to the Solaris Fund."

On December 19, 2013, Rooney and Solaris Management consented to the entry of permanent injunctions against future violations of the antifraud and disclosure provisions of the federal securities laws (the "District Court Injunction").[18] The district court retained jurisdiction to adjudicate penalties, disgorgement, and a possible officer-and-director bar for Rooney. On July 14, 2014, the district court issued a Memorandum Opinion in which it ordered Rooney and Solaris Management to pay, jointly and severally, disgorgement of $715,700, plus prejudgment

---

[17] The Complaint also alleged that Rooney, as the sole owner and managing partner of Solaris Management, had received more than $1.4 million in fees from Solaris Opportunity Fund.

[18] *SEC v. Rooney*, No. 11-cv-8264 (N.D. Ill. Dec. 19, 2013). Without admitting or denying the Commission's allegations, Rooney and Solaris Management consented to permanent injunctions against violating the following antifraud provisions of the federal securities laws: Sections 206(1), (2), and (4) of the Investment Advisers Act of 1940, 15 U.S.C. § 80b-6(1), (2), and (4), and Rules 206(4)-8(a)(1) and (a)(2) thereunder, 17 C.F.R. § 206(4)-8(a)(1) and (a)(2); Section 17(a) of the Securities Act of 1933, 15 U.S.C. § 77q(a); and Section 10(b) of the Securities Exchange Act of 1934, 15 U.S.C. § 78j(b), and Rule 10b-5 thereunder, 17 C.F.R. § 240.10b-5 (all prohibiting fraud in the offer and sale of securities). Rooney and Solaris Management also agreed to permanent injunctions against violating the disclosure provisions of the federal securities laws in Section 13(d)(1) of the Exchange Act, 15 U.S.C. § 78m(d)(1), and Rule 13d-1 thereunder, 17 C.F.R. § 240.13d-1 (requiring any beneficial owner of more than five percent of any Exchange Act registered securities to disclose the extent of his or her ownership stake).

interest of $166,476; imposed a civil money penalty of $715,700 against Rooney; and imposed a conditional officer-and-director bar against Rooney, prohibiting him from "operating another private fund and barr[ing him] from serving as an officer or director of any other public company except Positron."[19] The district court found that "Rooney acted with a high level of scienter and his conduct of funneling over $3 million of [Solaris Opportunity Fund's] assets into Positron while he served the important role as investment adviser was quite egregious." The district court concluded that a full officer and director bar was not necessary because "the likelihood of recidivism is low," based largely on Rooney's having consented to permanent injunctions against future violations of the antifraud provisions.[20]

3. The Administrative Follow-On Proceeding

On January 8, 2014, we instituted administrative follow-on proceedings to determine whether, as a result of the District Court Injunction, remedial action against Rooney was appropriate in the public interest (the "Commission Follow-On Proceeding").[21] On July 22, 2014, an administrative law judge issued an initial decision barring Rooney from associating with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization.[22] The law judge found that Rooney's violations were recurrent, egregious, and evidenced scienter.[23] The law judge further determined that Rooney's previous occupations indicated a likelihood that he would have

---

19 *SEC v. Rooney*, No. 1-11-cv-08264 (N.D. Ill. July 14, 2014).

20 The district court also stated, "based on Rooney's status as the father of three dependent sons and the caretaker of his ailing domestic partner, this Court finds that Rooney should be able to continue to support his family with the salary he earns at Positron while simultaneously satisfying disgorgement plus prejudgment interest and the civil penalty ordered by this Court."

On July 31, 2014, FINRA requested that the Commission accept a Supplemental Brief in Opposition to Positron Corporation's Application for Review, which FINRA filed after the conclusion of briefing in this appeal to address arguments regarding the July 14 Memorandum Opinion that Positron raised for the first time in its reply brief. Because the Memorandum Opinion was issued after FINRA filed its opposition brief, FINRA had no opportunity to address it earlier in this appeal. Positron did not oppose FINRA's request. Although the briefing order in this proceeding and our Rules of Practice do not specifically authorize the filing of such supplementary briefs, we have determined to grant FINRA's request.

opportunities to commit future violations in the absence of a full industry bar. Rooney did not appeal the initial decision, which has now become final.[24]

C. FINRA's Denial of Positron's Request

On January 24, 2014, Positron filed an application with FINRA requesting that it process two Company-Related Actions—specifically, announcements on the Daily List that Positron was issuing a 1-for-100 reverse stock split and was changing its domicile from Texas to Delaware. Positron explained that it sought the reverse stock split in an effort to increase the share price of its common stock.[25] The application stated that Positron would be "forced to increase the number of its authorized shares by two-fold to account for full dilution of [Positron's] securities and future investor participation." The company stated that such an increase in authorized shares would "bring [Positron's] total to six billion authorized shares, a number that is clearly extraordinary and not respectable of a growing nuclear medicine healthcare company." Positron further claimed that a low share price would undermine its credibility with investors, joint venture partners, and potential employees.[26]

On February 19, 2014, the Department issued a deficiency notice, informing Positron that, pursuant to FINRA Rule 6490(d)(3), it had denied the company's request to process the reverse stock split and the change in domicile because Rooney was the subject of a "settled regulatory action . . . related to fraud or securities laws violations," specifically the District Court Injunction. The Department found that this misconduct "raised concerns for FINRA regarding the protection of investors."[27] The Department stated that, as a result of its findings, it would "cease processing documentation related to [Positron's] Company-Related Action and would make no announcement on the Daily List."

Positron appealed the Department's decision to the UPCC Subcommittee, arguing that FINRA's determination was "detrimental to the interests of Positron's shareholders and the investing public." Positron claimed that it had already taken the necessary corporate actions and votes and had filed documents in Texas and Delaware to effectuate the Company-Related Actions. According to Positron, it "would have to make an entirely new set of filings with the Secretaries of State of Texas and Delaware to unwind the corporate actions, leading to additional wasted fees and expenses to Positron and its shareholders." Positron also argued for reversal of the Department's deficiency notice because the underlying actions against Rooney did not name Positron and did not (according to Positron) relate to Rooney's role as its CEO or Chairman.

---

24 *Patrick G. Rooney*, Advisers Act Release No. 3916, 2014 WL 4467878 (Sept. 11, 2014).

25 "A reverse stock split reduces the number of shares and increases the share price proportionately." *Reverse Stock Split*, http://www.sec.gov/answers/reversesplit.htm.

26 Positron did not address the reasons for its change of domicile from Texas to Delaware before the Department or the UPCC Subcommittee.

27 The Department did not mention the then-pending Commission Follow-On Proceeding.

On March 27, 2014, the UPCC Subcommittee affirmed the Department's decision, finding Positron's request deficient based on both the District Court Injunction and the Commission Follow-On Proceeding.[28] The UPCC Subcommittee found that the Department's denial of Positron's request was necessary "for the protection of investors and the public interest." The Subcommittee stated that "Rooney's beneficial ownership of Positron Corporation, and the corporate positions that he holds, provide Rooney with substantial authority and control [over Positron]." And although the Subcommittee acknowledged that Positron had offered potentially valid business reasons for the Company-Related Actions, it stated that it "place[s] primary importance on [FINRA's] responsibility to protect investors when an issuer's officers or directors are defendants and respondents in pending actions that allege fraud and securities law violations." The UPCC Subcommittee further found that, under Rule 6490, it need not find that Positron itself was involved in the underlying fraud, because Rooney's significant involvement with Positron provided a sufficient basis to support the deficiency determination. Nevertheless, the UPCC Subcommittee noted that Positron "received over $3.6 million from Solaris Opportunity Fund" in the transactions underlying the District Court Injunction. This appeal followed.

II. Analysis

Exchange Act Section 19(f) governs our review of a self-regulatory organization's denial of access to services.[29] Here, FINRA denied Positron's request for FINRA to process and announce a reverse stock split and a change in domicile on FINRA's Daily List. Under Section 19(f), we must dismiss Positron's appeal of this denial if we find that (i) the specific grounds on which FINRA based its denial exist in fact; (ii) the denial was in accordance with FINRA rules; and (iii) those rules are, and were applied in a manner, consistent with the purposes of the Exchange Act.[30] FINRA's denial meets these criteria.

---

28 The UPCC Subcommittee requested that both parties file briefs "to address what effect, if any, should be given" to the then-pending Commission Follow-On Proceeding. Positron argued that the Commission Follow-On Proceeding "should have no effect on Positron's appeal" of the Department's deficiency notice because the two proceedings were based on the same facts and stated that its arguments regarding the District Court Injunction "remain unchanged by the recent issuance of the [Commission Follow-On] order." FINRA argued that it was appropriate for the UPCC Subcommittee to consider the Commission Follow-On Proceeding, noting that it alone "would have served as a sufficient basis for a determination of deficiency" and, accordingly, "raise[d] substantial concerns for FINRA regarding investor protection and transparency to the marketplace as it relates to Positron's Requested Corporate Action."

We have found that FINRA Rule 6490 "is consistent with the [Exchange] Act and the rules and regulations thereunder applicable to a national securities association." 2010 Approval Order, *supra* note 4, at *5 (explaining that FINRA Rule 6490 is consistent with Exchange Act Sections 15A(b)(5) and (6)). Exchange Act Section 19(f) further requires that we set aside FINRA's

(continued...)

A. The grounds on which FINRA based its denial of Positron's request exist in fact.

FINRA Rule 6490(d)(3) requires FINRA to conduct a two-step analysis in determining whether to process a Company-Related Action request. First, FINRA must assess whether the issuer's request is deficient, based "solely . . . [on] one or more" of the five enumerated factors.[31] Second, in the event that FINRA deems an issuer's request deficient, FINRA then "may determine" not to process the issuer's request if it finds that denial "is necessary for the protection of investors, the public interest and to maintain fair and orderly markets."[32]

1. Positron's Company-Related Action was deficient under FINRA Rule 6490(d)(3).

Positron's request was deficient under FINRA Rule 6490(d)(3) because FINRA had "actual knowledge . . . that officers [or] directors . . . connected to" Positron "are the subject of a[n] . . . adjudicated or settled regulatory action . . . related to . . . fraud or securities laws violations."[33] Rooney was Positron's CEO and Chairman of its Board of Directors at the time of the request in January 2014. And the District Court Injunction entered against him on December 19, 2013 involved violations of the antifraud and disclosure provisions of the federal securities laws, specifically, Advisers Act Sections 206(1), (2), and (4) and Rules 206(4)-8(a)(1) and (a)(2) thereunder, Securities Act Section 17, and Exchange Act Sections 10(b) and 13(d) and Rules 10b-5 and 13d-1 thereunder. Rooney was also the subject of a then-pending Commission Follow-On Proceeding relating to the same securities law violations, in which the Commission sought to bar Rooney from association with any broker, dealer, investment adviser, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization.[34] The record further establishes that FINRA had actual knowledge of both the District Court Injunction and the Commission Follow-On Proceeding.

2. FINRA found that denying Positron's request was necessary for the protection of investors, the public interest, and to maintain fair and orderly markets under FINRA Rule 6490(d)(3).

FINRA Rule 6490(d)(3) states that "where [a Company-Related Action] is deemed deficient," FINRA "may determine" not to process the request if doing so is "necessary for the

(...continued)
action if we find that it imposes an undue burden on competition. 15 U.S.C. § 78s(f). Positron does not claim, nor does the record suggest, that FINRA's action imposes such a burden.

31 FINRA Rule 6490(d)(3). *See supra* note 10 (listing factors).

32 *Id.*

33 FINRA Rule 6490(d)(3)(3).

34 *See id.* (stating the FINRA may determine to deny a Company-Related Action where it has actual knowledge that an issuer's officers or directors are the subject of a "pending . . . regulatory action").

protection of investors, the public interest and to maintain fair and orderly markets."[35] The Rule's use of the permissive term "may" vests FINRA with discretionary authority in deciding whether to process and announce a Company-Related Action request on the Daily List.[36] In the similar context of appeals from a delisting determination, we have long stated that "[t]o the extent that discretion enters into [FINRA's decision to deny inclusion on its systems] . . . the discretion in question is [FINRA's], not ours,"[37] and as in those cases, we will not substitute our judgment for FINRA's unless its decision is unsupported by the record.[38]

Here, we find that the specific grounds on which FINRA based its findings that Positron's action posed a threat to investors and market integrity exist in fact. Rooney's previous misconduct was serious. The Commission's complaint alleged that, over nearly four years, Rooney repeatedly caused Solaris Opportunity Fund to make undocumented and no-interest loans to Positron, while misleading the fund's investors "into believing that they were invested in a diversified hedge fund" and hiding Rooney's role with Positron. The Commission alleged that, in doing so, Rooney "saddled the Fund with a concentrated, undiversified, and illiquid position in a cash poor company with a lengthy track record of losses." The Commission charged Rooney with violating the antifraud and disclosure provisions of the federal securities laws, which are fundamental to the securities industry and the protection of investors. We have repeatedly held that "conduct that violates the antifraud provisions of the securities laws is especially

---

35 *Id.*

36 *See, e.g., United States v. Rodgers*, 461 U.S. 677, 706 (1983) (stating that, absent "indications of legislative intent to the contrary," "the word 'may,' when used in a statute, usually implies some degree of discretion"). The 2010 Approval Order lends further support for this reading and included, with approval, the following explanation by FINRA of the operation of Rule 6490: "[W]hen the Department reasonably believes that an issuer . . . has triggered one of the explicitly enumerated factors, . . . it would *have the discretion* not to process any such actions that are incomplete or when it determines that not processing such an action is necessary for the protection of investors." 2010 Approval Order, *supra* note 4, at *6 (emphasis added).

37 *Tassaway, Inc.*, Exchange Act Release No. 11291, 45 SEC 706, 1975 WL 160383, at *2 (Mar. 13, 1975) (discussing oversight of the OTC markets by FINRA, then the NASD).

38 *See, e.g., Cleantech Innovations, Inc.*, Exchange Act Release No. 69968, 2013 WL 3477086, at *6 (July 11, 2013) (stating that "we are not free to substitute our discretion for NASDAQ's" but setting aside decision because "the record does not show that the grounds on which NASDAQ relied in delisting CleanTech exist in fact"); *Eagle Supply Grp., Inc.*, Exchange Act Release No. 39800, 53 SEC 480, 1998 WL 133847, at *4 (Mar. 25, 1998) (remanding to NASD for a more definitive statement on its reasoning for denying issuer's inclusion on the NASDAQ SmallCap Market).

serious . . ."[39] and that antifraud injunctions, such as those to which Rooney consented here, "have especially serious implications for the public interest."[40]

Further, the disclosures required by Exchange Act Section 13(d) and its rules, which the Commission also charged Rooney with violating, "alert[] the marketplace to every large, rapid aggregation or accumulation of securities . . . , which might represent a potential shift in corporate control," as in a corporate takeover.[41] Failure to comply with these core disclosure obligations deprives investors of information necessary to make informed investment decisions.[42] It is also troubling, as the UPCC Subcommittee found, that all of the regulatory actions against Rooney were relatively recent.

FINRA also based its denial on its concerns regarding Rooney's ongoing role at Positron. As FINRA found, Rooney's positions as CEO and Chairman of the Board at the time, as well as the substantial percentage of Positron's stock held by Solaris Opportunity Fund and Rooney, provided Rooney "with substantial authority and control [of Positron]." We also agree with FINRA's finding that Positron benefited from Rooney's misconduct, receiving over $3.6 million in investments at a time when the Commission's Complaint alleged that no other sources of funding for the company existed. Although such a finding is not required to support FINRA's determination, this significant benefit to Positron from Rooney's misconduct undermines Positron's claim that the District Court Injunction had nothing to do with Rooney's role at the company.

3. FINRA properly considered Rooney's District Court Injunction in reaching its decision.

Positron contends on appeal that FINRA should not have considered the District Court Injunction in denying Positron's request because Positron was not a named defendant in the underlying Commission action. Positron further claims that the District Court Injunction had

---

39 *See, e.g., Vladimir Boris Bugarski*, Exchange Act Release No. 66842, 2012 WL 1377357, at *5 (Apr. 20, 2012) (quoting *Steadman*, 603 F.2d at 1140 (5th Cir. 1979)).

41 *GAF Corp. v. Milstein*, 453 F.2d 709, 717 (2d Cir. 1971); *see also SEC v. First City Fin. Corp.*, 890 F.2d 1215, 1230 (D.C. Cir. 1989) (explaining that a violator of Exchange Act Section 13(d) improperly benefits by purchasing stock at an artificially low price, because disclosure of a holding in excess of five percent of a company's stock suggests to the rest of the market a likely takeover and therefore may increase the price of the stock).

42 *See SEC v. Drexel Burnham Lambert, Inc.*, 837 F. Supp. 587, 607 (S.D.N.Y. 1993) (stating that "Section 13(d) is not a mere 'technical' reporting provision; it is, rather, the 'pivot' of a regulatory scheme that may represent the only way that corporations, their shareholders and others can adequately evaluate . . . the possible effects of a change in substantial shareholdings" (citations omitted)).

nothing to do with Rooney's work at Positron. Based on these arguments, Positron contends that FINRA's deficiency determination was arbitrary and capricious.

We find that FINRA properly considered the allegations in the Commission's complaint against Rooney in assessing its interest in protecting investors. In our order approving Rule 6490, we specifically highlighted the value of FINRA's authority under the Rule to "conduct in-depth reviews of requests to process Company-Related Actions and to provide FINRA staff the discretion not to process . . . requests for which there are certain indicators of potential fraud."[43] In assessing Positron's request, FINRA did not invoke the allegations in the Commission's complaint against Rooney to establish any liability against Positron, which was not a party to the District Court Injunction. FINRA imposed no sanction or penalty against Positron, Rooney, or any other Positron shareholder. FINRA's denial of Positron's requests is but one of the several collateral consequences of Rooney's consent to the District Court Injunction and Positron's decision to have Rooney as its CEO and Chairman.[44] Further, Positron's argument would defeat the purpose of Rule 6490, under which FINRA looks to the conduct of an issuer's officers and directors, and other persons related to the issuer, when determining whether to process a Company-Related Action.

For the foregoing reasons, we find that the grounds on which FINRA based its denial to process Positron's Company-Related Action request existed in fact.

B. FINRA's denial of Positron's request was in accordance with its rules.

FINRA, a registered national securities association, adopted Rule 6490 pursuant to Exchange Act Section 15A(b).[45] That provision authorizes FINRA to adopt rules that, among other things, are "designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, [and] processing transactions in securities" and, in

---

43 *See* 2010 Approval Order, *supra* note 4, at *2.

44 *See DHB Capital Grp., Inc.*, Exchange Act Release No. 37069, 52 SEC 740, 1996 WL 164315, at *3 (Apr. 5, 1996) ("[FINRA]'s decision to deny inclusion [of DHB on NASDAQ]—based in part on the fact that, upon finding that Brooks committed serious securities law violations, we barred him (with his consent) from the industry—is a collateral consequence of Brooks's misconduct . . . [and] a proper exercise of the [FINRA]'s authority under its Qualification Requirements By-Law.").

For example, although Positron was not a party to the District Court Injunction, the entry of the settlement had the collateral consequence of requiring Positron (as long as Rooney remained the CEO and Chairman) to disclose the settlement for the next ten years in its periodic filings with the Commission—a requirement Positron met. Item 401(f) of Reg. S-K, 17 C.F.R. § 229.401(f) (requiring disclosure of a director's, nominee's, or executive officer's involvement in specific legal proceedings "that are material to an evaluation of the ability or integrity" of such a person).

45 2010 Approval Order, *supra* note 4, at *5.

general, "to protect investors and the public interest."[46] As we stated in the 2010 Approval Order, FINRA adopted Rule 6490 in furtherance of these statutory principles based on FINRA's growing concern that its Daily List services could be used for fraudulent practices.[47] We concluded that the rule was designed to protect "the OTC marketplace and investors in OTC Securities" by permitting FINRA to deny a Company-Related Action request when there are "certain indicators of potential fraud."[48]

The plain language of FINRA Rule 6490(d)(3) makes clear FINRA's authority to find a Company-Related Action deficient in the circumstances presented here. Among the five deficiency factors that may form the basis for FINRA's denial is whether it has "actual knowledge" of an adjudicated, settled, or pending regulatory action alleging securities law violations against the issuer's officers or directors. If "one or more" of these factors is present, FINRA has the discretion to deny a request if denial is "necessary for the protection of investors, the public interest, and maintenance of fair and orderly markets."[49] As discussed, FINRA's denial satisfied these requirements.[50]

Positron, citing language from the 2010 Approval Order in which we expressed concern regarding individuals who "usurped the identity of a defunct or inactive publicly traded company . . . based on the apparently false representation that they were duly authorized officers,"[51] claims that "fraud in connection with the [Company-Related Action] was clearly the type of fraud the Commission was concerned with in approving Rule 6490." Because Rooney's fraudulent conduct here was not related to the Company-Related Actions, and because "there has never been even an inference that Positron is not the company that it represents to be," Positron characterizes FINRA's determination at issue as a "fishing expedition," which it claims is inconsistent with the purposes of Rule 6490. But FINRA's discretion under Rule 6490 is not limited in the way Positron suggests. The text of the Rule provides FINRA with discretion to exercise judgment about whether approval of a Company-Related Action is appropriate in the

46 15 U.S.C. § 78*o*-3(b)(6); *see also Fog Cutter*, 474 F.3d at 824 (discussing Exchange Act Section 15A(b) and stating that, "[a]s a self-regulatory organization, [FINRA] must maintain rules to protect investors and the public interest").

47 2010 Approval Order, *supra* note 4, at *2 (stating that FINRA proposed Rule 6490 "in furtherance of its authority to adopt rules to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, and protect investors and the public interest").

48 *Id.*

49 *See supra* notes 35-38 and accompanying text (discussing FINRA's discretionary authority).

50 In addition to meeting these substantive requirements, we find, as Positron does not dispute, that FINRA properly followed the procedures set forth in Rule 6490(d) and (e) in disposing of Positron's request. *Michael Stegawski*, Exchange Act Release No. 59326, 2009 WL 223618, at *6 (Jan. 30, 2009).

51 2010 Approval Order, *supra* note 4, at *2 & n. 9.

public interest. As FINRA argues, Positron's proffered interpretation of Rule 6490 would "render the rule meaningless" because there is no question FINRA would deny a Company-Related Action request if it was aware of ongoing fraudulent conduct in connection with the Company-Related Action; the Rule addresses the risk of *future* harm by providing FINRA with discretion to consider whether the proposed Company-Related Action raises indicators of potential fraud such that it poses a threat to investors and the integrity of the markets.

Accordingly, based on the foregoing reasons, we find that FINRA's denial was in accordance with its rules.

C. FINRA applied its rules in a manner consistent with the Exchange Act.

FINRA applied its rules in a manner consistent with the purposes of the Exchange Act. In the Securities Enforcement Remedies and Penny Stock Reform Act of 1990, Congress directed the formation of "automated quotation systems for penny stocks . . . [t]o add visibility and regulatory and surveillance data to that market."[52] In enacting this legislation, Congress amended the federal securities laws by "issu[ing] legislative directives with the intention of curbing the pervasive fraud and manipulation of the penny stock market."[53] FINRA Rule 6490 furthers these objectives by authorizing FINRA to deny processing and announcing a Company-Related Action on the Daily List when it finds deficiencies with respect to an issuer's Company-Related Action, including "indicators of potential fraud," and that denial is "necessary for the protection of investors, the public interest and to maintain fair and orderly markets."[54]

Here, FINRA found that Rooney's consent to the District Court Injunction against violations of the antifraud and disclosure provisions of the federal securities laws, the recent nature of the regulatory actions against Rooney, and Rooney's "substantial authority and control" over Positron at the time made denial of the company's request necessary to protect investors.[55] Positron contends that FINRA lacks authority to deny its Company-Related Action request because FINRA has no direct jurisdiction over issuers. But this argument ignores the critical role

52 Pub. L. No. 101-429, 104 Stat. 931 (1990) (codified in the Exchange Act at 15 U.S.C. § 78q-2).

53 *Report to Accompany the Penny Stock Reform Act of 1990*, H.R. Rep. No. 617, 101st Cong., 2d Sess. (July 23, 1990) (reporting H.R. 4497), at 7.

54 2010 Approval Order, *supra* note 4, at *2-3.

55 The UPCC Subcommittee noted, in support of its determination, the recent nature of the regulatory actions against Rooney, and the fact that they remained unresolved at the time. Those proceedings have now been fully resolved, but the ultimate findings of the district court and the administrative law judge, which confirmed Rooney's fraudulent misconduct, only serve to add further support to FINRA's deficiency determination and its concerns that processing the Company-Related Actions would not have served the public interest or the protection of investors.

that FINRA occupies in regulating the OTC market.[56] FINRA has "direct authority for the activities related to OTC trading."[57] With this comes an obligation to oversee the market in OTC Securities and "protect the integrity of the market it is charged with maintaining."[58] Investors in OTC Securities are entitled to assume that "the risk associated with investing in [a market over which FINRA has such authority] is market risk rather than the risk that the promoter or other persons exercising substantial influence over the issuer is acting in an illegal manner."[59]

Positron claims that Rule 6490 is inconsistent with the Exchange Act, claiming that it impermissibly gives FINRA *de facto* "oversight over the regulation of officers and directors." But FINRA correctly notes that its determination not to process the requested Company-Related Actions does not "prohibit Rooney from serving as an officer or director of *any* company."[60] FINRA's refusal to announce Positron's Company-Related Action was a prophylactic measure designed to prevent potential fraud or abuse from occurring through use of the Daily List, and it had no further reach than announcement on that particular FINRA facility.[61] Although Positron contends that FINRA's denial effectively bars Rooney from acting as an officer or director, we note that he remained the CEO and Chairman of the Board of Positron at the time Positron filed

---

56 As one court has observed, "[t]he joint roles taken by [FINRA] and the SEC in the regulation of OTC securities reflects a congressional intent 'to establish a "cooperative regulation" where securities associations would regulate themselves under the supervision of the SEC.'" *Lang v. French*, 154 F.3d 217, 221 (5th Cir. 1998) (quoting *Jones v. SEC*, 115 F.3d 1173, 1179 (4th Cir. 1997) (quoting 115 S. Rep. No. 75-1455, at 3-4 (1938) and H.R. Rep. No. 75-2307, at 4-5 (1938) (legislation authorizing creation of SROs))).

57 *Order Granting Approval to Proposed Rule Change and Amendment No.1 Thereto, and Notice of Filing and Order Granting Accelerated Approval to Amendments Nos. 2, 3, and 4 Thereto, Relating to NASD's Direct Authority for the Activities Related to or in Support of Trading in Over-the-Counter Equity Securities*, Exchange Act Release No. 52508 (Sept. 26, 2005), 2005 WL 3734491, at *1, 70 F.R. 57,346 (Sept. 30, 2005).

58 *Air L.A., Inc.*, Exchange Act Release No. 34491, 1994 WL 413098, at *2 (Aug. 3, 1994) (order denying stay of delisting from NASD's SmallCap Market).

59 *JJFN Servs., Inc.*, Exchange Act Release No. 39343, 53 SEC 335, 1997 WL 722029, at *3 (Nov. 21, 1997) (internal quotation marks omitted) (declining to list issuer's securities on the SmallCap Market because promoter and "key person" of the issuer was previously convicted of filing a false tax return); *see also Fog Cutter Capital Grp., Inc.*, Exchange Act Release No. 52993, 58 SEC 1049, 2005 WL 3500274, at *5 (Oct. 31, 2005) (denying issuer's listing on NASDAQ after guilty plea by issuer's key executive and largest shareholder), *petition denied*, 474 F.3d 822 (D.C. Cir. 2007); *DHB Capital*, 1996 WL 164315, at *4 & n.20 (denying issuer's listing on the SmallCap Market based on consent injunction entered against controlling shareholder, officer, and director).

60 Emphasis in FINRA's brief.

61 *Cf., e.g., United States v. O'Hagan*, 521 U.S. 642, 672-73 (1997) (describing Exchange Act Rule 14e-3(a) as "[a] prophylactic measure, because its mission is to prevent . . . [and] encompasses more than the core activity prohibited").

this appeal. Further, Positron's stock continues to trade in the OTC market and is currently quoted on the OTC Pink.[62] FINRA merely exercised the authority granted under Rule 6490 to determine whether it was in the public interest to process the Company-Related Actions given Rooney's role at Positron at the time.[63]

Positron further contends that, because Rooney is not the controlling shareholder of Positron, "this is not a situation where Rooney is 'calling the shots,' . . . and he must answer to a Board of Directors which approved the Company-Related Action after a vote." Positron points to the required approval of the Company-Related Actions by the vote of two-thirds of Positron's shareholders as evidence that the Company-Related Actions were not "being sought at the sole directive of Rooney." But Positron does not deny that Rooney exercised significant control over the company at the time of the Company-Related Actions, and the fact that Positron has taken the necessary corporate votes to approve the Company-Related Actions does not outweigh FINRA's concerns about the risk of future harm in light of the regulatory actions taken against Rooney. FINRA's discretionary authority under Rule 6490 is significant. Our 2010 Approval Order made clear that the Rule would alter FINRA's approval of Company-Related Actions, which had historically been considered to be "ministerial." If, as Positron suggests, FINRA was expected to approve every Company-Related Action where an issuer had taken the necessary shareholder votes under applicable state laws to approve the action, such a reading would be inconsistent with the language and intent of the Rule.

Positron also claims that FINRA's denial of the Company-Related Actions "is not only unnecessary to protect shareholders and the investing public, but is detrimental to those interests." Positron claims that the reverse stock split would help the company and its shareholders because it would result in a higher stock price, which it claims "would increase Positron's credibility in dealing with the governmental authorities, institutions, and facilities involved in the nuclear medicine industry." It also claims that potential and existing shareholders, brokers, and analysts would think more favorably about Positron if its share price were higher. Positron argues that the change in domicile from Texas to Delaware also would benefit the company and its shareholders because, among other things, Delaware provides "an

---

62 *See supra* note 1. *Cf. Millenia Hope, Inc.*, Exchange Act Release No. 42739, 2000 WL 511439, at *1 (May 1, 2000) (denying stay of OTCBB delisting and stating that "the deletion [from the OTCBB] means only that there will be no prices for those securities on the OTCBB," not that the securities must cease trading); *Cleantech Innovations, Inc.*, Exchange Act Release No. 66064, 2011 WL 6811202, at *3 (Dec. 28, 2011) (same).

FINRA's denial of an announcement on the Daily List and our affirmance of that decision imposes no bar; nor does the denial prevent Positron from effectuating these Company-Related Actions outside of FINRA's services.

63 *Cf. Eagle Supply*, 1998 WL 133847, at *3 & n.12 ("Eagle argues that the NASD has effectively established a rule . . . that prevents an entity's securities from being listed if an officer or director engaged in prior criminal or civil violations of the federal securities laws. We disagree. As noted, the NASD has broad discretion in these matters. This discretion necessarily involves a fact-specific inquiry in determining whether to list particular securities.").

extensive and well-developed corporate jurisprudence that creates predictability and expediency in adjudication" and "Delaware statutes and regulations are favorable to corporations and their shareholders and provide sophisticated and regularly applied rules and structure to meet the evolving needs of businesses and their investors."[64]

FINRA considered Positron's business reasons before reaching its deficiency determination, but it found that they did not provide a compelling basis to outweigh FINRA's concerns based on the regulatory actions against Rooney relating to fraudulent misconduct. FINRA's mandate under Rule 6490 is "aimed not only at facilitating trading and settlement, but also promoting investor protection and market integrity."[65] In light of this mandate, and given FINRA's thorough consideration of Positron's business reasons for its request, we find that FINRA's determination is in the public interest and is consistent with the purposes of the Exchange Act.

Based on the foregoing, we find that FINRA properly denied Positron's Company-Related Action requests and, accordingly, dismiss Positron's appeal.

An appropriate order will issue.[66]

By the Commission (Chair WHITE and Commissioners AGUILAR, GALLAGHER, STEIN, and PIWOWAR).

PricewaterhouseCoopers Zhong Tian CPAs Limited

Respondents.

ORDER ON THE BASIS OF OFFERS OF SETTLEMENT OF CERTAIN RESPONDENTS IMPLEMENTING SETTLEMENT

I.

The Securities and Exchange Commission ("SEC" or "Commission") instituted public administrative proceedings pursuant to Rule 102(e)(1)(iii) of the Commission's Rules of Practice against Deloitte Touche Tohmatsu Certified Public Accountants Ltd. ("DTTC") on May 9, 2012.[1]

[1] Rule 102(e)(1)(iii) provides, in pertinent part, that: "The Commission may censure a person or deny, temporarily or permanently, the privilege of appearing or practicing before it in any way to any person

The Commission also instituted public administrative proceedings pursuant to Rule 102(e)(1)(iii) against BDO China Dahua CPA Co., Ltd. ("Dahua"); DTTC; Ernst & Young Hua Ming LLP ("EYHM"); KPMG Huazhen (Special General Partnership) ("KPMG Huazhen"); and PricewaterhouseCoopers Zhong Tian CPAs Limited Company ("PwC Shanghai") on December 3, 2012. The two proceedings were consolidated on December 20, 2012, pursuant to Commission Rule 201(a), and constitute the current proceeding ("Current Proceeding"). On May 9, 2014, we granted the respective petitions for review of four of the five respondents, DTTC, EYHM, KPMG Huazhen, and PwC Shanghai (collectively the "Settling Respondents"), and the Division of Enforcement ("Division") of the initial decision of the Administrative Law Judge ("ALJ") issued on January 22, 2014 ("Initial Decision").[2]

II.

The Settling Respondents have submitted Offers of Settlement (the "Offers"), which the Commission has determined to accept. The Settling Respondents admit only the facts set forth in Annex A attached hereto; and admit the Commission's jurisdiction over them in, and over the subject matter of, the Current Proceeding, any proceeding to enforce or that seeks to challenge this Order, and any proceeding contemplated by Section III.J.3 or III.J.4 of this Order. In addition, without admitting or denying the findings herein the Settling Respondents consent to the entry of this Order on the Basis of Offers of Settlement of Certain Respondents Implementing Settlement ("Order") containing the following findings, undertakings to make payments as part of the Offers, procedures and undertakings as to future requests and possible additional proceedings and remedies, as set forth below, and a stay of the Current Proceeding as to the Settling Respondents (defined herein).

III.

On the basis of this Order and the Settling Respondents' Offers, and the facts contained in Annex A, the Commission finds[3] that:

A. SUMMARY

1. The Settling Respondents are foreign public accounting firms, as defined by Section 106 of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley" or "the Act"), 15 U.S.C. § 7216(b), all based in the People's Republic of China ("China" or "PRC"). They registered with the Public Company Accounting Oversight Board ("PCAOB" or "Board") in 2004. Each Settling Respondent performed audit work for one or more clients identified in these proceedings with the

---

who is found . . . [t]o have willfully violated . . . any provision of the Federal securities laws or the rules and regulations thereunder." 17 C.F.R. § 201.102(e)(1)(iii).

[2] The remaining respondent, Dahua, did not file a petition for review.

[3] The findings herein are made pursuant to the Settling Respondents' Offers and are not binding on any other person or entity in this or any other proceeding.

letter designations DTTC Client A and Client B through I. The Division opened accounting fraud investigations related to each of these nine clients.

2. Pursuant to Section 106 of Sarbanes-Oxley, as amended by Section 929J of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank") ("Section 106"), the Division served requests for audit workpapers and related documents pertaining to the nine clients on the Settling Respondents, through their designated agents, at various times between March 11, 2011, and April 26, 2012. The Settling Respondents responded to these requests, stating that PRC laws prevented them from producing responsive documents directly to the Division. The Settling Respondents have not produced any responsive audit workpapers and related documents directly to the Division, nor did the Division receive any of the requested workpapers and related documents through any other channel before commencement of the Current Proceeding. Because of the lack of direct production, the Commission issued the above-referenced orders instituting proceedings under Commission Rule of Practice 102(e) against the Settling Respondents based on willful violations of Section 106 (the "OIPs"). The Administrative Law Judge issued the Initial Decision in the Current Proceeding finding that DTTC, EYHM, KPMG Huazhen, and PwC Shanghai each willfully violated Sarbanes-Oxley Section 106 by willfully refusing to comply with at least one SEC request under that provision.

3. As set forth below, this Order (i) finds, for purposes of this Order, that the Settling Respondents willfully violated Section 106, (ii) censures the Settling Respondents, and (iii) memorializes certain undertakings by them, including a payment by each of them in the amount of $500,000 to the United States Treasury. This Order also stays the Current Proceeding as to the Settling Respondents for a period of four years. During this time, the Settling Respondents will perform specified undertakings in response to any future requests for documents covered by Section 106 of Sarbanes-Oxley. Moreover, this Order provides at least three additional forms of relief in the event the Division is unsatisfied by the productions of documents that it receives in response to future requests.

- First, if a Settling Respondent fails to attest that it has produced documents as required by the undertakings, that Settling Respondent is subject to automatic issuance of a Commission order that partially denies that Settling Respondent the privilege of appearing or practicing before it for a period of six months (an "Automatic Bar").

- Second, if the Division believes that a production from a Settling Respondent is deficient in certain ways as set forth in the undertakings, the Commission, on the basis of the Division's allegations, may institute a separate, expedited administrative proceeding against that Settling Respondent (a "Summary Proceeding").

- Third, if two or more productions from the Settling Respondents are substantially delayed, are deficient in certain ways, or lack substantial volumes of requested documents (or portions of documents) in violation of, or without justification under, U.S. law, including, but not limited to, Section 106 of Sarbanes-Oxley, the Division may request that the Commission terminate the stay and resume the Current Proceeding ("Restart").

Under the Restart scenario, the Commission may resolve all issues as to liability and remedies raised by the OIPs, including all defenses previously raised by the Settling Respondents, consistent with the Commission's May 9, 2014 order granting the parties' petitions for review in the Current Proceeding.[4] Absent a Restart within the four-year undertaking period, this Current Proceeding will be deemed dismissed. However, such dismissal will not affect any admissions, findings, or remedies ordered in this Order, which are, and will be, deemed final upon the dismissal of the Current Proceeding.

B. SETTLING RESPONDENTS

4. DTTC (or "Deloitte") is a special general partnership providing audit and professional services in the PRC. DTTC is located in Shanghai, China, and is a member firm of Deloitte Touche Tohmatsu Limited ("DTT Global"), a UK private company limited by guarantee. DTTC is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

5. EYHM (or "Ernst") is a special general partnership providing audit and professional services in the PRC. EYHM is headquartered in Beijing, China, and is a member firm of Ernst & Young Global Limited ("EY Global"), a UK private company limited by guarantee. EYHM is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

6. KPMG Huazhen (or "KPMG") is a special general partnership providing audit and professional services in the PRC. KPMG Huazhen is located in Beijing, China, and is a member firm of KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Huazhen is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

7. PwC Shanghai (or "Pricewaterhouse") is a special general partnership providing audit and professional services in the PRC. PwC Shanghai is headquartered in Shanghai, China, and is a member firm of PricewaterhouseCoopers International Limited ("PwCIL"), a UK private company limited by guarantee. PwC Shanghai is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

---

[4] In the event of a Restart, as set forth more fully in Section III.I of this Order, this Order and the findings herein shall be without prejudice to any claims, arguments, or defenses that a Settling Respondent or the Division may assert in connection with the petitions for review or in any other proceeding that does not arise under paragraph 3 or paragraph 4 of Section III.J of this Order, except that the facts set forth in Annex A shall remain admitted by the Settling Respondents for all purposes. In the event of a Restart, the findings in Sections III.F and III.G of this Order shall be vacated as to any Settling Respondent for whom the Current Proceeding is restarted. In no event, however, may any Settling Respondent recover any payment made under Section III.H of this Order.

C. OTHER RELEVANT ENTITIES

8. DTTC Client A ("DTTC Client A") is a public company the securities of which are registered with the SEC under Section 12(b) of the Securities Exchange Act of 1934 ("Exchange Act") and listed on NASDAQ. DTTC Client A is incorporated in the Province of Ontario, Canada and has its principal operations and principal place of business in the PRC. DTTC Client A designs and manufactures solar products.

9. EYHM Client B ("Client B") is a Delaware corporation with its principal operations and principal place of business in the PRC. Client B's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client B purports to be a leading developer, manufacturer and distributor of organic compound fertilizers in China.

10. EYHM Client C ("Client C") is a Cayman Islands corporation with its primary operations in Beijing, PRC. Client C's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NASDAQ. Client C purports to provide enhanced recovery services for oil and gas exploration.

11. KPMG Huazhen Client D ("Client D") is a Delaware corporation with its primary operations in Xi'an, PRC. Client D's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NASDAQ. Client D purports to engage in the wholesale distribution of finished oil and heavy oil products, the production and sale of biodiesel, and the operation of retail gas stations.

12. KPMG Huazhen Client E ("Client E") is a Nevada corporation with its primary operations in Ningbo, PRC. Client E's securities are registered with the SEC pursuant to Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client E purports to manufacture and supply various petrochemical products in China.

13. KPMG Huazhen Client F ("Client F") is a Nevada corporation, with its primary operations in Shanghai, PRC. Client F's securities were previously registered with the SEC pursuant to Section 12(b) of the Exchange Act and listed on NASDAQ. Client F purports to manufacture chemical additives used in the production of consumer and industrial products.

14. DTTC Client G ("Client G") is a Wyoming corporation with its primary operations in Beijing, PRC. Client G's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NYSE. Client G purports to design, manufacture, and sell offset printing equipment.

15. PwC Shanghai Client H ("Client H") is a Cayman Islands corporation with its principal operations in the PRC. Client H's securities are registered with the SEC under Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client H purports to own and operate a commercial vehicle financing and service centers network.

16. PwC Shanghai Client I ("Client I") is a Nevada corporation with its primary operations in Beijing, PRC. Client I's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client I purports to manufacture automotive electrical parts in China.

D. FACTS CONCERNING COMMMISSION REQUESTS TO THE SETTLING RESPONDENTS UNDER SARBANES-OXLEY

1. Regulatory Background

17. Section 106 of the Sarbanes-Oxley Act of 2002, before it was amended by Dodd-Frank in 2010, stated, in relevant part, that "If a foreign public accounting firm issues an opinion or otherwise performs material services upon which a registered public accounting firm relies in issuing all or part of any audit report or any opinion contained in an audit report, that foreign public accounting firm shall be deemed to have consented . . . to produce its audit workpapers for the Board or the Commission in connection with any investigation by either body with respect to that audit report . . . ." Sarbanes-Oxley Act of 2002 (Public Company Accounting Reform and Investor Protection Act), Pub. L. No. 107-204 § 106(b).

18. In 2004, the Board posted Frequently Asked Questions to its website which stated, in part: "A registered firm's failure to cooperate with Board requests [for production of documents under Sarbanes-Oxley Section 106] may subject the firm to disciplinary sanctions, including substantial civil money penalties and revocation of the firm's registration. In the staff's view, if a firm fails to cooperate with the Board, the fact that the firm has not obtained a client consent that might be necessary (under non-U.S. law) to allow the firm to cooperate is not a defense to a disciplinary action for failure to cooperate."

19. Section 106(b)(1) of Sarbanes-Oxley, as amended by Dodd-Frank, states that: "[i]f a foreign public accounting firm performs material services upon which a registered public accounting firm relies in the conduct of an audit or interim review, issues an audit report, performs audit work, or conducts interim reviews, the foreign public accounting firm shall . . . produce the audit workpapers of the foreign public accounting firm and all other documents of the firm related to any such audit work or interim review to the Commission or the Board, upon request of the Commission or the Board . . . ."

2. Requests To DTTC

20. On or around April 16, 2004, DTTC[5] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The Board confirmed DTTC's registration as a foreign public accounting firm in a letter dated June 4, 2004. DTTC has remained registered with the Board since that time.

---

[5] On January 1, 2013, Deloitte Touche Tohmatsu Certified Public Accountants LLP filed with the PCAOB a notification on Form 4 that Deloitte Touche Tohmatsu Certified Public Accountants LLP had succeeded to the registration status of its predecessor, Deloitte Touche Tohmatsu CPA Ltd.

21. DTTC knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

22. DTTC knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. DTTC described possible conflicts of law in its April 16, 2004 PCAOB registration filing that included a legal opinion.

23. The Board's June 4, 2004 letter confirming DTTC's registration stated that, although DTTC had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Deloitte's registration . . . does not relieve Deloitte of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Deloitte associated persons. If Deloitte prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Deloitte despite the absence of a consent."

24. In June 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, DTTC designated Deloitte & Touche LLP ("DTT US"), the United States member firm of DTT Global, as its agent for receiving service of document requests under Section 106. In so doing, DTTC confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

25. DTTC knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. DTTC also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained power to deny DTTC the privilege of appearing or practicing before the Commission to the extent DTTC willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

26. In the PCAOB reporting years 2010, 2011, 2012, and 2013, DTTC issued audit reports for thirty-two (32), forty-five (45), forty-five (45), and thirty-nine (39) U.S. issuers, respectively.

27. DTTC audited DTTC Client A's financial statements for the fiscal years ended December 31, 2008, 2009, and 2010. DTTC Client A remained DTTC's client as of April 2013.

28. Before April 9, 2010, the Division commenced an investigation into potential accounting fraud involving DTTC Client A, which Client A disclosed in a Form 6-K and accompanying press release filed with the Commission on June 1, 2010. In the press release, DTTC Client A announced that it was postponing the release of its full financial results for the quarter ended March 31, 2010 and its quarterly conference call, scheduled for June 2, as a result of the commencement of an investigation by the Audit Committee of DTTC Client A's Board of Directors. DTTC Client A disclosed that "the investigation was launched after the Company received a subpoena from the [Commission] requesting documents from [DTTC Client A] relating to, among other things, certain sales transactions in 2009."

29. On March 11, 2011, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [DTTC Client A] for the fiscal year ending December 31, 2009" (the "Client A Request").

30. By letter dated April 29, 2011, DTTC, through its U.S. counsel, responded to the Client A Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

31. In July 2011, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client A Request.

32. DTTC was engaged to audit the financial statements of Client G for the fiscal year ended June 30, 2010. In the course of this engagement, DTTC performed audit work on behalf of Client G related to the fiscal year ended June 30, 2010. DTTC did not issue any audit report with respect to Client G.

33. In 2010, Division staff opened an investigation involving Client G, which related to matters reported in a Form 8-K filed by Client G on September 13, 2010. Specifically, Client G reported that:

a. Client G had terminated DTTC's engagement as independent auditor effective September 6, 2010;

b. During the course of DTTC's audit of Client G for the fiscal year ended June 30, 2010, Client G had denied DTTC's request for permission to access original bank statements to verify the identity of certain individuals and entities;

c. Several "reportable events," as defined in Item 304(a)(1)(v) of Regulation S-K, occurred during DTTC's audit of Client G; and

d. Between September 6 and September 8, 2010, Client G's CEO, CFO, and several directors, including the Chair of its Audit Committee, all resigned their positions.

34. On February 14, 2012, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client G] for the fiscal year ended June 30, 2010" (the "Client G Request").

35. By letter dated April 17, 2012, DTTC, through its U.S. counsel, responded to the Client G Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited

the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

36. In April 2012, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client G Request.

37. On May 9, 2012 and December 3, 2012, the Commission instituted these proceedings against DTTC under Rule 102(e) based on DTTC's conduct with respect to the Client A Request and the Client G Request, respectively. DTTC did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

38. In 2013, DTTC provided documents related to DTTC Client A to the China Securities Regulatory Commission ("CSRC"), in response to a request that DTTC had received from the CSRC. In November 2013, DTTC audit workpapers concerning DTTC Client A were provided by the CSRC to the SEC.

39. In 2013, DTTC provided documents related to Client G to the CSRC, in response to a request that DTTC had received from the CSRC. In October 2013, DTTC audit workpapers and related documents concerning Client G were provided by the CSRC to the SEC.

3. Requests To EYHM

40. On or around May 25, 2004, EYHM[6] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed EYHM's registration as a foreign public accounting firm in a letter dated July 8, 2004. EYHM has remained registered with the PCAOB since that time.

41. EYHM knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

42. EYHM knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. EYHM described possible conflicts of law in its May 25, 2004 PCAOB registration filing that included a legal opinion.

43. The Board's July 8, 2004 letter confirming EYHM's registration stated that, although EYHM had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Ernst's registration . . . does not relieve Ernst of the obligation to cooperate in and comply with Board demands (including for

---

[6] On September 3, 2012, Ernst & Young Hua Ming LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that Ernst & Young Hua Ming LLP had succeeded to the registration status of its predecessor, Ernst & Young Hua Ming Certified Public Accountants.

documents or testimony) and to enforce such cooperation and compliance by Ernst's associated persons. If Ernst prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Ernst despite the absence of a consent."

44. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, EYHM designated Ernst & Young LLP ("EY US"), the United States member firm of EY Global, as its agent for receiving service of document requests under Section 106. In so doing, EYHM confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

45. EYHM knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. EYHM also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that that the Commission retained the power to deny EYHM the privilege of appearing or practicing before the Commission to the extent EYHM willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

46. In the PCAOB reporting years 2010, 2011, 2012, and 2013, EYHM issued audit reports for eleven (11), twenty-four (24), twenty-one (21), and twenty (20) U.S. issuers, respectively.

47. EYHM was engaged to audit the financial statements of Client B for the fiscal year ended December 31, 2010. In the course of this engagement, EYHM performed audit work on behalf of Client B related to the fiscal year ended December 31, 2010. EYHM did not issue an audit report on Client B's financial statements for the fiscal year ended December 31, 2010.

48. In March 2011, the Division opened an investigation into Client B. The investigation related to, among other things, public allegations of potential accounting fraud and misleading disclosures by Client B, including overstated revenues, falsified assets and customer relationships, and failure to disclose certain related party transactions.

49. On April 26, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client B] for the fiscal year ending December 31, 2010" (the "Client B Request").

50. By letter dated May 25, 2012, EYHM, through its U.S. counsel, responded to the Client B Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

51. In June 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client B Request.

52. EYHM audited Client C's financial statements for the fiscal year ended September 30, 2010.

53. By September 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client C. The investigation stemmed from a short seller report regarding Client C, and from a letter that EYHM submitted to the Commission, pursuant to Section 10A of the Exchange Act, upon its resignation as Client C's auditor in September 2011. The two primary subjects of the investigation were possible accounting fraud related to asset valuation, and embezzlement by Client C's chairman.

54. On February 2, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client C] for the fiscal year ending September 30, 2010 and subsequent periods" (the "Client C Request").

55. By letter dated April 4, 2012, EYHM, through its U.S. counsel, responded to the Client C Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

56. In April 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client C Request.

57. On December 3, 2012, the Commission instituted these proceedings against EYHM under Rule 102(e) based on EYHM's conduct with respect to the Client B Request and the Client C Request. EYHM did not produce any documents responsive to either request to the Commission before the December 3, 2012 OIP.

58. In November 2013, EYHM audit workpapers and related documents concerning Client C were received by the Commission from the CSRC. In March 2014, EYHM audit workpapers and related documents concerning Client B were provided to the Commission by the CSRC.

4. Requests To KPMG Huazhen

59. On or around April 26, 2004, KPMG Huazhen[7] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The Board confirmed KPMG Huazhen's registration as a foreign public accounting firm in a letter dated July 13, 2004. KPMG Huazhen has remained registered with the Board since that time.

60. KPMG Huazhen knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

61. KPMG Huazhen knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. KPMG Huazhen described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

62. The Board's July 13, 2004 letter confirming KPMG Huazhen's registration stated that, although KPMG Huazhen had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of KPMG's registration . . . does not relieve KPMG of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by KPMG's associated persons. If KPMG prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to KPMG despite the absence of a consent."

63. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, KPMG Huazhen designated KPMG LLP ("KPMG US"), the United States member firm of KPMG International, as its agent for receiving service of document requests under Section 106. In so doing, KPMG Huazhen confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

64. KPMG Huazhen knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. KPMG Huazhen also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny KPMG Huazhen the privilege of appearing or practicing before the Commission to the extent KPMG Huazhen willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

65. In the PCAOB reporting years 2010, 2011, 2012, and 2013, KPMG Huazhen played a substantial role in the preparation or furnishing of audit reports filed with the SEC (as

[7] On August 14, 2012, KPMG Huazhen (Special General Partnership) filed with the Public Company Accounting Oversight Board a notification on Form 4 that KPMG Huazhen (Special General Partnership) had succeeded to the registration status of its predecessor, KPMG Huazhen.

defined by PCAOB Rule 1001(p)(ii))[8] for twenty-four (24), twenty-three (23), twenty-five (25), and twenty-one (21) U.S. issuers, respectively.

66. KPMG Huazhen was engaged as a component auditor for Client D for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client D related to the fiscal year ended December 31, 2010.

67. By April 2011, the Division opened an investigation into potential accounting fraud at Client D. The investigation concerned allegations made in two short seller reports issued in March 2011, which claimed that Client D's financial statements reported false cash balances, overstated revenues, and failed to disclose a material related party transaction.

68. On February 6, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client D] for the fiscal year ending December 31, 2010" (the "Client D Request").

69. KPMG Huazhen was engaged as a component auditor for Client E for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client E related to the fiscal year ended December 31, 2010, but did not complete the engagement.

70. By April 2011, Division staff opened an investigation into potential financial and accounting fraud at Client E. The investigation concerned issues raised in a Form 8-K that Client E filed in April 2011, which stated that Client E would be unable to file its Form 10-K on time because Client E's principal auditor had identified "unexplained issues regarding certain cash transactions and recorded sales."

71. On February 9, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client E] for the fiscal year ending December 31, 2010" (the "Client E Request").

72. KPMG Huazhen was engaged as a component auditor for Client F for the fiscal years ended December 31, 2008, and December 31, 2009. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit reports Client F filed with the Commission related to the fiscal years ended December 31, 2008 and 2009.

---

[8] PCAOB Rule 1001(p)(ii) defines "Play a Substantial Role in the Preparation or Furnishing of an Audit Report" to mean: "(1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer."

73. Before February 2012, Division staff opened an investigation involving potential financial and accounting fraud at Client F. The investigation related to issues raised in a pair of disclosures made by Client F in early 2011:

a. In March 2011, Client F disclosed that it was conducting an internal investigation into "potentially serious discrepancies" in its financial statements for the year ended December 31, 2010, and

b. In May 2011, Client F disclosed that its principal auditor had resigned after identifying what they considered "potentially serious discrepancies and/or unexplained issues relating to [Client F]'s financial records," in response to which Client F failed to take adequate remedial action.

74. On February 3, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit reports issued, audit work performed, or interim reviews conducted for [Client F] from January 1, 2008 to the present" (the "Client F Request").

75. By letter dated March 27, 2012, KPMG Huazhen, through its U.S. counsel, responded to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with any of the requested audit workpapers and related documents. KPMG Huazhen did not include any of the requested audit workpapers or related documents with its March 27 response.

76. In May 2012, the Division issued to KPMG Huazhen a Wells notice that the Division intended to recommend institution of proceedings against KPMG Huazhen because, in the Division's view, KPMG Huazhen had willfully refused to comply with the Client D Request, the Client E Request, and the Client F Request.

77. On December 3, 2012, the Commission instituted these proceedings against KPMG Huazhen under Rule 102(e) based on KPMG Huazhen's conduct with respect to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen did not produce audit workpapers or related documents responsive to any of the requests to the Commission before the December 3, 2012 OIP.

5. Requests To PwC Shanghai

78. On or around April 26, 2004, PwC Shanghai[9] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed PwC

[9] On July 8, 2013, PricewaterhouseCoopers Zhong Tian LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that PricewaterhouseCoopers Zhong Tian LLP had succeeded to the registration status of its predecessor, PricewaterhouseCoopers Zhong Tian CPAs Limited Company.

Shanghai's registration as a foreign public accounting firm in a letter dated July 13, 2004. PwC Shanghai has remained registered with the Board since that time.

79. PwC Shanghai knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

80. PwC Shanghai knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. PwC Shanghai described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

81. The Board's July 13, 2004 letter confirming PwC Shanghai's registration stated that, although PwC Shanghai had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Pricewaterhouse's registration . . . does not relieve Pricewaterhouse of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Pricewaterhouse's associated persons. If Pricewaterhouse prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Pricewaterhouse despite the absence of a consent."

82. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, PwC Shanghai designated PricewaterhouseCoopers LLP ("PwC US"), the United States member firm of PwCIL, as its agent for receiving service of document requests under Section 106. In so doing, PwC Shanghai confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

83. PwC Shanghai knew at all relevant times it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. PwC Shanghai also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny PwC Shanghai the privilege of appearing or practicing before the Commission to the extent PwC Shanghai willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

84. In the PCAOB reporting years 2010, 2011, 2012, and 2013, PwC Shanghai issued audit reports for seventeen (17), twenty-seven (27), thirty-one (31), and twenty-three (23) U.S. issuers, respectively.

85. PwC Shanghai was engaged to audit the financial statements of Client H for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client H related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client H.

86. By March 2011, the Division opened an investigation into potential accounting fraud at Client H. The investigation concerned public allegations of accounting fraud and market

manipulation at Client H. Certain internet reports alleged, among other things, that Client H overstated revenue and earnings by accounting for lease revenues upfront instead of recognizing this revenue over the duration of the leases, and that there were discrepancies between Client H's cash flow and reported net income.

87. On February 8, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client H] for the fiscal year ending December 31, 2010" (the "Client H Request").

88. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client H Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

89. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client H Request.

90. PwC Shanghai was engaged to audit the financial statements of Client I for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client I related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client I.

91. By March 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client I. The investigation focused on potential accounting irregularities, undisclosed related party transactions, misappropriation of corporate assets, and market manipulation.

92. On March 22, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work performed for [Client I] for the fiscal year ending December 31, 2010" (the "Client I Request").

93. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client I Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

94. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client I Request.

95. On December 3, 2012, the Commission instituted these proceedings against PwC Shanghai under Rule 102(e) based on PwC Shanghai's conduct with respect to the Client H Request and the Client I Request. PwC Shanghai did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

96. In November 2013, PwC Shanghai produced audit workpapers and related documents concerning Client I to the CSRC, in response to a request that PwC Shanghai had received from the CSRC. In March 2014, PwC Shanghai audit workpapers and related documents concerning Client I were provided by the CSRC to the SEC.

E. FACTS CONCERNING COMMISSION REQUESTS FOR ASSISTANCE UNDER INTERNATIONAL SHARING PROTOCOLS

97. Before the December 3, 2012 OIP, in connection with Division investigations, the SEC's Office of International Affairs sent a number of requests for assistance to the CSRC pursuant to the International Organization of Securities Commissions ("IOSCO") Multilateral Memorandum of Understanding ("MMOU"), seeking DTTC's audit workpapers and related documents concerning certain of the firm's clients. The SEC did not receive any of the requested documents before the December 3, 2012 OIP. Meanwhile, the SEC issued the nine requests under Section 106 of Sarbanes-Oxley to the Settling Respondents, as described above in Section III.D, among other Section 106 requests.

98. In July 2013, after the start of the hearing in this proceeding, the CSRC produced to the SEC a set of DTTC's audit workpapers concerning a firm client that is unrelated to Clients A through I listed above. The SEC had requested these workpapers from the CSRC before the December 3, 2012 OIP. The July 2013 production was the first time that the CSRC provided audit workpapers to the SEC under any international sharing protocols.[10]

99. After the July 2013 production, the SEC received productions from the CSRC for DTTC Clients A and G, in response to requests that the SEC had made under the IOSCO MMOU before the May 9, 2012 OIP. Also after the July 2013 production, the SEC sought and received productions from the CSRC for EYHM Clients B and C, and PwC Shanghai Client I, as described above in Section III.D. To date, the SEC has not sought the assistance of the CSRC in obtaining audit workpapers and related documents for KPMG Huazhen's Client D, Client E, and Client F, or for PwC Shanghai Client H.

[10] The audit workpapers produced by the CSRC in July 2013, concerning DTTC client Longtop Financial Technologies Limited ("Longtop"), were also the subject of a subpoena enforcement action brought by the SEC against DTTC in federal district court, *SEC v. DTTC*, 1:11mc00512-GK (D.D.C.). That action was dismissed without prejudice following supplemental productions of DTTC documents received by the SEC from the CSRC in January 2014. DTTC's non-production of the Longtop documents directly to the SEC is not the basis of any Division claim against DTTC in this proceeding.

F. VIOLATIONS

100. As noted, Rule 102(e)(1)(iii) of the Commission's Rules of Practice provides that "[t]he Commission may censure a person or deny, temporarily or permanently, the privilege of appearing or practicing before it in any way to any person who is found . . . [t]o have willfully violated . . . any provision of the Federal securities laws or the rules and regulations thereunder." 17 C.F.R. § 201.102(e)(1)(iii).[11] Rule 102(e) "provides the Commission with a means to ensure that the professionals on whom it relies 'perform their tasks diligently.'" *Marrie v. SEC*, 374 F.3d 1196, 1200 (D.C. Cir. 2004) (quoting *Touche Ross & Co. v. SEC*, 609 F.2d 570, 582 (2d Cir. 1979)). The rule "is directed at protecting the integrity of the Commission's own processes, as well as the confidence of the investing public in the integrity of the financial reporting process." *Marrie*, 374 F.3d at 1200.

101. Section 106(b) of Sarbanes-Oxley provides that a foreign public accounting firm that "performs audit work . . . shall . . . produce the audit work papers of the foreign public accounting firm and all other documents of the firm related to any such audit work . . . to the Commission . . . upon request of the Commission." 15 U.S.C. § 7216(b)(1). A foreign public accounting firm that willfully violates Section 106(b) is subject to sanction under Rule 102(e).[12]

102. Sarbanes-Oxley Section 106(e) identifies certain conduct that must be considered a violation under Section 106. Specifically, Section 106(e) states that "[a] willful refusal to comply, in whole or in part, with any request by the Commission . . . under this section, shall be deemed a violation of this Act." 15 U.S.C. § 7216(e). Thus, Rule 102(e)(1)(iii) and Section 106(e), considered together, provide that the Commission may censure, or deny, temporarily or permanently, the privilege of appearing or practicing before it in any way, a foreign public accounting firm that is found to have willfully refused to comply with a Commission request for documents covered by Section 106(b).[13]

103. During the relevant time period, each Settling Respondent was a foreign public accounting firm. In addition, the Commission properly served each Settling Respondent with at least two requests under Section 106(b) pertaining to clients or former clients as to which that Settling Respondent had "perform[ed] audit work." In response to these requests, the Settling

---

[11] Similarly, Section 4C of the Exchange Act provides, "The Commission may censure any person, or deny temporarily or permanently, to any person the privilege of appearing or practicing before the Commission in any way, if that person is found . . . to have willfully violated, or willfully aided and abetted the violation of, any provision of the securities laws or the rules and regulations issued thereunder." 15 U.S.C. § 78d-3(a)(3).

[12] Furthermore, under Section 3(b) of Sarbanes-Oxley, a violation of Section 106 is to be treated as a violation of the Exchange Act. *See* 15 U.S.C. § 7202(b)(1) ("A violation . . . of this Act . . . shall be treated for all purposes in the same manner as a violation of the Securities Exchange Act of 1934 . . . .").

[13] *See Gearhart & Otis, Inc. v. SEC*, 348 F.2d 798, 803 (D.C. Cir. 1965) (discussing meaning of "willfully" under Section 15(b) of the Exchange Act); *Wonsover v. SEC*, 205 F.3d 408, 414-415 (D.C. Cir. 2000).

Respondents informed the Division in writing that they could not, consistent with Chinese law, produce documents directly to the Division. The Division did not receive any of the requested audit workpapers or related documents before this Current Proceeding was instituted.

G. FINDINGS

104. Based on the foregoing and for the purposes of this Order, the Commission finds that each Settling Respondent willfully refused to comply with the requests that were issued to it under Section 106, and each Settling Respondent willfully violated Section 106 of the Sarbanes-Oxley Act.

H. UNDERTAKINGS TO MAKE PAYMENTS

105. Pursuant to the Offers, each Settling Respondent has undertaken to pay $500,000. The Settling Respondents will make their respective payments within thirty (30) days of the issuance of this Order. If timely payment is not made, additional interest shall accrue pursuant to 31 U.S.C. § 3717. Payment shall be made in one of the following ways:

(1) The Settling Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) The Settling Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http:/www.sec.gov/about/offices/ofm/htm; or

(3) The Settling Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying the Settling Respondent as a Respondent in this proceeding, and the file numbers of this proceeding; a copy of the cover letter and check or money order must be sent by overnight commercial mail service to David Mendel, Assistant Chief Litigation Counsel, Division of Enforcement, Securities and Exchange Commission, 100 F Street N.E., Mail Stop 5971, Washington, DC 20549-5971. The Commission shall remit the funds paid pursuant to this paragraph to the United States Treasury. In determining whether to accept the Offers, the Commission has considered this undertaking by Settling Respondents.

I. STAY OF THIS PROCEEDING

106. In light of the Procedures and Undertakings as to Future Requests, And Possible Additional Proceedings and Remedies set forth below in Section III.J of this Order, this proceeding (the "**Current Proceeding**") is stayed as follows:

a. The stay applies to the Settling Respondents' petition seeking review of the Initial Decision of the Administrative Law Judge, dated January 22, 2014 (the "Initial Decision"), and to the Division's petition for review of the Initial Decision's handling of remedies as to the Settling Respondents, and to any federal court appeal from the result of either such petition for review.

b. The stay is conditioned on the Current Proceeding not being restarted pursuant to paragraph 5 of Section III.J of this Order.

c. In the event the Current Proceeding is restarted, the Commission may resolve all issues as to liability and remedies raised by the OIPs in this proceeding, including all defenses previously raised by the Settling Respondents, consistent with the Commission's May 9, 2014 order granting the parties' petitions for review in the Current Proceeding. Under the Restart scenario, the Commission may resolve, among other issues, whether the OIP in the Current Proceeding was properly served on the Settling Respondents, whether the conduct of the Settling Respondents constitutes a willful violation of Section 106, and whether any or all of the Settling Respondents should be censured or denied the privilege of appearing and practicing before the Commission pursuant to Section 106 of Sarbanes-Oxley and Rule 102(e). Accordingly, in the event of a Restart, this Order and the findings herein shall be without prejudice to any claims, arguments, or defenses that a Settling Respondent or the Division may assert in connection with the petitions for review or in any other proceeding that does not arise under paragraph 3 or paragraph 4 of Section III.J of this Order, except that the facts set forth in Annex A (which are repeated in Section III, Sub-Sections B, C, and D of this Order) shall remain admitted by the Settling Respondents for all purposes. Upon the Division's filing of a notice that the Current Proceeding is restarted in accordance with paragraph 5 of Section III.J of this Order, the Current Proceeding will resume from its current status and the Commission will re-set a briefing schedule for consideration of the parties' respective petitions for review, as appropriate.

d. Nothing in this Order, the Offers, or the undertakings shall derogate from the Settling Respondents' rights to appeal any decision of the Commission in the Current Proceeding to the Federal Courts, and in any proceedings before the Commission or the Federal Courts to make all such arguments as are currently available to them. Except for the facts that the Settling Respondents expressly agree to and admit in Annex A, which are repeated in Section III, Sub-Sections B, C, and D of this Order, nothing in this Order or the discussions leading to it may be used as an admission in the Current Proceeding in the event it is restarted.

J. PROCEDURES AND UNDERTAKINGS AS TO FUTURE REQUESTS, AND POSSIBLE ADDITIONAL PROCEEDINGS AND REMEDIES

1. The Settling Respondents and the Division will abide by the procedures set forth in this Section III.J of this Order with respect to future requests for documents covered by Section 106(b) of Sarbanes-Oxley ("**Procedures**"), during the four-year period prescribed by paragraph III.J.7 of this Order. Nothing in the Procedures reflects a determination by the Division or Commission as to the scope of obligations of any foreign public accounting firm under Section 106 of Sarbanes-Oxley, or the steps the Division should or must take in connection with a foreign public accounting firm's satisfaction of its obligations under Section 106. Requests for documents under these Procedures are deemed "covered by Section 106(b) of Sarbanes-Oxley" without regard to whether the relevant Settling Respondent prepared, furnished, or issued any audit report concerning the client for which the documents are sought, and without prejudice to any arguments a Settling Respondent may have with respect to the application of Section 106 in a Restart of the Current Proceeding or any future proceeding based on Section 106 that does not arise under paragraph 3 or paragraph 4 of Section III.J of this Order. All references to "paragraphs" in Section III.J of this Order are references to the numbered paragraphs 1 through 8 that appear in Section III.J of this Order, unless expressly indicated otherwise.

2. The following Procedures will apply to future SEC requests for production of documents covered by Section 106(b) of Sarbanes-Oxley from the Settling Respondents:

   i. The Division agrees that, on its own or through other SEC staff (such as the SEC's Office of International Affairs), it will in the first instance issue a request for assistance to the CSRC in respect of such documents under international sharing mechanisms (including, to the extent available, the IOSCO MMOU). On or about the date on which such a request for assistance is sent, the SEC or the Division will do one or both of the following:

      A. Issue a new Section 106 request (mirroring the request made to the CSRC) to the relevant Settling Respondent through its designated U.S. agent. Unless the Division has already provided notice that it is terminating the stay pursuant to paragraph 5 below, the new Section 106 request shall expressly state that, pursuant to Section 106(f), the Division agrees to accept production of documents in accordance with these Procedures; and/or

      B. Provide the relevant Settling Respondent with notice of the request for assistance that was sent to the CSRC, specifying the documents sought by the Division.

References in Section III.J of this Order to the CSRC mean the CSRC and/or such other Chinese authority/ies as may be charged from time to time by the Chinese government with liaising with the SEC on matters of cross-border information-sharing and cooperation.

For the purpose of maximizing efficiency between the CSRC and the SEC in the handling of any request, to the extent practicable the Division will make reasonable efforts (1) to discuss the content of the request with outside counsel for the relevant Settling Respondent in the United States before the request is issued in connection with the Division's investigation; and (2) to consolidate follow-up inquiries with the CSRC in a minimal number of communications after the Division receives a production, and to set forth reasonable periods for responses to such inquiries. However, nothing in this sub-paragraph affects the Settling Respondents' undertakings under paragraph 2(ii) below, the potential remedies available in paragraphs 3 and 4 below, or the Division's ability to restart the Current Proceeding under paragraph 5 below.

ii. The Settling Respondents undertake as follows:

A. Within ninety (90) days of receipt of a request under paragraph 2(i)(A) or (B) above, or within forty-five (45) days from the date the relevant Settling Respondent receives the first corresponding request from the CSRC (**"corresponding request"**), whichever is later, the relevant Settling Respondent will provide the Division with an initial declaration (**"initial declaration"**) which states that the relevant Settling Respondent has produced all responsive documents to the CSRC for production to the SEC, subject to the following:

1. If the Settling Respondent has determined to withhold documents (or portions of documents) under a claim of U.S. privilege, the declaration must attest that the Settling Respondent has described all such information on a privilege log in accordance with U.S. custom and practice (**"privilege log"**);

2. If the Settling Respondent has determined (subject to the CSRC's review) that documents (or portions of documents) should be withheld under Chinese law governing state sensitive information or state secrets, or for any other reason under Chinese law, including applicable privilege(s) under Chinese law, the declaration must attest that the Settling Respondent has described all such information on a withholding log (**"withholding log"**). The withholding log must (to the extent permissible under Chinese law) include the date on which the document was created; the document's author(s); all recipients of the document; the document's general subject matter; the reason for proposing the withholding; a description sufficient to identify where the document is located (or would have been located) in the

production; and a unique identifying number (i.e., a bates number) for each page containing withheld information.

3. The Division, in its sole discretion, may authorize one or more extensions of the 90-day deadline (referenced in paragraph 2(ii)(A) above) if the relevant Settling Respondent, in writing, requests and demonstrates good cause for such an extension before the expiration of such deadline.

4. If the relevant Settling Respondent determines not to provide the initial declaration within the 90-day deadline because the Settling Respondent is allowed additional time by virtue of the date on which it receives the first corresponding request from the CSRC in accordance with paragraph 2(ii)(A) above, the Settling Respondent will notify the Division in writing of this determination before the 90-day deadline expires. In addition, upon such notification by the Settling Respondent, or within five days of the Settling Respondent's receipt of the first corresponding request from the CSRC, whichever is later, the Settling Respondent will inform the Division in writing of the date on which it received the first corresponding request.

B. The Settling Respondents will inform the CSRC in writing when they have completed preparation for production to the CSRC of all responsive documents, privilege logs and withholding logs in response to corresponding requests. The Settling Respondents will use all reasonable efforts to facilitate the SEC's receipt of all responsive documents, privilege logs, and withholding logs (finalized in accordance with the CSRC's directions) in as expeditious a manner as possible.

C. Within ten (10) days of the SEC notifying the relevant Settling Respondent that production from the CSRC to the SEC has occurred, the relevant Settling Respondent will provide the Division directly with a certification that it has provided to the CSRC all documents responsive to the CSRC's corresponding request except information set forth on a privilege log, and, where applicable, that it has proposed (subject to the CSRC's review) that documents (or portions of documents) set forth on the withholding log should be withheld under Chinese law governing state sensitive information or state secrets, or for any other reason under Chinese law (**"certification of completeness"**). The certification of completeness must append all corresponding requests received by the Settling Respondent from the CSRC, and certified English translations thereof, and describe the Settling Respondent's search for the documents, and (to the extent permissible under Chinese law) the process by which it was determined that information included on the withholding log, if any, should be withheld.

3. Remedy in the form of an Automatic Bar. If the relevant Settling Respondent does not provide the initial declaration as required by paragraph 2(ii)(A) above **or** if the relevant Settling Respondent does not provide the certification of completeness as required by paragraph 2(ii)(C) above, the Division shall notify the relevant Settling Respondent of the failure and give the Settling Respondent twenty (20) days to cure the failure. If, within twenty (20) days of the request for cure by the Division, the relevant Settling Respondent does not provide the initial declaration as required by paragraph 2(ii)(A) above **or** the relevant Settling Respondent does not provide the certification of completeness as required by paragraph 2(ii)(C) above, the Commission, in its sole discretion, and without regard to the procedures set forth in Rule 5(c) of SEC's Informal and Other Procedures, 17 C.F.R. § 202.5(c), may determine that the relevant Settling Respondent has not complied with its obligations under this Order and thereupon enter, without further notice, an order of the Commission pursuant to Rule 102(e) in an agreed-upon form (attached as Annex B to this Order), that partially denies the Settling Respondent the privilege of practicing or appearing before the Commission, for a period of six (6) months, according to the terms set forth below (collectively the "**Partial Bar**").[14]

i. A Partial Bar is defined as follows:

A. The Settling Respondent is prohibited from issuing an audit report, or otherwise serving as a principal auditor, for any issuer (as defined in Section 2(a)(7) of Sarbanes-Oxley); and

B. The Settling Respondent is prohibited from playing a 50% or greater role in the preparation or furnishing of an audit report for any issuer, meaning the Settling Respondent is prohibited from performing:

1. Audit work that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, where the engagement hours or fees for such services constitute 50% or more of the total engagement hours or fees, respectively, provided by the principal auditor in connection with the issuance of all or part of its audit report with respect to any issuer; and

2. The majority of audit work with respect to a subsidiary or component of any issuer, the assets or revenues of which constitute 50% or more of the consolidated assets or revenues of the issuer.

ii. If two or more orders imposing a Partial Bar are issued under this paragraph 3 for a particular Settling Respondent (where each such remedy arises from a separate

[14] If an order in the form of Annex B is entered under this paragraph 3 of Section III.J of this Order, the information contained in brackets ("[. . . .]") in Annex B will be replaced by the relevant Settling Respondent's name and the other pertinent details indicated within those brackets.

investigation), the Partial Bars shall be imposed so that each Partial Bar runs its full six-month course in a non-concurrent fashion.

iii. An Order imposing the remedy of a Partial Bar shall be final. There shall be no review by any federal court.

4. Remedy in the form of a Summary Proceeding. If the relevant Settling Respondent provides the initial declaration under paragraph 2(ii)(A) above **and/or** the certification of completeness under paragraph 2(ii)(C) above, but the Division believes that either or both of the documents so provided is inadequate or that the production which the Settling Respondent has made to the CSRC and in respect of which it has given a certificate of completeness is not materially complete (as defined below), the Division shall notify the relevant Settling Respondent of the inadequacy or material non-completeness which it asserts and give the Settling Respondent at least twenty (20) days to cure them or otherwise satisfy the Division. If after twenty (20) days the relevant Settling Respondent has not resolved the matter to the Division's satisfaction, the Commission, upon recommendation by the Division and without regard to the procedures set forth in Rule 5(c) of SEC's Informal and Other Procedures, 17 C.F.R. § 202.5(c), may issue an order instituting a summary administrative proceeding ("**Summary Proceeding**"). If the Commission decides to issue an OIP, a Summary Proceeding will commence as follows:

i. The purpose of the Summary Proceeding is to determine whether, in response to a request under the Procedures, the privilege log, withholding log, initial declaration, and/or certification of completeness is or are inadequate; whether U.S. privilege justifies the withholding of any responsive information; and whether the production to the CSRC is otherwise materially complete. These are the sole issues to be determined in a Summary Proceeding. A finding that is adverse to the Settling Respondent on one or more of these issues shall collectively constitute an "offense."

ii. The Summary Proceeding will be adjudicated by an assigned ALJ, who will issue a decision no later than either 180 days from the beginning of the proceeding or an extended date approved by the Commission. The relevant Settling Respondent will be afforded a reasonable opportunity to submit responses and briefs responding to any OIP instituting a Summary Proceeding in accordance with the SEC Rules of Practice. The Rules of Practice will govern the Summary Proceeding, except to the extent inconsistent with the terms of this Order.

iii. A Summary Proceeding may impose, for a first offense, a Partial Bar for a period of up to six (6) months. If, in the same Summary Proceeding or other Summary Proceedings, there is a finding of one or more additional offenses (each arising from a different investigation), the Summary Proceeding may impose a complete bar on appearing or practicing before the Commission for a period up to six (6) months per additional offense. Practice bars imposed for multiple offenses in a single Summary Proceeding may run consecutively. Additionally, whether or not a practice bar is imposed, the

Summary Proceeding may impose a censure on the relevant Settling Respondent and/or a monetary penalty up to U.S. $750,000 per offense.

iv. The Summary Proceeding decision shall be subject to Commission review in accordance with the SEC Rules of Practice. The Commission decision that resolves a petition for review of the ALJ's initial decision shall be final. There shall be no review by any federal court.

v. A "materially complete" production is one concerning which a reasonably diligent search has been conducted by the relevant Settling Respondent to identify responsive documents and where all of the documents identified in such search have been collected by the relevant Settling Respondent and provided to the CSRC, together with an index as required by the CSRC, in accordance with Chinese law protocols. A Summary Proceeding shall not be commenced to determine whether a production is deficient because of documents that are described on a Withholding Log and withheld under a claim that they contain state secrets or state sensitive information. However, neither the definition of "materially complete" nor any limitation on the subject matter of a Summary Proceeding, set forth herein, reflects a determination by the Division or the Commission of the Settling Respondent's full production obligation under Section 106 of Sarbanes-Oxley. Additionally, the Division expressly reserves its rights to restart the Current Proceeding under the circumstances described in paragraph 5 below, including, but not limited to, where the Division has concerns about the nature or scope of withholdings in response to a certain number of requests under the Procedures.

5. Restarting of the Current Proceeding. If any Settling Respondent does not comply with its undertaking to make the payment specified in Section III.H of this Order **or** if the Division in its sole discretion at any time decides that, with respect to two or more requests made collectively to the Settling Respondents under the Procedures, (i) in the Division's view, it has not received a materially complete production and/or an adequate privilege log, withholding log, initial declaration, and/or certification of completeness, as described in paragraph 2(ii) above, and the Division has not commenced a Summary Proceeding based on the request; (ii) in the Division's view a substantial number of documents (or portions of documents) have been withheld from the production in violation of, or without justification under, U.S. law, including, but not limited to, Section 106 of Sarbanes-Oxley; or (iii) in the Division's view its receipt of a production has been substantially delayed (or not received at all) under the Procedures, the Division may recommend to the Commission that the stay referred to in Section III.I of this Order be terminated, and, after receiving approval by the Commission of its recommendation, provide notice to all of the Settling Respondents that the stay has been terminated.

Before deciding that a request forms the basis (or part of the basis) for restarting the Current Proceeding, the Division (on its own or through other SEC staff) will notify the CSRC of the alleged inadequacy and/or make reasonable inquiry of the CSRC of the likely duration of any delay or non-production. A production will not be deemed "substantially delayed" within the meaning of paragraph 5(iii) above if the production is received by the SEC within 225 days of the date of the request made under paragraph 2(i) above (or within any period of time as specifically agreed between the SEC and the CSRC for a particular request) and, in the Division's view, the production is materially complete and accompanied by an adequate privilege log, withholding log, and certification of completeness as described in paragraph 2(ii) above. If a production is received by the Division more than 225 days after the date of the request under paragraph 2(i) above, the Division, in its sole discretion, will determine whether the production is "substantially delayed" within the meaning of paragraph 5(iii) above. In making this determination, the Division will not automatically conclude that a production is "substantially delayed" because it is received more than 225 days after the date of the request, but will consider the particular circumstances of the case, including the SEC staff's communications with the CSRC regarding the timing of production.

To the extent noncompliance with Section III.H of this Order or the matters under (i), (ii) and/or (iii) above in this paragraph 5 relate to fewer than all of the Settling Respondents, the Division, in its discretion, may request of the Settling Respondents that the stay be lifted only as to the relevant Settling Respondent(s) and, if all four of the Settling Respondents agree to lift the stay only as to the relevant Settling Respondent(s), the stay will be lifted only as to the relevant Settling Respondent(s). If not, the stay will be lifted as to all of the Settling Respondents. The Current Proceeding will then resume as to all or some of the Settling Respondents, and those parties' rights will be determined by the Commission or the Federal Courts (should the identified Settling Respondents appeal). The Division's "notice" under this agreement may be by any method reasonably calculated to provide such notice, including, but not limited to, by delivering (under any method set forth in Rule 150(c) of the SEC's Rules of Practice) a copy of such notice to the Settling Respondents' outside counsel in the United States **or** to the respective domestic registered public accounting firms or other United States agents that the Settling Respondents have designated for service under Section 106(d) of Sarbanes-Oxley, 15 U.S.C. § 7216(d). Except with respect to paragraph 5(i) above, the Division's prerogatives under this paragraph are entirely separate from any remedy it may seek under paragraph 4 above.

6. In the event the Commission approves the Division's recommendation to lift the stay in the Current Proceeding, the following terms will apply:

   i. The Division may serve new Section 106 requests on the Settling Respondents, via their designated agents, without reference to the Procedures as required under paragraph 2(i)(A) above. This means that the SEC may exercise its full statutory rights under Section 106.

   ii. With respect to requests under paragraph 2(i) above that predate the lifting of the stay and do not form the basis for restarting the Current Proceeding under paragraph 5(i) above, the Division may initiate or continue to prosecute a Summary Proceeding under paragraph 4 above.

   iii. The Division may not seek to sanction non-compliance by a Settling Respondent with any Section 106 request made after the lifting of the stay ("new Section 106 request"), including through an administrative proceeding under Rule 102(e) of the Commission's Rules of Practice, until there is a Final Commission Order in the Current Proceeding. A "Final Commission Order" means a final order issued by the Commission with respect to the pending petitions for review in the Current Proceeding, without regard to whether any Settling Respondent (or any other party or non-party) seeks federal court review of the order or a stay in connection with such review.

iv. The SEC or Division may not seek to enforce any Section 106 request against a Settling Respondent in federal district court under Section 106(b)(1)(B) of Sarbanes-Oxley until there is a Final Commission Order.

v. Nothing in paragraph 5 above or this paragraph 6 precludes the parties, in the Current Proceeding, in accordance with the Commission's Rules of Practice, from seeking leave to adduce additional evidence that relates to any request made by the Division under the Procedures or Section 106.

7. The provisions of paragraphs 2, 3, 4, 5, and 6 above will be in effect for four (4) years following the date of this Order. The day after this four-year period, these same provisions will expire, except that (i) any remedies ordered under these provisions shall run their full course; and (ii) any Summary Proceeding already instituted under paragraph 4 above and the Current Proceeding, if already restarted by the Division under paragraph 5 above, shall continue until final resolution. Upon expiration of the four-year period, unless the Division has restarted the Current Proceeding, all claims against any of the Settling Respondents in the Current Proceeding will be deemed to be dismissed, except such dismissal will not affect any admissions, findings, or remedies ordered in this Order, which are, and will be, deemed final upon the dismissal of the Current Proceeding.

8. For purposes of the Commission's consideration of any Division recommendation under paragraph 4 or 5 above, or in connection with a remedy or potential remedy under paragraph 3 above, each of the Settling Respondents waives: (i) such provisions of the Commission's Rules of Practice or other requirements of law as may be construed to prevent any member of the Commission's staff from participating in the preparation of, or advising the Commission as to, any order, opinion, finding of fact, or conclusion of law to be entered in connection with the Division's recommendation, any resulting Summary Proceeding, or the Current Proceeding; and (ii) any right to claim bias or prejudgment by the Commission, in any such order, opinion, finding of fact, or conclusion of law entered in connection with the Division's recommendation, in any Summary Proceeding, or in the Current Proceeding.

IV.

In view of the foregoing, the Commission deems it appropriate to impose the sanctions agreed to in the Settling Respondents' Offers.

Accordingly, pursuant to Rules 100(c)[15] and 102(e) of the Commission's Rules of Practice, it is hereby ORDERED that:

A. DTTC, EYHM, KPMG Huazhen, and PwC Shanghai each is censured for its willful violations of the securities laws.

B. The Current Proceeding is hereby stayed in accordance with Section III.I of this Order.

C. DTTC, EYHM, KPMG Huazhen, and PwC Shanghai each shall comply with the Procedures and Undertakings as to Future Requests, and Possible Additional Proceedings and Remedies, set forth above in Section III.J of this Order.

D. The Commission may institute additional proceedings and/or impose additional remedies, as appropriate, in accordance with Section III.J of this Order.

By the Commission.

ADMINISTRATIVE PROCEEDING
File Nos. 3-14872, 3-15116

In the Matter of **BDO China Dahua CPA Co., Ltd.;** **Deloitte Touche Tohmatsu Certified Public Accountants Ltd.;** **Ernst & Young Hua Ming LLP;** **KPMG Huazhen (Special General Partnership);** **PricewaterhouseCoopers Zhong Tian CPAs Limited** **Respondents.**	**ANNEX A TO ORDER ON THE BASIS OF OFFERS OF SETTLEMENT OF CERTAIN RESPONDENTS IMPLEMENTING SETTLEMENT**

ANNEX A

Respondents Deloitte Touche Tohmatsu Certified Public Accountants Ltd. ("DTTC"), Ernst & Young Hua Ming LLP ("EYHM"), KPMG Huazhen (Special General Partnership) ("KPMG Huazhen"), and PricewaterhouseCoopers Zhong Tian CPAs Limited Company ("PwC Shanghai") (collectively the "Settling Respondents") admit the facts set forth below (the "Admissions"):

RESPONDENTS

1. DTTC (or "Deloitte") is a special general partnership providing audit and professional services in the PRC. DTTC is located in Shanghai, China, and is a member firm of Deloitte Touche Tohmatsu Limited ("DTT Global"), a UK private company limited by guarantee. DTTC is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

2. EYHM (or "Ernst") is a special general partnership providing audit and professional services in the PRC. EYHM is headquartered in Beijing, China, and is a member firm of Ernst & Young Global Limited ("EY Global"), a UK private company limited by guarantee. EYHM is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

3. KPMG Huazhen (or "KPMG") is a special general partnership providing audit and professional services in the PRC. KPMG Huazhen is located in Beijing, China, and is a member firm of KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Huazhen is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

4. PwC Shanghai (or "Pricewaterhouse") is a special general partnership providing audit and professional services in the PRC. PwC Shanghai is headquartered in Shanghai, China, and is a member firm of PricewaterhouseCoopers International Limited ("PwCIL"), a UK private company limited by guarantee. PwC Shanghai is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

OTHER RELEVANT ENTITIES

5. DTTC Client A ("DTTC Client A") is a public company the securities of which are registered with the SEC under Section 12(b) of the Securities Exchange Act of 1934 ("Exchange Act") and listed on NASDAQ. DTTC Client A is incorporated in the Province of Ontario, Canada and has its principal operations and principal place of business in the PRC. DTTC Client A designs and manufactures solar products.

6. EYHM Client B ("Client B") is a Delaware corporation with its principal operations and principal place of business in the PRC. Client B's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client B purports to be a leading developer, manufacturer and distributor of organic compound fertilizers in China.

7. EYHM Client C ("Client C") is a Cayman Islands corporation with its primary operations in Beijing, PRC. Client C's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NASDAQ. Client C purports to provide enhanced recovery services for oil and gas exploration.

8. KPMG Huazhen Client D ("Client D") is a Delaware corporation with its primary operations in Xi'an, PRC. Client D's securities were previously registered with the SEC pursuant

to Section 12(g) of the Exchange Act and listed on NASDAQ. Client D purports to engage in the wholesale distribution of finished oil and heavy oil products, the production and sale of biodiesel, and the operation of retail gas stations.

9. KPMG Huazhen Client E ("Client E") is a Nevada corporation with its primary operations in Ningbo, PRC. Client E's securities are registered with the SEC pursuant to Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client E purports to manufacture and supply various petrochemical products in China.

10. KPMG Huazhen Client F ("Client F") is a Nevada corporation, with its primary operations in Shanghai, PRC. Client F's securities were previously registered with the SEC pursuant to Section 12(b) of the Exchange Act and listed on NASDAQ. Client F purports to manufacture chemical additives used in the production of consumer and industrial products.

11. DTTC Client G ("Client G") is a Wyoming corporation with its primary operations in Beijing, PRC. Client G's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NYSE. Client G purports to design, manufacture, and sell offset printing equipment.

12. PwC Shanghai Client H ("Client H") is a Cayman Islands corporation with its principal operations in the PRC. Client H's securities are registered with the SEC under Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client H purports to own and operate a commercial vehicle financing and service centers network.

13. PwC Shanghai Client I ("Client I") is a Nevada corporation with its primary operations in Beijing, PRC. Client I's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client I purports to manufacture automotive electrical parts in China.

FACTS CONCERNING COMMMISSION REQUESTS TO THE SETTLING RESPONDENTS UNDER SARBANES-OXLEY

1. Regulatory Background

14. Section 106 of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley" or the "Act"), before it was amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank") in 2010, stated, in relevant part, that "If a foreign public accounting firm issues an opinion or otherwise performs material services upon which a registered public accounting firm relies in issuing all or part of any audit report or any opinion contained in an audit report, that foreign public accounting firm shall be deemed to have consented . . . to produce its audit workpapers for the Board or the Commission in connection with any investigation by either body with respect to that audit report . . . ." Sarbanes-Oxley Act of 2002 (Public Company Accounting Reform and Investor Protection Act), Pub. L. No. 107-204 § 106(b).

15. In 2004, the Board posted Frequently Asked Questions to its website which stated, in part: "A registered firm's failure to cooperate with Board requests [for production of documents under Sarbanes-Oxley Section 106] may subject the firm to disciplinary sanctions, including substantial civil money penalties and revocation of the firm's registration. In the staff's view, if a firm fails to cooperate with the Board, the fact that the firm has not obtained a client consent that might be necessary (under non-U.S. law) to allow the firm to cooperate is not a defense to a disciplinary action for failure to cooperate."

16. Section 106(b)(1) of Sarbanes-Oxley, as amended by Dodd-Frank, states that: "[i]f a foreign public accounting firm performs material services upon which a registered public accounting firm relies in the conduct of an audit or interim review, issues an audit report, performs audit work, or conducts interim reviews, the foreign public accounting firm shall . . . produce the audit workpapers of the foreign public accounting firm and all other documents of the firm related to any such audit work or interim review to the Commission or the Board, upon request of the Commission or the Board . . . ."

2. <u>Requests To DTTC</u>

17. On or around April 16, 2004, DTTC[1] applied for registration with the Public Company Accounting Oversight Board (the "PCAOB" or "Board") as required by the Sarbanes-Oxley Act ("Sarbanes-Oxley"), 15 U.S.C. § 7212. The Board confirmed DTTC's registration as a foreign public accounting firm in a letter dated June 4, 2004. DTTC has remained registered with the Board since that time.

18. DTTC knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

19. DTTC knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. DTTC described possible conflicts of law in its April 16, 2004 PCAOB registration filing that included a legal opinion.

20. The Board's June 4, 2004 letter confirming DTTC's registration stated that, although DTTC had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Deloitte's registration . . . does not relieve Deloitte of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Deloitte associated persons. If Deloitte prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Deloitte despite the absence of a consent."

---

[1] On January 1, 2013, Deloitte Touche Tohmatsu Certified Public Accountants LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that Deloitte Touche Tohmatsu Certified Public Accountants LLP had succeeded to the registration status of its predecessor, Deloitte Touche Tohmatsu CPA Ltd.

21. In June 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, DTTC designated Deloitte & Touche LLP ("DTT US"), the United States member firm of DTT Global, as its agent for receiving service of document requests under Section 106. In so doing, DTTC confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

22. DTTC knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. DTTC also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained power to deny DTTC the privilege of appearing or practicing before the Commission to the extent DTTC willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

23. In the PCAOB reporting years 2010, 2011, 2012, and 2013, DTTC issued audit reports for thirty-two (32), forty-five (45), forty-five (45), and thirty-nine (39) U.S. issuers, respectively.

24. DTTC audited DTTC Client A's financial statements for the fiscal years ended December 31, 2008, 2009, and 2010. DTTC Client A remained DTTC's client as of April 2013.

25. Before April 9, 2010, the Division commenced an investigation into potential accounting fraud involving DTTC Client A, which Client A disclosed in a Form 6-K and accompanying press release filed with the Commission on June 1, 2010. In the press release, DTTC Client A announced that it was postponing the release of its full financial results for the quarter ended March 31, 2010 and its quarterly conference call, scheduled for June 2, as a result of the commencement of an investigation by the Audit Committee of DTTC Client A's Board of Directors. DTTC Client A disclosed that "the investigation was launched after the Company received a subpoena from the [Commission] requesting documents from [DTTC Client A] relating to, among other things, certain sales transactions in 2009."

26. On March 11, 2011, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [DTTC Client A] for the fiscal year ending December 31, 2009" (the "Client A Request").

27. By letter dated April 29, 2011, DTTC, through its U.S. counsel, responded to the Client A Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

28. In July 2011, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client A Request.

29. DTTC was engaged to audit the financial statements of Client G for the fiscal year ended June 30, 2010. In the course of this engagement, DTTC performed audit work on behalf of Client G related to the fiscal year ended June 30, 2010. DTTC did not issue any audit report with respect to Client G.

30. In 2010, Division staff opened an investigation involving Client G, which related to matters reported in a Form 8-K filed by Client G on September 13, 2010. Specifically, Client G reported that:

a. Client G had terminated DTTC's engagement as independent auditor effective September 6, 2010;

b. During the course of DTTC's audit of Client G for the fiscal year ended June 30, 2010, Client G had denied DTTC's request for permission to access original bank statements to verify the identity of certain individuals and entities;

c. Several "reportable events," as defined in Item 304(a)(1)(v) of Regulation S-K, occurred during DTTC's audit of Client G; and

d. Between September 6 and September 8, 2010, Client G's CEO, CFO, and several directors, including the Chair of its Audit Committee, all resigned their positions.

31. On February 14, 2012, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client G] for the fiscal year ended June 30, 2010" (the "Client G Request").

32. By letter dated April 17, 2012, DTTC, through its U.S. counsel, responded to the Client G Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

33. In April 2012, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client G Request.

34. On May 9, 2012 and December 3, 2012, the Commission instituted these proceedings against DTTC under Rule 102(e) based on DTTC's conduct with respect to the Client A Request and the Client G Request, respectively. DTTC did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

35. In 2013, DTTC provided documents related to DTTC Client A to the China Securities Regulatory Commission ("CSRC"), in response to a request that DTTC had received from the CSRC. In November 2013, DTTC audit workpapers concerning DTTC Client A were provided by the CSRC to the SEC.

36. In 2013, DTTC provided documents related to Client G to the CSRC, in response to a request that DTTC had received from the CSRC. In October 2013, DTTC audit workpapers and related documents concerning Client G were provided by the CSRC to the SEC.

3. **Requests To EYHM**

37. On or around May 25, 2004, EYHM[2] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed EYHM's registration as a foreign public accounting firm in a letter dated July 8, 2004. EYHM has remained registered with the PCAOB since that time.

38. EYHM knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

39. EYHM knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. EYHM described possible conflicts of law in its May 25, 2004 PCAOB registration filing that included a legal opinion.

40. The Board's July 8, 2004 letter confirming EYHM's registration stated that, although EYHM had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Ernst's registration . . . does not relieve Ernst of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Ernst's associated persons. If Ernst prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Ernst despite the absence of a consent."

41. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, EYHM designated Ernst & Young LLP ("EY US"), the United States member firm of EY Global, as its agent for receiving service of document requests under Section 106. In so doing, EYHM confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

42. EYHM knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. EYHM also knew, no later than upon the enactment of Dodd-

[2] On September 3, 2012, Ernst & Young Hua Ming LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that Ernst & Young Hua Ming LLP had succeeded to the registration status of its predecessor, Ernst & Young Hua Ming Certified Public Accountants.

Frank, in 2010, and at all times subsequent, that that the Commission retained the power to deny EYHM the privilege of appearing or practicing before the Commission to the extent EYHM willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

43. In the PCAOB reporting years 2010, 2011, 2012, and 2013, EYHM issued audit reports for eleven (11), twenty-four (24), twenty-one (21), and twenty (20) U.S. issuers, respectively.

44. EYHM was engaged to audit the financial statements of Client B for the fiscal year ended December 31, 2010. In the course of this engagement, EYHM performed audit work on behalf of Client B related to the fiscal year ended December 31, 2010. EYHM did not issue an audit report on Client B's financial statements for the fiscal year ended December 31, 2010.

45. In March 2011, the Division opened an investigation into Client B. The investigation related to, among other things, public allegations of potential accounting fraud and misleading disclosures by Client B, including overstated revenues, falsified assets and customer relationships, and failure to disclose certain related party transactions.

46. On April 26, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client B] for the fiscal year ending December 31, 2010" (the "Client B Request").

47. By letter dated May 25, 2012, EYHM, through its U.S. counsel, responded to the Client B Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

48. In June 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client B Request.

49. EYHM audited Client C's financial statements for the fiscal year ended September 30, 2010.

50. By September 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client C. The investigation stemmed from a short seller report regarding Client C, and from a letter that EYHM submitted to the Commission, pursuant to Section 10A of the Exchange Act, upon its resignation as Client C's auditor in September 2011. The two primary subjects of the investigation were possible accounting fraud related to asset valuation, and embezzlement by Client C's chairman.

51. On February 2, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents

related to any audit work or interim reviews performed for [Client C] for the fiscal year ending September 30 , 2010 and subsequent periods" (the "Client C Request").

52. By letter dated April 4, 2012, EYHM, through its U.S. counsel, responded to the Client C Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

53. In April 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client C Request.

54. On December 3, 2012, the Commission instituted these proceedings against EYHM under Rule 102(e) based on EYHM's conduct with respect to the Client B Request and the Client C Request. EYHM did not produce any documents responsive to either request to the Commission before the December 3, 2012 OIP.

55. In November 2013, EYHM audit workpapers and related documents concerning Client C were received by the Commission from the CSRC. In March 2014, EYHM audit workpapers and related documents concerning Client B were provided to the Commission by the CSRC.

4. Requests To KPMG Huazhen

56. On or around April 26, 2004, KPMG Huazhen[3] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The Board confirmed KPMG Huazhen's registration as a foreign public accounting firm in a letter dated July 13, 2004. KPMG Huazhen has remained registered with the Board since that time.

57. KPMG Huazhen knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

58. KPMG Huazhen knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. KPMG Huazhen described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

59. The Board's July 13, 2004 letter confirming KPMG Huazhen's registration stated that, although KPMG Huazhen had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of KPMG's registration . . . does not relieve KPMG of the obligation to cooperate in and comply with Board demands

[3] On August 14, 2012, KPMG Huazhen (Special General Partnership) filed with the Public Company Accounting Oversight Board a notification on Form 4 that KPMG Huazhen (Special General Partnership) had succeeded to the registration status of its predecessor, KPMG Huazhen.

(including for documents or testimony) and to enforce such cooperation and compliance by KPMG's associated persons. If KPMG prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to KPMG despite the absence of a consent."

60. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, KPMG Huazhen designated KPMG LLP ("KPMG US"), the United States member firm of KPMG International, as its agent for receiving service of document requests under Section 106. In so doing, KPMG Huazhen confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

61. KPMG Huazhen knew at all relevant times it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. KPMG Huazhen also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny KPMG Huazhen the privilege of appearing or practicing before the Commission to the extent KPMG Huazhen willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

62. In the PCAOB reporting years 2010, 2011, 2012, and 2013, KPMG Huazhen played a substantial role in the preparation or furnishing of audit reports filed with the SEC (as defined by PCAOB Rule 1001(p)(ii))[4] for twenty-four (24), twenty-three (23), twenty-five (25), and twenty-one (21) U.S. issuers, respectively.

63. KPMG Huazhen was engaged as a component auditor for Client D for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client D related to the fiscal year ended December 31, 2010.

64. By April 2011, the Division opened an investigation into potential accounting fraud at Client D. The investigation concerned allegations made in two short seller reports issued in March 2011, which claimed that Client D's financial statements reported false cash balances, overstated revenues, and failed to disclose a material related party transaction.

65. On February 6, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client D] for the fiscal year ending December 31, 2010" (the "Client D Request").

---

[4] PCAOB Rule 1001(p)(ii) defines "Play a Substantial Role in the Preparation or Furnishing of an Audit Report" to mean: "(1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer."

66. KPMG Huazhen was engaged as a component auditor for Client E for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client E related to the fiscal year ended December 31, 2010, but did not complete the engagement.

67. By April 2011, Division staff opened an investigation into potential financial and accounting fraud at Client E. The investigation concerned issues raised in a Form 8-K that Client E filed in April 2011, which stated that Client E would be unable to file its Form 10-K on time because Client E's principal auditor had identified "unexplained issues regarding certain cash transactions and recorded sales."

68. On February 9, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client E] for the fiscal year ending December 31, 2010" (the "Client E Request").

69. KPMG Huazhen was engaged as a component auditor for Client F for the fiscal years ended December 31, 2008, and December 31, 2009. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit reports Client F filed with the Commission related to the fiscal years ended December 31, 2008 and 2009.

70. Before February 2012, Division staff opened an investigation involving potential financial and accounting fraud at Client F. The investigation related to issues raised in a pair of disclosures made by Client F in early 2011:

a. In March 2011, Client F disclosed that it was conducting an internal investigation into "potentially serious discrepancies" in its financial statements for the year ended December 31, 2010, and

b. In May 2011, Client F disclosed that its principal auditor had resigned after identifying what they considered "potentially serious discrepancies and/or unexplained issues relating to [Client F]'s financial records," in response to which Client F failed to take adequate remedial action.

71. On February 3, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit reports issued, audit work performed, or interim reviews conducted for [Client F] from January 1, 2008 to the present" (the "Client F Request").

72. By letter dated March 27, 2012, KPMG Huazhen, through its U.S. counsel, responded to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with any of the requested audit workpapers and related documents. KPMG Huazhen did not include any of the requested audit workpapers or related documents with its March 27 response.

73. In May 2012, the Division issued to KPMG Huazhen a Wells notice that the Division intended to recommend institution of proceedings against KPMG Huazhen because, in the Division's view, KPMG Huazhen had willfully refused to comply with the Client D Request, the Client E Request, and the Client F Request.

74. On December 3, 2012, the Commission instituted these proceedings against KPMG Huazhen under Rule 102(e) based on KPMG Huazhen's conduct with respect to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen did not produce audit workpapers or related documents responsive to any of the requests to the Commission before the December 3, 2012 OIP.

5. Requests To PwC Shanghai

75. On or around April 26, 2004, PwC Shanghai[5] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed PwC Shanghai's registration as a foreign public accounting firm in a letter dated July 13, 2004. PwC Shanghai has remained registered with the Board since that time.

76. PwC Shanghai knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

77. PwC Shanghai knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. PwC Shanghai described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

78. The Board's July 13, 2004 letter confirming PwC Shanghai's registration stated that, although PwC Shanghai had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Pricewaterhouse's registration . . . does not relieve Pricewaterhouse of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Pricewaterhouse's associated persons. If Pricewaterhouse prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Pricewaterhouse despite the absence of a consent."

79. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, PwC Shanghai designated PricewaterhouseCoopers LLP ("PwC US"), the United States member firm of PwCIL, as its agent for receiving service of document requests under Section 106. In so doing, PwC Shanghai confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

---

[5] On July 8, 2013, PricewaterhouseCoopers Zhong Tian LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that PricewaterhouseCoopers Zhong Tian LLP had succeeded to the registration status of its predecessor, PricewaterhouseCoopers Zhong Tian CPAs Limited Company.

80. PwC Shanghai knew at all relevant times it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. PwC Shanghai also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny PwC Shanghai the privilege of appearing or practicing before the Commission to the extent PwC Shanghai willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

81. In the PCAOB reporting years 2010, 2011, 2012, and 2013, PwC Shanghai issued audit reports for seventeen (17), twenty-seven (27), thirty-one (31), and twenty-three (23) U.S. issuers, respectively.

82. PwC Shanghai was engaged to audit the financial statements of Client H for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client H related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client H.

83. By March 2011, the Division opened an investigation into potential accounting fraud at Client H. The investigation concerned public allegations of accounting fraud and market manipulation at Client H. Certain internet reports alleged, among other things, that Client H overstated revenue and earnings by accounting for lease revenues upfront instead of recognizing this revenue over the duration of the leases, and that there were discrepancies between Client H's cash flow and reported net income.

84. On February 8, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client H] for the fiscal year ending December 31, 2010" (the "Client H Request").

85. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client H Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

86. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client H Request.

87. PwC Shanghai was engaged to audit the financial statements of Client I for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client I related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client I.

88. By March 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client I. The investigation focused on potential accounting irregularities, undisclosed related party transactions, misappropriation of corporate assets, and market manipulation.

89. On March 22, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work performed for [Client I] for the fiscal year ending December 31, 2010" (the "Client I Request").

90. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client I Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

91. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client I Request.

92. On December 3, 2012, the Commission instituted these proceedings against PwC Shanghai under Rule 102(e) based on PwC Shanghai's conduct with respect to the Client H Request and the Client I Request. PwC Shanghai did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

93. In November 2013, PwC Shanghai produced audit workpapers and related documents concerning Client I to the CSRC, in response to a request that PwC Shanghai had received from the CSRC. In March 2014, PwC Shanghai audit workpapers and related documents concerning Client I were provided by the CSRC to the SEC.

ORDER MAKING FINDINGS AND PARTIALLY DENYING [NAME OF SETTLING RESPONDENT] THE PRIVILEGE OF PRACTICING OR APPEARING BEFORE THE SECURITIES AND EXCHANGE COMMISSION

I.

The Securities and Exchange Commission ("Commission") issues this Order Making Findings And Partially Denying [Name of Settling Respondent] The Privilege of Practicing Or Appearing Before The Securities and Exchange Commission ("Partial Bar Order") pursuant to the Offer of Settlement submitted by [Name of Settling Respondent], which was accepted by the Commission in its Order on the Basis of Offers of Settlement of Certain Respondents Implementing Settlement on [MONTH, DAY], 2015 (the "Settlement Order").

II.

Respondent [Name of Settling Respondent ("[Short Form of Settling Respondent's Name – DTTC, EYHM, KPMG Huazhen, or PwC Shanghai]" or "Respondent")] admits the Commission's jurisdiction over it in, and over the subject matter of, this proceeding and any proceeding to enforce or that seeks to challenge this Partial Bar Order or the Settlement Order. In addition, Respondent [Short Form of Settling Respondent's Name] consents to the entry of this Partial Bar Order, as set forth below.

III.

On the basis of this Partial Bar Order, Respondent [Short Form of Settling Respondent's Name]'s Offer of Settlement, the Settlement Order, and Rule 102(e) of the Commission's Rules of Practice, the Commission finds that:

1. [Insert one of the following paragraphs as appropriate:

> As of the date of the Settlement Order, DTTC was a special general partnership providing audit and professional services in the People's Republic of China ("China"). DTTC was located in Shanghai, China, and was a member firm of Deloitte Touche Tohmatsu Limited ("DTT Global"), a UK private company limited by guarantee. DTTC was a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.
>
> As of the date of the Settlement Order, KPMG Huazhen was a special general partnership providing audit and professional services in the People's Republic of China ("China"). KPMG Huazhen was located in Beijing, China, and was a member firm of KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Huazhen was a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.
>
> As of the date of the Settlement Order, EYHM was a special general partnership providing audit and professional services in the People's Republic of China ("China"). EYHM was headquartered in Beijing, China, and was a member firm of Ernst & Young Global Limited ("EY Global"), a UK private company limited by guarantee. EYHM was a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.
>
> As of the date of the Settlement Order, PwC Shanghai was a special general partnership providing audit and professional services in the People's Republic of China ("China"). PwC Shanghai was headquartered in Shanghai, China, and was a member firm of PricewaterhouseCoopers International Limited ("PwCIL"), a UK private company limited by guarantee. PwC Shanghai was

a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.]

2. The Settlement Order provides, *inter alia*, that the Commission's Division of Enforcement ("Division"), for a period of four years from the date of the Settlement Order, may issue requests for assistance to the China Securities Regulatory Commission ("CSRC")[1] under international sharing mechanisms with respect to Respondent's audit workpapers and related documents. The Settlement Order also provides that, on or about the date on which such a request for assistance is sent, the SEC or the Division will do one or both of the following: (A) issue a new request under Section 106 of Sarbanes-Oxley, as amended by Section 929J of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank") ("Section 106"), to Respondent through its designated U.S. agent, subject to certain conditions set forth in the Settlement Order; and/or (B) provide Respondent with notice of the request for assistance that was sent to the CSRC, specifying the documents sought by the Division. *See* Settlement Order, Section III.J, Paragraph 2(i).

3. The Settlement Order further provides, *inter alia*, that:

    i. Within ninety (90) days of receipt of such a request or within forty-five (45) days from the date Respondent receives the first corresponding request from the CSRC, whichever is later, Respondent will provide the Division with an initial declaration ("initial declaration") which states that Respondent has produced all responsive documents, accompanied by an index describing such documents, to the CSRC for production to the SEC, subject to specific exceptions and conditions as set forth in the Settlement Order. *See* Settlement Order, Section III.J, Paragraphs 2(ii)(A)-(B).

    ii. Within ten (10) days of the SEC notifying Respondent that production from the CSRC to the SEC has occurred, Respondent will provide the Division directly with a certification that it has provided to the CSRC all documents responsive to the CSRC's corresponding request except information set forth on a privilege log, and, where applicable, that it has proposed (subject to the CSRC's review) that documents (or portions of documents) set forth on the withholding log should be withheld under Chinese law governing state sensitive information or state secrets, or for any other reason under Chinese law ("certification of completeness"). *See* Settlement Order, Section III.J, Paragraph 2(ii)(C).

[1] References to the CSRC in the Settlement Order mean the CSRC and/or such other Chinese authority/ies as may be charged from time to time by the Chinese government with liaising with the SEC on matters of cross-border information-sharing and cooperation.

iii. If Respondent does not provide the initial declaration as required by the Settlement Order, or if Respondent does not provide the certification of completeness as required by the Settlement Order, the Division shall notify Respondent of the failure and give Respondent twenty (20) days to cure the failure. If, within twenty (20) days of the request for cure by the Division, the Respondent does not provide the initial declaration or the certification of completeness as required by the Settlement Order, the Commission, in its sole discretion, and without regard to the procedures set forth in Rule 5(c) of SEC's Informal and Other Procedures, 17 C.F.R. § 202.5(c), may determine that the relevant Settling Respondent has not complied with its obligations under the Settlement Order and thereupon enter, without further notice, this Partial Bar Order. *See* Settlement Order, Section III.J, Paragraph 3.

4. On [date of request], the SEC or the Division issued a Section 106 request and/or notice of a request for assistance to the CSRC for audit workpapers and related documents of Respondent [Short Form of Settling Respondent's Name], in connection with a Division investigation, [investigation matter number].

5. The Commission, in its sole discretion, has determined that Respondent failed to provide an initial declaration required by the Settlement Order, or that Respondent failed to provide a certification of completeness as required by the Settlement Order, and did not cure such failure within twenty (20) days of a request for cure by the Division. Thus, in accordance with Paragraph 3 of Section III.J of the Settlement Order, the Commission, in its sole discretion, has determined that Respondent has not complied with its obligations under the Settlement Order.

FINDINGS

6. Based on the foregoing, the Commission finds that Respondent has violated its obligations under Paragraphs 2 and 3 of Paragraph III.J of the Settlement Order.

IV.

In view of the foregoing, the Commission deems it appropriate to impose on Respondent [Short Form of Settling Respondent's Name] the remedy agreed to in [Short Form of Settling Respondent's Name] Offer of Settlement, and required by the Settlement Order.

Accordingly, pursuant to Rule 102(e) of the Commission's Rules of Practice, Respondent [Short Form of Settling Respondent's Name]'s Offer of Settlement, and the Settlement Order, it is hereby ORDERED that Respondent [Short Form of Settling Respondent's Name] is partially denied the privilege of practicing or appearing before the Commission for a period of 180 days commencing on [the date of this Partial Bar Order *OR* the day immediately following expiration of the last Partial Bar Order imposed on Settling Respondent under the Settlement Order, if any], as follows:

A. Respondent is prohibited from issuing an audit report, or otherwise serving as a principal auditor, for any issuer (as defined in Section 2(a)(7) of Sarbanes-Oxley); and

B. Respondent is prohibited from playing a 50% or greater role in the preparation or furnishing of an audit report for any issuer, meaning the respondent is prohibited from performing:

1. Audit work that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, where the engagement hours or fees for such services constitute 50% or more of the total engagement hours or fees, respectively, provided by the principal auditor in connection with the issuance of all or part of its audit report with respect to any issuer; and

2. The majority of audit work with respect to a subsidiary or component of any issuer, the assets or revenues of which constitute 50% or more of the consolidated assets or revenues of the issuer.

By the Commission.

Ernst & Young Hua Ming LLP;
KPMG Huazhen (Special General Partnership);
PricewaterhouseCoopers Zhong Tian CPAs Limited

Respondents.

CORRECTED ORDER ON THE BASIS OF OFFERS OF SETTLEMENT OF CERTAIN RESPONDENTS IMPLEMENTING SETTLEMENT

I.

The Securities and Exchange Commission ("SEC" or "Commission") instituted public administrative proceedings pursuant to Rule 102(e)(1)(iii) of the Commission's Rules of Practice against Deloitte Touche Tohmatsu Certified Public Accountants Ltd. ("DTTC") on May 9, 2012.[1]

[1] Rule 102(e)(1)(iii) provides, in pertinent part, that: "The Commission may censure a person or deny, temporarily or permanently, the privilege of appearing or practicing before it in any way to any person

13a of 71

The Commission also instituted public administrative proceedings pursuant to Rule 102(e)(1)(iii) against BDO China Dahua CPA Co., Ltd. ("Dahua"); DTTC; Ernst & Young Hua Ming LLP ("EYHM"); KPMG Huazhen (Special General Partnership) ("KPMG Huazhen"); and PricewaterhouseCoopers Zhong Tian CPAs Limited Company ("PwC Shanghai") on December 3, 2012. The two proceedings were consolidated on December 20, 2012, pursuant to Commission Rule 201(a), and constitute the current proceeding ("Current Proceeding"). On May 9, 2014, we granted the respective petitions for review of four of the five respondents, DTTC, EYHM, KPMG Huazhen, and PwC Shanghai (collectively the "Settling Respondents"), and the Division of Enforcement ("Division") of the initial decision of the Administrative Law Judge ("ALJ") issued on January 22, 2014 ("Initial Decision").[2]

II.

The Settling Respondents have submitted Offers of Settlement (the "Offers"), which the Commission has determined to accept. The Settling Respondents admit only the facts set forth in Annex A attached hereto; and admit the Commission's jurisdiction over them in, and over the subject matter of, the Current Proceeding, any proceeding to enforce or that seeks to challenge this Order, and any proceeding contemplated by Section III.J.3 or III.J.4 of this Order. In addition, without admitting or denying the findings herein the Settling Respondents consent to the entry of this Order on the Basis of Offers of Settlement of Certain Respondents Implementing Settlement ("Order") containing the following findings, undertakings to make payments as part of the Offers, procedures and undertakings as to future requests and possible additional proceedings and remedies, as set forth below, and a stay of the Current Proceeding as to the Settling Respondents (defined herein).

III.

On the basis of this Order and the Settling Respondents' Offers, and the facts contained in Annex A, the Commission finds[3] that:

A. SUMMARY

1. The Settling Respondents are foreign public accounting firms, as defined by Section 106 of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley" or "the Act"), 15 U.S.C. § 7216(b), all based in the People's Republic of China ("China" or "PRC"). They registered with the Public Company Accounting Oversight Board ("PCAOB" or "Board") in 2004. Each Settling Respondent performed audit work for one or more clients identified in these proceedings with the

---

who is found . . . [t]o have willfully violated . . . any provision of the Federal securities laws or the rules and regulations thereunder." 17 C.F.R. § 201.102(e)(1)(iii).

[2] The remaining respondent, Dahua, did not file a petition for review.

[3] The findings herein are made pursuant to the Settling Respondents' Offers and are not binding on any other person or entity in this or any other proceeding.

letter designations DTTC Client A and Client B through I. The Division opened accounting fraud investigations related to each of these nine clients.

2. Pursuant to Section 106 of Sarbanes-Oxley, as amended by Section 929J of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank") ("Section 106"), the Division served requests for audit workpapers and related documents pertaining to the nine clients on the Settling Respondents, through their designated agents, at various times between March 11, 2011, and April 26, 2012. The Settling Respondents responded to these requests, stating that PRC laws prevented them from producing responsive documents directly to the Division. The Settling Respondents have not produced any responsive audit workpapers and related documents directly to the Division, nor did the Division receive any of the requested workpapers and related documents through any other channel before commencement of the Current Proceeding. Because of the lack of direct production, the Commission issued the above-referenced orders instituting proceedings under Commission Rule of Practice 102(e) against the Settling Respondents based on willful violations of Section 106 (the "OIPs"). The Administrative Law Judge issued the Initial Decision in the Current Proceeding finding that DTTC, EYHM, KPMG Huazhen, and PwC Shanghai each willfully violated Sarbanes-Oxley Section 106 by willfully refusing to comply with at least one SEC request under that provision.

3. As set forth below, this Order (i) finds, for purposes of this Order, that the Settling Respondents willfully violated Section 106, (ii) censures the Settling Respondents, and (iii) memorializes certain undertakings by them, including a payment by each of them in the amount of $500,000 to the United States Treasury. This Order also stays the Current Proceeding as to the Settling Respondents for a period of four years. During this time, the Settling Respondents will perform specified undertakings in response to any future requests for documents covered by Section 106 of Sarbanes-Oxley. Moreover, this Order provides at least three additional forms of relief in the event the Division is unsatisfied by the productions of documents that it receives in response to future requests.

- First, if a Settling Respondent fails to attest that it has produced documents as required by the undertakings, that Settling Respondent is subject to automatic issuance of a Commission order that partially denies that Settling Respondent the privilege of appearing or practicing before it for a period of six months (an "Automatic Bar").

- Second, if the Division believes that a production from a Settling Respondent is deficient in certain ways as set forth in the undertakings, the Commission, on the basis of the Division's allegations, may institute a separate, expedited administrative proceeding against that Settling Respondent (a "Summary Proceeding").

- Third, if two or more productions from the Settling Respondents are substantially delayed, are deficient in certain ways, or lack substantial volumes of requested documents (or portions of documents) in violation of, or without justification under, U.S. law, including, but not limited to, Section 106 of Sarbanes-Oxley, the Division may request that the Commission terminate the stay and resume the Current Proceeding ("Restart").

Under the Restart scenario, the Commission may resolve all issues as to liability and remedies raised by the OIPs, including all defenses previously raised by the Settling Respondents, consistent with the Commission's May 9, 2014 order granting the parties' petitions for review in the Current Proceeding.[4] Absent a Restart within the four-year undertaking period, this Current Proceeding will be deemed dismissed. However, such dismissal will not affect any admissions, findings, or remedies ordered in this Order, which are, and will be, deemed final upon the dismissal of the Current Proceeding.

B. SETTLING RESPONDENTS

4. DTTC (or "Deloitte") is a special general partnership providing audit and professional services in the PRC. DTTC is located in Shanghai, China, and is a member firm of Deloitte Touche Tohmatsu Limited ("DTT Global"), a UK private company limited by guarantee. DTTC is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

5. EYHM (or "Ernst") is a special general partnership providing audit and professional services in the PRC. EYHM is headquartered in Beijing, China, and is a member firm of Ernst & Young Global Limited ("EY Global"), a UK private company limited by guarantee. EYHM is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

6. KPMG Huazhen (or "KPMG") is a special general partnership providing audit and professional services in the PRC. KPMG Huazhen is located in Beijing, China, and is a member firm of KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Huazhen is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

7. PwC Shanghai (or "Pricewaterhouse") is a special general partnership providing audit and professional services in the PRC. PwC Shanghai is headquartered in Shanghai, China, and is a member firm of PricewaterhouseCoopers International Limited ("PwCIL"), a UK private company limited by guarantee. PwC Shanghai is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

[4] In the event of a Restart, as set forth more fully in Section III.I of this Order, this Order and the findings herein shall be without prejudice to any claims, arguments, or defenses that a Settling Respondent or the Division may assert in connection with the petitions for review or in any other proceeding that does not arise under paragraph 3 or paragraph 4 of Section III.J of this Order, except that the facts set forth in Annex A shall remain admitted by the Settling Respondents for all purposes. In the event of a Restart, the findings in Sections III.F and III.G of this Order shall be vacated as to any Settling Respondent for whom the Current Proceeding is restarted. In no event, however, may any Settling Respondent recover any payment made under Section III.H of this Order.

C. OTHER RELEVANT ENTITIES

8. DTTC Client A ("DTTC Client A") is a public company the securities of which are registered with the SEC under Section 12(b) of the Securities Exchange Act of 1934 ("Exchange Act") and listed on NASDAQ. DTTC Client A is incorporated in the Province of Ontario, Canada and has its principal operations and principal place of business in the PRC. DTTC Client A designs and manufactures solar products.

9. EYHM Client B ("Client B") is a Delaware corporation with its principal operations and principal place of business in the PRC. Client B's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client B purports to be a leading developer, manufacturer and distributor of organic compound fertilizers in China.

10. EYHM Client C ("Client C") is a Cayman Islands corporation with its primary operations in Beijing, PRC. Client C's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NASDAQ. Client C purports to provide enhanced recovery services for oil and gas exploration.

11. KPMG Huazhen Client D ("Client D") is a Delaware corporation with its primary operations in Xi'an, PRC. Client D's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NASDAQ. Client D purports to engage in the wholesale distribution of finished oil and heavy oil products, the production and sale of biodiesel, and the operation of retail gas stations.

12. KPMG Huazhen Client E ("Client E") is a Nevada corporation with its primary operations in Ningbo, PRC. Client E's securities are registered with the SEC pursuant to Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client E purports to manufacture and supply various petrochemical products in China.

13. KPMG Huazhen Client F ("Client F") is a Nevada corporation, with its primary operations in Shanghai, PRC. Client F's securities were previously registered with the SEC pursuant to Section 12(b) of the Exchange Act and listed on NASDAQ. Client F purports to manufacture chemical additives used in the production of consumer and industrial products.

14. DTTC Client G ("Client G") is a Wyoming corporation with its primary operations in Beijing, PRC. Client G's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NYSE. Client G purports to design, manufacture, and sell offset printing equipment.

15. PwC Shanghai Client H ("Client H") is a Cayman Islands corporation with its principal operations in the PRC. Client H's securities are registered with the SEC under Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client H purports to own and operate a commercial vehicle financing and service centers network.

16. PwC Shanghai Client I ("Client I") is a Nevada corporation with its primary operations in Beijing, PRC. Client I's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client I purports to manufacture automotive electrical parts in China.

D. FACTS CONCERNING COMMMISSION REQUESTS TO THE SETTLING RESPONDENTS UNDER SARBANES-OXLEY

1. Regulatory Background

17. Section 106 of the Sarbanes-Oxley Act of 2002, before it was amended by Dodd-Frank in 2010, stated, in relevant part, that "If a foreign public accounting firm issues an opinion or otherwise performs material services upon which a registered public accounting firm relies in issuing all or part of any audit report or any opinion contained in an audit report, that foreign public accounting firm shall be deemed to have consented . . . to produce its audit workpapers for the Board or the Commission in connection with any investigation by either body with respect to that audit report . . . ." Sarbanes-Oxley Act of 2002 (Public Company Accounting Reform and Investor Protection Act), Pub. L. No. 107-204 § 106(b).

18. In 2004, the Board posted Frequently Asked Questions to its website which stated, in part: "A registered firm's failure to cooperate with Board requests [for production of documents under Sarbanes-Oxley Section 106] may subject the firm to disciplinary sanctions, including substantial civil money penalties and revocation of the firm's registration. In the staff's view, if a firm fails to cooperate with the Board, the fact that the firm has not obtained a client consent that might be necessary (under non-U.S. law) to allow the firm to cooperate is not a defense to a disciplinary action for failure to cooperate."

19. Section 106(b)(1) of Sarbanes-Oxley, as amended by Dodd-Frank, states that: "[i]f a foreign public accounting firm performs material services upon which a registered public accounting firm relies in the conduct of an audit or interim review, issues an audit report, performs audit work, or conducts interim reviews, the foreign public accounting firm shall . . . produce the audit workpapers of the foreign public accounting firm and all other documents of the firm related to any such audit work or interim review to the Commission or the Board, upon request of the Commission or the Board . . . ."

2. Requests To DTTC

20. On or around April 16, 2004, DTTC[5] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The Board confirmed DTTC's registration as a foreign public accounting firm in a letter dated June 4, 2004. DTTC has remained registered with the Board since that time.

---

[5] On January 1, 2013, Deloitte Touche Tohmatsu Certified Public Accountants LLP filed with the PCAOB a notification on Form 4 that Deloitte Touche Tohmatsu Certified Public Accountants LLP had succeeded to the registration status of its predecessor, Deloitte Touche Tohmatsu CPA Ltd.

21. DTTC knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

22. DTTC knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. DTTC described possible conflicts of law in its April 16, 2004 PCAOB registration filing that included a legal opinion.

23. The Board's June 4, 2004 letter confirming DTTC's registration stated that, although DTTC had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Deloitte's registration . . . does not relieve Deloitte of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Deloitte associated persons. If Deloitte prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Deloitte despite the absence of a consent."

24. In June 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, DTTC designated Deloitte & Touche LLP ("DTT US"), the United States member firm of DTT Global, as its agent for receiving service of document requests under Section 106. In so doing, DTTC confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

25. DTTC knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. DTTC also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained power to deny DTTC the privilege of appearing or practicing before the Commission to the extent DTTC willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

26. In the PCAOB reporting years 2010, 2011, 2012, and 2013, DTTC issued audit reports for thirty-two (32), forty-five (45), forty-five (45), and thirty-nine (39) U.S. issuers, respectively.

27. DTTC audited DTTC Client A's financial statements for the fiscal years ended December 31, 2008, 2009, and 2010. DTTC Client A remained DTTC's client as of April 2013.

28. Before April 9, 2010, the Division commenced an investigation into potential accounting fraud involving DTTC Client A, which Client A disclosed in a Form 6-K and accompanying press release filed with the Commission on June 1, 2010. In the press release, DTTC Client A announced that it was postponing the release of its full financial results for the quarter ended March 31, 2010 and its quarterly conference call, scheduled for June 2, as a result of the commencement of an investigation by the Audit Committee of DTTC Client A's Board of Directors. DTTC Client A disclosed that "the investigation was launched after the Company received a subpoena from the [Commission] requesting documents from [DTTC Client A] relating to, among other things, certain sales transactions in 2009."

29. On March 11, 2011, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [DTTC Client A] for the fiscal year ending December 31, 2009" (the "Client A Request").

30. By letter dated April 29, 2011, DTTC, through its U.S. counsel, responded to the Client A Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

31. In July 2011, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client A Request.

32. DTTC was engaged to audit the financial statements of Client G for the fiscal year ended June 30, 2010. In the course of this engagement, DTTC performed audit work on behalf of Client G related to the fiscal year ended June 30, 2010. DTTC did not issue any audit report with respect to Client G.

33. In 2010, Division staff opened an investigation involving Client G, which related to matters reported in a Form 8-K filed by Client G on September 13, 2010. Specifically, Client G reported that:

a. Client G had terminated DTTC's engagement as independent auditor effective September 6, 2010;

b. During the course of DTTC's audit of Client G for the fiscal year ended June 30, 2010, Client G had denied DTTC's request for permission to access original bank statements to verify the identity of certain individuals and entities;

c. Several "reportable events," as defined in Item 304(a)(1)(v) of Regulation S-K, occurred during DTTC's audit of Client G; and

d. Between September 6 and September 8, 2010, Client G's CEO, CFO, and several directors, including the Chair of its Audit Committee, all resigned their positions.

34. On February 14, 2012, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client G] for the fiscal year ended June 30, 2010" (the "Client G Request").

35. By letter dated April 17, 2012, DTTC, through its U.S. counsel, responded to the Client G Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited

the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

36. In April 2012, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client G Request.

37. On May 9, 2012 and December 3, 2012, the Commission instituted these proceedings against DTTC under Rule 102(e) based on DTTC's conduct with respect to the Client A Request and the Client G Request, respectively. DTTC did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

38. In 2013, DTTC provided documents related to DTTC Client A to the China Securities Regulatory Commission ("CSRC"), in response to a request that DTTC had received from the CSRC. In November 2013, DTTC audit workpapers concerning DTTC Client A were provided by the CSRC to the SEC.

39. In 2013, DTTC provided documents related to Client G to the CSRC, in response to a request that DTTC had received from the CSRC. In October 2013, DTTC audit workpapers and related documents concerning Client G were provided by the CSRC to the SEC.

3. Requests To EYHM

40. On or around May 25, 2004, EYHM[6] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed EYHM's registration as a foreign public accounting firm in a letter dated July 8, 2004. EYHM has remained registered with the PCAOB since that time.

41. EYHM knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

42. EYHM knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. EYHM described possible conflicts of law in its May 25, 2004 PCAOB registration filing that included a legal opinion.

43. The Board's July 8, 2004 letter confirming EYHM's registration stated that, although EYHM had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Ernst's registration . . . does not relieve Ernst of the obligation to cooperate in and comply with Board demands (including for

---

[6] On September 3, 2012, Ernst & Young Hua Ming LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that Ernst & Young Hua Ming LLP had succeeded to the registration status of its predecessor, Ernst & Young Hua Ming Certified Public Accountants.

documents or testimony) and to enforce such cooperation and compliance by Ernst's associated persons. If Ernst prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Ernst despite the absence of a consent."

44. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, EYHM designated Ernst & Young LLP ("EY US"), the United States member firm of EY Global, as its agent for receiving service of document requests under Section 106. In so doing, EYHM confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

45. EYHM knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. EYHM also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that that the Commission retained the power to deny EYHM the privilege of appearing or practicing before the Commission to the extent EYHM willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

46. In the PCAOB reporting years 2010, 2011, 2012, and 2013, EYHM issued audit reports for eleven (11), twenty-four (24), twenty-one (21), and twenty (20) U.S. issuers, respectively.

47. EYHM was engaged to audit the financial statements of Client B for the fiscal year ended December 31, 2010. In the course of this engagement, EYHM performed audit work on behalf of Client B related to the fiscal year ended December 31, 2010. EYHM did not issue an audit report on Client B's financial statements for the fiscal year ended December 31, 2010.

48. In March 2011, the Division opened an investigation into Client B. The investigation related to, among other things, public allegations of potential accounting fraud and misleading disclosures by Client B, including overstated revenues, falsified assets and customer relationships, and failure to disclose certain related party transactions.

49. On April 26, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client B] for the fiscal year ending December 31, 2010" (the "Client B Request").

50. By letter dated May 25, 2012, EYHM, through its U.S. counsel, responded to the Client B Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

51. In June 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client B Request.

52. EYHM audited Client C's financial statements for the fiscal year ended September 30, 2010.

53. By September 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client C. The investigation stemmed from a short seller report regarding Client C, and from a letter that EYHM submitted to the Commission, pursuant to Section 10A of the Exchange Act, upon its resignation as Client C's auditor in September 2011. The two primary subjects of the investigation were possible accounting fraud related to asset valuation, and embezzlement by Client C's chairman.

54. On February 2, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client C] for the fiscal year ending September 30, 2010 and subsequent periods" (the "Client C Request").

55. By letter dated April 4, 2012, EYHM, through its U.S. counsel, responded to the Client C Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

56. In April 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client C Request.

57. On December 3, 2012, the Commission instituted these proceedings against EYHM under Rule 102(e) based on EYHM's conduct with respect to the Client B Request and the Client C Request. EYHM did not produce any documents responsive to either request to the Commission before the December 3, 2012 OIP.

58. In November 2013, EYHM audit workpapers and related documents concerning Client C were received by the Commission from the CSRC. In March 2014, EYHM audit workpapers and related documents concerning Client B were provided to the Commission by the CSRC.

4. Requests To KPMG Huazhen

59. On or around April 26, 2004, KPMG Huazhen[7] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The Board confirmed KPMG Huazhen's registration as a foreign public accounting firm in a letter dated July 13, 2004. KPMG Huazhen has remained registered with the Board since that time.

60. KPMG Huazhen knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

61. KPMG Huazhen knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. KPMG Huazhen described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

62. The Board's July 13, 2004 letter confirming KPMG Huazhen's registration stated that, although KPMG Huazhen had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of KPMG's registration . . . does not relieve KPMG of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by KPMG's associated persons. If KPMG prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to KPMG despite the absence of a consent."

63. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, KPMG Huazhen designated KPMG LLP ("KPMG US"), the United States member firm of KPMG International, as its agent for receiving service of document requests under Section 106. In so doing, KPMG Huazhen confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

64. KPMG Huazhen knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. KPMG Huazhen also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny KPMG Huazhen the privilege of appearing or practicing before the Commission to the extent KPMG Huazhen willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

65. In the PCAOB reporting years 2010, 2011, 2012, and 2013, KPMG Huazhen played a substantial role in the preparation or furnishing of audit reports filed with the SEC (as

[7] On August 14, 2012, KPMG Huazhen (Special General Partnership) filed with the Public Company Accounting Oversight Board a notification on Form 4 that KPMG Huazhen (Special General Partnership) had succeeded to the registration status of its predecessor, KPMG Huazhen.

defined by PCAOB Rule 1001(p)(ii))[8] for twenty-four (24), twenty-three (23), twenty-five (25), and twenty-one (21) U.S. issuers, respectively.

66. KPMG Huazhen was engaged as a component auditor for Client D for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client D related to the fiscal year ended December 31, 2010.

67. By April 2011, the Division opened an investigation into potential accounting fraud at Client D. The investigation concerned allegations made in two short seller reports issued in March 2011, which claimed that Client D's financial statements reported false cash balances, overstated revenues, and failed to disclose a material related party transaction.

68. On February 6, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client D] for the fiscal year ending December 31, 2010" (the "Client D Request").

69. KPMG Huazhen was engaged as a component auditor for Client E for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client E related to the fiscal year ended December 31, 2010, but did not complete the engagement.

70. By April 2011, Division staff opened an investigation into potential financial and accounting fraud at Client E. The investigation concerned issues raised in a Form 8-K that Client E filed in April 2011, which stated that Client E would be unable to file its Form 10-K on time because Client E's principal auditor had identified "unexplained issues regarding certain cash transactions and recorded sales."

71. On February 9, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client E] for the fiscal year ending December 31, 2010" (the "Client E Request").

72. KPMG Huazhen was engaged as a component auditor for Client F for the fiscal years ended December 31, 2008, and December 31, 2009. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit reports Client F filed with the Commission related to the fiscal years ended December 31, 2008 and 2009.

[8] PCAOB Rule 1001(p)(ii) defines "Play a Substantial Role in the Preparation or Furnishing of an Audit Report" to mean: "(1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer."

73. Before February 2012, Division staff opened an investigation involving potential financial and accounting fraud at Client F. The investigation related to issues raised in a pair of disclosures made by Client F in early 2011:

a. In March 2011, Client F disclosed that it was conducting an internal investigation into "potentially serious discrepancies" in its financial statements for the year ended December 31, 2010, and

b. In May 2011, Client F disclosed that its principal auditor had resigned after identifying what they considered "potentially serious discrepancies and/or unexplained issues relating to [Client F]'s financial records," in response to which Client F failed to take adequate remedial action.

74. On February 3, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit reports issued, audit work performed, or interim reviews conducted for [Client F] from January 1, 2008 to the present" (the "Client F Request").

75. By letter dated March 27, 2012, KPMG Huazhen, through its U.S. counsel, responded to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with any of the requested audit workpapers and related documents. KPMG Huazhen did not include any of the requested audit workpapers or related documents with its March 27 response.

76. In May 2012, the Division issued to KPMG Huazhen a Wells notice that the Division intended to recommend institution of proceedings against KPMG Huazhen because, in the Division's view, KPMG Huazhen had willfully refused to comply with the Client D Request, the Client E Request, and the Client F Request.

77. On December 3, 2012, the Commission instituted these proceedings against KPMG Huazhen under Rule 102(e) based on KPMG Huazhen's conduct with respect to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen did not produce audit workpapers or related documents responsive to any of the requests to the Commission before the December 3, 2012 OIP.

5. Requests To PwC Shanghai

78. On or around April 26, 2004, PwC Shanghai[9] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed PwC

[9] On July 8, 2013, PricewaterhouseCoopers Zhong Tian LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that PricewaterhouseCoopers Zhong Tian LLP had succeeded to the registration status of its predecessor, PricewaterhouseCoopers Zhong Tian CPAs Limited Company.

Shanghai's registration as a foreign public accounting firm in a letter dated July 13, 2004. PwC Shanghai has remained registered with the Board since that time.

79. PwC Shanghai knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

80. PwC Shanghai knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. PwC Shanghai described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

81. The Board's July 13, 2004 letter confirming PwC Shanghai's registration stated that, although PwC Shanghai had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Pricewaterhouse's registration . . . does not relieve Pricewaterhouse of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Pricewaterhouse's associated persons. If Pricewaterhouse prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Pricewaterhouse despite the absence of a consent."

82. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, PwC Shanghai designated PricewaterhouseCoopers LLP ("PwC US"), the United States member firm of PwCIL, as its agent for receiving service of document requests under Section 106. In so doing, PwC Shanghai confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

83. PwC Shanghai knew at all relevant times it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. PwC Shanghai also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny PwC Shanghai the privilege of appearing or practicing before the Commission to the extent PwC Shanghai willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

84. In the PCAOB reporting years 2010, 2011, 2012, and 2013, PwC Shanghai issued audit reports for seventeen (17), twenty-seven (27), thirty-one (31), and twenty-three (23) U.S. issuers, respectively.

85. PwC Shanghai was engaged to audit the financial statements of Client H for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client H related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client H.

86. By March 2011, the Division opened an investigation into potential accounting fraud at Client H. The investigation concerned public allegations of accounting fraud and market

manipulation at Client H. Certain internet reports alleged, among other things, that Client H overstated revenue and earnings by accounting for lease revenues upfront instead of recognizing this revenue over the duration of the leases, and that there were discrepancies between Client H's cash flow and reported net income.

87. On February 8, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client H] for the fiscal year ending December 31, 2010" (the "Client H Request").

88. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client H Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

89. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client H Request.

90. PwC Shanghai was engaged to audit the financial statements of Client I for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client I related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client I.

91. By March 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client I. The investigation focused on potential accounting irregularities, undisclosed related party transactions, misappropriation of corporate assets, and market manipulation.

92. On March 22, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work performed for [Client I] for the fiscal year ending December 31, 2010" (the "Client I Request").

93. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client I Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

94. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client I Request.

95. On December 3, 2012, the Commission instituted these proceedings against PwC Shanghai under Rule 102(e) based on PwC Shanghai's conduct with respect to the Client H Request and the Client I Request. PwC Shanghai did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

96. In November 2013, PwC Shanghai produced audit workpapers and related documents concerning Client I to the CSRC, in response to a request that PwC Shanghai had received from the CSRC. In March 2014, PwC Shanghai audit workpapers and related documents concerning Client I were provided by the CSRC to the SEC.

E. FACTS CONCERNING COMMISSION REQUESTS FOR ASSISTANCE UNDER INTERNATIONAL SHARING PROTOCOLS

97. Before the December 3, 2012 OIP, in connection with Division investigations, the SEC's Office of International Affairs sent a number of requests for assistance to the CSRC pursuant to the International Organization of Securities Commissions ("IOSCO") Multilateral Memorandum of Understanding ("MMOU"), seeking DTTC's audit workpapers and related documents concerning certain of the firm's clients. The SEC did not receive any of the requested documents before the December 3, 2012 OIP. Meanwhile, the SEC issued the nine requests under Section 106 of Sarbanes-Oxley to the Settling Respondents, as described above in Section III.D, among other Section 106 requests.

98. In July 2013, after the start of the hearing in this proceeding, the CSRC produced to the SEC a set of DTTC's audit workpapers concerning a firm client that is unrelated to Clients A through I listed above. The SEC had requested these workpapers from the CSRC before the December 3, 2012 OIP. The July 2013 production was the first time that the CSRC provided audit workpapers to the SEC under any international sharing protocols.[10]

99. After the July 2013 production, the SEC received productions from the CSRC for DTTC Clients A and G, in response to requests that the SEC had made under the IOSCO MMOU before the May 9, 2012 OIP. Also after the July 2013 production, the SEC sought and received productions from the CSRC for EYHM Clients B and C, and PwC Shanghai Client I, as described above in Section III.D. To date, the SEC has not sought the assistance of the CSRC in obtaining audit workpapers and related documents for KPMG Huazhen's Client D, Client E, and Client F, or for PwC Shanghai Client H.

[10] The audit workpapers produced by the CSRC in July 2013, concerning DTTC client Longtop Financial Technologies Limited ("Longtop"), were also the subject of a subpoena enforcement action brought by the SEC against DTTC in federal district court, *SEC v. DTTC*, 1:11mc00512-GK (D.D.C.). That action was dismissed without prejudice following supplemental productions of DTTC documents received by the SEC from the CSRC in January 2014. DTTC's non-production of the Longtop documents directly to the SEC is not the basis of any Division claim against DTTC in this proceeding.

F. VIOLATIONS

100. As noted, Rule 102(e)(1)(iii) of the Commission's Rules of Practice provides that "[t]he Commission may censure a person or deny, temporarily or permanently, the privilege of appearing or practicing before it in any way to any person who is found . . . [t]o have willfully violated . . . any provision of the Federal securities laws or the rules and regulations thereunder." 17 C.F.R. § 201.102(e)(1)(iii).[11] Rule 102(e) "provides the Commission with a means to ensure that the professionals on whom it relies 'perform their tasks diligently.'" *Marrie v. SEC*, 374 F.3d 1196, 1200 (D.C. Cir. 2004) (quoting *Touche Ross & Co. v. SEC*, 609 F.2d 570, 582 (2d Cir. 1979)). The rule "is directed at protecting the integrity of the Commission's own processes, as well as the confidence of the investing public in the integrity of the financial reporting process." *Marrie*, 374 F.3d at 1200.

101. Section 106(b) of Sarbanes-Oxley provides that a foreign public accounting firm that "performs audit work . . . shall . . . produce the audit work papers of the foreign public accounting firm and all other documents of the firm related to any such audit work . . . to the Commission . . . upon request of the Commission." 15 U.S.C. § 7216(b)(1). A foreign public accounting firm that willfully violates Section 106(b) is subject to sanction under Rule 102(e).[12]

102. Sarbanes-Oxley Section 106(e) identifies certain conduct that must be considered a violation under Section 106. Specifically, Section 106(e) states that "[a] willful refusal to comply, in whole or in part, with any request by the Commission . . . under this section, shall be deemed a violation of this Act." 15 U.S.C. § 7216(e). Thus, Rule 102(e)(1)(iii) and Section 106(e), considered together, provide that the Commission may censure, or deny, temporarily or permanently, the privilege of appearing or practicing before it in any way, a foreign public accounting firm that is found to have willfully refused to comply with a Commission request for documents covered by Section 106(b).[13]

103. During the relevant time period, each Settling Respondent was a foreign public accounting firm. In addition, the Commission properly served each Settling Respondent with at least two requests under Section 106(b) pertaining to clients or former clients as to which that Settling Respondent had "perform[ed] audit work." In response to these requests, the Settling

---

[11] Similarly, Section 4C of the Exchange Act provides, "The Commission may censure any person, or deny temporarily or permanently, to any person the privilege of appearing or practicing before the Commission in any way, if that person is found . . . to have willfully violated, or willfully aided and abetted the violation of, any provision of the securities laws or the rules and regulations issued thereunder." 15 U.S.C. § 78d-3(a)(3).

[12] Furthermore, under Section 3(b) of Sarbanes-Oxley, a violation of Section 106 is to be treated as a violation of the Exchange Act. *See* 15 U.S.C. § 7202(b)(1) ("A violation . . . of this Act . . . shall be treated for all purposes in the same manner as a violation of the Securities Exchange Act of 1934 . . . .").

[13] *See Gearhart & Otis, Inc. v. SEC*, 348 F.2d 798, 803 (D.C. Cir. 1965) (discussing meaning of "willfully" under Section 15(b) of the Exchange Act); *Wonsover v. SEC*, 205 F.3d 408, 414-415 (D.C. Cir. 2000).

Respondents informed the Division in writing that they could not, consistent with Chinese law, produce documents directly to the Division. The Division did not receive any of the requested audit workpapers or related documents before this Current Proceeding was instituted.

G. FINDINGS

104. Based on the foregoing and for the purposes of this Order, the Commission finds that each Settling Respondent willfully refused to comply with the requests that were issued to it under Section 106, and each Settling Respondent willfully violated Section 106 of the Sarbanes-Oxley Act.

H. UNDERTAKINGS TO MAKE PAYMENTS

105. Pursuant to the Offers, each Settling Respondent has undertaken to pay $500,000. The Settling Respondents will make their respective payments within thirty (30) days of the issuance of this Order. If timely payment is not made, additional interest shall accrue pursuant to 31 U.S.C. § 3717. Payment shall be made in one of the following ways:

(1) The Settling Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) The Settling Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http:/www.sec.gov/about/offices/ofm/htm; or

(3) The Settling Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying the Settling Respondent as a Respondent in this proceeding, and the file numbers of this proceeding; a copy of the cover letter and check or money order must be sent by overnight commercial mail service to David Mendel, Assistant Chief Litigation Counsel, Division of Enforcement, Securities and Exchange Commission, 100 F Street N.E., Mail Stop 5971, Washington, DC 20549-5971. The Commission shall remit the funds paid pursuant to this paragraph to the United States Treasury. In determining whether to accept the Offers, the Commission has considered this undertaking by Settling Respondents.

I. STAY OF THIS PROCEEDING

106. In light of the Procedures and Undertakings as to Future Requests, And Possible Additional Proceedings and Remedies set forth below in Section III.J of this Order, this proceeding (the "**Current Proceeding**") is stayed as follows:

a. The stay applies to the Settling Respondents' petition seeking review of the Initial Decision of the Administrative Law Judge, dated January 22, 2014 (the "Initial Decision"), and to the Division's petition for review of the Initial Decision's handling of remedies as to the Settling Respondents, and to any federal court appeal from the result of either such petition for review.

b. The stay is conditioned on the Current Proceeding not being restarted pursuant to paragraph 5 of Section III.J of this Order.

c. In the event the Current Proceeding is restarted, the Commission may resolve all issues as to liability and remedies raised by the OIPs in this proceeding, including all defenses previously raised by the Settling Respondents, consistent with the Commission's May 9, 2014 order granting the parties' petitions for review in the Current Proceeding. Under the Restart scenario, the Commission may resolve, among other issues, whether the OIP in the Current Proceeding was properly served on the Settling Respondents, whether the conduct of the Settling Respondents constitutes a willful violation of Section 106, and whether any or all of the Settling Respondents should be censured or denied the privilege of appearing and practicing before the Commission pursuant to Section 106 of Sarbanes-Oxley and Rule 102(e). Accordingly, in the event of a Restart, this Order and the findings herein shall be without prejudice to any claims, arguments, or defenses that a Settling Respondent or the Division may assert in connection with the petitions for review or in any other proceeding that does not arise under paragraph 3 or paragraph 4 of Section III.J of this Order, except that the facts set forth in Annex A (which are repeated in Section III, Sub-Sections B, C, and D of this Order) shall remain admitted by the Settling Respondents for all purposes. Upon the Division's filing of a notice that the Current Proceeding is restarted in accordance with paragraph 5 of Section III.J of this Order, the Current Proceeding will resume from its current status and the Commission will re-set a briefing schedule for consideration of the parties' respective petitions for review, as appropriate.

d. Nothing in this Order, the Offers, or the undertakings shall derogate from the Settling Respondents' rights to appeal any decision of the Commission in the Current Proceeding to the Federal Courts, and in any proceedings before the Commission or the Federal Courts to make all such arguments as are currently available to them. Except for the facts that the Settling Respondents expressly agree to and admit in Annex A, which are repeated in Section III, Sub-Sections B, C, and D of this Order, nothing in this Order or the discussions leading to it may be used as an admission in the Current Proceeding in the event it is restarted.

J. PROCEDURES AND UNDERTAKINGS AS TO FUTURE REQUESTS, AND POSSIBLE ADDITIONAL PROCEEDINGS AND REMEDIES

1. The Settling Respondents and the Division will abide by the procedures set forth in this Section III.J of this Order with respect to future requests for documents covered by Section 106(b) of Sarbanes-Oxley ("**Procedures**"), during the four-year period prescribed by paragraph III.J.7 of this Order. Nothing in the Procedures reflects a determination by the Division or Commission as to the scope of obligations of any foreign public accounting firm under Section 106 of Sarbanes-Oxley, or the steps the Division should or must take in connection with a foreign public accounting firm's satisfaction of its obligations under Section 106. Requests for documents under these Procedures are deemed "covered by Section 106(b) of Sarbanes-Oxley" without regard to whether the relevant Settling Respondent prepared, furnished, or issued any audit report concerning the client for which the documents are sought, and without prejudice to any arguments a Settling Respondent may have with respect to the application of Section 106 in a Restart of the Current Proceeding or any future proceeding based on Section 106 that does not arise under paragraph 3 or paragraph 4 of Section III.J of this Order. All references to "paragraphs" in Section III.J of this Order are references to the numbered paragraphs 1 through 8 that appear in Section III.J of this Order, unless expressly indicated otherwise.

2. The following Procedures will apply to future SEC requests for production of documents covered by Section 106(b) of Sarbanes-Oxley from the Settling Respondents:

   i. The Division agrees that, on its own or through other SEC staff (such as the SEC's Office of International Affairs), it will in the first instance issue a request for assistance to the CSRC in respect of such documents under international sharing mechanisms (including, to the extent available, the IOSCO MMOU). On or about the date on which such a request for assistance is sent, the SEC or the Division will do one or both of the following:

      A. Issue a new Section 106 request (mirroring the request made to the CSRC) to the relevant Settling Respondent through its designated U.S. agent. Unless the Division has already provided notice that it is terminating the stay pursuant to paragraph 5 below, the new Section 106 request shall expressly state that, pursuant to Section 106(f), the Division agrees to accept production of documents in accordance with these Procedures; and/or

      B. Provide the relevant Settling Respondent with notice of the request for assistance that was sent to the CSRC, specifying the documents sought by the Division.

References in Section III.J of this Order to the CSRC mean the CSRC and/or such other Chinese authority/ies as may be charged from time to time by the Chinese government with liaising with the SEC on matters of cross-border information-sharing and cooperation.

For the purpose of maximizing efficiency between the CSRC and the SEC in the handling of any request, to the extent practicable the Division will make reasonable efforts (1) to discuss the content of the request with outside counsel for the relevant Settling Respondent in the United States before the request is issued in connection with the Division's investigation; and (2) to consolidate follow-up inquiries with the CSRC in a minimal number of communications after the Division receives a production, and to set forth reasonable periods for responses to such inquiries. However, nothing in this sub-paragraph affects the Settling Respondents' undertakings under paragraph 2(ii) below, the potential remedies available in paragraphs 3 and 4 below, or the Division's ability to restart the Current Proceeding under paragraph 5 below.

ii. The Settling Respondents undertake as follows:

A. Within ninety (90) days of receipt of a request under paragraph 2(i)(A) or (B) above, or within forty-five (45) days from the date the relevant Settling Respondent receives the first corresponding request from the CSRC ("**corresponding request**"), whichever is later, the relevant Settling Respondent will provide the Division with an initial declaration ("**initial declaration**") which states that the relevant Settling Respondent has produced all responsive documents to the CSRC for production to the SEC, subject to the following:

1. If the Settling Respondent has determined to withhold documents (or portions of documents) under a claim of U.S. privilege, the declaration must attest that the Settling Respondent has described all such information on a privilege log in accordance with U.S. custom and practice ("**privilege log**");

2. If the Settling Respondent has determined (subject to the CSRC's review) that documents (or portions of documents) should be withheld under Chinese law governing state sensitive information or state secrets, or for any other reason under Chinese law, including applicable privilege(s) under Chinese law, the declaration must attest that the Settling Respondent has described all such information on a withholding log ("**withholding log**"). The withholding log must (to the extent permissible under Chinese law) include the date on which the document was created; the document's author(s); all recipients of the document; the document's general subject matter; the reason for proposing the withholding; a description sufficient to identify where the document is located (or would have been located) in the

production; and a unique identifying number (i.e., a bates number) for each page containing withheld information.

3. The Division, in its sole discretion, may authorize one or more extensions of the 90-day deadline (referenced in paragraph 2(ii)(A) above) if the relevant Settling Respondent, in writing, requests and demonstrates good cause for such an extension before the expiration of such deadline.

4. If the relevant Settling Respondent determines not to provide the initial declaration within the 90-day deadline because the Settling Respondent is allowed additional time by virtue of the date on which it receives the first corresponding request from the CSRC in accordance with paragraph 2(ii)(A) above, the Settling Respondent will notify the Division in writing of this determination before the 90-day deadline expires. In addition, upon such notification by the Settling Respondent, or within five days of the Settling Respondent's receipt of the first corresponding request from the CSRC, whichever is later, the Settling Respondent will inform the Division in writing of the date on which it received the first corresponding request.

B. The Settling Respondents will inform the CSRC in writing when they have completed preparation for production to the CSRC of all responsive documents, privilege logs and withholding logs in response to corresponding requests. The Settling Respondents will use all reasonable efforts to facilitate the SEC's receipt of all responsive documents, privilege logs, and withholding logs (finalized in accordance with the CSRC's directions) in as expeditious a manner as possible.

C. Within ten (10) days of the SEC notifying the relevant Settling Respondent that production from the CSRC to the SEC has occurred, the relevant Settling Respondent will provide the Division directly with a certification that it has provided to the CSRC all documents responsive to the CSRC's corresponding request except information set forth on a privilege log, and, where applicable, that it has proposed (subject to the CSRC's review) that documents (or portions of documents) set forth on the withholding log should be withheld under Chinese law governing state sensitive information or state secrets, or for any other reason under Chinese law (**"certification of completeness"**). The certification of completeness must append all corresponding requests received by the Settling Respondent from the CSRC, and certified English translations thereof, and describe the Settling Respondent's search for the documents, and (to the extent permissible under Chinese law) the process by which it was determined that information included on the withholding log, if any, should be withheld.

3. Remedy in the form of an Automatic Bar. If the relevant Settling Respondent does not provide the initial declaration as required by paragraph 2(ii)(A) above **or** if the relevant Settling Respondent does not provide the certification of completeness as required by paragraph 2(ii)(C) above, the Division shall notify the relevant Settling Respondent of the failure and give the Settling Respondent twenty (20) days to cure the failure. If, within twenty (20) days of the request for cure by the Division, the relevant Settling Respondent does not provide the initial declaration as required by paragraph 2(ii)(A) above **or** the relevant Settling Respondent does not provide the certification of completeness as required by paragraph 2(ii)(C) above, the Commission, in its sole discretion, and without regard to the procedures set forth in Rule 5(c) of SEC's Informal and Other Procedures, 17 C.F.R. § 202.5(c), may determine that the relevant Settling Respondent has not complied with its obligations under this Order and thereupon enter, without further notice, an order of the Commission pursuant to Rule 102(e) in an agreed-upon form (attached as Annex B to this Order), that partially denies the Settling Respondent the privilege of practicing or appearing before the Commission, for a period of six (6) months, according to the terms set forth below (collectively the "**Partial Bar**").[14]

i. A Partial Bar is defined as follows:

A. The Settling Respondent is prohibited from issuing an audit report, or otherwise serving as a principal auditor, for any issuer (as defined in Section 2(a)(7) of Sarbanes-Oxley); and

B. The Settling Respondent is prohibited from playing a 50% or greater role in the preparation or furnishing of an audit report for any issuer, meaning the Settling Respondent is prohibited from performing:

1. Audit work that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, where the engagement hours or fees for such services constitute 50% or more of the total engagement hours or fees, respectively, provided by the principal auditor in connection with the issuance of all or part of its audit report with respect to any issuer; and

2. The majority of audit work with respect to a subsidiary or component of any issuer, the assets or revenues of which constitute 50% or more of the consolidated assets or revenues of the issuer.

ii. If two or more orders imposing a Partial Bar are issued under this paragraph 3 for a particular Settling Respondent (where each such remedy arises from a separate

[14] If an order in the form of Annex B is entered under this paragraph 3 of Section III.J of this Order, the information contained in brackets ("[. . . .]") in Annex B will be replaced by the relevant Settling Respondent's name and the other pertinent details indicated within those brackets.

investigation), the Partial Bars shall be imposed so that each Partial Bar runs its full six-month course in a non-concurrent fashion.

iii. An Order imposing the remedy of a Partial Bar shall be final. There shall be no review by any federal court.

4. <u>Remedy in the form of a Summary Proceeding</u>. If the relevant Settling Respondent provides the initial declaration under paragraph 2(ii)(A) above **<u>and/or</u>** the certification of completeness under paragraph 2(ii)(C) above, but the Division believes that either or both of the documents so provided is inadequate or that the production which the Settling Respondent has made to the CSRC and in respect of which it has given a certificate of completeness is not materially complete (as defined below), the Division shall notify the relevant Settling Respondent of the inadequacy or material non-completeness which it asserts and give the Settling Respondent at least twenty (20) days to cure them or otherwise satisfy the Division. If after twenty (20) days the relevant Settling Respondent has not resolved the matter to the Division's satisfaction, the Commission, upon recommendation by the Division and without regard to the procedures set forth in Rule 5(c) of SEC's Informal and Other Procedures, 17 C.F.R. § 202.5(c), may issue an order instituting a summary administrative proceeding ("**Summary Proceeding**"). If the Commission decides to issue an OIP, a Summary Proceeding will commence as follows:

   i. The purpose of the Summary Proceeding is to determine whether, in response to a request under the Procedures, the privilege log, withholding log, initial declaration, and/or certification of completeness is or are inadequate; whether U.S. privilege justifies the withholding of any responsive information; and whether the production to the CSRC is otherwise materially complete. These are the sole issues to be determined in a Summary Proceeding. A finding that is adverse to the Settling Respondent on one or more of these issues shall collectively constitute an "offense."

   ii. The Summary Proceeding will be adjudicated by an assigned ALJ, who will issue a decision no later than either 180 days from the beginning of the proceeding or an extended date approved by the Commission. The relevant Settling Respondent will be afforded a reasonable opportunity to submit responses and briefs responding to any OIP instituting a Summary Proceeding in accordance with the SEC Rules of Practice. The Rules of Practice will govern the Summary Proceeding, except to the extent inconsistent with the terms of this Order.

   iii. A Summary Proceeding may impose, for a first offense, a Partial Bar for a period of up to six (6) months. If, in the same Summary Proceeding or other Summary Proceedings, there is a finding of one or more additional offenses (each arising from a different investigation), the Summary Proceeding may impose a complete bar on appearing or practicing before the Commission for a period up to six (6) months per additional offense. Practice bars imposed for multiple offenses in a single Summary Proceeding may run consecutively. Additionally, whether or not a practice bar is imposed, the

Summary Proceeding may impose a censure on the relevant Settling Respondent and/or a monetary penalty up to U.S. $750,000 per offense.

iv. The Summary Proceeding decision shall be subject to Commission review in accordance with the SEC Rules of Practice. The Commission decision that resolves a petition for review of the ALJ's initial decision shall be final. There shall be no review by any federal court.

v. A "materially complete" production is one concerning which a reasonably diligent search has been conducted by the relevant Settling Respondent to identify responsive documents and where all of the documents identified in such search have been collected by the relevant Settling Respondent and provided to the CSRC, together with an index as required by the CSRC, in accordance with Chinese law protocols. A Summary Proceeding shall not be commenced to determine whether a production is deficient because of documents that are described on a Withholding Log and withheld under a claim that they contain state secrets or state sensitive information. However, neither the definition of "materially complete" nor any limitation on the subject matter of a Summary Proceeding, set forth herein, reflects a determination by the Division or the Commission of the Settling Respondent's full production obligation under Section 106 of Sarbanes-Oxley. Additionally, the Division expressly reserves its rights to restart the Current Proceeding under the circumstances described in paragraph 5 below, including, but not limited to, where the Division has concerns about the nature or scope of withholdings in response to a certain number of requests under the Procedures.

5. Restarting of the Current Proceeding. If any Settling Respondent does not comply with its undertaking to make the payment specified in Section III.H of this Order **or** if the Division in its sole discretion at any time decides that, with respect to two or more requests made collectively to the Settling Respondents under the Procedures, (i) in the Division's view, it has not received a materially complete production and/or an adequate privilege log, withholding log, initial declaration, and/or certification of completeness, as described in paragraph 2(ii) above, and the Division has not commenced a Summary Proceeding based on the request; (ii) in the Division's view a substantial number of documents (or portions of documents) have been withheld from the production in violation of, or without justification under, U.S. law, including, but not limited to, Section 106 of Sarbanes-Oxley; or (iii) in the Division's view its receipt of a production has been substantially delayed (or not received at all) under the Procedures, the Division may recommend to the Commission that the stay referred to in Section III.I of this Order be terminated, and, after receiving approval by the Commission of its recommendation, provide notice to all of the Settling Respondents that the stay has been terminated.

Before deciding that a request forms the basis (or part of the basis) for restarting the Current Proceeding, the Division (on its own or through other SEC staff) will notify the CSRC of the alleged inadequacy and/or make reasonable inquiry of the CSRC of the likely duration of any delay or non-production. A production will not be deemed "substantially delayed" within the meaning of paragraph 5(iii) above if the production is received by the SEC within 225 days of the date of the request made under paragraph 2(i) above (or within any period of time as specifically agreed between the SEC and the CSRC for a particular request) and, in the Division's view, the production is materially complete and accompanied by an adequate privilege log, withholding log, and certification of completeness as described in paragraph 2(ii) above. If a production is received by the Division more than 225 days after the date of the request under paragraph 2(i) above, the Division, in its sole discretion, will determine whether the production is "substantially delayed" within the meaning of paragraph 5(iii) above. In making this determination, the Division will not automatically conclude that a production is "substantially delayed" because it is received more than 225 days after the date of the request, but will consider the particular circumstances of the case, including the SEC staff's communications with the CSRC regarding the timing of production.

To the extent noncompliance with Section III.H of this Order or the matters under (i), (ii) and/or (iii) above in this paragraph 5 relate to fewer than all of the Settling Respondents, the Division, in its discretion, may request of the Settling Respondents that the stay be lifted only as to the relevant Settling Respondent(s) and, if all four of the Settling Respondents agree to lift the stay only as to the relevant Settling Respondent(s), the stay will be lifted only as to the relevant Settling Respondent(s). If not, the stay will be lifted as to all of the Settling Respondents. The Current Proceeding will then resume as to all or some of the Settling Respondents, and those parties' rights will be determined by the Commission or the Federal Courts (should the identified Settling Respondents appeal). The Division's "notice" under this agreement may be by any method reasonably calculated to provide such notice, including, but not limited to, by delivering (under any method set forth in Rule 150(c) of the SEC's Rules of Practice) a copy of such notice to the Settling Respondents' outside counsel in the United States **or** to the respective domestic registered public accounting firms or other United States agents that the Settling Respondents have designated for service under Section 106(d) of Sarbanes-Oxley, 15 U.S.C. § 7216(d). Except with respect to paragraph 5(i) above, the Division's prerogatives under this paragraph are entirely separate from any remedy it may seek under paragraph 4 above.

6. In the event the Commission approves the Division's recommendation to lift the stay in the Current Proceeding, the following terms will apply:

   i. The Division may serve new Section 106 requests on the Settling Respondents, via their designated agents, without reference to the Procedures as required under paragraph 2(i)(A) above. This means that the SEC may exercise its full statutory rights under Section 106.

   ii. With respect to requests under paragraph 2(i) above that predate the lifting of the stay and do not form the basis for restarting the Current Proceeding under paragraph 5(i) above, the Division may initiate or continue to prosecute a Summary Proceeding under paragraph 4 above.

   iii. The Division may not seek to sanction non-compliance by a Settling Respondent with any Section 106 request made after the lifting of the stay ("new Section 106 request"), including through an administrative proceeding under Rule 102(e) of the Commission's Rules of Practice, until there is a Final Commission Order in the Current Proceeding. A "Final Commission Order" means a final order issued by the Commission with respect to the pending petitions for review in the Current Proceeding, without regard to whether any Settling Respondent (or any other party or non-party) seeks federal court review of the order or a stay in connection with such review.

iv. The SEC or Division may not seek to enforce any Section 106 request against a Settling Respondent in federal district court under Section 106(b)(l)(B) of Sarbanes-Oxley until there is a Final Commission Order.

v. Nothing in paragraph 5 above or this paragraph 6 precludes the parties, in the Current Proceeding, in accordance with the Commission's Rules of Practice, from seeking leave to adduce additional evidence that relates to any request made by the Division under the Procedures or Section 106.

7. The provisions of paragraphs 2, 3, 4, 5, and 6 above will be in effect for four (4) years following the date of this Order. The day after this four-year period, these same provisions will expire, except that (i) any remedies ordered under these provisions shall run their full course; and (ii) any Summary Proceeding already instituted under paragraph 4 above and the Current Proceeding, if already restarted by the Division under paragraph 5 above, shall continue until final resolution. Upon expiration of the four-year period, unless the Division has restarted the Current Proceeding, all claims against any of the Settling Respondents in the Current Proceeding will be deemed to be dismissed, except such dismissal will not affect any admissions, findings, or remedies ordered in this Order, which are, and will be, deemed final upon the dismissal of the Current Proceeding.

8. For purposes of the Commission's consideration of any Division recommendation under paragraph 4 or 5 above, or in connection with a remedy or potential remedy under paragraph 3 above, each of the Settling Respondents waives: (i) such provisions of the Commission's Rules of Practice or other requirements of law as may be construed to prevent any member of the Commission's staff from participating in the preparation of, or advising the Commission as to, any order, opinion, finding of fact, or conclusion of law to be entered in connection with the Division's recommendation, any resulting Summary Proceeding, or the Current Proceeding; and (ii) any right to claim bias or prejudgment by the Commission, in any such order, opinion, finding of fact, or conclusion of law entered in connection with the Division's recommendation, in any Summary Proceeding, or in the Current Proceeding.

IV.

In view of the foregoing, the Commission deems it appropriate to impose the sanctions agreed to in the Settling Respondents' Offers.

Accordingly, pursuant to Rules 100(c)[15] and 102(e) of the Commission's Rules of Practice, it is hereby ORDERED that:

A. DTTC, EYHM, KPMG Huazhen, and PwC Shanghai each is censured for its willful violations of the securities laws.

B. The Current Proceeding is hereby stayed in accordance with Section III.I of this Order.

C. DTTC, EYHM, KPMG Huazhen, and PwC Shanghai each shall comply with the Procedures and Undertakings as to Future Requests, and Possible Additional Proceedings and Remedies, set forth above in Section III.J of this Order.

D. The Commission may institute additional proceedings and/or impose additional remedies, as appropriate, in accordance with Section III.J of this Order.

By the Commission.

Respondents.

ANNEX A TO ORDER ON THE BASIS OF OFFERS OF SETTLEMENT OF CERTAIN RESPONDENTS IMPLEMENTING SETTLEMENT

ANNEX A

Respondents Deloitte Touche Tohmatsu Certified Public Accountants Ltd. ("DTTC"), Ernst & Young Hua Ming LLP ("EYHM"), KPMG Huazhen (Special General Partnership) ("KPMG Huazhen"), and PricewaterhouseCoopers Zhong Tian CPAs Limited Company ("PwC Shanghai") (collectively the "Settling Respondents") admit the facts set forth below (the "Admissions"):

RESPONDENTS

1. DTTC (or "Deloitte") is a special general partnership providing audit and professional services in the PRC. DTTC is located in Shanghai, China, and is a member firm of Deloitte Touche Tohmatsu Limited ("DTT Global"), a UK private company limited by guarantee. DTTC is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

2. EYHM (or "Ernst") is a special general partnership providing audit and professional services in the PRC. EYHM is headquartered in Beijing, China, and is a member firm of Ernst & Young Global Limited ("EY Global"), a UK private company limited by guarantee. EYHM is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

3. KPMG Huazhen (or "KPMG") is a special general partnership providing audit and professional services in the PRC. KPMG Huazhen is located in Beijing, China, and is a member firm of KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Huazhen is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

4. PwC Shanghai (or "Pricewaterhouse") is a special general partnership providing audit and professional services in the PRC. PwC Shanghai is headquartered in Shanghai, China, and is a member firm of PricewaterhouseCoopers International Limited ("PwCIL"), a UK private company limited by guarantee. PwC Shanghai is a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.

OTHER RELEVANT ENTITIES

5. DTTC Client A ("DTTC Client A") is a public company the securities of which are registered with the SEC under Section 12(b) of the Securities Exchange Act of 1934 ("Exchange Act") and listed on NASDAQ. DTTC Client A is incorporated in the Province of Ontario, Canada and has its principal operations and principal place of business in the PRC. DTTC Client A designs and manufactures solar products.

6. EYHM Client B ("Client B") is a Delaware corporation with its principal operations and principal place of business in the PRC. Client B's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client B purports to be a leading developer, manufacturer and distributor of organic compound fertilizers in China.

7. EYHM Client C ("Client C") is a Cayman Islands corporation with its primary operations in Beijing, PRC. Client C's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NASDAQ. Client C purports to provide enhanced recovery services for oil and gas exploration.

8. KPMG Huazhen Client D ("Client D") is a Delaware corporation with its primary operations in Xi'an, PRC. Client D's securities were previously registered with the SEC pursuant

to Section 12(g) of the Exchange Act and listed on NASDAQ. Client D purports to engage in the wholesale distribution of finished oil and heavy oil products, the production and sale of biodiesel, and the operation of retail gas stations.

9. KPMG Huazhen Client E ("Client E") is a Nevada corporation with its primary operations in Ningbo, PRC. Client E's securities are registered with the SEC pursuant to Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client E purports to manufacture and supply various petrochemical products in China.

10. KPMG Huazhen Client F ("Client F") is a Nevada corporation, with its primary operations in Shanghai, PRC. Client F's securities were previously registered with the SEC pursuant to Section 12(b) of the Exchange Act and listed on NASDAQ. Client F purports to manufacture chemical additives used in the production of consumer and industrial products.

11. DTTC Client G ("Client G") is a Wyoming corporation with its primary operations in Beijing, PRC. Client G's securities were previously registered with the SEC pursuant to Section 12(g) of the Exchange Act and listed on NYSE. Client G purports to design, manufacture, and sell offset printing equipment.

12. PwC Shanghai Client H ("Client H") is a Cayman Islands corporation with its principal operations in the PRC. Client H's securities are registered with the SEC under Section 12(g) of the Exchange Act and were previously listed on NASDAQ. Client H purports to own and operate a commercial vehicle financing and service centers network.

13. PwC Shanghai Client I ("Client I") is a Nevada corporation with its primary operations in Beijing, PRC. Client I's securities were previously registered with the SEC under Section 12(g) of the Exchange Act and listed on NASDAQ. Client I purports to manufacture automotive electrical parts in China.

FACTS CONCERNING COMMMISSION REQUESTS TO THE SETTLING RESPONDENTS UNDER SARBANES-OXLEY

1. Regulatory Background

14. Section 106 of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley" or the "Act"), before it was amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank") in 2010, stated, in relevant part, that "If a foreign public accounting firm issues an opinion or otherwise performs material services upon which a registered public accounting firm relies in issuing all or part of any audit report or any opinion contained in an audit report, that foreign public accounting firm shall be deemed to have consented . . . to produce its audit workpapers for the Board or the Commission in connection with any investigation by either body with respect to that audit report . . . ." Sarbanes-Oxley Act of 2002 (Public Company Accounting Reform and Investor Protection Act), Pub. L. No. 107-204 § 106(b).

15. In 2004, the Board posted Frequently Asked Questions to its website which stated, in part: "A registered firm's failure to cooperate with Board requests [for production of documents under Sarbanes-Oxley Section 106] may subject the firm to disciplinary sanctions, including substantial civil money penalties and revocation of the firm's registration. In the staff's view, if a firm fails to cooperate with the Board, the fact that the firm has not obtained a client consent that might be necessary (under non-U.S. law) to allow the firm to cooperate is not a defense to a disciplinary action for failure to cooperate."

16. Section 106(b)(1) of Sarbanes-Oxley, as amended by Dodd-Frank, states that: "[i]f a foreign public accounting firm performs material services upon which a registered public accounting firm relies in the conduct of an audit or interim review, issues an audit report, performs audit work, or conducts interim reviews, the foreign public accounting firm shall . . . produce the audit workpapers of the foreign public accounting firm and all other documents of the firm related to any such audit work or interim review to the Commission or the Board, upon request of the Commission or the Board . . . ."

2. Requests To DTTC

17. On or around April 16, 2004, DTTC[1] applied for registration with the Public Company Accounting Oversight Board (the "PCAOB" or "Board") as required by the Sarbanes-Oxley Act ("Sarbanes-Oxley"), 15 U.S.C. § 7212. The Board confirmed DTTC's registration as a foreign public accounting firm in a letter dated June 4, 2004. DTTC has remained registered with the Board since that time.

18. DTTC knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

19. DTTC knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. DTTC described possible conflicts of law in its April 16, 2004 PCAOB registration filing that included a legal opinion.

20. The Board's June 4, 2004 letter confirming DTTC's registration stated that, although DTTC had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Deloitte's registration . . . does not relieve Deloitte of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Deloitte associated persons. If Deloitte prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Deloitte despite the absence of a consent."

---

[1] On January 1, 2013, Deloitte Touche Tohmatsu Certified Public Accountants LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that Deloitte Touche Tohmatsu Certified Public Accountants LLP had succeeded to the registration status of its predecessor, Deloitte Touche Tohmatsu CPA Ltd.

21. In June 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, DTTC designated Deloitte & Touche LLP ("DTT US"), the United States member firm of DTT Global, as its agent for receiving service of document requests under Section 106. In so doing, DTTC confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

22. DTTC knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. DTTC also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained power to deny DTTC the privilege of appearing or practicing before the Commission to the extent DTTC willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

23. In the PCAOB reporting years 2010, 2011, 2012, and 2013, DTTC issued audit reports for thirty-two (32), forty-five (45), forty-five (45), and thirty-nine (39) U.S. issuers, respectively.

24. DTTC audited DTTC Client A's financial statements for the fiscal years ended December 31, 2008, 2009, and 2010. DTTC Client A remained DTTC's client as of April 2013.

25. Before April 9, 2010, the Division commenced an investigation into potential accounting fraud involving DTTC Client A, which Client A disclosed in a Form 6-K and accompanying press release filed with the Commission on June 1, 2010. In the press release, DTTC Client A announced that it was postponing the release of its full financial results for the quarter ended March 31, 2010 and its quarterly conference call, scheduled for June 2, as a result of the commencement of an investigation by the Audit Committee of DTTC Client A's Board of Directors. DTTC Client A disclosed that "the investigation was launched after the Company received a subpoena from the [Commission] requesting documents from [DTTC Client A] relating to, among other things, certain sales transactions in 2009."

26. On March 11, 2011, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [DTTC Client A] for the fiscal year ending December 31, 2009" (the "Client A Request").

27. By letter dated April 29, 2011, DTTC, through its U.S. counsel, responded to the Client A Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

28. In July 2011, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client A Request.

29. DTTC was engaged to audit the financial statements of Client G for the fiscal year ended June 30, 2010. In the course of this engagement, DTTC performed audit work on behalf of Client G related to the fiscal year ended June 30, 2010. DTTC did not issue any audit report with respect to Client G.

30. In 2010, Division staff opened an investigation involving Client G, which related to matters reported in a Form 8-K filed by Client G on September 13, 2010. Specifically, Client G reported that:

a. Client G had terminated DTTC's engagement as independent auditor effective September 6, 2010;

b. During the course of DTTC's audit of Client G for the fiscal year ended June 30, 2010, Client G had denied DTTC's request for permission to access original bank statements to verify the identity of certain individuals and entities;

c. Several "reportable events," as defined in Item 304(a)(1)(v) of Regulation S-K, occurred during DTTC's audit of Client G; and

d. Between September 6 and September 8, 2010, Client G's CEO, CFO, and several directors, including the Chair of its Audit Committee, all resigned their positions.

31. On February 14, 2012, the Division properly served on DTTC a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client G] for the fiscal year ended June 30, 2010" (the "Client G Request").

32. By letter dated April 17, 2012, DTTC, through its U.S. counsel, responded to the Client G Request. DTTC stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. DTTC did not include any of the requested audit workpapers or related documents with its response.

33. In April 2012, the Division issued to DTTC a Wells notice that the Division intended to recommend institution of proceedings against DTTC because, in the Division's view, DTTC had willfully refused to comply with the Client G Request.

34. On May 9, 2012 and December 3, 2012, the Commission instituted these proceedings against DTTC under Rule 102(e) based on DTTC's conduct with respect to the Client A Request and the Client G Request, respectively. DTTC did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

35. In 2013, DTTC provided documents related to DTTC Client A to the China Securities Regulatory Commission ("CSRC"), in response to a request that DTTC had received from the CSRC. In November 2013, DTTC audit workpapers concerning DTTC Client A were provided by the CSRC to the SEC.

36. In 2013, DTTC provided documents related to Client G to the CSRC, in response to a request that DTTC had received from the CSRC. In October 2013, DTTC audit workpapers and related documents concerning Client G were provided by the CSRC to the SEC.

3. Requests To EYHM

37. On or around May 25, 2004, EYHM[2] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed EYHM's registration as a foreign public accounting firm in a letter dated July 8, 2004. EYHM has remained registered with the PCAOB since that time.

38. EYHM knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

39. EYHM knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. EYHM described possible conflicts of law in its May 25, 2004 PCAOB registration filing that included a legal opinion.

40. The Board's July 8, 2004 letter confirming EYHM's registration stated that, although EYHM had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Ernst's registration . . . does not relieve Ernst of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Ernst's associated persons. If Ernst prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Ernst despite the absence of a consent."

41. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, EYHM designated Ernst & Young LLP ("EY US"), the United States member firm of EY Global, as its agent for receiving service of document requests under Section 106. In so doing, EYHM confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

42. EYHM knew at all relevant times that it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. EYHM also knew, no later than upon the enactment of Dodd-

[2] On September 3, 2012, Ernst & Young Hua Ming LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that Ernst & Young Hua Ming LLP had succeeded to the registration status of its predecessor, Ernst & Young Hua Ming Certified Public Accountants.

Frank, in 2010, and at all times subsequent, that that the Commission retained the power to deny EYHM the privilege of appearing or practicing before the Commission to the extent EYHM willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

43. In the PCAOB reporting years 2010, 2011, 2012, and 2013, EYHM issued audit reports for eleven (11), twenty-four (24), twenty-one (21), and twenty (20) U.S. issuers, respectively.

44. EYHM was engaged to audit the financial statements of Client B for the fiscal year ended December 31, 2010. In the course of this engagement, EYHM performed audit work on behalf of Client B related to the fiscal year ended December 31, 2010. EYHM did not issue an audit report on Client B's financial statements for the fiscal year ended December 31, 2010.

45. In March 2011, the Division opened an investigation into Client B. The investigation related to, among other things, public allegations of potential accounting fraud and misleading disclosures by Client B, including overstated revenues, falsified assets and customer relationships, and failure to disclose certain related party transactions.

46. On April 26, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client B] for the fiscal year ending December 31, 2010" (the "Client B Request").

47. By letter dated May 25, 2012, EYHM, through its U.S. counsel, responded to the Client B Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

48. In June 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client B Request.

49. EYHM audited Client C's financial statements for the fiscal year ended September 30, 2010.

50. By September 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client C. The investigation stemmed from a short seller report regarding Client C, and from a letter that EYHM submitted to the Commission, pursuant to Section 10A of the Exchange Act, upon its resignation as Client C's auditor in September 2011. The two primary subjects of the investigation were possible accounting fraud related to asset valuation, and embezzlement by Client C's chairman.

51. On February 2, 2012, the Division properly served on EYHM a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents

related to any audit work or interim reviews performed for [Client C] for the fiscal year ending September 30 , 2010 and subsequent periods" (the "Client C Request").

52. By letter dated April 4, 2012, EYHM, through its U.S. counsel, responded to the Client C Request. EYHM stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. EYHM did not include any of the requested audit workpapers or related documents with its response.

53. In April 2012, the Division issued to EYHM a Wells notice that the Division intended to recommend institution of proceedings against EYHM because, in the Division's view, EYHM had willfully refused to comply with the Client C Request.

54. On December 3, 2012, the Commission instituted these proceedings against EYHM under Rule 102(e) based on EYHM's conduct with respect to the Client B Request and the Client C Request. EYHM did not produce any documents responsive to either request to the Commission before the December 3, 2012 OIP.

55. In November 2013, EYHM audit workpapers and related documents concerning Client C were received by the Commission from the CSRC. In March 2014, EYHM audit workpapers and related documents concerning Client B were provided to the Commission by the CSRC.

4. Requests To KPMG Huazhen

56. On or around April 26, 2004, KPMG Huazhen[3] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The Board confirmed KPMG Huazhen's registration as a foreign public accounting firm in a letter dated July 13, 2004. KPMG Huazhen has remained registered with the Board since that time.

57. KPMG Huazhen knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

58. KPMG Huazhen knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. KPMG Huazhen described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

59. The Board's July 13, 2004 letter confirming KPMG Huazhen's registration stated that, although KPMG Huazhen had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of KPMG's registration . . . does not relieve KPMG of the obligation to cooperate in and comply with Board demands

[3] On August 14, 2012, KPMG Huazhen (Special General Partnership) filed with the Public Company Accounting Oversight Board a notification on Form 4 that KPMG Huazhen (Special General Partnership) had succeeded to the registration status of its predecessor, KPMG Huazhen.

(including for documents or testimony) and to enforce such cooperation and compliance by KPMG's associated persons. If KPMG prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to KPMG despite the absence of a consent."

60. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, KPMG Huazhen designated KPMG LLP ("KPMG US"), the United States member firm of KPMG International, as its agent for receiving service of document requests under Section 106. In so doing, KPMG Huazhen confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

61. KPMG Huazhen knew at all relevant times it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. KPMG Huazhen also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny KPMG Huazhen the privilege of appearing or practicing before the Commission to the extent KPMG Huazhen willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

62. In the PCAOB reporting years 2010, 2011, 2012, and 2013, KPMG Huazhen played a substantial role in the preparation or furnishing of audit reports filed with the SEC (as defined by PCAOB Rule 1001(p)(ii))[4] for twenty-four (24), twenty-three (23), twenty-five (25), and twenty-one (21) U.S. issuers, respectively.

63. KPMG Huazhen was engaged as a component auditor for Client D for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client D related to the fiscal year ended December 31, 2010.

64. By April 2011, the Division opened an investigation into potential accounting fraud at Client D. The investigation concerned allegations made in two short seller reports issued in March 2011, which claimed that Client D's financial statements reported false cash balances, overstated revenues, and failed to disclose a material related party transaction.

65. On February 6, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client D] for the fiscal year ending December 31, 2010" (the "Client D Request").

---

[4] PCAOB Rule 1001(p)(ii) defines "Play a Substantial Role in the Preparation or Furnishing of an Audit Report" to mean: "(1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer."

66. KPMG Huazhen was engaged as a component auditor for Client E for the fiscal year ended December 31, 2010. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit of Client E related to the fiscal year ended December 31, 2010, but did not complete the engagement.

67. By April 2011, Division staff opened an investigation into potential financial and accounting fraud at Client E. The investigation concerned issues raised in a Form 8-K that Client E filed in April 2011, which stated that Client E would be unable to file its Form 10-K on time because Client E's principal auditor had identified "unexplained issues regarding certain cash transactions and recorded sales."

68. On February 9, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client E] for the fiscal year ending December 31, 2010" (the "Client E Request").

69. KPMG Huazhen was engaged as a component auditor for Client F for the fiscal years ended December 31, 2008, and December 31, 2009. In the course of this engagement, KPMG Huazhen played a substantial role with respect to the audit reports Client F filed with the Commission related to the fiscal years ended December 31, 2008 and 2009.

70. Before February 2012, Division staff opened an investigation involving potential financial and accounting fraud at Client F. The investigation related to issues raised in a pair of disclosures made by Client F in early 2011:

a. In March 2011, Client F disclosed that it was conducting an internal investigation into "potentially serious discrepancies" in its financial statements for the year ended December 31, 2010, and

b. In May 2011, Client F disclosed that its principal auditor had resigned after identifying what they considered "potentially serious discrepancies and/or unexplained issues relating to [Client F]'s financial records," in response to which Client F failed to take adequate remedial action.

71. On February 3, 2012, the Division properly served on KPMG Huazhen a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit reports issued, audit work performed, or interim reviews conducted for [Client F] from January 1, 2008 to the present" (the "Client F Request").

72. By letter dated March 27, 2012, KPMG Huazhen, through its U.S. counsel, responded to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with any of the requested audit workpapers and related documents. KPMG Huazhen did not include any of the requested audit workpapers or related documents with its March 27 response.

73. In May 2012, the Division issued to KPMG Huazhen a Wells notice that the Division intended to recommend institution of proceedings against KPMG Huazhen because, in the Division's view, KPMG Huazhen had willfully refused to comply with the Client D Request, the Client E Request, and the Client F Request.

74. On December 3, 2012, the Commission instituted these proceedings against KPMG Huazhen under Rule 102(e) based on KPMG Huazhen's conduct with respect to the Client D Request, the Client E Request, and the Client F Request. KPMG Huazhen did not produce audit workpapers or related documents responsive to any of the requests to the Commission before the December 3, 2012 OIP.

5. Requests To PwC Shanghai

75. On or around April 26, 2004, PwC Shanghai[5] applied for registration with the PCAOB as required by Sarbanes-Oxley, 15 U.S.C. § 7212. The PCAOB confirmed PwC Shanghai's registration as a foreign public accounting firm in a letter dated July 13, 2004. PwC Shanghai has remained registered with the Board since that time.

76. PwC Shanghai knew when it registered with the PCAOB that the PCAOB or the SEC could request documents under Section 106, as originally enacted as part of Sarbanes-Oxley.

77. PwC Shanghai knew when it registered with the PCAOB that there were possible conflicts between its obligations under U.S. and Chinese law. PwC Shanghai described possible conflicts of law in its April 26, 2004 PCAOB registration filing that included a legal opinion.

78. The Board's July 13, 2004 letter confirming PwC Shanghai's registration stated that, although PwC Shanghai had not provided with its application a "Consent to Cooperate" with Board inspections and requests for documents, "the Board's approval of Pricewaterhouse's registration . . . does not relieve Pricewaterhouse of the obligation to cooperate in and comply with Board demands (including for documents or testimony) and to enforce such cooperation and compliance by Pricewaterhouse's associated persons. If Pricewaterhouse prepares or issues, or plays a substantial role in preparing or issuing, an audit report with respect to any issuer . . . U.S. law and the Board's rules impose cooperation and compliance requirements that apply to Pricewaterhouse despite the absence of a consent."

79. In March 2011, pursuant to Sarbanes-Oxley Section 106(d), as amended by Dodd-Frank, PwC Shanghai designated PricewaterhouseCoopers LLP ("PwC US"), the United States member firm of PwCIL, as its agent for receiving service of document requests under Section 106. In so doing, PwC Shanghai confirmed its understanding that the PCAOB or the SEC could request documents under Section 106.

---

[5] On July 8, 2013, PricewaterhouseCoopers Zhong Tian LLP filed with the Public Company Accounting Oversight Board a notification on Form 4 that PricewaterhouseCoopers Zhong Tian LLP had succeeded to the registration status of its predecessor, PricewaterhouseCoopers Zhong Tian CPAs Limited Company.

80. PwC Shanghai knew at all relevant times it was possible that it could not, consistent with Chinese law, produce documents directly to the SEC in response to requests for documents under Sarbanes-Oxley Section 106. PwC Shanghai also knew, no later than upon the enactment of Dodd-Frank, in 2010, and at all times subsequent, that the Commission retained the power to deny PwC Shanghai the privilege of appearing or practicing before the Commission to the extent PwC Shanghai willfully refused to comply with requests for documents under Sarbanes-Oxley Section 106.

81. In the PCAOB reporting years 2010, 2011, 2012, and 2013, PwC Shanghai issued audit reports for seventeen (17), twenty-seven (27), thirty-one (31), and twenty-three (23) U.S. issuers, respectively.

82. PwC Shanghai was engaged to audit the financial statements of Client H for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client H related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client H.

83. By March 2011, the Division opened an investigation into potential accounting fraud at Client H. The investigation concerned public allegations of accounting fraud and market manipulation at Client H. Certain internet reports alleged, among other things, that Client H overstated revenue and earnings by accounting for lease revenues upfront instead of recognizing this revenue over the duration of the leases, and that there were discrepancies between Client H's cash flow and reported net income.

84. On February 8, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work or interim reviews performed for [Client H] for the fiscal year ending December 31, 2010" (the "Client H Request").

85. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client H Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

86. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client H Request.

87. PwC Shanghai was engaged to audit the financial statements of Client I for the fiscal year ended December 31, 2010. In the course of this engagement, PwC Shanghai performed audit work on behalf of Client I related to the fiscal year ended December 31, 2010. PwC Shanghai did not issue any audit report with respect to Client I.

88. By March 2011, Division staff opened an investigation involving potential financial and accounting fraud at Client I. The investigation focused on potential accounting irregularities, undisclosed related party transactions, misappropriation of corporate assets, and market manipulation.

89. On March 22, 2012, the Division properly served on PwC Shanghai a Commission request under Section 106 for the production of "[a]ll audit work papers and all other documents related to any audit work performed for [Client I] for the fiscal year ending December 31, 2010" (the "Client I Request").

90. By letter dated April 12, 2012, PwC Shanghai, through its U.S. counsel, responded to the Client I Request. PwC Shanghai stated in the letter that the laws and regulations of the PRC prohibited the firm from providing the SEC directly with the requested audit workpapers and related documents. PwC Shanghai did not include any of the requested audit workpapers or related documents with its response.

91. In April 2012, the Division issued to PwC Shanghai a Wells notice that the Division intended to recommend institution of proceedings against PwC Shanghai because, in the Division's view, PwC Shanghai had willfully refused to comply with the Client I Request.

92. On December 3, 2012, the Commission instituted these proceedings against PwC Shanghai under Rule 102(e) based on PwC Shanghai's conduct with respect to the Client H Request and the Client I Request. PwC Shanghai did not produce audit workpapers and related documents responsive to either request to the Commission before the December 3, 2012 OIP.

93. In November 2013, PwC Shanghai produced audit workpapers and related documents concerning Client I to the CSRC, in response to a request that PwC Shanghai had received from the CSRC. In March 2014, PwC Shanghai audit workpapers and related documents concerning Client I were provided by the CSRC to the SEC.

ANNEX B

UNITED STATES OF AMERICA
Before the
SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No.

ACCOUNTING AND AUDITING ENFORCEMENT
Release No.

ADMINISTRATIVE PROCEEDING
File Nos. 3-14872, 3-15116

In the Matter of **BDO China Dahua CPA Co., Ltd.;** **Deloitte Touche Tohmatsu Certified Public Accountants Ltd.;** **Ernst & Young Hua Ming LLP;** **KPMG Huazhen (Special General Partnership);** **PricewaterhouseCoopers Zhong Tian CPAs Limited** **Respondents.**	**ORDER MAKING FINDINGS AND PARTIALLY DENYING [NAME OF SETTLING RESPONDENT] THE PRIVILEGE OF PRACTICING OR APPEARING BEFORE THE SECURITIES AND EXCHANGE COMMISSION**

I.

The Securities and Exchange Commission ("Commission") issues this Order Making Findings And Partially Denying [Name of Settling Respondent] The Privilege of Practicing Or Appearing Before The Securities and Exchange Commission ("Partial Bar Order") pursuant to the Offer of Settlement submitted by [Name of Settling Respondent], which was accepted by the Commission in its Order on the Basis of Offers of Settlement of Certain Respondents Implementing Settlement on [MONTH, DAY], 2015 (the "Settlement Order").

II.

Respondent [Name of Settling Respondent ("[Short Form of Settling Respondent's Name – DTTC, EYHM, KPMG Huazhen, or PwC Shanghai]" or "Respondent")] admits the Commission's jurisdiction over it in, and over the subject matter of, this proceeding and any proceeding to enforce or that seeks to challenge this Partial Bar Order or the Settlement Order. In addition, Respondent [Short Form of Settling Respondent's Name] consents to the entry of this Partial Bar Order, as set forth below.

III.

On the basis of this Partial Bar Order, Respondent [Short Form of Settling Respondent's Name]'s Offer of Settlement, the Settlement Order, and Rule 102(e) of the Commission's Rules of Practice, the Commission finds that:

1. [Insert one of the following paragraphs as appropriate:

> As of the date of the Settlement Order, DTTC was a special general partnership providing audit and professional services in the People's Republic of China ("China"). DTTC was located in Shanghai, China, and was a member firm of Deloitte Touche Tohmatsu Limited ("DTT Global"), a UK private company limited by guarantee. DTTC was a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.
>
> As of the date of the Settlement Order, KPMG Huazhen was a special general partnership providing audit and professional services in the People's Republic of China ("China"). KPMG Huazhen was located in Beijing, China, and was a member firm of KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Huazhen was a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.
>
> As of the date of the Settlement Order, EYHM was a special general partnership providing audit and professional services in the People's Republic of China ("China"). EYHM was headquartered in Beijing, China, and was a member firm of Ernst & Young Global Limited ("EY Global"), a UK private company limited by guarantee. EYHM was a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.
>
> As of the date of the Settlement Order, PwC Shanghai was a special general partnership providing audit and professional services in the People's Republic of China ("China"). PwC Shanghai was headquartered in Shanghai, China, and was a member firm of PricewaterhouseCoopers International Limited ("PwCIL"), a UK private company limited by guarantee. PwC Shanghai was

a foreign public accounting firm as defined by Section 106 of Sarbanes-Oxley.]

2. The Settlement Order provides, *inter alia*, that the Commission's Division of Enforcement ("Division"), for a period of four years from the date of the Settlement Order, may issue requests for assistance to the China Securities Regulatory Commission ("CSRC")[1] under international sharing mechanisms with respect to Respondent's audit workpapers and related documents. The Settlement Order also provides that, on or about the date on which such a request for assistance is sent, the SEC or the Division will do one or both of the following: (A) issue a new request under Section 106 of Sarbanes-Oxley, as amended by Section 929J of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank") ("Section 106"), to Respondent through its designated U.S. agent, subject to certain conditions set forth in the Settlement Order; and/or (B) provide Respondent with notice of the request for assistance that was sent to the CSRC, specifying the documents sought by the Division. *See* Settlement Order, Section III.J, Paragraph 2(i).

3. The Settlement Order further provides, *inter alia*, that:

   i. Within ninety (90) days of receipt of such a request or within forty-five (45) days from the date Respondent receives the first corresponding request from the CSRC, whichever is later, Respondent will provide the Division with an initial declaration ("initial declaration") which states that Respondent has produced all responsive documents, accompanied by an index describing such documents, to the CSRC for production to the SEC, subject to specific exceptions and conditions as set forth in the Settlement Order. *See* Settlement Order, Section III.J, Paragraphs 2(ii)(A)-(B).

   ii. Within ten (10) days of the SEC notifying Respondent that production from the CSRC to the SEC has occurred, Respondent will provide the Division directly with a certification that it has provided to the CSRC all documents responsive to the CSRC's corresponding request except information set forth on a privilege log, and, where applicable, that it has proposed (subject to the CSRC's review) that documents (or portions of documents) set forth on the withholding log should be withheld under Chinese law governing state sensitive information or state secrets, or for any other reason under Chinese law ("certification of completeness"). *See* Settlement Order, Section III.J, Paragraph 2(ii)(C).

[1] References to the CSRC in the Settlement Order mean the CSRC and/or such other Chinese authority/ies as may be charged from time to time by the Chinese government with liaising with the SEC on matters of cross-border information-sharing and cooperation.

iii. If Respondent does not provide the initial declaration as required by the Settlement Order, or if Respondent does not provide the certification of completeness as required by the Settlement Order, the Division shall notify Respondent of the failure and give Respondent twenty (20) days to cure the failure. If, within twenty (20) days of the request for cure by the Division, the Respondent does not provide the initial declaration or the certification of completeness as required by the Settlement Order, the Commission, in its sole discretion, and without regard to the procedures set forth in Rule 5(c) of SEC's Informal and Other Procedures, 17 C.F.R. § 202.5(c), may determine that the relevant Settling Respondent has not complied with its obligations under the Settlement Order and thereupon enter, without further notice, this Partial Bar Order. *See* Settlement Order, Section III.J, Paragraph 3.

4. On [date of request], the SEC or the Division issued a Section 106 request and/or notice of a request for assistance to the CSRC for audit workpapers and related documents of Respondent [Short Form of Settling Respondent's Name], in connection with a Division investigation, [investigation matter number].

5. The Commission, in its sole discretion, has determined that Respondent failed to provide an initial declaration required by the Settlement Order, or that Respondent failed to provide a certification of completeness as required by the Settlement Order, and did not cure such failure within twenty (20) days of a request for cure by the Division. Thus, in accordance with Paragraph 3 of Section III.J of the Settlement Order, the Commission, in its sole discretion, has determined that Respondent has not complied with its obligations under the Settlement Order.

FINDINGS

6. Based on the foregoing, the Commission finds that Respondent has violated its obligations under Paragraphs 2 and 3 of Paragraph III.J of the Settlement Order.

IV.

In view of the foregoing, the Commission deems it appropriate to impose on Respondent [Short Form of Settling Respondent's Name] the remedy agreed to in [Short Form of Settling Respondent's Name] Offer of Settlement, and required by the Settlement Order.

Accordingly, pursuant to Rule 102(e) of the Commission's Rules of Practice, Respondent [Short Form of Settling Respondent's Name]'s Offer of Settlement, and the Settlement Order, it is hereby ORDERED that Respondent [Short Form of Settling Respondent's Name] is partially denied the privilege of practicing or appearing before the Commission for a period of 180 days commencing on [the date of this Partial Bar Order *OR* the day immediately following expiration of the last Partial Bar Order imposed on Settling Respondent under the Settlement Order, if any], as follows:

A. Respondent is prohibited from issuing an audit report, or otherwise serving as a principal auditor, for any issuer (as defined in Section 2(a)(7) of Sarbanes-Oxley); and

B. Respondent is prohibited from playing a 50% or greater role in the preparation or furnishing of an audit report for any issuer, meaning the respondent is prohibited from performing:

1. Audit work that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, where the engagement hours or fees for such services constitute 50% or more of the total engagement hours or fees, respectively, provided by the principal auditor in connection with the issuance of all or part of its audit report with respect to any issuer; and

2. The majority of audit work with respect to a subsidiary or component of any issuer, the assets or revenues of which constitute 50% or more of the consolidated assets or revenues of the issuer.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4022 / February 6, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16376

In the Matter of **JOHN A. GERINGER,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 203(f) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 203(f) of the Investment Advisers Act of 1940 ("Advisers Act") against John A. Geringer ("Geringer" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, Respondent admits the Commission's jurisdiction over him and the subject matter of these proceedings, and the findings contained in Sections III.2. and III.4. below, and consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 203(f) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. Geringer is the sole member of GLR Advisors, LLC ("GLR Advisors"), which was registered as an investment adviser with the State of California from 2003 to 2013. Geringer, 50 years old, is a resident of Santa Cruz, California.

2. On February 3, 2015, a final judgment was entered by consent against Geringer and GLR Advisors, permanently enjoining them from future violations of Section 17(a) of the Securities Act of 1933, Sections 10(b) and 26 of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder, and Sections 206(1), 206(2), and 206(4) of the Advisers Act and Rule 206(4)-8 thereunder, in the civil action entitled Securities and Exchange Commission v. GLR Capital Management, LLC, et al., Civil Action Number 12-CV-2663, in the United States District Court for the Northern District of California.

3. The Commission's complaint alleged that since at least 2005, Geringer raised in excess of $60 million from investors by misrepresenting the performance and strategy of a private investment fund he managed, the GLR Growth Fund, L.P. (the "Fund"), based in Scotts Valley, California. The complaint further alleged that Geringer and GLR Advisors acted as investment advisers to the Fund and sent investors false account statements making it seem like the Fund was generating returns from successful investments when, in fact, it was suffering losses. The complaint also alleged that Geringer falsified brokerage account records to conceal his fraud, and that Geringer and GLR Advisors sent account statements to investors falsely claiming that the Fund investments were "SEC Approved."

4. On June 4, 2014, Geringer pled guilty to one count each of conspiracy to commit mail and wire fraud in violation of Title 18 United States Code, Section 1349; mail fraud in violation of Title 18 United States Code, Section 1341; and securities fraud in violation of Title 15 United States Code, Section 78j(b) and 17 Code of Federal Regulations, Section 240.10b-5 before the United States District Court for the Northern District of California, in United States v. John Geringer, Criminal Action Number CR-12-0888-EJD.

5. The counts of the criminal indictment to which Geringer plead guilty alleged, inter alia, that Geringer sent misleading account statements to Fund investors through the United States Postal Service, and that he misled investors as to how the Fund's assets were being invested.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent Geringer's Offer.

Accordingly, it is hereby ORDERED pursuant to Section 203(f) of the Advisers Act, that Respondent Geringer be, and hereby is barred from association with any investment adviser, broker, dealer, municipal securities dealer, municipal advisor, transfer agent, or nationally recognized statistical rating organization.

Any reapplication for association by the Respondent will be subject to the applicable laws and regulations governing the reentry process, and reentry may be conditioned upon a number of factors, including, but not limited to, the satisfaction of any or all of the following: (a) any disgorgement ordered against the Respondent, whether or not the Commission has fully or partially waived payment of such disgorgement; (b) any arbitration award related to the conduct that served as the basis for the Commission order; (c) any self-regulatory organization arbitration award to a customer, whether or not related to the conduct that served as the basis for the Commission order; and (d) any restitution order by a self-regulatory organization, whether or not related to the conduct that served as the basis for the Commission order.

INVESTMENT ADVISERS ACT OF 1940
Release No. 4023 / February 6, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16377

In the Matter of

GLR ADVISORS, LLC,

Respondent.

ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 203(e) OF THE INVESTMENT ADVISERS ACT OF 1940, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 203(e) of the Investment Advisers Act of 1940 ("Advisers Act") against GLR Advisors, LLC ("GLR Advisors" or "Respondent").

II.

In anticipation of the institution of these proceedings, Respondent has submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over it and the subject matter of these proceedings and the findings contained in Section III.2. below, which are admitted, Respondent consents to the entry of this Order Instituting Administrative Proceedings Pursuant to Section 203(e) of the Investment Advisers Act of 1940, Making Findings, and Imposing Remedial Sanctions ("Order"), as set forth below.

III.

On the basis of this Order and Respondent's Offer, the Commission finds that:

1. John A. Geringer ("Geringer") is the sole member of GLR Advisors, which was registered as an investment adviser with the State of California from 2003 to 2013. Geringer, 50 years old, is a resident of Santa Cruz, California.

2. On February 3, 2015, a final judgment was entered by consent against Geringer and GLR Advisors, permanently enjoining them from future violations of Section 17(a) of the Securities Act of 1933, Sections 10(b) and 26 of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder, and Sections 206(1), 206(2), and 206(4) of the Advisers Act and Rule 206(4)-8 thereunder, in the civil action entitled Securities and Exchange Commission v. GLR Capital Management, LLC, et al., Civil Action Number 12-CV-2663, in the United States District Court for the Northern District of California.

3. The Commission's complaint alleged that since at least 2005, Geringer raised in excess of $60 million from investors by misrepresenting the performance and strategy of a private investment fund he managed, the GLR Growth Fund, L.P. (the "Fund"), based in Scotts Valley, California. The complaint further alleged that Geringer and GLR Advisors acted as investment advisers to the Fund and sent investors false account statements making it seem like the Fund was generating returns from successful investments when, in fact, it was suffering losses. The complaint also alleged that Geringer falsified brokerage account records to conceal his fraud, and that Geringer and GLR Advisors sent account statements to investors falsely claiming that the Fund investments were "SEC Approved."

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondent GLR Advisors' Offer.

Accordingly, it is hereby ORDERED pursuant to Section 203(e) of the Advisers Act, that Respondent GLR Advisors be, and hereby is censured.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION
(Release No. 34-74223; File No. 4-668)

February 6, 2015

Joint Industry Plan; Notice of Amendment to the National Market System Plan Governing the Process of Selecting a Plan Processor and Developing a Plan for the Consolidated Audit Trail by BATS Exchange, Inc., BATS-Y Exchange, Inc., BOX Options Exchange LLC, C2 Options Exchange, Incorporated, Chicago Board Options Exchange, Incorporated, Chicago Stock Exchange, Inc., EDGA Exchange, Inc., EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., International Securities Exchange, LLC, ISE Gemini, LLC, Miami International Securities Exchange LLC, NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, The NASDAQ Stock Market LLC, National Stock Exchange, Inc., New York Stock Exchange LLC, and NYSE MKT LLC, NYSE Arca, Inc.

I. Introduction

Pursuant to Section 11A of the Securities Exchange Act of 1934 ("Act")[1] and Rule 608 thereunder[2], notice is hereby given that, on December 12, 2014, BATS Exchange, Inc., BATS-Y Exchange, Inc., BOX Options Exchange LLC, C2 Options Exchange, Incorporated, Chicago Board Options Exchange, Incorporated, Chicago Stock Exchange, Inc., EDGA Exchange, Inc., EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., International Securities Exchange, LLC, ISE Gemini, LLC, Miami International Securities Exchange LLC, NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, The NASDAQ Stock Market LLC, National Stock Exchange, Inc., New York Stock Exchange LLC, NYSE MKT LLC, and NYSE Arca, Inc. (collectively, "SROs" or "Participants"), filed with the Securities and Exchange Commission (the "Commission") a proposal to amend the Plan Governing the Process of Selecting a Plan Processor and Developing a Plan for the Consolidated Audit Trail (the "Selection Plan").

---

1 15 U.S.C. 78k-1.

2 17 CFR 242.608.

II. Background

On July 11, 2012, the Commission adopted Rule 613 to require the SROs to jointly submit a national market system ("NMS") plan to create, implement, and maintain a consolidated audit trail ("CAT NMS Plan").[3] To facilitate the development of the consolidated audit trail, following the adoption of Rule 613, the SROs created a working group consisting of representatives from each SRO. The SROs also decided to engage in a request for proposal ("RFP") process to help them develop the CAT NMS Plan and to solicit bids ("Bids[4]") for the role of Plan Processor to build, operate, administer, and maintain the consolidated audit trail.[5] In addition, on September 3, 2013, the SROs filed, for approval, the Selection Plan to govern how the SROs would proceed with formulating and submitting the CAT NMS Plan—and, as part of that process, how the SROs would review, evaluate, and narrow down the Bids submitted in response to the RFP—and ultimately selecting the Plan Processor.[6] The Selection Plan was approved on February 21, 2014.[7]

The SROs propose to amend the Selection Plan in two ways. First, the SROs propose to provide opportunities to accept revised Bids prior to approval of the CAT NMS Plan, and second, to allow the list of Shortlisted Bids to be narrowed prior to Commission approval of the CAT NMS Plan. A copy of the proposed amendment to the Selection Plan is attached as Exhibit

3 Securities Exchange Act Release No. 67457 (July 18, 2012), 77 FR 45722 (August 1, 2012).

4 Pursuant to Section I(C) of the Selection NMS Plan, a "Bid" is a proposal submitted by a Bidder in response to the RFP.

5 See Securities Exchange Act Release No. 70892 (Nov. 15, 2013), 78 FR 69910 (Nov. 21, 2013)(Notice of Selection NMS Plan).

6 Id.

7 See Securities Exchange Act Release No. 71596 (Feb. 21, 2014), 79 FR 11152 (Feb. 27, 2014)(Approval Order).

A hereto. The Commission is publishing this notice to solicit comments from interested persons on the proposed amendment to the Selection Plan.

III. Description of the Plan

Set forth in this Section II is the statement of the purpose of the Selection Plan, along with the information required by Rule 608(a)(4) and (5) under the Exchange Act,[8] prepared and submitted by the SROs to the Commission.[9]

A. Background

The Selection Plan governs the process for Participant review of Bids for the role of Plan Processor for the CAT NMS Plan, the procedures for evaluating the Bids, and ultimately, until approval of the CAT NMS Plan, the selection of the Plan Processor. The CAT NMS Plan was filed with the Commission for approval on September 30, 2014.

After gaining experience with the development process for the CAT NMS Plan, the Participants believe it is necessary to amend the Selection Plan to ensure that the Participants will be able to choose a Plan Processor within the timeframe provided in the Selection Plan and Rule 613. The Participants propose amending the Selection Plan to (1) provide for additional opportunities to accept revised Bids and (2) allow the set of Shortlisted Bids to be narrowed prior to Commission approval of the CAT NMS Plan.

1. The Selection Plan Currently Allows Bid Revisions Only Following CAT NMS Plan Approval, and Does Not Allow for Narrowing of the Set of Shortlisted Bids

Under the Selection Plan, Shortlisted Bidders are only eligible to revise Bids following Commission approval of the CAT NMS Plan. The Selection Plan specifies that, following

---

8 See 17 CFR 242.608(a)(4) and (a)(5).

9 See Letter from the Participants to Brent J. Fields, Secretary, Commission, dated December 12, 2014.

approval of the CAT NMS Plan by the SEC, Shortlisted Bidders for the role of Plan Processor may be permitted to revise their Bids based on the provisions in the approved CAT NMS Plan, including further discussions if determined to be necessary by the Selection Committee described in the Selection Plan.[10] The Selection Plan provides that a Shortlisted Bidder will be permitted to revise its Bid only upon approval by a majority of the Selection Committee, subject to certain recusal provisions in the Selection Plan, that revisions are necessary or appropriate in the light of the content of the Shortlisted Bidder's initial Bid and the provisions in the approved CAT NMS Plan.[11]

The Selection Plan also requires that selection of the Plan Processor occur from among the initial set of Shortlisted Bids.[12] Under the current Selection Plan, the Participants are not permitted to narrow the list of Shortlisted Bids determined pursuant to Section VI(B) of the Selection Plan.

2. Allowing Revision(s) of Bids In Light of Additional Information Available to Shortlisted Bidders and Providing for Narrowing the Set of Shortlisted Bidders Will Allow the Participants to Select the Plan Processor More Effectively and Efficiently Within the Rule 613 Timeframe

The Participants believe that providing the Shortlisted Bidders with an additional opportunity or opportunities to revise their Bids prior to the approval of the CAT NMS Plan is critical to the timely and considered selection of the Plan Processor. Since the Bidders submitted their Bids, the Participants have expended substantial effort in analyzing potential solutions for the consolidated audit trail ("CAT") by gathering and evaluating data and information from a variety of market participants, including Bidders, broker-dealers, vendors, regulators and others.

10 See 78 FR 69910 at 69917.

11 Id.

12 Id. at 69917-18.

As a result, since the original Bid date, the Participants have made substantial strides in identifying characteristics of an optimal solution and formalizing these determinations in the proposed CAT NMS Plan and related technical documents. Given the development of the requirements for an optimal solution for the CAT, the Participants believe that waiting until after the approval of the CAT NMS Plan to permit the Shortlisted Bidders to revise their Bids will shortchange the Bid process to the detriment of the final plan. Moreover, given the passage of time since the original Bids, Bidders have indicated that new technological and other beneficial solutions are now available that may further improve the Bids, and, ultimately, the proposed solutions.

In addition, the Participants believe that delaying the Bid revision process until after the approval of the CAT NMS Plan will prevent Bidders from submitting, and the Participants from adequately reviewing the most relevant, informative and fulsome Bids before selecting a Plan Processor. Specifically, Rule 613(a)(2)(i) requires the Participants to select the Plan Processor within two months after effectiveness of the CAT NMS Plan. The Participants anticipate permitting the Shortlisted Bidders to revise their Bids, pursuant to Section VI(D) of the Selection Plan, after approval of the CAT NMS Plan, if there are substantial changes to the CAT NMS Plan before the CAT NMS Plan is approved by the Commission. Therefore, the Participants will have only a short time period of two months to analyze the Shortlisted Bids – Bids that are likely to have substantial revisions after the approval of the CAT NMS Plan for the reasons discussed above. Given the very large amount of information to digest in the revised Bids and the importance of appropriately analyzing such information, the Participants do not believe that two months will be sufficient to select the Plan Processor given the limitations of the current Selection Plan. However, if the Shortlisted Bidders are able to revise their Bids to reflect the provisions of the proposed CAT NMS Plan and any draft technical materials, as well as any new technology or other relevant developments, prior to the approval of the CAT NMS Plan, then the Participants believe that they will be able to select the Plan Processor within the time limits imposed by Rule 613 in a more thoughtful and deliberative manner.

In addition, the Participants believe that providing the Selection Committee the discretion to further reduce the number of Shortlisted Bids, either before or after any revisions to Shortlisted Bids are accepted, would also facilitate the selection of the Plan Processor within the time limits imposed by Rule 613. Allowing the Selection Committee to reduce the number of Shortlisted Bids before approval of the CAT NMS Plan could allow the Participants to more efficiently select the Plan Processor by focusing attention on a more refined set of options during the limited two month time period for selection following approval of the CAT NMS Plan.

B. Requirements Pursuant to Rule 608(a)

1. Description of the Amendments to the Selection Plan

The Participants propose amending the Selection Plan to permit the Shortlisted Bidders to revise their Bids one or more times prior to approval of the CAT NMS Plan if the Selection Committee determines, by majority vote, subject to the applicable recusal provisions, that such revisions are necessary and appropriate. The proposed amendment would not affect Section VI(D) of the Selection Plan, which allows for revisions to Shortlisted Bids following Commission approval of the CAT NMS Plan.

The Participants also propose amending the Selection Plan to provide the Selection Committee discretion to narrow the set of Shortlisted Bids prior to approval of the CAT NMS Plan. Specifically, the proposed amendment would authorize another round of voting to narrow the set of Shortlisted Bids. This round of voting, which could occur either before or after any revisions to Shortlisted Bids are accepted, would be commenced upon at least a two-thirds vote of the Selection Committee, and would proceed in a manner similar to the initial round for voting for the Shortlisted Bids. Each Voting Senior Officer would choose a first, second, and third choice Shortlisted Bid, with each choice receiving a weight of, respectively, three points, two points, and one point. The three bids receiving the highest cumulative number of points would constitute the new set of Shortlisted Bids. In the event of a tie that would result in more than three final Shortlisted Bids, the votes would be recounted, excluding each Voting Senior Officer's third choice. The three Shortlisted Bids receiving the largest number of cumulative votes in this recount would be the new Shortlisted Bids. If this recount were to result in a tie leading to a larger or equal number of final Shortlisted Bids than the initial count, the results of the initial count would constitute the new set of Shortlisted Bids. The proposed amendment also includes, for the sake of clarity, a provision ensuring that at least one Non-SRO Bid is included in the narrowed set of Shortlisted Bids. The individual scores and rankings under any vote to narrow the list of Shortlisted Bids shall be kept confidential.

Finally, the proposed amendment includes provisions with respect to the recusal of Participants that also are Shortlisted Bidders. Under this proposed provision, no Bidding Participant shall vote in the process narrowing the set of Shortlisted Bidders, if a Bid submitted by or including the Participant or an Affiliate of the Participant is a Shortlisted Bid.

2. Governing or Constituent Documents

Not applicable.

3. Implementation of Amendment

The terms of the proposed amendments will be operative immediately upon approval of the amendments by the Commission.

4. Development and Implementation Phases

Not applicable.

5. Analysis of Impact on Competition

The proposed amendments do not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act. The SROs believe that the amendments are reasonably designed to help assure that the SROs receive more updated and informed submissions from Shortlisted Bidders before the CAT NMS Plan is finalized, thereby helping to assure that the selection of the Plan Processor for the CAT NMS Plan proceeds efficiently within the timeframe provided by Rule 613. Moreover, the SROs believe that the amended process will facilitate the development of an audit trail that maximizes its regulatory utility while minimizing unnecessary costs, to the benefit of all market participants. Furthermore, providing the ability to narrow the list of Bidders at an earlier stage will prevent Bidders whose Bids are unlikely to be selected from misallocating their resources toward the further development of their Bid.

6. Written Understanding or Agreements Relating to Interpretation of, or Participation in, Plan.

Not applicable.

7. Statement that the Amendments Have Been Approved by the Plan Sponsors

The Selection Plan provides that amendments to the Selection Plan shall be effected by means of a written amendment that: (1) sets forth the change, addition, or deletion; (2) is executed by over two-thirds of the Participants; and (3) is approved by the SEC pursuant to Rule 608, or otherwise becomes effective under Rule 608.[13]

[13] 17 CFR 242.608.

The proposed amendments have been executed by eighteen of the Participants, and have consequently been approved by the SROs. One Participant which is also a Shortlisted Bidder, abstained from the decision whether to adopt these amendments to avoid potential conflicts of interest.

8. Terms and Conditions of Access

Not applicable.

9. Method of Determination and Imposition, and Amount of, Fees and Charges

Not applicable.

10. Method and Frequency of Processor Evaluation

Not applicable.

11. Dispute Resolution

Not applicable.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the Amendment to the Plan is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic comments:

- Use the Commission's Internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an e-mail to rule-comments@sec.gov. Please include File Number 4-668 on the subject line.

Paper comments:

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090.

All submissions should refer to File Number 4-668. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet website (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the Amendment to the Plan that are filed with the Commission, and all written communications relating to the Amendment to the Plan between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between 10:00 a.m. and 3:00 p.m. Copies of the filing will also be available for inspection and copying at the Participants' principal offices. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number 4-668 and should be submitted on or before [insert date 30 days from publication in the Federal Register].

By the Commission.

Brent J. Fields
Secretary

PROPOSED AMENDMENT TEXT

Plan Processor Evaluation and Selection Plan

I. Definitions

* * * * *

(X) "Shortlisted Bid" means a Bid submitted by a Qualified Bidder and selected as a Shortlisted Bid by the Selection Committee pursuant to Section VI(B) and, if applicable, pursuant to Section VI(C)(3) of the Plan.

* * * * *

III. Operating Committee

* * * * *

(E) Conflicts and Recusals

A Participant may recuse itself from voting on any matter under consideration by the Operating Committee if the Participant determines that voting on such matter raises a conflict of interest. Except as provided in Sections V(B)(2), ~~and~~ V(B)(3), and V(B)(4) of the Plan, no Participant is automatically recused from voting on any matter.

* * * * *

V. Selection Committee

* * * * *

(B) Voting

* * * * *

(2) No Bidding Participant shall vote on whether a Shortlisted Bidder will be permitted to revise its Bid pursuant to Section VI(C)(2) or Section VI(D)(1) below if a Bid submitted by or including the Participant or an Affiliate of the Participant is a Shortlisted Bid.

(3) No Bidding Participant shall vote in the process narrowing the set of Shortlisted Bidders as set forth in Section VI(C)(3) if a Bid submitted by or including the Participant or an Affiliate of the Participant is a Shortlisted Bid.

(4) No Bidding Participant shall vote in the second round set forth in Section VI(E)(4) below if a Bid submitted by or including the Participant or an Affiliate of the Participant is part of the second round.

(5) All votes by the Selection Committee shall be confidential and non-public. All such votes will be tabulated by an independent third party approved by the Operating Committee, and a Participant's individual votes will not be disclosed to other Participants or to the public.

* * * * *

VI. RFP Bid Evaluation and Plan Processor Selection

* * * * *

(C) Formulation of the CAT NMS Plan

(1) The Selection Committee shall review the Shortlisted Bids to identify optimal proposed solutions for the consolidated audit trail and provide descriptions of such proposed solutions for inclusion in the CAT NMS Plan. This process may, but is not required to, include iterative discussions with Shortlisted Bidders to address any aspects of an optimal proposed solution that were not fully addressed in a particular Bid.

(2) Prior to the approval of the CAT NMS Plan, all Shortlisted Bidders will be

permitted to revise their Bids one or more times if the Selection Committee determines, by majority vote, that such revision(s) are necessary or appropriate.

(3) Prior to approval of the CAT NMS Plan, and either before or after any revisions to Shortlisted Bids are accepted, the Selection Committee may determine, by at least a two-thirds vote, to narrow the number of Shortlisted Bids to three Bids, in accordance with the process in this Paragraph (C)(3).

(a) Each Voting Senior Officer shall select a first, second, and third choice from among the Shortlisted Bids.

(b) A weighted score shall be assigned to each choice as follows:

- First—3 points
- Second—2 points
- Third—1 point

(c) The three Shortlisted Bids receiving the highest cumulative scores will be the new set of Shortlisted Bids.

(d) In the event of a tie that would result in more than three final Shortlisted Bids, the votes shall be recounted, omitting each Voting Senior Officer's third choice, in order to break the tie. If this recount produces a tie that would result in a number of final Shortlisted Bids larger than or equal to that from the initial count, the results of the initial count shall constitute the final set of Shortlisted Bids.

(e) To the extent there are Non-SRO Bids that are Shortlisted Bids, the final Shortlisted Bids selected pursuant to this Section VI(C)(3) must, if possible, include at least one Non-SRO Bid. If following the vote set forth in this Section VI(C)(3), no Non-SRO Bid was selected as a final Shortlisted Bid, the Non-SRO Bid receiving the highest cumulative votes shall be retained as a Shortlisted Bid.

(f) The third party tabulating votes, as specified in Section V(B)(5), shall identify to the Selection Committee the new set of Shortlisted Bids, but shall keep confidential the individual scores and rankings of the Shortlisted Bids from the process in this Paragraph (C)(3).

(4) The Participants shall incorporate information on optimal proposed solutions in the CAT NMS Plan, including cost-benefit information as required by SEC Rule 613.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74226 / February 6, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16378

In the Matter of **MOUNTAIN SHARE TRANSFER, LLC and ERIK STERLING NELSON,** **Respondents.**	**ORDER INSTITUTING ADMINISTRATIVE AND CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTIONS 17A(c) AND 21C OF THE SECURITIES EXCHANGE ACT OF 1934, MAKING FINDINGS, AND IMPOSING REMEDIAL SANCTIONS AND A CEASE-AND-DESIST ORDER**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative and cease-and-desist proceedings be, and hereby are, instituted against Mountain Share Transfer, LLC ("MST") and Erik Sterling Nelson (collectively, "Respondents") pursuant to Sections 17A(c) and 21C of the Securities Exchange Act of 1934 ("Exchange Act").

II.

In anticipation of the institution of these proceedings, Respondents have submitted an Offer of Settlement (the "Offer") which the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over them and the subject matter of these proceedings, which are admitted, Respondents consent to the entry of this Order Instituting Administrative and Cease-and-Desist Proceedings Pursuant to Sections 17A(c) and 21C of the Securities Exchange Act of 1934, Making Findings, and Imposing Remedial Sanctions and a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offer, the Commission finds[1] that:

Summary

1. Between at least September 2012 and October 2014, MST, a Georgia-based transfer agent registered with the Commission, and its predecessor, Mountain Share Transfer, Inc., failed to comply with various transfer agent registration, record-keeping and other provisions of the Securities Exchange Act of 1934 ("Exchange Act") and rules promulgated thereunder. Specifically, among other things, MST, under the control of Nelson, its President and sole employee, filed with the Commission in March 2013 a false and misleading amended Form TA-1 (Registration of Transfer Agent), which affirmatively misrepresented that Nelson had never been involved in a violation of the rules of a self-regulatory organization ("SRO") or been disciplined, expelled, suspended or barred by an SRO. In fact, in 1995, Nelson was disciplined by the National Association of Securities Dealers ("NASD"), including a bar and sanctions for taking private payments in exchange for recommending that his clients purchase certain securities offerings. Further, MST's amended Form TA-1 was filed with the Commission in March 2013 – more than five months after Nelson acquired the company and relocated it from Colorado to Georgia – well beyond the 60-day limit for filing an amended Form TA-1 to report the change in ownership and address of the principal office where transfer agent activities were or were to be performed, including a new mailing address, if different.

2. Under Nelson's control, MST also filed with the Commission in March 2013 a false and misleading Form TA-2 (Transfer Agent Annual Activities Disclosure), which incorrectly indicated that MST had amended its existing Form TA-1 during calendar year 2012 within 60 days of any information on the TA-1 becoming inaccurate, incomplete or misleading. The certification by MST on this Form TA-2 was incorrect because MST did not file any Form TA-1 during calendar year 2012. Further, MST filed a separate Form TA-2 during April 2014 on which it certified that it had also followed the 60-day Form TA-1 amendment requirement during calendar year 2013. However, the only Form TA-1 for MST filed during 2013 was filed more than 60 days after Nelson acquired and moved the business to Georgia and affirmatively misrepresented Nelson's disciplinary history. MST filed an amended Form TA-1 in March 2014 on which Nelson's disciplinary history was disclosed.

3. In addition to these false and untimely filings with the Commission, MST, under Nelson's control, failed to comply with other provisions of the Exchange Act and the rules thereunder governing transfer agents. Specifically, MST failed to: (i) follow record-keeping requirements by making and keeping current appointment and/or termination documentation or other contracts and documents concerning the transfer agent services that MST performed for securities issuers; (ii) maintain written procedures describing MST's obligation to search for lost security holders; (iii) establish and implement written procedures for the cancellation, storage,

[1] The findings herein are made pursuant to Respondents' Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

transportation, destruction and disposition of securities certificates, as well as provide in such procedures for the timely and complete reporting of any cancelled certificate that is lost, stolen, missing, or counterfeit; and (iv) comply with required procedures for the fingerprinting of all transfer agent employees.

Respondents

4. **MST** is a transfer agent registered with the Commission. In September 2012, Nelson acquired Mountain Share Transfer, Inc. from its previous owners in Colorado and relocated the business to Georgia. In 2013, Nelson created Mountain Share Transfer, LLC, a Georgia limited liability company, and merged Mountain Share Transfer, Inc. into Mountain Share Transfer, LLC in January 2014, resulting in Mountain Share Transfer, LLC emerging as the surviving entity. Mountain Share Transfer, LLC is now registered with the Commission as a transfer agent. As of 2014, MST had been engaged as a transfer agent by approximately 20 corporate issuers to perform various shareholder administrative functions, including recording changes in ownership of the issuers' stock, maintaining the issuers' security holder records, canceling and issuing stock certificates and resolving problems arising from lost, destroyed or stolen certificates.

5. **Nelson**, 47, and a resident of Atlanta, Georgia, is the President and the sole employee of MST, a securities transfer agent which Nelson runs out of his house in Atlanta. Nelson acquired MST on or about September 19, 2012. Previously, Nelson worked as a registered representative for several broker-dealers between 1989 and 1995, when NASD barred and sanctioned Nelson for taking private payments in exchange for recommending that his clients purchase certain securities offerings.

Registration and Reporting

6. On or about September 19, 2012, Nelson acquired MST through a stock purchase agreement between MST's former owners and Sterling Investment Services, Inc., a separate corporation owned by Nelson. Nelson then moved MST's operations to his home in Atlanta, Georgia.

7. On or about March 14, 2013, more than five months after Nelson acquired MST and moved it to Georgia, MST filed with the Commission, through Nelson and under his signature, an amended Form TA-1. The Form TA-1, and instructions thereto, required MST, among other information, to disclose: (1) its officers, owners, and control persons; (2) the address of the principal office where MST's transfer agent activities occur; and (3) the disciplinary history of MST and any control affiliates, defined as an individual or firm that directly or indirectly controls, is under common control with, or is controlled by MST.

8. The Form TA-1 that MST filed with the Commission on March 14, 2013, identified Nelson as the new President of MST and provided MST's new principal office address in Georgia. MST's filing of this Form TA-1 was more than 60 days after Nelson acquired the entity and moved it to Georgia.

9. Further, MST, on its Form TA-1 filed on March 14, 2013, affirmatively misrepresented Nelson's discipline by the NASD stemming from Nelson's prior work as a registered representative for a broker-dealer. On the Form TA-1, MST answered "No" to questions asking whether Nelson, as the "control affiliate" of MST, was ever involved in the violation of the rules of an SRO or was ever disciplined, expelled, suspended or barred by an SRO. Because MST's responses to the disciplinary questions were incorrect from the moment they were filed with the Commission, this information was immediately inaccurate, misleading, or incomplete, triggering MST's obligation to amend the Form TA-1 within 60 days, which did not happen until nearly one year later in March 2014.

10. On or about March 27, 2013, MST, through Nelson and under his signature, filed with the Commission a Form TA-2 on which MST indicated that it had amended its Form TA-1 during calendar year 2012 within 60 calendar days following the date on which information reported on the Form TA-1 became inaccurate, incomplete, or misleading. However, MST did not file any Form TA-1 during calendar year 2012. Further, MST filed a separate Form TA-2 with the Commission in April 2014 on which MST also indicated it followed the 60-day Form TA-1 amendment requirement for calendar year 2013. However, MST only filed one Form TA-1 with the Commission during 2013. That Form TA-1 was filed more than five months after Nelson acquired and moved MST to Georgia in September 2012 and did not disclose Nelson's disciplinary history with the NASD, and instead affirmatively denied that such discipline had occurred. MST filed an amended Form TA-1 disclosing Nelson's disciplinary history in March 2014.

Record Keeping

11. Beginning on or about September 19, 2012, when Nelson acquired MST, and continuing until at least August 2014, MST lacked appointment documentation for various issuers for which MST was serving as a transfer agent. Nelson, as the President and sole employee of MST, learned of the lack of appointment documentation after he acquired MST and failed to make prompt efforts to remedy the problem until staff from the Commission's National Exam Program noted in 2013 that Nelson lacked written contracts for sixteen of the nineteen issuers that MST was serving at that time.

Written Policies and Procedures

12. Beginning on or about September 19, 2012, when Nelson acquired MST, and continuing until at least the fall of 2013, MST lacked any written procedures describing MST's methodology for complying with its obligation to search for lost security holders.

13. Beginning on or about September 19, 2012, when Nelson acquired MST, and continuing until at least the summer of 2013, MST failed to establish and implement written procedures for the cancellation, storage, transportation, destruction or other disposition of securities certificates.

Fingerprinting

14. Beginning on or about September 19, 2012, when Nelson acquired MST, and continuing until at least August 2013, MST failed to have Nelson fingerprinted. Further, not until October 2014 did MST submit Nelson's fingerprints to the appropriate designee.

Violations

As a result of the conduct described above, MST willfully[2] violated:

15. Section 17A(d) of the Exchange Act which prohibits a transfer agent from engaging in any activity as a transfer agent in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest, for the protection of investors, or otherwise;

16. Section 17A(c) of the Exchange Act and Rule 17Ac2-1 thereunder, which require that transfer agents: (1) register with the Commission by filing a true, correct, and complete Form TA-1 in accordance with the instructions therein (Rule 17Ac2-1(a)); and (2) file an amended Form TA-1 within 60 days (Rule 17Ac2-1(c)) if any information in a transfer agent's Form TA-1 became inaccurate, misleading or incomplete to correct the information;

17. Section 17A(c) of the Exchange Act and Rule 17Ac2-2 thereunder, by filing with the Commission a false and misleading Form TA-2 on which MST certified that it had amended its Form TA-1 within 60 days of any information becoming inaccurate, misleading or incomplete;

18. Sections 17(a)(1) and 17(a)(3) of the Exchange Act and Rules 17Ad-6(a)(8) and 17Ad-7 thereunder, which require transfer agents to make and keep current and to retain for prescribed periods of time certain records, respectively, including documents concerning the appointment and termination of the transfer agent to act in any capacity for a securities issuer;

19. Rule 17Ad-17 under the Exchange Act, which requires that recordkeeping transfer agents maintain records to demonstrate compliance with the requirements of the rule, which records must include written procedures describing the transfer agent's methodology for complying with its obligation to search for lost security holders;

20. Rule 17Ad-19 under the Exchange Act, which requires that transfer agents involved in the handling, processing, or storage of securities certificates shall establish and implement written procedures for the cancellation, storage, transportation, destruction or other disposition of securities certificates; and

---

[2] A willful violation of the securities laws means merely "'that the person charged with the duty knows what he is doing.'" *Wonsover v. SEC*, 205 F.3d 408, 414 (D.C. Cir. 2000) (*quoting Hughes v. SEC*, 174 F.2d 969,977 (D.C. Cir. 1949)).

21. Section 17(f)(2) of the Exchange Act and Rule 17f-2 thereunder, requiring transfer agents to have all partners, directors, officers and employees fingerprinted and to have those fingerprints submitted to the Attorney General of the United States or its designee.

22. As a result of the conduct described above, Nelson willfully aided and abetted and caused MST's violations of Sections 17(a)(1), 17(a)(3), 17(f)(2), 17A(c) and 17A(d) of the Exchange Act and Rules 17f-2, 17Ac2-1, 17Ac2-2, 17Ad-6(a)(8), 17Ad-7, 17Ad-17, and 17Ad-19 thereunder.

Undertakings

MST undertakes to:

23. Retain within 30 days after entry of this Order, the services of an Independent Consultant, not unacceptable to the Commission's staff, and thereafter exclusively bear all costs, including compensation and expenses, associated with the retention of the Independent Consultant. MST shall retain the Independent Consultant to conduct a comprehensive review of, and recommend corrective measures concerning, its policies and procedures relating to the making, keeping and filing of Forms TA-1 and Forms TA-2 with the Commission, as well as its record keeping requirements, its obligation to establish and maintain written policies, and its fingerprinting requirements. MST shall cooperate fully with the Independent Consultant and shall provide the Independent Consultant with access to MST's files, books, records, and personnel as reasonably requested;

24. No more than 120 days after the entry of this Order, submit to the Commission's staff a written report that MST will obtain from the Independent Consultant regarding MST's policies and procedures. The report will include a description of the review performed, the conclusions reached, the Independent Consultant's recommendations for changes or improvements to the policies and procedures, and a procedure for implementing any recommended changes;

25. Adopt all recommendations made by the Independent Consultant, provided, however, that within 150 days after the entry of this Order, MST will advise the Independent Consultant and the staff of the Commission in writing of any recommendations which MST considers unnecessary or inappropriate. MST need not adopt such recommendations at that time, but instead propose in writing an alternative policy, procedure or system designed to achieve the same objective or purpose. As to any recommendation with respect to MST's policies or procedures on which MST and the Independent Consultant do not agree, MST will attempt in good faith to reach an agreement with the Independent Consultant within 180 days of the entry of this Order. In the event that MST and the Independent Consultant are unable to agree on an alternative proposal, MST will abide by the determinations of the Independent Consultant;

26. Ensure the independence of the Independent Consultant. MST: (a) shall not have authority to terminate the Independent Consultant without prior written approval of the Commission's staff; (b) shall compensate the Independent Consultant, and persons engaged to assist the Independent Consultant, for services rendered pursuant to this Order at their reasonable

and customary rates; (c) shall not be in and shall not have an attorney-client relationship with the Independent Consultant, and shall not seek to invoke the attorney-client privilege or any other doctrine or privilege to prevent the Independent Consultant from transmitting any information, reports, or documents to the Commission or the Commission's staff;

27. Require the Independent Consultant to enter into an agreement that provides that for the period of engagement and for a period of two years from completion of the engagement, the Independent Consultant shall not enter into any employment, consultant, attorney-client, auditing or other professional relationship with MST or any of its present or former affiliates, directors, officers, employees, or agents acting in their capacity. The agreement will also provide that the Independent Consultant will require that any firm with which he/she is affiliated or of which he/she is a member, and any person engaged to assist the Independent Consultant in performance of his/her duties under this Order shall not, without prior written consent of the Commission staff, enter into any employment, consultant, attorney-client, auditing or other professional relationship with MST or any of its present or former affiliates, directors, officers, employees, or agents acting in their capacity as such for the period of the engagement and for a period of two years after the engagement; and

28. Certify, in writing, compliance with the undertakings set forth above. The certification shall identify the undertakings, provide written evidence of compliance in the form of a narrative, and be supported by exhibits sufficient to demonstrate compliance. The Commission staff may make reasonable requests for further evidence of compliance, and MST agrees to provide such evidence. The certification and supporting material shall be submitted to William P. Hicks, Associate Regional Director, U.S. Securities and Exchange Commission, Atlanta Regional Office, 950 East Paces Ferry Road NE, Suite 900, Atlanta, Georgia 30326, with a copy to the Office of Chief Counsel of the Enforcement Division, 100 F Street NE, Washington, D.C. 20549, no later than 60 days from the date of the completion of the undertakings.

IV.

In view of the foregoing, the Commission deems it appropriate and in the public interest to impose the sanctions agreed to in Respondents' Offer.

Accordingly, pursuant to Sections 17A(c) and 21C of the Exchange Act, it is hereby ORDERED that:

A. Respondent MST cease and desist from committing or causing any violations or future violations of Sections 17(a)(1), 17(a)(3), 17(f)(2), 17A(c) and 17A(d) of the Exchange Act and Rules 17f-2, 17Ac2-1, 17Ac2-2, 17Ad-6(a)(8), 17Ad-7, 17Ad-17, and 17Ad-19 thereunder;

B. Respondent Nelson cease and desist from committing or causing any violations or future violations of Sections 17(a)(1), 17(a)(3), 17(f)(2), 17A(c) and 17A(d) of the Exchange Act and Rules 17f-2, 17Ac2-1, 17Ac2-2, 17Ad-6(a)(8), 17Ad-7, 17Ad-17, and 17Ad-19 thereunder;

C. Respondents MST and Nelson are censured;

D. Respondent Nelson shall pay civil penalties of $10,000 to the United States Treasury. Payment shall be made in the following installments: $833.33 within 30 calendar days of this order; $833.33 within 60 calendar days of this order; $833.33 within 90 calendar days of this order; $833.33 within 120 calendar days of this order; $833.33 within 150 calendar days of this order; $833.33 within 180 calendar days of this order; $833.33 within 210 calendar days of this order; $833.33 within 240 calendar days of this order; $833.33 within 270 calendar days of this order; $833.33 within 300 calendar days of this order; $833.33 within 330 calendar days of this order; and $833.37 within 360 calendar days of this order. If any payment is not made by the date the payment is required by this Order, the entire outstanding balance of civil penalties, plus any additional interest accrued pursuant to 31 U.S.C. § 3717, shall be due and payable immediately without further application. Payment must be made in one of the following ways:

(1) Respondent may transmit payment electronically to the Commission, which will provide detailed ACH transfer/Fedwire instructions upon request;

(2) Respondent may make direct payment from a bank account via Pay.gov through the SEC website at http://www.sec.gov/about/offices/ofm.htm; or

(3) Respondent may pay by certified check, bank cashier's check, or United States postal money order, made payable to the Securities and Exchange Commission and hand-delivered or mailed to:

Enterprise Services Center
Accounts Receivable Branch
HQ Bldg., Room 181, AMZ-341
6500 South MacArthur Boulevard
Oklahoma City, OK 73169

Payments by check or money order must be accompanied by a cover letter identifying Nelson as a Respondent in these proceedings, and the file number of these proceedings; a copy of the cover letter and check or money order must be sent to William P. Hicks, Associate Regional Director, U.S. Securities and Exchange Commission, Atlanta Regional Office, 950 East Paces Ferry Road NE, Suite 900, Atlanta, Georgia 30326; and

E. Respondent MST shall comply with the undertakings enumerated in Section III, Paragraphs 23-28 above.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74227 / February 6, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16379

In the Matter of LAWRENCE FOSTER, Respondent.	ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934 AND NOTICE OF HEARING

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") against Lawrence Foster ("Respondent").

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT

1. From December 2009 to January 2013, Respondent was the President of Paradise is Mine, LLC ("Paradise is Mine"), a Florida-based company that offered investors the opportunity to invest in purported land development deals in the Bahamas. Neither Respondent nor Paradise is Mine has ever been registered with the Commission in any capacity. Respondent, 49 years old, a former resident of Miami-Dade County, Florida, is currently incarcerated in a federal detention facility in Miami, Florida.

B. ENTRY OF THE RESPONDENT'S CRIMINAL CONVICTION

2. On October 22, 2014, after a jury trial, Respondent was convicted of one count of conspiracy to commit wire fraud and seven counts of wire fraud in violation of Title 18 of the United States Code, Sections 1349 and 1343 before the United States District Court for the Southern District of Florida, in United States v. Lawrence Foster, et al., Case No. 1:13-cr-20063-DLG.

3. The counts of the indictment to which Respondent was convicted alleged, inter alia, that Respondent knowingly and willfully devised and intended to devise a scheme and artifice to defraud others and to obtain money and property by means of materially false and fraudulent pretenses, representations and promises, and that he knowingly transmitted and caused to be transmitted wire transfers of funds in furtherance of the scheme.

4. Respondent acted as an unregistered broker. The counts of the indictment to which Respondent was convicted further alleged that Respondent solicited individuals to invest in Paradise is Mine, representing that the company would purchase and develop land in the Bahamas. Respondent offered potential investors the ability to fund their investments using personal assets such as stocks and promised investors a fixed rate of return of 10-20% on their investments. To further induce investors, Respondent fabricated news stories about Paradise is Mine and represented to potential investors that Paradise is Mine had been featured in publications like the Wall Street Journal, and that professional athletes and celebrities had invested in Paradise is Mine. Furthermore, Respondent received compensation in the form of misappropriated funds and spent investor money on personal expenses, including a luxury vehicle.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate in the public interest that public administrative proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations; and

B. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 15(b) of the Exchange Act.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 210 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

SECURITIES EXCHANGE ACT OF 1934
Release No. 74228 / February 6, 2015

ADMINISTRATIVE PROCEEDING
File No. 3-16380

In the Matter of **JORDON MCCARTY,** **Respondent.**	**ORDER INSTITUTING ADMINISTRATIVE PROCEEDINGS PURSUANT TO SECTION 15(b) OF THE SECURITIES EXCHANGE ACT OF 1934 AND NOTICE OF HEARING**

I.

The Securities and Exchange Commission ("Commission") deems it appropriate and in the public interest that public administrative proceedings be, and hereby are, instituted pursuant to Section 15(b) of the Securities Exchange Act of 1934 ("Exchange Act") against Jordon McCarty ("Respondent").

II.

After an investigation, the Division of Enforcement alleges that:

A. RESPONDENT

1. From 2009 to 2012, Respondent worked for Paradise is Mine, LLC ("Paradise is Mine"), a Florida-based company that offered investors the ability to invest in purported land developments in the Bahamas. Neither Respondent nor Paradise is Mine has ever been registered with the Commission in any capacity. Respondent, 36 years old, a former resident of Miami-Dade County, Florida, is currently incarcerated in a federal detention facility in Pensacola, Florida.

B. ENTRY OF THE RESPONDENT'S CRIMINAL CONVICTION

2. On September 13, 2013, Respondent pled guilty to one count of conspiracy to commit wire fraud in violation of Title 18 of the United States Code, Section 1349 before the United States District Court for the Southern District of Florida, in United States v. Lawrence Foster, et al., Case No. 1:13-cr-20063-DLG. On November 26, 2013, a judgment in the criminal case was entered against Respondent. He was sentenced to a prison term of 78 months followed by three years of supervised release.

3. The count of the indictment to which Respondent pled guilty alleged, inter alia, that Respondent willfully and knowingly conspired with others with the intent to devise a scheme to obtain money and property by means of materially false and fraudulent representations and promises, knowing that they were false and fraudulent when made, and for the purpose of executing such scheme using means of interstate and foreign commerce.

4. Respondent acted as an unregistered broker. According to the count of the indictment to which Respondent pled guilty and the facts in the plea agreement to which Respondent agreed, Respondent solicited individuals to invest in Paradise is Mine, representing that the company would purchase and develop land in the Bahamas. Respondent offered potential investors the ability to fund their investments using personal assets such as stocks and promised investors a fixed rate of return of 10-20% on their investments. To further induce investors, Respondent fabricated news stories about Paradise is Mine and represented to potential investors that Paradise is Mine had been featured in publications like the Wall Street Journal, and that professional athletes and celebrities had invested in Paradise is Mine. Furthermore, Respondent received compensation in the form of misappropriated funds.

III.

In view of the allegations made by the Division of Enforcement, the Commission deems it necessary and appropriate in the public interest that public administrative proceedings be instituted to determine:

A. Whether the allegations set forth in Section II hereof are true and, in connection therewith, to afford Respondent an opportunity to establish any defenses to such allegations; and

B. What, if any, remedial action is appropriate in the public interest against Respondent pursuant to Section 15(b) of the Exchange Act.

IV.

IT IS ORDERED that a public hearing for the purpose of taking evidence on the questions set forth in Section III hereof shall be convened at a time and place to be fixed, and before an Administrative Law Judge to be designated by further order as provided by Rule 110 of the Commission's Rules of Practice, 17 C.F.R. § 201.110.

IT IS FURTHER ORDERED that Respondent shall file an Answer to the allegations contained in this Order within twenty (20) days after service of this Order, as provided by Rule 220 of the Commission's Rules of Practice, 17 C.F.R. § 201.220.

If Respondent fails to file the directed answer, or fails to appear at a hearing after being duly notified, the Respondent may be deemed in default and the proceedings may be determined against him upon consideration of this Order, the allegations of which may be deemed to be true as provided by Rules 155(a), 220(f), 221(f) and 310 of the Commission's Rules of Practice, 17 C.F.R. §§ 201.155(a), 201.220(f), 201.221(f) and 201.310.

This Order shall be served forthwith upon Respondent as provided for in the Commission's Rules of Practice.

IT IS FURTHER ORDERED that the Administrative Law Judge shall issue an initial decision no later than 210 days from the date of service of this Order, pursuant to Rule 360(a)(2) of the Commission's Rules of Practice.

In the absence of an appropriate waiver, no officer or employee of the Commission engaged in the performance of investigative or prosecuting functions in this or any factually related proceeding will be permitted to participate or advise in the decision of this matter, except as witness or counsel in proceedings held pursuant to notice. Since this proceeding is not "rule making" within the meaning of Section 551 of the Administrative Procedure Act, it is not deemed subject to the provisions of Section 553 delaying the effective date of any final Commission action.

By the Commission.

SECURITIES AND EXCHANGE COMMISSION

17 CFR PARTS 229 AND 240

RELEASE NO. 33-9723; 34-74232; IC-31450; File No. S7-01-15

RIN 3235-AL49

DISCLOSURE OF HEDGING BY EMPLOYEES, OFFICERS AND DIRECTORS

AGENCY: Securities and Exchange Commission.

ACTION: Proposed rule.

SUMMARY: We are proposing amendments to our rules to implement Section 955 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, which requires annual meeting proxy statement disclosure of whether employees or members of the board of directors are permitted to engage in transactions to hedge or offset any decrease in the market value of equity securities granted to the employee or board member as compensation, or held directly or indirectly by the employee or board member. The proposed disclosure would be required in a proxy statement or information statement relating to an election of directors, whether by vote of security holders at a meeting or an action authorized by written consent.

DATES: Comments should be received on or before [insert date 60 days after publication in the Federal Register].

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic Comments:

- Use the Commission's Internet comment form (http://www.sec.gov/rules/proposed.shtml);

- Send an email to rule-comments@sec.gov. Please include File Number S7-01-15 on the subject line; or
- Use the Federal Rulemaking Portal (http://www.regulations.gov). Follow the instructions for submitting comments.

Paper Comments:

- Send paper comments in triplicate to Brent J. Fields, Secretary, U. S. Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090.

All submissions should refer to File Number S7-01-15. This file number should be included on the subject line if email is used. To help us process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet website (http://www.sec.gov/rules/proposed.shtml). Comments are also available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549, on official business days between the hours of 10:00 am and 3:00 pm. All comments received will be posted without change; we do not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

Studies, memoranda or other substantive items may be added by the Commission or staff to the comment file during this rulemaking. A notification of the inclusion in the comment file of any such materials will be made available on the SEC's website. To ensure direct electronic receipt of such notifications, sign up through the "Stay Connected" option at www.sec.gov to receive notifications by e-mail.

FOR FURTHER INFORMATION CONTACT: Carolyn Sherman, Special Counsel, or Anne Krauskopf, Senior Special Counsel, at (202) 551-3500, in the Office of Chief Counsel, Division of Corporation Finance, and Nicholas Panos, Senior Special Counsel, at (202) 551-3440, in the Office of Mergers and Acquisitions, Division of Corporation Finance; or, with respect to investment companies, Michael Pawluk, Branch Chief, at (202) 551-6792, Division of Investment Management, U.S. Securities and Exchange Commission, 100 F Street, NE, Washington DC 20549.

SUPPLEMENTARY INFORMATION: We propose to amend Item 402[1] of Regulation S-K[2] by revising paragraph (b) to add Instruction 6; to amend Item 407[3] of Regulation S-K to add new paragraph (i); and to amend Schedule 14A[4] to revise Items 7 and 22.

I. INTRODUCTION

We are proposing rule amendments to implement Section 955 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Act"),[5] which adds new Section 14(j) to the Securities Exchange Act of 1934 (the "Exchange Act").[6] Section 14(j) directs the Commission to require, by rule, each issuer to disclose in any proxy or consent solicitation material for an annual meeting of the shareholders of the issuer whether any employee or member of the board of directors of the issuer, or any designee of such employee or director, is permitted to purchase financial instruments (including prepaid variable forward contracts, equity swaps, collars, and exchange funds) that are designed to hedge or offset any decrease in the market value of equity securities either (1) granted to the employee or director by the issuer as part of the compensation of the employee or director; or (2) held, directly or indirectly, by the employee or director.

A report issued by the Senate Committee on Banking, Housing, and Urban Affairs stated that Section 14(j) is intended to "allow shareholders to know if executives are allowed to purchase financial instruments to effectively avoid compensation restrictions that they hold stock long-term, so that they will receive their compensation even in the case that their firm does not perform."[7] In this regard, we infer that the statutory purpose of Section 14(j) is to provide transparency to shareholders, if action is to be taken with respect to the election of

[5] Pub. L. No. 111-203, 124 Stat. 1900 (July 21, 2010).

[6] 15 U.S.C. 78a et seq.

[7] See Report of the Senate Committee on Banking, Housing, and Urban Affairs, S. 3217, Report No. 111-176 (Apr. 30, 2010) ("Senate Report 111-176").

directors, about whether employees or directors are permitted to engage in transactions that mitigate or avoid the incentive alignment associated with equity ownership.

We propose to implement Section 14(j) as described in detail below. Neither Section 14(j) nor the proposed amendments would require a company to prohibit hedging transactions or to otherwise adopt practices or a policy addressing hedging by any category of individuals.

II. BACKGROUND

The current disclosure obligations relating to company hedging policies are provided by Item 402(b) of Regulation S-K, which sets forth the disclosure required in the company's Compensation Discussion and Analysis ("CD&A"). CD&A requires disclosure of material information necessary to an understanding of a company's compensation policies and decisions regarding the named executive officers.[8] Item 402(b)(2)(xiii) includes, as an example of the kind of information that should be provided, if material, the company's equity or other security ownership requirements or guidelines (specifying applicable amounts and forms of ownership) and any company policies regarding hedging the economic risk of such ownership. This CD&A disclosure item requirement, which does not apply to smaller

[8] As defined in Item 402(a)(3) of Regulation S-K, "named executive officers" are all individuals serving as the company's principal executive officer during the last completed fiscal year, all individuals serving as the company's principal financial officer during that fiscal year, the company's three other most highly compensated executive officers who were serving as executive officers at the end of that year, and up to two additional individuals who would have been among the three most highly compensated but for not serving as executive officers at the end of that year.

reporting companies,[9] emerging growth companies,[10] registered investment companies[11] or foreign private issuers,[12] by its terms addresses only hedging by the named executive officers. In providing their CD&A disclosure, however, some companies describe policies that address hedging by employees and directors, as well as the named executive officers.

In addition, disclosures pursuant to other requirements may reveal when company equity securities have been hedged:

- For companies with a class of equity securities registered pursuant to Section 12 of the Exchange Act,[13] hedging transactions by officers and directors in transactions involving one or more derivative securities – such as options, warrants, convertible securities, security futures products, equity swaps, stock appreciation rights and other securities that have an exercise or conversion price related to a company equity security or derive their value from a company equity security – are subject to reporting within two business days on Form 4, pursuant to Exchange Act Section 16(a).[14]

---

[9] As defined in Exchange Act Rule 12b-2 [17 CFR 240.12b-2].

[10] Section 101 of the Jumpstart Our Business Start-Ups Act (the "JOBS Act") [Pub. L. No. 112-106, 126 Stat. 306 (2012)] codified the definition of "emerging growth company" in Section 3(a)(80) of the Exchange Act and Section 2(a)(19) of the Securities Act.

[11] Registered investment companies are investment companies registered under Section 8 of the Investment Company Act of 1940 ("Investment Company Act"). 15 U.S.C. 80a et seq.

[12] As defined in Rule 3b-4 [17 CFR 240.3b-4].

[13] 15 U.S.C. 78l.

[14] 15 U.S.C. 78p(a). For Section 16 purposes, the term "derivative securities" is defined in Exchange Act Rule 16a-1(c), which excludes rights with an exercise or conversion privilege at a price that is not fixed. Exchange Act Rule 16a-1(d) defines "equity security of the issuer" as any equity security or derivative security relating to

- Some hedging transactions, such as prepaid variable forward contracts,[15] may involve pledges of the underlying company equity securities as collateral. Item 403(b) of Regulation S-K requires disclosure of the amount of company equity securities beneficially owned by directors, director nominees and named executive officers,[16] including the amount of shares that are pledged as security.[17]

---

the issuer, whether or not issued by that issuer. See also Exchange Act Rule 16a-4, which provides that for Section 16 purposes, both derivative securities and the underlying securities to which they relate shall be deemed to be the same class of equity securities.

The Commission has clarified that Section 16 applies to equity swap and similar transactions that a Section 16 insider may use to hedge, and has addressed how these derivative securities transactions should be reported, including specifically identifying them through the use of transaction code K. See Ownership Reports and Trading by Officers, Directors and Principal Security Holders, Release No. 34-34514 (Aug. 10, 1994) [59 FR 42449] at Section III.G; and Ownership Reports and Trading by Officers, Directors and Principal Security Holders, Release No. 34-37260 (May 31, 1996) [61 FR 30376] at Sections III.H and III.I. The Commission also has clarified how transactions in securities futures should be reported. Commission Guidance on the Application of Certain Provisions of the Securities Act of 1933, the Securities Exchange Act of 1934, and Rules thereunder to Trading in Security Futures Products, Release No. 33-8107 (June 21, 2002) [67 FR 43234] at Q. 13.

[15] A prepaid variable forward contract obligates the seller to sell, and the counterparty to purchase, a variable number of shares at a specified future maturity date. The number of shares deliverable will depend on the per share market price of the shares close to the maturity date. The contract specifies maximum and minimum numbers of shares subject to delivery, and at the time the contract is entered into, the seller will pledge to the counterparty the maximum number of shares. The Commission has indicated that forward sales contracts are derivative securities transactions subject to Section 16(a) reporting. Mandated Electronic Filing and Website Posting for Forms 3, 4 and 5, Release No. 33-8230 (May 7, 2003) [68 FR 25788], text at n. 42.

[16] Item 403(b) of Regulation S-K [17 CFR 229.403(b)]. Disclosure is required on an individual basis as to each director, nominee, and named executive officer, and on an aggregate basis as to executive officers of the issuer as a group and must be provided in proxy statements, annual reports on Form 10-K [referenced in 17 CFR 240.310], and registration statements under the Securities Act and under the Exchange Act on Form 10.

[17] The Commission's rationale for requiring the disclosure of the amount of shares pledged as security was as follows: "To the extent that shares owned by named executive officers, directors and director nominees are used as collateral, these shares may be subject to material risk or contingencies that do not apply to other shares beneficially owned by these persons." Executive Compensation and Related Person Disclosure, Release No. 33-8732A (Aug. 29, 2006) [71 FR 53158] (the "2006 Executive Compensation Disclosure Release") at Section IV.

III. DISCUSSION OF THE PROPOSED AMENDMENTS

We propose to implement Section 14(j) by adding new paragraph (i) to Item 407 of Regulation S-K to require companies to disclose whether they permit employees and directors to hedge their company's securities. We believe that the disclosure called for by Section 14(j) is primarily corporate governance-related because it requires a company to provide in its proxy statement information giving shareholders insight into whether the company has policies affecting how the equity holdings and equity compensation of all of a company's employees and directors may or may not align with shareholders' interests. Because Section 14(j) calls for disclosure about employees and directors, we believe that this information raises broader issues with respect to the alignment of shareholders' interests with those of employees' and directors', and is more closely related to the Item 407 corporate governance disclosure requirements than to Item 402 of Regulation S-K, which focuses only on the compensation of named executive officers and directors. We propose to amend Item 407 in this manner to keep disclosure requirements relating to corporate governance matters together in a single item in Regulation S-K.[18]

The proposed amendments implement Section 14(j) in the following ways:

---

[18] As a result, the proposed disclosure would not be subject to shareholder advisory votes to approve the compensation of named executive officers, as disclosed pursuant to Item 402, that are required pursuant to Section 14A(a)(1) of the Exchange Act and Rule 14a-21(a) [17 CFR 240.14a-21(a)]. We recognize, however, that there is an executive compensation component of the proposed disclosure as it relates to existing CD&A obligations. See Section III.D.3, below.

- include within the scope of the proposed disclosure requirement other transactions with economic consequences comparable to the financial instruments specified in Section 14(j);
- specify that the equity securities for which disclosure is required are only equity securities of the company, any parent of the company, any subsidiary of the company or any subsidiary of any parent of the company that are registered under Section 12 of the Exchange Act;[19]
- require the disclosure in any proxy statement on Schedule 14A or information statement on Schedule 14C[20] with respect to the election of directors because the information seems most relevant for shareholders voting or receiving information about the election of directors; and
- clarify that the term "employee" includes officers of the company.

A. Transactions Subject to the Disclosure Requirement

Section 14(j) requires disclosure of whether any employee or director of the issuer, or any designee of such employee or director, is permitted to purchase financial instruments (including prepaid variable forward contracts, equity swaps, collars, and exchange funds[21])

---

[19] 15 U.S.C. 78l.

[20] 17 CFR 240.14c-101.

[21] By covering "exchange funds," we believe that Section 14(j) can be interpreted to cover transactions involving dispositions or sales of securities. This is because an employee or director can acquire an interest in an exchange fund only in exchange for a disposition to the exchange fund of equity securities held by the employee or director. Whether the disposition to the exchange fund is a hedging transaction will depend on the terms of the fund.

that are designed to hedge or offset any decrease in the market value of equity securities. Our proposal would implement this requirement and would also require disclosure of transactions with economic consequences comparable to the purchase of the specified financial instruments.

As noted above, a Senate report indicated that Section 14(j) was added so that shareholders would know whether executive officers are able "to effectively avoid compensation restrictions that they hold stock long-term, so that they will receive their compensation even in the case that their firm does not perform."[22] Although Section 14(j) expressly refers only to the purchase of financial instruments designed to hedge or offset any decrease in the market value of equity securities, there are other transactions that could have the same economic effects, the disclosure of which would be consistent with the purpose of Section 14(j).[23] For example, a short sale can hedge the economic risk of ownership. Similarly, selling a security future establishes a position that increases in value as the value of the underlying equity security decreases, thereby establishing the downside price protection that is the essence of the transactions contemplated by Section 14(j).

We are concerned that if the proposed disclosure requirement is not sufficiently principles-based, the result would be incomplete disclosure as to the scope of hedging transactions that an issuer permits. If, for example, a company discloses that it prohibits the

---

[22] See Senate Report 111-176.

[23] Section 14(j) refers to financial instruments that are designed to hedge or offset any decrease in market value. The proposed amendments do not define the term "hedge," as we believe the meaning of hedge is generally understood and should be applied as a broad principle.

purchase of the types of financial instruments specifically listed in the statute, and does not otherwise disclose whether it permits other types of hedging transactions that may have the same economic effects as the purchase of the listed financial instruments, a shareholder might assume that the company does not permit any hedging transactions at all, even though that may not be the case. Similarly, failing to cover transactions with the same economic effects as purchase of the listed financial instruments might cause employees and directors to use those transactions that are not covered by the disclosure requirement. In order for the disclosure to be complete and to avoid discouraging or promoting the use of particular hedging transactions, our proposed amendment would require disclosure of whether an issuer permits other types of transactions that have the same hedging effect as the purchase of those instruments specifically identified in Section 14(j). Proposed Item 407(i) would require disclosure of whether an employee, officer or director, or any of their designees, is permitted to purchase financial instruments (including prepaid variable forward contracts, equity swaps, collars, and exchange funds) or otherwise engage in transactions that are designed to or have the effect of hedging or offsetting any decrease in the market value of equity securities. The proposed amendment would therefore cover all transactions that establish downside price protection – whether by purchasing or selling a security or derivative security or otherwise,[24] consistent with the statutory purpose and providing more complete disclosure.

---

[24] A pledge or loan of equity securities that does not involve a prepaid variable forward or similar transaction, would not be considered a hedging transaction covered by the proposed disclosure rule even though such a pledge or loan may be viewed as an "offer or sale" of a security under Securities Act Section 17(a) [15 U.S.C. §77q(a)]. See Rubin v. United States, 449 U.S. 424 (1981). This is because such stand-alone pledges and loans

Like the existing CD&A disclosure item, which applies to company policies regarding hedging the economic risk of named executive officers' ownership of the company's securities,[25] the scope of the proposed amendment is not limited to any particular types of hedging transactions.

A proposed instruction would clarify that the company must disclose which categories of transactions it permits and which categories of transactions it prohibits.[26] Disclosure of both the categories prohibited and those permitted conveys a complete understanding of the scope of hedging at the company. However, we recognize that where, for example, a company only prohibits specified hedging transactions, potentially limitless disclosure of each specific category otherwise permitted may not be meaningful. Accordingly, if a company specifically prohibits certain hedging transactions, it would disclose the categories of transactions it specifically prohibits, and could, if true, disclose that it permits all other hedging transactions in lieu of listing all of the specific categories that are permitted. For example, a company could disclose that it prohibits prepaid variable forward contracts, but permits all other hedging transactions. Conversely, where a company specifies only the hedging transactions that it permits, in addition to disclosing the particular categories of transactions permitted, it may, if true, disclose that it prohibits all other hedging transactions in lieu of listing all of the specific categories that are prohibited. For example, a

---

generally contemplate the return of the pledged or borrowed securities to the employee, with no consequent change in the employee's economic risk in ownership of the securities.

[25] Item 402(b)(2)(xiii) of Regulation S-K, discussed in Section II.D, below.

[26] Proposed Instruction 3 to Item 407(i).

company could disclose that it permits exchange fund transactions, but prohibits all other hedging transactions. If a company does not permit any hedging transactions, or permits all hedging transactions, it should so state and would not need to describe them by category. An additional instruction would require a company that permits hedging transactions to disclose sufficient detail to explain the scope of such permitted transactions.[27] For example, a company that permits hedging of equity securities that have been held for a specified period of time would need to disclose the period of time the securities must have been held.

If a company permits some, but not all, of the categories of persons covered by the proposed amendment to engage in hedging transactions, the company would disclose both the categories of persons who are permitted to hedge and those who are not.[28] For example, a company might disclose that it prohibits all hedging transactions by executive officers and directors, but does not restrict hedging transactions by other employees. Disclosing both categories of transactions and persons would provide investors a more complete understanding of the persons permitted to engage in hedging transactions, if any, and the types of hedging transactions permitted by the company.

B. Specifying the Term "Equity Securities"

We are proposing an instruction to specify that the term "equity securities," as used in proposed Item 407(i), would mean any equity securities (as defined in Exchange Act Section

---

[27] Proposed Instruction 4 to Item 407(i).

[28] Proposed Instruction 2 to Item 407(i).

3(a)(11)[29] and Exchange Act Rule 3a11-1)[30] issued by the company, any parent of the company, any subsidiary of the company or any subsidiary of any parent of the company that are registered under Section 12 of the Exchange Act.[31] As proposed, the disclosure requirement would apply to the equity securities issued by the company and its parents, subsidiaries or subsidiaries of the company's parents that are registered on a national securities exchange[32] or registered under Exchange Act Section 12(g).[33] We believe that the equity securities registered under Exchange Act Section 12 encompass the securities that are more likely to be readily traded, and more easily hedged. Because the Exchange Act and Exchanges Act Rules definitions of "equity security" do not specify the issuer, and Section 14(j) does not itself do so, without an instruction that narrows the scope, the term "equity securities" could be interpreted to include the equity securities of any company that are held directly or indirectly by an employee or director.

---

[29] 15 U.S.C. 78c(a)(11). Exchange Act Section 3(a)(11) defines "equity security" as any stock or similar security; or any security future on any such security; or any security convertible, with or without consideration, into such a security, or carrying any warrant or right to subscribe to or purchase such a security; or any such warrant or right; or any other security which the Commission shall deem to be of similar nature and consider necessary or appropriate, by such rules and regulations as it may prescribe in the public interest or for the protection of investors, to treat as an equity security.

[30] 17 CFR 240.3a11-1. Exchange Act Rule 3a11-1 defines "equity security" to include any stock or similar security, certificate of interest or participation in any profit sharing agreement, preorganization certificate or subscription, transferable share, voting trust certificate or certificate of deposit for an equity security, limited partnership interest, interest in a joint venture, or certificate of interest in a business trust; any security future on any such security; or any security convertible, with or without consideration into such a security, or carrying any warrant or right to subscribe to or purchase such a security; or any such warrant or right; or any put, call, straddle, or other option or privilege of buying such a security from or selling such a security to another without being bound to do so.

[31] 15 U.S.C. 78l; Proposed Instruction 1 to Item 407(i).

[32] 15 U.S.C. 78l(b).

[33] 15 U.S.C. 78l(g).

The proposed instruction would specify the scope of covered equity securities for both paragraphs (1) (compensatory equity securities grants) and (2) (other equity securities holdings) of proposed Item 407(i). Disclosure of whether a director or employee is permitted to hedge equity securities granted as compensation or otherwise held from whatever source acquired will more fully inform shareholders whether employees and directors are able to engage in transactions that reduce the alignment of their interests with the economic interests of other shareholders of the company and any affiliated company in which the employees or directors might have an interest. Shareholders would receive the Item 407(i) disclosure because they hold equity securities of the company and action is to be taken with respect to the election of directors for that company. The disclosure would provide additional information on whether the company has policies affecting the alignment of incentives for employees and directors of the company whose securities they hold. We therefore believe that disclosure about whether employees and directors are permitted to hedge equity securities issued by the company, its parents, subsidiaries or subsidiaries of the company's parents that are registered under Exchange Act Section 12 would be most relevant when providing information about the election of directors. We believe that, in certain instances,[34] companies may grant equity securities of affiliated companies to their employees or directors that are intended to achieve similar incentive alignment as grants in the company's equity securities. In these instances, we believe it would be relevant for shareholders to know

[34]Examples may include, but are not limited to, where a company reorganizes to create a publicly-traded subsidiary.

whether such persons are permitted to mitigate or avoid the risks associated with long-term ownership of these securities.

C. Employees and Directors Subject to the Proposed Disclosure Requirement

Section 14(j) covers hedging transactions conducted by any employee or member of the board of directors or any of their designees. Consistent with that mandate, we believe the term "employee" should be interpreted to include everyone employed by an issuer, including its officers. We believe it is just as relevant for shareholders to know if officers are allowed to effectively avoid restrictions on long-term compensation as it is for directors and other employees of the company.[35] Accordingly, we propose to implement Section 14(j) by adding the parenthetical "(including officers)" after the term "employees" in the language of the proposed disclosure requirement.[36] In sum, the proposed amendment uses the language "any employees (including officers) or directors of the registrant, or any of their designees" in describing the persons covered by the disclosure requirement.[37]

Request for Comment

1. Should the disclosure required by Section 14(j) be implemented by amending the corporate governance disclosures required by Item 407, as proposed?

---

[35] See Senate Report 111-176.

[36] The parenthetical "(including officers)" in proposed Item 407(i) is intended to include officers employed by an issuer and avoid possible confusion with Exchange Act Rule 12b-2 [17 CFR 240.12b-2], which states that the term "employee" does not include a director, trustee, or officer.

[37] Section 14(j) refers to "designee[s]" of employees and directors. Under the proposed disclosure requirement, whether someone is a "designee" would be determined by a company based on the particular facts and circumstances.

Alternatively, should it be implemented by amending the Item 402 executive compensation disclosure requirements? Are there advantages or disadvantages to requiring these disclosures under Item 402? If so, please explain why.

2. Should the scope of the proposed Item 407(i) disclosure requirement cover transactions that are not expressly listed in Exchange Act Section 14(j) but have economic consequences comparable to the purchase of the financial instruments specifically identified in Section 14(j), as proposed? If not, why not?

3. Should the scope of transactions covered by proposed Item 407(i) be clarified? We are of the view that there is a meaningful distinction between an index that includes a broad range of equity securities, one component of which is company equity securities, and a financial instrument, even one nominally based on a broad index, designed to or having the effect of hedging the economic exposure to company equity securities. Should we clarify the application of Item 407(i) to account for this situation? If so, how? For example, if an issuer prohibited hedging generally, but permitted the purchase of broad-based indices, should we specify that the issuer could nonetheless disclose that it prohibits all hedging transactions? Should the rule explicitly distinguish between instruments that provide exposure to a broad range of issuers or securities and those that are designed to hedge particular securities

or have that effect? Would a principles-based or numerical threshold approach be most helpful in this regard? If not, what other clarification should be provided?

4. If a company prohibits some, but not all, of the categories of transactions described in the proposed amendment, in order to fully describe what hedging transactions are permitted and by whom, is it necessary to require disclosure, as proposed, of both the categories of transactions that are permitted and the categories of transactions that are prohibited? If not, please explain why not. Does proposed Instruction 3 to Item 407(i) provide a way for companies that permit or prohibit only certain covered transactions to disclose this information in a clear and effective manner? Alternatively, should the company simply be required to describe its policy, if any, without further elaboration?

5. A company that permits hedging transactions would be required to disclose sufficient detail to explain the scope of such permitted transactions. For example, a company may permit hedging transactions only if pre-approved, or only after the company's stock ownership guidelines have been met. Should proposed Instruction 4 be more specific about the types of details, such as a pre-approval requirement, that the company must disclose?

6. Does our proposal to define the term "equity securities" as equity securities of the company or any of its parents, subsidiaries or subsidiaries of its parents

that are registered under Exchange Act Section 12 appropriately capture the disclosure that shareholders would find useful? Should the Commission limit the term "equity securities" to only equity securities of the company? If so, please explain why and the costs and benefits that would result. How often are directors and employees compensated through equity securities of an affiliated company that are not registered under Section 12(b) of the Exchange Act? If the definition of equity securities includes only equity securities registered under Section 12(b) of the Exchange Act, would that affect either compensation structure or corporate structure? Do companies typically have policies addressing hedging of equity securities of their parents, subsidiaries or subsidiaries of their parents? What would be the costs and benefits of disclosing whether hedging the equity securities of these affiliates is permitted or prohibited? Would any on-going compliance efforts be different? If so, please explain why and the costs and benefits that would result.

7. Should the proposed definition be broadened to include equity securities that are not registered under Exchange Act Section 12 or narrowed to only include equity securities registered under Section 12(b) of the Exchange Act? If so, explain why and the costs and benefits that would result. Alternatively, should the proposed definition be revised to exclude equity securities that do not trade in an established public market? If so, how would "established public market" be defined? To the extent the amendment applies to equity

securities that do not trade on an established public market, should we provide guidance about how to interpret "market value" for purposes of the proposed amendment? In either case, please explain why, and what costs and benefits would result from the recommended change.

8. Should we define "parent" and "subsidiary" specifically for purposes of this disclosure requirement? The definition of "parent" of a person in the Exchange Act Rules is an affiliate controlling such person directly, or indirectly through one or more intermediaries.[38] Similarly, the Exchange Act Rules definition of "subsidiary" of a person is an affiliate controlled by such person directly, or indirectly through one or more intermediaries.[39] Will these definitions, in the context of hedging disclosure, present any implementation challenges in determining what needs to be disclosed? Should we consider an alternative term, or alternative definition of "parent" for this disclosure requirement, such as an affiliate that owns a majority of the voting securities in the company? Similarly, with respect to subsidiaries, should we consider an alternative term, or alternative definition of "subsidiary" for this disclosure requirement, such as a majority-owned subsidiary, wholly-owned subsidiary, consolidated subsidiary or significant subsidiary? In each case, please

[38] Exchange Act Rule 12b-2 [17 CFR 240.12b-2].

[39] Exchange Act Rule 12b-2 [17 CFR 240.12b-2].

explain why, and what costs and benefits would result from the recommended change.

9. Section 14(j) does not define the circumstances in which equity securities are "held, directly or indirectly" by an employee or director. Is the concept of "held, directly or indirectly" unclear, such that we should provide more certainty about what is meant by the phrase? If so, how should we clarify it? Section 14(j) also does not define who is a "designee," nor is this term otherwise defined in the rules under the Securities Act or the Exchange Act. One commenter has recommended that the Commission define the term "designee."[40] Should the proposed amendment include an instruction clarifying who is a "designee"? If so, please explain how this term should be defined, and the costs and benefits that would result.

10. Section 14(j) is directed to "any employee" and we interpret that to mean anyone employed by the issuer. Should we limit the definition of "employee" to the subset of employees that participate in making or shaping key operating or strategic decisions that influence the company's stock price?[41] Why or why not? If so, how would that distinction be defined for practical purposes?

---

[40] See Letter from Compensia, Inc. (Oct. 4, 2010). To facilitate public input on the Act, the Commission has provided a series of email links, organized by topic, on its website at http://www.sec.gov/spotlight/regreformcomments.shtml. The public comments we have received on Section 955 of the Act are available on our website at http://www.sec.gov/comments/df-title-ix/executive-compensation/executive-compensation.shtml.

[41] See Section IV.C.1.

Alternatively, should we add an express materiality condition to the definition, as is the case under CD&A, to permit each issuer to determine whether disclosure about all its employees would be material information for its investors? Why or why not?

11. Should the amendment define "hedge"? If so, what concepts other than the statutory reference to "offset[ting] any decrease in the market value of equity securities" would be necessary to define this term?

12. One commenter has recommended that the Commission "should not only require disclosure of whether hedging is permitted, but should also require disclosure of any hedging that has occurred – both in promptly filed Form 4 filings and in the annual proxy statement."[42] Should the Commission require such disclosure in the final rule for those already subject to Form 4 reporting requirements?

D. Implementation

1. Manner and Location of Disclosure

Section 14(j) calls for disclosure in any proxy or consent solicitation material for an annual meeting of the shareholders. Shareholder annual meetings are typically the venue in which directors are elected.[43] Although the language of Section 14(j) refers to disclosure in

---

[42] See letter from Brian Foley & Company, Inc. (Sept. 22, 2010).

[43] The Commission has previously recognized that directors ordinarily are elected at annual meetings. See, e.g., Rule 14a-6(a) [17 CFR 240.14a-6(a)], which acknowledges that registrants soliciting proxies in the context of an election of directors at an annual meeting may be eligible to rely on the exclusion from the requirement to

any proxy or consent solicitation material for an annual meeting of the shareholders, this language, construed strictly, would result in the disclosure appearing in different instances than we currently require other corporate governance related disclosure. In particular, under our current rules, if a company solicits proxies[44] with respect to the election of directors, its proxy statement must include specified corporate governance information required by Item 407 of Regulation S-K, whether or not the election takes place at an annual meeting.[45] We believe that Item 407(i) disclosure would be relevant information for shareholders evaluating the governance practices of the company and the election of directors. By providing the disclosure in a proxy statement if action is to be taken with respect to the election of directors, shareholders will be able to consider the proposed disclosure at the same time as

---

file a proxy statement in preliminary form. Rule 14a-3(b) [17 CFR 240.14a-3(b)] requires proxy statements used in connection with the election of directors at an annual meeting to be preceded or accompanied by an annual report containing audited financial statements. The requirement for registrants to hold an annual meeting at which directors are to be elected, however, is imposed by a source of legal authority other than the federal securities laws. In Delaware, for example, where more than 50% of the publicly traded issuers are incorporated according to the State of Delaware's official website, Delaware General Corporation Law, Section 211(b) is viewed as requiring an annual meeting for the election of directors. See Delaware Law of Corporations & Business Organizations, Third Edition by R. Franklin Balotti, Jesse A. Finkelstein at §7.1, Folk on the Delaware General Corporate Law, 2013 Edition by Edward P. Welch, Andrew J. Turezyn, and Robert S. Saunders at § 211.2, and the text of DGCL Section 211(b), which reads in relevant part, "unless directors are elected by written consent in lieu of an annual meeting as permitted by this subsection, an annual meeting of stockholders shall be held for the election of directors on a date and at a time designated by or in the manner provided in the bylaws." See also Corporations and Other Business Associations, Seventh Edition by Charles R.T. O'Kelley and Robert B. Thompson at page 167 (explaining that the "paramount shareholder function is the election of directors" and that "[m]ost corporation codes protect this right by specifying immutably that directors shall be elected at an annually held meeting of shareholders."), California Corporations Code, Section 600(b), and 1984 Model Business Corporation Act (as amended through 2006), Section 7.01(a) (each requiring an annual meeting of shareholders for the election of directors).

[44] Rule 14a-1(f) [17 CFR 240.14a-1(f)] defines the term "proxy" to include every proxy, consent or authorization within the meaning of Section 14(a) of the Exchange Act. A solicitation of consents therefore constitutes a solicitation of proxies subject to Section 14(a) and Regulation 14A.

[45] See Items 7(b)-(d) and 8(a) of Schedule 14A.

they are considering the company's other corporate governance disclosures and voting for the election of directors, without regard to whether at an annual or special meeting of shareholders or in connection with an action authorized by written consent.[46] We therefore propose to implement Section 14(j) by amending Items 7 and 22 of Schedule 14A to call for new Item 407(i) information to be provided if action is to be taken with respect to the election of directors. In addition to including the new disclosure requirement, the proposal would amend Item 7 of Schedule 14A to streamline its current provisions by more succinctly cross-referencing disclosure Items.[47]

The information required under proposed Item 407(i) would need to be included in proxy or consent solicitation materials and information statements with respect to the election of directors. Section 14(j) specifically calls for the disclosure to be made in the proxy solicitation materials, and we believe the information would be most relevant to shareholders if action is to be taken with respect to the election of directors. We therefore do not propose to require Item 407(i) disclosure in Securities Act or Exchange Act registration statements or in the Form 10-K Part III Item 407 disclosure,[48] even if that disclosure is incorporated by reference from the company's definitive proxy statement or information statement filed with

---

[46] We note that an annual meeting, the meeting at which companies generally provide for the election of directors, could theoretically not include an election of directors. For reasons explained above, an annual meeting ordinarily involves an election of directors. In the unlikely event that a company is not conducting a solicitation for the election of directors but is otherwise soliciting proxies at an annual meeting, the proposed amendment would not require the proposed disclosure in the proxy statement.

[47] Proposed amended Item 7(b) and Instruction to Item 7 of Schedule 14A.

[48] This approach is consistent with the disclosure requirements for registration statements under the Securities Act and for annual reports on Form 10-K, which include only selected provisions of Item 407. See Item 11(l) and 11(o) on Form S-1 and Items 10, 11 and 13 of Form 10-K.

the Commission not later than 120 days after the end of the fiscal year covered by the Form 10-K.[49]

2. Disclosure on Schedule 14C

The statutory language of Section 14(j) expressly calls for proxy or consent solicitation materials for an annual meeting of the shareholders of the issuer to include the disclosure contemplated by the proposed amendments. These solicitation materials are required by our proxy rules to be filed under cover of Schedule 14A.[50] As provided in Item 1 of Schedule 14C, however, an information statement filed on Schedule 14C must include the information called for by all of the items of Schedule 14A to the extent each item would be applicable to any matter to be acted upon at a meeting if proxies were to be solicited, with only limited exceptions.[51] An information statement filed on Schedule 14C in connection with an election of directors therefore already is required to include the information required

---

[49] As permitted by General Instruction G to Form 10-K. Proposed Instruction 5 to Item 407(i) would provide that information disclosed pursuant to Item 407(i) would not be deemed incorporated by reference into any filing under the Securities Act, the Exchange Act or the Investment Company Act. As proposed, the disclosure also would not be subject to forward incorporation by reference under Item 12(b) of Securities Act Form S-3 [17 CFR 239.13].

[50] As stated above, Exchange Act Rule 14a-1(f) [17 CFR 240.14a-1(f)] defines the term "proxy" to include every proxy, consent or authorization within the meaning of section 14(a) of the [Exchange] Act. Exchange Act Rule 14a-3(a) [17 CFR 240.14a-3(a)] prohibits any proxy solicitation unless each person solicited is currently or has been previously furnished with a publicly-filed preliminary or definitive proxy statement containing the information specified in Schedule 14A [17 CFR 240.14a-101], and Exchange Act Rule 14a-6(m) [17 CFR 240.14a-6(m) requires proxy materials to be filed under cover of Schedule 14A.

[51] Specifically, Item 1 of Schedule 14C permits the exclusion of information called for by Schedule 14A Items 1(c) (Rule 14a-5(e) information re shareholder proposals), 2 (revocability of proxy), 4 (persons making the solicitation), and 5 (interest of certain persons in matters to be acted upon). Other Items of Schedule 14C prescribe the information to be provided with regard to such of these topics that are relevant to information statements. Specifically, Item 3 addresses the interest of certain persons in or opposition to matters to be acted upon, and Item 4 addresses proposals by security holders. In addition, Notes A, C, D and E to Schedule 14A are applicable to Schedule 14C [17 CFR 240.14c-101].

by Item 7 of Schedule 14A. Absent an amendment to Schedule 14C to exclude proposed Item 407(i) from the requirements for the information statement, the disclosure contemplated by the amendments would be required in Schedule 14C pursuant to existing Item 1 of Schedule 14C.

We are not proposing to exclude Item 407(i) disclosure from Schedule 14C.[52] Applying the proposed disclosure obligation to Schedule 14C filings would have the effect of expanding the requirement to comply with Item 407(i) to companies that do not solicit proxies from any or all security holders but are otherwise authorized by security holders to take an action with respect to the election of directors.

We believe that doing so would retain consistency in the corporate governance disclosure provided in proxy statements and information statements with respect to the election of directors. Exchange Act Section 14(c) was enacted to apply to companies not soliciting proxies or consents from some or all holders of a class of securities registered under Section 12 of the Exchange Act entitled to vote at a meeting or authorize a corporate action by execution of a written consent.[53] It creates disclosure obligations for a company

---

[52] Because our proposal would not add a new exclusion for information called for by the proposed amendment to Item 7 of Schedule 14A, the effect of the proposal will be to require Item 407(i) disclosure in Schedule 14C.

[53] Section 14(c) of the Exchange Act was enacted to "reinforce [ ] fundamental disclosure principles [for companies] subject to the proxy rules which did not solicit proxies…" By enacting Section 14(c), Congress was advised that these companies "would be required to furnish shareholders with information equivalent to that contained in a proxy statement….[and that such legislation was needed] [b]ecause evasion of the disclosures required by the proxy rules is made possible by the simple device of not soliciting proxies…" Statement of William L. Cary, Chairman, Securities and Exchange Commission, Part I. K. Other Amendments Proposed by S. 1642, Hearings before a Subcommittee of the Committee on Banking and Currency for the U.S. Senate, Eighty-Eighth Congress, First Session on S. 1642, June 18-21 and 24-25, 1963.

that chooses not to, or otherwise does not, solicit proxies, consents, or other authorizations from some or all of its security holders entitled to vote. An example of when such a situation could occur is in the case of a controlled company[54] not listed on the New York Stock Exchange, NYSE Market or NASDAQ. In instances where management and/or a shareholder affiliate may control sufficient shares to assure a quorum and a favorable voting outcome, as in the case of a majority-owned subsidiary, or where a solicitation of proxies, consents or authorization is made of only certain security holders in connection with an election of directors, Section 14(c) would operate to ensure that security holders not solicited would receive disclosure substantially equivalent to that which would have been included in a proxy statement had a solicitation of all security holders been made.[55] In light of this purpose, we believe requiring Item 407(i) disclosure in information statements filed pursuant

[54] A controlled company is generally understood to be a company in which more than 50% of the voting power is held by an individual, a group or another issuer. See e.g., Exchange Act Section 10C(g)(2) [15 U.S.C. 78jC(g)(2)].

[55] At the time Section 14(c) was being considered by Congress as an amendment to the Exchange Act, the Securities and Exchange Commission provided an official statement that reported findings associated with a study that examined the proxy solicitation practices of 556 industrial and other companies. "Twenty-nine percent of these companies did not solicit proxies and 24 percent did not even send shareholders a notice of meeting." Statement of the Securities and Exchange Commission with respect to Proposed Amendments to Sections 12, 13, 14, 15, 16, 20(c), and 32(b) of the Securities Exchange Act of 1934 and Section 4(1) of the Securities Act of 1933, at 2. Existing Disclosures by Over-the-Counter Companies, Hearings before a Subcommittee of the Committee on Banking and Currency for the U.S. Senate, Eighty-Eighth Congress, First Session on S. 1642, June 18-21 and 24-25, 1963. Simply extending the coverage of the proxy rules to reach over-the-counter issuers was not viewed as a solution, and was believed to have been a decision that would have accentuated the problem of non-solicitation "because of management's relatively larger holdings." Statement of William L. Cary, Chairman, U.S. Securities and Exchange Commission, cited in n. [51] above.

to Section 14(c) furthers the regulatory objective of Section 14(j) of the Exchange Act and would mitigate the regulatory disparity that otherwise might result.[56]

3. Relationship to Existing CD&A Obligations

One of the non-exclusive examples currently listed in the Item 402(b) requirement for CD&A calls, in part, for disclosure of any registrant policies regarding hedging the economic risk of company securities ownership,[57] to the extent material. CD&A applies only to named executive officers and is part of the Item 402 executive compensation disclosure that is required in Securities Act and Exchange Act registration statements, and Exchange Act annual reports on Form 10-K, as well as proxy and information statements relating to the election of directors.[58] Smaller reporting companies, emerging growth companies, registered

[56] Of the approximately 6845 operating companies with at least one class of securities registered under Section 12 of the Exchange Act, 4018 have a class of securities listed on an exchange. Based on our review of and experience with NASDAQ, the New York Stock Exchange or NYSE Market, collectively referred to here as primary market exchanges, companies with a class of common or voting preferred stock (or their equivalents) listed on these exchanges are generally required to solicit proxies from shareholders for all meetings of shareholders, including those to elect directors. See, e.g., NYSE Listed Company Manual Section 402.04, and NASDAQ Rule IM-5620 – Meetings of Shareholders or Partners. Operating companies with a class of voting stock listed on a primary exchange that comply with the listing exchange's requirements, therefore, will be providing the proposed disclosure in proposed amended Item 7 of Schedule 14A and proposed Item 407(i) of Regulation S-K for each election of directors. By contrast, the approximately 2827 non-exchange listed companies with a class of securities registered under Section 12 may not be subject to compulsory requirements analogous to the primary market exchange rules that impose an affirmative obligation to solicit shareholders. Consequently, these non-exchange listed companies, if not subject to a compulsory requirement to solicit proxies, could avoid the proposed disclosures if the new requirement were limited to only companies soliciting proxies or consents pursuant to Section 14(a), especially given that companies with a class of securities registered only under Exchange Act Section 12(g) may be able to effectuate a corporate action (as referenced in Exchange Act Rule 14c-2) without soliciting security holder approval and thus would need only comply with Section 14(c) and Regulation 14C.

[57] Item 402(b)(2)(xiii) of Regulation S-K.

[58] As required by Item 8 of Schedule14A.

investment companies and foreign private issuers, however, are not required to provide CD&A disclosure.

By requiring proxy statement disclosure of whether employees generally are permitted to hedge equity securities that they receive as compensation or otherwise hold, the disclosure mandated by Section 14(j) includes within its scope hedging policies applicable to named executive officers.[59] To reduce potentially duplicative disclosure in proxy and information statements, we propose to amend Item 402(b) of Regulation S-K to add an instruction providing that a company may satisfy its CD&A obligation to disclose material policies on hedging by named executive officers by cross referencing the information disclosed pursuant to proposed Item 407(i) to the extent that the information disclosed there satisfies this CD&A disclosure requirement.[60] This instruction, like the Item 407(i) disclosure requirement, would apply to a company's proxy statement or information statement with respect to the election of directors. We believe that amending Item 402(b) to add this instruction will, in certain circumstances, make it easier for companies that are subject to both Item 407(i) and Item 402(b) to prepare their proxy and information statements by avoiding the potential for duplicative disclosure.[61] In addition, we believe that locating all

---

[59] See Section III, above.

[60] Proposed Instruction 6 to Item 402(b).

[61] Exchange Act Rule 14a-21(a) [17 CFR 240.14a-21(a)] provides that shareholder advisory say-on-pay votes apply to executive compensation disclosure pursuant to Item 402 of Regulation S-K, which includes CD&A. Because Item 407(i) disclosure will not be subject to these votes except to the extent made part of CD&A pursuant to the proposed cross-reference instruction, the proposal will not effect any change in the scope of disclosure currently subject to say-on-pay votes. We also note that the cross-reference is optional and issuers

the responsive disclosure in one place in the proxy or information statement will make it easier for investors to find.

4. Issuers Subject to the Proposed Amendments

In proposing amendments to implement Section 14(j), we have considered whether certain categories of issuers should be exempted from the proposed Item 407(i) disclosure requirements, or, alternatively, whether they should be subject to a delayed implementation schedule.[62] In making these determinations, we have been guided by what we understand to be the statutory purpose behind Section 14(j), namely, to provide transparency to shareholders, if action is to be taken with respect to the election of directors, about whether employees or directors are permitted to engage in transactions that mitigate or avoid the incentive alignment associated with equity ownership.

a. Registered Investment Companies

We are proposing to require closed-end investment companies that have shares that are listed and registered on a national securities exchange ("listed closed-end funds") to provide the proposed disclosure. Investment companies registered under the Investment Company Act of 1940 ("funds" or "registered investment companies") that are not listed

---

may, if they prefer, avoid making the Item 407(i) disclosure part of CD&A by not cross-referencing the disclosure.

[62] Section 36(a) of the Exchange Act permits the Commission, by rule, regulation, or order, to conditionally or unconditionally exempt any person security, or transaction, or any class or classes of persons, securities, or transactions, from any provision or provisions of this title or of any rule or regulation thereunder, to the extent that such exemption is necessary or appropriate in the public interest, and is consistent with the protection of investors.

closed-end funds would be excluded from these requirements, as discussed in more detail below.[63]

Funds generally have a management structure and regulatory regime that differs in various respects from issuers that are operating companies, which we believe makes the proposed disclosure less useful for investors in funds that are not listed closed-end funds. Nearly all funds, unlike other issuers, are externally managed and have few, if any, employees who are compensated by the fund.[64] Rather, personnel who operate the fund and manage its portfolio generally are employed and compensated by the fund's investment adviser.[65] Although fund directors may hold shares of the funds they serve,[66] fund compensation practices can be distinguished from those of operating companies. We believe that the granting of shares as a component of incentive-based compensation is uncommon (and in some cases is prohibited[67]) for funds. Concerns about avoiding restrictions on long-

[63] Business development companies are a category of closed-end investment company that are not registered under the Investment Company Act [15 U.S.C. 80a-2(a)(48) and 80a-53-64]. As proposed, business development companies would be treated in the same manner as all issuers (other than certain funds as discussed in this section) and therefore would be subject to the requirements of proposed Item 407(i). We believe that this would be consistent with the Commission's treatment of business development companies regarding other disclosure requirements. See the 2006 Executive Compensation Disclosure Release, at Section II.D.3.

[64] Some funds do have employees, who might also hold fund shares. See also footnote 36 and accompanying text (explaining that the parenthetical "(including officers)" in proposed Item 407(i) is intended to include officers employed by an issuer).

[65] Funds also typically will contract with other service providers in addition to the investment adviser.

[66] *See* Saitz, Greg, "Here Are Two Choices: Buy Fund Shares or Buy Fund Shares," July 30, 2013, available at http://www.boardiq.com/c/556021/60971/here_choices_fund_shares_fund_shares.

[67] Registered open-end and closed-end investment companies are generally prohibited from issuing their securities for services. See Sections 22(g) (open-end funds) and 23(a) (closed-end funds) of the Investment Company Act. Recognizing that "effective fund governance can be enhanced when funds align the interests of

term compensation, which we understand to be one of the reasons Congress mandated this disclosure, may therefore be less likely to be raised with respect to funds.

In addition, most funds, other than listed closed-end funds as discussed below, also are generally not required to hold annual meetings of shareholders.[68] Exchange-traded funds ("ETFs"), although traded on an exchange, also do not generally hold annual meetings of shareholders, and some ETFs do not have boards of directors.[69]

Open-end funds differ from operating companies in the way that their shares are purchased and sold. For example, mutual funds sell shares that are redeemable, meaning

---

their directors with the interests of their shareholders," our staff has provided guidance concerning the circumstances under which funds may compensate fund directors with fund shares consistent with sections 22(g) and 23(a). See Interpretive Matters Concerning Independent Directors of Investment Companies, Investment Company Act Release No. 24083 (Oct. 14, 1999). With respect to registered closed-end funds, some of which would be subject to the proposed amendments, our staff stated that "[c]losed-end funds also may wish to institute policies that encourage or require their directors to use the compensation that they receive from the funds to purchase fund shares in the secondary market on the same basis as other fund shareholders." See id. at n.73. The staff also stated that it "would not recommend enforcement action to the Commission under Section 23(a) if closed-end funds directly compensate their directors with fund shares, provided that the directors' services are assigned a fixed dollar value prior to the time that the compensation is payable," while noting that "any closed-end fund that compensates its directors by issuing fund shares would generally be required to issue those shares at net asset value, even if the shares are trading at a discount to their net asset value." See id. at n.74.

[68] The requirement to hold an annual meeting of shareholders at which directors are to be elected generally is imposed by a source of authority other than the federal securities laws. See footnote 43 above. Funds are typically organized under state law as a form of trust or corporation that is not required to hold an annual meeting. See Robert A. Robertson, Fund Governance: Legal Duties of Investment Company Directors § 2.-6[5]. Funds may, however, hold shareholder meetings from time to time under certain circumstances, including where less than a majority of the directors of the fund were elected by the holders of the fund's outstanding voting securities. See Section 16(a) of the Investment Company Act. See also footnote 73 and accompanying text.

[69] ETFs are organized either as open-end funds or unit investment trusts ("UITs"). A UIT does not have a board of directors, corporate officers, or an investment adviser to render advice during the life of the trust, and does not actively trade its investment portfolio. See Section 4(2) of the Investment Company Act ("Unit investment trust" means an investment company which (A) is organized under a trust indenture, contract of custodianship or agency, or similar instrument, (B) does not have a board of directors, and (C) issues only redeemable securities, each of which represents an undivided interest in a unit of specified securities, but does not include a voting trust.").

generally that shareholders are able to present the shares to the fund at the shareholder's discretion and receive the net asset value ("NAV") per share determined at the end of each day.[70] For funds like mutual funds whose shares do not trade on an exchange, it may be less efficient or not possible to engage in certain hedging transactions with respect to the fund's shares. And although ETF shares trade on exchanges, they often trade on the secondary market at prices close to the NAV of the shares, rather than at discounts or premiums to NAV.

Based on these considerations, the proposed amendments would not require funds, other than listed closed-end funds, to provide the proposed disclosure.

We are, however, proposing to require listed closed-end funds to provide Item 407(i) disclosure. Although listed closed-end funds are similar to other funds in certain respects, including with respect to their management structure and regulatory regime, there are several features of listed closed-end funds that may make requiring the Item 407(i) disclosure appropriate. Shares of listed closed-end funds, unlike mutual fund shares, trade at negotiated market prices on a national securities exchange and are not redeemable from the funds. The shares thus may, and often do, trade at a "discount," or a price below the NAV per share.[71] Requiring listed closed-end funds to provide the proposed disclosure would allow shareholders to know if a listed closed-end fund permits its directors and employees (if any)

[70] The term "redeemable," as used with respect to fund shares, refers to shares that are redeemable at the discretion of the investor holding the shares. See Section 2(a)(32) of the Investment Company Act (defining the term "redeemable security"). Closed-end fund shares, in contrast, generally are not redeemable, and these shares trade at negotiated market prices, including on national securities exchanges.

[71] Based on staff review of information available from Morningstar Direct and filings with the Commission.

to hedge the value of the fund's securities held by these persons and thus whether they, like the fund's other shareholders, would receive that discounted price upon a sale of the shares without an offset from any hedging transactions. This information may be important to the voting decision of an investor when evaluating the extent to which a fund director or employee's interest is aligned with that of the fund's other shareholders, including in considering whether the director or employee may be more or less incentivized as a result of holding shares in the fund to seek to decrease the discount. It also may be more efficient to engage in certain hedging transactions with respect to shares of a listed closed-end fund as compared to certain other types of funds. Market participants can and do sell these types of fund shares short, for example.[72] Hedging transactions might thus be more likely with respect to shares of listed closed-end funds, and thus potentially of greater interest to those funds' shareholders.

Finally, unlike other types of funds as discussed above, listed closed-end funds generally are required to hold annual meetings of shareholders.[73] Listed closed-end funds thus more closely resemble operating companies that would be subject to the proposed disclosure requirements in this respect.[74] We also note that officers and directors of listed

---

[72] Based on staff review of market data available from the Bloomberg Professional service.

[73] See, e.g., Section 302.00 of the New York Stock Exchange's Corporate Governance Standards ("Listed companies are required to hold an annual shareholders' meeting during each fiscal year.").

[74] Listed closed-end funds also are similar to operating company issuers in other respects. For example, listed closed-end funds, like operating companies, do not issue redeemable securities (i.e., at the option of the holder); rather, they issue securities in traditional underwritings, which are subsequently listed on an exchange or traded in the over-the-counter markets. In addition, listed closed-end funds and operating companies each may be able

closed-end funds, like officers and directors of emerging growth companies and smaller reporting companies which would be subject to the proposed disclosure requirements as discussed below, are subject to the requirement in Section 16(a) of the Exchange Act to report hedging transactions.[75]

For all of these reasons and those discussed in Section IV below, we propose to require listed closed-end funds to provide Item 407(i) disclosure and to exclude all other registered investment companies from these requirements. We request comment below on this proposed approach and, more generally, on the application of the proposed disclosure requirements to funds, including whether these requirements should apply to additional specific types of funds, such as ETFs. We seek input and data on the prevalence of hedging by employees and directors for all registered investment companies.

b. Emerging Growth Companies and Smaller Reporting Companies

We do not propose to exempt smaller reporting companies or emerging growth companies from Item 407(i) disclosure. We are not aware of any reason why information about whether a company has policies affecting the alignment of shareholder interests with those of employees and directors would be less relevant to shareholders of an emerging

---

to issue preferred shares and are not restricted in the amount of illiquid assets they may hold, although the assets of an operating company are generally more illiquid than the securities held by a listed closed-end fund.

[75] See Section 30(h) of the Investment Company Act ("Every person who is . . . an officer, director, member of an advisory board, investment adviser, or affiliated person of an investment adviser of [a registered closed-end fund] shall in respect of his transactions in any securities of such company (other than short-term paper) be subject to the same duties and liabilities as those imposed by section 16 of the Securities Exchange Act of 1934 upon certain beneficial owners, directors, and officers in respect of their transactions in certain equity securities.").

growth company or a smaller reporting company than to shareholders of any other company. In this regard, we believe it is consistent with the statutory purpose of Section 14(j) to require these companies to provide disclosure about their hedging policies. Moreover, given its narrow focus, the proposed disclosure is not expected to impose a significant compliance burden on companies. For these reasons, the proposed disclosure would apply to smaller reporting companies and emerging growth companies to the same extent as other companies subject to the federal proxy rules.

We acknowledge that the JOBS Act excludes emerging growth companies from some, but not all, of the provisions of Title IX of the Act, of which Section 955 is a part,[76] and that emerging growth companies and smaller reporting companies are in many instances subject to scaled disclosure requirements, including with respect to executive compensation.[77] We believe that it would be more consistent with our historical approach to corporate governance related disclosures,[78] as well as the statutory objectives of Section 14(j), not to exempt these companies from the proposed disclosure requirement. We

---

[76] Section 102 of the JOBS Act exempts emerging growth companies from: the say-on-pay, say-on-frequency, and say-on-golden parachutes advisory votes required by Exchange Act Sections 14A(a) and (b), enacted in Section 951 of the Act; the "pay versus performance" proxy disclosure requirements of Exchange Act Section 14(i), enacted in Section 953(a) of the Act; and the pay ratio disclosure requirements of Section 953(b) of the Act.

[77] See Section 102(c) of the JOBS Act and Item 402(l) of Regulation S-K.

[78] See Item 407(a), (b), (c), (d), (e)(1)-(3), (f) and (h) of Regulation S-K; but see Item 407(g) of Regulation S-K that provides a phase-in period for smaller reporting companies from the disclosure required by Item 407(d)(5) of Regulation S-K and does not require smaller reporting companies to provide the disclosures required by Item 407(e)(4) and (5) of Regulation S-K. In addition, as noted above, officers and directors at smaller reporting companies and emerging growth companies are subject to the obligation under Exchange Act Section 16(a) to report transactions involving derivative securities.

recognize that, since emerging growth companies and smaller reporting companies are not required to provide CD&A disclosure required by Item 402(b) and therefore may not have had the occasion to consider a hedging policy, these companies may have a greater initial cost than companies that already have a policy or already disclose one. Further, these companies would also have on-going costs implementing and administering their policies. On balance, however, we believe the proposed rule would not constitute a substantial, incremental burden for smaller reporting companies or emerging growth companies.

In light of what we believe to be the minimal burden imposed by proposed Item 407(i) in terms of additional disclosure and the time necessary to prepare it, we are not proposing a delayed implementation schedule for smaller reporting companies and emerging growth companies. We are requesting comment, however, on the need for either an exemption for smaller reporting companies or emerging growth companies or a delayed implementation schedule for these companies.

c. Foreign Private Issuers

As noted above, Section 14(j) calls for disclosure in any proxy or consent solicitation material for an annual meeting of the shareholders of the issuer. Because securities registered by a foreign private issuer are not subject to the proxy statement requirements of Exchange Act Section 14,[79] foreign private issuers would not be required to provide Item 407(i) disclosure.

---

[79] Exchange Act Rule 3a12-3(b) [17 CFR 240.3a12-3(b)] specifically exempts securities registered by a foreign private issuer from Exchange Act Sections 14(a) and 14(c).

Request for Comment

13. Should Item 407(i) disclosure be required whenever action is taken with respect to the election of directors, as proposed? Instead, should we require disclosure in any proxy or information statement relating to an annual meeting of shareholders, irrespective of whether directors are to be elected at that meeting? Should the disclosure be limited only to annual meetings, and not special meetings, even if directors are to be elected at a special meeting?

14. Should proposed Item 407(i) disclosure also be required in Securities Act and Exchange Act registration statements? Should it be required in Exchange Act annual reports on Form 10-K? Would such information be material to investors in any of those contexts?

15. To retain consistency in the corporate governance disclosure provided in proxy statements and information statements with respect to the election of directors, Item 407(i) disclosure as proposed would apply to Schedule 14C as well as Schedule 14A. Is there any reason that the proposed Item 407(i) disclosure should be limited to issuers that are soliciting proxies? Why or why not?

16. In addition to including the new disclosure requirement, the proposed amendment to Item 7 of Schedule 14A would amend this Item to more succinctly organize its current provisions without changing the substance. As so revised, would the requirements of Item 7 be easier to understand?

Alternatively, should we retain the current structure of Item 7, with the addition of the Item 407(i) disclosure?

17. We propose to amend the CD&A requirement of Item 402(b) of Regulation S-K to add an instruction providing that the obligation under that item requirement to disclose material policies on hedging by named executive officers in a proxy or information statement with respect to the election of directors may be satisfied by a cross reference to the Item 407(i) disclosure in that document to the extent that the information disclosed there satisfies this CD&A disclosure requirement. Is there an alternative way to avoid possibly duplicative hedging disclosure in these proxy and information statements?

18. Is there a better way to align the requirements of Item 402(b) of Regulation S-K and proposed Item 407(i) of Regulation S-K? Are there circumstances in which the current CD&A requirement in Item 402(b) of Regulation S-K would result in more complete disclosure about the company's hedging policies than what would be required under proposed Item 407(i)? For example, although Section 14(j) addresses only hedging of equity securities, would disclosure of employees' and directors' ability to hedge other securities further the statutory purpose? In this regard, should we expand the proposed disclosure in Item 407(i) to include debt securities?

19. We request comment on all aspects of the proposed disclosure requirements as applied to funds, including whether all funds or additional types of funds other

than listed closed-end funds should be required to provide the proposed disclosure. Should we require all funds, including mutual funds and ETFs, to provide the proposed disclosure? Should we, instead, require different specific types of funds to provide the proposed disclosure? For example, should we require ETFs to provide the proposed disclosure? Would shareholders in mutual funds, ETFs, or other types of funds benefit from the information provided by the proposed disclosure?

20. If we were to require additional types of funds to provide the proposed disclosure, why and how, if at all, should we modify the disclosure requirements for such funds? As noted above, some ETFs are organized as UITs, which do not have boards of directors, and ETFs generally do not hold annual meetings of shareholders. How should any disclosure under Section 14(j) accommodate these or other characteristics of ETFs if we were to require ETFs to provide the proposed disclosure?

21. Are there additional characteristics of funds that we should consider in determining which funds should be required to provide the proposed disclosure or whether the disclosure requirements should be modified for funds or particular types of funds? If we were to require some or all funds to provide the proposed disclosure, including listed closed-end funds as proposed, what are the benefits and costs expected to result?

22. Should we modify the Item 407(i) disclosure requirements for listed closed-end funds? Would this information be material to an investor in contexts other than those relating to voting decisions, such as an investment decision? Should we also require the disclosure in listed closed-end funds' other disclosure documents, such as an annual report or shareholder report next following a meeting of shareholders, for example? If we were to require all funds or a broader group of funds to provide Item 407(i) disclosure, should we also require the disclosure in other disclosure documents, such as the funds' Statements of Additional Information?

23. As proposed, listed closed-end funds would be required to provide proposed Item 407(i) disclosure. Should we not require listed closed-end funds to provide this disclosure? If so, please explain why, and the benefits and costs that would result.

24. Do funds generally have policies concerning their employees and directors engaging in hedging transactions of securities issued by their respective funds, or policies that prohibit such hedging transactions? To what extent do employees or directors of listed closed-end funds receive shares of such funds as a form of compensation? Do employees or directors of listed closed-end funds currently effect hedging transactions with respect to the shares of those funds and, if so, what kinds of transactions do they effect?

25. How could employees or directors effect hedging transactions with respect to shares of funds other than listed-closed end funds, in particular mutual funds? How prevalent are these hedging transactions?

26. As proposed, listed closed-end funds, like the other issuers covered by the proposed amendments, would be required to provide disclosure concerning hedging of the equity securities issued by the fund or any of the fund's parents, subsidiaries or subsidiaries of the fund's parents that are registered under Section 12 of the Exchange Act.[80] Should we instead require listed closed-end funds to provide disclosure only about hedging transactions concerning the funds' shares? Would investors in listed closed-end funds benefit from receiving information about the funds' directors' and employees' holdings of the funds' parents, subsidiaries or subsidiaries of the fund's parents?

27. As proposed, business development companies would be required to provide proposed Item 407(i) disclosure. Should we modify the disclosure requirements for business development companies? Should we not require business development companies to provide this disclosure? If so, please explain why, and the benefits and costs that would result. Should we only

---

[80] Item 22 of Schedule 14A defines terms used in that Item, including the terms parent and subsidiary. Item 22(a)(1)(ix) defines the term "parent" to mean "the affiliated person of a specified person who controls the specified person directly or indirectly through one or more intermediaries." Item 22(a)(1)(xii) defines the term "subsidiary" to mean "an affiliated person of a specified person who is controlled by the specified person directly, or indirectly through one or more intermediaries."

require a business development company to provide the proposed disclosure if the business development company's shares are listed on a national securities exchange?

28. Should smaller reporting companies or emerging growth companies be exempted from proposed Item 407(i) or subject to a delayed implementation schedule? If so, please explain why and the benefits and costs that would result. As discussed below, a component of the disclosure costs (especially initial costs) may be fixed, which may have a greater impact on smaller reporting companies and emerging growth companies. Do the proposed disclosure requirements also impose other potential costs on smaller reporting companies or emerging growth companies that are different in kind or degree from those imposed on other companies?) Would the proposed disclosure requirements be as meaningful for investors in smaller reporting companies and emerging growth companies as for those in other companies? Do investors in smaller reporting companies and emerging growth companies place more, less, or the same value on corporate governance disclosures of the type proposed here than do investors in larger, more established companies, either alone or in relation to other disclosures?

29. Should foreign private issuers be required to provide the disclosure? If so, please explain why and specify the filing(s) in which the disclosure should be required?

30. Are there any other categories of issuers that should be exempt from the requirement to provide Item 407(i) disclosure? If so, please explain why, and the benefits and costs that would result.

General Request for Comment

We request and encourage any interested person to submit comments on any aspect of our proposals, other matters that might have an impact on the proposed amendments, and any suggestion for additional changes. With respect to any comments, we note that they are of greatest assistance to our rulemaking initiative if accompanied by supporting data and analysis of the issues addressed in those comments and by alternatives to our proposals where appropriate.

IV. ECONOMIC ANALYSIS

A. Background

Section 955 of the Act added Section 14(j) to the Exchange Act, which directs the Commission to adopt rules requiring an issuer to disclose in any proxy or consent solicitation material for an annual meeting of its shareholders whether any employee or director of the issuer, or any designee of an employee or director, is permitted to engage in transactions to hedge or offset any decrease in the market value of equity securities granted to the employee or director as compensation, or held directly or indirectly by the employee or director.

To implement the mandate of Section 14(j), we are proposing new paragraph (i) of Item 407 of Regulation S-K and amendments to Schedule 14A under the Exchange Act. Further, to reduce potentially duplicative disclosure, we propose to allow a company to satisfy its obligation to disclose material policies on hedging by named executive officers in the CD&A by cross reference to the information disclosed under proposed Item 407(i) to the extent that the information disclosed there satisfies this CD&A disclosure requirement.

We are mindful that our proposed amendments can both impose costs and confer benefits. Exchange Act Section 3(f) requires us, when engaging in rulemaking that requires us to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition and capital formation. Exchange Act Section 23(a)(2) requires us, when adopting rules under the Exchange Act, to consider the impact that any new rule would have on competition and not to adopt any rule that would impose a burden on competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act.

The discussion below addresses the economic effects of the proposed amendments, including likely benefits and costs, as well as the likely effect of the proposal on efficiency, competition and capital formation. We request comment throughout this release on alternative means of meeting the statutory mandate of Section 14(j) and on all aspects of the costs and benefits of our proposals and possible alternatives. We also request comment on any effect the proposed disclosure requirements may have on efficiency, competition and capital formation. We appreciate comments on costs and benefits that are attributed to the statute itself and, to the extent that they are separable, the costs and benefits that are a result of policy choices made by the Commission in implementing the statutory requirements, as well as any data or analysis that helps quantify the potential costs and the benefits identified.

B. Baseline

The proposed amendments affect all issuers registered under Section 12 of the Exchange Act, including smaller reporting companies ("SRCs"), emerging growth companies ("EGCs"), and listed closed-end funds, but excluding foreign private issuers ("FPIs"), and other types of registered investment companies, including non-listed closed-end funds, open-end funds, and unit investment trusts. We estimate that approximately 7,447 companies would be subject to the proposed amendments, including 4,620 listed Exchange Act Section 12(b) registrants and 2,827 non-listed Exchange Act Section 12(g) registrants. Among the Section 12(b) registrants subject to the proposed amendments, we estimate that 602 are listed closed-end funds, 916 are SRCs or EGCs, and the remaining 3,102 are other operating companies. Among the Section 12(g) registrants subject to the proposed amendments, 2,220 are SRCs or EGCs, and the remaining 607 are operating companies that are not SRCs or EGCs.[81] Other affected parties include these issuers' employees (including officers) and directors who hold equity securities of these issuers, and investors in general.

---

[81] We estimate the number of operating companies subject to the proposed amendments by analyzing companies that filed annual reports on Form 10-K in calendar year 2012 with the Commission. This set excludes ABS issuers (SIC 6189), registered investment companies, issuers that have filed registration statements but have yet to file Forms 10-K with the Commission, and foreign issuers filing on Forms 20-F and 40-F. We identify the companies that have securities registered under Section 12(b) or Section 12(g) from Form 10-K. We also determine from Form 10-K whether a company is a SRC. We determine whether a company is an EGC by reviewing both its Form 10-K and any registration statement. We estimate the number of listed closed-end funds based upon data from the 2014 Investment Company Fact Book, page 170 (available at http://www.ici.org/pdf/2014_factbook.pdf).

Because almost all listed closed-end funds are externally managed by investment advisers and only a small number of listed closed-end funds are internally managed where the portfolio managers are employees of the closed-end funds, the proposed amendments will generally affect the funds' employees and directors; employees of the funds' investment advisers (e.g., portfolio managers) will not be affected by the amendments.[82] Equity securities covered by the proposed amendments include equity securities issued by the company, any parent of the company, any subsidiary of the company or any subsidiary of any parent of the company that are registered under Section 12 of the Exchange Act.[83]

To assess the economic impact of the proposed amendments, we use as our baseline the state of the market as it exists at the time of this release. For Section 12 registrants (other than SRCs, EGCs, and listed closed-end funds) that are subject to the proposed amendments, the regulatory baseline is the current CD&A disclosure requirement in Item 402(b)(2)(xiii) of Regulation S-K. Item 402(b)(2)(xiii) calls for disclosure of "any registrant policies regarding hedging the economic risk" of security ownership by named executive officers as one of the "non-exclusive" examples of information includable in CD&A, if material. To the extent that a registrant does not have a policy regarding hedging by named executive officers, there

[82] Among the approximately 602 listed closed-end funds in 2012, Commission staff has identified only 4 internally-managed closed-end funds from a review of filings with the Commission.

[83] In some instances, equity of a company's subsidiary may be granted as compensation for that company's officers (He et al. 2009). Stock holdings in a company's subsidiary provide officers with an incentive to make decisions to improve the subsidiary's performance, which in turn may positively affect the economic prospects of the parent company. As discussed later, it is important for shareholders (of both the company and its subsidiary) to better understand whether incentives can be reduced by hedging. See He W., M. K. Tarun, and P. Wei, 2009, "Agency Problems in Tracking Stock and Minority Carve-out Decisions: Explaining the Discrepancy in Short- and Long-term Performances" Journal of Economics and Finance 33(1): 27-42.

is no obligation to disclose. For SRCs, EGCs, and listed closed-end funds, CD&A disclosure pursuant to Item 402(b)(2)(xiii) is not currently required.

Additionally, officers and directors of companies with a class of equity securities registered under Section 12, including SRCs and EGCs, are currently required to report their hedging transactions involving the company's equity securities pursuant to Exchange Act Section 16(a). Further, Section 30(h) of Investment Company Act specifies that officers and directors of closed-end funds are subject to the same duties and liabilities as those imposed by Section 16 of the Exchange Act.

Table 1 below draws a comparison between the current requirements for CD&A disclosure and Section 16 reporting, where applicable, and the proposed disclosure requirement for the registrants that would be affected by the proposed amendments.

Table 1 - Comparison of Disclosure Requirements

Covered Company (1)	*Covered Persons* (2)	*Current Company Reporting Requirement* (3)	*Current Officer & Director Reporting Requirement* (4)	*Company Reporting Requirement Under the Proposed Amendments* (5)
12(b) companies other than SRCs, EGCs, and listed closed-end funds [Number = 3,102]	NEOs	Item 402(b)	Section 16(a)	
	Other employees	None	Section 16(a), if an officer	
	Directors	None	Section 16(a)	
12(g) companies			Section 16(a)	

other than SRCs and EGCs [Number = 607]	NEOs	Item 402(b)		Item 407(i)[84]
	Other employees	None	Section 16(a), if an officer	
	Directors	None	Section 16(a)	
SRCs & EGCs under 12(b) [Number = 916]	Employees (including NEOs) & Directors	None	Section 16(a), if an officer or director	
SRCs & EGCs under 12(g) [Number = 2,220]	Employees (including NEOs) & Directors	None	Section 16(a), if an officer or director	
Listed closed-end funds [Number = 602]	Employees & Directors	None	Section 30(h) of the Investment Company Act	

As illustrated in Table 1, disclosure requirements will increase for all companies subject to the proposed amendments, although the extent of the increase may vary for different categories of registrants.

[84] As proposed, companies would be required to make disclosure under proposed Item 407(i) when they file proxy or information statements with respect to the election of directors. Proxy statement disclosure obligations only arise under Section 14(a), however, when an issuer with a class of securities registered under Section 12 chooses to solicit proxies (including consents). Since the federal securities laws do not require the solicitation of proxies, the application of Section 14(a) is not automatic. Whether or not an issuer has to solicit therefore depends upon any requirement under its charter and/or bylaws, or otherwise imposed by law in the state of incorporation and/or by the relevant stock exchange (if listed). For example, NYSE, NYSE Market, and NASDAQ generally require solicitation of proxies for all meetings of shareholders. If a listed company then chooses to hold a meeting at which directors are to be elected and solicit proxies, Section 14(a) would then apply and compel the disclosure identified in Item 407(i). Section 12(g)-registered companies also can make the decision to solicit proxies and thus similarly will have to comply with Section 14(a), to the same extent Section 12(b)-registered companies. When Section 12 registrants that do not solicit proxies from any or all security holders are nevertheless authorized by security holders to take an action with respect to the election of directors, disclosure obligations also arise under proposed Item 407(i) due to the requirement to file and disseminate an information statement under Section 14(c).

To establish the baseline practices for Section 12 companies subject to Item 402(b)(2)(xiii), we reviewed the disclosures of "policies regarding hedging" by named executive officers from two samples of exchange-listed companies. The first sample included all S&P 500 companies that filed proxy statements during the calendar year 2012, totaling 484 companies.[85] Our analysis revealed that disclosures are not uniform across companies. Out of the 484 proxy statements, 158 companies (33%) did not disclose hedging policies for named executive officers, six companies (1%) disclosed that the company did not have a policy regarding hedging by named executive officers, 284 companies (59%) disclosed that named executive officers were prohibited from hedging, and 36 companies (7%) disclosed that they permitted hedging by named executive officers under certain circumstances.

The second sample included 100 randomly selected companies from the 494 S&P Smallcap 600 index companies that filed proxy statements during the calendar year 2012. These companies are significantly smaller and less widely followed than S&P 500 companies, and, as a result, may have significantly different disclosure practices. These companies are all exchange-listed, and none are SRCs or EGCs. We found that 71 companies (71%) did not disclose hedging policies for named executive officers, four companies (4%) disclosed that the company did not have a policy regarding hedging by

[85] To be included in the S&P 500 index, the companies must be publicly listed on either the NYSE (NYSE Arca or NYSE MKT) or NASDAQ (NASDAQ Global Select Market, NASDAQ Select Market or the NASDAQ Capital Market). Because this index includes foreign companies, there were fewer than 500 proxy statements filed.

named executive officers, 23 companies (23%) disclosed that named executive officers were prohibited from hedging, and two companies (2%) disclosed that they permitted hedging by named executive officers under certain circumstances.

Our analysis of the two samples revealed that a significant percentage (34%) of S&P 500 companies, and an even larger percentage of the subset of S&P Smallcap 600 companies (75%) either did not make a disclosure or reported that they did not have a policy for named executive officers. This baseline analysis suggests that smaller companies will likely have a greater initial disclosure burden under the proposed amendments than larger companies.

As mentioned above, SRCs, EGCs, and listed closed-end funds are not required to make Item 402(b) disclosure and, consequently, are not currently required to disclose any policies regarding hedging by named executive officers. However, officers and directors at SRCs and EGCs with a class of equity securities registered under Section 12 are currently required to report their hedging transactions involving the companies' equity securities pursuant to Section 16(a), and officers and directors of registered closed-end funds are required to make similar reports by Section 30(h) of the Investment Company Act. Notwithstanding these reports, investors' ability to use reported insider hedging transactions, if any, to infer these companies' policies regarding hedging by officers and directors is imperfect at best. First, an investor must track all the accumulated insider trades reported to assess whether there is hedging. Disclosures of particular hedging transactions by officers and directors could indicate that the company permits that particular type of transaction, that the company has no hedging policy, or that a company policy was violated but the transaction was reported in accordance with current rules. The absence of reported hedging transactions could indicate that the company prohibits hedging, that the company permits hedging but the officers and directors do not engage in hedging transactions, or that officers and directors engage in hedging transactions but are not complying with Section 16(a) reporting requirements.

C. Discussion of Benefits and Costs, and Anticipated Effects on Efficiency, Competition and Capital Formation

1. Introduction

From an economic theory perspective, an executive officer's ownership in the employer company ties his or her financial wealth to shareholder wealth, and hence can provide the executive officer with an incentive to improve the company's performance, as measured by stock price.[86] Permitting executive officers to hedge can be perceived by shareholders as a problematic practice[87] because hedging can have the economic effect of taking a short position on the employer's stock, which is counter to the interests of other shareholders.

---

[86] The literature in economics and finance typically refers to a principal-agent model to describe the employment relationship between shareholders and executive officers (managers) at a company. The principal (shareholders) hires an agent (manager) to operate the company. However, because shareholders cannot perfectly observe managerial actions, this information asymmetry gives rise to a moral hazard problem: managers may act in their own self-interest and not always in the interest of shareholders. This potential misalignment of incentives is ameliorated when managers are also owners of the company, and thus must internalize the cost of any actions that harm shareholders or do not otherwise maximize the value of the company. See, e.g., Jensen, M. C. and W. H. Meckling, 1976. "Theory of The Firm: Managerial Behavior, Agency Costs and Ownership Structure" Journal of Financial Economics 3: 305-360; Holmstrom, B., 1979. "Moral Hazard and Observability" Bell Journal of Economics 10: 324-340; Holmstrom, B. and Ricart I Costa, J., 1986 "Managerial Incentives and Capital Management", Quarterly Journal of Economics 101, 835-860.

[87] See, e.g., Institutional Shareholder Services Inc., "2013 Corporate Governance Policy Updates and Process: Executive Summary", Nov. 16, 2012 at http://www.issgovernance.com/file/files/2013ExecutiveSummary.pdf.

Alternatively, permitting executive officers to hedge, under certain circumstances, could align officers' and shareholders' preferences more closely and thereby promote more efficient corporate investment. Compared with well-diversified shareholders, executive officers are likely to be disproportionately invested in their company and thus inherently undiversified.[88] The concentrated financial exposure, together with executive officers' concerns about job security in the event of a stock price decline, could lead them to take on fewer risky projects (i.e., projects with uncertain future cash flows) that are potentially value enhancing than would be in the interest of well-diversified shareholders, resulting in underinvestment.[89] This underinvestment concern can be addressed by providing downside price protection to executive officers' equity holdings, in case high-risk projects—that are in the interest of shareholders at the time of the investment decision—do not turn out to be successful and thereby cause a decline in the stock price.[90] One way to do so is to permit

---

[88] Meulbroek (2005) points out that employees may be even more undiversified than their equity holdings suggest: "their continued employment and its relation to the fortunes of the firm, outstanding deferred compensation owed to the employee, and any firm specific human capital exacerbate employees' firm-specific risk exposure." See Meulbroek, L. 2005, "Company Stock in Pension Plans: How Costly Is It?" Journal of Law and Economics, vol. XLVIII: 443-474; Hall, B., and K. Murphy. 2002. "Stock options for undiversified executives" Journal of Accounting and Economics 33: 3–42. Moral hazard and adverse selection issues cause boards of directors to compel executive officers to maintain large personal investment in their companies. Executive officers may not be able to diversify this exposure because of explicit stock ownership guidelines for executives and directors, contractual restrictions on trading equity grants within the vesting periods, and retention plans that prohibit the sale of unrestricted stock for some time after vesting.

[89] This underinvestment concern has been studied in a long strand of academic literature. See e.g., Rappaport, A. 1978, "Executive Incentives vs. Corporate Growth" Harvard Business Review 57: 81-88; Smith, C., and R. Stulz. 1985. "The Determinants of Firms' Hedging Policies", Journal of Financial and Quantitative Analysis 20: 391–405; Kaplan, R., 1982, "Advanced Management Accounting" Englewood Cliffs, N. J.: Prentice-Hall; and Lambert, R., 1986, "Executive Effort and the Selection of Risky Projects" Rand Journal of Economics 17, 77-88.

[90] See Hemmer, T., O., Kim, and R. Verrecchia, 1999, "Introducing Convexity into Optimal Compensation Contracts" Journal of Accounting and Economics 28: 307-327.

executive officers to seek downside price protection by hedging their equity holdings. However, the value of hedging to address potential underinvestment depends on the availability and cost-effectiveness of other solutions to the underinvestment concern.[91]

The theories of equity incentives described above for executive officers may also apply to critical employees (e.g., key research scientists), because these individuals' actions and decisions can also impact company stock price. These theories can also apply to directors, who typically receive equity-based compensation to align their interests with those of the shareholders they represent. However, directors may have less incentive to hedge because their financial wealth is typically better diversified than executive officers', and is therefore less sensitive to company stock price. Nevertheless, directors' compensation, particularly in the form of equity compensation, grew significantly during the 2000s, contributing to a significant increase in directors' equity incentives.[92] The increased level of

---

[91] For example, requiring executive officers to hold stock options can also provide them with incentives to take on risky ~~but~~ ~~value-enhancing~~ investment projects. Such risk-taking incentives depend on option moneyness: the incentives are the strongest when options are near the money, but quickly diminish when options go deep in the money. If a company experiences a sharp stock price increase, which causes executive officers' option holdings to become deep in-the-money, such holdings likely would not provide effective risk-taking incentives. In this situation, permitting executives to hedge may be a better solution to the underinvestment concern than for the company to grant new at-the-money options, because the latter may cause the company to overpay the executives. Hedging of corporate operations, as opposed to personal hedging by executive officers, could also increase the executives' incentives to take higher risk but value-enhancing corporate projects, but corporate hedging can be costly. See Smith C. and R. Stulz, 1985, "The Determinants of Firms' Hedging Policies" Journal of Financial and Quantitative Analysis 20(4): 392-405).

[92] For S&P 1500 companies, median total compensation per outside director rose from $57,514 in 1998 to $112,745 in 2004 (a 51% increase), far greater than the rate of increase of 24% in CEO compensation over the same period. The proportion of director pay provided by equity increased from around 45% in 1998 to over 60% in 2004. Yermack (2004) show that, in Fortune 500 companies, some directors near the top of the distribution receive very significant equity awards that can provide ex-post performance rewards exceeding those of some CEOs. Altogether, equity holdings, turnover, and opportunities to obtain new board seats provide outside directors serving in their fifth year with wealth increases of approximately 11 cents per $1,000 rise in

directors' equity incentives suggests that equity incentives could be playing an increasingly important role in influencing directors' actions on corporate decisions.

These theories of equity incentives may not apply to employees who do not participate in making and shaping key operating or strategic decisions that influence stock price. While some of these employees may also receive equity grants as part of the companies' broad-based equity plans, their equity ownership on average is much lower than that of executive officers. Equity ownership for these employees mainly serves the purpose of recruitment and job retention, and on an individual employee basis, is unlikely to have a notable impact on the company's equity market value.[93] In other words, for employees below the executive level who typically do not make decisions that influence stock price, information about their equity incentives and hedging of their equity holdings may be less relevant for investors.

---

firm value. Although typically smaller than incentives for CEOs, director incentives can be significant given that many directors serve on multiple boards. See Yermack, D. 2004, "Remuneration, Retention, and Reputation Incentives for Outside Directors", The Journal of Finance LIX: 2281-2308; Farrell K., G. Friesen, and P. Hersch, 2008, "How Do Firms Adjust Director Compensation?", Journal of Corporate Finance 14: 153-162; J. Linck, J. Netter, and T. Yang, 2009, "The Effects and Unintended Consequences of the Sarbanes-Oxley Act on the Supply and Demand for Directors", The Review of Financial Studies 22: 3287-3328; and Fedaseyeu V., J. Linck, and H. Wagner, 2014, "The Determinants of Director Compensation" Bocconi University and Southern Methodist University working paper (available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2335584). Note that these studies used samples prior to 2011; however, we have no reason to believe that director incentives and compensation have declined significantly in more recent years.

[93] See Oyer, P. 2002, "Stock Options – It's Not Just About Motivation", Stanford Institute for Economic Policy Research (available at http://web.stanford.edu/group/siepr/cgi-bin/siepr/?q=system/files/shared/pubs/papers/briefs/policybrief_oct02.pdf); Oyer, P. and S. Schaefer, 2005, "Why Do Some Firms Give Stock Options to All Employees?: An Empirical Examination of Alternative Theories", Journal of Financial Economics 76 (1): 99–133.

Like operating companies, listed closed-end funds also confront a principal-agent relationship between shareholders and the fund's directors and employees, if any. The connection between managerial incentives and firm performance is, however, less direct in listed closed-end funds than it is in operating companies because almost all of these funds are externally managed by investment advisers.

Fund directors oversee the many service providers that will typically serve a listed closed-end fund, including the investment adviser. Holding equity shares in the fund can align directors' interests with those of the shareholders.[94] Some listed closed-end funds do require or encourage directors to hold fund shares.[95] The proposed disclosure thus would allow the shareholders of a listed closed-end fund whose shares, for example, are trading at a discount to know if the listed closed-end fund permits its directors to hedge the value of the fund's equity securities. The proposed disclosure would thereby show whether the fund's directors, like the fund's other shareholders, would receive that discounted price upon a sale of the shares without an offset from any hedging transactions.

---

[94] We have previously published the Commission staff's view that "[f]und directors who own shares in the funds that they oversee have a clear economic incentive to protect the interests of fund shareholders," and that fund policies that encourage or require independent directors to invest the compensation that they receive from the funds in shares of the funds "gives the independent directors a direct and tangible stake in the financial performance of the funds that they oversee, and can help more closely align the interests of independent directors and fund shareholders." See Interpretive Matters Concerning Independent Directors of Investment Companies, Investment Company Act Release No. 24083 (Oct. 14, 1999).

[95] Zhao (2007) studies 316 closed-end funds in 2002. She finds that 200, or 62.3%, report positive director ownership. The average (median) director ownership is at $105,493 ($30,001). See Zhao, L., 2007, "Director Ownership and Fund Value: Evidence from Open-End and Closed-End Funds", Columbia University working paper (available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=963047).

In an operating company, shareholdings also affect the incentives of employees, including managers who are making the company's decisions. In contrast, almost all listed closed-end funds have few (if any) employees. Fund portfolios are almost always managed by portfolio managers who are employed by external investment advisers. Because listed closed-end fund shares are not redeemable and often trade at a discount to NAV, shareholders of those funds may place importance on the degree of incentive alignment between funds' key decision makers and shareholders when making voting decisions.[96]

The proposed amendments apply only to employees and directors of the fund itself, however. As a result, these amendments would not directly affect outside portfolio managers' asset choices. However, fund directors may influence the investment adviser's management of the fund's portfolio indirectly, through the directors' oversight of the investment adviser, which is responsible for managing the fund's portfolio consistent with the fund's disclosed strategy and investment objectives.

In summary, information on the company's policies regarding hedging by employees and directors may help investors better understand the employees' and directors' incentives in creating shareholder wealth. For example, in operating companies, because executive officers' and directors' reported equity holdings in proxy statements may not reflect their actual economic exposure to the company's performance, there may in certain cases exist an information asymmetry between insiders and other investors regarding the executive officers'

[96] See Wu, Y., R. Wermers, and J. Zechner, 2013, "Managerial Rents vs. Shareholder Value in Delegated Portfolio Management: The Case of Closed-End Funds" working paper. Available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2179125&download=yes.

and directors' equity incentives. The mandated disclosures can help mitigate this information asymmetry.

2. New Disclosure Requirements Across Covered Companies

Before considering the economic effects from proposed Item 407(i), we first discuss the new disclosures that would be required for different covered companies, and the new information from these disclosures. The potential economic effects would likely vary across companies depending on the nature and amount of new information from the disclosures, the degree of investment opportunities available to the company, and the likelihood that employees and directors engage in hedging transactions (discussed in detail later).

Section 12 registrants, with the exception of SRCs, EGCs, and registered investment companies (which include listed closed-end funds), are currently required under Item 402(b) to disclose their hedging policies for named executive officers, if material. Companies are not otherwise currently required to provide information about whether they have a policy on hedging. They may not be providing such disclosures, possibly because their hedging policies are not material, or because they do not have a policy. Table 2 divides covered companies, which includes both operating companies and listed closed-end funds, into four categories. The first three categories include operating companies. The last category includes listed closed-end funds.

Table 2 – Four Categories of Covered Companies

Section 12 Companies Subject to the Proposed Amendments
(1) Companies that are subject to Item 402(b) and make disclosures for named executive officers
(2) Companies that are subject to Item 402(b) but make no disclosures

(3) SRCs and EGCs that are not currently required to make Item 402(b) disclosures but must disclose under Item 407(i)
(4) Listed closed-end funds that are not currently required to make Item 402(b) disclosures but must disclose under Item 407(i)

Category 1 refers to the subset of companies subject to Item 402(b) that currently provide disclosure about hedging policies for named executive officers. These companies may be unlikely to change such policies as a result of the proposed amendments. For these companies, the new disclosures required under proposed Item 407(i) are whether employees (other than named executive officers) and directors are permitted to hedge.

Category 2 refers to companies subject to Item 402(b) that do not currently disclose information about whether hedging by their named executive officers is permitted.[97] New disclosures under the proposed amendments would confirm for shareholders whether hedging is permitted. Given that shareholders are likely to view a policy prohibiting hedging by named executive officers as shareholder friendly,[98] the requirement to disclose may prompt some of these companies to adopt new policies or change their current policies or practices.

[97] For example, as discussed above, we collected data on the baseline practice of some Section 12(b) registrants other than SRCs and EGCs. The proxy statements filed during calendar year 2012 indicated that most of the S&P 500 companies disclosed their hedging policies for named executive officers: 59% of companies prohibited hedging, while 7% permitted hedging. The rest either made no disclosure of hedging policy (33% of companies) or disclosed that they did not have a policy regarding hedging by named executive officers (1% of companies); we include such companies in category 2. The incidence of no disclosure tended to be higher among smaller companies.

[98] See, e.g., Institutional Shareholder Services Inc., "2013 Corporate Governance Policy Updates and Process: Executive Summary", Nov. 16, 2012 at http://www.issgovernance.com/file/files/2013ExecutiveSummary.pdf ("Stock-based compensation or open market purchases of company stock are intended to align executives' or directors' interests with those of shareholders. Therefore, hedging of company stock through covered call, collar, or other derivative transactions severs the ultimate alignment with shareholders' interests. Any amount hedged will be considered a problematic practice warranting a negative voting recommendation on the election of directors.").

In light of the required say-on-pay vote on executive compensation, we believe that companies prohibiting hedging by named executive officers would already have an incentive to disclose such a policy. Some shareholders may believe it is reasonable to infer that a company that is subject to Item 402(b) but does not disclose a hedging policy in effect may permit named executive officers to hedge. As a result, because shareholders either know through affirmative disclosure under Item 402(b)(2)(xiii) or may believe it is reasonable to infer from the absence of disclosure that named executive officers are permitted to hedge, the proposed amendments may not have much effect in reducing uncertainty as it relates to named executive officers. For Section 12 registrants other than SRCs, EGCs and listed closed-end funds, the new information provided by disclosures under the proposed amendments relates primarily to whether employees (other than named executive officers) and directors are permitted to hedge.

Category 3 refers to SRCs and EGCs, which are currently exempt from Item 402(b). The new information available to investors under proposed Item 407(i) would require disclosure, for the first time, about whether employees (including named executive officers) and directors are permitted to hedge.

Category 4 refers to listed closed-end funds. Since these funds are not currently subject to Item 402(b), the new information that would be available to shareholders is comparable in type to that of SRCs and EGCs. However, the new information about listed closed-end funds may in fact be less substantial than that of SRCs and EGCs for most funds because almost all listed closed-end funds are externally managed, as discussed above. Only a small number of internally-managed listed closed-end funds have employees, which include funds' portfolio managers.

3. Benefits and Costs

Investors can benefit from the disclosures under the proposed amendments in the following ways.[99] First, as discussed above, officers', directors', and non-officer critical employees' equity incentives tend to align their interests with those of the shareholders. Under the proposed amendments, investors would benefit from new disclosures that provide more clarity and transparency about these incentives, thereby reducing the information asymmetry between corporate insiders and shareholders regarding such incentives. Better information about equity incentives could be useful for investors' evaluation of companies, enabling investors to make more informed investment and voting decisions, thereby encouraging more efficient capital allocation decisions.

Second, the proposed amendments may reduce the costs for investors in researching and analyzing equity-based incentives. Knowledge that employees and directors are not permitted to hedge could confirm for investors that the reported equity holdings of officers and directors in proxy statements and annual reports on Form 10-K represent their actual incentives.[100] While Section 16(a) reports provide transaction-level information on officer

[99] Our discussion focuses on officers and non-officer critical employees, not on employees who do not participate in making and shaping key operating or strategic decisions that influence stock price. As discussed earlier, information about these other employees' equity incentives and hedging of their equity holdings is less relevant for investors.

[100] Between 1996 and 2006, in firms where insiders hedged their equity ownership, insiders on average used collars, forwards or swaps to cover about 30% of their ownership and placed about 9% of their ownership into

and director hedging activity, Forms 3, 4, and 5 may be costly to search; investors also may incur costs in analyzing whether a reported transaction is indeed a hedge. Moreover, hedging activity disclosed on a Form 3, 4, or 5 does not indicate whether a transaction was conducted in accordance with the company's hedging policy, and therefore may lead to improper inferences about the company's hedging policy.

Third, the proposed amendments could also benefit investors if the public nature of the required disclosures results in changes in hedging policies that improve incentive alignment between shareholders and executive officers or directors.[101] Companies that currently already disclose whether named executive officers are permitted to hedge may be unlikely to substantially change their policies as a result of the proposed amendments. However, this could be different for companies that do not currently make disclosures on hedging policies for all employees or directors.[102] Without disclosed hedging policies, these companies may in fact implicitly permit hedging. However, permitting hedging may not necessarily promote efficient investment decisions. Employees and directors often demand a premium for receiving equity compensation in lieu of cash. However, through hedging they

---

the exchange funds. See Bettis, C., J. Bizjak, and S. Kalpathy, 2013, "Why Do Insiders Hedge Their Ownership? An Empirical Examination" working paper (available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1364810). There is limited research on hedging transactions by corporate insiders. Hedging transactions studied in this paper included those by 10% owners. In addition, the sample period was 1996-2006, and thus the findings may not reflect the current situation.

[101] Alternatively, as discussed later, if the change in hedging policies reduces incentive alignment, such change can reduce shareholder wealth.

[102] Such companies include any company that currently does not disclose a hedging policy for any category of employees (including named executive officers) and directors, so could fall under any of the last three categories of companies in Table 2.

may be able to convert the value of that premium into cash. This causes the company to overpay relative to its opportunity cost.[103] If, in light of the disclosure requirement under Item 407(i), the company later chooses to prohibit hedging, this change could increase shareholder wealth to the extent that the change better aligns incentives and hence induces officers and directors to make corporate decisions that are more beneficial to all shareholders. However, to the extent that changes in hedging policies reduce incentive alignment between shareholders and officers or directors, and results in underinvesting in potentially value-enhancing projects, the opposite effect could result.

The benefits discussed above are relevant for investors of all companies affected by proposed Item 407(i), including listed closed-end funds.[104] Among operating companies (the first three categories in Table 2), the new information elicited from the required disclosures increases, so we expect the benefits from the new disclosures also to increase similarly. Further, we expect the potential benefits to be higher for EGCs and SRCs (category 3) than for non-EGCs and non-SRCs (categories 1 and 2), because EGCs and SRCs potentially face greater risk of a stock price decline than non-EGCs and non-SRCs. EGCs are typically younger firms with high growth options but fewer financial resources and are more likely to face financial distress since firm age is among the most important determinants of probability

---

[103] See Larcker D. and B. Tayan, 2010,"Pledge (and Hedge) Allegiance to the Company", Stanford Closer Look Series, available at http://ssrn.com/abstract=1690746.

[104] Because listed closed-end funds exhibit salient differences in organizational structure, and hence incentive compensation mechanisms, from operating companies, we do not compare the economic effects of the proposed amendments between listed closed-end funds and operating companies.

of failure.[105] Because employees and directors of EGCs and SRCs potentially face greater downside price risk than those of non-EGCs and non-SRCs, the former have likely stronger incentives to hedge, thus making information about permissible hedging activities more relevant for shareholders of these companies.[106]

The benefits to investors also depend on the likelihood that officers and directors engage in hedging transactions. Officers and directors can hedge by, for example, entering into exchange-traded or over-the-counter derivative contracts. In either case, however, when the underlying stock is illiquid, the price of the derivatives contracts likely reflects the higher risk and cost that would be required to dynamically replicate the exposure of the derivatives contracts by trading in the underlying stock. As a result, it is likely more costly to hedge the risk of more illiquid stock. Though undiversified officers and directors have strong incentives to diversify (e.g., through hedging), they may not engage in hedging transactions if the cost is too high. In companies whose officers and directors are less likely to hedge due to high hedging cost, the potential benefits to investors from the required disclosures under the proposed amendments might be more limited. In the first three categories of companies,

---

[105] See Lane, S., Schary, M.,1991,"Understanding the Business Failure Rate", Contemporary Economic Policy 9: 93–105; Kapadia, N. 2011. "Tracking Down Distress Risk," Journal of Financial Economics 102: 167-182

[106] Though no study to our knowledge directly examines whether insiders of smaller firms tend to hedge more, indirect evidence suggests that this is likely the case. For example, Bettis et al. (2001) find a total of 87 zero-cost collar transactions by searching Forms 3, 4 and 5 filed between January 1996 and December 1998. Firms in this sample have total assets with a mean (median) value of $3.4 billion ($401 million). These firms are much smaller than S&P 500 companies over the same time period, whose total assets have mean (median) of $16.15 billion ($3.84 billion) based on our calculation. This comparison indicates that hedging by zero-cost collars is disproportionally more frequent in smaller firms. See Bettis, J., J. Bizjak, and M. Lemmon. 2001. "Managerial Ownership, Incentive Contracting, and the Use of Zero-cost Collars and Equity Swaps by Corporate Insiders" Journal of Financial and Quantitative Analysis 36 (3): 345-370.

each category includes both exchange-listed and non-exchange-listed companies. Since stocks of exchange-listed companies are typically more liquid than stocks of non-exchange-listed companies, the potential benefits of the new disclosure to investors of non-exchange-listed companies may be lower than for exchange-listed ones. It is possible that stocks of smaller companies are less liquid, and hence these companies may be subject to the same effect.

The expected potential benefits from proposed Item 407(i) would not be achieved without costs. All covered companies would incur costs to comply with the proposed amendments. Such costs include both disclosure costs, which stem directly from complying with the proposed amendments, and potential costs incurred to implement, administer, or revise a hedging policy.

We first focus on disclosure costs, which should increase with the amount of new disclosures required under proposed Item 407(i). As discussed above, for operating companies (i.e., the three first categories in Table 2), the new required disclosures are higher in categories 2 and 3 than in category 1, so disclosure costs should also be higher in categories 2 and 3. Specifically, category 1 companies would incur costs to determine whether employees (other than named executive officers) and directors are permitted to engage in hedging transactions, and incur costs to provide the required disclosure.

Category 2 companies are subject to Item 402(b) but do not currently disclose any information about whether hedging by their named executive officers is permitted. To the extent that these companies permit hedging and that required disclosures under the proposed amendments do not change this practice, this category of companies would incur small additional costs to disclose their hedging policies for named executive officers. If these companies instead decide to prohibit hedging by named executive officers, they would incur a small additional cost to disclose the revised hedging policies, but they could incur other costs that could be more significant, which we discuss separately below. Similar to category 1, these companies would also incur costs to determine and disclose whether directors and employees other than named executive officers are permitted to hedge.

Category 3 companies, i.e., SRCs and EGCs, are not currently subject to Item 402(b). They may be less likely than companies subject to Item 402(b) to have policies, or to have articulated their practices, on whether hedging is permitted for employees (including named executive officers) and directors. Some SRCs and EGCs may incur costs in formulating policies for the first time, which will likely involve obtaining the advice of legal counsel and may also involve retaining compensation consultants. These companies would also incur costs in presenting the required disclosures in proxy or information statements.

In Category 4, listed closed-end funds, similar to SRCs and EGCs, would incur costs to disclose, and possibly to formulate, policies regarding hedging by employees and directors. As noted above, the vast majority of listed closed-end funds is externally-managed and thus would incur costs to disclose whether hedging by employees (if any) and directors is permitted. The limited number of listed closed-end funds that are internally managed also would incur costs to disclose if employees and directors are permitted to hedge with the difference, relative to externally-managed listed closed-end funds, that these funds will have portfolio managers and others as employees.

We expect the above disclosure costs to be minimal for these four categories of companies. A component of these costs (especially initial costs) may be fixed, which may have a greater impact on the smaller companies in category 3. While we cannot quantify these disclosure costs with precision, many of the costs reflect the burden associated with collection and reporting of information that we estimate for purposes of the Paperwork Reduction Act ("PRA"). For purposes of the PRA, we estimate the total annual increase in paperwork burden for all covered companies to be approximately 19,283 hours of in-house personnel time and approximately $2,571,200 for the services of outside professionals.[107]

These disclosure costs, however, do not include costs incurred to implement, administer, or revise a hedging policy. For example, under the proposed amendments, a company that prohibits hedging by directors may incur additional costs to implement this policy, e.g., by analyzing whether transactions by a director have the effect of hedging.[108] If a company revises its hedging policy as a result of the proposed amendments, additional costs may also arise. Such costs could involve obtaining the advice of compensation consultants and legal counsel.

---

[107] See Section V of the release.

[108] Such costs are only incremental to the extent that the company does not already have procedures in place to administer and make such determination for named executive officers.

Perhaps most importantly, disclosing whether employees and directors are permitted to hedge might lead to changes in hedging policies that reduce incentive alignment between shareholders and officers or directors, if the current compensation arrangement is already in shareholders' interest. Specifically, a company may currently permit hedging by executive officers to promote efficient investments in risky projects. As discussed above, companies in category 1 currently disclose hedging policy for named executive officers, and may be unlikely to substantially change their policies under proposed Item 407(i). However, companies in categories 2 and 3, which do not disclose their hedging policies for named executive officers, may currently permit hedging by named executive officers but could switch to prohibiting hedging as a result of public disclosure under proposed Item 407(i). Such a change in policy, in certain instances, could limit executives' ability to arrive at optimal levels of economic exposure to the company – i.e., one that leads executives to undertake the optimal level of risk in corporate investment decisions for the company's shareholders.[109] To the extent that compensation incentives materially affect a firm's value, such changes could result in a reduction in shareholder wealth.

We expect this cost from distorted investment incentives to be greater for companies in categories 2 and 3 than those in 1, as the latter may be unlikely to substantially change their hedging policies. However, between categories 2 and 3, it is not clear whether category 3 (EGCs and SRCs) would incur a higher cost than category 2. On one hand, EGCs and

---

[109] As discussed above, hedging by officers and directors is one of the solutions to the underinvestment concern, and the significance of such a problem depends on the availability and cost-effectiveness of other solutions.

SRCs likely have higher growth options than non-EGCs and non-SRCs. Since the use of equity incentives to induce officers and directors to make proper corporate investment decisions is more important for companies with higher growth options, the cost from distorting investment incentives could be higher for EGCs and SRCs. On the other hand, as discussed above, such cost is limited by the availability of other cost-effective solutions to the underinvestment concern, e.g., requiring an officer to hold stock options. Without adequate data, it is difficult to determine whether and when hedging would be more prevalent than stock options in providing incentives for officers at EGCs and SRCs as compared to non-EGCs and non-SRCs. Evidence from academic studies shows that reported hedging transactions by officers and directors are infrequent; however, officers' option holdings are much more prevalent, and the magnitude of CEO options holdings is greater in higher-growth firms to provide risk-taking incentives.[110] Taken together, it is not clear whether costs to EGCs and SRCs are higher than to companies in category 2.

The extent of the cost resulting from distorted investment incentives not only depends on a company' growth opportunities, but also depends on the likelihood that officers and directors engage in hedging transactions. As discussed above, we expect officers and directors are less likely to hedge when the equity security is more illiquid, because hedging cost is higher. As a result, in these companies, hedging by officers and directors is less likely to be used as a way to address the underinvestment concern in the first place. Thus, the cost

[110] See Guay, W., 1999, "The Sensitivity of CEO Wealth to Equity Risk: An Analysis of the Magnitude and Determinants", Journal of Financial Economics 53, 43-71.

to these companies from prohibiting hedging when it would otherwise be economically beneficial would also likely to be more limited. In company categories 1, 2, and 3, each category includes both exchange-listed and non-exchange-listed companies; we expect such cost to be lower for non-exchange-listed companies than exchange-listed companies, because equity securities of the former typically are more liquid than equity securities of non-exchange-listed companies. Finally, to the extent that equity securities of smaller companies are less liquid, these companies may be subject to the same effect.

The effects resulting from distorted incentives are likely to be different between externally-managed listed closed-end funds and internally-managed listed closed-end funds. As discussed above, portfolio managers for these externally managed funds are employees of the funds' investment advisers and thus are not covered by proposed Item 407(i). Policies on whether portfolio managers are permitted to hedge, if any, therefore are unlikely to change as a result of listed closed-end funds complying with proposed Item 407(i). Since these portfolio managers directly make investment decisions, their incentives to make portfolio selections are unlikely to be changed by the proposed amendments. Directors of listed closed-end funds are covered by proposed 407(i), however, and so directors' equity incentives could be affected. To the extent that directors do not influence portfolio managers' investment decisions, we do not expect listed closed-end funds to incur any cost from possible distortion of director incentives by the required disclosure under Item 407(i). However, directors oversee the fund's investment adviser (and other service providers), which employs the portfolio managers for the funds. If directors exert some influence over portfolio managers' investment decisions through their oversight of the investment adviser, closed-end funds may incur cost from distorted director incentives. Out of all listed closed-end funds, we estimate only 4 are internally managed, so their portfolio managers are covered by proposed 407(i). These four closed-end funds may incur cost resulting from distortion to both portfolio managers' and directors' incentives by the required disclosure under Item 407(i).

A revision in hedging policy also could impose costs on employees and directors. For example, if the company currently allows hedging for named executive officers but decides to prohibit all hedging transactions as a result of the new proposed disclosure requirements, named executive officers may incur costs stemming from the loss of their ability to hedge their current and future equity compensation awards or holdings.[111]

---

[111] Such loss does not necessarily need to be compensated through other forms of compensation. Consider the following three alternative scenarios. First, under efficient contracting where hedging by officers promotes efficient investment decisions, officers are paid their opportunity wage to the extent that their labor market is competitive. If hedging is later prohibited as a result of public disclosure under the proposed amendments, these companies would resort to other, possibly more costly, compensation mechanisms to promote efficient investment decisions. While this change represents a cost to the company, officers still would receive their opportunity wage, so they are not better or worse off than before. Note that the dollar amount of the compensation may vary due to a potential change in riskiness of compensation. Prohibiting hedging may affect the riskiness of officers' compensation, but the riskiness also depends on the use of new types of compensation mechanism to promote efficient investments decisions, so the direction of the net change is not clear. The change in the dollar amount of compensation, if any, reflects the change in the riskiness of the compensation, and is not a compensation for a loss in hedging opportunity. Second, if the labor market is not competitive, officers may be paid above their opportunity wage. If hedging is used to promote efficient investment decisions, prohibiting it as a result of public disclosure under the proposed amendments may shift the balance of power between the board and officers. While the loss of hedging opportunity is a cost to the officers, they may not be compensated for it as long as their compensation is still above their opportunity wage. Third, if hedging by officers is not in shareholders' interests, a change from permitting to prohibiting hedging better aligns incentives. Officers may incur a cost from the loss of ability to hedge, but such cost merely represents the loss in the rents extracted by officers, and the officers should not be compensated for it.

These costs incurred to implement a hedging policy or to revise a hedging policy are difficult to quantify. For example, in the absence of data on a company's investment opportunities, the magnitude of the inefficiency in choosing investment projects as a result of a change in hedging policy is difficult to estimate.

The proposed amendments would also require Item 407(i) disclosure in Schedule 14C, in addition to Schedule 14A. This would extend the disclosure requirements and potential benefits described above to the Section 12(g) companies that do not file proxy statements with respect to the election of directors, thereby facilitating better understanding of companies' corporate governance policies and practices, without regard to whether proxies or consents are solicited or otherwise obtained for such an action. At the same time, requiring the disclosure specified in proposed Item 407(i) to be included in information statements on Schedule 14C would impose costs on companies that file Schedule 14C. However, consistency of the disclosure requirements applicable to both Schedules 14A and 14C in the context of an action with respect to the election of directors would facilitate better understanding of how companies address hedging, without regard to whether proxies or consents are solicited or otherwise obtained in connection with such action.

The proposed amendment to Item 402(b) would add an instruction providing that a company may satisfy its CD&A obligation to disclose any material policies on hedging by named executive officers under that requirement by cross referencing to the information disclosed pursuant to proposed Item 407(i) to the extent that the information disclosed there would satisfy this CD&A disclosure requirement. This approach would reduce potentially duplicative disclosure in complying with the existing CD&A requirements under Item 402(b) and the proposed requirements of Item 407(i), thereby reducing issuers' cost of compliance. Locating all the responsive disclosure in one place also would make it easier for investors to find it.

4. Anticipated Effects on Efficiency, Competition, and Capital Formation

As discussed above, the proposed amendments may improve capital allocation efficiency by enabling investors to make more informed voting decisions. The disclosure costs incurred by Section 12 registrants to comply with the proposed amendments would be minimal, and hence unlikely to put any company at a competitive disadvantage. However, as discussed above, additional costs could arise if companies revise their hedging policies from permitting hedging to prohibiting hedging by officers and directors. Such a change could aggravate the underinvestment concern and result in shareholder wealth reduction. However, such costs would be limited by the availability and cost-effectiveness of other means to promote investments in high risk but value-enhancing projects.[112] The proposed amendments are unlikely to have a notable impact on the competition either among U.S. companies or between U.S. companies and FPIs. We also do not expect the proposed amendments to affect the attractiveness of employment opportunities at the company to employees and directors, and hence impact the competitiveness of the labor market of employees and directors. The proposed amendments would impose new costs on companies seeking to

---

[112] See footnote 91.

become public, but such costs, taken alone, are unlikely to be a significant hurdle to companies seeking to become public.

D. Alternatives

1. Changing the Scope of Disclosure Obligations

The proposed amendments would extend reporting requirements to information statements on Schedule 14C. This extension primarily affects those Section 12(g) registrants that do not file proxy statements given that Section 12(b) registrants are generally required to solicit proxies. We have considered alternatives to this extension. One alternative would be to require proposed Item 407(i) disclosure in proxy statements only, i.e., not in information statements. This would reduce the disclosure burden on companies that do not solicit proxies from any or all security holders but are otherwise authorized by security holders to take an action with respect to the election of directors. However, providing Item 407(i) disclosure in information statements provides consistency in disclosures in proxy statements and information statements, so that the disclosure could be made to all shareholders when a company does not solicit proxies from any or all security holders but are otherwise authorized by security holders to take a corporate action with respect to the election of directors. Excluding the Item 407(i) disclosure from information statements, as under this alternative, would reduce such benefits.

We also considered extending the proposed disclosure requirement to Form 10-K filings of Section 12 companies in order to impose consistent disclosure obligations upon all registrants with a class of securities registered under Section 12. This extension would have increased the proposed disclosure obligations especially for Section 12(g) companies that did not solicit proxies as they then would be required to provide the required disclosure in annual Form 10-K filings. Moreover, extending the disclosure requirement to all Section 12(g) companies may provide limited benefits to shareholders, as non-exchange listed companies can have infrequently traded stock, making it more costly and thus less likely that employees and directors would pursue hedging opportunities.

2. Issuers Subject to the Proposed Amendments

The proposed amendments apply to all Section 12 registrants, including EGCs, SRCs, and listed closed-end funds. We have considered the following alternatives about the scope of the proposed amendments.

The first alternative would be to either exempt or delay the application of the proposed amendments to EGCs and SRCs. Doing so would reduce costs for these entities, but the potential benefits would be eliminated or delayed as well. As discussed above, we expect the potential benefits from the required disclosures under proposed Item 407(i) to be higher for shareholders of EGCs and SRCs (i.e., category 3 in Table 2) than for shareholders of other operating companies (i.e., categories 1 and 2). While EGCs and SRCs likely also incur a higher cost from distorted incentives than companies in category 1, it is not clear whether such cost is higher than that for companies in category 2.

Not exempting EGCs and SRCs from the proposed amendment is also consistent with officers and directors at these companies not being exempt from the obligation under Exchange Act Section 16(a) to disclose hedging transactions involving derivative securities.

The second alternative is to include all funds, including mutual funds and ETFs, or a broader group of funds than listed closed-end funds, as proposed. Requiring all funds to provide the proposed disclosure would impose costs on the funds. The disclosure also could provide benefits, however, although the benefits to investors in funds other than listed closed-end funds may not be as significant where fund shares do not trade on an exchange. As discussed above, exchange-listed fund shares likely are more liquid than non-exchange-listed fund shares. Due to increased cost to hedge less liquid shares, directors and employees of non-exchange-listed funds may be less likely to engage in hedging transactions than those at exchange-listed funds.[113]

Further, the benefits that would result from applying the proposed amendments to ETFs are likely lower than the benefits from applying the proposed amendments to listed closed-end funds as proposed. Employees (if any) and directors of ETFs may not have as strong an incentive to hedge their personal fund shareholdings as those at listed closed-end funds. First, listed closed-end funds likely are more volatile than ETFs. While the shares of many ETFs often trade on the secondary market at prices close to NAV of the shares, one study finds that closed-end funds' monthly return on average is 64% more volatile than that of the underlying NAV.[114] The difference in volatility between ETF and closed-end fund returns is not driven by the difference in NAV between the two types of funds, and the listed

[113] The scope for hedging may be even more limited for mutual funds, as investors purchase mutual fund shares from or sell them to the fund daily at NAV.

[114] See Pontiff, J., 1997, "Excess Volatility and Closed-End Funds" American Economic Review 87 (1): 155-169. Day et al. (2011) find similar evidence in a much more recent sample. See Day T., G. Li, and Y. Xu, 2011, "Dividend Distributions and Closed-end Fund Discounts" Journal of Financial Economics 100: 579-593.

closed-end funds' "excess" volatility is largely idiosyncratic, and cannot be explained by market risk or risks that affect other closed-end funds.[115] Employees and directors of listed closed-end funds may therefore have more incentive to hedge their fund shareholdings due to the "excess" volatility. Second, the non-redeemability of listed closed-end fund shares allows the funds to take more illiquid positions, or positions that may not be possible to sell quickly and at short notice without incurring a substantial loss in value. Due to the potentially heightened liquidity risk in the funds' portfolios, fund directors and employees may prefer not to expose their personal portfolios to the volatility resulting from liquidity risk and thus may hedge their personal fund share holdings. To the extent that listed closed-end funds have greater ability than ETFs to invest in illiquid assets, it is possible that employees and directors of listed closed-end funds would have more incentives to hedge their personal holdings.

Another alternative is not to require any funds to provide the proposed disclosure. Doing so would not impose costs related to the proposed rule on the funds. However, fund investors, including investors in listed closed-end funds, also would not derive any benefits, including a better understanding of policies that may affect incentives provided by fund shareholdings of employees and directors.

---

[115] Id.

E. Request for Comments

1. We request information including data that would help quantify the costs and the value of the benefits of the proposed amendments described above. We seek estimates of these costs and benefits, as well as any costs and benefits not already defined, that may result from the adoption of the proposed amendment. We also request qualitative feedback on the nature of the benefits and costs described above and any benefits and costs we may have overlooked.
2. We are interested in any studies or analysis on the number and characteristics of companies that have made disclosures of their "policies regarding hedging" under the existing requirement of Item 402(b)(2)(xiii) or otherwise. In particular, among the companies subject to the reporting requirement of Item 402(b)(2)(xiii), how many have hedging policies that they do not disclose because they do not deem them material? Among companies that disclose hedging policies, what are the types of the "policies" disclosed?
3. Among companies currently subject to Item 402(b), some make no disclosure of a hedging policy for named executive officers. We believe that it may be reasonable to construe the absence of a disclosure of hedging policy to mean that the company does not prevent named executive officers from hedging. Is there evidence to the contrary? Are we correct in thinking that investors may draw the same inference?

4. To our knowledge, hedging transactions typically involve derivative contracts, and fixed price derivative contracts are subject to reporting under Section 16(a). Are there any types of hedging transactions that are not currently subject to reporting by officers and directors under Section 16(a)? If yes, please provide details.
5. Would the proposed disclosure increase the transparency to investors about the incentives provided by employees' and directors' equity holdings? Are there alternative ways to make the disclosures that would be more useful to investors in evaluating employees' and directors' incentive alignment with shareholders while still satisfying the mandate of Section 14(j)?
6. What impact would the proposed amendments have on the incentives of employees and directors? Would the proposed amendments likely change the behavior of issuers, investors, or other market participants?
7. Would the proposed disclosure requirements be likely to cause companies to change their policies on whether hedging is permitted for employees and directors? Why and how? If so, what costs would be incurred? What effect, if any, may the proxy voting policies of institutional investors and proxy advisory firms have on a company's decision to change its policy? Have institutional investors and proxy advisory firms already established hedging policy positions that have been guiding voting decisions and vote recommendations? Have institutional investors and proxy advisory firm

recommendations regarding such policies encouraged companies to provide transparency into hedging transactions that are permitted at the companies? How would the transparency into hedging transactions as a result of this disclosure impact investor communication with companies about such policies? What effect will this proposed disclosure requirement have on voting decisions? Would the proposed disclosure requirements be likely to cause companies to change their compensation policies for employees (including officers) or directors? Why or why not, and if so, how?

8. If a company revises its hedging policy, would this revision influence other corporate decisions, for example, by encouraging or discouraging more risky but value-enhancing corporate investments? Please explain and provide data.
9. Relative to other operating companies, would the proposed amendments have differential economic effects on EGCs and SRCs that we do not currently discuss in the release? If so, what are these differential economic effects? Would the impact of the proxy voting policies of institutional investors and proxy advisory firms, if any, be different for EGCs and SRCs than for other operating companies? In the absence of disclosure of hedging policies by EGCs and SRCs, to what extent have hedging policy positions of institutional investors and proxy advisory firms already been guiding voting decisions and vote recommendations for EGCs and SRCs?

10. Are the costs and benefits of disclosing information about whether non-officer employees are permitted or prohibited to hedge different from the costs and benefits of disclosing information about officers and directors? If so, should the rule be modified to take those differences into account?

11. What impact would the proposed amendments have on competition? Would the proposed amendments put registrants subject to the new disclosure requirements, or particular types of registrants subject to the new disclosure requirements, at a competitive advantage or disadvantage?

12. What impact would the proposed amendments have on efficiency? Have we overlooked any positive or negative effects on efficiency?

13. What impact would the proposed amendments have on capital formation? Would there be any positive or negative effects on capital formation that we may have overlooked?

14. Are listed closed-end funds subject to an incentive alignment concern due to shareholders' inability to redeem their shares from the fund (or often to sell them in secondary transactions at or close to the funds' NAV per share) that would relate to hedging considerations? What are the characteristics of listed closed-end funds' incentive structure with respect to employees and directors that would inform this consideration?

15. We note above that shares of listed closed-end funds are not redeemable, and they may trade at a discount to NAV. Will this create heightened incentives

for these funds' employees and directors to hedge personal holdings in listed closed-end funds as compared to employees and directors of other types of funds? Are there features of ETFs that would make the disclosures under the proposed amendments particularly useful for their investors even though ETF shares often trade on the secondary market at prices close to NAV of the shares? Are there features of mutual funds or other types of funds that would make the disclosures under the proposed amendments particularly useful for their investors?

16. The potential cost to companies from distorting investment incentives as a result of required disclosures under proposed Item 407(i) is lower for companies with fewer investment choices. How, if at all, does the range of available investment choices for listed closed-end funds differ from that for operating companies?

V. PAPERWORK REDUCTION ACT

A. Background

The proposed amendments contain "collection of information" requirements within the meaning of the Paperwork Reduction Act of 1995 ("PRA"). We are submitting the proposed amendments to the Office of Management and Budget ("OMB") for review in accordance with the PRA.[116] The titles for the collection of information are:

[116] 44 U.S.C. 3507(d) and 5 CFR 1320.11.

(1) "Regulation 14A and Schedule 14A" (OMB Control No. 3235-0059);

(2) "Regulation 14C and Schedule 14C" (OMB Control No. 3235-0057);

(3) "Regulation S-K" (OMB Control No. 3235-0071); [117] and

(4) "Rule 20a-1 under the Investment Company Act of 1940, Solicitation of Proxies, Consents, and Authorizations" (OMB Control No. 3235-0158).

Regulation S-K was adopted under the Securities Act and Exchange Act; Regulations 14A and 14C and the related schedules were adopted under the Exchange Act; and Rule 20a-1 was adopted under the Investment Company Act. The regulations and schedule set forth the disclosure requirements for proxy and information statements filed by companies to help investors make informed investment and voting decisions. The hours and costs associated with preparing, filing and sending the schedule constitute reporting and cost burdens imposed by each collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Compliance with the proposed amendment would be mandatory. Responses to the information collection would not be kept confidential, and there would be no mandatory retention period for the information disclosed.

[117] The paperwork burden from Regulation S-K is imposed through the forms that are subject to the disclosure requirements in Regulation S-K and is reflected in the analysis of these forms. To avoid a Paperwork Reduction Act inventory reflecting duplicative burdens, for administrative convenience we estimate the burden imposed by Regulation S-K to be a total of one hour.

B. Summary of the Proposed Amendments

We are proposing to add new paragraph (i) to Item 407 of Regulation S-K that would implement Section 14(j) of the Exchange Act, as added by Section 955 of the Act. As discussed in more detail above, proposed Item 407(i) would require disclosure of whether employees and directors of the company, or their designees, are permitted to hedge or offset any decrease in the market value of equity securities that are granted to them by the company as part of their compensation, or that are held, directly or indirectly, by them. Pursuant to the proposed amendment to Item 7 of Schedule 14A, and for listed closed-end funds, the proposed amendment to Item 22 of Schedule 14A, this new disclosure would be required in proxy or consent solicitation materials with respect to the election of directors, or an information statement in the case of such corporate action authorized by the written consent of security holders.

In addition, to reduce potentially duplicative disclosure between proposed Item 407(i) and the existing requirement for CD&A under Item 402(b) of Regulation S-K, we propose to amend Item 402(b) to add an instruction providing that a company may satisfy its obligation to disclose material policies on hedging by named executive officers in the CD&A by cross referencing the information disclosed pursuant to proposed Item 407(i) to the extent that the information disclosed there satisfies this CD&A disclosure requirement.[118] This instruction,

[118] Proposed Instruction 6 to Item 402(b).

like the Item 407(i) disclosure requirement, would apply to the company's proxy or information statement with respect to the election of directors.

C. Burden and Cost Estimates Related to the Proposed Amendments

If adopted, proposed Item 407(i) would require additional disclosure in proxy statements filed on Schedule 14A with respect to the election of directors and information statements filed on Schedule 14C where such corporate action is taken by the written consents or authorizations of security holders, and would thus increase the burden hour and cost estimates for each of those forms. For purposes of the PRA, we estimate the total annual increase in the paperwork burden for all affected issuers to comply with our proposed collection of information requirements, averaged over the first three years, to be approximately 19,238 hours of in-house personnel time and approximately $2,565,200 for the services of outside professionals (see Table 3).[119] These estimates include the time and cost of collecting and analyzing the information, preparing and reviewing disclosure, and filing the documents.

In deriving our estimates, we assumed that the information that proposed Item 407(i) would require to be disclosed would be readily available to the management of a company because it only requires disclosure of policies they already have but does not direct them to have a policy or dictate the content of the policy. Nevertheless, we used burden estimates similar to those used in the 2006 Executive Compensation Disclosure Release for updating

[119] Our estimates represent the average burden for all companies, both large and small.

Schedules 14A and 14C, which we believe were more extensive.[120] Since the first year of compliance with the proposed amendment is likely to be the most burdensome because companies are not likely to have compiled this information in this manner previously, we assumed it would take five total hours per form the first year and two total hours per form in all subsequent years.

Based on our assumptions, we estimated that the proposed amendments would increase the burden hour and cost estimates per company by an average of three total hours per year over the first three years the amendments are in effect for each Schedule 14A or Schedule 14C with respect to the election of directors.

We recognize that the burdens may vary among individual companies based on a number of factors, including the size and complexity of their organizations, and whether or not they prohibit or restrict hedging transactions by employees, directors and their designees and if they do, the specificity and complexity of such restrictions.

The table below shows the three-year average annual compliance burden, in hours and in costs, of the collection of information pursuant to proposed Item 407(i) of Regulation S-K.[121] The burden estimates were calculated by multiplying the estimated number of responses by the estimated average amount of time it would take a company to prepare and review the proposed disclosure requirements. The portion of the burden carried by outside

---

[120] See the 2006 Executive Compensation Disclosure Release.

[121] For convenience, the estimated hour and cost burdens in the table have been rounded to the nearest whole number.

professionals is reflected as a cost, while the portion of the burden carried by the company internally is reflected in hours. For purposes of the PRA, we estimate that 75% of the burden of preparation of Schedules 14A and 14C is carried by the company internally and that 25% of the burden of preparation is carried by outside professionals retained by the company at an average cost of $400 per hour. There is no change to the estimated burden of the collections of information under Regulation S-K because the burdens that this regulation imposes are reflected in our burden estimates for Schedule 14A and 14C.

Table 3. Incremental Paperwork Burden under the proposed amendments affecting Schedules 14A and 14C - Three-Year Average Costs.

	Number of responses (A) 122	Incremental burden hours/form (B)	Total incremental burden hours (C)=(A)*(B)	Internal company time (D)=(C)*0.75	External professional time (E)=(C)*0.25	External Professional costs (F)=(E)*$400
Sch. 14A	7,300	3	21,900	16,425	5,475	$2,190,000
Sch. 14C	680	3	2,040	1,530	510	$ 204,000
Rule 20a-1	590	3	1,770	1,328	443	$177,200
Total	8,570		25,710	19,283	6,428	$2,571,200

The proposed amendment to the CD&A requirement under Item 402(b) would not be applicable to smaller reporting companies or emerging growth companies because under current CD&A reporting requirements these companies are not required to provide CD&A in

122 For Schedules 14A and 14C, the number of responses reflected in the table equals the three-year average of the number of schedules filed with the Commission and currently reported by the Commission to OMB. For Rule 20a-1, the number of responses reflected in the table is based on an average of three years' of data from 2012-2014 in the 2014 ICI Fact book.

their Commission filings. For all other issuers, we do not expect this amendment would materially affect the disclosure burden associated with their Commission filings.

D. Request for Comment

Pursuant to 44 U.S.C. 3506(c)(2)(B), we request comment in order to:

- evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility;
- evaluate the accuracy of our assumptions and estimates of the burden of the proposed collection of information;
- determine whether there are ways to enhance the quality, utility and clarity of the information to be collected;
- evaluate whether there are ways to minimize the burden of the collection of information on those who respond, including through the use of automated collection techniques or other forms of information technology; and
- evaluate whether the proposed amendments will have any effects on any other collection of information not previously identified in this section.

Any member of the public may direct to us any comments concerning the accuracy of these burden estimates and any suggestions for reducing these burdens. Persons submitting comments on the collection of information requirements should direct their comments to the Office of Management and Budget, Attention: Desk Officer for the U.S. Securities and Exchange Commission, Office of Information and Regulatory Affairs, Washington, DC

20503, and send a copy to, Brent J. Fields, Secretary, U.S. Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090, with reference to File No. S7-01-15. Requests for materials submitted to OMB by the Commission with regard to the collection of information should be in writing, refer to File No. S7-01-15 and be submitted to the U.S. Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington DC 20549-2736. OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this release. Consequently, a comment to OMB is best assured of having its full effect if the OMB receives it within 30 days of publication.

VI. SMALL BUSINESS REGULATORY ENFORCEMENT FAIRNESS ACT

For purposes of the Small Business Regulatory Enforcement Fairness Act of 1996, or "SBREFA,"[123] we solicit data to determine whether the rule proposals constitute a "major" rule. Under SBREFA, a rule is considered "major" where, if adopted, it results or is likely to result in:

- an annual effect on the economy of $100 million or more (either in the form of an increase or a decrease);
- a major increase in costs or prices for consumers or individual industries; or
- significant adverse effects on competition, investment or innovation.

---

[123] Pub. L. No. 104-121, Title II, 110 Stat. 857 (1996).

Commentators should provide empirical data on: (1) the potential annual effect on the economy; (2) any increase in costs or prices for consumers or individual industries; and (3) any potential effect on competition, investment or innovation.

VII. INITIAL REGULATORY FLEXIBILITY ACT ANALYSIS

This Initial Regulatory Flexibility Analysis has been prepared in accordance with the Regulatory Flexibility Act.[124] This analysis involves a proposal to require, in proxy or consent solicitation materials, or in an information statement, with respect to the election of directors disclosure of whether employees (including officers), directors or their designees are permitted to engage in transactions to hedge or offset any decrease in the market value of equity securities granted to them as compensation, or directly or indirectly held by them.

A. Reasons for, and Objectives of, the Proposed Action

The proposed amendments are designed to implement Section 14(j), which was added to the Exchange Act by Section 955 of the Act. Specifically, the proposed amendments would require disclosure, in any proxy or information statement with respect to the election of directors, of whether any employee or director of the company or any designee of such employee or director, is permitted to purchase any financial instruments (including but not limited to prepaid variable forward contracts, equity swaps, collars, and exchange funds) or otherwise engage in transactions that are designed to or have the effect of hedging or offsetting any decrease in the market value of equity securities, that are granted to the

[124] 5 U.S.C. 603.

employee or director by the company as compensation, or held, directly or indirectly, by the employee or director. The covered equity securities would be equity securities issued by the company, any parent of the company, any subsidiary of the company or any subsidiary of any parent of the company that are registered under Exchange Act Section 12.

B. Legal Basis

We are proposing the amendments pursuant to Section 955 of the Act, Sections 14, 23(a) and 36(a) of the Exchange Act, as amended, and Sections 6, 20(a) and 38 of the Investment Company Act, as amended.

C. Small Entities Subject to the Proposed Amendments

The proposed amendments would affect some companies that are small entities. The Regulatory Flexibility Act defines "small entity" to mean "small business," "small organization," or "small governmental jurisdiction."[125] The Commission's rules define "small business" and "small organization" for purposes of the Regulatory Flexibility Act for each of the types of entities regulated by the Commission. Exchange Act Rule 0-10(a)[126] defines a company, other than an investment company, to be a "small business" or "small organization" if it had total assets of $5 million or less on the last day of its most recent fiscal year. We estimate that there are approximately 428 issuers that may be considered small entities. The proposed amendments would affect small entities that have a class of securities

---

[125] 5 U.S.C. 601(6).

[126] 17 CFR 240.0-10(a).

that are registered under Section 12 of the Exchange Act. An investment company, including a business development company, is considered to be a "small business" if it, together with other investment companies in the same group of related investment companies, has net assets of $50 million or less as of the end of its most recent fiscal year.[127] We believe that the proposal would affect some small entities that are investment companies. We estimate that there are approximately 29 investment companies that would be subject to the proposed rule that may be considered small entities.

D. Reporting, Recordkeeping and other Compliance Requirements

The proposed amendments would add to the proxy disclosure requirements of companies, including small entities, that file proxy or information statements with respect to the election of directors, by requiring them to provide the disclosure called for by the proposed amendment. Specifically, proposed Item 407(i) would require disclosure of whether any employee or director of the company or any designee of such employee or director, is permitted to purchase any financial instruments (including but not limited to prepaid variable forward contracts, equity swaps, collars, and exchange funds) or otherwise engage in transactions that are designed to or have the effect of hedging or offsetting any decrease in the market value of equity securities, that are granted to the employee or director by the company as compensation, or held, directly or indirectly, by the employee or director.

[127] 17 CFR 270.0-10(a).

E. Duplicative, Overlapping or Conflicting Federal Rules

We believe that the proposed amendments would not duplicate, overlap or conflict with other federal rules. The proposal would reduce potentially duplicative disclosure by adding an instruction permitting a company to satisfy any obligation under Item 402(b) of Regulation S-K to disclose in the CD&A material policies on hedging by named executive officers by cross referencing to the new disclosure required by proposed Item 407(i) to the extent that the information disclosed there satisfies this CD&A disclosure requirement.[128] However, as described above, the CD&A disclosure obligation does not apply to small entities that are emerging growth companies, smaller reporting companies or registered investment companies.

F. Significant Alternatives

The Regulatory Flexibility Act directs us to consider alternatives that would accomplish our stated objectives, while minimizing any significant adverse impact on small entities. In connection with the proposed amendments, we considered the following alternatives:

- establishing different compliance or reporting requirements or timetables that take into account the resources available to small entities;
- clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities;

---

[128] Proposed Instruction 6 to Item 402(b).

- use of performance rather than design standards; and
- exempting small entities from all or part of the proposed requirements.

We believe that the proposed amendments would require clear and straightforward disclosure of whether employees or directors are permitted to engage in transactions to hedge or offset any decrease in the market value of equity securities granted to them as compensation, or directly or indirectly held by them. Given the straightforward nature of the proposed disclosure, we do not believe that it is necessary to simplify or consolidate the disclosure requirement for small entities. We have used performance standards in connection with the proposed amendments by proposing to use a principles-based approach to identify transactions that would hedge or offset any decrease in the market value of equity securities. Additionally, the amendments do not specify any specific procedures or arrangements a company must develop to comply with the standards, or require a company to have or develop a policy regarding employee and director hedging activities.

We considered, but have not proposed, different compliance requirements or an exemption for small entities. We believe that mandating uniform and comparable disclosures across all issuers subject to our proxy rules will promote informed shareholder voting. The proposed rule amendments are intended to provide transparency regarding whether employees, directors, or their designees are allowed to engage in hedging transactions that will permit them to receive compensation without regard to company performance, or will permit them to mitigate or avoid the risks associated with long-term equity security ownership.[129] We believe this transparency would be just as beneficial to shareholders of small companies as to shareholders of larger companies. By increasing transparency regarding these matters, the proposed amendments are designed to improve the quality of information available to all shareholders, thereby promoting informed voting decisions. Different compliance requirements or an exemption for small entities may interfere with the goal of enhancing the information provided by all issuers. We also note that the disclosure is expected to result in minimal additional compliance costs for issuers although there could be indirect costs for some small entities, depending on their current hedging policies. Thus, we believe that our proposed amendments will promote consistent disclosure among all issuers, without creating a significant new burden for small entities.

Although we preliminarily believe that an exemption for small entities from coverage of the proposed amendments would not be appropriate, we solicit comment on whether we should exempt small entities. At this time, we do not believe that different compliance methods or timetables for small entities would be necessary given the relatively straightforward nature of the disclosure involved. Nevertheless, we solicit comment on whether different compliance requirements or timetables for small entities would be appropriate and consistent with the purposes of Section 14(j).

---

[129] See Senate Report 111-176.

G. Solicitation of Comments

We encourage the submission of comments with respect to any aspect of this Initial Regulatory Flexibility Analysis. In particular, we request comments regarding:

- how the proposed amendments can achieve their objective while lowering the burden on small entities;
- the number of small entities that may be affected by the proposed amendments;
- whether small entities should be exempt from the proposed amendments;
- the existence or nature of the potential impact of the proposed amendments on small entities discussed in the analysis; and
- how to quantify the impact of the proposed amendments.

Respondents are asked to describe the nature of any impact of the proposed amendments on small entities and provide empirical data supporting the extent of the impact. Such comments will be considered in the preparation of the Final Regulatory Flexibility Analysis, if the proposed amendments are adopted, and will be placed in the same public file as comments on the proposed amendments themselves.

VIII. STATUTORY AUTHORITY AND TEXT OF THE PROPOSED AMENDMENTS

The amendments contained in this release are being proposed under the authority set forth in Section 955 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Sections 14, 23(a) and 36(a) of the Securities Exchange Act of 1934, as amended, and Sections 6, 20(a) and 38 of the Investment Company Act, as amended.

List of Subjects in 17 CFR Parts 229 and 240

Reporting and recordkeeping requirements, Securities.

TEXT OF THE PROPOSED AMENDMENTS

For the reasons set out in the preamble, the Commission proposed to amend title 17, chapter II, of the Code of Federal Regulations as follows:

PART 229 – STANDARD INSTRUCTIONS FOR FILING FORMS UNDER SECURITIES ACT OF 1933, SECURITIES EXCHANGE ACT OF 1934 AND ENERGY POLICY AND CONSERVATION ACT OF 1975 – REGULATION S-K

1. The authority citation for part 229 continues to read as follows:

Authority: 15 U.S.C. 77e, 77f, 77g, 77h, 77j, 77k, 77s, 77z-2, 77z-3, 77aa(25), 77aa(26), 77ddd, 77eee, 77ggg, 77hhh, 77iii, 77jjj, 77nnn, 77sss, 78c, 78i, 78j, 78j-3, 78l, 78m, 78n, 78n-1, 78o, 78u-5, 78w, 78ll, 78mm, 80a-8, 80a-9, 80a-20, 80a-29, 80a-30, 80a-31(c), 80a-37, 80a-38(a), 80a-39, 80b-11, and 7201 et seq; and 18 U.S.C. 1350, unless otherwise noted.

2. Amend § 229.402 by adding Instruction 6 to Item 402(b), to read as follows:

§229.402 (Item 402) Executive compensation.

* * * * *

(b) * * *

Instructions to Item 402(b). * * *

6. If the information disclosed pursuant to Item 407(i) would satisfy the registrant hedging policy disclosure requirements of paragraph (b)(2)(xiii) of this Item, a registrant may satisfy

this Item in its proxy or information statement by referring to the information disclosed pursuant to Item 407(i).

* * * * *

3. Amend § 229.407 by adding paragraph (i) before the Instructions to Item 407, to read as follows:

§229.407 (Item 407) Corporate governance.

* * * * *

(i) Employee, officer and director hedging. In proxy or information statements with respect to the election of directors, disclose whether the registrant permits any employees (including officers) or directors of the registrant, or any of their designees, to purchase financial instruments (including prepaid variable forward contracts, equity swaps, collars, and exchange funds) or otherwise engage in transactions that are designed to or have the effect of hedging or offsetting any decrease in the market value of equity securities—

(1) Granted to the employee or director by the registrant as part of the compensation of the employee or director; or

(2) Held, directly or indirectly, by the employee or director.

Instructions to Item 407(i).

1. For purposes of this Item 407(i), "equity securities" (as defined in section 3(a)(11) of the Exchange Act (15 U.S.C. 78c(a)(11)) and § 240.3a11-1 of this chapter) shall mean only those equity securities issued by the registrant or any parent of the

registrant, any subsidiary of the registrant or any subsidiary of any parent of the registrant that are registered under Section 12 of the Exchange Act (15 U.S.C. 78l).

2. A registrant that permits hedging transactions by some, but not all, of the categories of persons covered by this Item 407(i) shall disclose the categories of persons who are permitted to engage in hedging transactions and those who are not.

3. A registrant shall disclose the categories of hedging transactions it permits and those it prohibits. In disclosing these categories, a registrant may, if true, disclose that it prohibits or permits particular categories and permits or prohibits, respectively, all other hedging transactions. If a registrant does not permit any hedging transactions, or permits all hedging transactions, it shall so state and need not describe them by category.

4. A registrant that permits hedging transactions shall disclose sufficient detail to explain the scope of such permitted transactions.

5. The information required by this Item 407(i) will not be deemed to be incorporated by reference into any filing under the Securities Act, the Exchange Act or the Investment Company Act, except to the extent that the registrant specifically incorporates it by reference.

PART 240 – GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

4. The authority citation for Part 240 continues to read, in part, as follows:

Authority: 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z-2, 77z-3, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78c-3, 78c-5, 78d, 78e, 78f, 78g, 78i, 78j, 78j-1, 78k, 78k-1, 78l, 78m 78n, 78n-1, 78o, 78o-4, 78o-10, 78p, 78q, 78q-1, 78s, 78u-5, 78w, 78x, 78ll, 78mm, 80a-20, 80a-23, 80a-29, 80a-37, 80b-3, 80b-4, 80b-11, and 7210 et seq.; and 8302; 7 U.S.C. 2(c)(2)(E); 12 U.S.C. 5521(e)(3); 18 U.S.C. 1350; and Pub. L. 111-203, 939A, 124 Stat. 1376, (2010), unless otherwise noted.

* * * * *

5. Amend § 240.14a-101 by:

a. revising paragraph (b) of Item 7;

b. removing paragraphs (c) and (d) of Item 7;

c. redesignating paragraph (e) as paragraph (c) of Item 7;

d. removing the Instruction to Item 7(e) of Item 7;

e. redesignating paragraph (f) as paragraph (d) of Item 7;

f. redesignating Instruction to Item 7(f) as Instruction to Item 7 and revising newly redesignated Instruction to Item 7;

g. redesignating paragraph (g) as paragraph (e) of Item 7; and

h. adding paragraph (20) to Item 22(b).

The revisions and addition read as follows:

§240.14a-101 Schedule 14A. Information required in proxy statement.

SCHEDULE 14A INFORMATION

* * * * *

Item 7. Directors and Executive Officers. * * *

(b) The information required by Items 401, 404(a) and (b), 405 and 407 of Regulation S-K (§§ 229.401, 229.404(a) and (b), 229.405 and 229.407 of this chapter), other than the information required by:

(i) Paragraph (c)(3) of Item 407 of Regulation S-K (§ 229.407(c)(3) of this chapter); and

(ii) Paragraphs (e)(4) and (e)(5) of Item 407 of Regulation S-K (§§ 229.407(e)(4) and 229.407(e)(5) of this chapter) (which are required by Item 8 of this Schedule 14A).

* * *

Instruction to Item 7. The information disclosed pursuant to paragraphs (c) and (d) of this Item 7 will not be deemed incorporated by reference into any filing under the Securities Act of 1933 (15 U.S.C. 77a *et seq.*), the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*), or the Investment Company Act of 1940 (15 U.S.C. 80a-1 *et seq.*), except to the extent that the registrant specifically incorporates that information by reference.

* * *

Item 22. Information required in investment company proxy statement.

* * * * *

(b) * * *

(20) In the case of a Fund that is a closed-end investment company that is listed and registered on a national securities exchange, provide the information required by Item 407(i) of Regulation S-K (§ 229.407(i) of this chapter).

File No. 3-13722

In the Matter of Mark V. Sever, CPA	ORDER GRANTING APPLICATION FOR REINSTATEMENT TO APPEAR AND PRACTICE BEFORE THE COMMISSION AS AN ACCOUNTANT

On December 17, 2009, Mark V. Sever, CPA ("Sever") was denied the privilege of appearing or practicing as an accountant before the Commission as a result of settled public administrative proceedings instituted by the Commission against Sever pursuant to Section 4C of the Securities Exchange Act of 1934 ("Exchange Act") and Rule 102(e)(1)(iii) of the Commission's Rules of Practice.[1] This order is issued in response to Sever's application for reinstatement to practice before the Commission as an accountant.

From 1997 through the third quarter of 2001, Sever was a Professional Practice Director in Ernst & Young LLP's ("E&Y") National Office, and served as the Independent Review Partner for E&Y's audits of Bally Total Fitness Holding Corporation's ("Bally") financial statements. Then, as the National Director of Area Professional Practice, Sever remained involved with Bally's 2001-2003 audits. In connection with Bally's 2001-2003 financial statements, Bally engaged in fraudulent financial accounting and, further, made false and misleading disclosures regarding a $55 million special charge in its 2002 Form 10-K. During the relevant period, the Commission found that Sever knew or should have known that E&Y's unqualified audit opinions regarding Bally's 2001-2003 financial statements, which stated that E&Y had conducted its audits in accordance with auditing standards generally accepted in the United States ("GAAS") and that Bally's financial statements were presented in conformity with accounting principles generally accepted in the United States ("GAAP"), were false because E&Y's audits of Bally's financial statements were not performed in accordance with GAAS and

[1] *See* Accounting and Auditing Enforcement Release No. 3084 dated December 17, 2009. Sever was permitted, pursuant to the order, to apply for reinstatement after three years upon making certain showings.

Bally's financial statements were not presented in conformity with GAAP. As a result of Sever's conduct relating to the false and misleading audit opinions, the Commission found that Sever was a cause of Bally's violations of Sections 17(a)(2) and (3) of the Securities Act of 1933 and was a cause of and willfully aided and abetted Bally's violations of Sections 13(a) and 13(b)(2)(A) of the Securities Exchange Act of 1934 ("Exchange Act") and Rules 12b-20, 13a-1, 13a-11, and 13a-13 thereunder. The Commission further found that Sever was a cause of E&Y's violation of Section 10A(b) of the Exchange Act.

Sever has met all of the conditions set forth in the original order and, in his capacity as an independent accountant, has stated that he will comply with all requirements of the Commission and the Public Company Accounting Oversight Board, including, but not limited to all requirements relating to registration, inspections, concurring partner reviews and quality control standards. In his capacity as a preparer or reviewer, or as a person responsible for the preparation or review, of financial statements of a public company to be filed with the Commission, Sever attests that he will undertake to have his work reviewed by the independent audit committee of any company for which he works, or in some other manner acceptable to the Commission, while practicing before the Commission in this capacity.

Rule 102(e)(5) of the Commission's Rules of Practice governs applications for reinstatement, and provides that the Commission may reinstate the privilege to appear and practice before the Commission "for good cause shown."[2] This "good cause" determination is necessarily highly fact specific.

On the basis of the information supplied, representations made, and undertakings agreed to by Sever, it appears that he has complied with the terms of the December 17, 2009 order denying him the privilege of appearing or practicing before the Commission as an accountant, that no information has come to the attention of the Commission relating to his character, integrity, professional conduct or qualifications to practice before the Commission that would be a basis for adverse action against him pursuant to Rule 102(e) of the Commission's Rules of Practice, and that Sever, by undertaking to have his work reviewed by the independent audit committee of any company for which he works, or in some other manner acceptable to the Commission, in his practice before the Commission as a preparer or reviewer of financial statements required to be filed with the Commission, and that Sever, by undertaking to comply with all requirements of the Commission and the Public Company Accounting Oversight Board, including, but not limited to, all requirements relating to registration, inspections, concurring partner reviews and quality control standards, in his practice before the Commission as an independent accountant has shown good cause for reinstatement. Therefore, it is accordingly,

---

[2] Rule 102(e)(5)(i) provides:

"An application for reinstatement of a person permanently suspended or disqualified under paragraph (e)(1) or (e)(3) of this section may be made at any time, and the applicant may, in the Commission's discretion, be afforded a hearing; however, the suspension or disqualification shall continue unless and until the applicant has been reinstated by the Commission for good cause shown." 17 C.F.R. § 201.102(e)(5)(i).

ORDERED pursuant to Rule 102(e)(5)(i) of the Commission's Rules of Practice that Mark V. Sever, CPA is hereby reinstated to appear and practice before the Commission as an accountant.

By the Commission.

In the Matter of Jeffrey P. Jorissen, CPA	: ORDER GRANTING APPLICATION FOR : REINSTATEMENT TO APPEAR AND PRACTICE : BEFORE THE COMMISSION AS AN ACCOUNTANT : RESPONSIBLE FOR THE PREPARATION OR : REVIEW OF FINANCIAL STATEMENTS REQUIRED : TO BE FILED WITH THE COMMISSION

On August 12, 2008, Jeffrey P. Jorissen, CPA ("Jorissen") was suspended from appearing or practicing before the Commission as an accountant as a result of settled public administrative proceedings instituted by the Commission against Jorissen pursuant to Rule 102(e)(3)(i) of the Commission's Rules of Practice.[1] This order is issued in response to Jorissen's application for reinstatement to appear and practice before the Commission as an accountant responsible for the preparation or review of financial statements required to be filed with the Commission.

The Commission found that Jorissen had been permanently enjoined by a United States District Court from future violations of Rule 13b2-1 under the Securities Exchange Act of 1934 ("Exchange Act") and from aiding and abetting violations of Sections 13(a) and 13(b)(2)(A) and (B) of the Exchange Act and Rules 12b-20, 13a-1, and 13a-13 thereunder. In a complaint filed on February, 22, 2006 the Commission alleged, among other things, that from the first quarter of 2000 through the third quarter of 2002, Sun Communities, Inc. ("Sun") engaged in false financial record-keeping and reporting. The complaint alleged that Sun's financial statements failed to properly account for losses resulting from Sun's investment in a joint venture involved in the development of manufactured housing communities. The Commission alleged that contrary to generally accepted accounting principles, Sun failed to account for any of the joint venture's losses during seven quarters and underreported Sun's share of the losses in four additional quarters. The complaint also alleged that Sun maintained an improper "cookie jar reserve" and improperly smoothed earnings, and that Sun's false financial statements were incorporated in documents filed with the SEC, including

[1] *See* Accounting and Auditing Enforcement Release No. 2862 dated August 12, 2008. Jorissen was permitted, pursuant to the order, to apply for reinstatement after two years upon making certain showings.

quarterly reports, annual reports, and non-periodic filings. The complaint alleged that Jorissen, in his position as Chief Financial Officer, initiated and directed Sun's false record-keeping and reporting.

In his capacity as a preparer or reviewer, or as a person responsible for the preparation or review, of financial statements of a public company to be filed with the Commission, Jorissen attests that he will undertake to have his work reviewed by the independent audit committee of any company for which he works, or in some other manner acceptable to the Commission, while practicing before the Commission in this capacity. Jorissen is not, at this time, seeking to appear or practice before the Commission as an independent accountant. If he should wish to resume appearing and practicing before the Commission as an independent accountant, he will be required to submit an application to the Commission showing that he has complied and will comply with the terms of the original suspension order in this regard. Therefore, Jorissen's suspension from practice before the Commission as an independent accountant continues in effect until the Commission determines that a sufficient showing has been made in this regard in accordance with the terms of the original suspension order.

Rule 102(e)(5) of the Commission's Rules of Practice governs applications for reinstatement, and provides that the Commission may reinstate the privilege to appear and practice before the Commission "for good cause shown."[2] This "good cause" determination is necessarily highly fact specific.

On the basis of information supplied, representations made, and undertakings agreed to by Jorissen, it appears that he has complied with the terms of the August 12, 2008 order suspending him from appearing or practicing before the Commission as an accountant, that no information has come to the attention of the Commission relating to his character, integrity, professional conduct or qualifications to practice before the Commission that would be a basis for adverse action against him pursuant to Rule 102(e) of the Commission's Rules of Practice, and that Jorissen, by undertaking to have his work reviewed by the independent audit committee of any company for which he works, or in some other manner acceptable to the Commission, in his practice before the Commission as a preparer or reviewer of financial statements required to be filed with the Commission, has shown good cause for reinstatement. Therefore, it is accordingly,

---

[2] Rule 102(e)(5)(i) provides:

"An application for reinstatement of a person permanently suspended or disqualified under paragraph (e)(1) or (e)(3) of this section may be made at any time, and the applicant may, in the Commission's discretion, be afforded a hearing; however, the suspension or disqualification shall continue unless and until the applicant has been reinstated by the Commission for good cause shown." 17 C.F.R. § 201.102(e)(5)(i).

ORDERED pursuant to Rule 102(e)(5)(i) of the Commission's Rules of Practice that Jeffrey P. Jorissen, CPA is hereby reinstated to appear and practice before the Commission as an accountant responsible for the preparation or review of financial statements required to be filed with the Commission.

In the Matter of Kevin Morano, CPA	: ORDER GRANTING APPLICATION FOR : REINSTATEMENT TO APPEAR AND PRACTICE : BEFORE THE COMMISSION AS AN ACCOUNTANT : RESPONSIBLE FOR THE PREPARATION OR : REVIEW OF FINANCIAL STATEMENTS REQUIRED : TO BE FILED WITH THE COMMISSION

On September 29, 2008, Kevin Morano, CPA ("Morano") was suspended from appearing or practicing before the Commission as an accountant as a result of settled public administrative proceedings instituted by the Commission against Morano pursuant to Rule 102(e)(3)(i) of the Commission's Rules of Practice.[1] This order is issued in response to Morano's application for reinstatement to appear and practice before the Commission as an accountant responsible for the preparation or review of financial statements required to be filed with the Commission.

The Commission found that Morano had been permanently enjoined by a United States District Court from future violations of Section 17(a) of the Securities Act of 1933, and Sections 10(b) and 13(b)(5) of the Securities Exchange Act of 1934 ("Exchange Act") and Rules 10b-5, 13a-14, 13b2-1, and 13b2-2 thereunder, and from aiding and abetting violations of Sections 10(b), 13(a), 13(b)(2)(A) and 13(b)(2)(B) of the Exchange Act and Rules 10b-5, 12b-20, 13a-1, 13a-11 and 13a-13 thereunder. In its complaint in the injunctive action, the Commission alleged, among other things, that Morano, while serving as its Chief Financial Officer, permitted Lumenis Ltd. to recognize revenue in a number of transactions despite red flag warnings that should have prevented such recognition. As a result, Morano made materially false and misleading statements in periodic reports filed with the Commission in 2002 and 2003, including by certifying the accuracy of financial statements contained in those reports.

[1] *See* Accounting and Auditing Enforcement Release No. 2892 dated September 29, 2008. Morano was permitted, pursuant to the order, to apply for reinstatement after five years upon making certain showings.

In his capacity as a preparer or reviewer, or as a person responsible for the preparation or review, of financial statements of a public company to be filed with the Commission, Morano attests that he will undertake to have his work reviewed by the independent audit committee of any company for which he works, or in some other manner acceptable to the Commission, while practicing before the Commission in this capacity. Morano is not, at this time, seeking to appear or practice before the Commission as an independent accountant. If he should wish to resume appearing and practicing before the Commission as an independent accountant, he will be required to submit an application to the Commission showing that he has complied and will comply with the terms of the original suspension order in this regard. Therefore, Morano's suspension from practice before the Commission as an independent accountant continues in effect until the Commission determines that a sufficient showing has been made in this regard in accordance with the terms of the original suspension order.

Rule 102(e)(5) of the Commission's Rules of Practice governs applications for reinstatement, and provides that the Commission may reinstate the privilege to appear and practice before the Commission "for good cause shown."[2] This "good cause" determination is necessarily highly fact specific.

On the basis of information supplied, representations made, and undertakings agreed to by Morano, it appears that he has complied with the terms of the September 29, 2008 order suspending him from appearing or practicing before the Commission as an accountant, that no information has come to the attention of the Commission relating to his character, integrity, professional conduct or qualifications to practice before the Commission that would be a basis for adverse action against him pursuant to Rule 102(e) of the Commission's Rules of Practice, and that Morano, by undertaking to have his work reviewed by the independent audit committee of any company for which he works, or in some other manner acceptable to the Commission, in his practice before the Commission as a preparer or reviewer of financial statements required to be filed with the Commission, has shown good cause for reinstatement. Therefore, it is accordingly,

ORDERED pursuant to Rule 102(e)(5)(i) of the Commission's Rules of Practice that Kevin Morano, CPA is hereby reinstated to appear and practice before the Commission as an accountant responsible for the preparation or review of financial statements required to be filed with the Commission.

By the Commission.

"An application for reinstatement of a person permanently suspended or disqualified under paragraph (e)(1) or (e)(3) of this section may be made at any time, and the applicant may, in the Commission's discretion, be afforded a hearing; however, the suspension or disqualification shall continue unless and until the applicant has been reinstated by the Commission for good cause shown." 17 C.F.R. § 201.102(e)(5)(i).

SECURITIES AND EXCHANGE COMMISSION

Release No. 34-74239; File No. S7-02-2015

CONTRACT STANDARD FOR CONTRACTOR WORKFORCE INCLUSION AND REQUEST FOR PUBLIC COMMENT

AGENCY: Securities and Exchange Commission.

ACTION: Notice of proposed contract standard; notice of proposed information collection; and request for public comment.

SUMMARY: To implement section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act" or "the Act"), the Securities and Exchange Commission (the "Commission") is proposing to include in its service contracts a standard concerning workforce inclusion of minorities and women.

DATE: Comments should be received on or before: [INSERT DATE THAT IS 60 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER].

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic Comments:

- Use the Commission's Internet comment form (http://www.sec.gov/rules/other.shtml);
- Send an e-mail to rule-comments@sec.gov. Please include File No. S7-02-2015 on the subject line; or
- Use the Federal eRulemaking Portal (http://www.regulations.gov). Follow instructions for submitting comments.

Paper Comments:

- Send paper comments to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to File No. S7-02-2015. This file number should be included on the subject line if e-mail is used. To help us process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet web site (http://www.sec.gov/rules/other.shtml). Comments will also be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street, NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. All comments received will be posted without change; we do not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

FOR FURTHER INFORMATION CONTACT: Pamela A. Gibbs, Director, Office of Minority and Women Inclusion, or Audrey B. Little, Senior Counsel, Office of Minority and Women Inclusion at (202) 551-6046, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549.

SUPPLEMENTARY INFORMATION:

Section 342(a)(1)(A) of the Dodd-Frank Act provides for certain agencies, including the Securities and Exchange Commission, to establish an Office of Minority and Women Inclusion ("OMWI").[1] Section 342(c)(1) provides that the OMWI Director shall develop and implement standards and procedures to ensure the fair inclusion and utilization of minorities, women, and minority-owned and women-owned businesses in all business and activities of the agency, including in procurement, insurance, and all types of contracts. Section 342(c)(2) requires that the OMWI Director include in the procedures for evaluating contract proposals and hiring service providers a component that gives consideration to the diversity of an applicant, to the

[1] 12 U.S.C. 5452.

extent consistent with applicable laws. In addition, section 342(c)(2) requires that such procedures include a written statement, in the form and content prescribed by the OMWI Director, that a contractor shall ensure, to the maximum extent possible, the fair inclusion of women and minorities in the workforce of the contractor and, as applicable, subcontractors.

Further, section 342(c)(3)(A) requires the OMWI Director to establish standards and procedures for determining whether an agency contractor or subcontractor "has failed to make a good faith effort to include minorities and women" in its workforce. Section 342(c)(3)(B)(i) provides that if the OMWI Director determines that a contractor has failed to make good faith efforts, the Director shall recommend to the agency administrator that the contract be terminated. Upon receipt of such a recommendation, section 342(c)(3)(B)(ii) provides that the agency administrator may terminate the contract, make a referral to the Office of Federal Contract Compliance Programs of the Department of Labor, or take other appropriate action.

Under section 342(c)(3)(A) of the Dodd-Frank Act, the OMWI Director is required to determine whether a contractor or subcontractor has made good faith efforts to include minorities and women in its workforce. The proposed Contract Standard would require that a Commission contractor, upon request from the OMWI Director, provide documentation of the actions undertaken (and as applicable, the actions each covered subcontractor under the contract has undertaken) that demonstrate its good faith efforts to ensure the fair inclusion of minorities and women in its workforce. The documentation requested may include, but is not limited to: 1) the total number of employees in the contractor's workforce, and the number of employees by race, ethnicity, gender, and job title or EEO-1 job category (e.g., EEO-1 Report(s)); 2) a list of covered subcontract awards under the contract that includes the dollar amount of each subcontract, date of award, and the subcontractor's race, ethnicity, and/or gender ownership status; 3) the contractor's plan to ensure the fair inclusion of minorities and women in its workforce, including outreach efforts; and 4) for each covered subcontractor, the information requested in items 1 and 3 above. The OMWI Director will consider the information submitted in evaluating whether the contractor or subcontractor has complied with its contractual obligation to make good faith efforts to ensure the fair inclusion of minorities and women in its workforce.

The Commission's proposes to satisfy section 342(c)(2) through the inclusion of a contract standard concerning workforce inclusion of minorities and women (the "Contract Standard") in solicitations and resulting contracts for services with a dollar value of $100,000 or more. The proposed Contract Standard is similar to the contract clauses adopted by OMWIs of other federal financial regulatory agencies.[2] The Contract Standard requires the service contractor, upon entering into a contract with the Commission, to confirm that it will ensure, to the maximum extent possible and consistent with applicable law, the fair inclusion of minorities and women in its workforce. In addition, the proposed Contract Standard requires the contractor to include the substance of the Contract Standard in all subcontracts for services awarded under the contract with a dollar value of $100,000 or more. Accordingly, the requirements of the proposed Contract Standard will apply to covered subcontractors, as prescribed in section 342(c)(2) of the Dodd-Frank Act.

The proposed Contract Standard requires a contractor to provide documentation, upon the request of the OMWI Director, to demonstrate that it has made good faith efforts to ensure the fair inclusion of minorities and women in its workforce and, as applicable, to demonstrate that its covered subcontractors have made such good faith efforts. "Good faith efforts" are interpreted to

[2] See Department of the Treasury Acquisition Regulations; Contract Clause on Minority and Women Inclusion in Contractor Workforce, 79 Fed. Reg. 15551, at http://www.gpo.gov/fdsys/pkg/FR-2014-03-20/pdf/2014-05846.pdf.

include actions by a contractor (and, as applicable, actions by each covered subcontractor) to ensure the fair inclusion of women and minorities in its workforce, while at the same time identifying, and if present, removing barriers to minority and women employment or expansion of employment opportunities for minorities and women within its workforce. Efforts to remove such barriers may include, but are not limited to, recruiting to ensure that applicant pools include minorities and women, providing job-related training, or other activity that could lead to removing such barriers.

Section 342 of the Dodd-Frank Act applies to "all contracts of [the Commission] for services of any kind," but the section does not define the term "contract." FAR 37.101 defines "service contract" as a "contract that directly engages the time and effort of a contractor whose primary purpose is to perform an identifiable task rather than to furnish an end item of supply." Pursuant to the FAR definition, this proposed Contract Standard will be included in all Commission solicitations and resulting contracts for services with a dollar value of $100,000 or more, and in all subcontracts under the related prime contract for services with a dollar value of $100,000 or more.

Public Comment

The proposed Contract Standard is being published for public comment pursuant to 41 U.S.C. 1707, which applies to the publication of a covered federal procurement policy, regulation, procedure or form. Section 1707 provides that a procurement policy, regulation, procedure or form (including an amendment or modification thereof) is to be published for public comment in the Federal Register if it relates to the expenditure of appropriated funds, and has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure or form, or has a significant cost or administrative impact on contractors or offerors.

Here, the proposed Contract Standard relates to the expenditure of appropriated funds of the Commission, because it will be incorporated in certain Commission service contracts paid for with appropriated funds. The Contract Standard may have a significant effect beyond the internal operating procedures of the agency, as it implements requirements of the Dodd-Frank Act designed to address minority and women inclusion by federal contractors and implements the new contract termination authority contained in section 342(c)(3). The proposed Contract Standard may also have a cost or administrative impact on contractors or offerors, but we believe these effects would be insignificant as a result of the overlap with existing EEO laws. The consequence for non-compliance could have a cost or administrative impact on the covered service contractors, although they again overlap with existing remedies.

PAPERWORK REDUCTION ACT

The proposed Contract Standard contains "collection of information" requirements within the meaning of the Paperwork Reduction Act of 1995 ("PRA").[3] The title for the proposed collection of information is:

- Contract Standard for Contractor Workforce Inclusion

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. We intend to submit these requirements to the Office of Management and Budget ("OMB") for review and approval in accordance with the PRA and its implementing regulations.[4] If approved, the

[3] 44 U.S.C. 3501 et seq.
[4] 44 U.S.C. 3507(c); 5 CFR 1320.10.

responses to the new collection of information would be mandatory. For collections of information not contained in a proposed rule, the PRA requires federal agencies to publish a notice in the Federal Register concerning each proposed collection of information and to allow 60 days for public comment.[5] To comply with this requirement, we are publishing this notice.

A. Overview of Information Collection

1. Description of the Need for the Information and Proposed Use.

Under section 342(c)(3)(A) of the Dodd-Frank Act, the OMWI Director is required to determine whether a contractor or subcontractor has made good faith efforts to include minorities and women in its workforce. The proposed Contract Standard would require that a Commission contractor, upon request from the OMWI Director, provide documentation of the actions undertaken (and as applicable, the actions each covered subcontractor under the contract has undertaken) that demonstrate its good faith efforts to ensure the fair inclusion of minorities and women in its workforce. The documentation requested may include, but is not limited to: 1) the total number of employees in the contractor's workforce, and the number of employees by race, ethnicity, gender, and job title or EEO-1 job category (e.g., EEO-1 Report(s)); 2) a list of covered subcontract awards under the contract that includes the dollar amount of each subcontract, date of award, and the subcontractor's race, ethnicity, and/or gender ownership status; 3) the contractor's plan to ensure the fair inclusion of minorities and women in its workforce, including outreach efforts; and 4) for each covered subcontractor, the information requested in items 1 and 3 above. The OMWI Director will consider the information submitted in evaluating whether the contractor or subcontractor has complied with its contractual obligation to make good faith efforts to ensure the fair inclusion of minorities and women in its workforce.

---

[5] 44 U.S.C. 3506(c)(2).

2. Respondents and Estimate of Recordkeeping and Reporting Burdens.

The proposed Contract Standard will be included in Commission contracts and subcontracts for services with a dollar value of $100,000 or more. Based on the data showing the dollar value of service contracts and subcontracts awarded in FY 2012 and FY 2013, we estimate that 170 contractors[6] would be subject to the proposed Contract Standard. Approximately 120 of these contractors have 50 or more employees, while about 50 contractors have fewer than 50 employees.

a. Recordkeeping Burden

The information collection under the proposed Contract Standard would impose no new recordkeeping burdens on the estimated 120 contractors that have 50 or more employees. Such contractors are generally subject to recordkeeping and reporting requirements under the regulations implementing Title VII of the Civil Rights Act[7] and Executive Order 11246 ("EO 11246")[8]. Their contracts and subcontracts must include the clause implementing EO 11246 -- FAR 52.222-26, Equal Opportunity. In addition, contractors that have 50 or more employees (and a contract or subcontract of $50,000 or more) are required to maintain records on the race, ethnicity, gender, and EEO-1 job category of each employee under Department of Labor regulations implementing EO 11246.[9] The regulations implementing EO 11246 also require contractors that have 50 or more employees (and a contract or subcontract of $50,000 or more) to demonstrate that they have made good faith efforts to remove identified barriers, expand employment opportunities, and produce measurable results,[10] and to develop and maintain a

---

[6] Unless otherwise specified, the term "contractors" refers to contractors and subcontractors.
[7] 42 U.S.C. 2000e, et seq.
[8] Executive Order 11246, 30 Fed. Reg. 12,319 (Sept. 24, 1965).
[9] See 41 CFR 60-1.7.
[10] See 41 CFR 60-2.17(c).

written program, which describes the policies, practices, and procedures that the contractor uses to ensure that applicants and employees receive equal opportunities for employment and advancement.[11] In lieu of developing a separate workforce inclusion plan, a contractor would be permitted to submit its existing written program prescribed by the EO 11246 regulations as part of the documentation that demonstrates the contractor's good faith efforts to ensure the fair inclusion of minorities and women in its workforce. Thus, approximately 120 contractors are already required to maintain the information that may be requested under the proposed Contract Standard.

The estimated 50 contractors that employ fewer than 50 employees are required under the regulations implementing EO 11246 to maintain records showing the race, ethnicity and gender of each employee. We believe that these contractors also keep job title information during the normal course of business. However, contractors that have fewer than 50 employees may not have the written program prescribed by the EO 11246 regulations or similar plan that could be submitted as part of the documentation to demonstrate their good faith efforts to ensure the fair inclusion of minorities and women in their workforces. Accordingly, contractors with fewer than 50 employees may have to create a plan to ensure workforce inclusion of minorities and women.

In order to estimate the burden on contractors associated with creating a workforce inclusion plan, we considered the burden estimates for developing the written programs required under the regulations implementing EO 11246.[12] As there is no regulatory blueprint for a

---

[11] See 41 CFR part 60-2.

[12] According to the Supporting Statement for the OFCCP Recordkeeping and Requirements-Supply Service, OMB Control No. 1250-003 ("Supporting Statement"), it takes approximately 73 burden hours for contractors with 1-100 employees to develop the initial written program required under the regulations implementing EO 11246. We understand the quantitative analyses prescribed by the Executive Order regulations at 41 CFR part 60-2 are a time-

workforce inclusion plan, and contractors creating a workforce inclusion plan are not required to perform the same types of analyses required for the written programs prescribed by the EO 11246 regulations, we believe that to develop a workforce inclusion plan contractors with fewer than 50 employees would require approximately a third of the hours that contractors of similar size spend on developing the written programs required under the EO 11246 regulations. Accordingly, we estimate that contractors would spend about 24 hours of employee resources to develop a workforce inclusion plan. This would be a one-time total burden of 1,200 hours. After the initial development, we estimate that each contractor with fewer than 50 employees would spend approximately 10 hours each year updating and maintaining its workforce inclusion plan for a total annual burden of 500 hours. To account for this expected diminishing burden, we use a three-year average of the expected burden during the first year with the expected ongoing burden during the next two years to estimate the annual recordkeeping burden on contractors with fewer than 50 employees. Thus, we estimate that the total annual recordkeeping burden for such contractors to be about 740 hours [(1,200+500+500) / 3 years, rounded up].

The proposed contract standard also would require contractors to maintain information about covered subcontractors' ownership status, workforce demographics, and workforce inclusion plans. Contractors would request this information from their covered subcontractors, who would have an obligation to keep workforce demographic data and maintain workforce inclusion plans because the substance of the proposed Contract Standard would be included in their subcontracts. Based on data describing recent Commission subcontractor activity, we

consuming aspect of the written program development. As there is no requirement to perform these types of quantitative analyses in connection with a workforce inclusion plan under the proposed Contract Standard, we believe the workforce inclusion plan will take substantially fewer hours to develop. The Supporting Statement is available at reginfo.gov.

believe that very few subcontractors will have subcontracts under Commission service contracts with a dollar value of $100,000 or more.[13] These subcontractors may already be subject to similar recordkeeping requirements as principal contractors. Consequently, we believe that any additional requirements imposed on subcontractors would not significantly add to the burden estimates discussed above.

b. Reporting Burden

With respect to the reporting burden, we estimate that it would take all contractors on average approximately one hour to retrieve and submit to the OMWI Director the documentation specified in the proposed Contract Standard. We expect to request documentation from up to 100 contractors each year and therefore we estimate the total annual reporting burden to be 100 hours.

B. Solicitation of Public Comment

We request comments on the proposed collection of information in order to: (a) evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (b) evaluate the accuracy of the Commission's estimate of the burden (including hours and cost) of the proposed collection of information; (c) determine whether there are ways to enhance the quality, utility, and clarity of the information to be collected; and (d) evaluate whether there are ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

---

[13] A search of subcontract awards on the usaspending.gov website showed that four subcontractors in FY 2012 and three subcontractors in FY 2013 had subcontracts of $100K or more. See data on subcontract awards available at http://usaspending.gov.

Persons who desire to submit comments on the collection of information may use any of the methods shown in the ADDRESSES section of this notice. Comments should be received on or before: [INSERT DATE THAT IS 60 DAYS AFTER PUBLICATION IN THE FEDERAL REGISTER]. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Text of Proposed Contract Standard for Contractor Workforce Inclusion

NOTE: The Text of this Proposed Contract Standard will not appear in the Code of Federal Regulations.

CONTRACTOR WORKFORCE INCLUSION

Authority: 12 U.S.C. 5452; Sec. 342, Pub. L. 111-203.

Scope.

The agency will include the Contractor Workforce Inclusion contract standard in all Commission solicitations and resulting contracts for services with a dollar value of $100,000 or more.

Contract Standard.

The following contract standard shall be included in all Commission solicitations and resulting contracts for services with a dollar value of $100,000 or more.

CONTRACTOR WORKFORCE INCLUSION

The Contractor confirms its commitment to equal opportunity in employment and contracting, and that it shall ensure, to the maximum extent possible and consistent with applicable law, the fair inclusion of minorities and women in its workforce.

The Contractor shall insert the substance of this contract standard in each subcontract for services awarded for performance of this contract with a dollar value of $100,000 or more.

Within ten (10) business days of a written request from the Director of the Commission's Office of Minority and Women Inclusion (OMWI Director) or designee, or such longer time as the OMWI Director or designee determines, and without any additional consideration, action or authorization required from the OMWI Director, the Contractor shall provide documentation, satisfactory to the OMWI Director, of the actions it has undertaken (and as applicable, the actions each covered subcontractor under the contract has undertaken) to demonstrate its good faith efforts to comply with the aforementioned provisions.

For purposes of this contract, "good faith efforts" shall include actions by the Contractor (and as applicable, actions by each covered subcontractor under the Service Contract) to identify and, if present, remove barriers to minority and women employment or expansion of employment opportunities for minorities and women within its workforce. Efforts to remove such barriers may include, but are not limited to, recruiting to ensure that applicant pools include minorities and women, providing job-related training, or other activity that could lead to removing such barriers.

The documentation requested by the OMWI Director or designee to demonstrate good faith efforts may include, but is not limited to, one or more of the following:

a. The total number of Contractor's employees, and the number of employees by race, ethnicity, gender, and job title or EEO-1 Report job category (e.g., EEO-1 Report(s));

b. A list of covered subcontract awards for services under the contract, and for each covered subcontract award, the dollar amount, date of award, and the subcontractor's race, ethnicity, and/or gender ownership status;

c. The contractor's plan for ensuring the fair inclusion of minorities and women in its workforce, including outreach efforts; and

d. For each covered subcontractor, the documentation specified in paragraphs a. and c. above.

Consistent with Section 342(c)(3) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), 12 U.S.C. § 5452(c)(3), a Contractor's failure to demonstrate to the OMWI Director that it has made good faith efforts to include minorities and women in its workforce (and as applicable, failure to demonstrate that its subcontractor(s) has made such good faith efforts) may result in termination of the contract for default after the contractor is provided written notice and an opportunity to cure the failure in accordance with the procedures set forth in FAR 49.402-3(d), other contractual remedies, referral to the Office of Federal Contract Compliance Programs (OFCCP), or other appropriate action.

Compliance with this standard does not necessarily satisfy the requirements of EO 11246, as amended, nor does it preclude OFCCP compliance evaluations and/or enforcement actions undertaken pursuant to that Executive Order, or demonstrate compliance with other FAR clauses that may be included in this contract.

For purposes of this contract standard, the term "minority" shall have the meaning set forth in section 342(g) of the Dodd-Frank Act.

By the Commission.

In the Matter of

WILLIAM SLATER, CPA and
PETER E. WILLIAMS, III

Respondents.

ORDER INSTITUTING CEASE-AND-DESIST PROCEEDINGS PURSUANT TO SECTION 21C OF THE SECURITIES EXCHANGE ACT OF 1934, MAKING FINDINGS, AND IMPOSING A CEASE-AND-DESIST ORDER

I.

The Securities and Exchange Commission ("Commission") deems it appropriate that cease-and-desist proceedings be, and hereby are, instituted pursuant to Section 21C of the Securities Exchange Act of 1934 ("Exchange Act") against William Slater and Peter E. Williams, III ("Respondents").

II.

In anticipation of the institution of these proceedings, the Respondents have submitted Offers of Settlement (the "Offers") that the Commission has determined to accept. Solely for the purpose of these proceedings and any other proceedings brought by or on behalf of the Commission, or to which the Commission is a party, and without admitting or denying the findings herein, except as to the Commission's jurisdiction over each and over the subject matter of these proceedings, which are admitted, Respondents consent to the entry of this Order Instituting Cease-and-Desist Proceedings Pursuant to Section 21C of the Securities Exchange Act of 1934, Making Findings, and Imposing a Cease-and-Desist Order ("Order"), as set forth below.

III.

On the basis of this Order and Respondents' Offers, the Commission finds[1] that:

Summary

1. This matter involves misstated revenues in the professional services organization at Saba Software, Inc. ("Saba" or "the Company"), a Silicon Valley-based enterprise software company. The misstatements were the result of the falsification of time records over a period of more than four years by professional services managers in multiple geographies directing consultants in Saba's Indian subsidiary (the India Consulting Group or "ICG") to falsify time records by either recording time in advance of performance of work or failing to record time for hours worked in order to achieve their quarterly revenue and margin targets.

2. As a result, Saba reported materially false financial results in its financial statements filed with the Commission over the period from October 4, 2007 through January 6, 2012. As Saba announced on August 6, 2012 and November 5, 2012, management has determined that the Company is required to restate its financial statements for fiscal years 2008 through 2011, as well as the first two quarters of fiscal 2012, as a result of misconduct. The Company expects that the restatement will change the time period during which the affected revenues are recognized, generally shifting the timing of such revenues to later periods.

3. Saba's former Chief Financial Officers, William Slater and Peter E. Williams, III, realized Saba stock-sale profits and received bonuses during the 12-month periods following the filings containing financial results that Saba is required to restate. The Commission does not allege that Slater and Williams participated in the misconduct giving rise to the restatement. Slater and Williams have not, however, reimbursed Saba for stock-sale profits and bonuses they are required to reimburse the Company under Section 304(a) of the Sarbanes-Oxley Act.

Respondents

4. **William Slater**, age 63, is a resident of San Diego, California. He served as Chief Financial Officer and Principal Accounting Officer of Saba from December 9, 2008 through October 27, 2011. He served as Chief Financial Officer, Vice President and Treasurer of another public company from November 10, 2011 to February 15, 2013. Slater was licensed as a certified public accountant in New York from 1978 to 2003, when his license became inactive.

5. **Peter E. Williams III**, age 53, is a resident of Hillsborough, California. Prior to joining Saba as General Counsel in October 1999, Williams was a partner at an international law

[1] The findings herein are made pursuant to Respondents' Offer of Settlement and are not binding on any other person or entity in this or any other proceeding.

firm. Williams has been Saba's Secretary from the time of the Company's inception in April 1997. Williams served as Saba's Chief Financial Officer and Principal Accounting Officer from March 2004 to July 2007 and then again, on an interim basis, from October 27, 2011 until January 7, 2012. Since July 2007, Williams has also served as Executive Vice President, Corporate Development. Williams has been licensed to practice law in California since 1987. He has never been licensed as a certified public accountant.

6. **Saba Software, Inc.** ("Saba" or "the Company") is a Delaware corporation headquartered in Redwood Shores, California. The software company provides cloud-based enterprise learning, talent management and social networking tools to businesses and large organizations. At all relevant times, Saba's common stock has been registered pursuant to Section 12 of the Exchange Act. From its IPO in April 2000 until July 31, 2006, its common stock was registered pursuant to Section 12(g). Thereafter, until June 2013, it was registered pursuant to Section 12(b). It traded on the Nasdaq Global Market until it was suspended on April 9, 2013, and then it was delisted effective June 17, 2013 for failure to remain compliant with its SEC reporting obligations. Upon its delisting and deregistration from Section 12(b), it reverted to its previous Section 12(g) registration. Its common stock is currently registered pursuant to Section 12(g) and traded on the OTC Markets. Saba has not filed any periodic reports since January 6, 2012, when it filed its Form 10-Q for the quarter ended November 30, 2011.

Facts

A. Saba's Falsification of Time Records

7. Saba's professional services historically have accounted for about one third of its approximately $120 million in yearly revenues. Professional services have been delivered to customers worldwide by (1) customer-facing field consultants in North America and Europe ("Field Consultants") and (2) off-shore technical development services provided to the Field Consultants by the Company's India Consulting Group ("ICG Consultants"). ICG is an organization within Saba's Indian subsidiary designed to help the Company deliver professional services to its customers at a lower cost than comparable consultants in North America and Europe. By 2011, ICG employed 50-60 consultants who generated approximately 14,000 hours of billable work per quarter, which constituted about 17% of consulting revenue and 6% of total revenue per quarter.

8. Both Field Consultants and ICG Consultants were required to record time worked on customer projects in a timesheet database. Hours input into the system by Field or ICG Consultants were approved on a weekly basis by project managers in North America and Europe, and revenue for the professional services organization was then measured based on the approved number of hours in the timesheet database.

9. Saba disclosed in its public filings that it recognized revenue for both "time and materials" and "fixed fee" contracts as the services were performed. This revenue recognition treatment was consistent with GAAP only if Saba could demonstrate that (1) its customers have historically paid a consistent rate for its services (measured by Vendor Specific Objective Evidence

or "VSOE") and (2) it could accurately estimate how many hours it took to complete projects ("ability to estimate"). Therefore, Saba's finance personnel depended on accurate time records to ensure that Saba recognized revenue in accordance with GAAP.

10. From at least 2008 through the second quarter of Saba's fiscal 2012, Saba professional services employees and managers engaged in two time-keeping practices that led to its false revenue recognition. First, there were multiple incidents of ICG Consultants recording hours and billing customers for the performance of professional services in advance of performing those services in order to accelerate revenue recognition and achieve quarterly revenue targets ("pre-booking"). Second, ICG and Field Consultants regularly failed to report professional services time worked in order to conceal budget overruns from management and finance, instead recording that time to non-billable project codes or not at all ("under-booking").

11. These improper time-keeping practices precluded the time records from serving as reliable evidence under GAAP to recognize revenue in the manner that Saba did. As such, Saba management has concluded that Saba cannot demonstrate VSOE for the period from 2008 through the second quarter of fiscal 2012. Over that period, therefore, Saba was required to recognize professional services revenues on a completed contract basis, which would have required it to defer substantially all of its professional services revenue and much of its license revenue (where software licenses were bundled with professional services) until the contract was completed. Accordingly, virtually all of Saba's professional services revenue was misstated over the relevant time period because revenue was recognized earlier than it should have been under the applicable accounting principles.

12. The practices of pre-booking and under-booking were directed by and known to numerous individuals in the professional services organization and ICG, including the two most senior Saba employees overseeing the professional services organization in North America over the relevant time period. Those senior Saba employees were told on multiple occasions by the finance department that the Company's accountants and auditors needed to understand exactly how many hours were being worked and when (regardless of whether or not they were billed to the customer) in order to ensure that revenue was recognized accurately, and they understood that inaccurate time-keeping would lead to misstatements in Saba's reported professional services revenue and violate the Company's policies regarding financial reporting, including the Code of Business Conduct and the Revenue Recognition Policy.

B. Scope and Impact of the Fraud

13. Saba's professional services revenues, gross margins and income were materially overstated in its periodic filings from October 4, 2007 through January 6, 2012 as a result of the time-reporting misconduct.

14. The practices of pre-booking and under-booking, and the fundamental inaccuracy in Saba's time records revealed by these practices, have led Saba management to conclude that it can no longer rely on its calculation of VSOE of fair value for professional services. In this circumstance, ASC 985-605 (Certain Revenue Arrangements That Include Software Elements) and

ASC 605-35 (Revenue Recognition) require that the Company defer to the point where services are complete, rather than recognize over the period where services are performed, standalone services revenue and revenue on software license and cloud services agreements that contain bundled professional services. Accordingly, Saba has determined and announced that it is required to restate its financial statements for the years 2008, 2009, 2010 and 2011, and the first two quarters of 2012, due to its material non-compliance with GAAP. Although Saba has not yet filed its required restatement, the cumulative impact of this alternative revenue recognition treatment is approximately $70 million over the period from 2008 through the second fiscal quarter of 2012. The Company expects that the restatement will change the time period during which the affected revenues are recognized, generally shifting the timing of such revenues to later periods.

15. These misstatements are material. First, based on the Company's own estimates, the restated financials will reflect overstatements of gross revenue and profit of more than 5% in each year for the period 2008 through 2011. Second, the effect of the inflated revenue was that Saba met analyst expectations for EPS in certain quarters and caused at least one year (2010) to reflect net income when, but for the inflated revenue, the Company should have reported a net loss.

C. Saba's Required Restatement

16. On August 6, 2012, Saba announced that, following an internal accounting review, management had determined that its annual financial results for fiscal years 2011 and 2010, as well as the first and second quarters of fiscal year 2012, should be restated as a result of instances of improper time-recording that it had identified in the Company's professional services business. On November 5, 2012, Saba announced that management had determined that the Company's annual financial results for fiscal years 2009 and 2008 would also need to be restated.

D. Compensation of CFOs Slater and Williams

17. During the 12-month periods that followed the filing of the periodic reports requiring restatement, Slater and Williams received bonuses and realized profits from sales of Saba stock.

18. Slater and Williams have not reimbursed those amounts to Saba.

Violations

19. Section 304 of the Sarbanes-Oxley Act of 2002 requires the chief financial officer of any issuer required to prepare an accounting restatement due to material noncompliance with the securities laws as a result of misconduct to reimburse the issuer for (i) any bonus or incentive-based or equity-based compensation received by that person from the issuer during the 12-month periods following the false filings, and (ii) any profits realized from the sale of securities of the issuer during those 12-month periods. Section 304 does not require that a chief financial officer engage in misconduct to trigger the reimbursement requirement. Slater and Williams both realized Saba stock-sale profits and received bonuses during the 12-month periods following the filings

containing financial results that Saba is required to restate. They have not, to date, reimbursed the Company for those amounts. Slater and Williams have, therefore, violated Sarbanes-Oxley Section 304.

IV.

In view of the foregoing, the Commission deems it appropriate to impose the sanctions agreed to in Respondents' Offers.

Accordingly, it is hereby ORDERED, pursuant to Section 21C of the Exchange Act, that:

A. Respondents Slater and Williams cease and desist from committing or causing any violations and any future violations of Section 304 of the Sarbanes-Oxley Act.

B. Respondent Slater shall, within 30 days of the entry of this Order, reimburse Saba for a total of $337,375 pursuant to Section 304(a) of SOX. Respondent shall simultaneously deliver proof of satisfying this reimbursement obligation to Erin Schneider, Division of Enforcement, Securities and Exchange Commission, 44 Montgomery Street, Suite 2800, San Francisco, California 94104.

C. Respondent Williams shall, within 30 days of the entry of this Order, reimburse Saba for a total of $141,992 pursuant to Section 304(a) of SOX. Respondent shall simultaneously deliver proof of satisfying this reimbursement obligation to Erin Schneider, Division of Enforcement, Securities and Exchange Commission, 44 Montgomery Street, Suite 2800, San Francisco, California 94104.

Therefore, OCC is required to comply with the Clearing Supervision Act and file advance notices with the Commission. See 12 U.S.C. 5465(e).

3 17 CFR 240.19b-4(n)(1)(i).

4 See Securities Exchange Act Release No. 74073 (January 15, 2015), 80 FR 3287 (January 22, 2015) (SR-OCC-2014-812). OCC also filed the proposal contained in this advance notice as a proposed rule change under Section 19(b)(1) of the Act and Rule 19b-4 thereunder, which was published for comment in the Federal Register on December 30, 2014. 15 U.S.C. 78s(b)(1); 17 CFR 240.19b-4. See Securities Exchange Act Release No. 73907 (December 22, 2014), 79 FR 78543 (December 30, 2014) (SR-OCC-2014-24). The Commission did not receive any comments on the proposed rule change.

Commission did not receive any comments on the Advance Notice. This publication serves as a notice of no objection to the Advance Notice.

I. Description of the Advance Notice

Description of Change

This advance notice was filed in connection with OCC's proposed change to its operations concerning the clearance of confirmed trades executed in overnight trading sessions offered by exchanges for which OCC provides clearance and settlement services. OCC currently clears overnight trading activity for CBOE Futures Exchange, LLC ("CFE").[5] The total number of trades submitted to OCC from overnight trading sessions is nominal, typically less than 3,000 contracts per session. However, OCC has recently observed an industry trend whereby exchanges are offering overnight trading sessions beyond traditional hours. Exchanges offering overnight trading sessions have indicated to OCC that such sessions benefit market participants by providing additional price transparency and hedging opportunities for products traded in such sessions, which, in turn, promotes market stability.[6] In light of this trend, OCC proposed to implement a framework for clearing trades executed in such sessions that includes: 1) qualification criteria used to approve clearing members for overnight trading sessions, 2) systemic controls to identify trades executed during overnight trading sessions by clearing members not approved for such sessions, 3) enhancements to OCC's overnight monitoring of trades submitted by exchanges during overnight trading sessions,

---

5 ELX Futures LP ("ELX") previously submitted overnight trading activity to OCC, but currently does not submit such trades. OCC will re-evaluate ELX's risk controls in the event ELX re-institutes its overnight trading sessions.

6 See CFE-2014-010 at http://cfe.cboe.com/publish/CFErulefilings/SR-CFE-2014-010.pdf.

4) enhancements to OCC's credit controls with respect to monitoring clearing members' credit risk during overnight trading sessions, including procedures for contacting an exchange offering overnight trading sessions in order to invoke use of the exchange's kill switch, and 5) taking appropriate disciplinary action against clearing members who attempt to clear during the overnight trading session without first obtaining requisite approvals. These changes (described in greater detail below) are designed to reduce and mitigate the risks associated with clearing trades executed in overnight trading sessions. In addition, the only products that will be eligible for clearing in overnight trading sessions are index options and index futures products.

OCC's framework for determining whether to provide clearing services for overnight trading sessions offered by an exchange is designed to work in conjunction with the risk controls of the exchange that offers overnight trading sessions. OCC will confirm an exchange's risk controls as well as its staffing levels as they relate to overnight trading sessions to determine if OCC may reasonably rely on such risk controls to reduce the risk presented to OCC by the exchange's overnight trading sessions. Such exchange risk controls will consist of: 1) price reasonability checks, 2) controls to prevent orders from being executed beyond a certain percentage (determined by the exchange) from the initial execution price, 3) activity based protections which focus on risk beyond price, such as a high number of trades occurring in a set period of time, and 4) kill switch capabilities, which may be initiated by the exchange and can cancel all open quotes or all orders of a particular participant. OCC believes that confirming the existence of applicable pre-trade risk controls as well as overnight staffing at the relevant exchanges is essential to mitigating risks presented to OCC from overnight trading sessions.[7] OCC believes that providing clearing services to exchanges offering such sessions is consistent with OCC's mission to provide market participants with clearing and risk management solutions that respond to changes in the marketplace.

Qualification Criteria

In order to mitigate risks associated with clearing for overnight trading sessions, clearing members that participate in such trading sessions will be required to provide contact information to OCC for operational and risk personnel available to be contacted by OCC during such sessions. In addition, OCC will require that clearing members participating in an overnight trading session post additional margin in a designated account in order to mitigate the risk that OCC cannot draft a clearing member's bank account during an overnight trading session.[8] OCC also will adopt a procedure whereby, on a quarterly basis, it confirms its record of clearing members eligible for overnight trading sessions with a similar record maintained by exchanges offering such overnight trading sessions.

With respect to providing operational and risk contacts, under OCC Rule 201, each clearing member is required to maintain facilities for conducting business with OCC

---

7 Comparable controls are applied to futures and future option trades executed in overnight trading sessions currently cleared by OCC, although such controls have been implemented by clearing futures commission merchants ("clearing FCMs") pursuant to Commodity Futures Trading Commission ("CFTC") Regulation 1.73. This requires clearing FCMs to monitor for adherence to such controls during regular and overnight trading sessions. Some of these risk control measures are similar to those proposed by OCC for use in clearing securities trades in overnight trading sessions. For instance, OCC confirmed that CFE maintains kill switch capabilities.

8 Clearing members will be required to designate a firm account to ensure that OCC has a general lien on the assets in the account and can use them to satisfy any obligation of the clearing member to OCC.

and to have a representative authorized in the name of the clearing member to take all action necessary for conducting business with OCC available at the facility during such hours as may be specified from time-to-time by OCC. Similarly, OCC Rules 214(c) and (d) require clearing members to ensure that they have the appropriate number of qualified personnel and to maintain the ability to process anticipated volumes and values of transactions. OCC will use this existing authority to require clearing members trading during overnight trading sessions to maintain operational and risk staff that may be contacted by OCC during such sessions.

OCC will impose upon clearing members qualified to participate in overnight trading sessions additional margin requirement in an amount of the lesser of $10 million or 10% of the clearing member's net capital ("Additional Margin"), which will be equal to the first monitoring risk threshold (described below) and which will be collected the morning before each overnight trading sessions. Clearing members must identify the proprietary account that would be charged the Additional Margin amount. The Additional Margin requirement is intended to provide OCC with additional margin assets should a clearing member's credit risk increase during overnight trading sessions.[9] OCC proposes to adopt a process whereby each morning OCC Financial Risk Management staff will assess the Additional Margin requirement against clearing members eligible to participate in overnight trading sessions. Clearing members that do not have sufficient excess margin on deposit with OCC to meet the Additional Margin amount will be

---

9 Clearing members approved for overnight trading sessions that do not meet the Additional Margin requirement for a given overnight trading session would be treated like a clearing member not approved for overnight trading sessions, as described below.

required to deposit additional funds with OCC to satisfy the Additional Margin requirement prior to participating in any future overnight trading sessions.[10] This process will be adopted under existing rule authority.

Moreover, OCC also will confirm that an exchange offering overnight trading sessions has adopted a procedure whereby such exchange would contact OCC when a trader requests trading privileges during overnight trading sessions. The purpose of this contact is to verify that the trader's clearing firm (i.e., the OCC clearing member) is approved for overnight trading sessions. If the applicable OCC clearing member is not approved for overnight trading sessions, then the clearing member must receive OCC's approval for overnight trading sessions, or the exchange will not provide the trader trading privileges during overnight trading sessions. Moreover, OCC will confirm that an exchange offering overnight trading sessions has implemented a procedure to periodically (i.e., quarterly) validate its record of approved clearing firms against OCC's record of clearing members approved for overnight trading sessions.[11] Any discrepancies between the two records will be promptly resolved by either the clearing member obtaining approval from OCC for overnight trading sessions or by the exchange revoking the clearing firm's trading privileges for overnight trading sessions.

Systemic Controls

OCC will implement system changes so that trades submitted to OCC during overnight trading sessions that have been executed by clearing members not approved for

[10] Under OCC Rule 601, OCC has the discretion to fix the margin requirement for any account at an amount that it deems necessary or appropriate under the circumstances to protect the interests of clearing members, OCC and the public.

[11] As discussed in more detail below, clearing members that attempt to participate in overnight trading sessions without the necessary approval will be subject to a minor rule violation fine.

such trading sessions will be reviewed by OCC staff after acceptance but before being processed (each such trade being a "Reviewed Trade"). OCC will contact the submitting exchange regarding each Reviewed Trade in order to determine if the trade is a valid trade. If the exchange determines that the Reviewed Trade was in error such that, as provided in Article VI, Section 7(c) of OCC's By-laws, new or revised trade information is required to properly clear the transaction, OCC expects the exchange would instruct OCC to disregard or "bust" the trade. If the exchange determines that the Reviewed Trade was not in error, then OCC will clear the Reviewed Trade and take appropriate disciplinary action against the non-approved clearing member, as described below. OCC believes that clearing the Reviewed Trade is appropriate in order to avoid potentially harming the clearing member approved for overnight trading sessions that is on the opposite side of the transaction.

Overnight Monitoring

OCC will implement additional overnight monitoring in order to better monitor clearing members' credit risk during overnight trading sessions. Such monitoring of credit risk is similar to existing OCC practices concerning futures cleared during overnight trading hours and includes automated processes within OCC's ENCORE clearing system to measure, by clearing member: (i) the aggregate mark-to-market amounts of a clearing member's positions, including positions created during overnight trading, based on current prices using OCC's Portfolio Revaluation system, (ii) the aggregate incremental margin produced by all positions resulting from transactions executed during overnight trading, and (iii) with respect to options cleared during overnight trading hours, the aggregate net trade premium positions resulting from trades executed during overnight trading (each of these measures being a "Credit Risk Number"). Hourly credit reports would be generated by ENCORE containing the Credit Risk Numbers expressed in terms of both dollars and, except for the mark-to-market position values, as a percentage of net capital for each clearing member trading during overnight trading sessions. The Credit Risk Numbers are the same information used by OCC staff to evaluate clearing member exposure during regular trading hours and, in addition to OCC's knowledge of its clearing members' businesses, are effective measures of the risk presented to OCC by each clearing member. OCC's Operations staff will review such reports as they are generated and, in the event that any of the Credit Risk Numbers for positions established by a clearing member during an overnight trading session exceed established thresholds, staff will alert OCC's Market Risk staff[12] of the exceedance in accordance with established procedures, as described below.

Market Risk staff will follow a standardized process concerning such exceedances, including escalation to OCC's management, if required by such process. Given the nominal volume of trades executed in overnight trading sessions that are presently submitted for clearance, OCC does not contemplate changes in its current staffing levels that support overnight clearing activities at this time, however, OCC will periodically assess and adjust such staffing levels as appropriate. As part of the overnight clearing activities, OCC has, however, designated an on-call Market Risk duty officer who would be responsible for reviewing issues that arise when clearing for overnight

12 OCC's Member Services staff will also receive alerts in order to contact clearing members as may be necessary.

trading session and determining what measures to be taken as well as additional escalation, if necessary.

With respect to OCC's escalation thresholds, if any Credit Risk Number of a clearing member approved for overnight trading sessions is $10 million or more, or any Credit Risk Number equals 10% or more of the clearing member's net capital, OCC's Operations staff will be required to provide e-mail notification to Market Risk and Member Services staff. If any Credit Risk Number of a clearing member not approved for overnight trading sessions is $10 million or more, or any Credit Risk Number equals 10% or more of the clearing member's net capital, OCC's Operations will also notify Market Risk and Member Services staff as well as its senior management. Such departments will take action to prevent additional trading by the non-approved clearing member, including contacting the exchange to invoke use of the exchange's kill switch.

If any Credit Risk Number of a clearing member approved for overnight trading sessions is $50 million or more, or equals 25% or more of the clearing member's net capital, Operations staff will be required to contact, by telephone: (i) Market Risk and Member Services, (ii) the applicable exchange for secondary review, and (iii) the clearing member's designated contacts. The on-call Market Risk duty officer also will consider if additional action is necessary, which may include contacting a designated executive officer in order to issue an intra-day margin call, increase the clearing member's margin requirement in order to prevent the withdrawal of a specified amount of excess margin collateral, if any, the clearing member has on deposit with OCC, or contacting the exchange in order to invoke the use of its kill switch.

If any Credit Risk Number is $75 million or more, or equals 50% or more of the clearing member's net capital, Operations staff will be required to contact, by telephone, Market Risk staff, the on-call Market Risk duty officer, and a designated executive officer. Such officer will be responsible for reviewing the situation and determining whether to implement credit controls, which are described in greater detail below and include: issuing an intra-day margin call, increasing a clearing member's margin requirement in order to prevent the withdrawal of a specified amount of excess margin collateral, if any, the clearing member has on deposit with OCC, whether further escalation is warranted in order for OCC to take protective measures pursuant to OCC Rule 305, or contact the exchange in order to invoke use of its kill switch. OCC stated that it chose the above described escalation thresholds based on its analysis of historical overnight trading activity across the futures industry. OCC believes that these thresholds strike an appropriate balance between effective risk monitoring and operational efficiency.

Credit Controls

In order to address credit risk associated with trading during overnight trading sessions, and as described above, OCC will collect Additional Margin from clearing members as well as monitor and analyze the impact that positions established during such sessions have on a clearing member's overall exposure. Should the need arise based on threshold breaches described above, and pursuant to OCC Rule 609, OCC may require the deposit of additional margin ("intra-day margin") by any clearing member that increases its incremental risk as a result of trading activity during overnight trading sessions. Accordingly, a clearing member's positions established during such sessions will be incorporated into OCC's intra-day margin process. Should a clearing member's exposure significantly increase while settlement banks are not open to process an intra-day margin call, OCC has the authority under OCC Rule 601 to increase a clearing member's margin requirement which will restrict its ability to withdraw excess margin collateral. The implementation of these measures is discussed more fully below.

In the event that a clearing member's exposure during overnight trading sessions causes a clearing member to exceed OCC's intra-day margin call threshold for overnight trading sessions, OCC will require the clearing member to deposit intra-day margin equal to the increased incremental risk presented by the clearing member. Specifically, if a clearing member has a total risk charge[13] exceeding 25% (a reduction of the usual figure of 50%), as computed overnight by OCC's STANS system, and a loss of greater than $50,000 from an overnight trading session(s), as computed by Portfolio Revaluation, OCC will initiate an intra-day margin call. OCC will know at approximately 8:30 a.m. (Central Time) if an intra-day margin call on a clearing member will be initiated based on breaches of these thresholds. This "start of business" margin call is in addition to daily margin OCC collects from clearing members pursuant to OCC Rule 605, any intra-day margin call that OCC may initiate as a result of regular trading sessions, or special margin call that OCC may initiate.

13 Total risk charge is a number derived from STANS outputs and is the sum of expected shortfall, stress test charges and any add-on charges computed by STANS. STANS is OCC's proprietary margin methodology.

In addition to, or instead of, requiring additional intra-day margin, OCC Rule 601[14] and OCC's Clearing Member Margin Call Policy will work together to authorize Market Risk staff to increase a clearing member's margin requirement which may be in an amount equal to an intra-day margin call.[15] (Any increased margin requirement will remain in effect until the next business day.) This action will immediately prevent clearing members from withdrawing any excess margin collateral (in the amount of the increased margin requirement) the clearing member has deposited with OCC. With respect to clearing trades executed in overnight trading sessions, and in the event OCC requires additional margin from a clearing member, Market Risk staff may use increased margin requirements as a means of collateralizing the increase in incremental risk a clearing member incurred during such sessions without having to wait for banks to open to process an intra-day margin call.[16] Such action may be taken by OCC instead of, or in addition to, issuing an intra-day margin call depending on the amount of excess margin a clearing member has on deposit with OCC and the amount of the incremental risk presented by such clearing member. OCC believes that the expansion of its intra-day margin call process as described in the preceding paragraph, including OCC's ability to manually increase clearing members' margin requirements, will mitigate the risk that OCC is under-collateralized as a result of overnight trading hours.

---

14 In addition, OCC Rule 601 provides OCC with the authority to fix the margin requirement for any account or any class of cleared contracts at such amount as it deems necessary or appropriate under the circumstances to protect the respective interests of clearing members, OCC, and the public.

15 Clearing members frequently deposit margin at OCC in excess of requirements.

16 Clearing members will be able to substitute the locked-up collateral during normal time frames (i.e., 6:00 a.m. to 5:00 p.m. (Central Time) for equity securities).

Moreover, a designated executive officer may call an exchange offering overnight trading sessions to invoke the use of its kill switch. The kill switch prevents a clearing member (or the market participant clearing through a clearing member) from executing trades on the exchange during a given overnight trading session or, if needed, stop all trading during a given overnight trading session. Finally, pursuant to OCC Rule 305, the Executive Chairman or the President of OCC, in certain situations, has the authority to impose limitations and restrictions on the transactions, positions, and activities of a clearing member. This authority will be used, as needed, in the event a clearing member accumulates significant credit risk during overnight trading sessions, or a clearing member's activities during such trading sessions otherwise warrant OCC taking protective action.

Rule Enforcement Actions

In order to deter clearing members from attempting to participate in overnight trading sessions without authorization as well as appropriately enforce the above described processes, OCC will ensure that any attempt by a clearing member to participate in overnight trading sessions without first obtaining the necessary approval will result in the initiation of a rule enforcement action against such clearing member. As described above, clearing members not approved for overnight trading sessions that trade during such overnight sessions will have their trades reviewed by OCC staff. Clearing members that attempt to participate in overnight trading sessions but do not obtain the necessary approval to do so will be subject to a minor rule violation fine.[17] In addition, if a clearing member's operational or risk contacts for overnight trading sessions were

17 See OCC Rule 1201(b).

unavailable had OCC attempted to contact such individuals, the clearing member will be subject to a minor rule violation fine. OCC has existing processes in place to monitor for clearing member violations of OCC's rules and such processes also will apply to clearing member activity during overnight trading sessions.

Effect that OCC Anticipates on and Management of Risk

Clearing transactions executed in overnight trading sessions may increase risk presented to OCC due to the period of time between trade acceptance and settlement, the staffing levels at clearing members during such trading sessions, and the deferment of executing intra-day margin calls until banking settlement services are operational. However, OCC will expand its risk management practices in order to mitigate these risks by implementing, and expanding, the various tools discussed above. For example, OCC will enhance its monitoring practices in order to closely monitor clearing members' credit risk from trades placed during overnight trading sessions as well as implement processes so that OCC takes appropriate action when such credit risk exceeds certain limits. OCC also will use its existing authority to require adequate clearing member staffing during such trading sessions, in order to mitigate the operational risk associated with clearing members trading while they are not fully staffed. These risk management functions will work in tandem with risk controls, including the implementation of kill switch capabilities, adopted by the exchanges operating overnight trading sessions or by clearing FCMs, as applicable.

In addition to the above, OCC will adapt existing processes so that such processes can be used to mitigate risk associated with overnight trading sessions. Specifically, OCC will exercise its authority to issue margin calls and prevent the withdrawal of excess margin on deposit at OCC, as a result of activity during such trading sessions as a means of reducing risk. OCC also will implement a systemic function to identify trades executed during overnight trading sessions by clearing members not approved for such trading sessions for further review prior to allowing such trades to proceed further through OCC's clearance processing, and therefore mitigate the risk of losses from erroneous trades. Finally, OCC will be able to assess the need to take protective action pursuant to OCC Rule 305 as a result of clearing member activity during such sessions.

II. Discussion and Commission Findings

Although the Clearing Supervision Act does not specify a standard of review for an advance notice, the Commission believes that the stated purpose of the Clearing Supervision Act is instructive.[18] The stated purpose of the Clearing Supervision Act is to mitigate systemic risk in the financial system and promote financial stability by, among other things, promoting uniform risk management standards for systemically-important financial market utilities and strengthening the liquidity of systemically important financial market utilities.[19]

Section 805(a)(2) of the Clearing Supervision Act[20] authorizes the Commission to prescribe risk management standards for the payment, clearing, and settlement activities of designated clearing entities and financial institutions engaged in designated activities for which it is the supervisory agency or the appropriate financial regulator. Section

---

18 See 12 U.S.C. 5461(b).

19 Id.

20 12 U.S.C. 5464(a)(2).

805(b) of the Clearing Supervision Act[21] states that the objectives and principles for the risk management standards prescribed under Section 805(a) shall be to:

- promote robust risk management;
- promote safety and soundness;
- reduce systemic risks; and
- support the stability of the broader financial system.

The Commission has adopted risk management standards under Section 805(a)(2) of the Clearing Supervision Act ("Clearing Agency Standards").[22] The Clearing Agency Standards became effective on January 2, 2013, and require registered clearing agencies that perform central counterparty services to establish, implement, maintain, and enforce written policies and procedures that are reasonably designed to meet certain minimum requirements for their operations and risk management practices on an ongoing basis.[23] As such, it is appropriate for the Commission to review advance notices against these Clearing Agency Standards, and the objectives and principles of these risk management standards as described in Section 805(b) of the Clearing Supervision Act.[24]

---

21 12 U.S.C. 5464(b).

22 17 CFR 240.17Ad-22.

23 The Clearing Agency Standards are substantially similar to the risk management standards established by the Board of Governors of the Federal Reserve System governing the operations of designated financial market utilities that are not clearing entities and financial institutions engaged in designated activities for which the Commission or the Commodity Futures Trading Commission is the Supervisory Agency. See Financial Market Utilities, 77 FR 45907 (August 2, 2012).

24 12 U.S.C. 5464(b).

The Commission believes that the proposal in this Advance Notice is designed to further the objectives and principles of Section 805(b) of the Clearing Supervision Act.[25] The Commission notes that clearing transactions executed in overnight trading sessions may present additional risks to OCC and the markets in general; specifically, overnight trading sessions may create risk due to the gap between trade acceptance and settlement, the staffing levels at clearing members and OCC during such trading sessions, and the inability of clearing members to transfer funds to satisfy margin during overnight hours. However, OCC's proposal is designed in a manner that should adequately monitor for the risks presented by accepting trades for clearance and settlement during these extended and overnight sessions, and should adequately mitigate these risks.

As part of that design, OCC proposed to limit to the product set eligible for overnight trading sessions to index options and index futures products and to institute qualification criteria for determining whether to provide clearing services for overnight trading sessions offered by a particular exchange. These qualification criteria include price reasonability checks, controls to prevent orders from being executed at prices beyond a certain percentage of the initial execution price, activity based protections focused on risk beyond price, such as a high number of trades occurring in a set period of time, and kill switch capabilities. Limiting the eligible product set as well as confirming risk management controls by participating exchanges also should help promote robust risk management and safety, and soundness of the clearance of overnight trades.

In addition, OCC's proposed framework also incorporates a number of mechanisms designed to further control the risks posed by overnight trading, including

---

25 12 U.S.C 5464(b).

(i) clearing member qualification criteria, (ii) systemic controls to identify trades executed by clearing members not approved for overnight trading, (iii) enhancements to OCC's overnight monitoring of trades submitted by exchanges during overnight trading sessions, (iv) enhancements to OCC's credit controls with respect to monitoring clearing members' credit risk during overnight trading sessions, and (v) disciplinary actions for unapproved clearing members who attempt to clear during overnight trading sessions.

Particularly, OCC's overnight monitoring and escalation, including requiring additional intra-day margin, increasing a clearing member's margin requirement, and/or invoking an exchange's kill switch should serve to help mitigate the risks posed by the inability of clearing members to transfer funds to satisfy margin during overnight hours due to the, lack of availability of bank payment systems in the overnight hours and the period of time between trade acceptance and settlement. Moreover, requiring and enforcing adequate staffing at clearing members as well as at OCC through a designated an on-call Market Risk duty officer should help to mitigate the risks of overnight clearing. Accordingly, the Commission believes that the proposal should promote robust risk management, promote safety and soundness in the marketplace, reduce systemic risks, and support the stability of the broader financial system as it provides OCC with a range of mechanisms that help mitigate the risks posed by clearance trades from extended and overnight trading sessions.

III. Conclusion

IT IS THEREFORE NOTICED, pursuant to Section 806(e)(1)(I) of the Clearing Supervision Act,[26] that the Commission DOES NOT OBJECT to advance notice proposal (SR-OCC-2014-812) and that OCC is AUTHORIZED to implement the proposal as of the date of this notice or the date of an order by the Commission approving a proposed rule change that reflects rule changes that are consistent with this advance notice proposal (SR-OCC-2014-24), whichever is later.

By the Commission.

Release No. 34-74244; File No. S7-34-10

RIN 3235-AK80

Regulation SBSR—Reporting and Dissemination of Security-Based Swap Information

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: In accordance with Section 763 and Section 766 of Title VII ("Title VII") of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), the Securities and Exchange Commission ("SEC" or "Commission") is adopting Regulation SBSR—Reporting and Dissemination of Security-Based Swap Information ("Regulation SBSR") under the Securities Exchange Act of 1934 ("Exchange Act"). Regulation SBSR provides for the reporting of security-based swap information to registered security-based swap data repositories ("registered SDRs") or the Commission, and the public dissemination of security-based swap transaction, volume, and pricing information by registered SDRs. Registered SDRs are required to establish and maintain certain policies and procedures regarding how transaction data are reported and disseminated, and participants of registered SDRs that are registered security-based swap dealers or registered major security-based swap participants are required to establish and maintain policies and procedures that are reasonably designed to ensure that they comply with applicable reporting obligations. Regulation SBSR contains provisions that address the application of the regulatory reporting and public dissemination requirements to cross-border security-based swap activity as well as provisions for permitting market participants to satisfy

these requirements through substituted compliance. Finally, Regulation SBSR will require a registered SDR to register with the Commission as a securities information processor.

DATES: Effective Date: [insert date 60 days from publication in the Federal Register]

Compliance Date: For Rules 900, 907, and 909 of Regulation SBSR, the compliance date is the effective date. For Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR, compliance dates are being proposed in a separate release, 34-74245 (February 11, 2015).

FOR FURTHER INFORMATION CONTACT: Michael Gaw, Assistant Director, at (202) 551-5602; Natasha Cowen, Special Counsel, at (202) 551-5652; Yvonne Fraticelli, Special Counsel, at (202) 551-5654; George Gilbert, Special Counsel, at (202) 551-5677; David Michehl, Special Counsel, at (202) 551-5627; Geoffrey Pemble, Special Counsel, at (202) 551-5628; Mia Zur, Special Counsel, at (202) 551-5638; all of the Division of Trading and Markets, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-7010.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The Commission is adopting Regulation SBSR, which implements the requirements for regulatory reporting and public dissemination of security-based swap transactions set forth in Title VII of the Dodd-Frank Act.[1] The Dodd-Frank Act was enacted, among other reasons, to promote the financial stability of the United States by improving accountability and transparency in the financial system.[2] The 2008 financial crisis highlighted significant issues in the over-the-counter ("OTC") derivatives markets, which experienced dramatic growth in the years leading up to the financial crisis and are capable of affecting significant sectors of the U.S. economy. Title VII of the Dodd-Frank Act provides for a comprehensive new regulatory framework for swaps and security-based swaps, by, among other things: (1) providing for the registration and

---

1 Pub. L. No. 111-203, 124 Stat. 1376 (2010).

2 See Pub. L. No. 111-203, Preamble.

comprehensive regulation of swap dealers, security-based swap dealers, major swap participants, and major security-based swap participants; (2) imposing clearing and trade execution requirements on swaps and security-based swaps, subject to certain exceptions; (3) creating recordkeeping, regulatory reporting, and public dissemination requirements for swaps and security-based swaps; and (4) enhancing the rulemaking and enforcement authorities of the Commission and the Commodity Futures Trading Commission ("CFTC").

The Commission initially proposed Regulation SBSR in November 2010.[3] In May 2013, the Commission re-proposed the entirety of Regulation SBSR as part of the Cross-Border Proposing Release[4] and re-opened the comment period for all of its other outstanding Title VII rulemakings.[5]

The Commission received 86 comments that were specifically directed to the comment file (File No. S7-34-10) for the Regulation SBSR Proposing Release, of which 38 were comments submitted in response to the re-opening of the comment period.[6] Of the comments directed to the comment file (File No. S7-02-13) for the Cross-Border Proposing Release, six referenced Regulation SBSR specifically, while many others addressed cross-border issues generally, without specifically referring to Regulation SBSR. The Commission also has considered other comments germane to regulatory reporting and/or public dissemination of

4 See Securities Exchange Act Release No. 69490 (May 1, 2013), 78 FR 30967 (May 23, 2013) ("Cross-Border Proposing Release").

5 See Securities Exchange Act Release No. 69491 (May 1, 2013), 78 FR 30799 (May 23, 2013).

6 However, one comment that was specifically directed to the comment file for the Regulation SBSR Proposing Release exclusively addressed issues related to clearing "debt swaps." See Hamlet Letter. Because the subject matter of this comment letter is beyond the scope of Regulation SBSR, the Commission is not addressing this comment.

security-based swaps that were submitted in other contexts. The comments discussed in this release are listed in Appendix A.

The Commission is now adopting Regulation SBSR largely as re-proposed, with certain revisions suggested by commenters or designed to clarify the rules. In addition, in separate releases, as discussed below, the Commission also is adopting rules relating to SDR registration, duties, and core principles (the "SDR Adopting Release")[7] and is proposing certain rules, amendments, and guidance relating to Regulation SBSR ("Regulation SBSR Proposed Amendments Release").[8] The principal aspects of Regulation SBSR—which, as adopted, consists of ten rules, Rules 900 to 909 under the Exchange Act[9]—are briefly described immediately below. A detailed discussion of each rule within Regulation SBSR, as well as how these rules interact with the rules in the SDR Adopting Release, follows in the body of this release.[10]

A. Summary of Final Regulation SBSR

Rule 900, as adopted, sets forth the definitions used throughout Regulation SBSR. The defined terms are discussed in connection with the rules in which they appear.

---

7 See Securities Exchange Act Release No. 74246 (February 11, 2015).

8 See Securities Exchange Act Release No. 74245 (February 11, 2015).

9 15 U.S.C. 78a et seq. All references in this release to the Exchange Act refer to the Securities Exchange Act of 1934.

10 If any of the provisions of these rules, or the application thereof to any person or circumstance, is held to be invalid, such invalidity shall not affect other provisions or application of such provisions to other persons or circumstances that can be given effect without the invalid provision or application.

Rule 901(a), as adopted, assigns the reporting obligation for all security-based swaps except for the following: (1) clearing transactions;[11] (2) security-based swap transactions executed on a platform[12] that will be submitted to clearing; (3) transactions where there is no U.S. person, registered security-based swap dealer, or registered major security-based swap participant on either side; and (4) transactions where there is no registered security-based swap dealer or registered major security-based swap participant on either side and there is a U.S. person on only one side. For purposes of this release, the Commission uses the term "covered transactions" to refer to all security-based swaps other than those listed in the four categories above; all covered transactions shall be reported in the manner set forth in Regulation SBSR, as adopted. For covered transactions, Rule 901(a) assigns the duty to report to one side of the transaction (the "reporting side"). The "reporting hierarchy" established in Rule 901(a) is based, where possible, on the registration status (e.g., registration as a security-based swap dealer or major security-based swap participant) of the direct and indirect counterparties to the transaction. In the Regulation SBSR Proposed Amendments Release, the Commission is proposing amendments to Rule 901(a) that would impose reporting obligations for security-based swaps in categories one and two above (i.e., clearing transactions and security-based swap transactions executed on a platform and that will be submitted to clearing).

---

11 A "clearing transaction" is defined as "a security-based swap that has a registered clearing agency as a direct counterparty." See Rule 900(g).

12 A "platform" is defined as a "national securities exchange or security-based swap execution facility that is registered or exempt from registration." See Rule 900(v); infra note 199 and accompanying text (discussing the definition of "platform").

Rule 901(b), as adopted, provides that if there is no registered security-based swap data repository ("SDR") that will accept the report, the reporting side must report the transaction to the Commission.[13]

Rule 901(c) sets forth the primary trade information and Rule 901(d) sets forth the secondary trade information that must be reported. For most transactions, the Rule 901(c) information will be publicly disseminated. Information reported pursuant to Rule 901(d) is for regulatory purposes only and will not be publicly disseminated.

Rule 901(e) requires the reporting of life cycle events to the entity to which the original transaction was reported.

Rule 901(i) requires reporting, to the extent the information is available, of security-based swaps entered into before the date of enactment of the Dodd-Frank Act ("pre-enactment security-based swaps") and security-based swaps entered into after the date of enactment but before Rule 901 becomes fully operative ("transitional security-based swaps").

B. Role of Registered SDRs

Rule 902(a) requires a registered SDR to publicly disseminate a transaction report immediately upon receipt of information about a security-based swap, except in certain limited circumstances. Pursuant to Rule 902(a), the published transaction report must consist of all the information reported pursuant to Rule 901(c), plus any condition flag contemplated by the registered SDR's policies and procedures that are required by Rule 907. Rule 901(f) requires a registered SDR to timestamp any information submitted to it pursuant to Rule 901(c), (d), (e), or

---

13 A "registered security-based swap data repository" is defined as "a person that is registered with the Commission as a security-based swap data repository pursuant to Section 13(n) of the Exchange Act (15 U.S.C. 78m(n)) and any rules or regulations thereunder." See Rule 900(ff).

(i), and Rule 901(g) requires a registered SDR to assign a transaction ID to each security-based swap.

Rule 907(a) requires a registered SDR to establish and maintain written policies and procedures that detail how it will receive and publicly disseminate security-based swap transaction information. For example, Rule 907(a)(1) requires policies and procedures that enumerate the specific data elements of a security-based swap that must be reported to the registered SDR, including the data elements specified in Rules 901(c) and 901(d). Rule 907(a)(2) requires policies and procedures that specify one or more acceptable data formats, connectivity requirements, and other protocols for submitting information. Rules 907(a)(3) and 907(a)(4) require policies and procedures for assigning condition flags to the appropriate transaction reports. In addition, Rule 907(c) requires a registered SDR to make its policies and procedures available on its website.

Rule 907(e) requires a registered SDR to provide to the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to it pursuant to Regulation SBSR and the registered SDR's policies and procedures established thereunder.

Finally, Rule 909 requires a registered SDR also to register with the Commission as a securities information processor ("SIP").

C. Unique Identification Codes

Rule 903 requires a registered SDR to use "unique identification codes" ("UICs") to specifically identify a variety of persons and things. The following UICs are specifically required by Regulation SBSR: counterparty ID, product ID, transaction ID, broker ID, branch ID, trading desk ID, trader ID, platform ID, and ultimate parent ID.

Rule 906(b) requires each participant of a registered SDR to provide the registered SDR with information sufficient to identify the participant's ultimate parent(s) and any affiliate(s) of the participant that are also participants of the registered SDR.

Rule 903(a) provides that, if an internationally recognized standards-setting system ("IRSS") meeting certain criteria is recognized by the Commission and has assigned a UIC to a person, unit of a person, or product (or has endorsed a methodology for assigning transaction IDs), that UIC must be used by all registered SDRs and their participants in carrying out duties under Regulation SBSR. If the Commission has not recognized an IRSS—or if the Commission-recognized IRSS has not assigned a UIC to a particular person or thing—the registered SDR is required to assign a UIC using its own methodology. Additionally, Rule 903(a) provides that, if the Commission has recognized such a system that assigns UICs to persons, each participant of a registered SDR shall obtain a UIC from or through that system for identifying itself, and each participant that acts as a guarantor of a direct counterparty's performance of any obligation under a security-based swap that is subject to Rule 908(a) shall, if the direct counterparty has not already done so, obtain a UIC for identifying the direct counterparty from or through that system, if that system permits third-party registration without a requirement to obtain prior permission of the direct counterparty. As discussed further in Section X(B)(2), infra, the Commission recognizes the Global LEI System ("GLEIS"), administered by the Regulatory Oversight Committee ("ROC"), as meeting the criteria specified in Rule 903. The Commission may, on its own initiative or upon request, evaluate other IRSSs and decide whether to recognize such other systems.

D. Public Dissemination and Block Trades

Section 13(m)(1)(B) of the Exchange Act[14] authorizes the Commission "to make security-based swap transaction and pricing data available to the public in such form and at such times as the Commission determines appropriate to enhance price discovery." Section 13(m)(1)(C) of the Exchange Act[15] identifies four categories of security-based swaps and authorizes the Commission "to provide by rule for the public availability of security-based swap transaction, volume, and pricing data." Section 13(m)(1)(C) further provides that, with respect to each of these four categories of security-based swaps, "the Commission shall require real-time public reporting for such transactions." Section 13(m)(1)(D) of the Exchange Act[16] provides that the Commission may require registered entities (such as registered SDRs) to publicly disseminate the security-based swap transaction and pricing data required to be reported under Section 13(m) of the Exchange Act. Finally, Section 13(n)(5)(D)(ii) of the Exchange Act[17] requires SDRs to provide security-based swap information "in such form and at such frequency as the Commission may require to comply with public reporting requirements."

Under Rule 902, as adopted, a registered SDR must, immediately upon receiving a transaction report of a security-based swap, publicly disseminate the primary trade information of that transaction, along with any condition flags.

In addition, Section 13(m)(1)(E) of the Exchange Act[18] requires the Commission rule for real-time public dissemination of cleared security-based swaps to: (1) "specify the criteria for determining what constitutes a large notional security-based swap transaction (block trade) for

14 15 U.S.C. 78m(m)(1)(B).

15 15 U.S.C. 78m(m)(1)(C).

16 15 U.S.C. 78m(m)(1)(D).

17 15 U.S.C. 78m(n)(5)(D)(ii).

18 15 U.S.C. 13m(m)(1)(E).

particular markets and contracts"; and (2) "specify the appropriate time delay for reporting large notional security-based swap transactions (block trades) to the public." Section 13m(1)(E)(iv) of the Exchange Act[19] requires the Commission rule for real-time public dissemination of security-based swaps that are not cleared at a registered clearing agency but reported to a registered SDR to contain provisions that "take into account whether the public disclosure [of transaction and pricing data for security-based swaps] will materially reduce market liquidity."

As discussed in detail below, in response to the comments received and in light of the fact that the Commission has not yet proposed block thresholds, the Commission is adopting final rules that require all security-based swaps—regardless of their notional amount—to be reported to a registered SDR at any point up to 24 hours after the time of execution.[20] The registered SDR will be required, as with all other dissemination-eligible transactions, to publicly disseminate a report of the transaction immediately and automatically upon receipt of the information from the reporting side.

Although the Commission is adopting final rules relating to regulatory reporting and public dissemination of security-based swaps, it intends for the rules relating to public dissemination to apply only on an interim basis. This interim approach is designed to address the concerns of commenters who believed that a public dissemination regime with inappropriately small block trade thresholds could harm market liquidity, and who argued that market participants would need an extended phase-in period to achieve real-time reporting. In connection with its future rulemaking about block thresholds, the Commission anticipates

---

19 15 U.S.C. 13m(m)(1)(E)(iv).

20 As discussed in more detail in Section VII(B), infra, if reporting would take place on a non-business day (i.e., a Saturday, Sunday or U.S. federal holiday), reporting would instead be required by the same time on the next business day.

seeking public comment on issues related to block trades. Given the establishment of this interim phase, the Commission is not adopting any other proposed rules relating to block trades.

E. Cross-Border Issues

Regulation SBSR, as initially proposed, included Rule 908, which addressed when Regulation SBSR would apply to cross-border security-based swaps and counterparties of security-based swaps. The Commission re-proposed Rule 908 with substantial revisions as part of the Cross-Border Proposing Release. The Commission is now adopting Rule 908 substantially as re-proposed with some modifications, as discussed in Section XV, infra.[21]

Under Rule 908, as adopted, any security-based swap involving a U.S. person, whether as a direct counterparty or as a guarantor, must be reported to a registered SDR, regardless of where the transaction is executed.[22] Furthermore, any security-based swap involving a registered security-based swap dealer or registered major security-based swap participant, whether as a direct counterparty or as a guarantor, also must be reported to a registered SDR, regardless of where the transaction is executed. In addition, any security-based swap that is accepted for clearing by a registered clearing agency having its principal place of business in the United States must be reported to a registered SDR, regardless of the registration status or U.S. person status of the counterparties and regardless of where the transaction is executed.

---

21 The Commission anticipates seeking further public comment on the application of Regulation SBSR to: (1) security-based swaps where there is no U.S. person, registered security-based swap dealer, or registered major security-based swap participant on either side; and (2) transactions where there is no registered security-based swap dealer or registered major security-based swap participant on either side and there is a U.S. person on only one side.

22 See also Section II(B)(3) and note 139, infra (describing the type of guarantees that could cause a transaction to be subject to Regulation SBSR).

In the Cross-Border Proposing Release, the Commission proposed a new paragraph (c) to Rule 908, which contemplated a regime for allowing "substituted compliance" for regulatory reporting and public dissemination with respect to individual foreign jurisdictions. Under this approach, compliance with the foreign jurisdiction's rules could be substituted for compliance with the Commission's Title VII rules, in this case Regulation SBSR. Final Rule 908(c) allows interested parties to request a substituted compliance determination with respect to a foreign jurisdiction's regulatory reporting and public dissemination requirements, and sets forth the standards that the Commission would use in determining whether the foreign requirements were comparable.

F. Compliance Dates

For Rules 900, 907, and 909 of Regulation SBSR, the compliance date is the effective date of this release. For Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR, a new compliance schedule is being proposed in the Regulation SBSR Proposed Amendments Release. Accordingly, compliance with Rules 901, 902, 903, 904, 905, 906, and 908 is not required until the Commission establishes compliance dates for those rules.

Rules 910 and 911, as proposed and re-proposed, would have established compliance dates and imposed certain restrictions, respectively, during Regulation SBSR's phase-in period. For reasons discussed in the Regulation SBSR Proposed Amendments Release, the Commission has determined not to adopt Rule 910 or 911.[23]

II. Information Required To Be Reported

---

23 Thus, Regulation SBSR, as adopted, consists of Rules 900 through 909 under the Exchange Act. Conforming changes have been made throughout Regulation SBSR to replace references to "§§ 242.900 through 242.911" to "§§ 242.900 through 242.909." In addition, the defined terms "registration date" and "phase-in period" which appeared in re-proposed Rules 910 and 911, respectively, are not being defined in final Rule 900.

A. Primary Trade Information—Rule 901(c)

1. Description of Re-Proposed Rule

Rule 901(c), as re-proposed, would have required the reporting of the following primary trade information in real time, which information would then be publicly disseminated: (1) the asset class of the security-based swap and, if the security-based swap is an equity derivative, whether it is a total return swap or is otherwise designed to offer risks and returns proportional to a position in the equity security or securities on which the security-based swap is based; (2) information that identifies the security-based swap instrument and the specific asset(s) or issuer(s) of any security on which the security-based swap is based; (3) the notional amount(s), and the currenc(ies) in which the notional amount(s) is (are) expressed; (4) the date and time, to the second, of execution, expressed using Coordinated Universal Time (UTC); (5) the effective date; (6) the scheduled termination date; (7) the price; (8) the terms of any fixed or floating rate payments, and the frequency of any payments; (9) whether or not the security-based swap will be cleared by a clearing agency; (10) if both counterparties to a security-based swap are registered security-based swap dealers, an indication to that effect; (11) if applicable, an indication that the transaction does not accurately reflect the market; and (12) if the security-based swap is customized to the extent that the information in items (1) through (11) above does not provide all of the material information necessary to identify such customized security-based swap or does not contain the data elements necessary to calculate the price, an indication to that effect.

2. Discussion of Final Rule 901(c) and Response to Comments

a. General Approach to Required Information

Rules 901(c) and 901(d), as adopted, require the reporting of general categories of information, without enumerating specific data elements that must be reported, except in limited cases. The Commission has made minor revisions to the introductory language of Rule 901(c).[24]

In addition, Rule 907(a)(1), as adopted, requires each registered SDR to establish, maintain, and make publicly available policies and procedures that, among other things, specify the data elements that must be reported.[25] Commenters expressed mixed views regarding this approach. One commenter expressed the view that "any required data should be clearly established by the Commission in its rules and not decided in part by [SDRs]."[26] This commenter further asked the Commission to clarify that any additional fields provided by registered SDRs for reporting would be optional.[27] Two commenters, however, supported the Commission's approach of providing registered SDRs with the authority to define relevant fields on the basis of general guidelines as set by the SEC.[28] One of these commenters noted that it would be difficult for the Commission to specify the security-based swap data fields because

---

24 The first sentence of re-proposed Rule 901(c), which would have required real-time public dissemination of certain data elements, would have stated, in relevant part, "For any security-based swap that must be publicly disseminated pursuant to §§ 242.902 and 242.908 and for which it is the reporting side, the reporting side shall report the following information . . ." The information required to be reported pursuant to Rule 901(c) must be reported for all covered transactions, even though Rule 902(c) provides that certain security-based swap transactions are not subject to public dissemination. Accordingly, the Commission is not including in final Rule 901(c) the phrase "For any security-based swap that must be publicly disseminated pursuant to §§ 242.902 and 242.908 and for which it is the reporting side . . ." In addition, as discussed in Section VII(B)(1), infra, Rule 901(c), as adopted, provides that the reporting side shall report the information specified in Rule 901(c) within the timeframe specified by Rule 901(j).

25 See infra Section V.

26 ISDA IV at 8.

27 See id. at 9.

28 See MarkitSERV I at 10; Barnard I at 2 (also supporting the proposed categories of information that would be required to be reported for public dissemination).

security-based swaps are complex products that may require a large number of data fields to be electronically confirmed.[29] In addition, the commenter stated that electronic methods for processing existing and new security-based swaps continue to be developed; accordingly, the commenter stated that establishing a detailed list of reportable fields for each category of security-based swap would be impracticable because such a system "will be outdated with every new product launch or change in market practice," and would result in a "regulatory scheme that is continuously lagging behind the market."[30] The commenter cautioned, however, that the Commission must assure that there is consistency among the data fields collected and reported by registered SDRs in the same asset class so that it would be possible to consolidate the data.[31]

The Commission shares the commenter's concerns about the potential difficulties of consolidating data if there are multiple registered SDRs in the same asset class and each establishes different data elements for information that must be reported. Enumerating specific data elements required to be reported could help to promote consistency among the data fields if there are multiple registered SDRs in the same asset class. In addition, as discussed more fully below, such an approach would be more consistent with the approach taken by the CFTC's swap reporting rules. The Commission also acknowledges the comment that the Commission's rules, rather than the policies and procedures of a registered SDR, should specify the information required to be reported. However, the Commission believes on balance that establishing broad categories of required information will more easily accommodate new types of security-based

---

29 See MarkitSERV I at 9-10. The commenter stated, for example, that the confirmation for a new "standard" credit default swap ("CDS") would contain 35 to 50 data fields, depending on the structure of the CDS, and the confirmation for other CDS products and life cycle events combined would require a total of 160 data fields. See id. at note 37.

30 MarkitSERV I at 10.

31 See MarkitSERV I at 10.

swaps and new conventions for capturing and reporting transaction data. The Commission agrees with the commenter who expressed the view that a rule that attempted to enumerate the required data elements for each category of security-based swap could become outdated with each new product, resulting in a regulatory framework that constantly lagged the market and would need to be updated.[32] The Commission believes that a standards-based approach will more easily accommodate new security-based swap reporting protocols or languages, as well as new market conventions, including new conventions for describing the data elements that must be reported.

One group of commenters noted that the CFTC provided greater specificity regarding the information to be reported.[33] Several commenters generally urged the Commission and the CFTC to establish consistent reporting obligations to reduce the cost of implementing both agencies' reporting rules.[34]

The Commission agrees that it would be beneficial to harmonize, to the extent practicable, the information required to be reported under Regulation SBSR and under the

---

32 See id.

33 See ISDA/SIFMA I at 6.

34 See Better Markets I at 2; Cleary II at 3, 21 note 61 (noting that a consistent approach between the two agencies would address the reporting of mixed swaps); ISDA/SIFMA I at 6; J.P. Morgan Letter at 14; ISDA IV at 1-2 (generally urging that the Commission align, wherever possible and practical, with the CFTC reporting rules). The last commenter also noted that reporting of mixed swaps will be difficult if Regulation SBSR requires a different reporting counterparty from the CFTC's swap data reporting rules or if transaction identifiers are not conformed to the CFTC approach, see ISDA IV at 4, 11, and urged the Commission to coordinate with the CFTC on a uniform approach to the time of execution for mixed swaps, see id. at 14. A mixed swap is a swap that is subject to both the jurisdiction of the CFTC and SEC, and, absent a joint order of the CFTC and SEC with respect to the mixed swap, as described in Rule 3a67-4(c) under the Exchange Act, is subject to the applicable reporting and dissemination rules adopted by the CFTC and SEC.

CFTC's swap reporting rules. However, the Commission believes that it is possible to achieve a significant degree of consistency without including in final Rule 901 a detailed list of required data elements for each security-based swap. Rather than enumerating a comprehensive list of required data elements in the rule itself, Rule 901 identifies broad categories of information in the rule, and a registered SDR's policies and procedures are required to identify specific data elements that must be reported. The Commission believes that the flexibility afforded by Rule 901 will facilitate harmonization of reporting protocols and elements between the CFTC and SEC reporting regimes. In identifying the specific data elements that must be reported, a registered SDR could, in some instances, require reporting of the same data elements that are required to be reported pursuant to the CFTC's swap reporting rules, provided that those data elements include the information required under Rules 901(c) and 901(d). In some cases, however, the differences between the asset classes under the Commission's jurisdiction and those under the CFTC's jurisdiction will require a registered SDR's policies and procedures to specify the reporting of data elements different from those required under the CFTC's rules.

The Commission recognizes that enumerating the specific data elements required to be reported would be more consistent with the approach taken by the CFTC's swap reporting rules. Nevertheless, the Commission believes that the flexibility afforded by the category-based approach in adopted Rule 901(c) could facilitate harmonization. Accordingly, Rule 901(c), as adopted, continues to require the reporting of broad categories of security-based swap information to registered SDRs, without enumerating each data element required to be reported (with a few exceptions, described below).

b. Rule 901(c)(1)

Rule 901(c)(1), as re-proposed, would have required reporting of the asset class of a security-based swap and, if the security-based swap is an equity derivative, whether it is a total return swap or is otherwise designed to offer risks and returns proportional to a position in the equity security or securities on which the security-based swap is based. As described in detail below, the Commission is making several revisions to Rule 901(c)(1) in response to comments. Among other things, these revisions clarify the final rules and eliminate certain unnecessary elements and redundancies. Final Rule 901(c)(1), however, does not expand on the types of data elements that must be reported.

i. Elimination of the Reference to Equity Derivatives

The Commission is eliminating the reference to equity derivatives in final Rule 901(c)(1). Under Regulation SBSR, as proposed and re-proposed, it would have been necessary to identify total return swaps and other security-based swaps designed to offer risks and returns proportional to a position in an equity security or securities, because those security-based swaps would not have been eligible for a block trade exception.[35] However, because the Commission is not adopting block thresholds or other rules relating to the block trade exception at this time, it is not necessary to identify security-based swaps that are not eligible for a block trade exception during the first, interim phase of Regulation SBSR.[36] Accordingly, the Commission is not including in

35 Rule 907(b)(2)(i), as proposed and re-proposed, would have prohibited a registered SDR from designating as a block trade any security-based swap that is an equity total return swap or is otherwise designed to offer risks and returns proportional to a position in the equity security or securities on which the security-based swap is based. As noted in the Regulation SBSR Proposing Release, there is no delay in the reporting of block transactions for equity securities in the United States. Re-proposed Rule 907(b)(2)(i) was designed to discourage market participants from evading post-trade transparency in the equity securities markets by using synthetic substitutes in the security-based swap market. See Regulation SBSR Proposing Release, 75 FR at 75232.

36 See infra Section VII.

final Rule 901(c)(1) any requirement to identify a security-based swap as a total return swap or a security-based swap otherwise designed to offer risks and returns proportional to a position in the equity security or securities on which the security-based swap is based.

ii. Product ID

Final Rule 901(c)(1) requires the reporting of the product ID[37] of a security-based swap, if one is available. If the security-based swap has no product ID, or if the product ID does not include the information enumerated in Rule 901(c)(1)(i)-(v), then the information specified in subparagraphs (i)-(v) of Rule 901(c)(1) (discussed below) must be reported. Rule 901(c)(1) is designed to simplify the reporting process for security-based swaps that have a product ID by utilizing the product ID in lieu of each of the categories of data enumerated in Rule 901(c)(1)(i)-(v).

The Commission believes that the product ID will provide a standardized, abbreviated, and accurate means for identifying security-based swaps that share certain material economic terms. In addition, the reporting and public dissemination of the product ID could enhance transparency because a transaction report that used a single identifier for the product traded could be easier to read than a transaction report that identified the product traded through information provided in numerous individual data fields. For example, market observers would be able to discern quickly that transaction reports including the same product ID related to trades of the same product. Product IDs also could facilitate risk management and assist relevant authorities in analyzing systemic risk and conducting market surveillance. Furthermore, the Commission believes that the development of security-based swaps with standardized terms could facilitate the development of product IDs that would readily identify the terms of these transactions.

[37] See Rule 900(bb) (defining "product ID" as "the UIC assigned to a product").

Re-proposed Rule 901(c)(2) would have required reporting of information that identifies the security-based swap instrument and the specific asset(s) or issuer(s) of any security on which the security-based swap is based. Proposed Rule 900 defined "security-based swap instrument" to mean "each security-based swap in the same asset class, with the same underlying reference asset, reference issuer, or reference index."[38] In the context of final Rule 901(c), the requirement to report the product ID, if one is available, replaces, among other things, the requirement in re-proposed Rule 901(c)(2) to report information that identifies the security-based swap instrument and the specific asset(s) or issuer(s) of any security on which the security-based swap is based. For a security-based swap that has no product ID, Rule 901(c)(1)(i), as adopted, requires reporting of information that identifies the security-based swap, including the asset class of the security-based swap and the specific underlying reference asset(s), reference issuer(s), or reference index. Because the information that was included in the definition of security-based swap instrument—i.e., the asset class and the underlying reference asset, issuer, or index—will be reported pursuant to adopted Rule 901(c)(1)(i) or included in the product ID, it is no longer necessary to separately define "security-based swap instrument." Thus, final Rule 900 no longer contains a definition of security-based swap instrument.

Although Rule 900, as proposed, defined the term "product ID," it did not separately propose to define the term "product."[39] Moreover, the original definition of the term "unique

---

38 This definition was re-proposed in the Cross-Border Proposing Release without change as Rule 900(dd).

39 Rule 900, as proposed, defined "product ID" to mean "the UIC assigned to a security-based swap instrument." As discussed above, Rule 900, as proposed, defined "security-based swap instrument" to mean "each security-based swap in the same asset class, with the same underlying reference asset, reference issuer, or reference index." Both of these definitions were re-proposed in the Cross-Border Proposing Release without change as Rules 900(x) and 900(dd), respectively.

identification code" included the term "product," again without defining it.[40] The Commission is now adopting a specific definition of the term "product." Final Rule 900(aa) defines "product" as "a group of security-based swap contracts each having the same material economic terms except those relating to price and size." Accordingly, the definition of "product ID" in adopted Rule 900(bb) is revised to mean "the UIC assigned to a product."

The key aspect of the term "product" is the classifying together of a group of security-based swap contracts that have the same material economic terms, other than those relating to price and size. The assignment of product IDs to groups of security-based swaps with the same material economic terms, other than those relating to price and size, is designed to facilitate more efficient and accurate transaction reporting by allowing reporting of a single product ID in place of the separate data categories contemplated by Rule 901(c)(1)(i)-(v). Product IDs also will make disseminated transaction reports easier to read, and will assist the Commission and other relevant authorities in monitoring for systemic risk and conducting market surveillance.

Although the price and size of a security-based swap are material terms of the transaction—and thus must be reported, along with many other material terms, to a registered SDR pursuant to Rules 901(c) and 901(d)—they do not help distinguish one product from another. The same product can be traded with different prices and with different notional amounts. Thus, by way of example and not of limitation, if otherwise materially similar security-based swaps have different currencies of denomination, underlying assets, or settlement terms, they are different products for purposes of Regulation SBSR and should have different product IDs. An indicium of whether two or more security-based swaps between the same direct

40 Rule 900, as proposed, defined UIC as "the unique identification code assigned to a person, unit of a person, or product . . ." (emphasis added). This definition was re-proposed in the Cross-Border Proposing Release without change as Rule 900(nn).

counterparties are the same product is whether they could be compressed or netted together to establish a new position (e.g., by a clearing agency or portfolio compression service).[41] If they cannot be compressed or netted, this suggests that there are material differences between the terms of the security-based swaps that do not permit the risks to be fully offset.

The fact that the Commission is requiring products to be distinguished for purposes of regulatory reporting and public dissemination even if a single material economic term differentiates one from another would not prevent the Commission and market participants from analyzing closely related products on a more aggregate basis. For example, products that were otherwise identical but for different currencies of denomination could still be grouped together to understand the gross amount of exposure created by these related products (factoring in exchange rates). However, a product ID system that was not granular enough to separate products based on individual material differences would make it difficult or impossible to analyze positions based solely on those individual differences. For example, if a product ID system permitted otherwise similar security-based swaps with different currencies of denomination to be considered as the same product, it would not be possible to observe risk aggregations according to their particular currencies.[42]

Similarly, the Commission believes that otherwise materially identical security-based swaps with different dates of expiration are different products and therefore must have different product IDs. Delineating products by, among other things, date of expiration will assist the Commission and other relevant authorities in developing a more precise analysis of risk exposure

---

41 See TriOptima Letter at 2, 5-6 (explaining the portfolio compression process for uncleared swaps).

42 See ISDA/SIFMA at 10 (recommending that the definition of "security-based swap instrument" provide for more granular distinctions between different types of transactions within a single asset class).

over time. This feature of the "product" definition is different from the approach taken in the originally proposed definition of "security-based swap instrument," which specifically rejected distinctions based on tenor.[43]

In connection with these requirements, the Commission notes the part of the "product" definition referring to a product as "a group of security-based swap contracts" (plural). If a group of security-based swap contracts is sufficiently standardized such that they all share the same material economic terms (other than price and size), a registered SDR should treat them as the same product and assign them the same product ID. A product could be evidenced, for example, by the fact that a clearing agency makes the group of security-based swap contracts eligible for clearing and will net multiple transactions in that group of contracts into a single open position. In contrast, a security-based swap that has a combination of material economic terms unlike any other security-based swap would not be part of a product group, and the Commission believes that it would be impractical to require registered SDRs to assign a product ID to each of these unique security-based swaps. For such a security-based swap, the transaction ID would be sufficient to identify the security-based swap in the registered SDR's records and would serve the same purpose as a product ID.

The product ID is one type of UIC. As discussed more fully in Section X, infra, Rule 903(a), as adopted, requires a registered SDR to use a UIC, including a product ID, assigned by an IRSS, if an IRSS has been recognized by the Commission and issues that type of UIC. If an IRSS that can issue product IDs has not been recognized by the Commission, Rule 903(a)

43 The Commission is not expressing a view as to whether products with different tenors might or might not be considered together to constitute a class of securities required to be registered under Section 12 of the Exchange Act. See Section 12(a) of the Exchange Act, 15 U.S.C. 78l(a); Section 12(g)(1) of the Exchange Act, 15 U.S.C. 78l(g); Rule 12g-1 under the Exchange Act, 17 CFR 240.12g-1.

requires a registered SDR to assign a product ID to that product using its own methodology. Similarly, final Rule 907(a)(5) requires a registered SDR to establish and maintain written policies and procedures for assigning UICs in a manner consistent with Rule 903, which establishes standards for the use of UICs.[44]

One commenter noted that, although there likely will be global standards for identification codes for certain data fields, such as the LEI, some global identifiers will not exist.[45] The commenter believed that requiring registered SDRs to create identifiers would "result in bespoke implementation among" registered SDRs that would be of limited value absent an industry standard.[46] The commenter recommended that the Commission consider postponing a requirement to establish identifiers "until an international taxonomy exists that can be applied consistently."[47]

The Commission agrees that a system of internationally recognized product IDs would be preferable to a process under which registered SDRs assign their own product IDs to the same product. Nonetheless, the Commission believes that the use of product IDs, even product IDs created by registered SDRs rather than by an IRSS, could simplify security-based swap transaction reporting and facilitate regulatory oversight of the security-based swap market. In addition, the Commission believes that the requirement for registered SDRs to assign product

---

44 See infra Section X(C) (discussing a registered SDR's policies and procedures relating to UICs).

45 See DTCC V at 14.

46 Id.

47 Id. The use of identifiers is discussed more fully in connection with Rule 903. See infra Section X.

IDs could provide additional incentive for security-based swap market participants to develop industry-wide product IDs.[48]

One commenter stated that "[i]ndustry utilities should be considered for assigning unique IDs for transactions, products, and legal entities/market participants."[49] As discussed in Section X(B)(2), infra, the Commission is recognizing the Global LEI System ("GLEIS"), an industry utility administered by the Regulatory Oversight Committee ("ROC"), as meeting the criteria specified in Rule 903, as adopted. The GLEIS and this comment are discussed in Section X(B)(2), infra.

iii. Rule 901(c)(1)(i)

Rule 901(c)(1) requires that, if a security-based swap has no product ID, or if the product ID does not include the information identified in Rule 901(c)(1)(i)-(v), the information specified in Rule 901(c)(1)(i)-(v) must be reported. Final Rule 901(c)(1)(i)-(v) incorporates, with some

48 In this regard, the Commission notes that one commenter stated that a "newly formed ISDA cross-product data working group, with representatives from sell side and buy side institutions, will look at proposed solutions and the practical implications of unique identifiers for the derivatives industry." The commenters stated, further, that "ISDA is committed to provide product identifiers for OTC derivatives products that reflect the FpML standard....In the first instance, this work will focus on product identifiers for cleared products. ISDA/FpML is currently working on a pilot project with certain derivative clearing houses to provide a normalized electronic data representation through a FpML document for each OTC product listed and/or cleared. This work will include the assignment of unique product identifiers." ISDA/SIFMA I at 8-9. In addition, the Commission notes that ISDA has issued a white paper that discusses ways of creating unique identifiers for individual products. See ISDA, "Product Representation for Standardized Derivatives" (April 14, 2011), available at http://www2.isda.org/functional-areas/technology-infrastructure/data-and-reporting/identifiers/upi-and-taxonomies/ (last visited September 22, 2014) , at 4 (stating that one goal of the white paper is to "[s]implif[y] . . . the trade processing and reporting architecture across the marketplace for the standardized products, as market participants will be able to abstract the trade economics through reference data instead of having to specify them as part of each transaction").

49 ISDA/SIFMA I at 8.

modifications, information that would have been required under paragraphs (c)(1), (2), (5), (6), (8), and (12) of re-proposed Rule 901, and re-proposed Rule 901(d)(1)(iii).

Rule 901(c)(1)(i), as adopted, generally requires the reporting of information that would have been required to be reported under re-proposed Rules 901(c)(1) and 901(c)(2). Re-proposed Rule 901(c)(1) would have required, in part, reporting of the asset class of a security-based swap.[50] Re-proposed Rule 901(c)(2) would have required the reporting of information identifying the security-based swap instrument and the specific asset(s) or issuer(s) on which the security-based swap is based. Re-proposed Rule 900(dd) would have defined "security-based swap instrument" as "each security-based swap in the same asset class, with the same underlying reference asset, reference issuer, or reference index." Rule 901(c)(1)(i), as adopted, requires the reporting of information that identifies the security-based swap, including the asset class of the security-based swap and the specific underlying reference asset(s), reference issuer(s), or reference index. Although the defined term "security-based swap instrument" is being deleted from Regulation SBSR for the reasons discussed in Section VII(B)(3), infra, final Rule 901(c)(1)(i) retains the requirement to report the underlying reference asset(s), reference issuer(s), or reference index for the security-based swap, as well as the asset class of the security-based swap.

---

50 "Asset class" is defined as "those security-based swaps in a particular broad category, including, but not limited to, credit derivatives and equity derivatives." See Rule 900(b), as adopted. As proposed and re-proposed, the definition of "asset class" also would have included loan-based derivatives. However, because loan-based derivatives can be viewed as a form of credit derivative, the Commission has removed the reference to loan-based derivatives as a separate asset class and adopted the definition noted above. This revision aligns the definition of "asset class" used in Regulation SBSR with the definition used in the SDR Adopting Release.

The Commission received no comments regarding the information required to be reported in Rule 901(c)(1)(i). As stated in the Regulation SBSR Proposing Release, the Commission believes that the reporting and public dissemination of information relating to the asset class of the security-based swap would provide market participants with basic information about the type of security-based swap (e.g., credit derivative or equity derivative) being traded.[51] Similarly, the Commission believes that information identifying the specific reference asset(s), reference issuer(s), or reference index of any security on which the security-based swap is based is fundamental to understanding the transaction being reported, and that a transaction report that lacked such information would not be meaningful.[52] Accordingly, Rule 901(c)(1)(i), as adopted, includes the requirement to report this information.

iv. Rules 901(c)(1)(ii) and (iii)

Re-proposed Rules 901(c)(5) and 901(c)(6) would have required the reporting of, respectively, the effective date of the security-based swap and the scheduled termination date of the security-based swap. These requirements are incorporated into adopted Rules 901(c)(1)(ii) and (iii), which require the reporting of, respectively, the effective date of the security-based swap and the scheduled termination date of the security-based swap. The Commission received no comments regarding the reporting of this information. As stated in the Regulation SBSR Proposing Release, the Commission believes that information specifying the effective date and the scheduled termination date of the security-based swap is fundamental to understanding the transaction being reported, and that a transaction report that lacked such information would not

---

51 See 75 FR at 75213.

52 See id. at 75214.

be meaningful.[53] Accordingly, final Rules 901(c)(1)(ii) and (iii) include the requirement to report the effective date and the scheduled termination date, respectively, of the security-based swap.

v. Rule 901(c)(1)(iv)

Re-proposed Rule 901(c)(8) would have required the reporting of any fixed or floating rate payments of a security-based swap, and the frequency of any payments. Re-proposed Rule 901(d)(1)(iii) would have required the reporting of the amount(s) and currenc(ies) of any up-front payment(s) and a description of the terms and contingencies of the payment streams of each direct counterparty to the other. In the Regulation SBSR Proposing Release, the Commission noted that the terms of any fixed or floating rate payments and the frequency of any payments are among the terms that would be fundamental to understanding a security-based swap transaction.[54] One commenter echoed the importance of information concerning the payment streams of security-based swaps.[55]

Another commenter stated that proposed Rule 901(d)(1)(iii) was unclear about the proposed form of the description of the terms and contingencies of the payment streams, and that the requirements of proposed Rule 901(d)(1)(iii) appeared to be duplicative of proposed Rule 901(d)(1)(v), which would have required reporting of the data elements necessary for a person to

---

53 See id.

54 See id.

55 See Benchmark Letter at 1 (stating that "[t]he reference data set [for a security-based swap] must include standard attributes necessary to derive cash flows and any contingent claims that can alter or terminate payments of these contracts. . . . Without these critical pieces of information, users of the trade price dissemination service will be unable to accurately assess reported values").

determine the market value of the transaction.[56] The commenter also suggested that the Commission consider the utility of requiring reporting of the terms of fixed or floating rate payments, as required by re-proposed Rule 901(c)(8).[57]

The Commission continues to believe that, for a security-based swap that provides for periodic exchange of cash flows, information concerning those payment streams is fundamental to understanding the terms of the transaction. The Commission acknowledges, however, that re-proposed Rules 901(c)(8), 901(d)(1)(iii), and 901(d)(v) contained overlapping requirements concerning the payment streams of a security-based swap. Accordingly, the Commission is revising Rules 901(c) and 901(d) to streamline and clarify the information required to be reported with respect to the payment streams of a security-based swap.

Specifically, final Rule 901(c)(1)(iv) requires the reporting of any standardized fixed or floating rate payments, and the frequency of any such payments. As discussed more fully in Section II(C)(3)(d), infra, final Rule 901(d)(3) requires the reporting of information concerning the terms of any fixed or floating rate payments, or otherwise customized or non-standardized payment streams, including the frequency and contingencies of any such payments, to the extent that this information has not been reported pursuant to Rule 901(c)(1). Thus, Rule 901(c)(1)(iv) requires the reporting of information concerning standardized payment streams, while Rule 901(d)(3) requires the reporting of information concerning customized payment streams. In addition, as discussed more fully below, final Rule 901(d)(5) requires reporting of any additional data elements included in the agreement between the counterparties that are necessary for a

---

56 See DTCC II at 10. See also DTCC V at 12 (requesting additional clarity with respect to the requirement to report the contingencies of the payments streams of each direct counterparty to the other).

57 See DTCC V at 11.

person to determine the market value of the transaction, to the extent that such information has not already been reported pursuant to Rule 901(c) or other provisions of Rule 901(d). The Commission believes that these changes to Rules 901(c) and 901(d) will avoid potential redundancies in the reporting requirements and will clarify the information required to be reported with respect to the payment streams of a security-based swap.

Like other primary trade information reported pursuant to Rule 901(c), information about standardized payment streams reported pursuant to Rule 901(c)(1)(iv) will be publicly disseminated. The Commission envisions that, rather than disseminating such information as discrete elements, this information could be inherent in the product ID of a security-based swap that has a product ID. Information concerning non-standard payment streams that is reported pursuant to Rule 901(d)(3), like other secondary trade information, will be available for regulatory purposes but will not be publicly disseminated. Re-proposed Rule 901(c)(8) would have required reporting of the terms of any fixed or floating rate payments, standardized or non-standardized, and the frequency of such payments, and re-proposed Rule 902(a) would have required the public dissemination of that information. In addition, as noted above, one commenter discussed the importance of the availability of information concerning payment streams.[58] Nonetheless, the Commission believes that public dissemination of the non-standard payment terms of a customized security-based swap would be impractical, because a bespoke transaction by definition could have such unique terms that it would be difficult to reflect the full material terms using any standard dissemination protocol. In addition, it is not clear that the benefits of publicly disseminating information concerning these non-standard payment streams would justify the costs of disseminating the information. However, the Commission will have

[58] See supra note 55.

access to regulatory reports of such transactions, which should facilitate regulatory oversight and assist relevant authorities in monitoring the exposures of security-based swap market participants. Accordingly, Rule 901(d)(3), as adopted, requires the reporting of information concerning the terms of any non-standard fixed or floating rate payments, or otherwise customized or non-standardized payment streams, including the frequency and contingencies of any such payments.

One commenter expressed the view that, without further clarification, market participants could adopt different interpretations of the requirement in re-proposed Rule 901(c)(8) to report the terms of fixed or floating rate payments, resulting in inconsistent reporting to registered SDRs; the commenter recommended, therefore, limiting the reportable fields to tenor and frequency, where applicable.[59]

The Commission shares the commenter's concerns that, without guidance, market participants could adopt different interpretations of the requirement to report the terms of fixed or floating rate payments. The Commission notes, however, that final Rules 907(a)(1) and 907(a)(2) require a registered SDR to establish and maintain written policies and procedures that enumerate the specific data elements that must be reported and that specify the protocols for submitting information, respectively. The Commission believes that, read together, Rules 907(a)(1) and 907(a)(2) provide registered SDRs with flexibility to determine the appropriate conventions for reporting these data elements, including the terms of a security-based swap's fixed or floating rate payments. Thus, although Rule 901(c) itself does not specify the precise manner for reporting a security-based swap's fixed or floating rate payments, the policies and procedures of registered SDRs must do so. The Commission notes, further, that final Rule

59 See DTCC V at 11.

906(c), among other things, requires SDR participants that are registered security-based swap dealers and registered major security-based swap participants to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure that they comply with any obligations to report information to a registered SDR in a manner consistent with Regulation SBSR.

vi. Rule 901(c)(1)(v)

Re-proposed Rule 901(c)(12) would have required a reporting side to indicate, if applicable, that the information reported under subparagraphs (1)-(11) of re-proposed Rule 901(c) for a customized security-based swap does not provide all of the material information necessary to identify the customized security-based swap or does not contain the data elements necessary to calculate its price. The Commission is adopting the substance of re-proposed Rule 901(c)(12) and locating it in final Rule 901(c)(1)(v). Rule 901(c)(1)(v), as adopted, provides that, if a security-based swap is customized to the extent that the information provided in paragraphs (c)(1)(i) through (c)(1)(iv) of Rule 901 does not provide all of the material information necessary to identify such customized security-based swap or does not contain the data elements necessary to calculate the price, the reporting side must include a flag to that effect. As discussed more fully in Section VI(G), infra, the registered SDRs should develop a condition flag to identify bespoke transactions because absent such a flag, users of public reports of bespoke transactions might receive a distorted impression of the market.

One commenter argued that "publicly disseminated data for trades with a non-standard feature flag activated will be of limited usefulness and could be misleading."[60] The commenter expressed the view that dissemination of information regarding highly structured transactions

60 DTCC II at 9.

should not occur until an analysis regarding the impact and potential for misleading the investing public has been conducted.[61] A second commenter, however, endorsed the approach being adopted by the Commission.[62] The Commission acknowledges the concerns that the dissemination of transaction reports for highly customized trades could be misleading or of limited usefulness. However, as discussed more fully in Section VI(D)(2)(a), infra, the Commission believes that public dissemination of the key terms of a customized security-based swap, even without all of the details of the transaction, could provide useful information to market observers, including information concerning the pricing of similar products and information relating to the relative number and aggregate notional amounts of transactions in bespoke products versus standardized products. In addition, the Commission believes that the condition flag signaling that the transaction is a customized trade, and therefore that the reported information does not provide all of the details of the transaction, will minimize the potential for confusion and help to assure that the publicly disseminated reports of these transactions are not misleading. For these reasons, the Commission is declining, at this time, to undertake the study recommended by the commenter.

A third commenter indicated that Rule 901 should go further and require reporting of additional information necessary to calculate the price of a security-based swap that is so customized that the price cannot be calculated from the reported information.[63] The Commission generally agrees that transaction reports of customized security-based swaps should be as informative and useful as possible. However, it is not clear that the benefits of publicly

---

61 See id.

62 See Cleary II at 16 (recommending "public reporting of a few key terms of a customized swap . . . [with] some indication that the transaction is customized").

63 See Better Markets I at 7.

disseminating all of the detailed and potentially complex information that would be necessary to calculate the price of a highly customized security-based swap would justify the costs of disseminating that information. Accordingly, Rule 901(c)(1)(v), as adopted, does not require reporting of this information, and it will not be publicly disseminated.[64]

This commenter also expressed concern that a "composite" security-based swap composed of two swaps grafted together could be used to avoid reporting requirements; the commenter recommended that, if at least one of the transactions could be disaggregated and reported in a format so that its price could be calculated, Regulation SBSR should require that the security-based swap be disaggregated and the component parts be reported separately.[65] In considering the commenter's concern the Commission notes the following:

To begin, the Commission understands that market participants may execute so-called "package trades" that are composed of multiple components, or "legs," some of which may be

---

64 The Commission notes that Rule 901(d)(5) requires the reporting of any additional data elements included in the agreement between the counterparties that is necessary to determine the market value of a transaction. Although this information will not be publicly disseminated, it will be available to the Commission and other relevant authorities. Such relevant authorities are enumerated in Section 13(n)(5)(G) of the Exchange Act, 15 U.S.C. 78m(n)(5)(G), which requires an SDR, upon request, to make available all data obtained by the SDR, including individual counterparty trade and position data, to each appropriate prudential regulator, the Financial Stability Oversight Council, the CFTC, the Department of Justice, and any other person that the Commission determines to be appropriate, including foreign financial supervisors, foreign central banks, and foreign ministries.

65 See Better Markets I at 7 ("This enhancement to the Proposed Rules is particularly important with respect to SBS comprised of two swaps grafted together. Such composite SBS can be used to avoid reporting requirements. Even worse they can be used to obfuscate the real financial implications of a transaction. Accordingly, if an SBS can be disaggregated into two or more transactions, and at least one of those disaggregated transactions can be reported in a format so that price can be calculated, then the rules should require that the SBS be disaggregated and reported in that form"); Better Markets II at 3 (stating that complex transactions must be broken down into meaningful components); Better Markets III at 4-5 (stating that the Commission should require reporting of data on disaggregated customized security-based swaps).

security-based swaps. Though such package trades are executed at a single price, each leg is separately booked and processed. In these cases, Regulation SBSR does in fact require a reporting side to separately report (and for the SDR to separately disseminate) each security-based swap component of the package trade.[66]

However, if a market participant combines the economic elements of multiple instruments into one security-based swap contract, Regulation SBSR requires a single report of the transaction. The Commission understands the commenter's concerns regarding potential attempts to evade the post-trade transparency requirements. Such efforts could undermine Regulation SBSR's goals of promoting transparency and efficiency in the security-based swap markets and impede the Commission's ability to oversee those markets. The Commission does not believe, however, that either a registered SDR or a reporting side should be required to disaggregate a customized security-based swap if it consists of a single contract incorporating elements of what otherwise might have been two or more security-based swaps. In the absence of evidence of a significant amount of such "composite" security-based swap transactions and structuring other than through package trades, the Commission does not at this time believe that devising protocols for disseminating them in a disaggregated fashion would be practical. Importantly, however, and as discussed more fully in Section VI(D)(2)(a), infra, the primary trade information of any complex or bespoke security-based swap, including "composite" security-based swaps as described by the commenter, will be publicly disseminated, as required

66 In addition, as discussed more fully in Section VI(G), infra, in developing its policies and procedures, a registered SDR should consider requiring participants to identify the individual component security-based swaps of such a trade as part of a package transaction, and should consider disseminating reports of the individual security-based swap components of the package trade with a condition flag that identifies them as part of a package trade. Absent such a flag, observers of public reports of package transactions might obtain a distorted view of the market.

by Rule 902(a), including the specific underlying reference asset(s), reference issuer(s), or reference index for the transaction, as required by Rule 901(c)(1).[67] The Commission believes that the public dissemination of the primary trade information, even without all of the material economic terms of the transaction that could affect its pricing, could provide market observers with useful information, including information concerning the pricing of similar products and the relative number and aggregate notional amounts of transactions in complex and other bespoke transactions versus transactions in standardized products. The Commission further notes that since all of the material economic terms of a "composite" security-based swap must be reported to a registered SDR, including the data elements required by Rule 901(d),[68] the Commission itself will have complete access to these details.[69]

---

67 One commenter stated its view that "proprietary baskets" should qualify as non-disseminated information, and requested that Regulation SBSR specifically recognize this as an example of non-disseminated information. See ISDA IV at 17 (stating that reportable security-based swaps may include customized narrow-based baskets that a counterparty deems proprietary to its business and for which public disclosure would compromise its anonymity and negatively impact its trading activity). Rule 902(a), as adopted, requires a registered SDR to publicly disseminate, for each transaction, the primary trade information required to be reported by Rule 901(c), as adopted, which includes the specific underlying reference asset(s), reference issuer(s), or reference index. The Commission continues to believe that the primary trading terms of a security-based swap should be disseminated to help facilitate price discovery. See infra Section VI(A).

68 See infra Section II(B)(3)(e) (discussing requirement in Rule 901(d)(5) that, to the extent not provided pursuant to other provisions of Rules 901(c) and 901(d), all data elements included in the agreement between the counterparties that are necessary for a person to determine the market value of the transaction must be reported).

69 See infra Section V(B)(1) (noting that the Commission anticipates proposing for public comment detailed specifications of acceptable formats and taxonomies that would facilitate an accurate interpretation, aggregation, and analysis by the Commission of security-based swap data submitted to it by an SDR); supra Section II(A)(2)(b)(v) (explaining that the Commission will have access to regulatory reports of bespoke security-based swap transactions, which should facilitate regulatory oversight and assist relevant authorities in monitoring the exposures of security-based swap market participants).

The commenter also expressed the view that Regulation SBSR should clearly define the meaning of a security-based swap that is so customized that its price is not ascertainable.[70] The Commission does not believe that it is necessary to further define the term "customized security-based swap" for purposes of Rule 901(c)(1)(v). The condition flag required under adopted Rule 901(c)(1)(v) will notify market participants that the security-based swap being reported does not have a product ID and is customized to the extent that the information provided in Rules 901(c)(1)(i)-(iv) does not provide all of the material information necessary to identify the security-based swap or does not contain the data elements necessary to calculate the price. Thus, market participants will know that a customized security-based swap transaction was executed, and that the information reported pursuant to Rules 901(c)(1)(i)-(iv) provides basic but limited information about the transaction. The Commission believes, further, that Rule 901(c)(1)(v) provides clear guidance with respect to when a transaction is customized to the extent that the reporting side must attach a condition flag that identifies the transaction as a bespoke transaction, i.e., when the information reported pursuant to Rules 901(c)(1)(i)-(iv) does not provide all of the material information necessary to identify the security-based swap or does not contain the data elements necessary to calculate the price. Accordingly, the Commission does not believe that it is necessary, at this time, to further define what constitutes a customized security-based swap for purposes of Regulation SBSR.

c. Rule 901(c)(2)

70 See Better Markets I at 7 ("The Proposed Rules also represent a critically important opportunity to shed light on the nature of 'customized' swaps. Since the inception of the debate over disclosure and clearing in connection with financial regulation, the concept of the 'customized' or 'bespoke' transactions has figured prominently, yet these terms remain poorly understood in real world terms. The Proposed Rules should clearly define the meaning of SBS that are so customized that price is not ascertainable").

Re-proposed Rule 901(c)(4) would have required reporting of the date and time, to the second, of the execution of a security-based swap, expressed using Coordinated Universal Time ("UTC").[71] In the Regulation SBSR Proposing Release, the Commission stated that information concerning the time of execution would allow security-based swap transactions to be ordered properly, and would provide the Commission with a detailed record of when a security-based swap was executed.[72] The Commission further noted that, without the time of execution, market participants and relevant authorities would not know whether the transaction reports that they are seeing reflect the current state of the market.[73] In both the proposal and the re-proposal, the Commission defined "time of execution" to mean "the point at which the counterparties to a security-based swap become irrevocably bound under applicable law."[74]

One commenter expressed the view that time of execution should be reported at least to the second, and by finer increments where practicable.[75] A second commenter raised timestamp issues in connection with proposed Rule 901(f), which would have required a registered SDR to timestamp transaction information submitted to it under Rule 901. The commenter stated that especially for markets for which there are multiple security-based swap execution facilities and markets where automated, algorithmic trading occurs, "the sequencing of trade data for transparency and price discovery, as well as surveillance and enforcement purposes, will require

---

71 UTC is defined by the International Telecommunication Union (ITU-R) and is maintained by the International Bureau of Weights and Measures (BIPM). See http://www.itu.int/net/newsroom/wrc/2012/reports/atomic_time.aspx (last visited September 22, 2014).

72 See 75 FR at 75213.

73 See id.

74 See re-proposed Rule 900(ff).

75 See Barnard I at 2.

much smaller increments of time-stamping."[76] The commenter urged the Commission to revise proposed Rule 901(f) to require a registered SDR to time stamp information that it receives in increments shorter than one second, stating that time stamps shorter than one second are technologically feasible, affordable, and in use.[77]

The Commission understands that trading in the security-based swap market does not yet occur as fast or as frequently as in the equities market, which makes recording the time of security-based swap executions in subsecond increments less necessary for surveillance purposes. While some market participants may have the capacity to record trades in subsecond intervals, others may not. Given the potential costs of requiring all market participants to utilize subsecond timestamps, the Commission believes that it is not necessary or appropriate at this time to require reporting of the time of execution in subsecond increments.[78] Accordingly, the Commission is adopting Rule 901(c)(4) as proposed and re-proposed, but renumbering it as final Rule 901(c)(2). The Commission will continue to monitor developments in the security-based swap market and could in the future reconsider whether reporting time of execution in subseconds would be appropriate.

One commenter discussed the time of execution for a voice trade in the context of proposed Rule 910(a), which addressed the reporting of pre-enactment security-based swaps.[79] The commenter noted that in the Regulation SBSR Proposing Release, the Commission stated that "proposed Rule 910(a) would not require reporting parties to report any data elements (such

---

76 Better Markets I at 9.

77 See id.

78 However, a registered SDR could, in its policies and procedures, allow its participants to report using subsecond timestamps.

79 As discussed in Section I(F), supra, the Commission is not adopting Rule 910.

as the time of execution) that were not readily available. Therefore, proposed Rule 910(a) would not require reporting parties to search for or reconstruct any missing data elements."[80] The commenter disagreed with this assertion in the context of voice trades, stating that the time of entry of the voice trade into the system is typically provided, but not the actual execution time of the trade. The commenter stated that "[p]roviding the actual execution time in the case of voice trades would then prove extremely challenging and invasive for the marketplace."[81] Similarly, one commenter requested that the "Commission clarify that participants are not required to provide trade execution time information for pre-enactment security-based swap transactions and that going-forward, such information need only be provided when industry-wide time stamping practices are implemented."[82]

With respect to these concerns, the Commission notes, first, that it is not adopting Rule 910, but is proposing a new compliance schedule for Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR in the Regulation SBSR Proposed Amendments Release. The Commission emphasizes, however, that proposed Rule 910(a) would not have required market participants to report information for a pre-enactment security-based swap that was not readily available, or to reconstruct that information. Thus, Rule 910(a), as proposed, would not have required market participants to provide the time of execution for an orally negotiated pre-enactment security-based swap, unless such information was readily available. Likewise, final Rule 901(i) does not require reporting of the date and time of execution for an orally negotiated

---

80 See 75 FR at 75278-79.

81 ISDA/SIFMA I at 11.

82 ISDA I at 5.

pre-enactment or transitional security-based swap, unless such information is readily available.[83] However, for all other security-based swaps, including voice trades, final Rule 901(c)(2) requires reporting of the date and time of execution, to the second, of the security-based swap. The Commission noted in the Regulation SBSR Proposing Release that trades agreed to over the phone would need to be systematized by being entered in an electronic system that assigns a time stamp to report the date and time of execution of a security-based swap.[84] The Commission continues to believe that it is consistent with Congress' intent for orally negotiated security-based swap transactions to be systematized as quickly as possible.[85] The Commission notes, further, that market participants also must report the time of execution for voice-executed trades in other securities markets (e.g., equities and corporate bonds).[86] Knowing the date and time of execution of a security-based swap is important for reconstructing trading activity and for market surveillance purposes. Accordingly, the Commission continues to believe that the regulatory interest in having information regarding the date and time of execution for all security-based swaps, including orally negotiated security-based swaps, justifies the burden on market participants of recording and reporting this information.

In addition, the Commission is adopting, as proposed and re-proposed, the requirement for all times of execution reported to and recorded by registered SDRs to be in UTC. In the

---

83 For pre-enactment and transitional security-based swaps, final Rule 901(i) requires reporting of the information required under Rules 901(c) and 901(d), including the date and time of execution, only to the extent that such information is available.

84 See 75 FR at 75213.

85 See id.

86 See, e.g., FINRA Rule 6230(c)(8) (requiring transactions reported to TRACE to include the time of execution); FINRA Rule 6622(c)(5) (requiring last-sale reports for transactions in OTC Equity Securities and Restricted Securities to include the time of execution expressed in hours, minutes, and seconds).

Regulation SBSR Proposing Release, the Commission explained its reasons for proposing to require that the date and time of execution be expressed in UTC.[87] The Commission noted that security-based swaps are traded globally, and expected that many security-based swaps subject to the Commission's reporting and dissemination rules would be executed between counterparties in different time zones. In the absence of a uniform time standard, it might not be clear whether the date and time of execution were being expressed from the standpoint of the time zone of the first counterparty, the second counterparty, or the registered SDR. Mandating a common standard for expressing date and time would alleviate any potential confusion as to when the security-based swap was executed. The Commission believed that UTC was an appropriate and well known standard suitable for purposes of reporting the time of execution of security-based swaps. The Commission received no comments regarding the use of UTC for reporting the time of execution. For the reasons set out in the Regulation SBSR Proposing Release, the Commission continues to believe that UTC is appropriate for security-based swap transaction reporting. Accordingly, the Commission is adopting this requirement as proposed and re-proposed.

Finally, the Commission is adopting the definition of "time of execution" as proposed and re-proposed, and renumbering it as final Rule 900(ii). One commenter stated that the time at which a transaction becomes legally binding may not be the same for all products.[88] The commenter further noted that, in some cases primary terms are not formed until the security-based swap is confirmed, and that the full terms of a total return swap might not be formed until the end of the day "and therefore the [total return swap] is not executed and confirmed until the

87 See 75 FR at 75213.

88 See ISDA/SIFMA I at 7.

end of the day."[89] A second commenter stated that "the obligation to report should not be triggered until price, size, and other transaction terms required to be reported are available."[90] The Commission understands the concerns of these commenters and believes that the definition of "time of execution" provides sufficient flexibility to address these commenters' concerns. For example, if the key terms of a security-based swap, such as price or size, are so indefinite that they cannot be reported to a registered SDR until some time after the counterparties agree to preliminary terms, the counterparties may not have executed the security-based swap under applicable law. Alternatively, even if the counterparties determine that their preliminary agreement constitutes an execution, the reporting timeframe adopted herein, which will allow a security-based swap to be reported at any point up to 24 hours after the time of execution, should address the concerns raised by the commenters.

A third commenter urged the Commission to revise the definition to equate time of execution with "the time of execution of the confirmation."[91] The Commission declines to do so. While confirmation is an important aspect of post-trade processing, performance of the actions necessary to confirm a transaction is within the discretion of the counterparties and their agents. Defining the "time of execution" to mean the time that a confirmation is issued could create incentives for counterparties to delay confirmation and thus the reporting of the transaction. The Commission notes that Section 13(m)(1)(A) of the Exchange Act[92] defines "real-time public reporting" as reporting certain security-based swap data "as soon as technologically practicable

---

89 Id.

90 Cleary II at 6. See also ISDA/SIFMA I at 15 ("for some transaction types . . . the price or size of the transaction cannot be determined at the time the swap is negotiated"); ISDA IV at 10.

91 MFA I at 5.

92 15 U.S.C. 78m(m)(1)(A).

after the time at which the security-based swap transaction has been executed." The Commission believes this provision is most appropriately implemented by linking obligations to the time at which the counterparties become bound to the terms of the transaction—i.e., the time of execution—rather than some indefinite point in the future, such as the time when the confirmation is issued.

d. Rule 901(c)(3)

Re-proposed Rule 901(c)(7) would have required the reporting of the price of a security-based swap. Re-proposed Rule 901(d)(1)(iii) would have required the reporting of the "amount(s) and curren(cies) of any up-front payment(s) and a description of the terms and contingencies of the payment streams of each direct counterparty to the other." Final Rule 901(c)(3) combines these elements and requires the reporting of "[t]he price, including the currency in which the price is expressed and the amount(s) and currenc(ies) of any up-front payments."[93] The Commission believes that including in final Rule 901(c)(3) the explicit requirement to report the currency in which the price is expressed will help to clarify the information required to be reported.[94] Re-proposed Rule 901(c)(3) is being re-numbered as final Rule 901(c)(4).[95]

Rule 901(c)(3), as adopted, requires the reporting of the amount(s) and currenc(ies) of any up-front payments, a requirement that was included in re-proposed Rule 901(d)(1)(iii). The Commission believes that information concerning the amount(s) and currenc(ies) of any up-front

[93] Cf. Section II(B)(3)(c), infra (describing Rule 901(d), which enumerates data elements that will not be subject to public dissemination).

[94] The addition of the reference to currency also is consistent with re-proposed Rule 901(c)(3), which would have required reporting of the notional amount(s) of the security-based swap and the currenc(ies) in which the notional amount(s) is expressed.

[95] See infra Section II(B)(2)(b)(vi)(e).

payment(s) will help regulators and market observers understand the reported price of a security-based swap, and that the public dissemination of this information will further the transparency goals of Title VII. The Commission also believes that Rule 901(c) will be simpler if all considerations relating to the price are consolidated into a single provision. Accordingly, Rule 901(c)(3), as adopted, requires the reporting and public dissemination of the amount(s) and currenc(ies) of any up-front payment(s) along with other pricing information for the security-based swap.

As discussed in the Regulation SBSR Proposing Release, the price of a security-based swap could be expressed in terms of the commercial conventions used in that asset class.[96] The Commission recognized that the price of a security-based swap generally might not be a simple number, as with stocks, but would likely be expressed in terms of the quoting conventions of the security-based swap. For example, a credit default swap could be quoted in terms of the economic spread—which is variously referred to as the "traded spread," "quote spread," or "composite spread"—expressed as a number of basis points per annum. Alternately, a credit default swap might be quoted in terms of prices representing a discount or premium over par.[97] In contrast, an equity or loan total return swap might be quoted in terms of a LIBOR-based floating rate payment, expressed as a floating rate plus a fixed number of basis points.[98] As discussed further in Section IV, infra, final Rule 907(a)(1) requires a registered SDR to establish, maintain, and make publicly available policies and procedures that specify the data elements of a

---

96 See 75 FR at 75214. Final Rule 900(z) defines "price" to mean "the price of a security-based swap transaction, expressed in terms of the commercial conventions used in the asset class."

97 See id.

98 See id.

security-based swap that must be reported, including elements that constitute the price. The Commission believes that, because of the many different conventions that exist to express the price in various security-based swap markets and new conventions that might arise in the future, registered SDRs should have flexibility to select appropriate conventions for denoting the price of different security-based swap products.

One commenter expressed concern that disseminating prices of margined and unmargined transactions together could mislead the market about the intrinsic prices of the underlying contracts.[99] Noting that the CFTC proposed a field for "additional price notation" that would be used to provide information, including margin, that would help market participants evaluate the price of a swap, the commenter recommended that the Commission and the CFTC harmonize their approaches to assure that the market has an accurate picture of prices.[100] The Commission agrees that publicly disseminated transaction reports should be as informative as possible. However, the Commission believes, at this time, that it could be impractical to devise additional data fields for describing the potentially complex margin requirements governing a security-based swap. Furthermore, it could be difficult if not impossible to attribute a portion of the price to a particular margin arrangement when the overall price represents the aggregation of a number of different factors into a single variable. The Commission notes that the bespoke flag required by Rule 901(c)(1)(v) is designed to inform market observers when a security-based swap is customized to the extent that the other data elements required by Rule 901(c)(1) do not provide all of the material information necessary to identify the security-based swap or provide sufficient information to calculate the price.

---

99 See CCMR I at 4.

100 See id.

Another commenter expressed concern that disseminating the terms of the floating rate payment for an equity swap, which is often comprised of a benchmark rate plus or minus a spread and thus contains information about the direction of a customer transaction (positive spreads indicate a customer long swap and negative spreads indicate a customer short swap) may harm customers by offering other market participants the opportunity to anticipate their execution strategy.[101] The commenter believes that the spread value should thus be masked for equity security-based swaps when disclosing the price or terms of the floating rate payment.[102] As noted above, the Commission believes that publicly disseminated transaction reports should be as informative as possible. The floating rate payment of an equity security-based swap, including the spread, is an important part of the price of an equity security-based swap, and as such the Commission continues to believe that it should be disseminated. Not disseminating this information would undermine one of the key aspects of public dissemination, namely price discovery. The Commission further understands that in other markets—such as the cash equity market and the bond market—similar information is publically disclosed or can be inferred from public market data, which informs on the direction of the customer transaction.[103]

e. Rule 901(c)(4)

---

101 See ISDA IV at 17.

102 See id.

103 In the bond markets, the side of the customer is reported on TRACE. See http://www.finra.org/Industry/Compliance/MarketTransparency/TRACE/Announcements/P039007. In the cash equity markets, the side of the initiator of a transaction is, for many exchanges, provided as a data element on direct data feeds. It can also be inferred according to whether the trade was executed at the bid or offer.

Re-proposed Rule 901(c)(3) would have required reporting of the notional amount(s) and the currenc(ies) in which the notional amount(s) is expressed. The Commission is adopting this rule as re-proposed, but re-numbering it as Rule 901(c)(4).

The Commission received two comments regarding the reporting and public dissemination of the notional amount of a security-based swap. One commenter believed that, "in the case of some asset classes, there is not a universal definition of the notional amount of the trade. This is particularly the case where the notional amount is not confirmable information."[104] To address this issue, the commenter recommended that the Commission provide guidelines, such as those developed by the Federal Reserve Bank of New York, for reporting the notional amount of a security-based swap.[105]

As discussed below, final Rules 907(a)(1) and 907(a)(2) require a registered SDR to establish and maintain written policies and procedures that enumerate the specific data elements that must be reported and that specify the protocols for submitting information, respectively. The Commission believes that, read together, Rules 907(a)(1) and 907(a)(2) provide registered SDRs with flexibility to determine the appropriate conventions for reporting all required data elements, including the notional amount. Thus, although Rule 901(c) itself does not specify the precise manner for reporting a security-based swap's notional amount, the policies and procedures of registered SDRs must do so. The Commission believes that a registered SDR

---

104 ISDA/SIFMA I at 12.

105 See id. The commenter refers to the guidelines included under "Line Item Instructions for Derivatives and Off-Balance-Sheet Item Schedule HC-L" in the Board of Governors of the Federal Reserve System's "Instructions for Preparation of Consolidated Financial Statements for Bank Holding Companies Reporting Form FR Y-9C." See ISDA/SIFMA I at 12, note 13.

could choose to incorporate the guidance noted by the commenter, or other appropriate guidance, into its policies and procedures for reporting notional amounts.

Another commenter suggested that the Commission, to mitigate adverse impacts on market liquidity, should—like the CFTC—adopt masking thresholds, rather than requiring public dissemination of the precise notional amount of a security-based swap transaction.[106] The commenter noted that FINRA's Trade Reporting and Compliance Engine ("TRACE") system[107] uses masking conventions, and suggested applying that approach to the swap and security-based swap markets by "computing how much market risk is represented by the TRACE masking thresholds and using those numbers to map the masking thresholds into other asset classes."[108]

The Commission appreciates the commenter's concerns regarding the uncertainty of the potential effects of public dissemination of security-based swap transaction reports on liquidity in the security-based swap market. As discussed further in Section VII, infra, the rules adopted in this release will allow the reporting, on an interim basis, of a security-based swap transaction at any time up to 24 hours after the time of execution (or, if 24 hours after the time of execution would fall on a day that is not a business day, by the same time on the next day that is a business day). This timeframe is designed in part to minimize potential adverse impacts of public dissemination on liquidity during the interim phase of Regulation SBSR's implementation, as market participants grow accustomed to operating in a more transparent environment.

---

106 See J.P. Morgan Letter at 12. See also ISDA IV at 16 (recommending the use of a notional cap in each asset class).

107 TRACE is a FINRA facility to which FINRA member firms must report over-the-counter transactions in eligible fixed income securities. See generally http://www.finra.org/Industry/Compliance/MarketTransparency/TRACE/ (last visited September 22, 2014).

108 Id. at 13.

Accordingly, the Commission does not believe that it is necessary at this time to adopt a masking convention for purposes of reporting and publicly disseminating the notional amount of security-based swap transactions.[109]

f. Rule 901(c)(5)

Rule 901(c)(10), as proposed and re-proposed, would have required the reporting side to indicate whether both counterparties to a security-based swap are security-based swap dealers. In the Regulation SBSR Proposing Release, the Commission stated its preliminary belief that such an indication would enhance transparency and provide more accurate information about the pricing of security-based swap transactions.[110] The Commission noted, further, that prices of security-based swap transactions involving a dealer and non-dealer are typically "all-in" prices that include a mark-up or mark-down, while interdealer transactions typically do not. Thus, the Commission believed that requiring an indication of whether a security-based swap was an interdealer transaction or a transaction between a dealer and a non-dealer counterparty would enhance transparency by allowing market participants to more accurately assess the reported price of a security-based swap.[111]

Commenters expressed mixed views regarding this proposed requirement. One commenter supported a requirement to include the counterparty type in security-based swap transaction reports.[112] Another commenter, however, recommended that the Commission

---

109 The Commission anticipates soliciting comment on issues relating to block trades, including the possibility of utilizing masking thresholds, at a later date. See infra Section VII.

110 See 75 FR at 75214.

111 See id.

112 See Benchmark Letter at 2. The commenter also suggested that it would be useful to include an entry for "end user," similar to the "Producer/Merchant/Producer/User"

eliminate the interdealer indication because "[e]xcluding this field from the information required to be reported to [a registered SDR] in real time will bring the scope of required data in line with existing dissemination functionality."[113] A third commenter expressed concern that disseminating information that both counterparties are security-based swap dealers would reduce the anonymity of participants, ultimately resulting in "worse pricing and reduced liquidity for end-users."[114]

The Commission believes that publicly disseminating an indication of whether both sides of a security-based swap are registered security-based swap dealers would enhance transparency in the security-based swap market by helping market participants to assess the reported price of a security-based swap. Although the Commission understands the concerns about potential burdens that could result from changes to existing dissemination practices, the required indicator should not impose significant burdens. Furthermore, the Commission believes that any potential burden created by requiring the indicator will be justified by the transparency benefits of publicly disseminating this information. The Commission notes that flagging transactions between two registered security-based swap dealers does indeed provide information to the public that the transaction involved two dealers, thus restricting the set of possible counterparties. However, since a majority of security-based swap transactions presently have a dealer as one of the counterparties, an interdealer flag is unlikely to enable market observers to identify

---

designation used in agricultural futures reports. See id. The Commission does not believe, at this time, that it is necessary to require a specific end-user indication. Under final Rule 901(c)(5), a transaction involving two registered security-based swap dealers must have an indication to that effect. An observer of a transaction report without that indicator will be able to infer that the transaction involved at least one side that does not have a registered security-based swap dealer.

113 DTCC V at 11.

114 ISDA IV at 16.

counterparties to particular transactions. Also, although there is a limited group of entities that likely would be required to register as security-based swap dealers that are currently active in the security-based swap market, this number is more than two.[115] The Commission also notes that in the bond market interdealer transactions are flagged as part of TRACE's public dissemination of corporate bond trades. Therefore, the Commission does not believe that flagging transactions between two registered security-based swap dealers would ultimately result in "worse pricing and reduced liquidity for end-users."[116]

The Commission, therefore, is adopting this requirement as final Rule 901(c)(5), with one revision. The Commission has added the word "registered" before the term "security-based swap dealer." Therefore, the final rule requires an indication only when there is a registered security-based swap dealer on both sides of the transaction. As discussed further below, the Commission seeks to avoid imposing costs on market participants for assessing whether or not they are security-based swap dealers solely for purposes of Regulation SBSR.[117] Therefore, counterparties would have to be identified for purposes of Rule 901(c)(5), as adopted, only if they are registered security-based swap dealers.

g. Rule 901(c)(6)

Re-proposed Rule 901(c)(9) would have required the reporting side to indicate whether or not a security-based swap would be cleared by a clearing agency. This requirement is being adopted substantially as proposed but numbered as Rule 901(c)(6), with an additional

115 Historical data reviewed by the Commission suggest that, among an estimated 300 reporting sides, approximately 50 are likely to be required to register with the Commission as security-based swap dealers. See infra Section XXI(B)(3).

116 See ISDA IV at 16.

117 See infra notes 284 to 285 and accompanying text.

clarification, described below. In the Regulation SBSR Proposing Release, the Commission noted that the use of a clearing agency to clear a security-based swap could affect the price of the security-based swap because counterparty credit risk might be diminished significantly if the security-based swap were centrally cleared.[118] Thus, the Commission preliminarily believed that information concerning whether a security-based swap would be cleared would provide market participants with information that would be useful in assessing the reported price of the security-based swap, thereby enhancing price discovery.[119] One commenter agreed, stating that it "will likely also be necessary to identify whether a price is associated with a bilateral trade or a cleared trade . . . as these distinctions may well have price impacts."[120]

The Commission continues to believe that information concerning whether a security-based swap will be cleared is useful in assessing the price of the security-based swap and will facilitate understanding of how risk exposures may change after the security-based swap is executed. Accordingly, final Rule 901(c)(6) requires the reporting side to indicate "whether the direct counterparties intend that the security-based swap will be submitted to clearing." Reporting of whether the direct counterparties intend that the security-based swap will be submitted to clearing, rather than whether the security-based swap will be cleared, as originally proposed, more accurately reflects the process of entering into and clearing a security-based swap transaction. It may not be known, when the transaction is reported, whether a registered clearing agency will in fact accept the security-based swap for clearing. The Commission

---

118 See 75 FR at 75214.

119 See id.

120 Cleary II at 20, note 56.

received no comments on this issue. The Commission believes, however, that the modified language enhances the administration of the rule.

The Commission notes that, in some cases, the identity of the registered clearing agency that clears a security-based swap could be included in the product ID of a security-based swap. If the identity of the registered clearing agency is included in the product ID, no information would have to be separately reported pursuant to Rule 901(c)(6).

h. Rule 901(c)(7)

Re-proposed Rule 901(c)(11) would have required a reporting side to indicate, if applicable, that a security-based swap transaction does not accurately reflect the market. In the Regulation SBSR Proposing Release, the Commission noted that, in some instances, a security-based swap transaction might not reflect the current state of the market.[121] This could occur, for example, in the case of a late transaction report, which by definition would not represent the current state of the market, or in the case of an inter-affiliate transfer or assignment, where the new counterparty might not have an opportunity to negotiate the terms, including the price, of taking on the position.[122] The Commission believed that there might not be an arm's length negotiation of the terms of the security-based swap transaction, and disseminating a transaction report without noting that fact would be inimical to price discovery. Accordingly, Rule 901(c)(11), as proposed and as re-proposed, would have required a reporting side to note such circumstances in its transaction report to the registered SDR.

Rule 907(a)(4), as proposed and as re-proposed, would have required a registered SDR to establish and maintain written policies and procedures that describe, among other things, how a

---

121 See 75 FR at 75214.

122 See id. at 75214-15.

reporting side would report security-based swap transactions that, in the estimation of the registered SDR, do not accurately reflect the market. The Commission noted its expectation that these policies and procedures would require, among other things, different indicators being applied in different situations.[123]

One commenter suggested that Rule 901 should require the counterparties to a security-based swap to disclose specific reasons why a security-based swap does not accurately reflect the market because it would not be possible to understand the reported prices without that information.[124] The commenter also stated that the Commission, rather than registered SDRs, should specify the indicators used for such transaction reports.[125]

The Commission agrees in general that an effective regime for public dissemination should provide market observers with appropriate information to assist them in understanding the disseminated transaction information. The Commission also agrees with the commenter that it could be useful to market observers to provide more specific information about particular characteristics of or circumstances surrounding a transaction that could affect its price discovery value. Therefore, after careful consideration, the Commission is adopting the substance of re-proposed Rule 901(c)(11), but is modifying the rule text to reflect final Rule 907(a)(4), and is renumbering the requirement as Rule 901(c)(7). Rule 901(c)(7), as adopted, requires reporting of any applicable flag(s) pertaining to the transaction that are specified in the policies and procedures of the registered SDR to which the transaction will be reported. Rule 907(a)(4)(i) requires a registered SDR to establish and maintain written policies and procedures for

---

123 See id. at 75215.

124 See Better Markets I at 6.

125 See id. at 7 ("Such disclosure should not be left to the discretion of the SDRs, but should instead be required by the rules").

"identifying characteristic(s) of a security-based swap, or circumstances associated with the execution of a security-based swap, that could, in the fair and reasonable estimation of a registered security-based swap data repository, cause a person without knowledge of these characteristic(s) or circumstance(s) to receive a distorted view of the market." A registered SDR also must establish flags to denote these characteristic(s) or circumstance(s).[126] As discussed in Section VI(G), infra, the Commission generally believes that a registered SDR should consider providing condition flags identifying the following: inter-affiliate security-based swaps; transactions resulting from netting or compression exercises; transactions resulting from a "forced trading session" conducted by a clearing agency; transactions reported late; transactions resulting from the default of a clearing member; and package trades. The Commission believes that these condition flags, and others that registered SDRs may adopt in the future, should provide additional information that will help to prevent market observers from receiving a distorted view of the market. The Commission believes, further, that these condition flags address the commenter's recommendation that security-based swap transaction reports identify the specific reasons why a transaction does not accurately reflect the market.

The Commission disagrees, however, with the commenter's suggestion that a Commission rule rather than the policies and procedures of a registered SDR should identify the specific characteristics or circumstances that must be reported to prevent a transaction report from presenting a distorted view of the market. The Commission continues to believe that requiring registered SDRs to develop, maintain, and require the use of condition flags, and to modify them as needed, will facilitate the development of a flexible reporting regime that is better able to respond quickly to changing conditions in the security-based swap market. This

---

126 See Rule 907(a)(4)(ii).

flexibility will help to assure that reported transaction information remains meaningful as the security-based swap market evolves over time.

B. Rule 901(d)—Secondary Trade Information

1. Description of Proposed and Re-Proposed Rule

Rule 901(d)(1), as proposed and as re-proposed, would have required the reporting of certain secondary trade information concerning a security-based swap. Information reported pursuant to Rule 901(d)(1) would be available to regulatory authorities only and would not be publicly disseminated. Rule 901(d)(1), as re-proposed, would have required the reporting of the following secondary trade information to a registered SDR: (1) the participant ID of each counterparty; (2) as applicable, the broker ID, desk ID, and trader ID of the direct counterparty on the reporting side; (3) the amount(s) and currenc(ies) of any up-front payment(s) and a description of the terms and contingencies of the payment streams of each direct counterparty to the other; (4) the title of any master agreement, or any other agreement governing the transaction (including the title of any document governing the satisfaction of margin obligations), incorporated by reference and the date of any such agreement; (5) the data elements necessary for a person to determine the market value of the transaction; (6) if applicable, and to the extent not provided pursuant to Rule 901(c), the name of the clearing agency to which the security-based swap will be submitted for clearing; (7) if the security-based swap is not cleared, whether the exception in Section 3C(g) of the Exchange Act[127] was invoked; (8) if the security-based swap is not cleared, a description of the settlement terms, including whether the security-based

127 15 U.S.C. 78c-3(g).

swap is cash-settled or physically settled, and the method for determining the settlement value; and (9) the venue where the security-based swap was executed.[128]

As discussed in the Regulation SBSR Proposing Release, the Commission believed that the information required to be reported by proposed Rule 901(d) would facilitate regulatory oversight and monitoring of the security-based swap market by providing comprehensive information regarding security-based swap transactions and trading activity.[129] The Commission believed, further, that this information would assist the Commission in detecting and investigating fraud and trading abuses in the security-based swap market.[130]

Re-proposed Rule 901(d)(2) specified timeframes for reporting the secondary trade information required to be reported under Rule 901(d)(1). Rule 901(d)(2), as re-proposed, would have required the reporting of secondary trade information promptly, but in no event later than: (1) 15 minutes after the time of execution of a security-based swap that is executed and confirmed electronically; (2) 30 minutes after the time of execution for a security-based swap that is confirmed electronically but not executed electronically; or (3) 24 hours after the time of execution for a security-based swap that is not executed or confirmed electronically.

2. Final Rule 901(d)

---

128 Rule 901(d)(1), as re-proposed, was substantially similar to Rule 901(d)(1), as proposed, but made several technical changes. Rule 901(d)(1), as re-proposed, revised the rule to add references to the reporting side, the direct counterparty on the reporting side, and secondary trade information.

129 See 75 FR at 75217. Furthermore, to the extent that the Commission receives information that is reported under Rule 901(d), the Commission anticipates that it will keep such information confidential, to the extent permitted by law. See id. at note 59.

130 See id.

As discussed more fully below, the Commission is adopting Rules 901(d)(1) substantially as re-proposed, although it is making several clarifying and technical changes to address issues raised by commenters.

The Commission is not adopting the 15-minute, 30-minute, and 24-hour timeframes in re-proposed Rule 901(d)(2). Instead, final Rule 901(d) requires a reporting side to report the information required under Rule 901(d) within the timeframes specified by Rule 901(j).[131] Because re-proposed Rule 901(d)(2) is not being adopted, re-proposed Rule 901(d)(1) is renumbered as final Rule 901(d), and re-proposed Rules 901(d)(1)(i)-(ix), which would identify the categories of secondary trade information required to be reported, are renumbered as final Rules 901(d)(1)-(9).

Rule 901(d), as adopted, requires the reporting side to report the following secondary trade information: (1) the counterparty ID or execution agent ID of each counterparty, as applicable; (2) as applicable, the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID of the direct counterparty on the reporting side; (3) to the extent not provided pursuant to Rule 901(c)(1), the terms of any fixed or floating rate payments, including the terms and contingencies of any such payments; (4) for a security-based swap that is not a clearing transaction, the title and date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract; (5) to the extent not provided pursuant to Rule 901(c) or other provisions of Rule 901(d), any additional elements included in the agreement between the counterparties that are necessary for a person to determine the market value of the transaction; (6) if applicable, and to the extent not

131 Rule 901(j), which specifies the timeframe for reporting of the information enumerated in Rules 901(c) and 901(d), is discussed in Section VII(B)(1) infra.

provided pursuant to Rule 901(c), the name of the registered clearing agency to which the security-based swap will be submitted for clearing; (7) if the direct counterparties do not intend to submit the security-based swap to clearing, whether they have invoked the exception in Section 3C(g) of the Exchange Act; (8) to the extent not provided pursuant to other provisions of Rule 901(d), if the direct counterparties do not submit the security-based swap to clearing, a description of the settlement terms, including whether the security-based swap is cash-settled or physically settled, and the method for determining the settlement value; (9) the platform ID, if applicable; and (10) if the security-based swap arises from the allocation, termination, novation, or assignment of one or more existing security-based swaps, the transaction ID of the allocated, terminated, assigned, or novated security-based swap(s), except in the case of a clearing transaction that results from the netting or compression of other clearing transactions.

3. Discussion of Final Rule 901(d) and Response to Comments

a. Rule 901(d)(1)—Counterparty IDs

In the Regulation SBSR Proposing Release, the Commission expressed the view that a registered SDR "must have a systematic means to identify and track" all persons involved in the security-based swap transactions reported to that registered SDR.[132] The Commission intended to accomplish this, in part, through proposed Rule 901(d)(1)(i), which would have required the reporting party to report the participant ID of each counterparty to a registered SDR.[133] As proposed in Rule 900, "participant ID" would have been defined as "the UIC assigned to a participant"[134] and "participant" would have encompassed: (1) a U.S. person that is a

132 75 FR at 75217.

133 See infra Section X (discussing use of LEIs).

134 The definition of "participant ID" was re-proposed, without change, in re-proposed Rule 900(s). The UIC is the unique identification code assigned to a person, unit of a person,

counterparty to a security-based swap that is required to be reported to a registered SDR; or (2) a non-U.S. person that is a counterparty to a security-based swap that is (i) required to be reported to a registered SDR; and (ii) executed in the United States or through any means of interstate commerce, or cleared through a clearing agency that has its principal place of business in the United States.

Re-proposed Rule 901(d)(1)(i) would have required the reporting side to report the participant ID of each counterparty to a security-based swap. Re-proposed Rule 900(s) would have defined "participant" as "a person that is a counterparty to a security-based swap that meets the criteria of § 242.908(b)." Under re-proposed Rule 900(s), the following types of person would have met the criteria of Rule 908(b): (1) U.S. persons; (2) security-based swap dealers and major security-based swap participants; and (3) counterparties to a transaction "conducted within the United States."[135]

The Commission received no comments on re-proposed Rule 901(d)(1)(i), but has determined to adopt, as final Rule 901(d)(1), a modified rule that will, in the Commission's estimation, better accomplish the objective of ensuring that a registered SDR can identify each counterparty to a security-based swap. As re-proposed, the reporting side would have been required to report the participant ID of its counterparty only if the counterparty met the definition of "participant," which would have been limited by Rule 908(b). Under the re-proposed definition of "participant," some counterparties to security-based swaps would not have become participants of the registered SDRs that receive reports of those security-based swaps under Rule

---

product, or transaction. <u>See</u> Rule 900(qq). As discussed more fully in Section IV, <u>infra</u>, final Rule 907(a)(5) requires a registered SDR to establish and maintain policies and procedures for assigning UICs in a manner consistent with adopted Rule 903.

135 <u>See</u> Cross-Border Proposing Release, 78 FR at 31065 (discussing re-proposed Rule 908(b)).

901(a). For example, if a U.S. person security-based swap dealer entered into a security-based swap with a non-U.S. person private fund in a transaction that is not conducted within the United States, the security-based swap dealer would have been a participant of the registered SDR to which the security-based swap is reported pursuant to Rule 901(a), but the private fund would not. In this circumstance, Rule 901(d)(1)(i), as re-proposed, would not have provided a mechanism for the reporting of the private fund's identity to the registered SDR; because the private fund would not have been a participant of that registered SDR it would not have received a "participant ID."

The Commission believes that it is necessary and appropriate for a registered SDR to obtain identifying information for all counterparties to security-based swaps that are subject to Regulation SBSR. Without this information being reported to a registered SDR, the Commission's ability to oversee the security-based swap market could be impaired because the Commission might not be able to determine the identity of each counterparty to a security-based swap reported to a registered SDR pursuant to Regulation SBSR.

Final Rule 901(d)(1) addresses this concern by requiring the reporting side to report "the counterparty ID or the execution agent ID of each counterparty, as applicable." The Commission is adopting, as Rule 900(j), the term "counterparty ID," which means "the UIC assigned to a counterparty to a security-based swap."[136] A "counterparty" is a person that is a direct or indirect counterparty of a security-based swap.[137] A "direct counterparty" is a person that is a primary obligor on a security-based swap,[138] and an "indirect counterparty" is a guarantor of a

[136] The Commission is not adopting the re-proposed definition of "participant ID" as this term is not used in Regulation SBSR, as adopted.

[137] See Rule 900(i).

[138] See Rule 900(k).

direct counterparty's performance of any obligation under a security-based swap such that the direct counterparty on the other side can exercise rights of recourse against the indirect counterparty in connection with the security-based swap; for these purposes a direct counterparty has rights of recourse against a guarantor on the other side if the direct counterparty has a conditional or unconditional legally enforceable right, in whole or in part, to receive payments from, or otherwise collect from, the guarantor in connection with the security-based swap.[139] Thus, the definition of "counterparty ID" encompasses UICs that identify all direct and indirect

[139] See Rule 900(p). Re-proposed Rule 900(o) would have defined "indirect counterparty" to mean "a guarantor of a direct counterparty's performance of any obligation under a security-based swap." The Commission is adopting, consistent with the approach it took in the cross-border context, a modified definition of "indirect counterparty" to clarify the type of guarantor relationship that would cause a person to become an indirect counterparty for purposes of Regulation SBSR. See Securities Exchange Act Release No.72472 (June 25, 2014), 79 FR 47278, 47316-17 (August 12, 2014) ("Cross-Border Adopting Release"). Final Rule 900(p) defines "indirect counterparty" to mean a guarantor of a direct counterparty's performance of any obligation under a security-based swap such that the direct counterparty on the other side can exercise rights of recourse against the indirect counterparty in connection with the security-based swap; for these purposes, a direct counterparty has rights of recourse against a guarantor on the other side if the direct counterparty has a conditional or unconditional legally enforceable right, in whole or in part, to receive payments from, or otherwise collect from, the guarantor in connection with the security-based swap. Thus, under final Rule 900(p), a person becomes an indirect counterparty to a security-based swap if the guarantee offered by the person permits a direct counterparty on the other side of the transaction to exercise rights of recourse against the person in connection with the security-based swap. The Commission believes that, if a recourse guarantee exists, it is reasonable to assume that the other side of the transaction would look both to the direct counterparty and its guarantor(s) for performance on the security-based swap. If the direct counterparty fails to fulfill its payment obligations on the security-based swap, its guarantor would be obligated to make the required payments. As noted in the Cross-Border Adopting Release, such rights may arise in a variety of contexts. The meaning of the terms "guarantee," "recourse," and any related terms used in Regulation SBSR is the same as the meaning of those terms in the Cross-Border Adopting Release and the rules adopted therein.

counterparties to a security-based swap, even if a particular counterparty is not a participant of a registered SDR.[140]

The Commission believes final Rule 901(d)(1) will accomplish the Commission's objective of obtaining identifying information for all counterparties to a security-based swap and improve regulatory oversight and surveillance of the security-based swap market. The counterparty ID will allow registered SDRs, the Commission, and other relevant authorities to track activity by a particular market participant and facilitate the aggregation and monitoring of that market participant's security-based swap positions.

The Commission also is adopting a requirement in Rule 901(d)(1)(i) for the reporting side to report the "execution agent ID" as applicable.[141] This situation could arise if the identity of a counterparty is not known at the time of execution.[142] In this circumstance, the reporting side would report the execution agent ID because it would not know the counterparty ID.

Regulation SBSR requires reporting of the UIC of each counterparty to a security-based swap.[143] One commenter stated that "each series or portfolio within each trust should be given its own LEI/UCI number to address possible confusion between series or portfolios within the same trust. Each portfolio is distinct with its own separate assets and liabilities."[144] The

140 The process for obtaining UICs, including counterparty IDs, is described in Section X, infra.

141 See infra Section II(C)(3)(b)(i) (discussing execution agent ID).

142 The Commission believes the reporting side may not know the counterparty ID of the other side if, for example, the security-based swap will be allocated after execution. Section VIII describes how Regulation SBSR applies to security-based swaps involving allocation.

143 See Rule 901(d)(1); Rule 907(a)(5) (requiring a registered SDR to have written policies and procedures for assigning UICs in a manner consistent with Rule 903).

144 Institutional Investors Letter at 6.

Commission agrees with this commenter and notes that Rule 901(d)(1) requires the reporting of the UIC for each counterparty to a security-based swap, whether not the counterparty is a legal person.[145] If a counterparty is an entity other than a legal person, such as a series or portfolio within a trust, or an account, Rule 901(d)(1) requires the reporting of the UIC that identifies that counterparty.

Finally, the Commission notes that although it is not adopting a definition of "participant ID," the concept of a "participant" is still utilized in Regulation SBSR. Rule 900(u), as adopted, defines "participant," with respect to a registered SDR, as "a counterparty, that meets the criteria of § 242.908(b), of a security-based swap that is reported to that registered security-based swap data repository to satisfy an obligation under § 242.901(a)."[146] The adopted definition makes clear that a person becomes a participant of a particular registered SDR only if the person meets the criteria of Rule 908(b) <u>and</u> is a counterparty to a security-based swap that is reported to that registered SDR on a mandatory basis. A counterparty would not become a participant of <u>all</u> registered SDRs as a result of being a counterparty to a security-based swap that is subject to Regulation SBSR and reported to a particular registered SDR as required by Rule 901(a). The adopted definition also clarifies that a counterparty would not become a participant of a registered SDR as a result of any non-mandatory report[147] submitted to that registered SDR.[148]

---

145 Consequently, the word "person," as used in this release, includes any counterparty to a security-based swap, including a counterparty that is not a legal person. <u>Cf.</u> Cross-Border Adopting Release, 79 FR at 47312 (providing that an account, whether discretionary or not, of a U.S. person also is a U.S. person—even though accounts generally are not considered separate legal persons—and noting that this prong of the "U.S. person" definition focuses on the party that actually bears the risk arising from a security-based swap transaction).

146 Re-proposed Rule 900(s) would have defined "participant" as "a person that is a counterparty to a security-based swap that meets the criteria of § 242.908(b)."

147 <u>See</u> <u>infra</u> Section VI(D)(1) (discussing non-mandatory reports).

Similarly, a counterparty that meets the criteria of Rule 908(b) would not become a participant of any registered SDR if the security-based swap is reported pursuant to a substituted compliance determination under Rule 908(c), because such a security-based swap would not be reported to a registered SDR pursuant to Rule 901(a).

The final definition of "participant" is less comprehensive than the re-proposed definition because Rule 908(b), as adopted, is narrower than Rule 908(b), as re-proposed. As discussed in Section XV(D), infra, final Rule 908(b) includes U.S. persons, registered security-based swap dealers, and registered major security-based swap participants. The Commission is not at this time taking action on the prong of re-proposed Rule 908(b) that would have caused a person to become a participant solely by being a counterparty to a security-based swap that is a transaction conducted within the United States. As a result, fewer non-U.S. persons are likely to "meet the criteria of Rule 908(b)," as adopted, because a non-U.S. person that is a counterparty of a security-based swap would meet the criteria of final Rule 908(b) only if that counterparty is a registered security-based swap dealer or a registered major security-based swap participant. Thus, only a U.S. person, a registered security-based swap dealer, or a registered major security-based swap participant could be a "participant" under Regulation SBSR.

b. Rule 901(d)(2)—Additional UICs

---

148 Assume, for example, that Fund X is a U.S. person and engages in a single uncleared security-based swap with a registered security-based swap dealer. Further assume that the registered security-based swap dealer, who has the duty to report the transaction under the reporting hierarchy, elects to submit the required transaction report to SDR P, and also submits a non-mandatory report of the transaction to SDR Q. Fund X is now a participant of SDR P but not of SDR Q. Under Rule 900(u), Fund X would not become a participant of SDR Q unless and until it enters into a future security-based swap that is reported on a mandatory basis to SDR Q.

Rule 901(d)(1)(ii), as re-proposed, would have required reporting of, as applicable, the broker ID, desk ID, and trader ID of the direct counterparty on the reporting side. The Commission preliminarily believed that the reporting of this information would help to promote effective oversight, enforcement, and surveillance of the security-based swap market by the Commission and other relevant authorities.[149] The Commission noted, for example, that this information would allow regulators to track activity by a particular participant, a particular desk, or a particular trader. In addition, relevant authorities would have greater ability to observe patterns and connections in trading activity, or examine whether a trader had engaged in questionable activity across different security-based swap products. Such identifiers also would facilitate aggregation and monitoring of the positions of security-based swap counterparties, which could be of significant benefit for systemic risk management.[150]

Adopted Rule 901(d)(2) modifies re-proposed Rule 901(d)(1)(ii) in certain respects. First, final Rule 901(d)(2) replaces the defined term "desk ID" with the defined term "trading desk ID." Second, final Rule 901(d)(2) now includes a requirement to report the branch ID and the execution agent ID of the direct counterparty on the reporting side, in addition to the broker ID, trading desk ID, and trader ID. In conjunction with this requirement, final Rule 900 includes the new defined terms "branch ID" and "execution agent ID." Third, final Rule 900 includes a revised definition of "trader ID." Thus, final Rule 901(d)(2) requires reporting of, "[a]s applicable, the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID of the direct counterparty on the reporting side."[151]

---

149 See Regulation SBSR Proposing Release, 75 FR at 75217.

150 See id.

151 As discussed in greater detail in Section XIII(A), infra, Rule 906(a), as adopted, requires reporting to a registered SDR of the branch ID, broker ID, execution agent ID, trader ID,

i. Branch ID and Execution Agent ID

Rule 901(d)(2), as adopted, requires the reporting of, as applicable, the branch ID and execution agent ID of the direct counterpart on the reporting side, in addition to the broker ID, trader ID, and trading desk ID of the direct counterparty on the reporting side. The "branch ID" is the "UIC assigned to a branch or other unincorporated office of a participant."[152] The Commission did not include a requirement to report the branch ID in Rule 901(d), as proposed or as re-proposed. However, the Commission now believes that it is appropriate to include in Regulation SBSR a new concept of the branch ID and require reporting of the branch ID, when a transaction is conducted through a branch, as part of Rule 901(d)(2), as adopted. Reporting of the branch ID, where applicable, will help identify the appropriate sub-unit within a large organization that executed a security-based swap (if a transaction were in fact conducted through that sub-unit). This information also will facilitate the aggregation and monitoring of security-based swap transactions by branch, at the level of the registered SDR and potentially within the firm itself.

Final Rule 901(d)(2) also includes another UIC, the "execution agent ID," that was not included in the proposal or re-proposal. Rule 900(m), as adopted, provides that the execution agent ID is the "UIC assigned to any person other than a broker or trader that facilitates the execution of a security-based swap on behalf of a direct counterparty." The Commission initially proposed to require reporting of the broker ID in order to obtain a record of an agent that facilitates a transaction, if there is such an agent. The Commission now recognizes, however,

---

and trading desk ID, as applicable, of a direct counterparty to a security-based swap that is not the reporting side. Thus, Rules 901(d)(2) and 906(a) together require reporting, as applicable, of the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID of each direct counterparty to a security-based swap.

152 See Rule 900(d).

that entities other than registered brokers could act as agents in a security-based swap transaction. For example, an asset manager could be acting as an agent on behalf of a fund counterparty but likely would not be a broker-dealer. The definition of "execution agent ID" is designed to encompass the entities in addition to brokers that may act as agents for security-based swap counterparties. The broker ID,[153] which also must be reported under final Rule 901(d)(2), will identify a registered broker, if any, that intermediates a security-based swap transaction between two direct counterparties and itself is not a counterparty to the transaction.

The Commission believes that obtaining information about a broker or execution agent, if any, involved in the transaction will provide regulators with a more complete understanding of the transaction and could provide useful information for market surveillance purposes. The Commission notes that some security-based swap transactions may involve multiple agents. For example, an asset manager could use a broker to facilitate the execution of a security-based swap on behalf of one or more of the funds that it advises. In that case, final Rule 901(d) would require reporting of the counterparty ID of the direct counterparty (the fund), the execution agent ID (for the asset manager), and the broker ID (of the broker that intermediated the transaction).

ii. Revised Defined Terms in Rule 901(d)(2)

Rule 901(d)(1)(ii), as re-proposed, would have required the reporting of, among other things, the desk ID of the direct counterparty on the reporting side. Rule 900(i), as re-proposed, would have defined "desk ID" as the UIC assigned to the trading desk of a participant or of a broker of a participant. Rule 900, as re-proposed, did not include a definition of "desk." Final Rule 901(d)(2) requires the reporting of the "trading desk ID," rather than the "desk ID."

153 "Broker ID" is defined as "the UIC assigned to a person acting as a broker for a participant." See Rule 900(e).

Accordingly, the defined term "desk ID" is being replaced in Rule 900 with the defined term "trading desk ID," which Rule 900(ll) defines as "the UIC assigned to the trading desk of a participant." Unlike re-proposed Rule 900, which provided no definition of the term "desk," final Rule 900(kk) provides a definition of the term "trading desk." Specifically, final Rule 900(kk) defines "trading desk" to mean, "with respect to a counterparty, the smallest discrete unit of organization of the participant that purchases or sells financial instruments for the account of the participant or an affiliate thereof." The Commission believes that adding a definition of "trading desk" will help to clarify the rule by describing the type of structure within an enterprise that must receive a trading desk ID. The "trading desk ID" concept is designed to identify, within a large organization, the smallest discrete unit that initiated a security-based swap transaction. Requiring the reporting of the trading desk ID will assist regulators in monitoring the activities and exposures of market participants. The trading desk ID could, among other things, facilitate investigations of suspected manipulative or abusive trading practices.[154]

Final Rule 901(d)(2) also requires reporting of, if applicable, the trader ID of the direct counterparty on the reporting side. Re-proposed Rule 900(gg) would have defined "trader ID" as

---

154 The trading desk ID also might allow relevant authorities to determine whether a particular trading desk is engaging in activity that could disrupt the security-based swap markets. For example, in early 2012, a trading desk of JPMorgan Chase and Company known as the Chief Investment Office executed transactions in synthetic credit derivatives that declined in value by at least $6.2 billion later in the year. According to the report of the United States Senate Permanent Subcommittee on Investigations, these trades, which were unknown to the bank's regulators, were "so large in size that they roiled world credit markets." Report of the United States Senate Permanent Subcommittee on Investigations, JPMorgan Chase Whale Trades: A Case History of Derivatives Risks and Abuses (March 15, 2013), available at http://www.hsgac.senate.gov/subcommittees/investigations/hearings/chase-whale-trades-a-case-history-of-derivatives-risks-and-abuses (last visited October 7, 2014). The existence of a trading desk ID could, in the future, facilitate the ability of relevant authorities to detect this type of trading activity.

"the UIC assigned to a natural person who executes security-based swaps." This definition would encompass a direct counterparty that executed a security-based swap, as well as a trader acting as agent that executes a security-based swap on behalf of a direct counterparty. The Commission did not intend for the definition of "trader ID" to include both direct counterparties (whose counterparty IDs must be provided pursuant to Rule 901(d)(1)) and traders acting in an agency capacity that execute security-based swaps on behalf of a direct counterparty. To narrow the definition of "trader ID" so that it includes only traders that execute security-based swaps on behalf of direct counterparties, final Rule 900(jj) defines "trader ID" as "the UIC assigned to a natural person who executes one or more security-based swaps on behalf of a direct counterparty." The direct counterparty would be the person, account, or fund that is the direct counterparty to the security-based swap that employs the trader.

iii. Response to Comments

One commenter supported the proposed requirement for reporting broker ID, desk ID, and trader ID, stating that these UICs would "give regulators a capability to aggregate position and trade data in multiple ways including by individual trader to spot concentration risk and insider trading."[155] A second commenter argued that desk structures change relatively frequently and personnel often rotate or transfer to other firms; therefore, the effort to maintain trader ID and desk ID information in a registered SDR could exceed its usefulness.[156] The commenter also

---

155 GS1 Letter at 39 (also stating that these elements "would be most critical for performing trading oversight and compliance functions such as trading ahead analysis, assessing trader price collusion, analyzing audit trail data from multiple derivatives markets as well as underlying cash markets. . . Also, lack of unique, unambiguous and universal identification of broker, desks and traders was one of the significant deterrents to analyzing the May 6, 2010 flash crash"). Another commenter generally supported the information required to be reported pursuant to Rule 901(d). See Barnard I at 2.

156 See DTCC II at 11.

indicated that information regarding the desk ID and trader ID would be available from a firm's audit trail.[157]

The Commission questions whether consistent and robust information about a firm's desk and trader activity is available from firms' audit trails. Even if it were, the Commission believes that reporting of the trader ID and the trading desk ID—as well as the branch ID, broker ID, and execution agent ID—will help to assure that information concerning the persons involved in the intermediation and execution of a security-based swap is readily available to the Commission and other relevant authorities. This information could assist in monitoring and overseeing the security-based swap market and facilitate investigations of suspected manipulative or abusive trading practices.

Two other commenters raised issues with requiring reporting of broker, trader, and trading desk IDs.[158] One of these commenters believed that reporting these UICs would require "great cost and effort" from firms, including the costs associated with establishing and maintaining UICs in the absence of a global standard.[159] The commenter also noted that not all of these identifiers are required to be reported in other jurisdictions.[160] In a joint comment letter with another trade association, this commenter also stated that, because these UICs are not currently reported by any participants in the OTC derivatives markets, "[t]he industry will need

157 See id.

158 See ISDA III at 2; ISDA IV at 8; ISDA/SIFMA at 11.

159 ISDA III at 2; ISDA IV at 8.

160 See ISDA IV at 8 (stating that "[u]nder EMIR rules, broker ID is required, but not desk ID or trader ID. In Canada, only broker ID is required, but we note that reporting entities are struggling with the availability of an LEI to identify brokers that have not been subject to a mandate to obtain one"). See also ISDA III at 2.

to develop standards and appropriate methodology to effectively report this information."[161] This comment expressed concern that the proposed requirement "will create significant 'noise' as a result of booking restructuring events (due to either technical or desk reorganization considerations). We therefore recommend that such information be either excluded, or that participants report the Desk ID and Trader ID associated with the actual trade or lifecycle events, but not those resulting from internal reorganization events."[162]

The Commission recognizes that, currently, UICs for branches, execution agents, trading desks, and individual traders are generally not in use. While the Commission agrees with the commenters that there could be a certain degree of cost and effort associated with establishing and maintaining UICs, the Commission believes that such costs have already been taken into account when determining the costs of Regulation SBSR.[163] The costs of developing such UICs are included in the costs for Rule 901 (detailing the data elements that must be reported) and Rule 907 (detailing the requirement that SDRs develop policies and procedures for the reporting of the required data elements).

The Commission confirms that these UICs must be reported pursuant to Rule 901(d)(2) only in connection with the original transaction.[164]

---

161 ISDA/SIFMA at 11.

162 Id. See also ISDA IV at 8 ("We suggest that the Commission eliminate broker ID, desk ID and trader ID from the list of reportable secondary trade information. If the Commission wants to retain these fields we strongly believe a cost-benefit analysis should be conducted").

163 See infra Section XXII(C)(1) (providing the economic analysis of these requirements).

164 Thus, a participant would not be required to "re-report" a transaction to the registered SDR if, for example, the trader who executed the transaction leaves the firm some time afterwards. However, the participant will be subject to the policies and procedures of the registered SDR for, among other things, assigning UICs in a manner consistent with Rule 903. See infra Section IV. Those policies and procedures could include a requirement

c. Rule 901(d)(3)—Payment Stream Information

Rule 901(d)(1)(iii), as proposed and re-proposed, would have required the reporting side to report the amount(s) and currenc(ies) of any up-front payment(s) and a description of the terms and contingencies of the payment streams of each direct counterparty to the other. The Commission stated that this requirement would include, for a credit default swap, an indication of the counterparty purchasing protection, the counterparty selling protection, and the terms and contingencies of their payments to each other; and, for other security-based swaps, an indication of which counterparty is long and which is short.[165] The Commission noted that this information could be useful to regulators in investigating suspicious trading activity.[166]

One commenter stated the view that proposed Rule 901(d)(1)(iii) was duplicative of proposed Rule 901(d)(1)(v), which would require reporting of the data elements necessary to determine the market value of a transaction.[167] The commenter stated, further, that proposed Rule 901(d)(1)(iii) was unclear about the required form of the description of the terms and contingencies of the payment streams, and requested further clarification of this proposed requirement.[168]

The Commission agrees with the commenter's concerns regarding the need to clarify the information required to be reported under these provisions of Rule 901. Accordingly, the Commission is revising adopted Rule 901(d)(3) to require the reporting, to the extent not

---

for the participant to regularly notify the registered SDR about changes in persons or business units requiring a UIC.

165 See Regulation SBSR Proposing Release, 75 FR at 75218, note 62.

166 See id.

167 See DTCC II at 10.

168 See DTCC II at 10; DTCC V at 12.

provided pursuant to Rule 901(c)(1), of the terms of any fixed or floating rate payments, or otherwise customized or non-standardized payment streams, including the frequency and contingencies of any such payments.[169] As discussed above, adopted Rule 901(c)(1)(iv) requires the reporting side to report the terms of any standardized fixed or floating rate payments, and the frequency of any such payments.[170] To the extent that a security-based swap includes fixed or floating rate payments that do not occur on a regular schedule or are otherwise customized or non-standardized, final Rule 901(d)(3) requires the reporting of the terms of those payments, including the frequency and contingencies of the payments. The Commission believes that the changes to final Rule 901(d)(3) make clear that Rule 901(d)(3) requires reporting of customized or non-standardized payment streams, in contrast to the standardized payment streams required to be reported pursuant to Rule 901(c)(1)(iv). The terms required to be reported could include, for example, the frequency of any resets of the interest rates of the payment streams. The terms also could include, for a credit default swap, an indication of the counterparty purchasing protection and the counterparty selling protection, and, for other security-based swaps, an indication of which counterparty is long and which counterparty is short. The Commission believes that information concerning the non-standard payment streams of a security-based swap could be useful to the Commission or other relevant authorities in assessing the nature and extent

169 As discussed above, the requirement to report the amount(s) and currenc(ies) of any up-front payments now appears in Rule 901(c)(3), rather than in Rule 901(d). Rule 901(c)(3), as adopted, requires reporting of the price of a security-based swap, including the currency in which the price is expressed and the amount(s) and currenc(ies) of any up-front payments.

170 If information concerning the terms and frequency of any regular fixed or floating rate payments is included in the product ID for the security-based swap, the reporting side is required to report only the product ID, and would not be required to separately report the terms and frequency of any regular fixed or floating rate payments in addition to the product ID. See Rule 901(c)(1); Section III(B)(2)(b)(ii), supra.

of counterparty obligations and risk exposures. The Commission believes that the changes made to Rule 901(d)(3) will help clarify the information required to be reported under the rule and will eliminate any redundancy between the information required to be reported under Rules 901(c)(1)(iv) and 901(d)(3).

In addition, as discussed more fully below, the Commission is revising re-proposed Rule 901(d)(1)(v), which is renumbered as final Rule 901(d)(5), to indicate that Rule 901(d)(5) requires the reporting of additional data elements necessary to determine the market value of a transaction <u>only to the extent that the information has not been reported pursuant to Rule 901(c) or other provisions of Rule 901(d)</u>. The Commission believes that these changes address the concern that Rule 901(d)(i)(iii) was duplicative of Rule 901(d)(1)(v).

d. <u>Rule 901(d)(4)—Titles and Dates of Agreements</u>

Rule 901(d)(1)(iv), as proposed, would have required reporting of the title of any master agreement, or any other agreement governing the transaction (including the title of any document governing the satisfaction of margin obligations), incorporated by reference and the date of any such agreement. Rule 901(d)(1)(v), as proposed, would have required reporting of the data elements necessary for a person to determine the market value of the transaction. The Commission noted that proposed Rule 901(d)(1)(v) would require, for a security-based swap that is not cleared, information related to the provision of collateral, such as the title and date of the relevant collateral agreement. The Commission preliminarily believed that these requirements, together with other information required to be reported under Rule 901(d), would facilitate regulatory oversight of counterparties by providing information concerning counterparty obligations.[171] The Commission re-proposed Rules 901(d)(1)(iv) and 901(d)(1)(v) without revision in the Cross-Border Proposing Release.

In proposing Rules 901(d)(1)(iv) and 901(d)(1)(v), the Commission balanced the burdens associated with reporting entire agreements against the benefits of having information about these agreements, and proposed to require reporting only of the title and date of such master agreements and any other agreement governing the transaction. Similarly, the Commission indicated that proposed Rule 901(d)(1)(v) would require the reporting of the title and date of any collateral agreements governing the transaction.[172]

One commenter disagreed with the Commission's proposed approach. This commenter expressed the view that Regulation SBSR should be more explicit in requiring reports of information concerning collateral and margin for use by regulators because this information would be important for risk assessment and other purposes.[173]

The Commission agrees that it is important for regulatory authorities to have access to information concerning the collateral and margin associated with security-based swap transactions. The Commission also is mindful, however, that requiring the reporting of detailed information concerning the master agreement and other documents governing security-based swaps could impose significant burdens on market participants. In addition, the Commission

---

171 See Regulation SBSR Proposing Release, 75 FR at 75218.

172 See id. at 75218, note 63.

173 See Better Markets I at 7-8 (arguing that, to facilitate oversight, security-based swap counterparties should be required to report the core data elements of their collateral arrangements, including, at a minimum: (1) the parties to the agreement; (2) the thresholds for forbearance of posted collateral applicable to each party; (3) the triggers applicable to each party that would require immediate funding (termination of forbearance); and (4) the methodology for measuring counterparty credit risk); Better Markets III at 4-5.

notes that one commenter on proposed Regulation SBSR stated that it would not be possible, in all cases, to identify the collateral associated with a particular security-based swap transaction because collateral is calculated, managed, and processed at the portfolio level rather than at the level of individual transactions.[174]

In light of these considerations, the Commission believes that, for security-based swaps that are not clearing transactions, requiring reporting of the title and date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract—but not the agreements themselves or detailed information concerning the agreements—will facilitate regulatory oversight of the security-based swap market by providing regulators with a more complete understanding of a security-based swap counterparty's obligations while not imposing significant burdens on market participants. The Commission anticipates that, if a situation arose where the Commission or another relevant authority needed to consult information about a transaction contained in one of the related agreements, the Commission could request the agreement from one of the security-based swap counterparties. Knowing the title and date of the agreement will assist relevant authorities in identifying the agreement and thereby expedite the process of obtaining the necessary information.

---

174 See ISDA/SIFMA I at 14-15. Specifically, the commenter stated that the calculation of exposure collateral "is performed at a netted portfolio level and cannot be broken down to the transaction level—it is simply not possible to identify the specific exposure collateral or the 'exposure' associated with any particular transaction." See id. at 14. The commenter noted, further, that the independent amount, an optional additional amount of collateral that two counterparties may negotiate, "may be specified at transaction level, at portfolio level, at some intermediate level (a combination of product type, currency and maturity, for instance), and possible a hybrid of all three. Therefore it may or may not be possible to identify the [independent amount] associated with a particular transaction, but as a general matter this association cannot be reliably made." See id. at 15.

One commenter argued that the "level of change" necessary to incorporate the titles and dates of master agreements into individual trade messages was excessive and recommended that the trade level reference continue to follow the current process of referencing the lowest level governing document, which would permit the identification of all of the other relevant documents.[175] Another commenter questioned the value of requiring reporting of the title and date of party level agreements.[176] This commenter stated that, because other jurisdictions do not require reporting of the "title and date of a Credit Support Agreement or other similar document ("CSA") governing the collateral arrangement between the parties . . . global trade repositories do not currently have fields to support separate reporting of data pertaining to the CSA from those which define the master agreement. Equally challenging is firms' ability to report data pertaining to the CSA as the terms of these agreements are not readily reportable in electronic format nor could this be easily or accurately achieved."[177] Noting that other global regulators have limited their trade reporting requirements to the relevant date and type of the master agreement, the commenter believed that the information required to be reported should be limited to the identification of party level master agreements that govern all of the derivatives transactions between the parties, and should not include master confirmations or other documentation that is used to facilitate confirmation of the security-based swap.[178]

The Commission understands that reporting the titles and dates of agreements for individual security-based swap transactions may require some modification of current practices. However, the Commission believes that it is important for regulators to know such titles and

---

175 See DTCC II at 11.

176 See ISDA IV at 8.

177 Id.

178 See id.

dates so that the Commission and other relevant authorities would know where to obtain further information about the obligations and exposures of security-based swap counterparties, as necessary. The Commission believes that requiring reporting of the titles and dates of master agreements and other agreements governing a transaction—but not the agreements themselves or detailed information concerning the agreements—would provide regulators with access to necessary information without creating an unduly burdensome reporting obligation. Therefore, the Commission is adopting Rule 901(d)(1)(iv) substantially as proposed and re-proposed, while renumbering it final Rule 901(d)(4). With respect to the commenter's concern regarding the difficulty of reporting the terms of the documentation governing a security-based swap, the Commission emphasizes that final Rule 901(d)(4) requires reporting only of the titles and dates of the documents specified in Rule 901(d)(4), but not the terms of these agreements.

The commenter also requested additional clarity regarding the proposed requirement generally.[179] As discussed above, Rule 901(d)(1)(iv), as proposed and re-proposed, would have required reporting of "the title of any master agreement, or any other agreement governing the transaction (including the title of any document governing the satisfaction of margin obligations), incorporated by reference and the date of any such agreement." The proposed rule also would have required reporting of the title and date of any collateral agreements governing the transaction.[180] Although the rule, as proposed and re-proposed, would have required reporting of the title and date of any master agreement, margin agreement, collateral agreement, and any other document governing the transaction that is incorporated by reference, the Commission agrees that it would be useful to state more precisely the information required to be

[179] See DTCC V at 12.

[180] See Regulation SBSR Proposing Release, 75 FR at 75218, note 63.

reported and to clarify the scope of the rule. Rule 901(d)(4), as adopted, requires reporting of, "[f]or a security-based swap that is not a clearing transaction, the title and date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract." The new language makes clear that Rule 901(d)(4) applies only to security-based swaps that are not clearing transactions (i.e., security-based swaps that do not have a registered clearing agency as a direct counterparty). Any such agreements relating to a clearing transaction would exist by operation of the rules of the registered clearing agency, and therefore do not need to be reported pursuant to Regulation SBSR because the Commission could obtain information from the registered clearing agency as necessary.

e. Rule 901(d)(5)—Other Data Elements

Rule 901(d)(1)(v), as re-proposed, would have required reporting of the data elements necessary for a person to determine the market value of a transaction. The Commission is adopting Rule 901(d)(1)(v) substantially as re-proposed, but renumbering it as Rule 901(d)(5) and making certain technical and clarifying changes in response to comments.

As discussed above, re-proposed Rule 901(d)(1)(iii) would have required reporting of the amount(s) and currenc(ies) of any up-front payments and the terms and contingencies of the payment streams of each direct counterparty to the other. One commenter believed that re-proposed Rule 901(d)(1)(iii) was duplicative of re-proposed Rule 901(d)(1)(v),[181] and asked the Commission to provide additional clarity on what re-proposed Rule 901(d)(1)(v) requires.[182] To address these comments, the Commission is revising adopted Rule 901(d)(5) to require the

181 See DTCC II at 10.

182 See DTCC V at 12.

reporting, to the extent not required pursuant to Rule 901(c) or other provisions of Rule 901(d), of any additional data elements included in the agreement between the counterparties that are necessary for a person to determine the market value of the transaction.

Another commenter expressed concern that the requirements of re-proposed Rule 901(d)(1)(v) were vague, "leaving reporting parties and trade repositories with the task of establishing the reportable data with potentially different result."[183] This commenter recommended that Commission revise the rule to clarify the requirement to report "(i) the mark-to-market value and currency code and (ii) the date and time of the valuation in Coordinated Universal Time . . ."[184] Further, because information necessary to determine the market value of a transaction "is determined as part of end of day processes," the commenter requested that the timeframe for reporting data pertaining to market value be based on the end of the day on which the relevant data was determined.[185]

In response to these concerns, the Commission emphasizes that neither Regulation SBSR, as proposed and re-proposed, nor Regulation SBSR, as adopted, requires the reporting of the market value of a security-based swap (although the negotiated price of the actual transaction is required to be reported), either on a one-time or ongoing basis.[186] As noted above, final Rule 901(d)(5) requires reporting, to the extent not required pursuant to Rule 901(c) or other provisions of Rule 901(d), of any additional data elements included in the agreement between the counterparties that are necessary to determine the market value of the transaction. This refers to

183 ISDA IV at 9.

184 Id.

185 See id.

186 In contrast, the CFTC's swap data reporting rules require reporting parties to report the market value of swap transactions to a CFTC-registered swap data repository on a daily basis. See 17 CFR 45.4(a)(2).

all of the contractual terms and conditions of a security-based swap that a party would need to perform its own calculation of the market value of the security-based swap using its own market data. Although the reporting side must include, as part of the initial transaction report, the information necessary to determine the market value of the transaction, Regulation SBSR does not require the reporting side to take the additional step of calculating and reporting the market value of the transaction, nor does it require the reporting side to provide any market data that would be needed to calculate the market value of the transaction.

Rule 901(d)(5) is designed to help to ensure that all of the material terms of the agreement between the counterparties that is necessary to determine the market value of a security-based swap are available to the Commission and other relevant authorities.[187] The Commission continues to believe that this requirement will facilitate regulatory oversight by giving relevant authorities the information necessary to value an entity's security-based swap positions and calculate the exposure resulting from those positions. However, the final language of Rule 901(d)(5) is designed to eliminate any overlap with other provisions of Rule 901(c) or 901(d). For example, if a security-based swap has a product ID, the Commission presumes that all information necessary to identify the security-based swap and determine the market value of the transaction could be derived from the product ID (or the identification information behind that particular product ID). Therefore, it would not be necessary to report any additional information pursuant to Rule 901(d)(5) for a security-based swap for which a product ID is reported.

[187] This could include—by way of example and not of limitation—information about interest rate features, commodities, or currencies that are part of the security-based swap contract.

In addition, the Commission is further clarifying the rule by making a technical change to indicate that final Rule 901(d)(5) requires the reporting only of data elements "included in the agreement between the counterparties." The Commission believes that the rule as proposed and re-proposed—which did not include this phrase—could have been interpreted to require the reporting of information external to the agreement between the counterparties that could have helped determine the market value of the security-based swap (e.g., the levels of supply and demand in the market for the security-based swap). The Commission intended, however, to require reporting only of information included in the agreement between the counterparties, not of general market information. Accordingly, final Rule 901(d)(5) requires the reporting only of data elements "included in the agreement between the counterparties" that are necessary for a person to determine the market value of the transaction.

Finally, one commenter believed that proposed Rule 901(d)(1)(v) should require reporting only of the full terms of a security-based swap as laid out in the trade confirmation.[188] Although the Commission agrees that the full terms of a trade confirmation could, in some cases, provide the data elements included in the agreement between the counterparties that are necessary to determine the market value of a transaction, the Commission notes that the information required to be reported pursuant Rule 901(d)(5) would not necessarily be limited to information included in the trade confirmation. Not all market participants observe the same conventions for confirming their trades. The Commission understands that confirmations for some types of trades are significantly more standardized than others. Some trades may have critical terms included in other documentation, such as master confirmation agreements or credit support annexes. Moreover, confirmation practices in the future may differ from current

188 See DTCC II at 10.

confirmation practices. The Commission believes, therefore, that restricting information reported in accordance with Rule 901(d)(5) to the information included in the confirmation would not provide the Commission and other relevant authorities with sufficient information regarding the market value of a security-based swap.

f. Rule 901(d)(6)—Submission to Clearing

Rule 901(d)(1)(vi), as re-proposed, would have required reporting of the following data element: "If the security-based swap will be cleared, the name of the clearing agency." This information would allow the Commission to verify, if necessary, that a security-based swap was cleared, and to identify the clearing agency that cleared the transaction. The Commission received no comments on this provision and is adopting it substantially as re-proposed, with minor clarifying changes and renumbered as Rule 901(d)(6). Rule 901(d)(6), as adopted, requires reporting of the following: "If applicable, and to the extent not provided pursuant to paragraph (c), the name of the clearing agency to which the security-based swap will be submitted for clearing."

For some security-based swaps, the name of the clearing agency that clears the security-based swap could be inherent in the product ID. Rule 901(d)(6), as adopted, clarifies that the name of the clearing agency to which the security-based swap will be submitted for clearing need not be reported if that information is inherent in the product ID. In addition, the new language regarding whether the security-based swap will be submitted for clearing reflects the possibility that a clearing agency could reject the security-based swap for clearing after it has been submitted. The Commission believes that it would be useful to know the name of the clearing agency to which the transaction is submitted, even if the clearing agency rejects the transaction.

g. Rule 901(d)(7)—Indication of Use of End-User Exception

Rule 901(d)(1)(vii), as re-proposed, would have required reporting of whether a party to the transaction invoked the so-called "end user exception" from clearing, which is contemplated in Section 3C(g) of the Exchange Act.[189] Section 3C(g)(6) of the Exchange Act[190] provides for the Commission to request information from persons that invoke the exception. The Commission preliminarily believed that requiring reporting of whether the exception was invoked in the case of a particular security-based swap would assist the Commission in monitoring use of the exception.[191]

One commenter argued that the Commission should not use the trade reporting mechanism "to police the end-user exception."[192] The commenter expressed concern with an end user having to certify eligibility with each transaction and stated that "it is illogical that filings by swap dealers should determine the eligibility of the end user."[193] The Commission acknowledges the commenter's concerns but believes that they are misplaced. Re-proposed Rule 901(d)(1)(vii) would not require reporting of any information as to the end user's eligibility to

---

189 15 U.S.C. 78c-3(g). Section 3C(g)(1) of the Exchange Act provides that the general clearing mandate set forth in Section 3C(a)(1) of the Exchange Act will not apply to a security-based swap if one of the counterparties to the security-based swap: (1) is not a financial entity; (2) is using security-based swaps to hedge or mitigate commercial risk; and (3) notifies the Commission, in a manner set forth by the Commission, how it generally meets if financial obligations associated with entering into non-cleared security-based swaps. The application of Section 3C(g)(1) is solely at the discretion of the security-based swap counterparty that satisfies these conditions. See Securities Exchange Act Release No. 63556 (December 15, 2010), 75 FR 79992 (December 21, 2010).

190 15 U.S.C. 78c-3(g)(6).

191 See Regulation SBSR Proposing Release, 75 FR at 75218.

192 Cravath Letter at 3.

193 Id. at 4.

invoke the exception for a specific transaction; instead, it would require reporting only of the fact of the exception being invoked. The Commission could then obtain information from a registered SDR regarding instances of the exception being invoked and could determine, as necessary, whether to further evaluate whether the exception had been invoked properly. The Commission does not believe that it is necessary or appropriate to require information about the end user's eligibility to invoke the exception to be reported under Rule 901(d). Therefore, the Commission has determined to adopt Rule 901(d)(1)(vii) as re-proposed, but is renumbering it as Rule 901(d)(7).

h. Rule 901(d)(8)—Description of Settlement Terms

Rule 901(d)(1)(viii), as re-proposed, would have required, for a security-based swap that is not cleared, a description of the settlement terms, including whether the security-based swap is cash-settled or physically settled, and the method for determining the settlement value. In the Regulation SBSR Proposing Release, the Commission stated its preliminary belief that this information would assist relevant authorities in monitoring the exposures and obligations of security-based swap market participants.[194] One commenter expressed the view that the settlement terms could be derived from other data fields and thus recommended deletion of this data element, or in the alternative, requested additional clarity on what would be required pursuant to this provision.[195]

Re-proposed Rule 901(d)(1)(viii) is being adopted substantially as re-proposed but renumbered as final Rule 901(d)(8) and now includes certain revisions that respond to the commenter and clarify the operation of the rule. Rule 901(d)(8), as adopted, requires: "[t]o the

194 See 75 FR at 75218.

195 See DTCC V at 12.

extent not provide pursuant to other provisions of this paragraph (d), if the direct counterparties do not submit the security-based swap to clearing, a description of the settlement terms, including whether the security-based swap is cash-settled or physically settled, and the method for determining the settlement value." The Commission believes that the final rule makes clear that there is no requirement to report information concerning the settlement terms of an uncleared security-based swap if the information was reported pursuant to another provision of Rule 901(d). Similarly, there is no requirement to report the settlement terms pursuant to Rule 901(d)(8) if the settlement terms are inherent in the product ID. Final Rule 901(d)(8) is designed to facilitate regulatory oversight by providing the Commission and other relevant authorities with information necessary to understand the exposures of security-based swap counterparties.

i. Rule 901(d)(9)—Platform ID

Rule 901(d)(1)(ix), as re-proposed, would have required reporting of the venue where a security-based swap was executed. This would include, if applicable, an indication that a security-based swap was executed bilaterally in the OTC market.[196] This information could be useful for a variety of purposes, including studying the development of security-based swap execution facilities ("SB SEFs") or conducting more detailed surveillance of particular security-based swap transactions. In the latter case, the Commission or another relevant authority would find it helpful to know the execution venue, from which it could obtain additional information as appropriate.

One commenter, in discussing the entity that should assign transaction IDs, suggested that linking a trade to a particular platform potentially could result in the unintentional disclosure

196 See Regulation SBSR Proposing Release, 75 FR at 75218.

of the identities of the counterparties.[197] The Commission notes that information concerning the venue where a security-based swap was executed, like all secondary trade information reported under Rule 901(d), is not required to be, and thus may not be, publicly disseminated. Because the platform ID may not be publicly disseminated, there is no potential for it to unintentionally identify the counterparties to the transaction.

The Commission continues to believe that information identifying the venue where a security-based swap was executed, whether on a trading platform or in the OTC market, is necessary information for relevant authorities to conduct surveillance in the security-based swap market and understand developments in the security-based swap market generally. Therefore, the Commission is adopting the rule substantially as re-proposed and renumbering it as final Rule 901(d)(9).

One commenter asked the Commission to clarify that re-proposed Rule 901(d)(1)(ix) would require reporting only of execution platforms required to register with the Commission or the CFTC.[198] The Commission believes that final Rule 901(d)(9) largely accomplishes this result. Specifically, the Commission has revised Rule 901(d)(9) to require reporting, if applicable, of the "platform ID," rather than the "execution venue" more broadly. To implement this requirement, the Commission also is adopting a definition of "platform." Final Rule 900(v) defines a "platform" as "a national securities exchange or a security-based swap execution facility that is registered or exempt from registration."[199] Rule 900(w) defines "platform ID" as

---

197 See DTCC II at 15-16.

198 See ISDA IV at 9.

199 The Commission believes that transactions occurring on a registered SB SEF as well as an exempt SB SEF should be reported to a registered SDR. Certain entities that currently meet the definition of "security-based swap execution facility" are not yet registered with the Commission and will not have a mechanism for registering until the Commission

the UIC assigned to the platform on which a security-based swap is executed. The platform ID, like other UICs, must be assigned as provided in Rule 903. The Commission believes that this approach makes clear that other entities that may be involved in executing transactions, such as inter-dealer brokers, are not considered platforms for purposes of this reporting requirement.[200]

j. Rule 901(d)(10)—Transaction ID of Any Related Transaction

Regulation SBSR, as proposed and re-proposed, was designed to obtain complete and accurate reporting of information regarding a security-based swap from its execution through its termination or expiration. In the Regulation SBSR Proposing Release, the Commission noted that maintaining an accurate record of the terms of a security-based swap would require reporting of life cycle event information to a registered SDR.[201] The term "life cycle event" includes

---

adopts final rules governing the registration and core principles of SB SEFs. These entities currently operate pursuant to an exemption from certain otherwise applicable provisions of the Exchange Act. See Securities Exchange Act Release No. 34-64678 (June 15, 2011), 76 FR 36287, 36292-93 (June 22, 2011) (Temporary Exemptions and Other Temporary Relief, Together With Information on Compliance Dates for New Provisions of the Securities Exchange Act of 1934 Applicable to Security-Based Swaps). In addition, the Commission has raised the possibility of granting exemptions to certain foreign security-based swap markets that otherwise would meet the definition of "security-based swap execution facility." See Cross-Border Proposing Release, 78 FR at 31056 ("The Commission preliminarily believes that it may be appropriate to consider an exemption as an alternative approach to SB SEF registration depending on the nature or scope of the foreign security-based swap market's activities in, or the nature or scope of the contacts the foreign security-based swap market has with, the United States"). The adopted definition of "platform" requires such entities to be identified in SDR transaction reports and thus will enable the Commission and other relevant authorities to observe transactions that occur on such exempt SB SEFs.

200 Consistent with Rule 901(d)(9), a registered SDR could create a single identifier for transactions that are not executed on a national securities exchange or a SB SEF that is registered or exempt from registration.

201 See 75 FR at 75220. The Commission re-affirmed the importance of life cycle event reporting for security-based swaps in the Cross-Border Proposing Release. See 75 FR at 31068.

terminations, novations, and assignments of existing security-based swaps.[202] As discussed in greater detail in Sections V(C)(5) and VIII(A), infra, a new security-based swap may arise following the allocation, termination, novation, or assignment of an existing security-based swap, and that the reporting side for the new security-based swap must report the transaction to a registered SDR.[203] The Commission believes that it should be able to link any new security-based swaps that arise from the termination, novation, or assignment of an existing security-based swap to the original transaction. For example, when a single security-based swap is executed as a bunched order and then allocated among multiple counterparties, the Commission and other relevant authorities should be able to link the allocations to the executed bunched order.[204] The ability to link a security-based swap that arises from an allocation, termination, novation, or assignment back to the original security-based swap(s) will help to assure that the Commission and relevant authorities have an accurate and current representation of counterparty exposures.

To facilitate the Commission's ability to map a resulting security-based swap back to the original transaction—particularly if the original transaction and the resulting transaction(s) are reported to different registered SDRs—the Commission is adopting Rule 901(d)(10), which requires the reporting side for a security-based swap that arises from an allocation, termination,

202 See infra Section XXI(A) (discussing the definition of "life cycle events").

203 Certain terminations, such as the termination of an alpha upon acceptance for clearing, result in the creation of new security-based swaps (e.g., the beta and gamma). Similarly, security-based swaps that are terminated during netting or compression exercises result in the creation of new security-based swaps. Regardless of the circumstances, if a security-based swap arises from the termination of an existing security-based swap, the reporting side for the new security-based swap must report the transaction to a registered SDR as required by Rule 901(a).

204 See infra Section VIII (explaining the application of Regulation SBSR to security-based swaps involving allocations).

novation, or assignment of one or more existing security-based swaps, to report "the transaction ID of the allocated, terminated, assigned, or novated security-based swap(s), except in the case of a clearing transaction that results from the netting or compression of other clearing transactions."[205] The Commission does not believe that it is necessary to require reporting of the transaction ID for clearing transactions that result from other clearing transactions because clearing transactions occur solely within the registered clearing agency and are used by the registered clearing agency to manage the positions of clearing members and, possibly their clients. Thus, it would not be necessary for regulatory authorities to have the ability to link together clearing transactions that result from other clearing transactions.

k. Information That Is Not Required by Rule 901(d)

One commenter, responding to a question in the Regulation SBSR Proposing Release,[206] stated that the Commission should not require reporting of the purpose of a security-based swap because it could reveal proprietary information, and because the parties to a security-based swap often will have several reasons for executing the transaction.[207] The Commission agrees that counterparties could have multiple reasons for entering into a security-based swap, and that requiring reporting of a particular reason could be impractical. Furthermore, different sides to the same transactions would likely have different reasons for entering into it. The Commission notes, further, that it did not propose to require reporting of the purpose of the security-based swap and Rule 901, as adopted, does not include a requirement to report this information.

205 See infra Section V(B) (discussing the definition of "clearing transaction").

206 See 75 FR at 75218 (question 39).

207 See ISDA/SIFMA I at 12. See also Barnard I at 2 (stating that the commenter was "not convinced" that the Commission should require reporting of the purpose of a security-based swap transaction).

Two commenters recommended that the Commission require reporting of valuation data on an ongoing basis.[208] The Commission emphasizes that it did not propose to require the reporting of valuation data in either the Regulation SBSR Proposing Release or the Cross-Border Proposing Release, and that it is not adopting such a requirement at this time.[209] However, the Commission will continue to assess the reporting and public dissemination regime under Regulation SBSR and could determine to propose additional requirements, such as the reporting of valuations, as necessary or appropriate. In addition, the Commission notes that the data elements required under Rules 901(c) and 901(d) are designed to allow the public, the Commission, other relevant authorities, or a data analytics firm engaged by a relevant authority, to calculate the market value of a security-based swap at the time of execution of the trade.[210]

C. Reporting of Historical Security-Based Swaps

1. Statutory Basis and Proposed Rule

Section 3C(e)(1) of the Exchange Act[211] requires the Commission to adopt rules

---

208 See DTCC II at 10; Markit I at 3. A third commenter, discussing the Commission's proposed rules governing recordkeeping and reporting requirements for security-based swap dealers, major security-based swap participants, and broker-dealers (Securities Exchange Act Release No. 34-71958 (April 17, 2014), 79 FR 25194 (May 2, 2014)), urged the Commission to provide guidance regarding the methods these entities should use to produce valuation information). See Levin Letter at 3-4. A fourth commenter asked the Commission to confirm that there is no requirement to report valuation data on a daily basis, provided that there has been no change in the data. See ISDA IV at 11.

209 See also Section II(B)(3)(e), supra.

210 See Rule 901(d)(5) (requiring reporting of any additional data elements included in the agreement between the counterparties, to the extent not already provided under another provision of Rule 901(c) or 901(d), that are necessary for a person to determine the market value of the transaction); Regulation SBSR Proposing Release, 75 FR at 75218 ("the reporting of data elements necessary to calculate the market value of a transaction would allow regulators to value an entity's [security-based swap] positions and calculate the exposure resulting from those provisions").

211 15 U.S.C. 78c-3(e)(1).

providing for the reporting to a registered SDR or to the Commission of security-based swaps entered into before the date of enactment of Section 3C (i.e., July 21, 2010). By its terms, this provision is not limited to security-based swaps that were still open as of the date of enactment of the Dodd-Frank Act. In the Regulation SBSR Proposing Release, the Commission took the preliminary view that an attempt to collect many years' worth of transaction-level security-based swap data (including data on terminated or expired security-based swaps) would not enhance the goal of price discovery, nor would it be particularly useful to relevant authorities or market participants in implementing a forward-looking security-based swap reporting and dissemination regime.[212] The Commission also took the preliminary view that collecting, reporting, and processing all such data would involve substantial costs to market participants with little potential benefit. Accordingly, the Commission proposed to limit the reporting of security-based swaps entered into prior to the date of enactment to only those security-based swaps that had not expired as of the date of enactment of the Dodd-Frank Act ("pre-enactment security-based swaps").

In addition, Section 3C(e)(2) of the Exchange Act[213] requires the Commission to adopt rules that provide for the reporting of security-based swaps entered into on or after the date of enactment of Section 3C ("transitional security-based swaps").[214]

The Commission proposed Rule 901(i) to implement both of these statutory requirements. Rule 901(i), as proposed, would have required a reporting party to report all of the

---

212 See 75 FR at 75223-24.

213 15 U.S.C. 78c-3(e)(2).

214 See Regulation SBSR Proposing Release, 75 FR at 75224. See also re-proposed Rule 900(kk) (defining "transitional security-based swap" to mean "any security-based swap executed on or after July 21, 2010, and before the effective reporting date").

information required by Rules 901(c) and 901(d) for any pre-enactment security-based swap or transitional security-based swap (collectively, "historical security-based swaps"), to the extent such information was available. Thus, Rule 901(i), as proposed and re-proposed, would have required the reporting only of security-based swaps that were open on or executed after the date of enactment (July 21, 2010). The Commission further proposed that historical security-based swaps would not be subject to public dissemination. In the Cross-Border Proposing Release, the Commission re-proposed Rule 901(i) in its entirety with only one technical revision, to replace the term "reporting party" with "reporting side."

2. Final Rule and Discussion of Comments Received

As adopted, Rule 901(i) states: "With respect to any pre-enactment security-based swap or transitional security-based swap in a particular asset class, and to the extent that information about such transaction is available, the reporting side shall report all of the information required by [Rules 901(c) and 901(d)] to a registered security-based swap data repository that accepts security-based swaps in that asset class and indicate whether the security-based swap was open as of the date of such report." In adopting Rule 901(i), the Commission is making minor changes to the rule as re-proposed in the Cross-Border Proposing Release. The Commission has added the clause "in a particular asset class" following "transitional security-based swap" and the clause "to a registered security-based swap data repository that accepts security-based swaps in that asset class." The security-based swap market is segregated into different asset classes, and an SDR might choose to collect and maintain data for only a single asset class. These new clauses clarify that a reporting side is not obligated to report historical security-based swaps in a particular asset class to a registered SDR that does not accept security-based swaps in that asset class. A reporting side's duty to report a historical security-based swap in a particular asset class arises only when there exists a registered SDR that accepts security-based swaps in that asset class.

The Commission also is adopting the definition of "pre-enactment security-based swap" as proposed and re-proposed.[215] Further, the Commission is adopting the definition of "transitional security-based swap" substantially as proposed and re-proposed, with one clarifying change and a technical revision to eliminate the obsolete term "effective reporting date."[216] Rule 900(nn), as adopted, defines "transitional security-based swap" to mean "a security-based swap executed on or after July 21, 2010, and before the first date on which trade-by-trade reporting of security-based swaps in that asset class to a registered security-based swap data repository is required pursuant to §§ 242.900 through 242.909." Thus, only those security-based swaps that were open as of the date of enactment (July 21, 2010) or opened thereafter must be reported. The Commission continues to believe that the costs of reporting security-based swaps that terminated or expired before July 21, 2010, would not justify any potential benefits, particularly given the difficulty of assembling records concerning these transactions after many years. One commenter specifically agreed with the Commission's proposal to limit reporting of security-

---

215 See Rule 900(y).

216 The term "effective reporting date" was used in the compliance schedule set out in re-proposed Rule 910, which the Commission is not adopting. The "effective reporting date," would have been defined to mean, with respect to a registered [SDR], the date six months after the registration date. The "registration date" would have been defined to mean, with respect to a registered SDR, "the date on which the Commission registers the security-based swap data repository, or, if the Commission registers the security-based swap data repository before the effective date of §§ 242.900 through 242.911, the effective date of §§ 242.900 through 242.911." See re-proposed Rules 900(l) and 900(bb), respectively. The Commission is making a conforming change to delete the defined terms "effective reporting date" and "registration date" from final Rule 900. As noted in Section I(F) above, the Commission is proposing a new compliance schedule for Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR in the Regulation SBSR Proposed Amendments Release.

based swaps entered into prior to the date of enactment only to those that had not expired as of that date.[217]

However, this commenter also expressed concern that a blanket requirement to report all pre-enactment security-based swaps "risks double-counting and presenting a distorted view of certain markets."[218] In particular, the commenter indicated that compression exercises and tri-party novations raised concerns regarding the potential for double-counting. The Commission shares the commenter's concern that double-counting could create a distorted view of the security-based swap market. Therefore, the Commission is adding new language at the end of the Rule 901(i) which provides that the reporting side of a pre-enactment or transitional security-based swap must "indicate whether the security-based swap was open as of the date of such report." This information is necessary to allow a registered SDR to calculate a participant's open positions established before the time trade-by-trade reporting becomes mandatory for a particular asset class.

The commenter also stated that "inter-affiliate security-based swaps should not be subject to reporting."[219] The Commission disagrees with this suggestion. As described in Section IX, infra, the Commission believes generally that inter-affiliate security-based swaps should be subject to regulatory reporting and public dissemination. The Commission thus believes that pre-enactment inter-affiliate security-based swaps also should be subject to regulatory reporting, assuming that such security-based swaps were opened after the date of enactment or still open as

---

217 See ISDA I at 2, note 1.

218 Id. at 4.

219 ISDA I at 5.

of the date of enactment. The Commission notes, however, that no information reported pursuant to Rule 901(i) will be publicly disseminated.

Having access to information regarding historical security-based swaps will help the Commission and other relevant authorities continue to develop a baseline understanding of positions and risk in the security-based swap market, starting on the date of enactment of the Dodd-Frank Act, which contemplates the regime for regulatory reporting of all security-based swaps. These transaction reports will provide a benchmark against which to assess the development of the security-based swap market over time, and help the Commission to prepare reports that it is required to provide to Congress.

One commenter, while generally supporting the Commission's proposal to require reporting of historical security-based swaps to a registered SDR, argued that only open contracts should be reported.[220] The Commission partially agrees with this comment and thus, as noted above, is requiring reporting of only pre-enactment security-based swaps that were open as of the date of enactment. However, the Commission believes that all security-based swaps entered into on or after the date of enactment should be reported—even if they expired or were terminated before trade-by-trade reporting becomes mandatory—and that the reporting side should indicate whether the security-based swap was open as of the date of such report. While reporting of terminated or expired transitional security-based swaps is not necessary for the calculation of market participants' open positions, this information will assist the Commission and other relevant authorities to create, for surveillance purposes, at least a partial audit trail[221] of

220 See DTCC II at 17.

221 The Commission notes that Rule 901(i) by its terms requires the reporting of historical security-based swaps only "to the extent such information is available." Thus, if

transactions executed after the date of enactment and, more generally, to analyze market developments since the date of enactment.

This commenter also argued that security-based swaps "only [in] their current state should need to be reported, without additional information like execution time."[222] A second commenter expressed concern that the reporting requirements for historical security-based swaps could require parties to modify existing trades that occurred in a heretofore unregulated market in order to comply with Rule 901(i).[223] A third commenter expressed concern that "[t]he submission of non-electronic transaction confirmations [for pre-enactment security-based swaps] will be extremely burdensome for reporting entities,"[224] and recommended instead that the Commission "permit the reporting in a common electronic format of the principal electronic terms" of each such pre-enactment security-based swap.[225]

For several reasons, the Commission believes that Rule 901(i) strikes a reasonable balance between the burdens placed on security-based swap counterparties and the policy goal of enabling the Commission and other relevant authorities to develop a baseline understanding of counterparties' security-based swap positions. First, the Commission notes that Rule 901(i) requires reporting of the data elements set forth in Rules 901(c) and 901(d) only to the extent

---

information about terminated or expired transitional security-based swaps no longer exists, it would not be required to be reported under Rule 901(i).

222 DTCC II at 17. See also ISDA I at 5 (requesting that the Commission clarify that market participants are not required to provide trade execution time information for pre-enactment security-based swap transactions).

223 See Roundtable Letter at 11 (stating that "any effort to alter the terms or documentation of existing swaps would be resource intensive with potentially significant negative consequences").

224 Deutsche Bank Letter at 2.

225 Id. at 3.

such information is available. The Commission does not expect, nor is it requiring, reporting sides to create or re-create data related to historical security-based swaps. Thus, if the time of execution of a historical security-based swap was not recorded by the counterparties, it is not required to be reported under Rule 901(i). Similarly, Rule 901(i) does not require counterparties to modify existing transactions in any way to ensure that all data fields are complete. By limiting the reporting requirement to only that information that is available, the Commission is acknowledging that, for historical security-based swaps, certain information contemplated by Rules 901(c) and 901(d) may not be available. The Commission generally believes that the benefits of requiring security-based swap counterparties to reconstruct the missing data elements—including, for example, the time of execution—potentially several years after the time of execution—would not justify the costs.

The Commission agrees with the commenter who argued that providing large volumes of non-electronic confirmations to registered SDRs is not desirable, and that the Commission instead should require reporting in a "common electronic format."[226] As discussed in Section IV, infra, Rules 907(a)(1) and 907(a)(2) require registered SDRs to establish and maintain policies and procedures that enumerate the specific data elements and the acceptable data formats for transaction reporting, including of historical security-based swaps. The Commission expects that registered SDRs and their participants will consult regarding the most efficient and cost effective ways to report the transaction information required by Rule 901(i). Furthermore, to the extent that information regarding a historical security-based swap already has been reported to a person that will register with the Commission as an SDR—or to a person that itself will not seek registration as an SDR but will transfer the historical security-based swap information to an

---

226 Deutsche Bank Letter at 2-3.

affiliate that registers as an SDR—Rule 901(i) would be satisfied, and would not require resubmission of that information to the registered SDR.[227]

Finally, the Commission notes an issue relating to the reporting of the counterparty ID of historical security-based swaps. As commenters have discussed,[228] certain foreign jurisdictions have privacy laws or blocking statutes that may prohibit the disclosure of the identity of a counterparty to a financial transaction, such as a security-based swap transaction. Thus, the reporting side of a cross-border security-based swap could face a dilemma: comply with Regulation SBSR and report the identity of the counterparty and thereby violate the foreign law, or comply with the foreign law by withholding the identity of the counterparty and thereby violate Regulation SBSR. As discussed in Section XVI(B), infra, the Commission will consider requests for exemptions from the requirement under Rule 901(i) to report the identity of a counterparty with respect to historical security-based swaps.

III. Where To Report Data

A. All Reports Must Be Submitted to a Registered SDR

Section 13A(a)(1) of the Exchange Act[229] provides that "[e]ach security-based swap that is not accepted for clearing by any clearing agency or derivatives clearing organization shall be reported to—(A) a registered security-based swap data repository described in Section 13(n); or (B) in the case in which there is no security-based swap data repository that would accept the

---

227 One commenter, DTCC, noted that the Trade Information Warehouse could provide an affiliate that will seek registration as an SDR with information related to security-based swaps that were previously reported to the Trade Information Warehouse. See DTCC II at 17.

228 See infra note 956.

229 15 U.S.C. 78m-1(a)(1).

security-based swap, to the Commission." Section 13(m)(1)(G) of the Exchange Act[230] provides that "[e]ach security-based swap (whether cleared or uncleared) shall be reported to a registered security-based swap data repository." Rule 901(b) implements these statutory requirements.

Rule 901(b), as re-proposed, would have required reporting of the security-based swap transaction information required under Regulation SBSR "to a registered security-based swap data repository or, if there is no registered security-based swap data repository that would accept the information, to the Commission." In addition, Rule 13n-5(b)(1)(ii) under the Exchange Act, adopted as part of the SDR Adopting Release, requires an SDR that accepts reports for any security-based swap in a particular asset class to accept reports for all security-based swaps in that asset class that are reported to the SDR in accordance with certain SDR policies and procedures. In view of this requirement under Rule 13n-5(b)(1)(ii) and the statutory requirement in Section 13(m)(1)(G) that all security-based swaps, whether cleared or uncleared, must be reported to a registered SDR, the Commission does not anticipate that any security-based swaps will be reported directly to the Commission.

Some commenters noted the potential advantages of designating a single registered SDR for each asset class.[231] Another commenter, however, believed that a diverse range of options for reporting security-based swap data would benefit the market and market participants.[232] These

---

230 15 U.S.C. 78m(m)(1)(G).

231 See DTCC II at 14-15 (noting the potential for fragmentation of data and overstatement of net open interest and net exposure if security-based swaps in the same asset class are reported to multiple registered SDRs); ISDA/SIFMA I at note 12 (stating that the designation of a single registered SDR per asset would provide valuable efficiencies because there would be no redundancy of platforms or need for additional data aggregation, which would reduce the risk of errors associated with transmitting, aggregating, and analyzing data from multiple sources).

232 See MFA I at 6.

comments concerning the development of multiple registered SDRs are discussed in Section XIX, infra. No commenters opposed Rule 901(b), and the Commission is adopting Rule 901(b) with technical modifications to clarify the rule.[233]

B. Duties of Registered SDR Upon Receiving Transaction Reports

1. Rule 901(f)—Time Stamps

Rule 901(f), as re-proposed, provided that "[a] registered security-based swap data repository shall time stamp, to the second, its receipt of any information submitted to it pursuant to paragraph (c), (d), (e), or (i) of this section." The Commission preliminarily believed that this requirement would help regulators to evaluate certain trading activity.[234] For example, a reporting side's pattern of submitting late transaction reports could be an indicator of weaknesses in the reporting side's internal compliance processes. Accordingly, the Commission preliminarily believed that the ability to compare the time of execution with the time of receipt of the report by the registered SDR could be an important component of surveillance activity conducted by relevant authorities.

One commenter, noting that proposed Rule 901(f) would require time-stamping to the nearest second, argued that "[t]ime-stamping increment should be as small as technologically practicable, but in any event no longer than fractions of milliseconds."[235] The commenter

---

233 Rule 901(b), as re-proposed, would have required reporting of the security-based swap transaction information required under Regulation SBSR "to a registered security-based swap data repository or, if there is no registered security-based swap data repository that would accept the information, to the Commission." Final Rule 901(b) provides: "If there is no registered security-based swap data repository that will accept the report required by § 242.901(a), the person required to make such report shall instead provide the required information to the Commission."

234 See Regulation SBSR Proposing Release, 75 FR at 75221.

235 Better Markets I at 9.

expressed the view that, especially in markets with multiple SB SEFs or where algorithmic trading occurs, "the sequencing of trade data for transparency and price discovery, as well as surveillance and enforcement purposes, will require much smaller increments of time-stamping."[236] The Commission notes, however, that Rule 901(f) is designed to allow the Commission to learn when a transaction has been reported to a registered SDR, not when the transaction was executed. The interim phase of applying Regulation SBSR allows transactions to be reported up to 24 hours after time of execution. The Commission believes that no purpose would be served by knowing the moment of reporting to the subsecond. Instead, the Commission believes that this comment is germane instead to the reporting of time of execution. Therefore, the Commission has considered this comment in connection with Rule 901(c)(2) rather than with Rule 901(f).[237]

The Commission continues to believe that requiring a registered SDR to timestamp, to the second, its receipt of any information pursuant to paragraphs (c), (d), (e), or (i) of Rule 901 is appropriate, and is adopting Rule 901(f) as re-proposed. Rule 901(f) will allow the Commission to compare the time of execution against the time of receipt by the registered SDR to ascertain if a transaction report has been submitted late.

2. Rule 901(g)—Transaction IDs

Rule 901(g), as proposed and re-proposed, would have provided that "[a] registered security-based swap data repository shall assign a transaction ID to each security-based swap." The transaction ID was defined in both the proposal and re-proposal as "the unique identification code assigned by a registered security-based swap data repository to a specific security-based

236 Id.

237 See supra notes 76 and 77 and accompanying text.

swap." The Commission preliminarily believed that a unique transaction ID would allow registered SDRs, regulators, and counterparties to more easily track a security-based swap over its duration and would facilitate the reporting of life cycle events and the correction of errors in previously reported security-based swap information.[238] The transaction ID of the original security-based swap would allow for the linking of the original report to a report of a life cycle event. Similarly, the transaction ID would be required to be included on an error report to identify the transaction to which the error report pertained.

In proposing Rule 901(g), the Commission preliminarily believed that, because each transaction is unique, it would not be necessary or appropriate to look to an internationally recognized standards setting body for assigning such identifiers.[239] Instead, proposed Rule 901(g) would have required a registered SDR to use its own methodology for assigning transaction IDs.[240]

Two commenters generally supported use of the transaction ID.[241] One commenter stated that transaction IDs would allow for a complete audit trail, permit the observation of concentrations of trading and risk exposure at the transaction level, and facilitate more timely analysis of market events.[242] The second commenter agreed that a transaction ID would be

238 See Regulation SBSR Proposing Release, 75 FR at 75221.

239 See id.

240 See id.

241 See GS1 Proposal at 42; DTCC II at 15.

242 See GS1 Proposal at 42 (also stating that transaction IDs would benefit internal compliance departments and self-regulatory organizations).

essential for reporting life cycle event and secondary trade information, as well as corrections to reported information.[243]

Commenters expressed mixed views regarding the entity that should assign the transaction ID. One commenter stated that a platform should assign the transaction ID to assure that the identifier is assigned at the earliest point in the life of a transaction.[244] A second commenter suggested that registered SDRs should assign transaction IDs,[245] or have the flexibility to accept transaction IDs already generated by the reporting side or to assign transaction IDs when requested to do so.[246] A third commenter expressed concern that registered SDRs would assign transaction IDs in a non-standard manner, which could hinder regulators' ability to gather transaction data across registered SDRs to reconstruct an audit trail.[247] A fourth commenter, a trade association, recommended that security-based swaps be identified by a Unique Trade Identifier ("UTI") created either by the reporting side or by a platform (including

---

243 See DTCC II at 15. Another commenter believed that proposed Regulation SBSR would require public dissemination of the transaction ID, and argued that the transaction ID should not be publicly disseminated, as it could compromise the identity of the counterparties to the security-based swap. The commenter suggested instead that an SDR could create a separate identifier solely for purposes of public dissemination. See ISDA IV at 17. Under Regulation SBSR, as adopted, the transaction ID is not a data element of security-based swap transaction that is required to be publicly disseminated. Thus, registered SDRs must identify transactions in public reports without using the transaction ID. See infra Section XII(C) (discussing requirement for registered SDRs to establish and maintain policies and procedures for disseminating life cycle events).

244 See Tradeweb Letter at 5.

245 DTCC II at 16 (arguing that this approach would "eliminate any unintentional disclosure issues which stem from linking a trade to a specific SEF, potentially increasing the instances of unintended identification of the trade parties").

246 See DTCC V at 14.

247 See GS1 Proposal at 42-43 (recommending an identification system that would allow counterparties, participants, SB SEFs, and registered SDRs to assign transaction IDs to specific transactions).

an execution venue or an affirmation or middleware or electronic confirmation platform) on behalf of the parties.[248] This commenter noted that it has worked with market participants to develop a standard for creating and exchanging a single unique transaction identifier suitable for global reporting.[249]

After careful consideration, the Commission has determined to adopt Rule 901(g) with modifications to respond to concerns raised by the commenters. Final Rule 901(g) provides that a registered SDR "shall assign a transaction ID to each security-based swap, or establish or endorse a methodology for transaction IDs to be assigned by third parties." The Commission is also making a conforming change to the definition of "transaction ID." Final Rule 900(mm) defines "transaction ID" as "the UIC assigned to a specific security-based swap transaction." As re-proposed, "transaction ID" would have been defined as "the unique identification code assigned by a registered security-based swap data repository to a specific security-based swap."[250] By eliminating the reference to a UIC "assigned by a registered security-based swap data repository," the revised definition contemplates that a third party could assign a transaction ID under Regulation SBSR. However, because the Commission believes that the registered SDR

---

248 See ISDA III at 2.

249 See id. In a subsequent comment letter, this commenter indicated that it "strongly believe[s] the party reporting the SBS should assign or provide the Transaction ID" rather than a registered SDR. ISDA IV at 11 (stating that "many SBS already have been reported to other global jurisdictions for which a . . . UTI (including a CFTC Unique Swap Identifier) has already been assigned by one of the parties or a central execution, affirmation or confirmation platform in accordance with industry standard practices for trade identifiers that have developed in the absence of a global regulatory standard. For the sake of efficiency and in consideration of global data aggregation, we recommend that the Commission allow a reporting party to use the UTI already established for a SBS for further reporting under SBSR and acknowledge that trades subject to reporting under SBSR may be assigned a trade identifier in accordance with existing industry UTI practices").

250 See re-proposed Rule 900(jj).

is in the best position to promote the necessary uniformity for UICs that will be reported to it, the reporting side would be permitted to report a transaction ID generated by a third party only if the third party had employed a methodology for generating transaction IDs that had been established or endorsed by the registered SDR.

Rule 901(g), as adopted, provides flexibility by requiring a registered SDR either to assign a transaction ID itself or to establish or endorse a methodology for assigning transaction IDs. Thus, under adopted Rule 901(g), an SB SEF, a counterparty, or another entity could assign a transaction ID, provided that it assigned the transaction ID using a methodology established or endorsed by the registered SDR. This approach will allow market participants to determine the most efficient and effective procedures for assigning transaction IDs and will accommodate the use of different processes that might be appropriate in different circumstances.[251] For example, an SB SEF might generate the transaction ID for a security-based swap executed on its facilities (provided the SB SEF does so using a methodology established or endorsed by the registered SDR[252]), while a registered SDR or security-based swap dealer counterparty might generate the transaction ID for a security-based swap that is not executed on an SB SEF.

251 This approach will allow a platform to assign the transaction ID in certain cases, as recommended by a commenter. See Tradeweb Letter at 5.

252 Thus, the Commission only partially agrees with the commenter who believed that the registered SDR should assign transaction IDs, in order to "eliminate any unintentional disclosure issues which stem from linking a trade to a specific SEF, potentially increasing the instances of unintended identification of the trade parties." DTCC II at 16. The Commission shares the commenter's concern that the transaction ID not result in the unintended identification of the counterparties. However, this would not require that the registered SDR itself issue the transaction ID in all cases; the registered SDR could allow submission of transaction IDs generated by third parties (such as SB SEFs or counterparties), provided that the registered SDR endorsed the methodology whereby third parties can generate transaction IDs. Furthermore, the Commission notes that the transaction ID is not a data element required by Rule 901(c) and thus it should not be

IV. How To Report Data—Rules 901(h) and 907

A. Introduction

Designing a comprehensive system of transaction reporting and post-trade transparency for security-based swaps involves a constantly evolving market, thousands of participants, and potentially millions of transactions. The Commission does not believe that it is necessary or appropriate to specify by rule every detail of how this system should operate. On some matters, there may not be a single correct approach for carrying out the purposes of Title VII's requirements for regulatory reporting and public dissemination of security-based swap transactions.

The Commission believes that registered SDRs will play an important role in developing, operating, and improving the system for regulatory reporting and public dissemination of security-based swaps. Registered SDRs are at the center of the market infrastructure, as the Dodd-Frank Act requires all security-based swaps, whether cleared or uncleared, to be reported to them.[253] Accordingly, the Commission believes that some reasonable flexibility should be given to registered SDRs to carry out their functions—for example, to specify the formats in which counterparties must report transaction data to them, connectivity requirements, and other protocols for submitting information. Furthermore, the Commission anticipates that counterparties will make suggestions to registered SDRs for altering and improving their practices, or developing new policies and procedures to address new products or circumstances, consistent with the requirements set out in Regulation SBSR.

---

publicly disseminated—so market observers should not be able to learn the transaction ID in any case.

253 See 15 U.S.C. 13m(m)(1)(G).

Accordingly, proposed Rule 907 would have required each registered SDR to establish and maintain written policies and procedures addressing various aspects of security-based swap transaction reporting. Proposed Rules 907(a)(1) and 907(a)(2) would have required a registered SDR to establish policies and procedures enumerating the specific data elements that must be reported, the acceptable data formats, connectivity requirements, and other protocols for submitting information; proposed Rule 907(a)(3) would have required a registered SDR to establish policies and procedures for reporting errors and correcting previously submitted information; proposed Rule 907(a)(4) would have required a registered SDR to establish policies and procedures for, among other things, reporting and publicly disseminating life cycle events and transactions that do not reflect the market; proposed Rule 907(a)(5) would have required a registered SDR to establish policies and procedures for assigning UICs; proposed Rule 907(a)(6) would have required a registered SDR to establish policies and procedures for obtaining ultimate parent and affiliate information from its participants; and proposed Rule 907(b) would have required a registered SDR to establish policies and procedures for calculating and publicizing block trade thresholds. The Commission also proposed to require registered SDRs to make their policies and procedures publicly available on their websites, and to update them at least annually.[254] Rule 901(h), as proposed and re-proposed, would have required reports to be made to a registered SDR "in a format required by the registered security-based swap data repository, and in accordance with any applicable policies and procedures of the registered security-based swap data repository."

Furthermore, because all security-based swaps must be reported to a registered SDR, registered SDRs are uniquely positioned to know of any instances of untimely, inaccurate, or

---

[254] See proposed Rules 907(c) and 907(d).

incomplete reporting. Therefore, proposed Rule 907(e) would have required registered SDRs to have the capacity to provide the Commission with reports related to the timeliness, accuracy, and completeness of the data reported to them.

The Commission re-proposed Rule 907 as part of the Cross-Border Proposing Release with only minor conforming changes.[255] Rule 901(h) was re-proposed without revision.

B. Rules 907(a)(1), 907(a)(2), and 901(h)—Data Elements and Formats

The comments addressing Rule 907 were generally supportive of providing flexibility to registered SDRs to develop policies and procedures.[256] One commenter stated, for example, that overly prescriptive rules for how data is reported will almost certainly result in less reliable or redundant data flowing into an SDR when higher quality data is available. In this commenter's view, the Commission should not prescribe the exact means of reporting for SDRs to meet regulatory obligations, and SDRs should be afforded the flexibility to devise the most efficient, effective, and reliable methods of furnishing the Commission with the complete set of data necessary to fulfill regulatory obligations.[257] The Commission is adopting Rule 907 with some revisions noted below.

Final Rule 907(a)(1) requires a registered SDR to establish and maintain written policies and procedures that "enumerate the specific data elements of a security-based swap that must be reported, which shall include, at a minimum, the data elements specified in [Rules 901(c) and 901(d)]." The Commission revised Rule 907(a)(1) to make certain non-substantive changes and

---

255 As initially proposed, Rule 907 used the term "reporting party." As described in the Cross-Border Proposing Release, the term "reporting party" was replaced with "reporting side" in Rule 907 and throughout Regulation SBSR.

256 See DTCC IV at 5. See also Barnard I at 3.

257 See DTCC IV at 5.

to move the requirement to establish policies and procedures for life cycle event reporting from final Rule 907(a)(1) to final Rule 907(a)(3).[258] Final Rule 907(a)(2) requires a registered SDR to establish and maintain written policies and procedures that "specify one or more acceptable data formats (each of which must be an open-source structured data format that is widely used by participants), connectivity requirements, and other protocols for submitting information." The Commission is adopting Rule 907(a)(2) as re-proposed.

The Commission continues to believe that it is neither necessary nor appropriate to mandate a fixed schedule of data elements to be reported, or a single format or language for reporting such elements to a registered SDR. The Commission anticipates that industry standards for conveying information about security-based swap transactions will evolve over time, and the approach taken in Rule 907 is designed to allow Regulation SBSR's reporting requirements to evolve with them. The Commission further anticipates that security-based swap products with novel contract terms could be developed in the future. Establishing, by Commission rule, a fixed schedule of data elements risks becoming obsolete, as new data elements—as yet unspecified—could become necessary to reflect the material economic terms of such products. Final Rules 907(a)(1) and 907(a)(2) give registered SDRs the duty, but also the flexibility, to add, remove, or amend specific data elements or to adjust the required reporting protocols over time in a way that captures all of the material terms of a security-based swap

---

258 As initially proposed, Rule 907(a)(1) would have required policies and procedures that enumerate the specific data elements of a security-based swap or life cycle event that a reporting party must report. In addition, proposed Rule 907(a)(4) would have required a registered SDR to establish policies and procedures for reporting and publicly disseminating life cycle events, among other things. The Commission is consolidating the requirements to establish policies and procedures for reporting life cycle events in final Rule 907(a)(3). See infra Section XII(C). The Commission also revised Rule 907(a)(1) so that the final rule text refers to the data elements "that must be reported," rather than the data elements that a reporting side must report.

while minimizing the reporting burden on its participants.[259] One commenter supported this approach, stating that "[a] registered SDR should have the flexibility to specify acceptable formats, connectivity requirements and other protocols for submitting information."[260] The commenter added that "[m]arket practice, including the structure of confirmation messages and detail of economic fields, evolve over time, and the SDR should have the capability to adopt and set new formats."[261] The Commission anticipates that feedback and ongoing input from participants will help registered SDRs to craft appropriate policies and procedures regarding data elements and reporting protocols.

The same commenter, in a subsequent comment letter, expressed concern that market participants could adopt different interpretations of the requirement to report payment stream information, which could result in inconsistent reporting to registered SDRs.[262] The Commission notes that final Rule 907(a)(1) requires a registered SDR to enumerate the specific data elements of a security-based swap that must be reported, and final 907(a)(2) requires a registered SDR, among other things, to specify acceptable data formats for submitting required information. Because Rules 907(a)(1) and 907(a)(2) provide a registered SDR with the authority to identify the specific data elements that must be reported with respect to the payment streams of a security-based swap and the format for reporting that information, the Commission does not

---

259 While an SDR would have flexibility regarding the data elements and the protocols for reporting to the SDR, pursuant to Rule 13n-4(a)(5), which is being adopted in the SDR Adopting Release, the data provided by an SDR to the Commission must "be in a form and manner acceptable to the Commission . . . ." The Commission anticipates that it will specify the form and manner that will be acceptable to it for the purposes of direct electronic access.

260 See DTCC II at 20.

261 Id.

262 See DTCC V at 11.

believe that market participants will have flexibility to adopt inconsistent interpretations of the information required to be reported with respect to payment streams. Instead, persons with the duty to report transactions will be required to provide the payment stream information using the specific data elements and formats specified by the registered SDR.

One commenter argued that a uniform electronic reporting format is essential, and was concerned that Rules 901(h) and 907(a)(2) would permit multiple formats and connectivity requirements for the submission of data to a registered SDR.[263] The Commission considered the alternative of requiring a single reporting language or protocol for conveying information to registered SDRs, and three commenters encouraged the use of the FpML standard.[264] While FpML could be a standard deemed acceptable by a registered SDR pursuant to Rule 907(a)(2), the Commission does not believe that it is necessary or appropriate at this time for the Commission itself to require FpML as the only permissible standard by which reporting sides report transaction data to a registered SDR.[265] The Commission is concerned that adopting a regulatory requirement for a single standard for reporting security-based swap transaction information to registered SDRs could result in unforeseen adverse consequences, particularly if that standard proves incapable of being used to carry information about all of the material data elements of all security-based swaps, both those that exist now and those that might be created in the future. Thus, the Commission has adopted an approach that permits registered SDRs to select their own standards for how participants must report data to those SDRs. The Commission agrees with the commenter who recommended that all acceptable data formats should be open-

---

263 See Better Markets I at 4.

264 See DTCC II at 16; ISDA I at 4; ISDA/SIFMA I at 8.

265 But see infra note 268.

source structured data formats.[266] The Commission believes that any reporting languages or protocols adopted by registered SDRs must be open-source structured data formats that are widely used by participants, and that information about how to use any such language or protocol is freely and openly available.[267]

The Commission believes that, however registered SDRs permit their participants to report security-based swap transaction data to the SDRs, those SDRs should be able to provide to the Commission normalized and uniform data, so that the transaction data can readily be used for regulatory purposes without the Commission itself having to cleanse or normalize the data.[268]

---

266 See Barnard Letter at 3.

267 One commenter argued that the Commission should not require registered SDRs to support all connectivity methods, as the costs to do so would be prohibitive. See DTCC II at 20. Under Rule 907(a)(2), as adopted, a registered SDR need not support all connectivity methods or data formats. A registered SDR may elect to support only one data format, provided that it is "an open-source structured data format that is widely used by participants."

268 See SDR Adopting Release, Section VI(D)(2)(c)(ii) ("data provided by an SDR to the Commission must be in a form and manner acceptable to the Commission ... [T]he form and manner with which an SDR provides the data to the Commission should not only permit the Commission to accurately analyze the data maintained by a single SDR, but also allow the Commission to aggregate and analyze data received from multiple SDRs. The Commission continues to consider whether it should require the data to be provided to the Commission in a particular format. The Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies that would facilitate an accurate interpretation, aggregation, and analysis of [security-based swap] data by the Commission. The Commission intends to maximize the use of any applicable current industry standards for the description of [security-based swap] data, build upon such standards to accommodate any additional data fields as may be required, and develop such formats and taxonomies in a timeframe consistent with the implementation of [security-based swap] data reporting by SDRs. The Commission recognizes that as the [security-based swap] market develops, new or different data fields may be needed to accurately represent new types of [security-based swaps], in which case the Commission may provide updated specifications of formats and taxonomies to reflect these new developments. Until such time as the Commission adopts specific formats and taxonomies, SDRs may provide direct electronic access to the Commission to data in the form in which the SDRs maintain such data").

However, it does not follow that information must be submitted to a registered SDR using a single electronic reporting format. The Commission believes that a registered SDR should be permitted to make multiple reporting formats available to its participants if it chooses, provided that the registered SDR can quickly and easily normalize and aggregate the reported data in making it accessible to the Commission and other relevant authorities. If a registered SDR is not willing or able to normalize data submitted pursuant to multiple data formats, then its policies and procedures under Rule 907(a)(2) should prescribe a single data format for participants to use to submit data to the registered SDR.

The Commission believes that the policies and procedures of a registered SDR, required by Rule 907(a)(1), likely will need to explain the method for reporting if all the security-based swap transaction data required by Rules 901(c) and 901(d) are being reported simultaneously, and how to report if responsive data are being provided at separate times.[269] One way to accomplish this would be for the registered SDR to link the two reports by the transaction ID, which could be done by providing the reporting side with the transaction ID after the reporting side reports the information required by Rule 901(c). The reporting side would then include the transaction ID with its submission of data required by Rule 901(d), thereby allowing the

[269] Regulation SBSR, as proposed and re-proposed, contemplated two "waves" of reporting: the Rule 901(c) information would have been required to be reported in real time; while the Rule 901(d) information could have been provided later (depending on the type of transaction, perhaps as much as one day after time of execution). However, because Regulation SBSR, as adopted, requires both sets of information to be reported within 24 hours of execution, the Commission anticipates that many reporting sides will choose to report both sets of information in only a single transaction report. Under Rule 901, as adopted, a reporting side is not prohibited from reporting the Rule 901(c) information before the Rule 901(d) information, provided that the policies and procedures of the registered SDR permit this outcome, and both sets of information are reported within the timeframes specified in Rule 901(j).

registered SDR to match the report of the Rule 901(c) data and the subsequent report of the Rule 901(d) data.

Finally, Rule 901(h), as re-proposed, would have provided: "A reporting side shall electronically transmit the information required under this section in a format required by the registered security-based swap data repository, and in accordance with any applicable policies and procedures of the registered security-based swap data repository." The Commission received only one comment on Rule 901(h), which is addressed above.[270] The Commission is adopting Rule 901(h) as re-proposed, with two minor revisions to clarify the rule. First, the rule text has been revised to refer to "A" reporting side instead of "The" reporting side. Accordingly, the Commission has revised Rule 901(h) to refer to the registered SDR to which a reporting side reports transactions. Second, Rule 901(h), as adopted, does not include the phrase "and in accordance with any applicable policies and procedures of the registered security-based swap data repository." The Commission believes that it is sufficient for the rule to state that the reporting side must report the transaction information "in a format required by" the registered SDR.[271]

C. Rule 907(a)(6)—Ultimate Parent IDs and Counterparty IDs

As originally proposed, Rule 907(a)(6) would have required a registered SDR to establish and maintain written policies and procedures "[f]or periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any other participant(s) with which the counterparty is affiliated, using ultimate parent IDs and participant IDs" (emphasis

270 See supra note 263 and accompanying text.

271 As noted above, the Commission anticipates that it will propose for public comment detailed specifications of acceptable formats and taxonomies that would facilitate an accurate interpretation, aggregation, and analysis by the Commission of security-based swap data submitted to it by an SDR. See supra note 268.

added). The Commission re-proposed Rule 907(a)(6) with the word "participant" in place of the word "counterparty." Re-proposed Rule 907(a)(6) would have required a registered SDR to establish and maintain written policies and procedures for periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any other participant(s) with which the counterparty is affiliated, using ultimate parent IDs and participant IDs. The Commission received one comment relating to Rule 907(a)(6), which suggested that parent and affiliate information could be maintained by a market utility rather than by one or more registered SDRs[272]

The Commission notes that Regulation SBSR neither requires nor prohibits the development of a market utility for parent and affiliate information. Regulation SBSR requires a registered SDR to obtain parent and affiliate information from its participants and to maintain it, whether or not a market utility exists. Regulation SBSR does not prohibit SDR participants from storing parent and affiliate information in a market utility or from having the market utility report such information to a registered SDR as agent on their behalf, so long as the information is provided to the registered SDR in a manner consistent with Regulation SBSR and the registered SDR's policies and procedures.

The Commission is adopting Rule 907(a)(6) substantially as re-proposed, with a technical change to replace the word "counterparty" with the word "participant" and a conforming change to replace the reference to "participant IDs" with a reference to "counterparty IDs." Thus, final Rule 907(a)(6) requires a registered SDR to establish and maintain written policies and procedures "[f]or periodically obtaining from each participant information that identifies the

---

272 See GS1 Proposal at 44.

participant's ultimate parent(s) and any participant(s) with which the participant is affiliated, using ultimate parent IDs and counterparty IDs" (emphasis added).

V. Who Reports—Rule 901(a)

A. Proposed and Re-proposed Rule 901(a)

Section 13(m)(1)(F) of the Exchange Act[273] provides that parties to a security-based swap (including agents of parties to a security-based swap) shall be responsible for reporting security-based swap transaction information to the appropriate registered entity in a timely manner as may be prescribed by the Commission. Section 13(m)(1)(G) of the Exchange Act[274] provides that each security-based swap, "whether cleared or uncleared," shall be reported to a registered SDR. Section 13A(a)(3) of the Exchange Act[275] specifies the party obligated to report a security-based swap that is not accepted for clearing by any clearing agency or derivatives clearing organization. Rule 901(a), as adopted, assigns to specific persons the duty to report certain security-based swaps to a registered SDR, thereby implementing Sections 13(m)(1)(F), 13(m)(1)(G), and 13A(a)(3) of the Exchange Act. In addition, in the Regulation SBSR Proposed Amendments Release, the Commission is proposing revisions to Rule 901(a), as adopted, to further implement these provisions of the Exchange Act as they apply to clearing transactions (as defined below) and transactions executed on platforms and that will be submitted to clearing.

As originally proposed, Rule 901(a) would have assigned reporting duties exclusively to one of the direct counterparties to a security-based swap based on the nationality of the counterparties. The original proposal contemplated three scenarios: both direct counterparties

---

273 15 U.S.C. 78m(m)(1)(F).

274 15 U.S.C. 78m(m)(1)(G).

275 15 U.S.C. 78mA(a)(3).

are U.S. persons, only one direct counterparty is a U.S. person, or neither direct counterparty is a U.S. person.[276] Under the original proposal, if only one counterparty to a security-based swap is a U.S. person, the U.S. person would have been the reporting party. If neither counterparty is a U.S. person (and assuming the security-based swap is subject to Regulation SBSR), the counterparties would have been required to select the reporting party. Where both counterparties to a security-based swap are U.S. persons, the reporting party would have been determined according to the following hierarchy:

(i) If only one counterparty is a security-based swap dealer or major security-based swap participant, the security-based swap dealer or major security-based swap participant would be the reporting party.

(ii) If one counterparty is a security-based swap dealer and the other counterparty is a major security-based swap participant, the security-based swap dealer would be the reporting party.

(iii) With respect to any other security-based swap, the counterparties to the security-based swap would be required to select the reporting party.

Under Rule 901(a) as originally proposed, for a security-based swap between: (1) a non-registered U.S. person; and (2) a security-based swap dealer or major security-based swap participant that is a non-U.S. person, the non-registered U.S. person would have been the reporting party. The Commission preliminarily believed that, as between a U.S. person and a non-U.S. person, it was more appropriate to assign the duty to report to the U.S. person, even if the non-U.S. person was a security-based swap dealer or major security-based swap

[276] See proposed Rules 901(a)(1)-(3); Regulation SBSR Proposing Release, 75 FR at 75211.

participant.[277]

In the Cross-Border Proposing Release, the Commission revised proposed Rule 901(a) in two significant ways. First, the Commission proposed to expand the scope of Regulation SBSR to require reporting (and, in certain cases, public dissemination) of any security-based swap that has a U.S. person acting as guarantor of one of the direct counterparties, even if neither direct counterparty is a U.S. person. To effectuate this requirement, the Cross-Border Proposing Release added the following new defined terms: "direct counterparty," "indirect counterparty," "side," and "reporting side." A "side" was defined to mean a direct counterparty of a security-based swap and any indirect counterparty that guarantees the direct counterparty's performance of any obligation under the security-based swap.[278] The Commission revised proposed Rule 901(a) to assign the duty to report to a "reporting side," rather than a specific counterparty. Re-proposed Rule 901(a) generally preserved the reporting hierarchy of Rule 901(a), as originally proposed, while incorporating the "side" concept to reflect the possibility that a security-based swap might have an indirect counterparty that is better suited for carrying out the reporting duty than a direct counterparty. Thus, Rule 901(a), as re-proposed in the Cross-Border Proposing

---

277 See Regulation SBSR Proposing Release, 75 FR at 75211.

278 See re-proposed Rule 900(ee); Cross-Border Proposing Release, 78 FR at 31211. The Commission is adopting this term in Rule 900(hh) with a minor modification to more clearly incorporate the definition of "indirect counterparty." Final 900(hh) defines "side" to mean "a direct counterparty and any guarantor of that direct counterparty's performance who meets the definition of indirect counterparty in connection with the security-based swap." Final Rule 900(p) defines "indirect counterparty" to mean "a guarantor of a direct counterparty's performance of any obligation under a security-based swap such that the direct counterparty on the other side can exercise rights of recourse against the indirect counterparty in connection with the security-based swap; for these purposes a direct counterparty has rights of recourse against a guarantor on the other side if the direct counterparty has a conditional or unconditional legally enforceable right, in whole or in part, to receive payments from, or otherwise collect from, the guarantor in connection with the security-based swap."

Release, would have assigned the reporting obligation based on the status of each person on a side (i.e., whether any person on the side is a security-based swap dealer or major security-based swap participant), rather than the status of only the direct counterparties. Second, the Commission proposed to expand the circumstances in which a security-based swap dealer or major security-based swap participant that is not a U.S. person would incur the duty to report a security-based swap.

Under Rule 901(a), as originally proposed, a non-U.S. person that is a direct counterparty to a security-based swap that was not executed in the United States or through any means of interstate commerce never would have had a duty to report the security-based swap, even if the non-U.S. person was a security-based swap dealer or major security-based swap participant or was guaranteed by a U.S. person. As re-proposed in the Cross-Border Proposing Release, Rule 901(a) re-focused the reporting duty primarily on the status of the counterparties, rather than on their nationality or place of domicile. Under re-proposed Rule 901(a), the nationality of the counterparties would determine who must report only if neither side included a security-based swap dealer or major security-based swap participant. In such case, if one side included a U.S. person while the other side did not, the side with the U.S. person would have been the reporting side. Similar to the original proposal, however, if both sides included a U.S. person or neither side included a U.S. person, the sides would have been required to select the reporting side.

B. Final Rule 901(a)

Rule 901(a), as adopted, establishes a "reporting hierarchy" that specifies the side that has the duty to report a security-based swap.[279] The reporting side, as determined by the

[279] However, Rule 901(a) does not address who has the reporting duty for the following types of security-based swaps: (1) a clearing transaction; (2) a security-based swap that

reporting hierarchy, is required to submit the information required by Regulation SBSR to a registered SDR.[280] The reporting side may select the registered SDR to which it makes the required report. However, with respect to any particular transaction, all information required to be reported by Rule 901(a)(2)(ii), as adopted, must be reported to the same registered SDR. In the Regulation SBSR Proposed Amendments Release, issued as a separate release, the Commission is proposing additional provisions of Rule 901(a) that would assign reporting responsibilities for clearing transactions and platform-executed security-based swaps that will be submitted to clearing. The Commission also anticipates soliciting further comment on reporting duties for a security-based swap where neither side includes a registered security-based swap dealer or major security-based swap participant and neither side includes a U.S. person or only one side includes a U.S. person.[281]

1. Reporting Hierarchy

---

is executed on a platform and that will be submitted to clearing; (3) a security-based swap where neither side includes a registered security-based swap dealer, a registered major security-based swap participant, or a U.S. person; and (4) a security-based swap where one side consists of a non-registered U.S. person and the other side consists of a non-registered non-U.S. person.

280 Final Rule 900(gg) defines "reporting side" to mean "the side of a security-based swap identified by § 242.901(a)(2)." Rule 900(cc), as re-proposed, would have defined "reporting side" to mean "the side of a security-based swap having the duty to report information in accordance with §§ 242.900 through 911 to a registered security-based swap data repository, or, if there is no registered security-based swap data repository that would receive the information, to the Commission." Final Rule 900(gg) modifies the definition to define the reporting side by reference to final Rule 901(a), which identifies the person that will be obligated to report a security-based swap to a registered SDR under various circumstances.

281 The Commission notes that Rule 901(a), as adopted, does address how the reporting duty is assigned when both sides include a U.S. person and neither side includes a registered security-based swap dealer or a registered major security-based swap participant. In that case, the sides would be required to select which is the reporting side. See Rule 901(a)(2)(ii)(E)(1).

Final Rule 901(a)(2)(ii) adopts the reporting hierarchy largely as proposed in the Cross-Border Proposing Release, but limits its scope. The reporting hierarchy in Rule 901(a), as proposed and as re-proposed in the Cross-Border Proposing Release, did not contain separate provisions to address reporting responsibilities for two kinds of security-based swaps that are described in the Regulation SBSR Proposed Amendments Release: clearing transactions and security-based swaps that are executed on a platform and that will be submitted to clearing. The Regulation SBSR Proposed Amendments Release solicits comment on proposed rules that address the reporting of these types of security-based swaps. The reporting hierarchy in Rule 901(a)(2)(ii), as adopted, applies to security-based swaps that are covered transactions.[282] The reporting hierarchy is designed to locate the duty to report with counterparties who are most likely to have the resources and who are best able to support the reporting function.

Specifically, final Rule 901(a)(2)(ii) provides that, for a covered transaction, the reporting side will be as follows:

(A) If both sides of the security-based swap include a registered security-based swap dealer, the sides shall select the reporting side.

(B) If only one side of the security-based swap includes a registered security-based swap dealer, that side shall be the reporting side.

(C) If both sides of the security-based swap include a registered major security-based swap participant, the sides shall select the reporting side.

(D) If one side of the security-based swap includes a registered major security-based swap participant and the other side includes neither a registered security-based swap dealer nor a

---

282 See supra notes 11-12 and accompanying text.

registered major security-based swap participant, the side including the registered major security-based swap participant shall be the reporting side.

(E) If neither side of the security-based swap includes a registered security-based swap dealer or registered major security-based swap participant: (1) If both sides include a U.S. person, the sides shall select the reporting side. (2) [Reserved].[283]

The following examples explain the operation of final Rule 901(a)(2)(ii). For each example, assume that the relevant security-based swap is not executed on a platform.

- Example 1. A non-registered U.S. person executes a security-based swap with a registered security-based swap dealer that is a non-U.S. person. Neither side has a

[283] This provision, as set forth in the Cross-Border Proposing Release, would have provided: "If neither side of the security-based swap includes a security-based swap dealer or major security-based swap participant: (i) If both sides include a U.S. person or neither side includes a U.S. person, the sides shall select the reporting side. (ii) If only one side includes a U.S. person, that side shall be the reporting side." The Commission anticipates seeking further comment on how Title VII should apply to non-U.S. persons who engage in certain security-based swap activities in the United States, particularly dealing activities. Accordingly, the Commission is not deciding at this time how Regulation SBSR will apply to (1) transactions where there is no U.S. person, registered security-based swap dealer, or registered major security-based swap participant on either side; and (2) transactions where there is no registered security-based swap dealer or registered major security-based swap participant on either side and there is a U.S. person on only one side. One commenter recommended that this proposed part of the hierarchy be revised to refer only to cases where both sides are U.S. persons, as the commenter did not believe that a security-based swap for which neither party is a security-based swap dealer, major security-based swap participant, or a U.S. person would be subject to reporting under Regulation SBSR. See ISDA IV at 19. As discussed, the Commission is not adopting this provision of proposed Rule 901(a). The Commission anticipates seeking further comment on how Title VII should apply to non-U.S. persons who engage in certain security-based swap activities in the United States, particularly dealing activities, and is not deciding at this time how Regulation SBSR will apply to transactions where there is no U.S. person, registered security-based swap dealer, or registered major security-based swap participant on either side. The Commission notes that, under final Rule 908(a)(1)(ii), a security-based swap is subject to regulatory reporting and public dissemination if it was accepted for clearing by a clearing agency having its principal place of business in the United States. See infra Section XV(C)(4).

guarantor. The registered security-based swap dealer is the reporting side.

- Example 2. Same facts as Example 1, except that the non-registered U.S. person is guaranteed by a registered security-based swap dealer. Because both sides include a person that is a registered security-based swap dealer, the sides must select which is the reporting side.
- Example 3. Two private funds execute a security-based swap. Both direct counterparties are U.S. persons, neither is guaranteed, and neither is a registered security-based swap dealer or registered major security-based swap participant. The sides must select which is the reporting side.

In Rule 901(a)(2)(ii), as adopted, the Commission has included the word "registered" before each instance of the terms "security-based swap dealer" and "major security-based swap participant." A person is a security-based swap dealer or major security-based swap participant if that person meets the statutory definition of that term, regardless of whether the person registers with the Commission.[284] A person meeting one of those statutory definitions must register with the Commission in that capacity. However, persons meeting one of the statutory definitions cannot register in the appropriate capacity until the Commission adopts registration rules for these classes of market participant. The Commission has proposed but not yet adopted registration rules for security-based swap dealers and major security-based swap participants.

284 See Section 3(a)(71) of the Exchange Act, 15 U.S.C. 78c(a)(71) (defining "security-based swap dealer"); Section 3(a)(67) of the Exchange Act, 15 U.S.C. 78c(a)(67) (defining "major security-based swap participant"). See also 17 CFR 240.3a71-2 (describing the time at which a person will be deemed to be a security-based swap dealer); 17 CFR 240.3a67-8 (describing the time at which a person will be deemed to be a major security-based swap participant).

Thus, currently, there are no registered security-based swap dealers even though many market participants act in a dealing capacity in the security-based swap market.

Including the word "registered" before each instance of the terms "security-based swap dealer" and "major security-based swap participant" in final Rule 901(a)(2)(ii) means that it will not be necessary for a person to evaluate whether it meets the definition of "security-based swap dealer" or "major security-based swap participant" solely in connection with identifying which counterparty must report a security-based swap under Regulation SBSR.[285]

A result of the Commission's determination to apply duties in Rule 901(a)(2)(ii) based on registration status rather than on meeting the statutory definition of "security-based swap dealer" or "major security-based swap participant" is that, until such persons register with the Commission as such, all covered transactions will fall within Rule 901(a)(2)(ii)(E). In other words, under the adopted reporting hierarchy, because neither side of the security-based swap includes a <u>registered</u> security-based swap dealer or <u>registered</u> major security-based swap participant, the sides shall select the reporting side.

2. <u>Other Security-Based Swaps</u>

Rule 901(a), as proposed and re-proposed in the Cross-Border Proposing Release, did not differentiate between platform-executed security-based swaps and other types of security-based swaps in assigning the duty to report. Similarly, the proposed and re-proposed rule would have

---

285 As the Commission noted in the Cross-Border Adopting Release, the assessment costs for making such evaluations are likely to be substantial. <u>See</u> Cross-Border Adopting Release, 79 FR 47330-34. The Commission's approach here is consistent with the approach described in the Cross-Border Adopting Release, where the Commission noted that security-based swap dealers and major security-based swap participants "will not be subject to the requirements applicable to those dealers and major participants until the dates provided in the applicable final rules." 79 FR at 47368. <u>See also</u> Intermediary Definitions Adopting Release, 77 FR at 30700.

assigned reporting obligations without regard to whether a particular security-based swap was cleared or uncleared.[286] In the Regulation SBSR Proposing Release, the Commission expressed a preliminary view that cleared and uncleared security-based swaps should be subject to the same reporting procedures.[287] The Commission preliminarily believed that security-based swap dealers and major security-based swap participants generally should be responsible for reporting security-based swap transactions of all types, because they are more likely than other counterparties to have appropriate systems in place to facilitate reporting.[288]

Commenters raised a number of concerns about the application of the reporting hierarchy to platform-executed security-based swaps that will be submitted to clearing and clearing transactions.[289] The Commission has determined that final resolution of these issues would benefit from further consideration and public comment. Accordingly, in the Regulation SBSR Proposed Amendments Release, the Commission is proposing amendments to Rule 901(a) that would assign the reporting obligation for clearing transactions and platform-executed security-based swaps that will be submitted to clearing.

To differentiate between security-based swaps that are subject to the reporting hierarchy in Rule 901(a)(2)(ii) and those that are not, the Commission is defining a new term, "clearing transaction," in Rule 900(g). A "clearing transaction" is "a security-based swap that has a

286 See 75 FR at 75211.

287 See id.

288 See id.

289 See infra Section V(C) for an overview of these comments. A detailed summary of and response to these comments appears in the Regulation SBSR Proposed Amendments Release.

registered clearing agency as a direct counterparty."[290] This definition encompasses all security-based swaps that a registered clearing agency enters into as part of its security-based swap clearing business. The definition includes, for example, any security-based swaps that arise if a registered clearing agency accepts a security-based swap for clearing, as well as any security-based swaps that arise as part of a clearing agency's internal processes, such as security-based swaps used to establish prices for cleared products and security-based swaps that result from netting other clearing transactions of the same product in the same account into an open position.[291]

Two models of clearing—an agency model and a principal model—are currently used in the swap markets. In the agency model, which predominates in the U.S. swap market, a swap that is accepted for clearing—often referred to in the industry as an "alpha"—is terminated and replaced with two new swaps, known as "beta" and "gamma." The Commission understands that, under the agency model, one of the direct counterparties to the alpha becomes a direct counterparty to the beta, and the other direct counterparty to the alpha becomes a direct counterparty to the gamma. The clearing agency would be a direct counterparty to each of the

290 In connection with the definition of "clearing transaction," the Commission is adopting a definition of "registered clearing agency." Final Rule 900(ee) defines "registered clearing agency" to mean "a person that is registered with the Commission as a clearing agency pursuant to section 17A of the Exchange Act (15 U.S.C. 78q-1) and any rules or regulations thereunder." In addition, the Commission is not adopting re-proposed Rule 900(h), which would have defined the term "derivatives clearing organization" to have the same meaning as provided under the Commodity Exchange Act. This term is not used in Regulation SBSR, as adopted, so the Commission is not including a definition of the term in Rule 900.

291 Under Rule 900(g), a security-based swap that results from clearing is an independent security-based swap and not a life cycle event of a security-based swap that is submitted to clearing. Thus, Rule 901(e), which addresses the reporting of life cycle events, does not address what person has the duty to report the clearing transactions that arise when a security-based swap is accepted for clearing.

beta and the gamma.[292] This release uses the terms "alpha," "beta," and "gamma" in the same way that they are used in the agency model of clearing in the U.S. swap market.[293] The Commission notes that, under Regulation SBSR, an alpha is not a "clearing transaction," even though it is submitted for clearing, because it does not have a registered clearing agency as a direct counterparty.[294]

---

292 If both direct counterparties to the alpha are clearing members, the direct counterparties would submit the transaction to the clearing agency directly and the resulting beta would be between the clearing agency and one clearing member, and the gamma would be between the clearing agency and the other clearing member. The Commission understands, however, that, if the direct counterparties to the alpha are a clearing member and a non-clearing member (a "customer"), the customer's side of the trade would be submitted for clearing by a clearing member acting on behalf of the customer. When the clearing agency accepts the alpha for clearing, one of the resulting swaps—in this case, assume the beta—would be between the clearing agency and the customer, with the customer's clearing member acting as guarantor for the customer's trade. The other resulting swap—the gamma—would be between the clearing agency and the clearing member that was a direct counterparty to the alpha. See, e.g., Byungkwon Lim and Aaron J. Levy, "Contractual Framework for Cleared Derivatives: The Master Netting Agreement Between a Clearing Customer Bank and a Central Counterparty," 10 Pratt's Journal of Bankruptcy Law (October 2014) 509, 515-17 (describing the clearing model for swaps in the United States).

293 In the principal model of clearing, which the Commission understands is used in certain foreign swap markets, a customer is not a direct counterparty of the clearing agency. Under this model, a clearing member would clear a security-based swap for a customer by entering into a back-to-back swap with the clearing agency: the clearing member would become a direct counterparty to a swap with the customer, and then would become a counterparty to an offsetting swap with the clearing agency. In this circumstance, unlike in the agency model of clearing, the swap between the direct counterparties might not terminate upon acceptance for clearing.

294 This release does not address the application of Section 5 of the Securities Act of 1933, 15 U.S.C. 77a et seq. ("Securities Act"), to security-based swap transactions that are intended to be submitted to clearing (e.g., alpha transactions, in the agency model of clearing). Rule 239 under the Securities Act, 17 CFR 230.239, provides an exemption for certain security-based swap transactions involving an eligible clearing agency from all provisions of the Securities Act, other than the Section 17(a) anti-fraud provisions. This exemption does not apply to security-based swap transactions not involving an eligible clearing agency, including a transaction that is intended to be submitted to clearing, regardless of whether the security-based swaps subsequently are cleared by an eligible clearing agency. See Exemptions for Security-Based Swaps Issued By Certain Clearing

C. Discussion of Comments and Basis for Final Rule

The Commission requested and received comment on a wide range of issues related to Rule 901(a), as proposed and re-proposed in the Cross-Border Proposing Release. As described in more detail below, commenters addressed a number of topics, including the application of Rule 901(a) to sides rather than direct counterparties, the role of agents in the reporting process, the application of Rule 901(a) to cleared security-based swaps, and the types of entities that should be required to report security-based swaps.

1. Application of the Reporting Hierarchy to Sides

The Commission received a number of comments on the reporting hierarchy in proposed Rule 901(a).[295] As described in the Cross-Border Proposing Release, a number of commenters objected to the reporting hierarchy in Rule 901(a), as originally proposed, on the grounds that it would unfairly impose reporting burdens on non-registered U.S.-person counterparties that enter into security-based swaps with non-U.S.-person security-based swap dealers or major security-based swap participants.[296] In the Cross-Border Proposing Release, the Commission re-proposed a modified reporting hierarchy in response to the commenters' concerns.[297]

Agencies, Securities Act Release No. 33-9308 (March 30, 2012), 77 FR 20536 (April 5, 2012).

295 See ISDA/SIFMA I at 19; DTCC II at 8; ICI I at 5 (stating that security-based swap dealers are the only market participants that currently have the standardization necessary to report the required security-based swap data); SIFMA I at 3 (arguing that an end user should not incur higher transaction costs or potential legal liabilities depending on the domicile of its counterparty); Vanguard Letter at 6 (stating that non-U.S. person security-based swap dealers and major security-based swap participants would be more likely to have appropriate systems in place to facilitate reporting than unregistered counterparties).

296 See Cross-Border Proposing Release, 78 FR at 31066. See also note 295, supra (describing the relevant comments).

297 See re-proposed Rule 901(a); Cross-Border Proposing Release, 78 FR at 31066, 31212.

The Commission believes that a non-registered person should not incur the duty to report a security-based swap when a registered security-based swap dealer or registered major security-based swap participant, directly or indirectly, is on the other side of the transaction, and is adopting the reporting hierarchy in Rule 901(a)(2)(ii) to effect this result. Rule 901(a), as adopted, is designed to assign reporting duties to the person best positioned to discharge those duties. The Commission believes that registered security-based swap dealers and registered major security-based swap participants, regardless of whether they are U.S. persons, will have greater technological capability than non-registered persons to report security-based swaps as required by Regulation SBSR. Accordingly, the Commission is adopting the reporting hierarchy in Rule 901(a)(2)(ii) largely as re-proposed to give registered security-based swap dealers and registered major security-based swap participants reporting obligations, regardless of whether they are U.S. persons. Furthermore, the Commission believes that it is appropriate to assign the duty to report to the side that includes a non-U.S. person registered security-based swap dealer or major security-based swap participant, even as an indirect counterparty, if neither the direct or indirect counterparty on the other side includes a registered security-based swap dealer or a registered major security-based swap participant. The fact that a person is a registered security-based swap dealer or registered major security-based swap participant implies that the person has substantial contacts with the U.S. security-based swap market and thus would understand that it could incur significant regulatory duties arising from its security-based swap business, or has voluntarily registered and chosen to undertake the burdens associated with such registration. The fact that a person is a registered security-based swap dealer or registered major security-based swap participant also implies that the person has devoted substantial infrastructure and administrative resources to its security-based swap business, and thus would be more likely to have the capability to carry out the reporting function than a non-registered counterparty.

In response to the Cross-Border Proposing Release, one commenter raised concerns about burdens that the re-proposed reporting hierarchy might place on U.S. persons.[298] This commenter noted that certain non-U.S. persons might engage in security-based swap dealing activities in the United States below the de minimis threshold for security-based swap dealer registration. The commenter expressed the view that an unregistered non-U.S. person that is acting in a dealing capacity likely would have "greater technological capability and resources available to fulfill the reporting function" than an unregistered U.S. person that is not acting in a dealing capacity.[299] The commenter suggested that, when an unregistered U.S. person enters into a security-based swap with an unregistered non-U.S. person that is acting in a dealing capacity, it "would be more efficient and fair" to allow the counterparties to choose the reporting side than to assign the reporting obligation to the unregistered U.S. person.[300]

The Commission acknowledges these comments. The Commission did not propose, and is not adopting, rules that would permit counterparties to choose to impose reporting burdens on the unregistered non-U.S. person that is acting in a dealing capacity in this scenario. The Commission believes that the issue of whether the counterparties should be able to choose the reporting side when an unregistered non-U.S. person acts in a dealing capacity with respect to a security-based swap involving an unregistered U.S. person would benefit from further comment.

---

298 See IIB Letter at 26.

299 See id.

300 See id.

Accordingly, Rule 901(a)(2)(ii), as adopted, does not assign a reporting side for security-based swaps involving an unregistered non-U.S. person and an unregistered U.S. person.

Other commenters focused on the Commission's proposal to introduce the "side" concept to the reporting hierarchy. In response to the Cross-Border Proposing Release, three comments recommended that direct counterparties bear reporting duties, rather than sides (i.e., that guarantors of direct counterparties not incur reporting responsibilities).[301] One of these commenters recommended that a non-U.S. company that provides its U.S. affiliate with a guarantee should not be subject to reporting responsibilities because the non-U.S. company would be outside the Commission's jurisdiction.[302] Another commenter noted that non-U.S. guarantors should not cause a security-based swap to become reportable.[303] The Commission generally agrees with these comments. As discussed in more detail in Section XV(C)(5), infra, Rule 908(a) of Regulation SBSR makes clear that a non-U.S. person guarantor would not cause a security-based swap to become reportable, unless the guarantor is a registered security-based swap dealer or a registered major security-based swap participant.[304] Moreover, Rule 908(b) provides that, notwithstanding any other provision of Regulation SBSR, a non-U.S. person guarantor of a security-based swap that is reportable would not incur any obligation under Regulation SBSR, including a reporting obligation under Rule 901(a)(2)(ii), unless the guarantor is a registered security-based swap dealer or a registered major security-based swap participant.

301 See JSDA Letter at 6; ISDA III; ISDA IV at 3-4.

302 See JSDA Letter at 6.

303 See ISDA IV at 4 (recommending that the Commission should not include non-U.S. person guarantors in the definition of "indirect counterparty").

304 Section XV(C)(5), infra, explains why the Commission has determined that security-based swaps having non-U.S. person guarantors that are registered as security-based swap dealers or major security-based swap participants should be reportable under Regulation SBSR.

Thus, for a security-based swap involving, on one side, the guaranteed U.S. affiliate of an unregistered non-U.S. person, only the guaranteed U.S. affiliate could incur reporting obligations under Regulation SBSR.[305]

The Commission disagrees with the broader point made by the commenters, however, and continues to believe that it is appropriate to adopt a final rule that places the reporting duty on the reporting side, rather than on a specific counterparty on the reporting side. The Commission notes that Rule 908(b)—which is discussed in more detail in Section XV, infra—limits the types of counterparties that incur obligations under Regulation SBSR to U.S. persons, registered security-based swap dealers, and registered major security-based swap participants. A person that does not fall within one of the categories enumerated in Rule 908(b) incurs no duties under Regulation SBSR. Accordingly, there may be situations where the direct counterparty on the reporting side—rather than the indirect counterparty, as in the commenter's example—would not fall within Rule 908(b) and therefore would incur no obligation under Regulation SBSR.[306] There will be cases where all counterparties on the reporting side fall within Rule 908(b). In these cases, Rule 901(a)(2)(ii), as adopted, provides reasonable flexibility to the counterparties on the reporting side to determine the specific person who will carry out the function of reporting the security-based swap on behalf of the reporting side. As stated in the Cross-Border Proposing Release, the Commission "understands that many reporting parties already have established linkages to entities that may register as registered SDRs, which could significantly reduce the

---

305 If the non-U.S. person guarantor is a registered security-based swap dealer or major security-based swap participant, the exclusion in Rule 908(b) would not apply, and both the direct and indirect counterparties would jointly incur the duty to report.

306 Rule 908(a) describes when Regulation SBSR applies to a security-based swap having at least one side that includes a non-U.S. person. See infra Section XV(C).

out-of-pocket costs associated with establishing the reporting function."[307] A reporting side could leverage these existing linkages, even if the entity that has established connectivity to the registered SDR is an indirect counterparty to the transaction.

The other commenters argued that incorporating indirect counterparties into current reporting practices could take considerable effort, because these practices, developed for use with the CFTC's swap data reporting regime, do not consider the registration status of indirect counterparties.[308] The commenter recommended that the industry should be permitted to use existing reporting party determination logic because negotiating the identity of the reporting side on a trade-by-trade basis would not be feasible.[309] Furthermore, one commenter noted that there is no industry standard source for information about indirect counterparties. As a result, "despite the requirement for participants to [provide] this information to [a registered SDR], there is a chance that the parties...could come up with a different answer as to which of them is associated with an indirect counterparty."[310]

The Commission acknowledges these commenters' concerns, but continues to believe that it is appropriate for the reporting hierarchy to take into account both the direct and indirect counterparties on each side. Even without an industry standard source for information about indirect counterparties, counterparties to security-based swaps will need to know the identity and status of any indirect counterparties on a trade-by-trade basis to determine whether the

307 78 FR at 31066 (citing Regulation SBSR Proposing Release, 75 FR at 75265).

308 See ISDA III; ISDA IV at 3-4 (noting also that Canada's swap data reporting regime resembles the CFTC's swap data reporting regime in so far as it does not consider the status of indirect counterparties).

309 See ISDA III.

310 Id. See also ISDA IV at 3-4.

transaction is subject to Regulation SBSR under final Rule 908(a).[311] By considering the status of indirect counterparties when assigning reporting obligations, Regulation SBSR is designed to reduce reporting burdens on non-registered persons without imposing significant new costs on other market participants, even though market participants may need to modify their reporting workflows. The Commission believes that market participants could adapt the mechanisms they develop for purposes of adhering to Rule 908(a) to facilitate compliance with the reporting hierarchy in Rule 901(a)(2)(ii). For example, the documentation for the relevant security-based swap could alert both direct counterparties to the fact that one counterparty's obligations under the security-based swap are guaranteed by a registered security-based swap dealer or registered major security-based swap participant. The counterparties can use that information to identify which side would be the reporting side for purposes of Regulation SBSR.

The Commission further believes that incorporating indirect counterparties into current reporting workflows is unlikely to cause substantial disruption to existing reporting logic because the status of an indirect counterparty likely will alter reporting practices in few situations. Most transactions in the security-based swap market today involve at least one direct counterparty who is likely to be a security-based swap dealer.[312] In such case, the current industry practice of determining the reporting side based only on the status of direct counterparties is likely to produce a result that is consistent with Rule 901.[313] The Commission understands that, in the

---

311 See infra Section XV.

312 See Cross-Border Adopting Release, 79 FR at 47293 (noting that transactions between two ISDA-recognized dealers represent the bulk of trading activity in the single-name credit default swap market).

313 Assume, for example, that a security-based swap dealer executes a transaction with a non-registered person, and that current industry practices default the reporting obligation to the security-based swap dealer. This result is consistent with Rule 901(a)(2)(ii)(B), which states that the side including the registered security-based swap dealer will be the

current security-based swap market, market participants that are likely to be non-registered persons transact with each other only on rare occasions. In these circumstances, the status of an indirect counterparty could cause one side to become the reporting side, rather than leaving the choice of reporting side to the counterparties. For example, if a registered security-based swap dealer or registered major security-based swap participant guarantees one side of such a trade, the side including the non-registered person and the guarantor would, under Rule 901(a)(2), be the reporting side. The Commission believes that, if a registered security-based swap dealer or registered major security-based swap participant is willing to accept the responsibility of guaranteeing the performance of duties under a security-based swap contract, it should also be willing to accept the responsibility of having to report that security-based swap to satisfy Regulation SBSR. In any event, the Commission believes that, if a guarantor's security-based swap activities are extensive enough that it must register as a security-based swap dealer or major security-based swap participant, it would have systems in place to ensure that it complies with the regulatory obligations attendant to such registration, including any reporting obligations for security-based swaps.

Finally, one commenter requested that the Commission provide guidance that reporting parties could follow when the reporting hierarchy instructs them to select the reporting side.[314] The Commission does not believe at this time that it is necessary or appropriate for the Commission itself to provide such guidance, because the determination of which counterparty is

---

reporting side for such transactions. Assume, however, that the non-registered direct counterparty is guaranteed by another registered security-based swap dealer. Because both sides include a registered security-based swap dealer, Rule 901(a)(2)(ii)(A) requires the sides to select the reporting side. Agreeing to follow current industry practices—and locating the duty on the side that has the direct counterparty that is a registered security-based swap dealer—would be consistent with Rule 901(a)(2)(ii)(A).

314 See Better Markets I at 10.

better positioned to report these security-based swaps is likely to depend on the facts and circumstances of the particular transaction and the nature of the counterparties. Rule 901(a)(2)(ii), as adopted, instructs the sides to select the reporting side only when the two sides are of equal status (i.e., when both sides include a registered security-based swap dealer or when neither side includes a registered security-based swap dealer or registered major security-based swap participant). The Commission understands that, under existing industry conventions, market participants who act in a dealing capacity undertake the reporting function. Thus, the Commission believes that Rule 901(a)(2)(ii), as adopted, is not inconsistent with these current industry practices. Furthermore, the Commission would not be averse to the development and use of new or additional industry standards that create a default for which side would become the reporting side in case of a "tie," provided that both sides agree to use such standards.

2. Reporting by Agents

In the Regulation SBSR Proposing Release, the Commission noted that Rule 901(a) would not prevent a reporting party from entering into an agreement with a third party to report a security-based swap on behalf of the reporting party.[315] Several commenters strongly supported the use of third-party agents to report security-based swaps.[316]

Four commenters addressed the types of entities that may wish to report security-based swaps on behalf of reporting parties. One commenter stated that platforms, clearing agencies, brokers, and stand-alone data reporting vendors potentially could provide reporting services to

---

[315] See 75 FR at 75211.

[316] See Barnard I at 2; DTCC II at 7; DTCC III at 13 (allowing third-party service providers to report security-based swaps would reduce the regulatory burden on counterparties and would assure prompt compliance with reporting obligations); ISDA/SIFMA I at 17 (noting that portions of the OTC derivatives market likely would rely on third-party agents to meet their reporting obligations); MarkitSERV I at 9; MarkitSERV II at 7-8; MarkitSERV III at 4-5.

security-based swap counterparties.[317] Another commenter requested that the Commission clarify that a security-based swap counterparty that was not the reporting party under Rule 901(a) would be able to agree contractually to report a security-based swap on behalf of the reporting party under Rule 901(a).[318] A third commenter noted that many market participants will look to third-party service providers to streamline the reporting process.[319] One commenter, however, recommended that the Commission should consider limiting the use of third-party reporting service providers to SB SEFs or other reporting market intermediaries, such as exchanges, because allowing unregulated third parties with potentially limited experience could lead to incomplete or inaccurate security-based swap reporting.[320]

Although the Commission agrees that security-based swap transaction information must be reported in a timely and accurate manner to fulfill the transparency and oversight goals of Title VII, the Commission does not believe that it is necessary, at this time, to allow only regulated intermediaries to perform reporting services on behalf of a reporting side. The Commission believes that reporting sides have a strong incentive to ensure that agents who report on their behalf have the capability and dedication to perform this function. In this regard, the Commission notes that any reporting side who contracts with a third party, including the non-reporting side, to report a security-based swap transaction on its behalf would retain the obligation to ensure that the information is provided to a registered SDR in the manner and form

---

317 See ISDA/SIFMA I at 17 (explaining that there likely would be competition to provide reporting services and that market participants would be able to contract with appropriate vendors to obtain the most efficient allocation of reporting responsibilities).

318 See SIFMA I at 2, note 3.

319 See MarkitSERV IV at 3.

320 See Tradeweb Letter at 4-5.

required under Regulation SBSR. Thus, a reporting side could be held responsible if its agent reported a security-based swap transaction to a registered SDR late or inaccurately.

In addition, the Commission believes that allowing entities other than regulated intermediaries to provide reporting services to reporting persons could enhance competition and foster innovation in the market for post-trade processing services. This could, in turn, encourage more efficient reporting processes to develop over time as technology improves and the market gains experience with security-based swap transaction reporting. Accordingly, Rule 901(a), as adopted, does not limit the types of entities that may serve as reporting agents on behalf of reporting sides of security-based swaps. Furthermore, nothing in Rule 901(a), as adopted, prohibits the reporting side from using the non-reporting side to report as agent on its behalf.[321]

3. Reporting Clearing Transactions

In establishing proposed reporting obligations, Regulation SBSR, as proposed and as re-proposed, did not differentiate between cleared and uncleared security-based swaps. Accordingly, cleared and uncleared security-based swaps would have been treated in the same manner for purposes of reporting transactions to a registered SDR. Multiple commenters addressed the reporting of cleared and uncleared security-based swaps. Two commenters supported the Commission's proposal to assign reporting obligations for cleared security-based swaps through the reporting hierarchy in all circumstances.[322] These commenters noted that the

---

321 See SIFMA I at 2, note 3.

322 See DTCC VI at 8-9; MarkitSERV III at 4-5. See also DTCC VII passim (suggesting operational difficulties that could arise if a person who is not a counterparty to a security-based swap has the duty to report); DTCC VIII (noting that "there has been a long held view that the SEC proposed model [for security-based swap data reporting] provides for a better defined process flow approach that achieves data quality, assigns proper ownership of who should report, and provides the most cost efficiencies for the industry as a whole").

Commission's proposal would allow security-based swap counterparties, rather than clearing agencies, to choose the registered SDR that receives data about their security-based swaps.[323] Other commenters objected to the proposal on statutory and operational grounds.[324] Two commenters argued that Title VII's security-based swap reporting provisions and Regulation SBSR should not extend to clearing transactions.[325] In the alternative, they argued that, if the Commission requires clearing transactions to be reported to a registered SDR, the clearing agency that clears a security-based swap should have the duty to report the associated clearing transactions to a registered SDR of its choice because, "in contrast to uncleared [security-based swaps], the Clearing Agency is the sole party who holds the complete and accurate record of transactions and positions for cleared [security-based swaps] and in fact is the only entity capable of providing accurate and useful positional information on cleared [security-based swaps] for systemic risk monitoring purposes."[326]

After careful consideration of the comments, the Commission has determined not to apply the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, to clearing transactions.[327] In the Regulation SBSR Proposed Amendments Release, the Commission is proposing to revise Rule

---

324 See CME/ICE Letter at 2-4; ICE Letter at 2-5; CME II at 4; ISDA IV at 5.

325 See CME/ICE Letter at 2, 4; CME II at 4.

326 CME/ICE Letter at 3-4. See also ICE Letter at 2-5 (arguing that a clearing agency would be well-positioned to issue a termination message for a swap that has been accepted for clearing and subsequently report the security-based swaps that result from clearing); DTCC X (arguing for allowing the reporting side to determine which SDR to report to for cleared security-based swaps); ISDA IV at 5 (expressing the view that "the clearing agency is best-positioned to report cleared [security-based swaps] timely and accurately as an extension of the clearing process").

327 As stated above, a clearing transaction is a security-based swap that has a registered clearing agency as a direct counterparty.

901(a) to assign reporting duties for clearing transactions.[328] However, the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, applies to alpha transactions that are not executed on a platform.[329]

One commenter expressed the view that reporting the alpha "adds little or no value to an analysis of market exposure since it is immediately replaced by the beta and gamma and cannot exist unless the swap is cleared."[330] This commenter argued, therefore, that alpha transactions should not be reported to registered SDRs. The Commission disagrees with this comment, and believes instead that having a record of all alphas at registered SDRs will ensure that registered SDRs receive complete information about security-based swap transactions that are subject to the Title VII reporting requirement. This requirement is designed, in part, to provide valuable information about the types of counterparties active in the security-based swap market. Reconstructing this information from records of betas and gammas would be less efficient and potentially more prone to error than requiring reports of the alpha in the first instance. Furthermore, requiring reporting of the alpha transaction eliminates the need to address issues that would arise if there is a delay between the time of execution of the alpha and the time that it is submitted to clearing, or if the transaction is rejected by the clearing agency.

This commenter also stated that, if the alpha is reported, the "key to improving data quality is to have a single party responsible for reporting a cleared transaction, and thus with respect to whether reporting for purposes of public dissemination and/or reporting to a

---

328 Rule 901(a), as adopted, reserves Rule 901(a)(2)(i) for assigning reporting obligations for clearing transactions.

329 Reporting requirements for platform-executed alphas are discussed in Section V(C)(4), infra, and in the Regulation SBSR Proposed Amendments Release.

330 ISDA IV at 6.

[registered SDR], the clearing agency should be responsible for the alpha once it is accepted for clearing."[331] This commenter believed that this approach allows the data pertaining to the execution of the alpha to be more easily and accurately linked to the resulting beta and gamma.[332] The Commission also sees the importance in being able to link information about the alpha to a related beta and gamma. However, the Commission does not believe that relying solely on the clearing agency to report transaction information is the only or the more appropriate way to address this concern. As discussed in Section II(B)(3)(j), supra, the Commission is adopting in Rule 901(d)(10) a requirement that the reports of new security-based swaps (such as a beta and gamma) that result from the allocation, termination, novation, or assignment of one or more existing security-based swaps (such as an alpha) must include the transaction ID of the allocated, terminated, assigned, or novated security-based swap(s). This requirement is designed to allow the Commission and other relevant authorities to link related transactions across different registered SDRs.

4. Reporting by a Platform

Commenters expressed mixed views regarding reporting by platforms. Some commenters, addressing Rule 901(a) as originally proposed, recommended that the Commission require a platform to report security-based swaps executed on or through its facilities.[333] One of these commenters stated that a platform would be in the best position to ensure the accurate and timely reporting of a transaction executed on its facilities.[334] Another commenter expressed the

---

332 Id.

333 See ICI I at 5; Tradeweb Letter at 3-4; Vanguard Letter at 2, 7.

334 See Tradeweb Letter at 3. This commenter also stated that the counterparties to a transaction executed on a platform should be relieved of any reporting obligations

view that having platforms report security-based swaps would facilitate economies in the marketplace by reducing the number of reporting entities.[335]

Four commenters, however, recommended that the Commission not impose reporting requirements on platforms.[336] Three of these commenters argued that certain practical considerations militate against assigning reporting duties to platforms.[337] Specifically, these commenters believed that a platform might not have all of the information required to be reported under Rules 901(c) and 901(d).[338] These commenters further noted that, even if a platform could report the execution of a security-based swap, it would lack information about life cycle events.[339] The third commenter stated that it could be less efficient for a platform to report than to have counterparties report.[340]

After careful consideration of the issues raised by the commenters, the Commission has determined not to apply the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, to platform-

---

because they would not be in a position to control or confirm the accuracy of the information reported or to control the timing of the platform's reporting. See id. at 3-4.

335 See Vanguard Letter at 7.

336 See ISDA/SIFMA I at 18; ISDA IV at 7; MarkitSERV III at 4; WMBAA II at 6.

337 See ISDA/SIFMA I at 18; ISDA IV at 7; WMBAA II at 6.

338 See id.

339 See WMBAA II at 6 (observing that it would take a platform at least 30 minutes to gather and confirm the accuracy of all required information and recommending that the reporting party should be able to contract with a SB SEF to report a security-based swap on its behalf); ISDA/SIFMA I at 17-18 (noting that a platform may not know whether a security-based swap submitted for clearing had been accepted for clearing); ISDA IV at 7 (noting that certain aspects of the CFTC regime for reporting bilateral swaps executed on facility have been challenging due to the difficulty for SEFs to know and report certain trade data that is not essential to the trade execution, and because of the shared responsibility for reporting since the SEF/DCM is responsible for the initial creation data reporting and the SD/MSP is responsible for the continuation data reporting).

340 See MarkitSERV III at 4.

executed transactions that will be submitted to clearing. In the Regulation SBSR Proposed Amendments Release, the Commission is proposing to assign reporting duties for platform-executed security-based swaps that will be submitted to clearing.[341] If the security-based swap will not be submitted to clearing, the platform would have no reporting obligation, and the reporting hierarchy in final Rule 901(a)(2)(ii) would apply.[342] The Commission notes that Section 13A(a)(3) of the Exchange Act provides that, for a security-based swap not accepted by any clearing agency, one of the counterparties must report the transaction. The reporting hierarchy of final Rule 901(a)(2)(ii) implements that provision and clarifies which side has the duty to report. The Commission believes that, in the case of security-based swaps that will not be submitted to clearing, the counterparties either will know each other's identity at the time of execution or the they will learn this information from the platform immediately or shortly after execution,[343] which will allow them to determine which side will incur the duty to report under

341 Rule 901(a), as adopted, reserves Rule 901(a)(1) for assigning reporting obligations for platform-executed security-based swaps that will be submitted to clearing.

342 See ISDA IV at 7 (recommending that for a bilateral transaction executed on a platform that is not intended for clearing, one of the counterparties should be responsible for reporting, per the proposed reporting hierarchy).

343 Market participants typically are unwilling to accept the credit risk of an unknown counterparty and therefore generally would not execute a security-based swap anonymously, unless the transaction would be cleared. Based on discussions with market participants, however, the Commission understands that certain temporarily registered CFTC SEFs offer "work-up" sessions that allow for anonymous execution of uncleared swaps in a limited circumstance. In a "work-up" session, after a trade is executed, other SEF participants may be given the opportunity to execute the same product at the same price. In a typical work-up session, the SEF would "flash" the execution to other SEF participants, who could then submit long or short interest to trade at the same price. The Commission understands that such interest could be submitted anonymously, and that a participant in a work-up session must agree to accept the credit risk of any other participant, if the work-up is conducted in a product that is not cleared. The Commission understands that the platform will inform each participant that executes a trade of the identity of its counterparty shortly after completion of the work-up session.

Rule 901(a)(2)(ii), as adopted.

5. Reporting of a Security-Based Swap Resulting from a Life Cycle Event

Rule 901(e)(1)(i) requires the reporting side for a security-based swap to report a life cycle event of that security-based swap—such as a termination, novation, or assignment—to the registered SDR to which it reported the original transaction.[344] Certain life cycle events may result in the creation of a new security-based swap. The Commission is modifying Rule 901(a) to identify the reporting side for this new security-based swap.[345]

Rule 901(e), as adopted, identifies the reporting side for a life cycle event. Rule 901(e) does not, however, address who will be the reporting side for a new security-based swap that arises from a life cycle event (such as a termination) of an existing security-based swap.[346] To identify the reporting side for the new security-based swap, the Commission is modifying the introductory language of final Rule 901(a) to provide that a "security-based swap, including a security-based swap that results from the allocation, termination, novation, or assignment of

---

344 However, a reporting side is not required to report whether or not a security-based swap has been accepted for clearing. See infra Section XII(A) (discussing life cycle event reporting).

345 Security-based swaps resulting from an allocation are discussed in greater detail in Section VIII(A) infra.

346 As re-proposed, paragraphs (1) and (2) of Rule 901(e) would have identified the reporting side for a security-based swap resulting from a life cycle event, if the reporting side for the initial security-based swap ceased to be a counterparty to the security-based swap resulting from the life cycle event. The Commission believes that these proposed provisions are unnecessary in light of the reporting hierarchy in Rule 901(a). Therefore, as described above, the Commission has determined that security-based swap counterparties should use the reporting hierarchy in Rule 901(a) to determine the reporting side for all security-based swaps, including security-based swaps that result from a life cycle event to another security-based swap.

another security-based swap, shall be reported" as provided in the rest of the rule.[347] This change responds to a commenter who suggested that reporting obligations be reassessed upon novation based on the current registration status of the remaining party and the new party to the security-based swap.[348] The reporting side designated by Rule 901(a) for the new transaction could be different from the reporting side for the original transaction.[349] The reporting side for the new security-based swap would be required to report the transaction within 24 hours of the time of creation of the new security-based swap.[350]

Rule 901(d)(10) requires the reporting side for the new security-based swap to report the transaction ID of the original security-based swap as a data element of the transaction report for

---

347 As proposed, this introductory language read "[t]he reporting party shall be as follows." In the Cross-Border Proposing Release, the Commission proposed to modify this language to be "[t]he reporting side for a security-based swap shall be as follows."

348 See ISDA IV at 7.

349 Assume, for example, that a registered security-based swap dealer and a hedge fund execute a security-based swap. The execution does not occur on a platform and the transaction will not be submitted to clearing. Under Rule 901(a)(2)(ii)(B), as adopted, the registered security-based swap dealer is the reporting side for the transaction. Assume further that three days after execution the registered security-based swap dealer and the hedge fund agree that the registered security-based swap dealer will step out of the trade through a novation and will be replaced by a registered major security-based swap participant. Pursuant to Rule 901(e), as adopted, the registered security-based swap dealer would be required to report the novation to the same registered SDR that received the initial report of the security-based swap. At this point, the transaction between the registered security-based swap dealer and the hedge fund is complete and the registered security-based swap dealer would have no further reporting obligations with respect to the transaction. Under Rule 901(a)(2)(ii)(D), as adopted, the registered major security-based swap participant is the reporting side for the security-based swap that results from the novation of the transaction between the registered security-based swap dealer and the hedge fund. The registered major security-based swap participant is the reporting side for the resulting transaction.

350 If the time that is 24 hours after the time of the creation of the new security-based swap would fall on a day that is not a business day, the report of the new security-based swap would be due by the same time on the next day that is a business day. See Rule 901(j).

the new security-based swap.[351] The Commission believes that this requirement will allow the Commission and other relevant authorities to link the report of a new security-based swap that arises from the allocation, termination, novation, or assignment of an existing security-based swap to the original security-based swap. As a result of these links, the Commission believes that it is not necessary or appropriate to require that a security-based swap that arises from the allocation, termination, novation, or assignment of an existing security-based swap be reported to the same registered SDR that received the transaction report of the original transaction. Thus, the reporting side for a security-based swap that arises as a result of the allocation, termination, novation, or assignment of an existing security-based swap could report the resulting new security-based swap to a registered SDR other than the registered SDR that received the report of the original security-based swap.

VI. Public Dissemination—Rule 902

A. Background

In addition to requiring regulatory reporting of all security-based swaps, Regulation SBSR seeks to implement Congress's mandate for real-time public dissemination of all security-based swaps. Section 13(m)(1)(B) of the Exchange Act authorizes the Commission "to make security-based swap transaction and pricing data available to the public in such form and at such times as the Commission determines appropriate to enhance price discovery."[352] Section

351 Rule 901(d)(10) provides that if a "security-based swap arises from the allocation, termination, novation, or assignment of one or more existing security-based swaps," the reporting side must report "the transaction ID of the allocated, terminated, assigned, or novated security-based swap(s), except in the case of a clearing transaction that results from the netting or compression of other clearing transactions." See supra Section II(C)(3)(k) (discussing Rule 901(d))(10)).

352 15 U.S.C. 78m(m)(1)(B). Section 13m(1)(E) of the Exchange Act, 15 U.S.C. 78m(m)(1)(E), requires the Commission rule for real-time public dissemination of

13(m)(1)(C) of the Exchange Act[353] authorizes the Commission to provide by rule for the public availability of security-based swap transaction, volume, and pricing data as follows:

(1) With respect to those security-based swaps that are subject to the mandatory clearing requirement described in Section 3C(a)(1) of the Exchange Act (including those security-based swaps that are excepted from the requirement pursuant to Section 3C(g) of the Exchange Act),[354] the Commission shall require real-time public reporting for such transactions;[355]

(2) With respect to those security-based swaps that are not subject to the mandatory clearing requirement described in Section 3C(a)(1) of the Exchange Act, but are cleared at a registered clearing agency, the Commission shall require real-time public reporting for such transactions;

---

security-based swap transactions to: (1) "specify the criteria for determining what constitutes a large notional security-based swap transaction (block trade) for particular markets and contracts" and (2) "specify the appropriate time delay for reporting large notional security-based swap transactions (block trades) to the public." The treatment of block trades is discussed in Section VII, infra.

353 15 U.S.C. 78m(m)(1)(C).

354 15 U.S.C. 78c-3(g).

355 Section 3C(a)(1) of the Exchange Act, 15 U.S.C. 78c-3(a)(1), provides that it shall be unlawful for any person to engage in a security-based swap unless that person submits such security-based swap for clearing to a clearing agency that is registered under the Exchange Act or a clearing agency that is exempt from registration under the Exchange Act if the security-based swap is required to be cleared. Section 3C(g)(1) of the Exchange Act, 15 U.S.C. 78c-3(g)(1), provides that requirements of Section 3C(a)(1) will not apply to a security-based swap if one of the counterparties to the security-based swap (1) is not a financial entity; (2) is using security-based swaps to hedge or mitigate commercial risk; and (3) notifies the Commission, in a manner set forth by the Commission, how it generally meets its financial obligations associated with entering into non-cleared security-based swaps.

(3) With respect to security-based swaps that are not cleared at a registered clearing agency and which are reported to a SDR or the Commission under Section 3C(a)(6),[356] the Commission shall require real-time public reporting for such transactions, in a manner that does not disclose the business transactions and market positions of any person; and

(4) With respect to security-based swaps that are determined to be required to be cleared under Section 3C(b) of the Exchange Act but are not cleared, the Commission shall require real-time public reporting for such transactions.[357]

Furthermore, Section 13(m)(1)(D) of the Exchange Act[358] authorizes the Commission to require registered entities (such as registered SDRs) to publicly disseminate the security-based swap transaction and pricing data required to be reported under Section 13(m) of the Exchange Act. Finally, Section 13(n)(5)(D)(ii) of the Exchange Act[359] requires SDRs to provide security-based swap information "in such form and at such frequency as the Commission may require to comply with public reporting requirements."

In view of these statutory provisions, the Commission proposed Rule 902—Public Dissemination of Transaction Reports. In the Regulation SBSR Proposing Release, the Commission expressed its belief that the best approach would be to require market participants to

---

356 The reference in Section 13(m)(1)(C)(iii) of the Exchange Act to Section 3C(a)(6) of the Exchange Act is incorrect. Section 3C of the Exchange Act does not contain a paragraph (a)(6). See generally Am. Petroleum Institute v. SEC, 714 F.3d 1329, 1336-37 (D.C. Cir 2013) (explaining that "[t]he Dodd Frank Act is an enormous and complex statute, and it contains" a number of "scriveners' errors").

357 Section 3C(b)(1) of the Exchange Act requires the Commission to review on an ongoing basis each security-based swap, or any group, category, type, or class of security-based swap to make a determination that such security-based swap, or group, category, type, or class of security-based swap should be required to be cleared.

358 15 U.S.C. 78m(m)(1)(D).

359 15 U.S.C. 78m(n)(5)(D)(ii).

report transaction information to a registered SDR and require registered SDRs to disseminate that information to the public.[360] Many commenters expressed general support for public dissemination of security-based swap information.[361] In addition, as discussed more fully below, the Commission received a large number of comments addressing specific aspects of public dissemination of transaction reports.[362]

The current market for security-based swaps is opaque. Dealers know about order flow that they execute, and may know about other dealers' transactions in certain instances, but information about executed transactions is not widespread. Market participants—particularly

---

360 See 75 FR 75227.

361 See Barnard I at 3 (recommending full post-trade transparency as soon as technologically and practically feasible, with an exemption to permit delayed reporting of block trades); CII Letter at 2 ("the transparency resulting from the implementation of the proposed rules would not only lower systemic risk and strengthen regulatory oversight, but also, importantly for investors, enhance the price discovery function of the derivatives market"); DTCC II at 17-18 (noting that the proposed rules are designed to balance the benefits of post-trade transparency against the potentially higher costs of transferring or hedging a position following the dissemination of a report of a block trade); Ethics Metrics Letter at 3 (last-sale reporting of security-based swap transactions will "provide material information to eliminate inefficiencies in pricing [financial holding company] debt and equity in the U.S. capital markets"); FINRA Letter at 1 (stating that the proposed trade reporting and dissemination structure, and the information it would provide to regulators and market participants, are vital to maintaining market integrity and investor protection); Getco Letter at 3 (noting that in the absence of accurate and timely post-trade transparency for most security-based swap transactions only major dealers will have pricing information and therefore new liquidity providers will not participate in the security-based swap market); ICI I at 1-2 (stating that market transparency is a key element in assuring the integrity and quality of the security-based swap market); Markit I at 4 (stating that security-based swap data should be made available on a non-delay basis to the public, media, and data vendors); MFA I at 1 (supporting the reporting of security-based swap transaction data to serve the goal of market transparency); SDMA I at 4 ("Post-trade transparency is not only a stated goal of the Dodd-Frank Act it is also an instrumental component in establishing market integrity. By creating real time access to trade information for all market participants, confidence in markets increases and this transparency fosters greater liquidity"); ThinkNum Letter passim; Shatto Letter passim.

362 See infra notes 377 to 386 and accompanying text and Section VI(D).

non-dealers—have to rely primarily on their understanding of the market's fundamentals to arrive at a price at which they would be willing to assume risk. The Commission believes that, by reducing information asymmetries between dealers and non-dealers and providing more equal access to all post-trade information in the security-based swap market, post-trade transparency could help reduce implicit transaction costs and promote greater price efficiency.[363] The availability of post-trade information also could encourage existing market participants to increase their activity in the market and encourage new participants to join the market—and, if so, increase liquidity and competition in the security-based swap market. In addition, all market participants will have more comprehensive information with which to make trading and valuation determinations.

Security-based swaps are complex derivative products, and there is no single accepted way to model a security-based swap for pricing purposes. The Commission believes that post-trade pricing and volume information will allow valuation models to be adjusted to reflect how other market participants have valued a security-based swap product at a specific moment in time. Public dissemination of last-sale information also will aid dealers in deriving better quotations, because they will know the prices at which other market participants have traded. Last-sale information also will aid end users and other non-registered entities in evaluating current quotations by allowing them to request additional information if a dealer's quote differs from the prices of the most recent transactions. Furthermore, smaller market participants that view last-sale information will be able to test whether quotations offered by dealers before the last sale were close to the price at which the last sale was executed. In this manner, post-trade

[363] See infra Section XXII(C)(2)(a). See also infra note 1255 (discussing implicit transaction costs).

transparency will promote price competition and more efficient price discovery in the security-based swap market.

The Commission is adopting Rule 902 with certain modifications and technical changes discussed in more detail below. Final Rule 902(a) sets forth the basic duty of a registered SDR to publicly disseminate transaction reports. Final Rule 902(c) sets forth certain types of security-based swaps and certain other information about security-based swaps that a registered SDR shall not publicly disseminate. Final Rule 902(d), the so-called "Embargo Rule," is designed to promote fair access to information about executed security-based swaps.[364]

Rule 902(b), as proposed and re-proposed, would have established a mechanism for registered SDRs to publicly disseminate transaction reports of block trades. As discussed in more detail in Section VII, infra, the Commission is not adopting thresholds for determining what constitutes a block trade. Accordingly, the Commission believes that it is not necessary or appropriate at this time to adopt rules specifically addressing the public dissemination of block trades.

B. Registered SDR's Duty to Disseminate—Rule 902(a)

Rule 902(a), as proposed and re-proposed, would have required a registered SDR to publicly disseminate a transaction report of any security-based swap immediately upon receipt of transaction information about the security-based swap, except in the case of a block trade.[365]

---

364 Final Rule 902(d) provides that "[n]o person shall make available to one or more persons (other than a counterparty or post-trade processor) transaction information relating to a security-based swap before the primary trade information about the security-based swap is submitted to a registered security-based swap data repository."

365 The Commission recognized, however, that there may be circumstances when a registered SDR's systems might be unavailable for publicly disseminating transaction data. In such cases, proposed Rule 902(a) would have required a registered SDR to disseminate the transaction data immediately upon its re-opening. See Regulation SBSR

Further, Rule 902(a), as initially proposed, provided that the transaction report would consist of "all the information reported by the reporting party pursuant to § 242.901, plus any indicator or indicators contemplated by the registered security-based swap data repository's policies and procedures that are required by § 242.907." Rule 902(a) was revised and re-proposed as part of the Cross-Border Proposing Release to add that a registered SDR would not have an obligation to publicly disseminate certain types of cross-border security-based swaps that are required to be reported but not publicly disseminated.[366]

Commenters generally were supportive of the Commission's approach of requiring registered SDRs to be responsible for public dissemination of security-based swap transaction reports.[367] One commenter, for example, stated that allowing other types of entities to have the regulatory duty to disseminate data could lead to undue complications for market participants.[368] In addition, the commenter expressed the view that real-time public dissemination of security-based swap data is a "core function" of registered SDRs, and that permitting only registered SDRs to publicly disseminate security-based swap data would help to assure the accuracy and completeness of the data.[369] However, one commenter appeared to recommend that a clearing

---

Proposing Release, 75 FR 75228. Rule 904 of Regulation SBSR deals with hours of operation of registered SDRs and related operational procedures. See infra Section XI.

366 This carve-out was necessitated by re-proposed Rule 908(a), which contemplated situations where a security-based swap would be required to be reported to a registered SDR but not publicly disseminated. See 78 FR 31060.

367 See FINRA Letter at 5; DTCC II at 18 (stating that SDRs should be able to disseminate data effectively and should be the sole source of data dissemination); DTCC IV at 4; MarkitSERV I at 7-8 (stating that only registered SDRs, or their agents, should be permitted to disseminate security-based swap data); Thomson Reuters Letter at 6-7 (stating that publication and dissemination of security-based swap transaction information should be the responsibility of registered SDRs rather than SB SEFs).

368 See DTCC II at 18.

369 See DTCC IV at 4.

agency should be responsible for public dissemination of "relevant pricing data for a security-based swap subject to clearing."[370]

The Commission has carefully analyzed the comments and is adopting the approach of requiring public dissemination through registered SDRs. The Commission believes that this approach will promote efficiency in the security-based swap market, or at least limit inefficiency.[371] Section 13(m)(1)(G) of the Exchange Act[372] provides that "[e]ach security-based swap (whether cleared or uncleared) shall be reported to a registered security-based swap data repository." Thus, security-based swaps would have to be reported to registered SDRs regardless of the mechanism that the Commission chooses for public dissemination. By requiring registered SDRs to carry out the task of public dissemination, the Commission will not require reporting steps beyond those already required by the Exchange Act. Furthermore, the Commission believes that assigning registered SDRs the duty to publicly disseminate will help promote efficiency and consistency of post-trade information. Market observers will not have to obtain market data from potentially several other sources —such as SB SEFs, clearing agencies, or the counterparties themselves—to have a full view of security-based swap market activity.

1. Format of Disseminated Data

In the Regulation SBSR Proposing Release, the Commission acknowledged that multiple uniquely formatted data feeds could impair the ability of market participants to receive,

---

370 See ISDA IV at 6 (stating that "as regards public dissemination of relevant pricing data for a SBS subject to clearing, such reporting should be done by the clearing agency when a SBS is accepted for clearing and the clearing agency reports for the beta and gamma").

371 See infra Section XXII(B)(2).

372 15 U.S.C. 78m(m)(1)(G).

understand, or compare security-based swap transaction data and thus undermine its value.[373] Furthermore, the Commission suggested that one way to address that issue would be to dictate the exact format and mode of providing required security-based swap data to the public, while acknowledging various problems with that approach.[374] The Commission proposed, however, to identify in proposed Rules 901(c) and 901(d) the categories of information that would be required to be reported, and to require registered SDRs to establish and maintain policies and procedures that, among other things, would specify the data elements that would be required to be reported.[375] The Commission preliminarily believed that this approach would promote the reporting of uniform, material information for each security-based swap, while providing flexibility to account for changes to the security-based swap market over time.[376]

Two commenters generally supported the Commission's approach of providing registered SDRs with the flexibility to define the relevant data fields.[377] However, one commenter stated that the final rules should clearly identify the data fields that will be publicly disseminated.[378] Another commenter emphasized the importance of presenting security-based swap information in a format that is useful for market participants, and expressed concern that proposed Regulation SBSR did "nothing to ensure that the data amassed by individual SDRs is aggregated and

374 See id.

375 See id. at 75213.

376 See id.

377 See Barnard I at 2 (stating that the categories of information required to be reported under the proposed rules should be "complete and sufficient so that its dissemination will enhance transparency and price discovery"); MarkitSERV I at 10 (expressing support for the Commission's "proposal to provide [registered] SDRs with the authority to define the relevant fields on the basis of general guidelines as set out by the SEC").

378 See ISDA/SIFMA I at 10. See also ISDA IV at 9 and Section II(2)(a), supra, for a response.

disseminated in a form that is genuinely useful to traders and regulators and on a nondiscriminatory basis."[379] This commenter further believed that to provide meaningful price discovery, data must be presented in a format that allows market participants to view it in near-real time, fits onto the limited space available on their trading screens, and allows them to view multiple markets simultaneously.[380]

The Commission has carefully considered these comments and continues to believe that it is not necessary or appropriate at this time for the Commission to dictate the format and mode of public dissemination of security-based swap transaction information by registered SDRs. Therefore, Rule 902(a), as adopted, provides registered SDRs with the flexibility to set the format and mode of dissemination through its policies and procedures, as long as the reports of security-based swaps that it publicly disseminates include the information required to be reported by Rule 901(c), plus any "condition flags" contemplated by the registered SDR's policies and procedures under Rule 907.[381] The Commission notes that it anticipates proposing for public comment detailed specifications of acceptable formats and taxonomies that would facilitate an accurate interpretation, aggregation, and analysis by the Commission of security-based swap data submitted to it by an SDR. The Commission intends to maximize the use of any applicable current industry standards for the description of security-based swap data, and build upon such standards to accommodate any additional data fields as may be required.

2. Timing of Public Dissemination

379 Better Markets II at 2-3 (also arguing that the Commission should require disclosure of the component parts of a complex transaction to prevent market participants from avoiding transparency by creating complex composite transactions).

380 See Better Markets I at 3; Better Markets II at 4.

381 The Commission notes that final Rule 902(a) references "condition flags," rather than "indicator or indicators," as was proposed, to conform with Rule 907, as adopted.

Rule 902(a), as re-proposed, would have required a registered SDR to publicly disseminate a transaction report of a security-based swap immediately upon (1) receipt of information about the security-based swap from a reporting side, or (2) re-opening following a period when the registered SDR was closed, unless the security-based swap was a block trade or a cross-border security-based swap that was required to be reported but not publicly disseminated. One commenter agreed with the proposed requirement, stating that reported security-based swap transaction information "should be made available on a non-delayed basis to the public, media, and data vendors."[382]

The Commission is adopting the requirement contained in Rule 902(a), as re-proposed, that a registered SDR must disseminate a transaction report of a security-based swap "immediately upon receipt of information about the security-based swap, or upon re-opening following a period when the registered security-based swap data repository was closed."[383] "Immediately," as used in this context, implies a wholly automated process to accept the incoming information, process the information to assure that only information required to be disseminated is disseminated, and disseminate a trade report through electronic means.

3. Dissemination of Life Cycle Events

Rule 902(a), as adopted, provides that, in addition to transaction reports of security-based swaps, a registered SDR "shall publicly disseminate … a life cycle event or adjustment due to a life cycle event." Rule 902(a), as proposed and re-proposed, did not specifically refer to such information, but, as noted in the Regulation SBSR Proposing Release, proposed Rule 907(a)(4) would have required a registered SDR to "establish and maintain written policies and procedures

382 Markit I at 4.

383 See infra Section XI (discussing Rule 904, which deals with hours of operation of registered SDRs and related operational procedures).

describing how reporting parties shall report—and, consistent with the enhancement of price discovery, how the registered SDR shall publicly disseminate—reports of, and adjustments due to, life cycle events."[384] One commenter argued that the Commission should limit public dissemination to new trading activity and should exclude maintenance or life cycle events.[385] The Commission disagrees, and believes instead that, if information about a security-based swap is publicly disseminated but subsequently one or more of the disseminated data elements is revised due to a life cycle event (or an adjustment due to a life cycle event), the revised information would provide market observers a more accurate understanding of the market. The Commission, therefore, is clarifying Rule 902(a) to make clear the requirement to disseminate life cycle events. Final Rule 902(a) provides, in relevant part, that a registered SDR "shall publicly disseminate a transaction report of the security-based swap or a life cycle event or adjustment due to a life cycle event immediately upon receipt."[386]

4. Correction of Minor Drafting Error

Rule 902(a), as initially proposed and re-proposed, provided that the transaction report that is publicly disseminated "shall consist of all the information reported pursuant to Rule 901, plus any indicator or indicators contemplated by the registered security-based swap data

---

384 Regulation SBSR Proposing Release, 75 FR at 75237.

385 See ISDA/SIFMA I at 12. See also ISDA IV at 13 (arguing that only life cycle events that result in a change to the price of a security-based swap should be subject to public dissemination, and requesting that "any activity on a [security-based swap] that does not affect the price of the reportable [security-based swap]" be excluded from public dissemination).

386 To enhance the usefulness of a public transaction report of a life cycle event, final Rule 907(a)(3) requires a registered SDR to have policies and procedures for appropriately flagging public reports of life cycle events. See infra Section XII(C). This requirement is designed to promote transparency by allowing market observers to distinguish original transactions from life cycle events.

repository's policies and procedures that are required by Rule 907" (emphasis added). However, in the Regulation SBSR Proposing Release, the Commission specified that the transaction report that is disseminated should consist of all the information reported pursuant to Rule 901(c).[387] The statement from the preamble of the Regulation SBSR Proposing Release is correct. The Commission did not intend for all of the information reported pursuant to Rule 901 to be publicly disseminated;[388] this would include, for example, regulatory data reported pursuant to Rule 901(d) and information about historical security-based swaps reported pursuant to Rule 901(i). The Commission is correcting this drafting error so that final Rule 902(a) explicitly states that the "transaction report shall consist of all the information reported pursuant to § 242.901(c), plus any condition flags contemplated by the registered security-based swap data repository's policies and procedures that are required by § 242.907" (emphasis added).

5. Use of Agents by a Registered SDR to Carry Out the Public Dissemination Function

One commenter discussed the appropriateness of third-party service providers carrying out the public dissemination function on behalf of registered SDRs.[389] The Commission believes that, in the same way that reporting sides may engage third-party agents to report transactions on their behalf, registered SDRs may engage third-party providers to carry out the public dissemination function on their behalf. In both cases, the entity with the legal duty would remain responsible for compliance with Regulation SBSR if its agent failed to carry out the function in a manner stipulated by Regulation SBSR. Thus, reporting sides and registered SDRs should

---

387 See 75 FR at 75212-13.

388 Two comments specifically noted this lack of clarity. See ISDA/SIFMA I at 12; ISDA IV at 14.

389 See MarkitSERV I at 7-8.

engage only providers that have the capacity and reliability to carry out those duties.

C. Definition of "Publicly Disseminate"

In the Regulation SBSR Proposing Release, the Commission defined "publicly disseminate" in Rule 900 to mean "to make available through the Internet or other electronic data feed that is widely accessible and in machine-readable electronic format." The Commission re-proposed this definition renumbering it Rule 900(y), in the Cross-Border Proposing Release.

The Commission received no comment letters directly discussing the proposed definition, although as noted above many commenters commented on various other aspects of public dissemination, including the format of disseminated data[390] and timing of public dissemination.[391] The Commission is adopting the definition of "publicly disseminate" as proposed and re-proposed. The Commission continues to believe that, to satisfy the statutory mandate for public dissemination, security-based swap transaction data must be widely accessible in a machine-readable electronic format. These data are too numerous and complex for direct human consumption and thus will have practical use only if they can be downloaded and read by computers. The definition of "publicly disseminate" recognizes the Internet as one, but not the only, possible electronic medium to make these data available to the public.

D. Exclusions from Public Dissemination—Rule 902(c)

1. Discussion of Final Rule

Rule 902(c), as proposed and re-proposed, set forth three kinds of information that a registered SDR would be prohibited from disseminating. First, in Rule 902(c)(1), the Commission proposed that a registered SDR would be prohibited from disseminating the identity

[390] See supra Section VII(B)(1).

[391] See supra Section VII(B)(2).

of any counterparty to a security-based swap. This would implement Section 13(m)(1)(E)(i) of the Exchange Act,[392] which requires the Commission's rule providing for the public dissemination of security-based swap transaction and pricing information to ensure that "such information does not identify the participants." The Commission received three comments that generally urged the Commission to ensure the anonymity of security-based swap counterparties, either through non-dissemination of the identity of any counterparty or by limiting public dissemination of other data elements they believed could lead to disclosure of counterparties' identities.[393] To address the commenters' concerns, the Commission is adopting Rule 902(c)(1) as proposed and re-proposed, with one conforming change.[394] Final Rule 902(c)(1) explicitly prohibits a registered SDR from disseminating the identity of any counterparty. Further, Rule 902(a) explicitly provides for the public dissemination of a transaction report that consists only

---

392 15 U.S.C. 13m(m)(1)(E)(i). This section is applicable to security-based swaps that are subject to Sections 13(m)(1)(C)(i) and (ii) of the Exchange Act—i.e., security-based swaps that are subject to the mandatory clearing requirement in Section 3C(a)(1) and security-based swaps that are not subject to the mandatory clearing requirement in Section 3C(a)(1) but are cleared.

393 See Deutsche Bank Letter at 6 (asking the SEC and CFTC to impose strict requirements on an SDR's handling, disclosure, and use of identifying information); DTCC II at 9 (noting that trading volume in most single name credit derivatives is "extremely thin" and disclosing small data samples, particularly from narrow time periods, may not preserve the anonymity of the trading parties); ISDA/SIFMA I at 12; MFA I at 2 (arguing that participant IDs should not be included in any publicly disseminated transaction report to protect identities and proprietary trading strategies of security-based swap market participants).

394 Re-proposed Rule 902(c)(1) would have prohibited a registered SDR from publicly disseminating the identity of either counterparty to a security-based swap. Final Rule 902(c)(1) prohibits a registered SDR from publicly disseminating the identity of any counterparty to a security-based swap. Final Rule 900(i) defines counterparty to mean "a person that is a direct counterparty or indirect counterparty of a security-based swap." This conforming change to Rule 902(c)(1) makes clear that a registered SDR may not publicly disseminate the identity of any counterparty—direct or indirect—of a security-based swap.

of "the information reported pursuant to § 242.901(c), plus any condition flags contemplated by the registered security-based swap data repository's policies and procedures that are required by § 242.907." Limiting the publicly disseminated trade report to these specific data elements is designed to further avoid disclosure of any counterparty's identity, including the counterparty ID of a counterparty, even in thinly-traded markets.[395]

Second, the Commission proposed in Rule 902(c)(2) that, with respect to a security-based swap that is not cleared at a clearing agency and that is reported to a registered SDR, a registered SDR would be prohibited from disseminating any information disclosing the business transactions and market positions of any person. This would implement Section 13(m)(1)(C)(iii) of the Exchange Act,[396] which provides that, with respect to the security-based swaps that are not cleared and which are reported to an SDR or the Commission, "the Commission shall require real-time public reporting... in a manner that does not disclose the business transactions and market positions of any person." The Commission received no comments that directly addressed proposed Rule 902(c)(2), although one commenter noted that "all market participants have legitimate interests in the protection of their confidential and identifying financial information."[397] By prohibiting a registered SDR from disseminating any information disclosing the business transactions and market positions of any person, the Commission believes that Rule 902(c)(2) will help preserve the confidential information of market participants, in addition to implementing Section 13(m)(1)(C)(iii) of the Exchange Act. Accordingly, the Commission is adopting Rule 902(c)(2) as proposed and re-proposed.

---

395 See infra Section VI(D)(1)(f) (discussing public dissemination of thinly-traded products).

396 15 U.S.C. 13(m)(1)(C)(iii).

397 Deutsche Bank Letter at 6.

Third, the Commission preliminarily believed that it would be impractical and unnecessary for a registered SDR to publicly disseminate reports of historical security-based swaps reported pursuant to Rule 901(i), and therefore included this exclusion in proposed Rule 902(c)(3).[398] The Commission received no comments regarding proposed Rule 902(c)(3). The Commission continues to believe that it would be impractical for a registered SDR to publicly disseminate reports of historical security-based swaps reported pursuant to Rule 901(i). Accordingly, the Commission is adopting Rule 902(c)(3) as proposed and re-proposed.

The Commission calls particular attention to the relationship between Rules 901(i), 901(e), and 902. Rule 901(i) requires reporting of historical security-based swaps to a registered SDR. Rule 902(c)(3) provides that the initial transaction reported pursuant to Rule 901(i) shall not be publicly disseminated. A historical security-based swap might remain open after market participants are required to begin complying with the requirement in Rule 901(e) to report life cycle events.[399] If a life cycle event of a historical security-based swap relating to any of the primary trade information—i.e., the data elements enumerated in Rule 901(c)—occurs after public dissemination is required for security-based swaps in a particular asset class, Rule 902(a) would require the registered SDR to publicly disseminate a report of that life cycle event, plus any condition flags required by the registered SDR's policies and procedures under Rule 907. In other words, Rule 902(c)(3)'s exclusion from public dissemination for historical security-based swaps applies only to the initial transaction, not to any life cycle event of that historical security-based swap relating to the primary trade information that occurs after public dissemination in that asset class is required. Therefore, life cycle events relating to the primary trade information

398 75 FR at 75286.

399 See Regulation SBSR Proposed Amendments Release, Section VII (proposing a new compliance schedule for Regulation SBSR).

of historical security-based swaps must, after the public dissemination requirement goes into effect, be publicly disseminated.[400]

At the same time, correcting an error in the Rule 901(c) information relating to a historical security-based swap would not trigger public dissemination of a corrected report. Rule 905 applies to all information reported pursuant to Regulation SBSR, including historical security-based swaps that must be reported pursuant to Rule 901(i). Rule 905(b)(2) requires the registered SDR to publicly disseminate a correction of a transaction only if the corrected information falls within Rule 901(c) and the transaction previously was subject to a public dissemination requirement. Historical security-based swaps are not subject to the public dissemination requirement; therefore, corrections to Rule 901(c) information in historical security-based swaps are not subject to public dissemination either.

Rule 902(a), as proposed, would have provided that a registered SDR shall publicly disseminate a transaction report of a security-based swap reported to it, "[e]xcept in the case of a block trade." Rule 902(a), as re-proposed, would have retained the exception for block trades and added a second exception, for "a trade that is required to be reported but not publicly disseminated."[401] In final Regulation SBSR, the Commission is revising Rules 902(a) and 902(c) to consolidate into a single rule—Rule 902(c)—all the types of security-based swaps and

400 For example, a termination of a historical security-based swap—occurring after public dissemination in that asset class becomes required—would have to be publicly disseminated. A termination represents the change in the notional amount of the transaction from a positive amount to zero. Because the notional amount is a Rule 901(c) element, the termination of the historical security-based swap would have to be publicly disseminated.

401 This second exception was necessitated by revisions to Rule 908 made in the Cross-Border Proposing Release that would have provided that certain cross-border security-based swaps would be subject to regulatory reporting but not public dissemination. See 78 FR at 31215.

the kinds of information that a registered SDR is prohibited from disseminating. Therefore, Rule 902(a), as adopted, now provides that a registered SDR shall publicly disseminate a transaction report of a security-based swap "except as provided in paragraph (c)."

In addition to adopting subparagraphs (1), (2), and (3) of Rule 902(c), as proposed and re-proposed, the Commission is modifying Rule 902(c) to expand the number of exclusions from public dissemination from three to seven. First, the Commission is adding Rule 902(c)(4), which prohibits a registered SDR from disseminating a non-mandatory report, and is adding a new Rule 900(r) to define "non-mandatory report" as any information provided to a registered SDR by or on behalf of a counterparty other than as required by Regulation SBSR. Situations may arise when the same transaction may be reported to two separate registered SDRs. This could happen, for example, if the reporting side reports a transaction to one registered SDR, as required by Rule 901, but the other side elects to submit the same transaction information to a second registered SDR. The Commission has determined that any non-mandatory report should be excluded from public dissemination because the mandatory report of that transaction will have already been disseminated, and the Commission seeks to avoid distorting the market by having two public reports issued for the same transaction.[402]

Second, the Commission is adding Rule 902(c)(5), which prohibits a registered SDR from disseminating any information regarding a security-based swap that is subject to regulatory reporting but not public dissemination under final Rule 908(a) of Regulation SBSR.[403] Rule 902(a), as re-proposed, would have prohibited a registered SDR from publicly disseminating information concerning a cross-border security-based swap that is required to be reported but not

402 See infra Section XIX (explaining how a registered SDR can determine whether the report it receives is a non-mandatory report).

403 See infra Section XV(A).

publicly disseminated. The Commission received no comments on this specific provision, and is relocating it from re-proposed Rule 902(a) to final Rule 902(c)(5). Rule 902(c)(5), as adopted, will prohibit a registered SDR from disseminating "[a]ny information regarding a security-based swap that is required to be reported pursuant to §§ 242.901 and 242.908(a)(1) but is not required to be publicly disseminated pursuant to § 242.908(a)(2)."

Third, the Commission is adding Rule 902(c)(6), which prohibits a registered SDR from disseminating any information regarding certain types of clearing transactions.[404] Regulation SBSR, as proposed and re-proposed, did not provide any exemption from public dissemination for clearing transactions. However, the Commission has determined that publicly disseminating reports of clearing transactions that arise from the acceptance of a security-based swap for clearing by a registered clearing agency or that result from netting other clearing transactions would be unlikely to further Title VII's transparency objectives. Any security-based swap transaction, such as an alpha, that precedes a clearing transaction must be publicly disseminated. Clearing transactions, such as the beta and the gamma, that result from clearing a security-based swap or from netting clearing transactions together do not have price discovery value because they are mechanical steps taken pursuant to the rules of the clearing agency. Therefore, the Commission believes that non-dissemination of these clearing transactions is appropriate in the public interest and consistent with the protection of investors.

Fourth, the Commission is adding Rule 902(c)(7), which prohibits a registered SDR from disseminating any information regarding the allocation of a security-based swap. As discussed in more detail in Section VIII, infra, the Commission has determined that, to comply with this

404 Rule 900(f) defines "clearing transaction" as "a security-based swap that has a registered clearing agency as a direct counterparty."

prohibition, a registered SDR will satisfy its public dissemination obligations for a security-based swap involving allocation by disseminating only the aggregate notional amount of the executed bunched order that is subsequently allocated. The Commission believes that this is an appropriate means of public dissemination, because the price and size of the executed bunched order were negotiated as if the transaction were a single large trade, rather than as individual smaller trades. In the Commission's view, public dissemination of the allocations would not enhance price discovery because the allocations are not individually negotiated.[405] Furthermore, although the Commission has taken the approach in other situations of requiring public dissemination of the transaction but with a condition flag to explain the special circumstances related to the transaction,[406] for the reasons stated above, the Commission does not believe that this approach is appropriate here. Rule 902(c)(7)'s exception to public dissemination for the individual allocations also is designed to address commenter concerns that publicly disseminating the sizes of individual allocations could reveal the identities or business strategies of fund groups that execute trades on behalf of multiple client funds.[407] For similar reasons, Rule

405 The size in which a transaction is executed could significantly affect the price of the security-based swap. Thus, all other things being equal, the price negotiated for a large trade could be significantly different from the price negotiated for a small trade. Publicly disseminating the prices of small trades that are allocated from the bunched order execution might not provide any price discovery value for another small trade if it were to be negotiated individually. Nor does the Commission believe that publicly disseminating the prices and sizes of the allocations would provide any more price discovery than a single print of the bunched order execution, because the allocations result from a single negotiation for the bunched order size. However, if "child" transactions of a larger "parent" transaction are priced differently from the parent transaction, these child transactions would not fall within the exclusion in Rule 902(c)(7).

406 See infra Section IX (discussing requirements for public dissemination of inter-affiliate security-based swaps).

407 See MFA I at 2-3 ("we are concerned that post-allocation [security-based swap] data, if publicly disseminated, will allow any of the fund's counterparties to identify transactions that the fund executed with others. Counterparties are often aware of an investment

902(c)(7), as adopted, prohibits a registered SDR from publicly disseminating the fact that an initial security-based swap has been terminated and replaced with several smaller security-based swaps as part of the allocation process.[408] The Commission believes that any marginal benefit of publicly disseminating this type of termination event would not be justified by the potential risk to the identity or business strategies of fund groups that execute trades on behalf of multiple client funds.[409]

Registered SDRs will need to rely on the information provided by reporting sides to determine whether Rule 902(c) excludes a particular report from public dissemination. As described in more detail in Section VI(G), Rule 907(a)(4)(iv) requires a registered SDR, among other things, to establish and maintain written policies and procedures directing its participants to apply to the transaction report a condition flag designated by the registered SDR to indicate when the report of a transaction covered by Rule 902(c) should not be publicly disseminated.[410] A registered SDR would not be liable for a violation of Rule 902(c) if it disseminated a report of a transaction that fell within Rule 902(c) if the reporting side for that transaction failed to appropriately flag the transaction as required by Rule 907(a)(4).

---

manager's standard fund allocation methodology and therefore, reporting transactions at the allocated level with trade execution time will make evident an allocation scheme that other participants can easily associate with a particular investment manager").

408 Ordinarily, the termination of a security-based swap that has been publicly disseminated would itself be an event that must be publicly disseminated. See Rule 902(a) (generally providing that a registered SDR shall publicly disseminate a transaction report of a security-based swap "or a life cycle event or adjustment due to a life cycle event" immediately upon receiving an appropriate transaction report).

409 For the reasons noted above, the Commission believes that it is necessary or appropriate in the public interest, and is consistent with the protection of investors, to exclude these types of information from public dissemination under Regulation SBSR.

410 Rule 907(a)(4) provides registered SDRs with some discretion in determining how a reporting side must flag reported data that will be excluded from public dissemination. See infra Section VI(G).

2. Other Exclusions from Public Dissemination Sought by Commenters

Several commenters advanced arguments against public dissemination of various types of security-based swaps. The Commission notes at the outset that the statutory provisions that require public dissemination of security-based swap transactions state that all security-based swaps shall be publicly disseminated.

a. Customized Security-Based Swaps

Several commenters expressed the view that transaction information regarding customized security-based swaps should not be publicly disseminated because doing so would not enhance price discovery, would be of limited use to the public, or could be confusing or misleading to market observers.[411] However, one commenter urged the Commission to require public dissemination of all of the information necessary to calculate the price of a customized security-based swap.[412]

---

411 See Barclays Letter at 3; Cleary II at 6, 16 (stating that public reporting of customized security-based swaps would not aid price discovery, and that the Commission should require the public dissemination of key terms of a customized transaction and an indication that it is customized); DTCC II at 9 (noting the difficulty of comparing price data across transactions that are non-standard and have different terms); ISDA/SIFMA I at 11 (stating that customized security-based swaps provide little to no price discovery value and should not be subject to public dissemination); MFA I at 3 (arguing that Congress did not intend to require public dissemination of comprehensive information for customized security-based swaps and that price discovery serves a purpose only if there is a broad market for the relevant transaction, which is not the case with customized security-based swaps).

412 See Better Markets I at 7; Better Markets II at 3 (stating that many transactions characterized as too complex for reporting or dissemination are, in fact, composites of more straightforward transactions, and that there should be disclosure of information concerning these components to provide meaningful transparency and to prevent market participants from avoiding disclosure by creating composite transactions).

Section 13(m)(1)(C) of the Exchange Act[413] authorizes the Commission to provide by rule for the public availability of security-based swap transaction, volume, and pricing data for four types of security-based swaps, which together comprise the complete universe of potential security-based swaps. With respect to "security-based swaps that are not cleared at a registered clearing agency and which are reported to a security-based swap data repository"—which category would include customized or bespoke security-based swaps—Section 13(m)(1)(C) provides that "the Commission shall require real-time public reporting for such transactions, in a manner that does not disclose the business transactions and market positions of any person" (emphasis added).

The Commission does not believe that the commenters who argued against disseminating reports of bespoke transactions have provided sufficient justification for an exception to public dissemination. To the contrary, the Commission believes that dissemination of transaction reports of customized security-based swaps could still provide useful information to market observers. Although all of the material elements of a bespoke transaction necessary to understand the market value might not be publicly disseminated, it is an overstatement to argue categorically that bespoke transactions would have no price discovery value, as certain commenters suggested.[414] The disseminated price could, for example, still have an anchoring effect on price expectations for future negotiations in similar or related products, even in thinly-traded markets. Furthermore, even if it is difficult to compare price data across customized transactions, by disseminating reports of all bespoke transactions, market observers can

413 15 U.S.C. 13(m)(1)(C)(iii).

414 See supra note 411.

understand the relative number and aggregate notional amounts of transactions in bespoke products versus standardized products.

The Commission recognizes, however, that market observers should have information that permits them to readily distinguish transactions in standardized products from transactions in bespoke security-based swaps. Accordingly, Rule 901(c)(1)(v) provides that, when reporting a transaction to a registered SDR, the reporting side must attach a flag to indicate whether a security-based swap is customized to the extent that the other information provided pursuant to Rule 901(c) does not provide all of the material information necessary to identify the security-based swap or does not contain the data elements necessary to calculate the price of the security-based swap. In addition, final Rule 907(a)(4) requires a registered SDR to establish policies and procedures concerning the use of appropriate flags on disseminated transaction reports that are designed to assist market observers in interpreting the relevance of a transaction.

b. Inter-Affiliate Transactions

Several commenters argued that the Commission should not require public dissemination of inter-affiliate security-based swaps. Issues relating to regulatory reporting and public dissemination of inter-affiliate transactions are discussed in Section IX, infra.

c. Security-Based Swaps Entered into in Connection with a Clearing Member's Default

One commenter argued that reports of security-based swaps effected in connection with a clearing agency's default management processes following the default of a clearing member should not be publicly disseminated in real time.[415] This commenter believed that public

[415] See LCH.Clearnet Letter at 2 (explaining that, to manage a defaulting clearing member's portfolio, a clearing agency would rely on its non-defaulting members to provide liquidity for a small number of large transactions that would be required to hedge the

dissemination of these transactions could undermine a clearing agency's default management processes and have a negative effect on market stability, particularly because a default likely would occur during stressed market conditions. Accordingly, the commenter recommended that reports of security-based swaps entered into in connection with a clearing agency's default management processes be made available to the Commission in real time but not publicly disseminated until after the default management processes have been completed, as the Commission determines appropriate.

The Commission believes that, at present, the commenter's concerns are addressed by the Commission's approach for the interim phase of Regulation SBSR, which offers reporting sides up to 24 hours after the time of execution to report a security-based swap.[416] The Commission believes that this approach strikes an appropriate balance between promoting post-trade transparency and facilitating the default management process, and is broadly consistent with the commenter's suggestion to allow for public dissemination after the default management process has been completed. Further, the commenter suggested that such transactions typically occur in large size; thus, transactions entered into by surviving clearing members might qualify for any block exception, if the Commission were to promulgate such an exception in the future. The Commission intends to revisit the commenter's concern in connection with its consideration of block thresholds and other potential rules relating to block trades.

d. Total Return Security-Based Swaps

---

defaulting member's portfolio, and the ability of non-defaulting members to provide liquidity for these transactions would be impaired if the transactions were reported publicly before the members had an opportunity to mitigate the risks of the transactions).

416 See Rule 901(j); Section VII(B), infra. If 24 hours after the time of execution would fall on a day that is not a business day, reporting would be required by the same time on the next day that is a business day.

Three commenters argued that there should be no public dissemination of total return security-based swaps ("TRSs"), which offer risks and returns proportional to a position in a security, securities, or loan(s) on which a TRS is based.[417] One of these commenters argued that "TRS pricing information is of no value to the market because it is driven by many considerations including the funding levels of the counterparties to the TRS and therefore may not provide information about the underlying asset for the TRS."[418] Another commenter suggested that the fact that TRSs are hedged in the cash market, where trades are publicly disseminated, would mitigate the incremental price discovery benefit of public dissemination of the TRSs.[419] Similarly, a third commenter argued that requiring public dissemination of an equity TRS transaction would not enhance transparency, and could confuse market participants, because the hedging transactions are already publicly disseminated.[420]

The Commission has carefully considered these comments but believes that these commenters have not provided sufficient justification to support a blanket exclusion from public dissemination for TRSs. The Commission believes, rather, that market observers should be given an opportunity to decide how to interpret the relevance of a disseminated trade to the state of the market, and reiterates that relevant statutory provisions state that all security-based swaps

---

417 See Barclays Letter at 2-3; Cleary II at 13-14; ISDA/SIFMA I at 13.

418 ISDA/SIFMA I at 13.

419 See Cleary II at 13-14. The primary concern of this commenter with respect to equity TRSs was the proposed exclusion of equity TRSs from the reporting delay for block trades. See id. The Commission expects to consider this comment in connection with its consideration of rules for block trades.

420 See Barclays Letter at 3. The commenter also expressed more general concerns regarding the potential consequences of reduced liquidity in the equity TRS market, noting that if liquidity in the equity TRS market is impaired, liquidity takers could migrate away from a diversified universe of security-based swap counterparties to a more concentrated group of prime brokers, which could increase systemic risk by concentrating large risk positions with a small number of prime brokers. See Barclays Letter at 8.

shall be publicly disseminated. These statutory provisions do not by their terms distinguish such public dissemination based on particular characteristics of a security-based swap.

The Commission also has considered the argument advanced by one of the commenters that requiring instantaneous public dissemination of an equity TRS transaction could confuse market participants, because the hedging transactions are already publicly disseminated.[421] The Commission disagrees that dissemination of both transactions (i.e., the initial transaction and the hedge) would cause confusion. In other securities markets, public dissemination of initial transactions and their hedges occur on a regular basis.[422] Valuable information could be obtained by observing whether transactions in related products executed close in time have the same or different prices.[423] The commenter who expressed concerns about potential negative consequences of reduced liquidity in the equity TRS market provided no evidence to support its claim.[424]

e. Transactions Resulting from Portfolio Compression

One group of commenters argued that transactions resulting from portfolio compression exercises do not reflect trading activity, contain no market information, and thus should be excluded from public dissemination.[425] One member of that group requested clarification that

---

421 See Barclays Letter at 3.

422 For example, a trade in a listed single-stock option is frequently hedged by a trade in the underlying stock. Each trade is disseminated via the relevant consolidated tape.

423 For example, a difference in prices between an equity TRS and the underlying securities might suggest mispricing of either leg of the trade, signaling to market participants the existence of economic rents they could subsequently compete away. Additionally, price discrepancies also could be related to fees or liquidity premiums charged by equity TRS dealers. See infra Section XXII(B)(2)(a).

424 See Barclays Letter at 8.

425 See ISDA/SIFMA I at 12. See also DTCC II at 20 (stating, with respect to portfolio compression activities, that "an exact pricing at individual trade level between parties is

only trades representing the end result of a netting or compression would need to be reported. This commenter expressed the view that publicly disseminating original transactions as well as the transactions that result from netting or compression would result in double-counting and could present a distorted view of the market.[426]

The Commission recognizes that portfolio compression is designed to mitigate risk between counterparties by reducing gross exposures, and any new security-based swaps executed as a result reflect existing net exposures and might not afford market participants an opportunity to negotiate new terms. Nevertheless, there may be some value in allowing market observers to see how often portfolio compressions occur and how much net exposure is left after much of the gross exposure is terminated. Furthermore, it is possible that new positions arising from a compression exercise could be repriced, and thus offer new and useful pricing information to market observers. Therefore, the Commission is not convinced that there would be so little value in disseminating such transactions that they all should be excluded from public dissemination, even though the original transactions that are netted or compressed may previously have been publicly disseminated. With respect to the commenter's concern regarding double-counting, the Commission notes that Rule 907(a)(4) requires a registered SDR to have policies and procedures for flagging special circumstances surrounding certain transactions, which could include transactions resulting from portfolio compression. The Commission believes that market observers should have the ability to assess reports of transactions resulting from portfolio compressions, and that a condition flag identifying a transaction as the result of a portfolio compression exercise would help to avoid double-counting.

---

not meaningful and, therefore, these transactions should not be disseminated"); ISDA IV at 13.

426 See ISDA I at 4-5.

f. Thinly Traded Products

Three commenters expressed concern about the potential impact of real-time public dissemination on thinly traded products.[427] One of these commenters suggested that "security-based swaps traded by fewer than ten market makers per month should be treated as illiquid and subject to public reporting only on a weekly basis."[428] The Commission disagrees with this suggestion. In other classes of securities—e.g., listed equity securities, OTC equity securities, listed options, corporate bonds, municipal bonds—all transactions are disseminated in real time, and there is no delayed reporting for products that have only a limited number of market makers. The Commission is not aware of characteristics of the security-based swap market that are sufficiently different from those other markets to warrant delayed reporting because of the number of market makers. Furthermore, given the high degree of concentration in the U.S. security-based swap market, many products have fewer than ten market makers. Thus, the commenter's suggestion—if accepted by the Commission—could result in delayed reporting for a substantial percentage of security-based swap transactions, which would run counter to Title VII's goal of having real-time public dissemination for all security-based swaps (except for block trades). Finally, as noted above, the Title VII provisions that mandate public dissemination on a real-time basis do not make any exception for security-based swaps based on the number of market makers.

Another commenter expressed concern that mandating real-time reporting of thinly-traded products and illiquid markets could increase the price of entering into a derivatives

427 See Bachus/Lucas Letter at 2; ISDA IV at 14; UBS Letter at 1. These comments also are discussed in Section VII(B) infra.

428 UBS Letter at 1, note 5.

contract to hedge risk by facilitating speculative front-running.[429] Another commenter expressed concern about the impact of real-time post-trade transparency for illiquid security-based swaps on pre-trade transparency that currently exists in the form of indicative prices provided by dealers to their clients (known as "runs").[430] This commenter requested that the Commission provide illiquid security-based swaps with an exception from real-time reporting and instead allow for delays roughly commensurate with the trading frequency of the security-based swap.[431] Under the adopted rules, counterparties generally will have up to 24 hours after the time of execution to report security-based swap transactions. This reporting timeframe is designed, in part, to minimize the potential for market disruption resulting from public dissemination of any security-based swap transaction during the interim phase of Regulation SBSR. The Commission anticipates that, during the interim period, it will collect and analyze data concerning the sizes of transactions that potentially affect liquidity in different segments of the market in connection with considering block thresholds.

E. Dissemination of Block Transactions—Rule 902(b)

Rule 902(b), as proposed and re-proposed, would have required a registered SDR to publicly disseminate a transaction report for a block trade (except for the notional amount of the transaction) immediately upon receipt of the information about the block trade from the reporting party, along with the transaction ID and an indicator that the report represented a block trade.

---

429 See Bachus/Lucas Letter at 2.

430 See ISDA IV at 14 (expressing concern that the combination of name-attributed runs and a rapidly disseminated set of post-trade information would make it relatively easy for many participants to reconstruct the identity of parties to a particular transaction, which may reduce dealers' willingness to disseminate pre-trade price information in the form of runs, thereby reducing pre-trade transparency).

431 See id.

Rule 902(b) would further have required the registered SDR to disseminate a complete transaction report for the block trade, including the full notional amount of the transaction, within specified timeframes ranging from eight to 26 hours after execution, depending on the time when the security-based swap was executed. Thus, under Rule 902(b), as proposed and re-proposed, market participants would learn the price of a security-based swap block trade in real time, and would learn the full notional amount of the transaction on a delayed basis.[432]

For the reasons discussed in detail in Section VII(B), infra, the Commission is not adopting Rule 902(b).

F. The Embargo Rule—Rule 902(d)

Rule 902(d), as proposed, would have provided that "[n]o person other than a registered security-based swap data repository shall make available to one or more persons (other than a counterparty) transaction information relating to a security-based swap before the earlier of 15 minutes after the time of execution of the security-based swap; or the time that a registered security-based swap data repository publicly disseminates a report of that security-based swap." In other words, the information about the security-based swap transaction would be "embargoed" until a registered SDR has in fact publicly disseminated a report of the transaction (or until such time as a transaction should have been publicly disseminated). Rule 902(d) is also referred to as the "Embargo Rule." Rule 902(d) was not revised as part of the Cross-Border Proposing Release, and was re-proposed in exactly the same form as had been initially proposed.

Under Regulation SBSR, only registered SDRs must publicly disseminate security-based swap transaction data to the public. However, other persons with knowledge of a transaction—

---

432 The only difference between Rule 902(b) as proposed and as re-proposed was that the term "reporting party" was changed to "reporting side."

the counterparties themselves or the venue on which a transaction is executed—also might wish to disclose information about the transaction to third parties (whether for commercial benefit or otherwise). An unfair competitive advantage could result if some market participants could obtain security-based swap transaction information before others. Regulation SBSR, by carrying out the Congressional mandate to publicly disseminate all security-based swap transactions, is intended to reduce information asymmetries in the security-based swap market and to provide all market participants with better information—and better access to information—to make investment decisions. Therefore, the Commission proposed Rule 902(d), which would have imposed a partial and temporary restriction on sources of security-based swap transaction information other than registered SDRs.

Three commenters supported the view that market participants (including SB SEFs) should not be permitted to distribute their security-based swap transaction information before such information is disseminated by a registered SDR.[433] However, three other commenters strongly opposed the proposed Embargo Rule.[434] Other commenters expressed a concern that the proposed Embargo Rule would make it more difficult for SB SEFs to offer "work-up"[435]

---

433 See Markit II at 4 (stating that if SB SEFs were permitted to disseminate data elements of a security-based swap transaction, confusion and data fragmentation would inevitably result, which would ultimately undermine the goal of increased transparency); Barnard I at 4 (stating that market participants should be prohibited from distributing their market data prior to the dissemination of that data by a registered SDR to prevent the development of a two-tier market); ISDA IV at 17 (stating that "it is unclear why any person should be allowed to make the data available to another market data source ahead of the time that [an SDR] is allowed to publicly disseminate such transaction," and recommending that proposed Rule 902(d) be revised to refer only to the time that an SDR disseminates a report of the security-based swap).

434 See GFI Letter at 2; SDMA II at 4; WMBAA Letter at 8-9.

435 See GFI Letter at 3 ("A typical workup transaction begins when two market participants agree to transact at a certain price and quantity. The transaction does not necessarily end there, however, and the two participants then have the opportunity to transact further

functionality.[436] This "work-up" process, according to one of the commenters, is designed to foster liquidity in the security-based swap market and to facilitate the execution of larger-sized transactions.[437]

The Commission has carefully reviewed the comments received and has determined to revise the Embargo Rule to provide that the act of sending a report to a registered SDR—not the act of the registered SDR actually disseminating it—releases the embargo. Rule 902(d), as adopted, provides: "No person shall make available to one or more persons (other than a counterparty <u>or a post-trade processor</u>) transaction information relating to a security-based swap <u>before the primary trade information about the security-based swap is sent to a registered security-based swap data repository</u>" (emphasis added).

The Commission agrees with the majority of commenters that it would be beneficial for security-based swap market participants to have the ability to disseminate and receive transaction data without being constrained by the time when a registered SDR disseminates the transaction information. The Commission understands that, in some cases, entities that are likely to become

---

volume at the already-established price. Thereafter, other market participants may join the trade and transact with either the original counterparties to the trade or with other firms if they agree to trade further volume at the established price"); SDMA II at 3 ("Trade work ups are a common practice in which the broker looks for additional trading interest at the same time a trade is occurring—or "flashing" on the screen—in the same security at the same price. The ability to view the price of a trade as it is occurring is critical to broker's ability to locate additional trading interest. The immediate flash to the marketplace increases the probability that additional buyers and sellers, of smaller or larger size, will trade the same security at the same time and price"); WMBAA II at 3 ("Work-up enables traders to assess the markets in real-time and make real-time decisions on trading activity, without the fear of moving the market one way or another").

436 <u>See</u> GFI Letter at 3; SDMA II at 3 (if "the SB SEF is prohibited from 'flashing' the price of a trade as it occurs and the brokers must wait until after the SB SDR has disclosed the price, the broker's window of opportunity to locate additional trading interest will close"); WMBAA II at 3.

437 <u>See</u> GFI Letter at 3.

SB SEFs may want to broadcast trades executed electronically across their platforms to all subscribers, because knowing that two counterparties have executed a trade at a particular price can, in some cases, catalyze trading by other counterparties at the same price. Allowing dissemination of transaction information to occur simultaneously with transmission to a registered SDR will allow SB SEF participants to see last-sale information for the particular markets on which they are trading, which could facilitate the work-up process and thus enhance price discovery.

One commenter expressed concern, however, that permitting the distribution of market data prior to dissemination of the information by a registered SDR could result in the development of a two-tier market.[438] Although the Commission generally shares the commenter's concern about information asymmetries, the Commission does not believe that Rule 902(d), as adopted, raises that concern. Certain market participants might learn of a completed transaction before others who rely on public dissemination through a registered SDR. However, the time lag is likely to be very small because Rule 902(a) requires a registered SDR to publicly disseminate a transaction report "immediately upon receipt of information about the security-based swap." The Commission understands that, under the current market structure, trading in security-based swaps occurs for the most part manually (rather than through algorithmic means) and infrequently. Thus, obtaining knowledge of a completed transaction through private means a short time before others learn of the transaction from a registered SDR is unlikely, for the foreseeable future, to provide a significant advantage. Furthermore, as discussed above regarding the "work-up" process, the most likely recipients of direct information about the completed transaction are other participants of the SB SEF. Thus, an important

438 See Barnard I at 4.

segment of the market—i.e., competitors of the counterparties to the original transaction in the work up who are most likely to have an interest in trading the same or similar products—are still benefitting from post-trade transparency, even if it comes via the work-up process on the SB SEF rather than through a registered SDR.

Two commenters raised arguments related to the ownership of the security-based swap transaction data and were concerned that the proposed Embargo Rule would place improper restrictions on the use of security-based swap market data.[439] One of these commenters recommended that the Commission revise the Embargo Rule "in such a way that . . . the security-based swap counterparties and SB SEFs [would] continue to have the ability to market and commercialize their own proprietary data."[440] The other commenter recommended that the Commission make clear that nothing in the final rules is intended "to impose or imply any limit on the ability of market participants . . . to use and/or commercialize data they create or receive in connection with the execution or reporting of swap data."[441]

The Commission declines to revise Rule 902(d) in the manner suggested by these commenters. As the Commission notes in the SDR Adopting Release, "the issue of who owns the data is not particularly clear cut, particularly when value is added to it."[442] If the

---

440 WMBAA II at 8.

441 Tradeweb Letter II at 6.

442 SDR Adopting Release, Section VI(D)(3)(c)(iii) (citing difficulties associated with determining ownership of data as one of several reasons for not adopting, at this time, a rule prohibiting an SDR and its affiliates from using, for commercial purposes, security-based swap data that the SDR maintains without obtaining express written consent from both counterparties to the security-based swap transaction or the reporting party). See also Securities Exchange Act Release 63825 (February 2, 2011), 76 FR 10948 (February

Commission were to revise the rule in the manner suggested by commenters, it would seem to make a presumption about who owns the data, which may be viewed as the Commission favoring one business model over another. As further noted in the SDR Adopting Release, the Commission does not support any particular business model[443] and, therefore, does not believe it is necessary or appropriate to revise the rule as suggested by these commenters.

As originally proposed, the Embargo Rule had an exception for disseminating the transaction information to counterparties, as the counterparties to the transaction should be allowed to receive information about their own security-based swap transactions irrespective of whether such information has been reported to or disseminated by a registered SDR. However, two commenters noted that SB SEFs also will need to provide transaction data to entities involved in post-trade processing, irrespective of whether the embargo has been lifted.[444] The Commission recognizes that, after a trade is executed, there are certain entities that perform post-trade services—such as matching, confirmation, and reporting—that may need to receive the transaction information before it is sent to a registered SDR. For example, a third party could not act as agent in reporting a transaction to a registered SDR on behalf of a reporting side if it could not receive information about the executed transaction before it was submitted to the registered SDR. In the Regulation SBSR Proposing Release, the Commission stated that counterparties to a security-based swap

28, 2011) at 10961-7 ("SB SEF Proposing Release") (discussing the proposed imposition of certain requirements on SB SEFs with respect to services provided and fees charged).

443 See SDR Adopting Release, Section III(D) (discussing business models of SDRs).

444 See BlackRock Letter at 9; ISDA IV at 17 (recommending a carve-out from Rule 902(d) for third-party service providers that one or both counterparties use for execution, confirmation, trade reporting, portfolio reconciliation and other services that do not include the public dissemination of security-based swap data).

could rely on agents to report security-based swap data on their behalf.[445] Without an exception, such use of agents could be impeded, an action the Commission did not intend. Accordingly, the Commission is revising the Embargo Rule to add an explicit exception for "post-trade processors." The Commission is also adding a new paragraph (x) to final Rule 900, which defines "post-trade processor" as "any person that provides affirmation, confirmation, matching, reporting, or clearing services for a security-based swap transaction."

Finally, one commenter recommended a carve-out from Rule 902(d) not only for counterparties, but also for their affiliates, "to allow for internal communication of SBS data."[446] Rule 902(d)—as proposed, re-proposed, and adopted—includes a carve-out for counterparties, which could include affiliates, to the extent that an affiliate is an indirect counterparty as defined in Rule 900. The Commission continues to believe that it is necessary for counterparties to know when they have executed a trade. The Commission further notes that Rule 902(d), as adopted, contains an exception for post-trade processors,[447] which could include post-trade processors that are affiliates of the counterparties. Thus, Rule 902(d) would not prohibit a counterparty to a security-based swap transaction from providing the transaction information to an affiliate before providing it to a registered SDR, if that affiliate will serve as the counterparty's agent for reporting the transaction to the registered SDR. However, Rule 902—as proposed, re-proposed, and adopted—includes no

---

445 See 75 FR at 75211-12.

446 ISDA IV at 17.

447 See Rule 900(x) (defining "post-trade processor" as "any person that provides affirmation, confirmation, matching, reporting, or clearing services for a security-based swap transaction").

broad carve-out for all affiliates of the counterparties. The Commission does not see a basis for allowing such a broad exception for all affiliates, which could undermine the purpose of Rule 902(d), as discussed above.

G. Condition Flags—Rule 907(a)(4)

Rule 907(a)(4), as originally proposed, would have required a registered SDR to establish and maintain written policies and procedures "describing how reporting parties shall report and, consistent with the enhancement of price discovery, how the registered security-based swap depository shall publicly disseminate, reports of, and adjustments due to, life cycle events; security-based swap transactions that do not involve an opportunity to negotiate any material terms, other than the counterparty; and any other security-based swap transactions that, in the estimation of the registered security-based swap data depository, do not accurately reflect the market." The Commission re-proposed Rule 907(a)(4) in the Cross-Border Proposing Release with only minor technical revisions.[448]

One commenter expressed the view that a registered SDR should have the flexibility to determine and apply special indicators.[449] Another commenter suggested that, to be meaningfully transparent, security-based swap transaction data should include "condition flags" comparable to those used in the bond market.[450] As discussed more fully below, the Commission agrees that such "condition flags" could provide additional transparency to the security-based swap market. The Commission believes that the condition flags that registered SDRs will develop pursuant to final Rule 907(a)(4) could provide information similar to the

448 The Commission changed the words "reporting parties" to "reporting sides" and "depository" to "repository."

449 See Barnard I at 3.

450 See MarkitSERV I at 10.

information provided by the condition flags used in the bond market. The registered SDR's condition flags could include, for example, flags indicating that a security-based swap was an inter-affiliate transaction or a transaction entered into as part of a trade compression.

A third commenter suggested that a registered SDR should not have discretion to determine whether a particular transaction reflects the market, as the registered SDR may not have sufficient information to make such a determination.[451] The Commission agrees with the commenter that a registered SDR may not have sufficient information to ascertain whether a particular transaction "do[es] not accurately reflect the market," as would have been required under Rule 907(a)(4), as originally proposed. Therefore, the Commission will not require the registered SDR to have policies and procedures for attaching an indicator that merely conveys that the transaction, in the estimation of the registered SDR, does not accurately reflect the market.

Instead, the Commission believes that requiring the registered SDR to provide information about any special circumstances associated with a transaction report could help market observers better understand the report and enhance transparency. For example, Rule 901(c)(1)(v), as adopted, requires a reporting side to attach a flag if a security-based swap is customized to the extent that other information provided for the swap does not provide all of the material information necessary to identify the customized security-based swap or does not contain the data elements necessary to calculate the price.[452] In addition, Rule 905(b)(2), as adopted, requires a registered SDR that receives a correction to information that it previously

---

451 See DTCC II at 20.

452 See supra Section II(B)(2)(b)(vi).

disseminated publicly to publicly disseminate a corrected transaction report with an indication that the report relates to a previously disseminated transaction.[453]

The Commission, therefore, is adopting Rule 907(a)(4) with certain additional language to respond to the comments and to clarify how Rule 907(a)(4) should apply in circumstances contemplated by but not fully addressed in the original proposal or the re-proposal. The Commission has revised Rule 907(a)(4) as follows: new subparagraph (i) requires the registered SDR to have policies and procedures for "identifying characteristic(s) of a security-based swap, or circumstances associated with the execution or reporting of the security-based swap, that could, in the fair and reasonable estimation of the registered security-based swap data repository, cause a person without knowledge of these characteristic(s) or circumstances to receive a distorted view of the market." This language retains the idea that the appropriate characteristics or circumstances remain "in the estimation of" the registered SDR, but requires the SDR's exercise of this discretion to be "fair and reasonable" to emphasize that the estimation should not result in flags that would not allow market observers to better understand the transaction reports that are publicly disseminated. Rule 907(a)(4)(i), as adopted, also widens the scope of transactions to which the provision applies.[454] This provision grants a registered SDR the

---

453 See infra Section XX(B).

454 This revision to Rule 907(a)(4) also removes the references to public dissemination of life cycle events that were proposed and re-proposed. These references have been relocated to final Rule 907(a)(3). Rule 907(a)(3), as proposed and re-proposed, addressed only the reporting and public dissemination of error reports. Life cycle events are similar to error reports in that they reflect new information that relates to a previously executed security-based swap. Therefore, Rule 907(a)(3), as adopted, now requires a registered SDR to have policies and procedures for "specifying procedures for reporting life cycle events and corrections to previously submitted information, making corresponding updates or corrections to transaction records, and applying an appropriate flag to the transaction report to indicate that the report (i) is an error correction required to be disseminated by [Rule 905(b)(2)]; or (ii) is a life cycle event, or any adjustment due

flexibility to determine which special circumstances require flags and to change that determination over time, if warranted.[455] Subparagraph (ii) provides that the registered SDR's policies and procedures must "establish[] flags to denote such characteristic(s) or circumstance(s)," explicitly incorporating the concept of condition flags suggested by the commenter.[456] Subparagraph (iii) requires policies and procedures "directing participants to apply such flags, as appropriate, in their reports" to the registered SDR. Finally, subparagraph (iv) requires these policies and procedures to address, in part, "applying such flags to disseminated reports to help to prevent a distorted view of the market."

The Commission also is adopting Rule 907(a)(4) with certain additional language in subparagraph (iv) that clarifies the handling of security-based swap information that is required to be reported under Rule 901 but which a registered SDR is required by Rule 902(c) not to publicly disseminate. As noted above, even in the initial proposal, the Commission contemplated that certain information would fall into this category.[457] Rule 907(a), as originally proposed, would have required a registered SDR to establish and maintain policies and procedures that addressed, among other things, the public dissemination of security-based swap data. Carrying out that duty in a manner consistent with Rule 902—and, in particular, with Rule 902(c)—will necessarily require a registered SDR to differentiate reported information that is required to be publicly disseminated from reported information that is required not to be publicly

---

to a life cycle event, required to be disseminated by [Rule 902(a)]." See infra Section XII(C).

455 See Barnard I at 3.

456 See MarkitSERV I at 10.

457 See Regulation SBSR Proposing Release, 75 FR at 75234-35.

disseminated.[458] The new language in final Rule 907(a)(4)(iv)(B) calls attention to this particular requirement. Rule 907(a)(4)(iv)(B), as adopted, requires the registered SDR to have policies and procedures for suppressing from public dissemination a transaction referenced in Rule 902(c).[459]

In addition to the requirements for indications in the case of error reports or bespoke transactions, the Commission believes that registered SDRs generally should include the following in its list of condition flags:

- Inter-affiliate security-based swaps. As discussed in detail in Section VI(D), infra, the Commission is not exempting inter-affiliate transactions from public dissemination. However, the Commission believes it could be misleading if market observers did not understand that a transaction involves affiliated counterparties.

458 One commenter noted its view that Rule 907(a)(4), as proposed, seemed to delegate to the discretion of the SDR whether and how certain security-based swap activity would be publicly disseminated, and requested that the Commission clearly establish in Regulation SBSR that certain security-based swap activity is not subject to public dissemination. See ISDA IV at 13. The Commission believes that the rules as adopted do clearly establish what security-based swap activity is not subject to public dissemination. Rule 902(a), as adopted, requires the registered SDR to publicly disseminate a transaction report of a security-based swap, or a life cycle event or adjustment due to a life cycle event, immediately upon receipt of information about the security-based swap, except as provided in Rule 902(c). Rule 902(c) provides a list of information and types of security-based swap transactions that a registered security-based swap shall not disseminate. See supra Section VI(D).

459 Under Rule 907(a)(4)(iv), the registered SDR's policies and procedures must direct the reporting side to apply appropriate flags to transaction reports. In the case of a report falling within Rule 902(c), the reporting side for the relevant transaction is required to use the flag that signals to the registered SDR that the report should not be publicly disseminated. The Commission notes that Rule 907(a)(4) affords registered SDRs some discretion to determine precisely how a reporting side must flag reported data that will be excluded from public dissemination under Rule 902(c). For example, a registered SDR may determine not to require a specific "do not disseminate" tag for historical security-based swaps if it is clear from context that they are historical security-based swaps and not current transactions. As described in Section VI(D) above, the Commission does not believe that a registered SDR would violate Rule 902(c) if it disseminated a report of a transaction that fell within Rule 902(c) if the reporting side fails to appropriately flag the transaction.

- Transactions resulting from netting or compression exercises.[460] The Commission believes that market observers should be made aware that these transactions are related to previously existing transactions and generally do not represent new risks being assumed by the counterparties.
- Transactions resulting from a "forced trading session" conducted by a clearing agency.[461] The Commission believes that it would be helpful for market observers to understand that such transactions may not be available to market participants outside of the forced trading session.
- Transactions reported more than 24 hours after execution. The Commission believes that there is price discovery value in disseminating the transaction report, particularly

---

460 This applies only to transactions resulting from netting or compression exercises other than through a registered clearing agency. Security-based swaps resulting from netting or compression exercises carried out by a registered clearing agency are not subject to public dissemination. See Rule 902(c)(6). See also supra Section VI(D)(1) (explaining Rule 902(c)(6)); Section VI(D)(2)(v) (explaining why the Commission believes that transactions resulting from portfolio compression—other than clearing transactions—should be publicly disseminated).

461 Entities that the Commission previously exempted from certain Exchange Act requirements, including clearing agency registration, have informed the Commission that they undertake "forced trading" sessions in order to promote accuracy in the end-of-day valuation process. See, e.g., Securities Exchange Act Release No. 59527 (March 6, 2009), 74 FR 10791, 10796 (March 12, 2009) (Order Granting Temporary Exemptions Under the Securities Exchange Act of 1934 in Connection With Request on Behalf of ICE U.S. Trust LLC Related to Central Clearing of Credit Default Swaps, and Request for Comments) (describing "forced trading sessions" conducted by a clearing agency as follows: "ICE Trust represents that, in connection with its clearing and risk management process, it will calculate an end-of-day settlement price for each Cleared CDS in which an ICE Trust Participant has a cleared position, based on prices submitted by ICE Trust Participants. As part of this mark-to-market process, ICE Trust will periodically require ICE Trust Participants to execute certain CDS trades at the applicable end-of-day settlement price. Requiring ICE Trust Participants to trade CDS periodically in this manner is designed to help ensure that such submitted prices reflect each ICE Trust Participant's best assessment of the value of each of its open positions in Cleared CDS on a daily basis").

in cases where there are few or no other recent last-sale reports in that product. However, all market observers should understand that the report is no longer timely and thus may not reflect the current market at the time of dissemination.

- Transactions resulting from default of a clearing member. The Commission believes that the fact that the transaction was necessitated by a clearing agency's need to have surviving clearing members assume the positions of a defaulting clearing member is important information about understanding the transaction and market conditions generally.
- Package trades. "Package trade" is a colloquial term for a multi-legged transaction of which a security-based swap constitutes one or more legs. Market observers should be made aware that the reported price of a security-based swap that is part of a package trade might reflect other factors—such as the exchange of an instrument that is not a security-based swap—that are not reflected in the transaction report of the security-based swap itself.

This list is by way of example and not of limitation. There are likely to be other types of transactions or circumstances associated with particular transactions that may warrant a condition flag. The Commission anticipates that each registered SDR will revise its list over time as the security-based swap market evolves and registered SDRs and market participants gain greater insight into how to maximize the effectiveness of publicly disseminated transaction reports.

VII. Block Trades and the Interim Phase of Regulation SBSR

Section 13m(1)(E) of the Exchange Act[462] requires the Commission rule for real-time public dissemination of security-based swap transactions to: (1) "specify the criteria for determining what constitutes a large notional security-based swap transaction (block trade) for particular markets and contracts" and (2) "specify the appropriate time delay for reporting large notional security-based swap transactions (block trades) to the public." In addition, Section 13m(1)(E)(iv) of the Exchange Act[463] requires the Commission rule for real-time public dissemination of security-based swap transactions to contain provisions that "take into account whether the public disclosure [of transaction and pricing data for security-based swaps] will materially reduce market liquidity."[464]

As discussed further below, the Commission is neither proposing nor adopting rules relating to block trades at this time. However, the rules, as adopted, establish an interim phase of Regulation SBSR. During this first phase, as described below, reporting sides—with certain minor exceptions—will have up to 24 hours ("T+24 hours") after the time of execution to report a transaction. The registered SDR that receives the transaction information would then be required to publicly disseminate a report of the transaction immediately thereafter.

The Commission recognizes that the introduction of mandated post-trade transparency in the security-based swap market could have a significant impact on market participant behavior

---

462 15 U.S.C. 78m(m)(1)(E).

463 15 U.S.C. 78m(m)(1)(E)(iv).

464 These statutory mandates apply only with respect to <u>cleared</u> security-based swaps. The Dodd-Frank Act does not require the Commission to specify block thresholds or dissemination delays or to take into account how public disclosure will materially reduce market liquidity with respect to <u>uncleared</u> security-based swaps. For security-based swaps that are not cleared but are reported to an SDR or the Commission under Section 3C(a)(6) of the Exchange Act, "the Commission shall require real-time public reporting for such transactions, in a manner that does not disclose the business transactions and market positions of any person." 15 USC 78m(1)(C)(iii).

and the provision of liquidity. The interim phase is designed, among other things, to generate information about how market participants behave in an environment with post-trade transparency. Furthermore, once the first phase is implemented, reporting sides will be required under Regulation SBSR to report, among other things, the time of execution of their security-based swap transactions. As described in a staff analysis of the inventory management of dealers in the market for single-name CDS based on transaction data from DTCC-TIW, security-based swap transaction data currently stored in DTCC-TIW include the time of reporting, but not the time of the execution.[465] Having the execution time instead of only the reporting time will enable staff to perform a more robust and granular analysis of any hedging that may or may not occur within the first 24-hour period after execution. After collecting and analyzing data that are more granular and reflect the reactions of market participants to T+24 hour post-trade transparency, the Commission anticipates that it will undertake further rulemaking to propose and adopt rules related to block trades and the reporting and public dissemination timeframe for non-block trades.

A. Proposed Rules Regarding Block Trades

The Commission did not propose specific thresholds for block trades in the Regulation SBSR Proposing Release. Instead, the Commission described general criteria that it would consider when setting specific block trade thresholds in the future.[466] The Commission stated that it "preliminarily believes that the general criteria for what constitutes a large notional security-based swap transaction must be specified in a way that takes into account whether

---

465 See "Inventory risk management by dealers in the single-name credit default swap market" (October 17, 2014) at 5, available at http://www.sec.gov/comments/s7-34-10/s73410-184.pdf ("Hedging Analysis").

466 See Regulation SBSR Proposing Release, 75 FR at 75228.

public disclosure of such transactions would materially reduce market liquidity, but presumably should be balanced by the general mandate of Section 13(m)(1) of the Exchange Act, which provides that data on security-based swap transactions must be publicly disseminated in real time, and in a form that enhances price discovery."[467] The Commission further stated: "For post-trade transparency to have a negative impact on liquidity, market participants would need to be affected in a way that either: (1) Impacted their desire to engage in subsequent transactions unrelated to the first; or (2) impacted their ability to follow through with further actions after the reported transaction has been completed that they feel are a necessary consequence of the reported transaction."[468]

The Commission noted, with respect to the first case, that post-trade dissemination of transaction prices could lead to narrower spreads and reduce participants' willingness to trade. However, the Commission noted that liquidity could be enhanced if market participants increased their trading activity as a result of the new information. Because it would be difficult, if not impossible, to estimate with certainty which factor would prevail in the evolving security-based swap market, the Commission was guided by the general mandate of Section 13(m)(1) and the Commission's preliminary belief that even in illiquid markets, transaction prices form the foundation of price discovery.[469] Therefore, the Commission proposed that prices for block trades be disseminated in the same fashion as prices for non-block transactions.

The Commission noted that, in the second case, counterparties may intend to take further action after an initial transaction for hedging purposes. The Commission believed that, for a

---

467 Id. at 75228-29.

468 Id. at 75229.

469 See id.

transaction that was sufficiently large, disseminating the size of such a transaction could signal to the market that there is the potential for another large transaction in a particular security-based swap or related security.[470] Therefore, in order to give the market time to absorb any subsequent transactions, the Commission stated that it preliminarily believed that the size of a sufficiently large transaction should be suppressed for a certain period of time to provide time for subsequent transactions.[471]

In the Regulation SBSR Proposing Release, the Commission noted a variety of metrics that could be used to determine whether a security-based swap transaction should be considered a block trade.[472] They included: (1) the absolute size of the transaction; (2) the size of the transaction relative to other similar transactions; (3) the size of the transaction relative to some measure of overall volume for that security-based swap instrument; and (4) the size of the transaction relative to some measure of overall volumes for the security or securities underlying

---

470 See id.

471 See id.

472 The Commission considered several tests including a percentage test (the top N-percent of trade would be considered block) and set forth data from the Depository Trust Clearing Corporation ("DTCC") regarding single-name corporate CDS and single name sovereign CDS. The Commission noted that the observed trade sizes would suggest certain cut-off points when considering single-name corporate CDS or sovereigns as a whole. The Commission also noted, however, that there may still be differences in liquidity between individual corporates and sovereigns, as well as linkages between the underlying cash markets and the CDS markets that a simple percentage or threshold test would not capture. In addition, the Commission's Division of Risk, Strategy, and Financial Innovation (which has been renamed the Division of Economic and Risk Analysis) prepared an analysis of several different block trade criteria in January 2011, based on the same DTCC data. The analysis examined fixed minimum notional amount thresholds; dynamic volume-based thresholds based on the aggregate notional amount of all executions in a CDS instrument over the past 30 calendar days; and a combination of dynamic volume-based thresholds and fixed minimum thresholds of $10 and $25 million, respectively. See id. at 75230-31.

the security-based swap.[473] The Commission stated that the metric should be chosen in a way that minimizes inadvertent signaling to the market of potential large follow-on transactions.[474]

Although the Commission did not propose block thresholds, the Commission did propose two "waves" of public dissemination of block trades for when it had adopted block thresholds. Rule 902(b), as proposed and re-proposed, would have required a registered SDR to publicly disseminate a transaction report of a security-based swap that constitutes a block trade immediately upon receipt of information about the block trade from the reporting party. The transaction report would have been required to consist of all the information reported pursuant to Rule 901(c)—except for the notional amount—plus the transaction ID and an indicator that the report represents a block trade. The second wave would have required the registered SDR to publicly disseminate a complete transaction report for the block trade (including the transaction ID and the full notional amount) between 8 and 26 hours after the execution of the block trade. Thus, under Rule 902(b), as proposed and re-proposed, market participants would have learned the price and all other primary trade information (except notional amount) about a block trade in real time, and the full notional amount of the transaction on a delayed basis.[475] Registered SDRs would have been responsible for calculating the specific block thresholds based on the formula established by the Commission and publicizing those thresholds, but the Commission

---

473 See id.

474 See id.

475 Rule 902(b)(3), as proposed and re-proposed, would have provided that, if a registered SDR was closed when it otherwise would be required to disseminate information concerning a block trade, the registered SDR would be required to disseminate the information immediately upon re-opening.

emphasized that a registered SDR would be performing "mechanical, non-subjective calculations" when determining block trade thresholds.[476]

The Commission proposed and re-proposed a variety of other provisions related to block trades. Proposed Rule 900 defined "block trade" to mean a large notional security-based swap transaction that satisfied the criteria in Rule 907(b). Proposed Rule 907(b) would have required a registered SDR to establish and maintain written policies and procedures for calculating and publicizing block trade thresholds for security-based swaps in accordance with the criteria and formula for determining block size specified by the Commission. Proposed Rule 907(b)(2) also would have provided that a registered SDR should not designate as a block trade: (1) any security-based swap that is an equity total return swap or is otherwise designed to offer risks and returns proportional to a position in the equity security or securities on which the security-based swap is based; or (2) any security-based swap contemplated by Section 13(m)(1)(C)(iv) of the Exchange Act.[477]

B. Potential Impact on Liquidity

The Commission received several comments addressing the issue of timing for public dissemination and the potential impact of public dissemination on liquidity. The commenters vary significantly in their views on this issue. One commenter stated that the proposed timeframes for publicly disseminating security-based swap transaction reports would not materially reduce market liquidity.[478] Another commenter, however, expressed the view that

---

476 See Regulation SBSR Proposing Release, 75 FR at 75228.

477 15 USC 78m(m)(1)(C)(iv) ("With respect to security-based swaps that are determined to be required to be cleared under section 78c–3(b) of this title but are not cleared, the Commission shall require real-time public reporting for such transactions").

478 See Barnard I at 2.

"[t]here is insufficient liquidity in the single-name credit default swap market to support real-time public dissemination of non-block transaction data for all but a handful of instruments without creating price moving events."[479] A third commenter expressed concern that real-time security-based swap reporting, "if implemented without adequate safeguards, could unnecessarily increase the price of entering into a derivatives contract to hedge risk"[480] and cautioned that requiring real-time reporting of thinly traded products in illiquid markets in an effort to compel derivatives to trade similarly to exchange-listed products represented "a fundamentally flawed approach that demonstrates a lack of understanding of the existing market structure."[481] A fourth commenter expressed concern about the impact of real-time post-trade transparency for illiquid security-based swaps on pre-trade transparency that currently exists in the form of indicative prices provided by dealers to their clients (known as "runs").[482] This commenter requested that the Commission provide illiquid security-based swaps with an exception from real-time reporting and instead allow for delays roughly commensurate with the trading frequency of the security-based swap.[483]

---

479 UBS Letter at 1.

480 Bachus/Lucas Letter at 2.

481 Id.

482 See ISDA IV at 14 (expressing concern that the combination of name-attributed runs and a rapidly disseminated set of post-trade information would make it relatively easy for many participants to reconstruct the identity of parties to a particular transaction, which might reduce dealers' willingness to disseminate pre-trade price information in the form of runs, thereby reducing pre-trade transparency).

483 See id., note 21 (stating, for example, that a 24-hour delay would be appropriate for a security-based swap that trades, on average, once per day, and security-based swap that trades 10 times per day could be reported in real time).

In addition, several commenters raised concerns about the effect of an improperly designed block trade regime.[484] One commenter stated that an appropriate block exemption is critical to the successful implementation of Title VII.[485] Several commenters expressed the view that improper block thresholds or definitions would adversely impact liquidity.[486] One commenter noted that the SEC and CFTC's proposed block trade rules would adversely impact liquidity.[487] By contrast, one commenter recommended that the Commission consider that increased transparency of trades that are large relative to the liquidity of the product may attract new entrants to the market and may result in increased liquidity.[488]

The Commission has considered these comments as well as the statutory requirement that the Commission rule for public dissemination of security-based swap transactions contain provisions that "take into account whether the public disclosure [of transaction and pricing data

484 See Barclays Letter at 8; BlackRock Letter at 8, note 10; Cleary I at 10-11; Cleary II at 2; Institutional Investors Letter at 4; ISDA/SIFMA I at 2; ISDA/SIFMA Block Trade Study at 6; ISDA/SIFMA II at 8; J.P. Morgan Letter at 5; WMBAA I at 3.

485 See ISDA/SIFMA I at 2.

486 See Barclays Letter at 8 (stating that overly broad block trade thresholds could adversely impact the liquidity and pricing of security-based swaps); J.P. Morgan Letter at 5 (stating that liquidity may be significantly reduced if too few trades receive block treatment); BlackRock Letter at 8, note 10 (expressing concern that it could become infeasible for market participants to enter into block trades for some products if the Commissions fail to balance liquidity and price transparency correctly); Institutional Investors Letter at 4 (noting, with specific reference to the CFTC's proposed rules, that the benefits of large trades could be negated, and institutional investors' costs increased, if block trade sizes were set too high); ISDA/SIFMA II at 8 (stating that an overly restrictive definition of block trade has great potential to adversely affect the ability to execute and hedge large transactions); WMBAA I at 3 (expressing the view that block trade thresholds "be set at such a level that trading may continue without impacting market participants' ability to exit or hedge their trades").

487 See Cleary II at 2.

488 See GETCO Letter at 1-2.

for security-based swaps] will materially reduce market liquidity."[489] The Commission is adopting these final rules for regulatory reporting and public dissemination of security-based swaps with a view toward implementing additional rules in one or more subsequent phases to define block thresholds and to revisit the timeframes for reporting and public dissemination of block and non-block trades. This approach is designed to increase post-trade transparency in the security-based swap market—even in its initial phase—while generating new data that could be studied in determining appropriate block thresholds after the initial phase. The Commission also considered several comments related to the timing of public dissemination and believes that at present the commenters' concerns are appropriately addressed by the Commission's adoption of T+24 hour reporting during the interim phase.

During this phase, the reporting side will have up to 24 hours after the time of execution of a security-based swap transaction to report it to a registered SDR, regardless of its notional amount.[490] The registered SDR will be required, for all dissemination-eligible transactions,[491] to publicly disseminate a report of the transaction immediately upon receipt of the information. Even with the T+24 reporting of transactions, the Commission anticipates being able to collect significant new information about how market participants behave in an environment with post-

---

489 15 U.S.C. 78m(m)(1)(E). However, this mandate applies only with respect to cleared security-based swaps. No provision of Title VII requires the Commission to specify block thresholds or dissemination delays, or to take into account how public disclosure will materially reduce market liquidity, for uncleared security-based swaps.

490 For a security-based swap that is subject to regulatory reporting and public dissemination solely by operation of Rule 908(a)(1)(ii), however, a reporting side is required to report the information required under Rules 901(c) and 901(d) within 24 hours of acceptance for clearing. See Rule 901(j); Section XV(C)(4), infra.

491 See Rule 902(c) (setting forth certain types of security-based swaps that are not to be publicly disseminated).

trade transparency, which will inform the Commission's analysis and effort to determine what block thresholds and time delays may be appropriate.

In developing a regulatory regime for post-trade transparency in the security-based swap market, the Commission is cognizant of rules adopted by the CFTC to provide for post-trade transparency in the swap market. Commission staff analyzed the effect of the adoption of post-trade transparency in the swap market, which is regulated by the CFTC.[492] That analysis shows no discernible empirical evidence of economically meaningful effects of the introduction of post-trade transparency in the swap market at this time. In particular, the study did not find negative effects such as reduced trading activity. Based on this analysis, the Commission believes that post-trade transparency does not seem to have a negative effect on liquidity and market activity in the swap market.[493]

1. T+24 Hour Reporting for All Transactions

The Commission initially proposed to require reporting to a registered SDR of the primary trade information of all security-based swaps "as soon as technologically practicable, but in no event later than 15 minutes after the time of execution of the security-based swap transaction."[494] For all dissemination-eligible transactions other than block trades, the registered

---

492 See "Analysis of post-trade transparency under the CFTC regime" (October 17, 2014), available at http://www.sec.gov/comments/s7-34-10/s73410-183.pdf ("Analysis of Post-Trade Transparency"). See also infra Sections XXII(C)(2)(b), XXII(C)(2)(c), XXII(C)(3)(a), and XXII(D)(4)(b). The one comment that the Commission received on the Analysis of Post-Trade Transparency did not directly address the staff's analysis. This comment is discussed in notes 688 and 1011, infra.

493 See Analysis of Post-Trade Transparency at 1 ("While we acknowledge that there are significant differences between the index [credit default swap] market and the security-based swap market, the data analysis presented here may enhance the Commission's understanding of the potential economic effects of mandated post-trade transparency in the security-based swap market").

494 See Rules 901(c) and 900 (definition of "real time"), as originally proposed.

SDR would have been required to publicly disseminate a report of the transaction immediately and automatically upon receipt of the transaction. As proposed, block trades would have been subject to two-part dissemination: (1) an initial report with suppressed notional amount disseminated in real-time; and (2) a full report including notional amount disseminated between 8 to 26 hours after execution.[495]

Commenters expressed mixed views regarding the proposed reporting timeframes. Two commenters generally supported them.[496] However, several commenters stated that, at least in the near term, it would be difficult to comply with the reporting timeframes as proposed.[497] One of these commenters argued, for example, that the benefits of providing security-based swap information within minutes of execution did not outweigh the infrastructure costs of building a

---

495 Rule 902(b)(1), as proposed and re-proposed, would have provided: "If the security-based swap was executed on or after 05:00 UTC and before 23:00 UTC of the same day, the transaction report [for the block trade] (including the transaction ID and the full notional amount) shall be disseminated at 07:00 UTC of the following day." Proposed Rule 902(b)(2) would have provided: "If the security-based swap was executed on or after 23:00 UTC and up to 05:00 UTC of the following day, the transaction report (including the transaction ID and the full notional size) shall be disseminated at 13:00 UTC of that following day." Those block trades executed at the end of each window would receive an 8 hour dissemination delay and those blocks executed at 5:00 UTC would receive a 26 hour dissemination delay. The delay for all other block trades would vary between 8 and 26 hours, depending on the time of execution.

496 See FINRA Letter at 2 (supporting the Commission's proposal to require reporting as soon as technologically practicable, but in no event later than 15 minutes after the time of execution); Barnard I at 3 (recommending full post-trade transparency as soon as technologically and practicably feasible, with an exemption permitting delayed reporting for block trades).

497 See DTCC II at 9-10; ICI I at 4-5; ISDA III at 1 ("Not all market participants have the ability to report within 15 or 30 minutes of execution"); MarkitSERV I at 9 ("complying with a strict 15-minute deadline even for non-electronically executed or confirmed trades will require significant additional implementation efforts by the industry at a time when resources are already stretched in order to meet other requirements under the [Dodd-Frank Act]"); MFA I at 5.

mechanism to report in real time, particularly given the likelihood of errors.[498] Another commenter expressed concern that "the 15 minute limit is not technologically practicable under existing communications and data infrastructure."[499]

Commenters also advocated that the Commission phase-in reporting deadlines over time, similar to the implementation model for TRACE, to allow regulators to assess the impact of post-trade transparency on the security-based swap market.[500] One commenter noted that phased-in implementation would allow regulators to assess the impact of transparency on the security-based swap market and make adjustments, if necessary, to the timing of dissemination and the data that is disseminated.[501] Other commenters echoed the belief that a phased approach would allow the Commission to assess the impact of public reporting on liquidity in the security-based swap market, monitor changes in the market, and adjust the reporting rules, if necessary.[502]

---

498 See MFA I at 5.

499 ICI I at 4.

500 See Barnard I at 4; CCMR I at 2; Cleary II at 18-21; DTCC II at 9-10, 24-25; DTCC III at 10; DTCC IV at 8-9; Roundtable Letter at 4-9; FINRA Letter at 4-5; Institutional Investors Letter at 3; ISDA/SIFMA I at 9-10; ISDA/SIFMA Block Trade Study at 2, 7; MarkitSERV I at 9-10; MFA Recommended Timeline at 1; UBS Letter at 2-3; WMBAA III at 4-6. Based on its experience with industry-wide processes, one commenter suggested that there could be a "shake-out" period during which problems with reported data could surface. The commenter urged the Commission to consider this possibility and provide a means to assure that information is of high quality before dissemination is permitted. See DTCC II at 9-10.

501 See FINRA Letter at 5. See also ISDA/SIFMA Block Trade Study at 2 (stating that phased implementation would provide regulators with time to test and refine preliminary standards).

502 See CCMR I at 2; Cleary II at 19; ISDA/SIFMA Block Trade Study at 2; UBS Letter at 2.

Three commenters recommended a 24-hour delay for reporting block trades,[503] and one recommended a delay of at least five days with an indefinite delay of full notional size.[504] Of those commenters, two also suggested that the delay could be reduced or refined after the Commission gathers additional information about the security-based swap market.[505] In contrast, two commenters recommended block delays as short as 15 minutes.[506] In addition, several commenters opposed two-part transaction reporting for block trades. These commenters believed that all information about a block trade, including the notional amount of the transaction, should be subject to a dissemination delay to provide liquidity providers with

[503] See ICI I at 3; SIFMA I at 5 ("a 24-hour delay would better ensure that block liquidity providers are able to offset their risk regardless of the time during the trading day at which the block is executed"); Vanguard Letter at 4; Viola Letter at 2 ("At a minimum, the data in question should be delayed from the public reporting requirements at least one (1) day after the trade date"). Cf. Phoenix Letter at 4 (recommending end-of-day dissemination of block trades).

[504] See ISDA IV at 16.

[505] See ICI I at 3-4; Vanguard Letter at 4, note 3.

[506] See Better Markets I at 5-6 and at 4-5 (stating that no compelling economic justification exists for delaying the immediate public dissemination of any data regarding block trades, and that the minimum duration of any delay in reporting block trades should be "far shorter" than the delays included in Regulation SBSR); Better Markets III at 4-5; SDMA Letter at 2.

adequate time to hedge their positions.[507] Two commenters recommended initially setting block sizes low and over time collecting data to determine an appropriate block trade size.[508]

In addition, Commission staff has undertaken an analysis of the inventory management of dealers in the market for single-name CDS based on transaction data from DTCC-TIW.[509] The analysis, in line with prior studies of hedging in this market,[510] shows that, after most large transactions between a dealer and customer are executed, dealers do not appear to hedge resulting exposures by executing offsetting transactions (either with other dealers or other customers) in the same single-name CDS. In instances where dealers appear to hedge resulting exposures following a large trade in single-name CDS written on the same reference entity, they generally do so within a maximum of 24 hours after executing the original trade.

One commenter responded to this analysis, asserting that dealers, rather than hedging security-based swap exposures using offsetting transactions in the same instruments, might

---

507 See Cleary II at 12 (even without disclosure of the notional amount, observers may be able to infer information about a trade and predict subsequent hedging activity); Goldman Sachs Letter at 6 (disclosure of the fact that a block trade occurred could still impact liquidity); ICI I at 2 (recommending a delay of all block trade information); ISDA/SIFMA I at 3 (delaying disclosure of notional amount is only a "partial solution"); SIFMA I at 3-4 (all block trade information should be delayed, otherwise immediate trade signaling could harm end users); Vanguard Letter at 2, 4 (all block trades should be delayed 24 hours, and establishment of a block regime should be delayed until the Commission has had time to assess how reporting affects the market).

508 See Institutional Investors Letter at 4; MFA Recommended Timeline at 4.

509 See Hedging Analysis.

510 See Kathryn Chen, et al., Federal Reserve Bank of New York Staff Report, An Analysis of CDS Transactions: Implications for Public Reporting (September 2011), available at http:// www.newyorkfed.org/research/staff_reports/sr517.html, last visited September 22, 2014. See also http://www.dtcc.com/repository-otc-data.aspx, last visited September 22, 2014. This study uses an earlier sample of DTCC-TIW transaction data to identify hedging of transactions in single-name CDS. They find little evidence of hedging via offsetting trades in the same instrument and conclude by saying that "requiring same day reporting of CDS trading activity may not significantly disrupt same day hedging activity, since little such activity occurs in the same instrument."

choose instead to hedge their security-based swap exposures in related assets, and that these types of hedging behaviors were not measured in the Commission staff analysis. The commenter further suggested that the use of cross-market hedges could be particularly important for transactions in single-name CDS that are especially illiquid.[511] The Commission acknowledges that the staff's analysis was limited to same-instrument hedging.[512] However, the Commission notes that, to the extent that security-based swap positions can be hedged using other assets—as the commenter suggests—these additional opportunities would suggest that dealers would likely need less time to hedge than if hedging opportunities existed only within the security-based swap market.

In view of these comments and the staff analysis, the Commission is modifying Regulation SBSR's timeframes for reporting security-based swap transaction information as follows. First, Rules 901(c) and 901(d), as adopted, require reporting sides to report the information enumerated in those rules "within the timeframe specified in paragraph (j) of this section"—i.e., by Rule 901(j). Rule 901(j), as adopted, provides that the reporting timeframe for Rules 901(c) and 901(d) shall be "within 24 hours after the time of execution (or acceptance for

511 See ISDA IV at 15 (stating that "participants may enter into risk mitigating transactions using other products that are more readily available at the time of the initial trade (for example CD index product [sic], CDS in related reference entities, bonds or loans issued by the reference entity or a related entity, equities or equity options)"). In addition, the commenter stated that it "interprets the data in the study to imply that such temporary hedges in other asset classes (rather than offsetting transactions in the precise reference entity originally traded) are the norm for an illiquid market." See id.

512 See Chen et al., supra note 510, at 6. Like the Chen et al. report, which was cited by the commenter, the Commission staff analysis did not incorporate data that would allow it to identify hedging in corporate bonds or equities, because appropriate data were not available. The commenter did not provide any analysis, rationale, or data demonstrating how public dissemination of a single-name CDS transaction within 24 hours would negatively impact a dealer from being able to hedge this exposure in another market, such as a broad-based CDS index.

clearing in the case of a security-based swap that is subject to regulatory reporting and public dissemination solely by operation of § 242.908(a)(1)(ii)), or, if 24 hours after the time of execution or acceptance for clearing, as applicable, would fall on a day that is not a business day, by the same time on the next day that is a business day." Under Rule 902(a), as adopted, the registered SDR that receives the transaction report from the reporting side is required, as proposed and re-proposed, to publicly disseminate a report of that transaction immediately upon receipt. The Commission believes that this approach will improve post-trade transparency and respond to commenters' concerns. In particular, the Commission believes that this approach addresses concerns relating to potential market impact, the ability to report in real time, and the length of delay for dissemination of block trade information.[513] Thus, the T+24 hour approach is designed to improve post-trade transparency in the security-based swap market in the near term, while generating additional data that the Commission can evaluate in considering appropriate treatment of block trades.

At this time, the Commission is not adopting the provisions of proposed and re-proposed Rule 902 that would have provided for real-time public dissemination of non-block trades. However, the Commission is adopting, substantially as proposed and re-proposed, what was originally designed to be the second wave of block dissemination—i.e., disseminating the full trade details, including the true notional amount, at one of two points in the day (either 07:00 or 13:00 UTC) after an initial report of the transaction (without the notional amount) had been

513 Although two commenters advocated shorter block trade delays, the Commission believes that it would be prudent to allow for the accumulation of additional data about the effect of post-trade transparency on the security-based swap market before considering shorter reporting and dissemination timeframes for block trades. The Commission may consider shorter timeframes in the future but believes that it is neither necessary nor appropriate to adopt these commenters' recommendations at this time.

disseminated in real time.[514] The Commission is now simplifying that approach by eliminating the idea of "batch dissemination" at two points during the day, and instead allowing for T+24 hour reporting for all transactions, regardless of the time of execution. Furthermore, in the absence of a standard to differentiate block from non-block transactions, the Commission believes that it is appropriate to require the same T+24 hour reporting for all transactions.[515]

This interim phase is designed to allow the accumulation of empirical data and is consistent with various comments that emphasized the need for further study and analysis of empirical data prior to establishing block trading rules.[516] Several commenters noted that

---

514 See Rule 902(b), as proposed and re-proposed.

515 As discussed in more detail in Section VII(B)(3), infra, if 24 hours after the time of execution would fall on a non-business day (i.e., a Saturday, Sunday, or U.S. federal holiday), reporting would instead be required by the same time on the next business day.

516 See ABC Letter at 7-8; CCMR I at 4 ("The Commission should set the thresholds low at first in order to collect data that will enable them to make informed decisions about the final delay and threshold determinations"); Institutional Investors Letter at 4-5 (stating, in reference to the CFTC's proposed rules, that the marketplace currently lacks sufficient collection and analysis of swap trading data to establish block trade thresholds); ICI II at 8 ("We agree with the SEC that it should defer its proposed rulemaking regarding block thresholds until after SDRs register with the SEC and the SEC begins to receive and analyze data required to be reported under the final rules or until after SB swap transaction information begins to be publicly reported"); MFA I at 4 (recommending that the Commission study and obtain empirical evidence to determine block trade definitions for each asset class to assure that the final rules do not disrupt the markets or reduce liquidity); ISDA/SIFMA I at 4-5 (recommending significant detailed research, including independent academic research, before determining block size thresholds and reporting delays for particular security-based swap transactions); ISDA/SIFMA II at 8 (stating that market-based research and analysis should be employed to provide the basis for the determination of well-calibrated block trading exemption rules); SIFMA II at 8 ("Until a liquid SBS trading market develops on SB-SEFs and exchanges, the Commission will not be able to make informed decisions on the definition of a block or an appropriate public reporting time frame. For the same reason, real-time reporting should be implemented gradually. Block trade thresholds should be set at a low level at first, such that many trades are treated as blocks, and raised slowly by the Commission when doing so is supported by market data"). But see SDMA Letter at 3 (stating that swap transaction data are available today and block trade thresholds could be established without delay).

implementing the rules requiring reporting to registered SDRs prior to the block trading rules would provide security-based swap transaction data (in addition to historical data) that could be used in the formation of block trade thresholds.[517] One of these commenters stated, for example, that it would be premature to adopt block trade thresholds prior to the commencement of reporting to registered SDRs because SDR reporting would increase the amount of information available across various markets and asset classes.[518] Commenters also recommended several methods for obtaining and analyzing empirical data,[519] including independent academic research[520] and a review of a statistically significant data set for each security-based swap category.[521]

Although more data and analyses about executed transactions are now available than when the Commission originally issued the Regulation SBSR Proposing Release,[522] these data provide limited insights into how post-trade transparency might affect market behavior if executed transactions were to become publicly known on a real-time or near-real-time basis.[523]

---

517 See Institutional Investors Letter at 4 (recommending that the CFTC collect market data for one year before adopting rules relating to block trades); MFA II, Recommended Timeline at 4; WMBAA III at 6; FIA/FSF/ISDA/SIFMA Letter at 6.

518 See FIA/FSF/ISDA/SIFMA Letter at 6, note 6.

519 See ISDA/SIFMA I at 4; Goldman Sachs Letter at 5.

520 See ISDA/SIFMA I at 4.

521 See Goldman Sachs Letter at 5 (stating that the Commission could obtain the necessary data by asking large dealers to provide information on a confidential basis and supplementing that information with data obtained from a survey of other market participants).

522 See, e.g., Chen et al., supra note 510.

523 See ICI II at 8 ("Any data on which the SEC could rely currently to develop a methodology for determining minimum block trade sizes will not adequately represent or reflect the swaps market once the Dodd-Frank requirements (including public reporting of swap data) are fully implemented"). Two commenters pointed to evidence suggesting negative effects of post-trade transparency in other securities markets. See ISDA/SIFMA

The Commission has information from DTCC-TIW about most CDS trades over the past few years[524] and can analyze the frequency of execution and the notional trade sizes. However, the Commission believes that these data permit only speculative inferences about the potential market impact of those trades being made public. Currently, there is little post-trade transparency in the security-based swap market, so the current trading generally is informed only imperfectly, if at all, about earlier trading.

Several aspects of the Commission's adopted rules are designed to help facilitate the collection of data relating to how post-trade transparency affects market behavior. The Commission is adopting, as re-proposed, the requirement that the trade report include the time of execution and the requirement that the registered SDR mark the time that it receives the trade report. These requirements are designed to help inform the Commission as to the length of time between the execution of a transaction and when the transaction is reported to a registered SDR, which should provide useful data to the Commission in analyzing trends in reporting timeframes. These timeframes would provide some insight into the beliefs of market participants regarding the length of the reporting delay that they deem necessary to minimize the market impact of a transaction. Observing trades being reported to a registered SDR with varying delays after execution could provide the Commission with greater insight as to what market participants consider to be market-impacting trades. Further, the Commission believes that this approach

---

Block Trade Study at 4-5 (stating that some studies had concluded that transparency had negatively impacted markets, including the Canadian stock markets and the London Stock Exchange); J.P. Morgan Letter at 2-4 (stating that anecdotal evidence reported in one study supported the view that institutional customers experienced less deep markets as a result of TRACE reporting, and that adverse impacts could be more substantial for CDS).

524 See http://www.dtcc.com/repository-otc-data.aspx (last visited September 22, 2014) for a description of aggregated data disseminated by DTCC. See also infra Section XXII(B)(1) for a description of transaction data obtained by the Commission.

would address, during the interim phase, the concerns of the commenters who believed that a public dissemination regime with inappropriately low block trade thresholds could harm market liquidity, and those who argued that market participants would need an extended period of time to comply with the requirements to report within shorter timeframes.

Although any participant could take the full 24 hours to report a given trade, there may be incentives to submit trade reports in substantially less than 24 hours. The Commission understands that, in some cases, entities that are likely to become SB SEFs ("pre-SEFs") may want to broadcast trades executed electronically across their platforms to all subscribers in order to catalyze trading by other counterparties at the same price.[525] This "work-up" process, according to a commenter, is designed to foster liquidity in the security-based swap market and to facilitate the execution of larger-sized transactions.[526] If pre-SEFs and their participants want to continue their current practices and broadcast a subset of their executed trades across the platform in real time to facilitate work-ups, they will be subject to Rule 902(d), which embargos transaction information until the information is transmitted to a registered SDR.[527] Therefore, any pre-SEF or user of a pre-SEF that wants to continue to have real-time information about a completed trade broadcast as part of a work-up must ensure that the initial transaction is reported to a registered SDR no later than the time at which it is broadcast to users of the pre-SEF.

In response to commenters who advocated shorter reporting time frames or block trade delays, the Commission notes that it anticipates further refining the reporting timeframes when it proposes and implements final block trade rules, at which point reporting sides will have had

---

525 See supra Section VI(F) (discussing Embargo Rule).

526 See GFI Letter at 3.

527 See supra Section VI(F).

more time to test and implement their reporting systems and processes. This approach was recommended by several commenters.[528]

2. Reporting Timeframe for Trades Executed Prior to Weekends or U.S. Federal Holidays

While most transactions will have 24 hours within which to be reported, Rule 901(j) also provides that, "if 24 hours after the time of execution would fall on a day that is not a business day, [the transaction must be reported] by the same time on the next day that is a business day." The Commission's intent is to afford security-based swap counterparties—during the interim phase—the equivalent of at least an entire business day to hedge their positions, if they so desire, before the transaction must be reported and publicly disseminated. Without clarifying that, during the interim phase, reporting requirements fall only on business days, for a transaction executed on the day before a weekend or holiday, the counterparties would have less than the number of business hours of a regular business day to hedge a transaction if reporting were required within 24 hours of execution.

The Commission is also adopting a definition of "business day" to clarify the "not a business day" provision. "Business day" is defined in Rule 900(f) as "a day, based on U.S. Eastern Time, other than a Saturday, Sunday, or a U.S. federal holiday." Counterparties to the

---

528 See Institutional Investors Letter at 4 (recommending that the CFTC collect market data for one year before adopting rules relating to block trades); MFA II, Recommended Timeline at 4; WMBAA III at 6; FIA/FSF/ISDA/SIFMA Letter at 6 (appropriate block trade thresholds, and therefore real-time reporting requirements, can be established only after the commencement of SDR reporting to regulators and careful analysis of security-based swap market transaction data). This approach is also broadly consistent with the implementation of the TRACE system, which shortened reporting requirements over time. Several commenters recommended a phased reporting approach analogous to TRACE. See CCMR I at 2; Cleary II at 20; DTCC II at 9-10; FINRA Letter at 4-5; ISDA/SIFMA I at 10; ISDA/SIFMA Block Trade Study at 2; UBS Letter at 2-3; WMBAA II at 5.

trade may be in different time zones and/or jurisdictions; in the absence of Rule 900(f) there could be confusion about whether the "not a business day" provision referred to the jurisdiction and time zone of one side or the jurisdiction and time zone of the other. Because Regulation SBSR is designed to implement Title VII's regulatory reporting and public dissemination requirements for the U.S. security-based swap market, the Commission is designating U.S. Eastern Time (which may be either Eastern Standard Time or Eastern Daylight Time) as the time zone on which the reporting side should base its reporting for purposes of Rules 900(f) and 901(j). The Commission also is excluding U.S. federal holidays from the definition of "business day." The following examples are designed to help explain the application of this provision:

- Example 1. A trader executes a trade at 04:59 UTC on Friday (11:59 p.m. EST on Thursday). This particular Friday is not a U.S. federal holiday. The reporting side must report by 04:59 UTC on Saturday (11:59 p.m. EST on Friday).
- Example 2. A trader executes a trade at 05:01 UTC on Friday (12:01 a.m. EST on Friday). The reporting side must report by 05:01 UTC on Monday (12:01 a.m. EST on Monday), provided that this particular Monday is not a U.S. federal holiday.
- Example 3. A trader executes a trade at 14:42 UTC on Friday (9:42 a.m. EST on Friday). The reporting side must report by 14:42 UTC on Monday (9:42 a.m. EST on Monday), provided that this particular Monday is not a U.S. federal holiday.
- Example 4. A trader executes a trade at 13:42 UTC on Friday (9:42 a.m. EDT on Friday). The following Monday is Labor Day, a U.S. federal holiday. The

reporting party must report by 13:42 UTC on Tuesday (9:42 a.m. EDT on Tuesday).

- Example 5. A trader executes a trade at 16:45 UTC on Wednesday, November 26, 2014 (11:45 a.m. EST on Wednesday, November 26, 2014). Thursday, November 27, 2014 is Thanksgiving, a U.S. federal holiday. The reporting party must report by 16:45 UTC on Friday, November 28, 2014 (11:45 a.m. EST on Friday, November 28, 2014).
- Example 6. A trader executes a trade at 16:45 UTC on a Wednesday (11:45 a.m. EST on Wednesday). Thursday is not a U.S. federal holiday, but a large blizzard causes emergency closures in New York City and several other U.S. cities. The reporting party must report by 16:45 UTC on Thursday (11:45 a.m. EST on Thursday).

3. Other Revisions to Accommodate the Interim Phase

In addition to the changes noted above, the Commission is adopting the following technical changes to Regulation SBSR to implement the interim phase of reporting and public dissemination. First, the Commission is not adopting certain sections of rule text that referred to block trades and marking those sections as "Reserved." Rule 900(c), as re-proposed, would have defined a "block trade" as a large notional security-based swap transaction that meets the criteria set forth in proposed Rule 907(b). Rule 907(b), as proposed and re-proposed, would have required a registered SDR to establish and maintain policies and procedures "for calculating and publicizing block trade thresholds for all security-based swap instruments reported to the registered security-based swap data repository in accordance with the criteria and formula for determining block size as specified by the Commission." Rule 907(b), as proposed and re-proposed, also would have excluded equity TRS instruments and any security-based swap contemplated by Section 13(m)(1)(C)(iv) of the Exchange Act[529] from the definition of "block trade." Because the Commission anticipates soliciting public comment on block thresholds and other rules related to block trades—including what role (if any) registered SDRs should play in calculating those thresholds—the Commission is not at this time defining the term "block trade" in Rule 900(c) or adopting Rule 907(b). Similarly, because the Commission is not at this time adopting the requirement to report in real time, the Commission is not adopting a definition of "real time" in Rule 900.

Second, the Commission has determined not to utilize the term "security-based swap instrument"[530] in Regulation SBSR. The Commission devised the original definition of "security-based swap instrument" in connection with its overall analysis of the block trade issue. In the Regulation SBSR Proposing Release, the Commission stated its preliminary belief that it would not be appropriate to establish different block trade thresholds for similar instruments with different maturities. Thus, the proposed definition of "security-based swap instrument" did not include any distinction based on tenor or date until expiration.[531]

One commenter discussed the concept of security-based swap instruments in the context of its overall discussion of block trade issues.[532] The commenter argued that a different block size threshold would have to be calculated for each category of security-based swap instrument,

---

529 15 U.S.C. 78m(m)(1)(C)(iv).

530 Proposed Rule 900 would have defined "security-based swap instrument" to mean "each security-based swap in the same asset class, with the same underlying reference asset, reference issuer, or reference index." This definition was included, without change, in re-proposed Rule 900(dd).

531 <u>See</u> 75 FR at 75231.

532 <u>See</u> CCMR I at 3.

so the boundaries of those categories would greatly impact market participants' ability to engage in block trading. The commenter recommended, therefore, that instruments be classified in as few categories as possible.[533] Another commenter argued that the definition of "security-based swap instrument" "should provide for more granular distinctions between different types of transaction within a single asset class to avoid grouping together transactions with quite different characteristics."[534]

The Commission anticipates soliciting public comment on block trade thresholds at a later date. Because the initial intent of the term "security-based swap instrument" was to delineate separate categories of security-based swaps that could have separate block trade thresholds, the Commission is not adopting the term "security-based swap instrument" at this time. The Commission anticipates soliciting public comment on whether and how to establish different categories of security-based swaps—and what, if any, block thresholds and dissemination delays will apply to those different categories—when it solicits comment on block thresholds.

Further, proposed Rule 902(b) would have specified the delay for dissemination of certain information about block trades to the public as well as what information a registered SDR should disseminate immediately. Because the Commission anticipates that it will re-propose all aspects of Regulation SBSR as they pertain to block trades, the Commission is not adopting Rule 902(b) at this time.

Rules 901(j), as adopted, require the reporting of both primary and secondary trade information, respectively, for a security-based swap no later than 24 hours after the time of

---

533 See id.

534 ISDA/SIFMA I at 10.

execution (or acceptance for clearing in the case of a security-based swap that is subject to regulatory reporting and public dissemination solely by operation of Rule 908(a)(1)(ii)), or, if 24 hours after the time of execution or acceptance for clearing, as applicable, would fall on a day that is not a business day, by the same time on the next day that is a business day. Re-proposed Rule 901(d)(2) would have required the reporting side to report what final Rule 901(d) now terms the "secondary trade information" promptly, but in any event, no later than: (1) 15 minutes after the time of execution for a security-based swap that is executed and confirmed electronically; (2) 30 minutes after the time of execution for a security-based swap that is confirmed electronically but not executed electronically; or (3) 24 hours after the time of execution for a security-based swap that is not executed or confirmed electronically. In proposing these reporting timeframes, the Commission recognized that the amount of time required for counterparties to report the information required under proposed Rule 901(d)(1) depended upon, among other things, the extent to which the security-based swap was customized and whether the security-based swap was executed or confirmed electronically or manually.[535]

Generally, commenters' views regarding the regulatory reporting timeframes in proposed Rule 901(d)(2) were mixed. While some commenters expressed concerns that the proposed timeframes were too lenient or incentivized slower technologies,[536] other commenters expressed

---

535 See Regulation SBSR Proposing Release, 75 FR at 75219. The Commission believed that the information required under Rule 901(d)(1) would be available relatively quickly for a security-based swap that was executed and confirmed electronically because most of the required information would already be in an electronic format. On the other hand, the Commission recognized that, for security-based swaps that are not executed or confirmed electronically, additional time might be needed to systematize the information required under Rule 901(d)(1) and put it into the appropriate format. See id.

536 See Better Markets I at 9 (noting that technology that would permit reporting within much shorter timeframes is widely available, and that market participants routinely adhere to much shorter timeframes for their own business and internal reporting);

the view that the reporting timeframes in proposed Rule 901(d)(2) were not practicable.[537] One of these commenters noted the likelihood of errors if reporting timeframes were too short.[538] Another commenter urged the Commission to strike an appropriate balance between speed and accuracy in establishing timeframes for regulatory reporting.[539] One commenter suggested that, initially, the Rule 901(d) regulatory reporting timeframes should be set closer to current market capability, with electronically confirmable trades reported within 24 hours.[540] This commenter recommended a phase-in period to allow reporting parties to develop the necessary reporting capabilities, after which time shorter timeframes could be implemented.[541]

The Commission is not adopting the reporting timeframes proposed in Rule 901(d)(2), and is therefore renumbering Rule 901(d)(1) as Rule 901(d).[542] Because Rule 901(j), as adopted, allows reporting sides up to 24 hours to report the primary trade information pursuant to Rule 901(c) (or until the same time on the next business day if the trade occurs less than 24 hours before a weekend or federal holiday), the Commission believes that it is appropriate also to modify the timeframe for reporting the secondary trade information set forth in Rule 901(d) to harmonize with the Rule 901(c) requirement. Although both the primary and secondary trade

---

Tradeweb Letter at 5 (different reporting timeframes based on the method of execution potentially could create incentives for market participants not to take advantage of available technology); SDMA I at 3 (stating, with reference to the CFTC's proposed rules, that different reporting timeframes based on method of execution could create a 'race to the slowest' among swap execution facilities, with market participants favoring slower-reporting swap execution facilities over more efficient and transparent facilities).

537 See MFA Letter at 5; DTCC II at 12.

538 See MFA Letter at 5.

539 See ISDA/SIFMA I at 9.

540 See DTCC II at 12.

541 See id.

542 See supra Section II(C)(2).

information must be reported within 24 hours of the time of execution or acceptance for clearing, as applicable (or until the same time on the next business day if the trade occurs less than 24 hours before a weekend or federal holiday), Rule 901 does not require that all of the information enumerated in Rules 901(c) and 901(d) be provided in a single trade report. Thus, a reporting side could, if permitted by the policies and procedures of the relevant registered SDR, make an initial report of the primary trade information followed by a subsequent report containing secondary trade information, so long as both reports were provided within the timeframe prescribed by Rule 901(j).[543]

The Commission acknowledges the issues raised by the commenters regarding the proposed reporting timeframes, and, in particular, the concerns that unreasonably short reporting timeframes would result in the submission of inaccurate transaction information. The Commission believes that the 24-hour reporting timeframe being adopted in Rule 901(j) strikes an appropriate balance, for the interim phase, between the need for prompt reporting of security-based swap transaction information and allowing reporting entities sufficient time to develop fast and robust reporting capability. The Commission notes that some commenters supported a 24-hour reporting timeframe as consistent with existing industry reporting capability,[544] and believes

---

[543] However, the registered SDR's policies and procedures adopted under Rule 907(a)(1) generally should explain to reporting sides how to report if all the security-based swap transaction data required by Rules 901(c) and 901(d) is being reported simultaneously, and how to report if responsive data are being provided at separate times. In the latter case, the registered SDR should provide the reporting side with the transaction ID after the reporting side reports the information required by Rule 901(c). The reporting side would then include the transaction ID with its submission of data required by Rule 901(d), thereby allowing the registered SDR to match the Rule 901(c) report with the subsequent Rule 901(d) report.

[544] See DTCC II at 12; MFA at 5.

that this timeframe addresses commenters' concerns that some elements of the required information might not be available within the initially proposed reporting timeframes.[545]

Finally, Rule 901(d)(2), as proposed and re-proposed, would have established reporting timeframes based on whether a security-based swap is executed and/or confirmed electronically. The term "confirm" appeared only in Rule 901(d)(2), as proposed and re-proposed.[546] Because this term does not appear in Rule 901(d)(2), as adopted, the Commission has determined not to adopt a definition for the term "confirm" in final Rule 900.[547]

4. Dissemination of Notional Amount

The Commission is mindful of comments expressing concern about dissemination of the full notional amount for block trades.[548] For example, two commenters expressed the view that disseminating the notional amount of a block trade could jeopardize the anonymity of the

---

545 See Cleary II at 15-16.

546 Rule 900(e), as re-proposed, defined "confirm" as "the production of a confirmation that is agreed to by the parties to be definitive and complete and that has been manually, electronically, or, by some other legally equivalent means, signed."

547 One commenter suggested that the Commission use the term "issued," rather than "confirm" to better reflect existing market practice with respect to confirming the terms of a security-based swap. See ISDA IV at 10. The deletion of the term "confirm" from Regulation SBSR, as adopted, addresses this concern.

548 See Cleary II at 13 ("we would recommend that the SEC gather further data on the costs and benefits of disclosing notional size before requiring such disclosure for all transactions"); ISDA/SIFMA I at 5 (size of a block trade transaction should not be disclosed at any time); ISDA/SIFMA II at 8 (same); ISDA/SIFMA Block Trade Study at 26-27 (noting that reporting of notional amounts of block trades will hamper the execution of large-sized trades and recommending dissemination of capped volume information); Phoenix Letter at 3; SIFMA I at 5; UBS Letter at 2 (arguing actual notional amount of an illiquid security-based swap would provide information to the market about potential hedging activity); WMBAA II at 7 (arguing that dissemination of the full notional amount could jeopardize the anonymity of counterparties to the trade).

counterparties.[549] One commenter, who noted that TRACE never requires the dissemination of the exact notional amount of block transactions, suggested that the Commission had not fully explained its rationale for not adopting this approach for security-based swaps.[550] Numerous commenters supported dissemination of the notional amount of block trades through a "masking" or "size plus" convention comparable to that used by TRACE, in which transactions larger than a specified size would be reported as "size plus."[551]

Under Rule 902(a), as adopted, a registered SDR is required to publicly disseminate (for all dissemination-eligible transactions[552]), immediately upon receipt of the transaction report, all of the elements required by Rule 901(c), including the true notional amount of the transaction (as opposed to a "capped" or "bucketed" notional amount). The Commission believes the T+24 hour approach during the interim phase should address commenters' concerns about disseminating the true notional amount of a transaction, including concerns about preserving the anonymity of counterparties.[553] One commenter expressed concern about reporting blocks and non-blocks in the same timeframe, which, the commenter stated, would prevent market

---

549 See WMBAA II at 7 (also noting that the result may be that counterparties are less willing to engage in large transactions); Phoenix Letter at 3 (stating that reporting block trades at the same time as non-block trades could jeopardize the anonymity of the block trade).

550 See Cleary II at 13.

551 See WMBAA II at 7; ISDA/SIFMA I at 5; ISDA/SIFMA Block Trade Study at 2, 26-27; Vanguard Letter at 5; Goldman Sachs Letter at 6; SIFMA I at 5; J.P. Morgan Letter at 12-13; MFA I at 4; MFA III at 8; UBS Letter at 2; FIA/FSF/ISDA/SIFMA Letter at 6; Phoenix Letter at 3; ISDA IV at 16.

552 See Rule 902(c) (requiring that certain types of security-based swaps not be publicly disseminated).

553 One commenter appears to agree generally with this approach. See J.P. Morgan Letter at 14 ("'un-masked' trade-by-trade notional amounts should eventually be disseminated . . . in order to facilitate analysis of market trends by market participants and the academic community").

participants from being able to hedge the trade.[554] The Commission believes that a 24-hour timeframe for reporting of transaction information should address any concerns about disseminating the true notional amount of any transaction and allow market participants who choose to hedge adequate time to accomplish a majority of their hedging activity before transaction data is publicly disseminated.[555] During the interim phase when no transaction must be reported in less than 24 hours after execution, the Commission will be able to collect and analyze transaction information to develop an understanding of how market participants are reacting to the introduction of mandated post-trade transparency. The Commission expects to study, among other things, the frequency with which security-based swap market participants transact in non-standard notional amounts, and will attempt to observe whether the market reacts differently to last-sale prints of any non-standard sizes versus more conventional sizes. Based on such data and analysis, the Commission anticipates considering whether it may be appropriate to establish notional caps or rounding conventions in disseminated reports.

5. Analysis Period

As discussed in Section XXII(C)(3)(a), infra, during the interim phase, the Commission will have access to more useful data about how different security-based swap trades of different sizes and with different reporting delays might be affecting subsequent behavior in the market, as well as any additional data and analysis that might be submitted by third parties.[556] Furthermore,

554 See Phoenix Letter at 3.

555 The Commission further notes that equity total return swaps are synthetic substitutes for positions in the underlying equity security or securities; therefore, the Commission believes that it would not be appropriate to allow masking for a synthetic substitute when there is no masking exceptions to public dissemination in the cash equities markets.

556 See ICI II at 7 ("We also support the SEC re-opening for comment certain issues related to block trades—such as the required time delays—in connection with the future SEC proposal regarding how to define block trades").

once implemented, reporting sides will be required under Regulation SBSR to submit their security-based swap execution times to a registered SDR. As noted above, security-based swap transaction data currently stored in DTCC-TIW includes the time of reporting but not the time of the execution.[557] Having the execution time instead of only the reporting time will allow a more robust and granular analysis of any hedging that may or may not occur within the first 24-hour period after execution.

The Commission is directing its staff to use data collected during the interim phase to publish a report for each asset class of security-based swaps assessing the impact of post-trade transparency on that asset class. Appendix A to Rule 901 of Regulation SBSR sets forth the guidelines for these reports, which must be completed no later than two years following the initiation of public dissemination of SBS transaction data by the first registered SDR in each asset class.[558]

The completion of the staff's report for an asset class will mark the beginning of an analysis period, during which the Commission anticipates considering the report, any public comments received on the report, and any other relevant data and information, including the Commission's original proposal to define "real time" in the context of Section 13(m) of the Exchange Act to mean "as soon as technologically practicable, but in no event later than 15 minutes after the time of execution of a security-based swap transaction."[559] Based on this analysis, the Commission anticipates that it will prepare a proposal that would address, among other things: (1) the criteria for determining what constitutes a large notional security-based

557 See Hedging Analysis at 5.

558 See infra Section XXII(C)(3)(a) (describing the importance of conducting additional data analysis during the interim phase).

559 See Regulation SBSR Proposing Release, 75 FR at 75284.

swap transaction (block trade) for particular markets and contracts; and (2) the appropriate time delay for disseminating large notional security-based swap transactions (block trades) to the public.[560] The Commission believes that the approach of studying security-based swap market activity once post-trade transparency is implemented, but before adopting block trade rules, accords with the recommendations of several commenters.[561]

VIII. Reporting and Public Dissemination of Security-Based Swaps Involving Allocation

---

560 See 15 U.S.C. 78m(m)(1)(E)(ii)-(iii). The Commission anticipates that these proposed rules also would address certain issues raised by commenters during the comment period for Regulation SBSR. For example, several commenters proposed calculation methodologies for block trade thresholds. See, e.g., Goldman Sachs Letter at 4-6; ISDA/SIFMA I at 4; Better Markets I at 6; WMBAA II at 3; ISDA/SIFMA Block Trade Study at 26; Cleary II at 14 (supporting various tests or methodologies for establishing block trade thresholds). Commenters suggested various approaches for how often block thresholds should be updated. See ISDA/SIFMA I at 5 (stating that block trade thresholds should be updated at least every three months because liquidity in the OTC markets may change quickly); ISDA/SIFMA II at 8 (stating that the block trading exemption rules should be updated quarterly); ISDA/SIFMA Block Trade Study at 2 (stating that the reporting rules should be re-evaluated regularly to ensure that they reflect the changing characteristics of the market); ICI I at 3 (stating that block trade thresholds would need to be reviewed more than once a year to remain meaningful); WMBAA II at 5 (recommending that block trade thresholds be updated at appropriate intervals); MFA III at 8 (stating that an SB SEF's swap review committee should periodically determine what constitutes a "block" for each security-based swap or security-based swap class that the SF SEF trades). See also Barclays Letter at 5 (generally supporting a 30-calendar-day look-back for determining block size thresholds).

561 See Institutional Investors Letter at 4 (recommending that the CFTC collect market data for one year before adopting rules relating to block trades); MFA II, Recommended Timeline at 4; WMBAA III at 6; FIA/FSF/ISDA/SIFMA Letter at 6 (appropriate block trade thresholds, and therefore real-time reporting requirements, can be established only after the commencement of SDR reporting to regulators and careful analysis of security-based swap market transaction data). This approach is also broadly consistent with the implementation of the TRACE system, which shortened reporting requirements over time. Several commenters recommended a phased reporting approach analogous to TRACE. See CCMR I at 2; Cleary II at 20; DTCC II at 9-10; FINRA Letter at 4-5; ISDA/SIFMA I at 10; ISDA/SIFMA Block Trade Study at 2; UBS Letter at 2-3; WMBAA II at 5.

This section explains the application of Regulation SBSR to certain security-based swaps executed by an asset manager on behalf of multiple clients—transactions involving what are sometimes referred to as "bunched orders."[562] To execute a bunched order, an asset manager negotiates and executes a security-based swap with a counterparty, typically a security-based swap dealer, on behalf of multiple clients. The bunched order could be executed on- or off-platform. The asset manager would allocate a fractional amount of the aggregate notional amount of the transaction to each client, either at the time of execution or some time after execution. Allocation results in the termination of the executed bunched order and the creation of new security-based swaps between the security-based swap dealer and the accounts managed by the asset manager.[563] By executing a bunched order, the asset manager avoids having to negotiate the account-level transactions individually, and obtains exposure for each account on the same terms (except, perhaps, for size).

A. Discussion of Comments Received and Application of Regulation SBSR

In response to the Regulation SBSR Proposing Release, one commenter stated that asset managers commonly use bunched orders and allocations in the OTC derivatives market, and recommended that publicly disseminating the execution of a bunched order—without the allocation information—would satisfy the transparency objective of Title VII and be consistent

562 The Commission recognizes that market participants may use a variety of other terms to refer to such transactions, including "blocks," "parent/child" transactions, and "splits." The Commission has determined to use a single term, "bunched orders," for purposes of this release, as this appears to be a widely accepted term. See, e.g., "Bunched orders challenge SEFs," MarketsMedia (March 25, 2014), available at http://marketsmedia.com/bunched-orders-challenge-sefs/ (last visited September 22, 2014); "Cleared bunched trades could become mandatory rule," Futures and Options World (October 31, 2013) (available at http://www.fow.com/3273356/Cleared-bunched-trades-could-become-mandatory-rule.html (last visited September 22, 2014).

563 In aggregate, the notional amount of the security-based swaps that result from the allocation is the same as the notional amount of the executed bunched order.

with TRACE reporting.[564] The commenter also expressed the view that the reporting party for a bunched order execution should be obligated to report allocation information, which would be necessary to indicate the final placement of risk derived from the initial trade.[565] The discussion below explains how Regulation SBSR's regulatory reporting and public dissemination requirements apply to executed bunched orders that are subject to the reporting hierarchy in Rule 901(a)(2)(ii) and the security-based swaps that result from the allocation of these transactions, to the extent that the resulting security-based swaps are not cleared. The Regulation SBSR Proposed Amendments Release is proposing guidance for reporting platform-executed bunched orders that will be submitted to clearing and security-based swaps that result from the allocation of a bunched order if the resulting security-based swaps are cleared.

Regulation SBSR requires bunched order executions to be reported like other security-based swaps. The reporting side for a bunched order execution subject to the reporting hierarchy in Rule 901(a)(2)(ii)[566] must report the information required by Rules 901(c) and 901(d) for the bunched order execution, including the notional amount of the bunched order execution, to a registered SDR.[567] The information described in final Rule 901(c) will be publicly disseminated under final Rule 902(a), like any other security-based swap transaction that does not fall within

564 See ISDA/SIFMA I at 7-8. See also ISDA IV at 10, 13 (asserting that the bunched order execution could be disseminated publicly, but that post-allocation activities should be excluded from public dissemination).

565 See id. at 8.

566 See supra Section V. A bunched order execution will be subject to this reporting hierarchy unless it is executed on a platform and submitted to clearing.

567 Rule 901(d)(1) requires the reporting side for a security-based swap to report "the counterparty ID or the execution agent ID of each counterparty, as applicable." The Commission notes that an asset manager acts as an execution agent for the clients that receive allocations of an executed bunched order.

the enumerated exceptions to public dissemination in Rule 902(c).[568] The Commission believes that it is appropriate to enhance price discovery, and thus consistent with the statutory provisions governing public dissemination of security-based swaps, to require public dissemination of a single transaction report showing the aggregate notional amount of the bunched order execution (i.e., the size prior to allocation).[569] The public thereby will know the full size of the bunched order execution and that this size was negotiated at a single price. The reporting side for a bunched order execution also must report life cycle events for the bunched order execution—including the termination of the executed bunched order that result from its allocation—to the registered SDR that receives the initial report of the transaction.

When a bunched order execution is allocated, new security-based swaps are created that must be reported to a registered SDR pursuant to Rule 901(a). To clarify that point, the introductory language to final Rule 901(a) states that a "security-based swap, including a security-based swap that results from the allocation, termination, novation, or assignment of another security-based swap, shall be reported" as provided in the rest of the rule.[570] Reporting of the security-based swaps resulting from the allocation of a bunched order execution should assure that the Commission and other relevant authorities know the final placement of risk that results from the bunched order execution.[571] As with any other security-based swap, the

---

568 See supra Section VI.

569 See 15 U.S.C. 13(m)(1)(B) (authorizing the Commission to make security-based swap transaction and pricing data available to the public "in such form and at such times as the Commission determines appropriate to enhance price discovery").

570 See supra Section V(C)(5).

571 As stated above, allocation also results in the termination of the bunched order execution, which is a life cycle event of the original transaction. This life cycle event must be reported, in accordance with Rule 901(e), to the registered SDR that receives the report of the original bunched order execution.

reporting side for a security-based swap resulting from an allocation is determined by Rule 901(a). Also, as with any other security-based swap, the reporting side must make the required report within 24 hours of the time that the new security-based swap is created—not within 24 hours of the time of execution of the original bunched order.[572] Under Rule 901(d)(10), the reporting side for a security-based swap resulting from an allocation must report the transaction ID of the executed bunched order as part of the report of the new security-based swap.[573] This requirement will allow the Commission and other relevant authorities to link a report of a bunched order execution to the smaller security-based swaps that result from the allocation of the bunched order execution. Because these related transactions can be linked across registered SDRs using the transaction ID of the bunched order execution, the Commission believes that it is not necessary or appropriate to require that the security-based swaps resulting from the allocation be reported to the same registered SDR that received the transaction report of the original transaction.

The Commission agrees with the commenters who recommended that publicly disseminating the execution of a bunched order—without the allocation information—would

---

572 If 24 hours after the time of allocation would fall on a day that is not a business day, the report of the security-based swaps resulting from the allocation would be due by the same time on the next day that is a business day. See Rule 901(j). One commenter requested that Regulation SBSR reflect that the timeframe for reporting security-based swaps resulting from a bunched order execution commence upon receipt of the identity of the counterparties to the bunched order execution by the reporting party during its own business hours. See ISDA IV at 10. The Commission believes that the requirement that the reporting side make the required report within 24 hours of the time that the new security-based swap is created is responsive to this comment.

573 Rule 901(d)(10), as adopted, provides that, if a "security-based swap arises from the allocation, termination, novation, or assignment of one or more existing security-based swaps," the reporting side must report "the transaction ID of the allocated, terminated, assigned, or novated security-based swap(s)," subject to one exception that would not apply to an allocation that is not submitted for clearing.

satisfy the transparency objective of Title VII.[574] Therefore, Regulation SBSR does not require a registered SDR to publicly disseminate reports of the new security-based swaps that result from an allocation. In fact, as described above, Rule 902(c)(7), as adopted, prohibits a registered SDR from disseminating "[a]ny information regarding the allocation of a security-based swap."[575] This approach also accords with the recommendation of the commenter who urged that the aggregate notional amount prior to allocation be disseminated, rather than the individual transaction sizes, in order to preserve anonymity of the asset manager and its clients.[576]

The Commission notes that Rule 907(a)(1), as adopted, requires a registered SDR to establish and maintain policies and procedures that, among other things, enumerate the specific data elements of a security-based swap that must be reported. Registered SDRs should consider describing, as part of these policies and procedures, the means by which persons with a duty to report bunched order executions—and the new security-based swaps that result from the allocation—must report the information required by Rules 901(c) and 901(d).

B. Example: Reporting and Public Dissemination for an Uncleared Bunched Order Execution

The following example demonstrates how Regulation SBSR applies to a bunched order execution that will not be cleared and the security-based swaps that result from the allocation of that bunched order execution. Assume that an asset manager, acting on behalf of several investment fund clients, executes a bunched order with a registered security-based swap dealer.

---

574 See ISDA/SIFMA I at 7-8; ISDA IV at 10, 13.

575 See supra Section VI(D).

576 See MFA I at 2-3 ("Counterparties are often aware of an investment manager's standard fund allocation methodology and therefore, reporting transactions at the allocated level . . . will make evident an allocation scheme that other participants can easily associate with a particular investment manager").

Assume that the transaction is not submitted to clearing and there are no indirect counterparties on either side. The execution of the bunched order could occur either on a platform or not.

1. Reporting the Executed Bunched Order

Under Rule 901(a)(2)(ii), as adopted, the registered security-based swap dealer is the reporting side for the bunched order execution because only one side of the transaction includes a registered security-based swap dealer. Under final Rules 901(c) and 901(d), the registered security-based swap dealer has up to 24 hours after the time of execution of the bunched order to report all applicable primary and secondary trade information to a registered SDR. The registered security-based swap dealer must report the entire notional amount of the executed bunched order as part of the Rule 901(c) primary trade information.[577] Rule 902(a) requires the registered SDR to publicly disseminate a single last-sale print showing the aggregate notional amount of the bunched order execution immediately upon receiving the report from the registered security-based swap dealer.

2. Reporting the Allocations

Regulation SBSR also requires reporting to a registered SDR of the security-based swaps that result from allocation of the bunched order execution.[578] As the reporting side for the executed bunched order, the registered security-based swap dealer must make a life cycle event report, in accordance with Rule 901(e), to notify the registered SDR that received the report of the executed bunched order that the trade has been allocated, which terminates the security-based swap. Pursuant to Rule 901(a)(2)(ii), the registered security-based swap dealer also is the

577 See Rule 901(c)(4) (requiring reporting of the notional amount of a security-based swap and the currency in which the notional amount is denominated).

578 See Rule 901(a) (requiring that a security-based swap, "including a security-based swap that results from the allocation, termination, novation, or assignment of another security-based swap shall be reported" as provided in the rest of the rule).

reporting side for each security-based swap resulting from allocation of the bunched order execution because only one side of the transaction includes a registered security-based swap dealer.[579] If the asset manager provides the allocation information to the registered security-based swap dealer prior to or contemporaneous with the bunched order execution, the registered security-based swap dealer could report the bunched order execution and the security-based swaps that result from its allocation to a registered SDR at the same time.[580] If the asset manager does not provide the allocation information to the registered security-based swap dealer until some time after execution of the bunched order, the registered security-based swap dealer must report each security-based swap resulting from the allocation within 24 hours of the allocation. In either case, the reports of the security-based swaps resulting from the allocation of the bunched order execution must include the counterparty IDs of each investment fund and the notional amount of each security-based swap resulting from the allocation. In either case, Rule 901(d)(10) requires each report of a security-based swap resulting from the allocation to include the transaction ID of the bunched order execution so that the Commission and other relevant authorities will have the ability to link each resulting transaction with the initial bunched order execution.

IX. Inter-Affiliate Security-Based Swaps

A. Background and Summary of Final Rule

---

579 The Commission assumes that the investment funds would not be registered security-based swap dealers for purposes of these examples.

580 Even though the reports could be made at the same time, Rule 901(a) requires a report of a bunched order execution and an associated allocation to be maintained as separate records by a registered SDR because the execution of the bunched order and the allocations are separate reportable security-based swap transactions.

Regulation SBSR, as initially proposed, did not contemplate any exception from reporting for inter-affiliate security-based swaps. In the Regulation SBSR Proposing Release, the Commission expressed the preliminary view that a report of an inter-affiliate security-based swap should be publicly disseminated with an indicator identifying the transaction as an inter-affiliate security-based swap.[581] The Commission noted that, for such transactions, "there might not be an arm's length negotiation over the terms of the [security-based swap] transaction, and disseminating a report of the transaction without noting that fact would be inimical to price discovery."[582] Rule 907(a)(4), as proposed, would have required a registered SDR to establish and maintain written policies and procedures describing, among other things, how reporting parties would report—and consistent with the enhancement of price discovery, how the registered SDR would publicly disseminate—security-based swap transactions that do not involve an opportunity to negotiate any material terms, other than the counterparty.[583]

The Commission received several comments regarding inter-affiliate security-based swaps in response to the Regulation SBSR Proposing Release and discussed those comments in the Cross-Border Proposing Release.[584] Although the Cross-Border Proposing Release did not propose to revise any portion of Regulation SBSR with regard to the treatment of inter-affiliate security-based swaps, the Commission provided some preliminary thoughts on how Regulation SBSR could be applied to them, particularly as regards to public dissemination, in a manner that could address commenters' concerns without taking the step of suppressing all inter-affiliate

581 See 75 FR at 75214-15.

582 Id. at 75215.

583 See id. at 75237.

584 See 78 FR at 31069-72.

transactions from public dissemination.[585] In response to the Cross-Border Proposing Release, the Commission received additional comments, described below, regarding the application of Regulation SBSR to inter-affiliate security-based swaps.

Regulation SBSR, as adopted, applies to all security-based swaps, including inter-affiliate security-based swaps. The Commission has considered, but is not adopting, any exemption from Regulation SBSR's regulatory reporting or public dissemination requirements for inter-affiliate security-based swaps. Therefore, Rules 901(c) and 901(d) require reporting of inter-affiliate security-based swaps; Rule 901(i) requires reporting of historical inter-affiliate security-based swaps; and Rule 902 requires public dissemination of inter-affiliate security-based swaps. Furthermore, Rule 907(a)(4) requires a registered SDR to establish and maintain policies and procedures that, among other things, identify characteristics of or circumstances associated with the execution or reporting of a security-based swap that could, in the fair and reasonable estimation of the registered SDR, cause a person without knowledge of such characteristics or circumstances to receive a distorted view of the market. As discussed in Section VI(G), supra, the Commission generally believes that a registered SDR should establish a flag for inter-affiliate security-based swaps to help market observers better understand the information that is publicly disseminated.

B. Discussion of Comments

1. Regulatory Reporting of Inter-Affiliate Security-Based Swaps

Most of the comments relating to inter-affiliate security-based swaps, in response to both the initial proposal and the Cross-Border Proposing Release (which re-proposed Regulation SBSR in its entirety), pertained to public dissemination. However, one commenter stated that,

---

585 See id. at 31071-72.

because inter-affiliate transactions should not be publicly disseminated, it also should be unnecessary to "collect" information about them.[586] Another commenter on the Regulation SBSR Proposing Release argued that, for a foreign entity registered as a bank holding company and subject to the consolidated supervision of the Federal Reserve System, the reporting of inter-affiliate transactions would be superfluous because the Federal Reserve has "ample authority to monitor transactions among affiliates,"[587] suggesting that even regulatory reporting of inter-affiliate security-based swaps should not be necessary.[588] In the Cross-Border Proposing Release, the Commission specifically asked whether commenters believed that cross-border inter-affiliate security-based swaps should be excluded from the regulatory reporting requirements of Regulation SBSR and, if so, under what circumstances such security-based swaps should be excluded.[589] No commenters on the Cross-Border Proposing Release responded to this particular question pertaining to regulatory reporting.

The Commission continues to believe that the Commission and other relevant authorities should have ready access to information about the specific counterparties that hold positions in all security-based swaps subject to Regulation SBSR. While it is true that the Federal Reserve or perhaps another relevant authority might exercise consolidated supervision over a group, such supervision might not provide the Commission and other relevant authorities with current and specific information about security-based swap positions held by the group's subsidiaries. As a

---

586 Cravath Letter at 9.

587 Japanese Banks Letter at 5.

588 See also Multiple Associations IV at 6 (stating that "many of the transaction-based requirements in Title VII, such as. . . trade reporting rules, generally do not further legislative or regulatory purposes when applied to inter-affiliate swaps," but without specifying whether the comment was with respect to regulatory reporting, public dissemination, or both).

589 See 78 FR at 31072.

result, it would likely be more difficult for relevant authorities to conduct general market analysis or surveillance of market behavior, and could present difficulties during a crisis, when ready access to accurate and timely information about specific risk exposures might be crucial. Furthermore, the statutory provisions that require regulatory reporting of security-based swap transactions state that "each" security-based swap shall be reported; these statutory provisions do not by their terms limit the reporting requirement to transactions having particular characteristics (such as being negotiated at arm's length).[590] Even absent these constraints, for the reasons described above, the Commission does not believe that an exemption from regulatory reporting for these transactions would be appropriate. Therefore, Regulation SBSR subjects inter-affiliate security-based swaps to regulatory reporting.[591]

2. Public Dissemination of Inter-Affiliate Security-Based Swaps

As discussed below, some commenters raised concerns regarding the public dissemination of inter-affiliate security-based swaps. After carefully considering the issues raised by these commenters, the Commission has determined to adopt Regulation SBSR with no

590 Section 13A(a)(1) of the Exchange Act, 15 U.S.C. 78m-1(a)(1), provides that each security-based swap that is not accepted for clearing shall be subject to regulatory reporting. Section 13(m)(1)(G) of the Exchange Act, 15 U.S.C. 78m(m)(1)(G), provides that each security-based swap (whether cleared or uncleared) shall be reported to a registered SDR.

591 In addition, one group of commenters acknowledged that "a number of rules that apply to the core operations of a registered entity will perforce apply to such entity's inter-affiliate swap transactions and could further Dodd-Frank policy purposes." Multiple Associations Letter at 9. These commenters stated that inter-affiliate transactions would need to be taken into account in calculating an entity's capital requirements, and that internal recordkeeping requirements are essential to the oversight of the security-based swap business. See id. The Commission notes that regulatory reporting of all security-based swaps, including inter-affiliate security-based swaps, will assist the Commission and other relevant authorities in overseeing compliance with these capital and recordkeeping requirements, as the regulatory report of an entity's security-based swap activity could provide an external check of the internal records of such entities' positions and activities.

exemption from the public dissemination requirements for inter-affiliate security-based swaps.

As a preliminary matter, the Commission notes that, once a security-based swap transaction has been reported to a registered SDR, the counterparties assume no additional burdens associated with public dissemination of the transaction. That function will be carried out solely by the registered SDR. Thus, requiring registered SDRs to publicly disseminate security-based swaps, including inter-affiliate security-based swaps, will not increase the compliance burden on security-based swap counterparties.

One commenter argued that inter-affiliate security-based swaps should not be subject to public dissemination because "public reporting could confuse market participants with irrelevant information" and suggested that "the Commissions collect data on these transactions but not require dissemination to the public at large."[592] Another commenter stated that an inter-affiliate transaction "does not contain any additional price information beyond that contained in the transaction with the customer."[593] One group of commenters argued that publicly disseminating inter-affiliate transactions "will distort the establishment of position limits, analysis of open interest, determinations of block trade thresholds and performance of other important regulatory analysis, functions and enforcement activities that require an accurate assessment of the [security-based] swaps market."[594] These commenters stated, further, that inter-affiliate security-based swaps "could be required to be publicly reported in multiple jurisdictions, even though

592 Cleary II at 17. See also SIFMA/FIA/Roundtable Letter at A-44 (stating that "real-time reporting of inter-affiliate [security-based swaps] ... would distort market information and thus have a detrimental market and commercial impact").

593 ISDA/SIFMA I at 13. See also ISDA IV at 13 (recommending that inter-affiliate trades should not be subject to public dissemination).

594 Multiple Associations Letter at 11-12. See also ISDA I at 5 (stating, in the context of pre-enactment security-based swaps, that inter-affiliate security-based swaps should not be subject to reporting).

they are not suitable for reporting in any jurisdiction."[595]

An accurate assessment of the security-based swap market will be necessary for a wide range of functions, potentially including—as noted by this group of commenters—analysis of open interest and the establishment of block trade thresholds.[596] The Commission believes that users of security-based swap market data—whether regulators, SDRs, market participants, or the public at large—should have an accurate and undistorted view of the market. However, it does not follow that public dissemination of inter-affiliate security-based swaps will necessarily prevent an accurate assessment of the security-based swap market.

The need to distinguish reports of initial transactions from subsequent inter-affiliate transactions exists whether or not the latter are publicly disseminated. As noted above, the Commission is requiring each registered SDR to adopt, among others, policies and procedures for flagging transaction reports that have special circumstances.[597] This flagging mechanism is designed to provide regulators with a more accurate view of the security-based swap market, and the same mechanism can be applied to publicly disseminated last-sale reports to give market

---

595 Multiple Associations Letter at 16.

596 See id. at 11-12.

597 These policies and procedures could address not only reporting of whether a security-based swap is an inter-affiliate transaction, but also whether the initial security-based swap was executed in a jurisdiction with public dissemination requirements. This could be either the United States or another jurisdiction that imposes last-sale transparency requirements similar to those in Regulation SBSR. Further, these policies and procedures also could address whether to indicate the approximate time when the initial security-based swap was executed. For example, there could be condition flags for the initial security-based swap having been executed within the past 24 hours, between one and seven days before, or longer than seven days before. An indication that the initial trade was executed less than 24 hours before could provide significant price discovery value, while an indication that the initial trade was executed over a week before could, all things being equal, have less. However, even information about a trade executed over a week ago (or more) could have price discovery value for security-based swaps that trade infrequently.

observers the same view. The Commission continues to believe that the commenters' concerns about the potentially limited price discovery value of inter-affiliate security-based swaps can be addressed through the public dissemination of relevant data that flags such limitations, rather than suppressing these transactions from public dissemination entirely. Additionally, even if the report of an initial security-based swap transaction has been publicly disseminated in another jurisdiction, the Commission believes that it would be preferable to disseminate a report of the subsequent inter-affiliate transaction with an appropriate condition flag rather than suppressing a report of the inter-affiliate transaction from public dissemination through a registered SDR. Public dissemination of such a transaction by a registered SDR would help to assure that information concerning the transaction was readily available to participants in the U.S. market and other market observers.

One group of commenters argued that "use of inter-affiliate [security-based swaps] not only allows risks to reside where they are more efficiently managed, but it also has a net positive effect on an institution's assets and liquidity, as well as on its efficiency in deploying capital. For these reasons, we believe that there should be an inter-affiliate exemption from the public dissemination requirements."[598] Another commenter raised similar concerns, arguing that "public reporting of inter-affiliate transactions could seriously interfere with the internal risk management practices of a corporate group" and that "[p]ublic disclosure of a transaction between affiliates could prompt other market participants to act in a way that would prevent the corporate group from following through with its risk management strategy by, for instance, causing adverse price movements in the market that the risk-carrying affiliate would use to

598 SIFMA/FIA/Roundtable Letter at A-44.

hedge."[599] The Commission agrees generally that corporate groups should engage in appropriate risk management practices. However, the Commission does not agree that Regulation SBSR, as adopted, is inimical to effective risk management. The Commission notes that, during the first phase of Regulation SBSR, all security-based swaps—regardless of size—must be reported within 24 hours from the time of execution and—except with regard to transactions falling within Rule 902(c)—immediately publicly disseminated. As discussed in Section VII, supra, this reporting timeframe is designed, in part, to minimize any potential for market disruption resulting from public dissemination of any security-based swap transaction during the interim phase of Regulation SBSR. The Commission anticipates that, during the interim period, it will collect and analyze data concerning the sizes of transactions that potentially affect liquidity in the market. If the Commission ultimately determines that some form of block trade exception to real-time public dissemination is appropriate, an inter-affiliate security-based swap of block size would be able to avail itself of that exception. The Commission sees no basis for concluding, at this time, that inter-affiliate security-based swaps are more difficult to hedge than other types of security-based swaps, or that the hedging of these transactions presents unique concerns that would not also arise in connection with the hedging of a security-based swap that was not an inter-affiliate transaction. Therefore, the Commission does not agree with the commenters' concern that public dissemination of inter-affiliate security-based swaps will impede the ability of corporate groups to hedge.

Another group of commenters argued that "affiliates often enter into these swaps on terms linked to an external trade being hedged. If markets have moved before the inter-affiliate trade is entered into on the SEF or reported as an off-exchange trade, market participants could

[599] Cleary II at 17.

also misconstrue the market's true direction and depth."[600] This comment suggests that last-sale reports of transactions that appear out of the order in which the transactions in fact occurred could mislead market observers. The Commission shares this concern but does not conclude that the appropriate response is to suppress all inter-affiliate transactions from public dissemination. The Commission believes instead that this issue can be addressed by requiring the dissemination of the date and time of execution on the last-sale report.[601] This requirement is designed to allow market observers to construct a time-sequenced record of all transactions in the security-based swap market and thereby counteract the possibility that certain transactions could be reported and publicly disseminated out of the order in which they were in fact executed.

Some commenters stated that inter-affiliate security-based swaps "are typically risk transfers with no market impact."[602] This statement does not exclude the possibility that some inter-affiliate security-based swaps might have a market impact. The Commission sees no basis to conclude at this time that inter-affiliate security-based swaps do not provide price discovery value or other useful information to market observers. Market observers might be able to discern useful information from the last-sale reports of some inter-affiliate security-based swaps, and the Commission believes that market observers should be given the opportunity to do so—particularly given the Title VII mandate that all security-based swaps shall be publicly disseminated. The value of this information to market observers is unknown at this time, because market observers have never before had the opportunity to view comprehensive last-sale information from the security-based swap market. Suppressing all inter-affiliate security-based

---

600 See Multiple Associations Letter at 12.

601 See Rule 901(c)(2).

602 SIFMA/FIA/Roundtable Letter at A-44; Multiple Associations Letter at 11 (emphasis added).

swaps from public dissemination would eliminate any potential that market observers could develop ways to utilize this information. Thus, under the final rules, market observers who wish to evaluate the entire record of transactions, including inter-affiliate transactions, will have the opportunity to do so. As discussed above, the Commission disagrees with the commenters who argued that "[r]equiring real-time reporting of inter-affiliate [security-based swaps] . . . would distort market information and thus have a detrimental market and commercial impact."[603] Because such transactions will be flagged, market observers can simply—if they wish—remove from their analysis any transactions having an inter-affiliate flag.

The Commission sees one circumstance where public dissemination of an inter-affiliate transaction could have significant price discovery value: when the initial transaction is effected in a foreign jurisdiction without a public dissemination requirement and is not otherwise subject to public dissemination under Regulation SBSR, and the subsequent inter-affiliate transaction—between one of the original counterparties and one of its affiliate—would be publicly disseminated if it fell within Rule 908(a)(1). Commenters' views that public dissemination of an inter-affiliate transaction would be duplicative and distorting are premised on the view that the initial transaction is, in fact, publicly disseminated, which may not always be the case.[604] Therefore, public dissemination of the subsequent inter-affiliate transaction might be the only way for the market to obtain any pricing information about the related pair of transactions.[605] In

603 SIFMA/FIA/Roundtable Letter at A-44.

604 See Multiple Associations Letter at 12 ("The market-facing swaps already will have been reported and therefore, to require that inter-affiliate swaps also be reported will duplicate information").

605 In addition, even if the initial transaction is publicly disseminated, the Commission does not believe that publicly disseminating the second, inter-affiliate transaction would cause observers to obtain a distorted view of the market, as long as the second transaction is flagged as an inter-affiliate transaction. See supra Section VI(G).

the Cross-Border Proposing Release, the Commission specifically noted this circumstance and requested comment on it.[606] No commenters responded.

Finally, one commenter on the Cross-Border Proposing Release argued that the Commission should propose a comprehensive rule regarding inter-affiliate security-based swaps "before finalizing the substantive underlying rules governing the SBS markets."[607] The commenter reasoned that "a separate proposed rule, like the Cross-Border Proposal, is necessary to ensure that market participants are accorded sufficient opportunity to comment on the interplay between the Commission's proposed rules and inter-affiliate trades."[608]

The Commission notes that Regulation SBSR, as initially proposed, did not contemplate any exception for inter-affiliate security-based swaps, and the Regulation SBSR Proposing Release discussed at various points how proposed Regulation SBSR would apply to inter-affiliate transactions.[609] The Commission received comments regarding the reporting of inter-affiliate transactions in response to both the Regulation SBSR Proposing Release and the Cross-Border Proposing Release. Commenters on the Cross-Border Proposing Release's discussion of the application of Regulation SBSR to inter-affiliate security-based swaps did not raise any new issues that had not already been raised in response to the Regulation SBSR Proposing Release. In addition, as noted above, the Commission discussed in the Cross-Border Proposing Release the comments regarding inter-affiliate transactions submitted in response to the Regulation SBSR Proposing Release.[610] After carefully considering all of these comments, the Commission

believes that commenters had sufficient opportunity to present their views on inter-affiliate transactions in Regulation SBSR and therefore it is appropriate at this time to adopt final rules relating to regulatory reporting and public dissemination of security-based swaps, including inter-affiliate security-based swaps.

X. Rule 903—Use of Codes

Regulation SBSR, as adopted, permits or, in some instances, requires security-based swap counterparties to report coded information to registered SDRs. These codes, known as unique identification codes ("UICs"), will be used to identify products, transactions, and legal entities, as well as certain business units and employees of legal entities.[611] Rule 903 of Regulation SBSR establishes standards for assigning and using coded information in security-based swap reporting and dissemination to help ensure that codes are assigned in an orderly manner and that regulators, market participants, and the public are able to interpret coded information stored and disseminated by registered SDRs.

A. Proposed Treatment of Coded Information

As initially proposed, Regulation SBSR would have established a process for assigning UICs in Rule 900 and addressed the standards for using coded information in Rule 903. Proposed Rule 900 would have provided that a "unique identification code" or "UIC" would be the unique code assigned to a person, unit of a person, or product by or on behalf of an internationally recognized standards-setting body ("IRSB") that imposes fees and usage restrictions that are fair and reasonable and not unreasonably discriminatory. The proposed definition of "UIC" further would have provided that, if there existed no IRSB meeting these

[611] See supra Section II (describing UICs that must be reported to registered SDRs pursuant to Regulation SBSR).

criteria, a registered SDR would have been required to assign all necessary UICs using its own methodology. Similarly, if an IRSB meeting the criteria existed but had not assigned a relevant UIC, the registered SDR would have been required to assign that UIC using its own methodology. When the Commission re-proposed Regulation SBSR as part of the Cross-Border Proposing Release, it designated the definition of "UIC" as re-proposed Rule 900(nn) but made no changes to the substance of the definition.[612]

Rule 903, as originally proposed, would have permitted the use of codes in place of certain data elements for purposes of reporting and publicly disseminating the information required under proposed Rules 901 and 902 of Regulation SBSR, provided that the information to interpret such codes is "widely available on a non-fee basis." When the Commission re-proposed Rule 903, it replaced the term "reporting party" with "reporting side" but otherwise made no substantive revisions to the rule.[613]

B. Comments Received and Final Rule 903

1. Relocation of UIC Provisions into Rule 903

Final Rule 903 is divided into paragraphs (a) and (b). Rule 903(a) sets out the requirements that registered SDRs must follow when assigning UICs. Similar requirements were initially proposed as part of the definition of "UIC" in Rule 900, and re-proposed without revision in Rule 900(nn). The Commission now believes that it would be more consistent with the overall structure of Regulation SBSR to move any substantive requirements from the definitions rule (Rule 900) and into an operative rule. Therefore, the Commission's substantive

612 See 78 FR at 31211-12.

613 See id. at 31213.

requirements for a registered SDR's use of UICs are now located in final Rule 903.[614] As described below, the Commission is adopting these requirements substantially as proposed, but with certain changes as described below. In particular, Rule 903(a), as adopted, includes new language regarding Commission recognition of international systems for assigning UICs. In addition, final Rule 903(a) provides that, if the Commission has recognized such a system that assigns UICs to persons, each participant of a registered SDR shall obtain a UIC from or through that system for identifying itself, and each participant that acts as a guarantor of a direct counterparty's performance of any obligation under a security-based swap that is subject to Rule 908(a) shall, if the direct counterparty has not already done so, obtain a UIC for identifying the direct counterparty from or through that system, if that system permits third-party registration without a requirement to obtain prior permission of the direct counterparty.

Final Rule 903(b) imposes certain restrictions on how coded information may be reported and publicly disseminated. Rule 903(b) substantially incorporates the earlier versions of Rule 903, with certain conforming and technical changes described below.

2. Comments Regarding UICs and Final Rule 903(a)

The Commission received several comments on the proposed rules relating to UICs and the development of internationally recognized LEIs generally. One commenter expressed concern that, absent a methodology outlined by a standard-setting body, multiple UICs could be assigned by different regulators to the same financial entity, thereby creating compliance

614 Accordingly, the Commission is now adopting a simplified definition of "UIC." See Rule 900(qq) (defining "UIC" as "a unique identification code assigned to a person, unit of a person, product, or transaction"). See also infra Section X(B)(2) (discussing final Rule 903(a)).

burdens, operational difficulties, and opportunities for confusion.[615] Another commenter believed that, absent internationally recognized LEIs, requiring SDR-specific UICs would create inconsistencies among different SDRs.[616] This commenter recommended that the Commission postpone this requirement until an international taxonomy exists that can be applied consistently.[617] A third commenter stated that it is imperative that a single source of reference data and unambiguous identifiers be established.[618] A fourth commenter argued that "[s]ignificant progress in establishing the GLEIS has been made to date, and the time for further expanding the use of the LEI through rulemaking is favorable."[619] A fifth commenter noted that the CFTC's swap reporting rules require the use of LEIs and urged the Commission, for the sake of clarity and consistency, to replace its reference to "unique counterparty identifiers" with "Legal Entity Identifiers," unless the Commission's rule was intended to include identifiers beyond LEIs.[620] A sixth commenter suggested that the rules reflect primary use of the LEI as a

615 See ICI I at 6.

616 See DTCC V at 14 (also noting that, while global standards for identification codes are likely to exist for some data fields, certain global identifiers will not exist).

617 See id. See also Bloomberg Letter at 1 ("an identifier system should be comprehensive and global").

618 See Benchmark Letter at 1.

619 See letter from Kenneth E. Bentsen, Jr., President and CEO, SIFMA, to the Honorable Jacob J. Lew, Chairman, Financial Stability Oversight Council, dated April 11, 2014, available at http://www.sifma.org/newsroom/2014/sifma_pushes_for_broad_use_of_leis_to_promote_financial_stability/ (last visited January 13, 2015). In a prior comment letter, this commenter recommended that "industry utilities" be considered for assigning unique IDs for legal entities/market participants, as well as for transactions and products. See ISDA/SIFMA I at 8. See also SWIFT Letter at 2 (expressing support for a global standard for identifying security-based swap market participants); DTCC X (stating that there has been significant adoption globally on transaction ID, product ID, and LEI standards).

620 See Levin Letter at 4.

party identifier and the need to use an LEI "when available," recognizing that a reporting party may request but cannot compel its counterparties to obtain an LEI.[621]

The Commission is adopting in Rule 903(a) the provisions relating to the process for assigning UICs largely as proposed and re-proposed, but—reflecting the comments described above—is including two new requirements: (1) that the Commission recognize an IRSS before the use of UICs from that IRSS becomes mandatory under Regulation SBSR; and (2) that, if the Commission has recognized an IRSS that assigns UICs to persons, each participant of a registered SDR shall obtain a UIC from or through that IRSS. As noted below, the Commission is recognizing the GLEIS as an IRSS for assigning LEIs. Final Rule 903(a) states: "If an internationally recognized standards-setting system that imposes fees and usage restrictions on persons that obtain UICs for their own usage that are fair and reasonable and not unreasonably discriminatory and that meets the requirements of paragraph (b) of this section is recognized by the Commission and has assigned a UIC to a person, unit of a person, or product (or has endorsed a methodology for assigning transaction IDs), the registered security-based swap data repository shall employ that UIC (or methodology for assigning transaction IDs). If no such system has been recognized by the Commission, or a recognized system has not assigned a UIC to a particular person, unit of a person, or product (or has not endorsed a methodology for assigning transaction IDs), the registered security-based swap data repository shall assign a UIC to that person, unit of person, or product using its own methodology (or endorse a methodology for assigning transaction IDs). If the Commission has recognized such a system that assigns UICs to persons, each participant of a registered security-based swap data repository shall obtain

621 See ISDA IV at 12. Regulation SBSR, as adopted, does not compel a counterparty on a reporting side to a security-based swap to obtain an LEI for a counterparty on the other side of the transaction.

a UIC from or through that system for identifying itself, and each participant that acts as a guarantor of a direct counterparty's performance of any obligation under a security-based swap that is subject to § 242.908(a) shall, if the direct counterparty has not already done so, obtain a UIC for identifying the direct counterparty from or through that system, if that system permits third-party registration without a requirement to obtain prior permission of the direct counterparty."[622]

The Commission shares commenters' desire to have identifiers that are widely recognized, which would increase efficiency at both the SDR and market participant level. To avoid confusion about when an IRSS meets the standards of Rule 903, the Commission has modified the rule to provide that UICs issued by a particular IRSS would not become mandatory under Regulation SBSR unless the Commission has recognized the IRSS. As detailed below, the Commission is recognizing the GLEIS, applying the standards provided in Rule 903. The Commission will apply the standards provided in Rule 903 to any future assessment of whether an IRSS should be recognized as a provider of UICs for purposes of Regulation SBSR. Specifically, the Commission will consider whether the IRSS imposes fees and usage restrictions on persons that obtain UICs for their own usage that are fair and reasonable and not unreasonably discriminatory, and whether the information necessary to interpret the codes assigned by or through the IRSS is widely available to users of the information on a non-fee basis and without usage restrictions.[623]

Since Regulation SBSR was initially proposed in 2010, significant strides have been made in the development of a globally recognized LEI. The Commission hereby recognizes the

---

622 See infra Section X(B)(3) (explaining the Commission's rationale for adopting final Rule 903(a)).

623 See infra Section X(B)(3) (discussing final Rule 903(b)).

GLEIS, which operates under a regulatory oversight committee ("ROC"), as an internationally recognized standards-setting system ("IRSS")[624] that meets the requirements of Rule 903 of Regulation SBSR. The Commission notes that the LEI Regulatory Oversight Committee ("LEI ROC") currently includes members that are official bodies from over 40 jurisdictions.[625] LEIs are being issued by over 30 pre-local operating units ("pre-LOUs") around the globe, including the Global Markets Entity Identifier ("GMEI") Utility in the United States.[626] Furthermore, the Commission believes that the GLEIS imposes fees and usage restrictions on persons that obtain UICs for their own usage that are fair and reasonable and not unreasonably discriminatory under Rule 903(a).[627] The Commission also understands that the GLEIS does not impose any fees for usage of or access to its LEIs, and that all of the associated reference data needed to understand,

624 Regulation SBSR, as proposed and re-proposed, would have employed the term "internationally recognized standards-setting body" rather than "internationally recognized standards-setting system," which is used in Regulation SBSR, as adopted. The Commission made this revision to better reflect the process of LEI issuance. LEIs are being assigned by a number of different bodies in different jurisdictions being coordinated through a global system, rather than by a single body.

625 The Commission is a member of the Executive Committee of the LEI ROC. The LEI ROC is a stand-alone committee established pursuant to recommendations by the Financial Stability Board ("FSB") that was subsequently endorsed by the Group of 20 nations. See Financial Stability Board ("FSB"), A Global Legal Entity Identifier for Financial Markets (June 8, 2012), available at http://www.leiroc.org/publications/gls/roc_20120608.pdf (last visited September 22, 2014); http://www.treasury.gov/resource-center/international/g7-g20/Documents/G20%20Ministerial%20Communique%20November%204-5-2012-Mexico%20City.pdf (last visited September 22, 2014).

626 See https://www.gmeiutility.org/index.jsp.

627 See FSB, A Global Legal Entity Identifier for Financial Markets, at 20 ("Fees, where and when imposed, should be modest and set on a non-profit cost-recovery basis") and at 20, note 20 ("It is possible that some jurisdictions could be willing to fund the LEI issuance from public sources and provide LEIs to its local entities free of charge"). As of December 26, 2014, the cost of obtaining an LEI from the GMEI Utility was $200, plus a $20 surcharge for the LEI Central Operating Unit. The annual cost of maintaining an LEI from the GMEI Utility was $100, plus a $20 surcharge for the LEI Central Operating Unit. See https://www.gmeiutility.org/frequentlyAskedQuestions.jsp.

process, and utilize the LEIs are widely and freely available and not subject to any usage restrictions.[628] Therefore, the Commission believes that the LEIs issued by or through the GLEIS meet the standards of Rule 903(b), which are discussed in the section immediately below. The Commission also notes that it would expect to revisit its recognition of the GLEIS if the GLEIS were to modify its operations in a manner that causes it no longer to meet the standards of Rule 903. The Commission believes that the provisions of Rule 903—coupled with the Commission's recognition of the GLEIS—will facilitate the reporting and analysis of security-based swap transaction data, because (1) each participant of a registered SDR must be identified using the same LEI for all transactions reported pursuant to Regulation SBSR, and regardless of which registered SDR holds records of its transactions, and (2) a participant, when it acts as guarantor of a direct counterparty to a security-based swap that is subject to Rule 908(b), is required to obtain an LEI from or through the GLEIS if the direct counterparty does not already have an LEI and if the system permits third-party registration without a requirement to obtain prior permission of the direct counterparty.[629]

As noted above, one commenter recommended that, for clarity and consistency with the CFTC's swap reporting rules, the Commission refer to LEIs, rather than UICs, unless the

[628] See, e.g., http://www.financialstabilityboard.org/wp-content/uploads/r_120608.pdf?page_moved=1, at 9 ("Access to the LEI and associated reference data will be free and open to all users, and there should be no 'bundling' of other services alongside the LEI by providers which forces users to pay directly or indirectly for the LEI"). In addition, LEI information can be downloaded at no cost from pre-LOU websites. See, e.g., https://www.gmeiutility.org/ (providing a link for downloading an FTP file containing LEI information).

[629] The Commission understands that the GLEIS permits one firm to register a second firm when the first firm has a controlling interest over the second. See https://www.gmeiutility.org/frequentlyAskedQuestions.jsp ("Who can register an entity for the LEI?").

Commission intended to include identifiers beyond LEIs.[630] Although the Commission agrees that the use of the term "LEI" would provide greater consistency with the CFTC's rules, Regulation SBSR continues to refer to UICs, rather than LEIs, for two reasons. First, as the commenter suggested, the term "UIC" in Regulation SBSR includes identifiers in addition to LEIs, such as identifiers for products, transactions, business units of legal entities (i.e., branches and trading desks), and individual traders.[631] Second, the GLEIS does not extend to natural persons or sub-legal entity business units, such as a branches and trading desks. Because at present the Commission has not recognized an IRSS for these types of UICs, a registered SDR is required to assign UICs to these entities using its own methodology. Thus, because Regulation SBSR refers to identifiers in addition to LEIs, Regulation SBSR continues to refer to UICs rather than LEIs.

The Commission acknowledges that, under final Rule 903(a), different registered SDRs could, in theory, assign different UICs to the same person, unit of a person, or product. Inconsistent UICs could require the Commission and other relevant authorities to map the UICs assigned by one registered SDR to the corresponding UICs assigned by other registered SDRs to obtain a complete picture of the market activity pertaining to a particular person or business unit.[632] Although mapping may present certain challenges, the Commission believes that this

---

630 See Levin Letter at 4.

631 Rule 900(qq), as adopted, defines UIC to mean "a unique identification code assigned to a person, unit of a person, product, or transaction."

632 To avoid this possibility with respect to the identification of legal persons that are participants of at least one registered SDR, the Commission has recognized the GLEIS—by or through which LEIs are issued—as an IRSS that meets the criteria of Rule 903. The Commission is requiring that, if the Commission has recognized such a system that assigns UICs to persons, each participant of a registered SDR shall obtain a UIC from or through that system. The Commission notes that a single person may act in various capacities in the security-based swap market. For example, a person could be a direct

approach is better than the likely alternative of having market participants assign UICs to identify persons, units of persons, or products according to their own methodologies.[633] In other words, the Commission believes that UICs, even if they are SDR-specific, will provide a streamlined way of reporting, disseminating, and interpreting security-based swap information.[634] The Commission believes that requiring registered SDRs to develop their own UICs—but only for UICs that are not assigned by or through an IRSS that has been recognized by the Commission—will result in less confusion than the currently available alternatives, such as allowing each reporting side to utilize its own nomenclature conventions, which would subsequently have to be normalized by registered SDRs themselves or by the Commission.

The Commission further understands that, at this time, neither the GLEIS nor any other IRSS has assigned product IDs or established a methodology for assigning transaction IDs. Therefore, a registered SDR also is required under Rule 903(a) to assign, or endorse a methodology for assigning, product IDs and transaction IDs. One commenter recommended that "industry utilities" be considered for assigning unique IDs, including transaction IDs and product IDs.[635] With respect to product IDs, Rule 903(a) provides a registered SDR with flexibility to

---

counterparty with respect to some transactions while acting as a broker with respect to other transactions. If that person is a participant of a registered SDR, that person must obtain an LEI from or through the GLEIS to identify itself in all applicable security-based swap transaction reports, regardless of the capacity in which the person acted with respect to a particular transaction.

633 The Commission notes, however, that Regulation SBSR does not prohibit one registered SDR from utilizing the UICs that were originally assigned by another SDR.

634 See infra Section XIX (discussing regulatory implications of having multiple registered SDRs).

635 See ISDA/SIFMA I at 8. See also ISDA IV at 12 (requesting that the Commission acknowledge the ISDA OTC Taxonomy as an acceptable product ID for reporting under Regulation SBSR and recognize that reporting parties, as opposed to SDRs, are generally best positioned to assign these values). In the context of the development of product IDs,

assign a product ID created by an industry utility, in the absence of an IRSS recognized by the Commission that issues product IDs. Thus, if an industry utility developed product IDs,[636] a registered SDR could endorse that industry utility as the means for assigning such product IDs, and require use of those product IDs for reporting and publicly dissemination transaction information in its policies and procedures required by Rule 907(a).

With respect to transaction IDs, a registered SDR—in the absence of an IRSS recognized by the Commission that has endorsed a methodology for assigning transaction IDs—is required to assign transaction IDs or endorse a methodology for assigning transaction IDs.[637] A number of commenters recommended that Regulation SBSR permit transaction IDs generated by persons other than a registered SDR.[638] The Commission generally agrees with these comments, and has revised the UIC provisions relating to transaction IDs as follows. Although Rule 900, as proposed and re-proposed, would have defined "transaction ID" as "the unique identification code assigned by registered security-based swap data repository to a specific security-based swap," the definition of "UIC" in proposed Rule 900(nn) did not mention transaction IDs. The final definition of "UIC" includes transaction IDs in addition to identification codes for persons, units of persons, and products. The final definition of "transaction ID" is "the UIC assigned to a specific security-based swap transaction," without the limitation that it be assigned by a

---

the Commission is not at this time making any determination as to whether the ISDA OTC Taxonomy system constitutes an IRSS under Regulation SBSR, or whether the product IDs issued under the ISDA OTC Taxonomy system meet the criteria of Rule 903.

636 See id.

637 See Rule 903(a). See also supra Section III(B)(2) (discussing transaction IDs).

638 See DTCC V at 14 (recommending that the Commission allow flexibility for a registered SDR to accept transaction IDs already generated by the reporting side or to assign transaction IDs where such request is made); ISDA III at 2; ISDA IV at 11; Tradeweb Letter at 5 (arguing that SB SEFs and exchanges should be permitted to assign transaction IDs).

registered SDR. The Commission agrees with these commenters that requiring a registered SDR to use transaction IDs assigned only by a registered SDR would not be practical. The Commission believes that it would be more efficient and consistent with current practice in the security-based swap market to allow transaction IDs to be assigned at or shortly after execution, by a counterparty, platform, or post-trade processor. Final Rule 903(a) includes language that contemplates that an IRSS or registered SDR may "endorse a methodology for assigning transaction IDs." This formulation makes clear that transaction IDs need not be assigned by an IRSS or registered SDR itself, but can be assigned by security-based swap counterparties, platforms, or post-trade processors using the IRSS's or registered SDR's methodology. Any entity that assigns the transaction ID must do so in accordance with the methodology endorsed by a recognized IRSS or, in the absence of a recognized IRSS that has endorsed a methodology for assigning transaction IDs, by the registered SDR that will receive the report of the transaction.[639]

Two commenters addressed the types of entities that can act as IRSSs. One of these commenters recommended that for-profit entities be permitted to act as reference data registration authorities,[640] while the other commenter argued that LEIs should be issued by a not-for-profit entity that operates on the principle of cost recovery, and that the industry should determine the appropriate model for cost recovery.[641] The Commission does not believe that it is necessary or appropriate to specify the type of entity—for-profit or non-profit—that can establish

639 See Rule 903(a). Thus, for example, a counterparty or platform must not generate 40-character transaction IDs if the registered SDR requires and can accept only 32-character transaction IDs.

640 See GS1 Proposal at 53.

641 See ISDA/SIFMA I at 8.

or operate an IRSS. Whichever the case, final Rule 903(a) specifies that the UICs issued by an IRSS may be used under Regulation SBSR only if the IRSS that imposes fees and usage restrictions that are fair and reasonable and not unreasonably discriminatory and that meets the criteria of Rule 903(b) has been recognized by the Commission. In other words, the overall character of the IRSS's operation does not matter for purposes of compliance with Regulation SBSR (i.e., whether it is a for-profit or non-profit entity) so long as any fees and usage restrictions imposed with respect to UICs meets the requirements of Rule 903(a). In addition, any codes used as, or as part of, UICs under Regulation SBSR must meet the standards of Rule 903(b), which are described below.

3. Comments on Proposed Rule 903 and Final Rule 903(b)

Commenters expressed differing views regarding whether the providers of UICs—and product IDs in particular—should be able to charge fees for the codes or for the information necessary to interpret the codes. One commenter supported the proposed requirement that information necessary to interpret reported or publicly disseminated codes be available free of charge.[642] However, a second commenter—a provider of product identification codes for security-based swaps—stated that Regulation SBSR should not require product identifiers to be freely available.[643] This commenter noted that maintaining a reliable identification system for security-based swaps requires a substantial level of investment, and recommended that the providers of product identification codes be permitted to charge commercially reasonable fees

642 See Barnard I at 3 (noting that making this information available for free could eliminate confusion).

643 See Markit I at 6 (stating that identifier systems provided on an automated basis and/or for free "generally are not adequate for the intended goals").

for developing and maintaining the codes.[644] A third commenter recommended that existing licensing codes be used for product IDs to the extent possible, because using existing codes would be easier for registered SDRs; the use of new codes would require ongoing maintenance and the development of specific processes for reporting, which could result in poorer quality data submissions.[645]

After careful consideration of these comments, the Commission continues to believe that the information necessary to interpret any codes used by registered SDRs must be "widely available on a non-fee basis." Thus, the Commission is adopting this key feature of Rule 903(b) as proposed and re-proposed. A primary goal of Title VII is to use reporting and public dissemination of security-based swap data as a means of monitoring risks and increasing transparency, both to regulators and the public, of the security-based swap markets. If the transaction data that are reported and publicly disseminated contain codes and the information necessary to interpret such codes is not widely available on a non-fee basis, these Title VII goals could be frustrated. In the absence of Rule 903(b), a registered SDR could require—or acquiesce in the use of—proprietary, fee-based identification codes, thereby requiring all users of the security-based swap market data to pay the code creator, directly or indirectly, for the

---

644 See id.

645 See DTCC II at 16. The commenter supported the continued use of existing license codes, including the Markit Reference Entity Database ("RED")™ codes currently used in trade confirmations for credit derivatives and the Reuters Instrument Codes ("RIC") used in electronic messages for equity derivatives. The commenter further noted that without RED codes, the description of a reference entity in submitted data could vary, even in minor ways (e.g., the punctuation used in an abbreviation), creating difficulties for the SDR that would be required to correctly identify the reference entity. This commenter also suggested that the Commission adopt a rule that would provide existing licensing codes at a reduced cost for small volume market participants. As described below, final Rule 903(b) permits the use of codes in security-based swap reports under Regulation SBSR only if the information necessary to interpret the codes is widely available on a non-fee basis.

information necessary to interpret the codes. Users of the data also might be subject to usage restrictions imposed by the code creator.

Currently, the security-based swap market data typically include fee-based codes, and all market participants and market observers must pay license fees and agree to various usage restrictions to obtain the information necessary to interpret the codes. The Commission believes that allowing continuation of the status quo would not satisfy the Title VII mandate to increase security-based swap market transparency through public dissemination. If information to understand embedded codes is not widely available on a non-fee basis, information asymmetries would likely continue to exist between large market participants who pay for the codes and others market participants. One commenter suggested that alternatives could be developed to the status quo of using fee-based codes in security-based swap market data.[646] The Commission welcomes the development of such alternatives, and believes that Rule 903(b), as adopted, will likely encourage such development.

Furthermore, the Commission believes that the public dissemination requirements in Title VII should allow observers of the market to incorporate the information contained in public reports of security-based swaps into any decisions they might take regarding whether and how to participate in the market (or even to avoid participation), and for intermediaries in the market to incorporate this information to provide better advice to their clients about the market. The Commission does not believe that these objectives would be advanced if the ability of market participants to understand public reports of security-based swap transactions were conditioned on

646 See Bloomberg Letter at 2. This commenter stated that it would be possible to develop a public domain symbology for security-based swap reference entities that relied on products in the public domain to "provide an unchanging, unique, global and inexpensive identifier." According to this commenter, its proprietary symbology product for securities could provide a starting point for a security-based swap symbology product.

agreeing to pay fees to a code creator. The Commission similarly believes that subjecting the public's use of this information to restrictions imposed by a code creator also could frustrate the objectives of public dissemination. In addition, allowing continuation of the status quo would retard the ability of the Commission and other relevant authorities to obtain and analyze comprehensive security-based swap information.

The Commission recognizes the usefulness of codes. They make reporting more efficient because providing just one code—a product ID, for example—can eliminate the need to report multiple data elements individually. Codes also facilitate the standardized representation of security-based swap data and thereby make reporting (and understanding reported data) more reliable and efficient.[647] With respect to product IDs specifically, the Commission believes that unless an IRSS has been recognized by the Commission and can assign product IDs, registered SDRs should be free to choose between using an existing mechanism for assigning product IDs—assuming it is consistent with Rule 903(b)—and developing a new product classification system. If all existing product identification codes require users of the transaction information to pay a fee, then a registered SDR may not require or permit use of those codes for reporting and public dissemination. The registered SDR would be required to issue UICs using its own methodology and make the information necessary to interpret those codes available on a non-fee basis.

In light of the requirement in Rule 903(b) that the information necessary to interpret coded information be widely available on a non-fee basis, it would be inconsistent with the rule

647 For example, in the absence of an LEI, different persons might refer to a particular legal entity as "XYZ," "XYZ Corp.", or "XYZ Corporation." Confusion about whether all of these terms refer to same entity would be minimized, if not wholly eliminated, if all parties referred to the entity using the same code (e.g., "ABCD12345").

for a registered SDR to permit information to be reported pursuant to Rule 901, or to publicly disseminate information pursuant to Rule 902, using codes in place of certain data elements if the registered SDR imposes, or permits the imposition of, any usage restrictions on the disseminated information. The purpose of Rule 903(b) is to help ensure that the public is able to utilize the last-sale information provided by Regulation SBSR without limitation or expense.

The commenter that provides product identification codes for security-based swaps also noted that proposed Regulation SBSR would allow an IRSB that develops counterparty identifiers to charge fees, and believed that providers of product IDs should receive comparable treatment.[648] In response to this comment, the Commission believes that it is appropriate to make minor revisions to the rule language to clarify its original intent and thereby eliminate any apparent contradiction between the two paragraphs of Rule 903. When the Commission originally proposed that an IRSB could impose fees and usage restrictions as long as they were fair and reasonable and not unreasonably discriminatory, the Commission intended that language to apply to persons that obtain UICs for their own usage (such as a legal entity that seeks to identify itself as a counterparty when engaging in security-based swap transactions), not ultimate users of the information (such as third parties who might wish to enter into a security-based swap with that entity as the reference entity). The Commission believes that this distinction is consistent with international efforts to develop a global LEI.[649]

---

648 See Markit Letter at 6.

649 See Charter of the Regulator Oversight Committee for the Global Legal Entity Identifier (LEI) System (November 5, 2012), http://www.leiroc.org/publications/gls/roc_20121105.pdf (last visited September 22, 2014) ("ROC Charter"). The ROC Charter provides that the mission of the ROC is "to uphold the governance principles of and to oversee the Global LEI System, in the broad public interest." Id. at 1. The ROC Charter further provides that, in protecting the broad public interest, the objectives of the ROC include "open and free access to publicly

In Rule 903(a), as adopted, the Commission is inserting after the words "fees and usage standards" the new words "on persons that obtain UICs for their own usage."[650] This language clarifies that it is consistent with Rule 903(a) for a registered SDR to accept codes for which the code creator assesses fair and reasonable fees on market participants that need to identify themselves, their agents, or parts of their organizations when engaging in financial activities. For example, Rule 903(a) would permit a registered SDR to charge participants that need to acquire UICs that are assigned by registered SDRs, such as counterparty IDs, ultimate parent IDs, branch IDs, trading desk IDs, and trader IDs.

In Rule 903(b), as adopted, the Commission is inserting the words "to users of the information" immediately after the phrase "widely available."[651] The users of information

---

available data from the Global LEI System," and specifically includes the following principle: "all public data should be readily available on a continuous basis, easily and widely accessible using modern technology, and <u>free of charge</u>." <u>Id.</u> at 2 (emphasis added). At the same time, the ROC Charter states that "any entities required, or eligible, to obtain an LEI [must be] able to acquire one under open and non-discriminatory terms." <u>Id.</u> One such term is that "fees, where and when imposed by the [Central Operating Unit], are set on a non-profit cost-recovery basis." <u>Id.</u>

650 Final Rule 903(a) thus provides: "If an internationally recognized standards-setting system that imposes fees and usage restrictions <u>on persons that obtain UICs for their own usage</u> that are fair and reasonable and not unreasonably discriminatory is recognized by the Commission and has assigned a UIC to a person, unit of a person, or product (or has endorsed a methodology for assigning transaction IDs), the registered security-based swap data repository shall employ that UIC (or methodology for assigning transaction IDs). If no such system has been recognized by the Commission, or a recognized system has not assigned a UIC to a particular person, unit of a person, or product (or has not endorsed a methodology for assigning transaction IDs), the registered security-based swap data repository shall assign a UIC to that person, unit of person, or product using its own methodology (or endorse a methodology for assigning transaction IDs)" (emphasis added).

651 Final Rule 903(b) thus provides: "A registered security-based swap data repository may permit information to be reported pursuant to § 242.901, and may publicly disseminate that information pursuant to § 242.902, using codes in place of certain data elements, provided that the information necessary to interpret such codes is widely available <u>to users of the information</u> on a non-fee basis" (emphasis added).

referred to in final Rule 903(b) could include the Commission, other relevant authorities, or any person who wishes to view or utilize the publicly disseminated security-based swap transaction data for any purpose. As noted above, the Commission does not believe that access to this information should be impeded by having to pay fees or agree to usage restrictions in order to understand any coded information that might be contained in the transaction data.

The Commission notes that Rule 903(b) prevents registered SDRs and code creators from impeding a person's ability to obtain the information necessary to interpret coded information used in reporting or public dissemination under Regulation SBSR. Rule 903(b) is not intended to prevent a registered SDR from charging for its SDR services. To the contrary, registered SDRs are expressly permitted to charge fees for their SDR services that are fair and reasonable and not unreasonably discriminatory.[652]

The Commission notes that it is making an additional revision to the language in re-proposed in Rule 903 to conform final Rule 903(b) to the Commission's original intent and to avoid any potential conflict with final Rule 901(h). Rule 901(h), as adopted, provides that the reporting side shall electronically transmit the information required under Rule 901 to a registered SDR "in a format required by the registered [SDR]." Under re-proposed Rule 903, the reporting side could "provide information to a registered [SDR]...using codes in place of certain data elements."[653] This language in re-proposed 903 could have been read to give the reporting

---

652 See Rule 13n-4(c)(1)(i) under the Exchange Act, which is part of the SDR Adopting Release. But see Regulation SBSR Proposed Amendments Release, Section VI (proposing to prohibit SDRs from charging fees for publicly disseminating regulatorily mandated transaction data).

653 Specifically, re-proposed Rule 903 provided that "The reporting side may provide information to a registered security-based swap data repository pursuant to § 242.901 and a registered security-based swap data repository may publicly disseminate information

side discretion to select what codes it could use for reporting transaction information to a registered SDR. , The Commission has revised final Rule 903(b) to more clearly reflect its original intent: that reporting sides shall report information in a format required by the registered SDR.[654] Thus, Rule 903(b), as adopted, provides that a registered SDR "may permit information to be reported . . . using codes in place of certain data elements." The Commission believes that final Rule 903(b), read together with final Rule 901(h), makes clear that a reporting side may provide coded information to a registered SDR only to the extent permitted by the registered SDR and only in a format required by the SDR. Therefore, the reporting side may not exercise its own discretion when selecting codes to use in its reports to the registered SDR, regardless of whether the codes otherwise comport with Rule 903.

Finally, one commenter expressed concern that, although Regulation SBSR, as initially proposed, would have required that the information necessary to interpret codes be made available for free, the proposal would not have prevented a code creator from charging for other uses.[655] In this commenter's view, "[a] widely used identifier can become a de facto standard for anyone doing business in the relevant marketplace. This creates the potential for abuse, defeating the entire purpose of promoting the broad availability of identifiers."[656] This commenter believed instead that, "[a]s long as all market participants have the unfettered

---

pursuant to § 242.902 using codes in place of certain data elements, provided that the information necessary to interpret such codes is widely available on a non-fee basis."

654 See supra Section IV (discussing Rule 901(h)). See also Rule 907(a)(5) (requiring a registered SDR to establish and maintain policies and procedures for assigning UICs in a manner consistent with Rule 903); Rule 907(a)(2) (requiring a registered SDR to establish and maintain policies and procedures that specify, among other things, protocols for submitting information, including but not limited to UICs).

655 See Bloomberg Letter at 2.

656 Id.

freedom to introduce alternative identifiers and to map those identifiers to the standard, however, multiple, competing identifiers can provide an inexpensive solution."[657] The Commission shares the commenter's concern that identification codes not become a tool for monopolistic abuse. This is why the Commission is requiring in Rule 903(b) that, if such codes will be used for reporting or publicly disseminating security-based swap transaction data, "the information necessary to interpret such codes [must be] widely available to users of the information on a non-fee basis." Thus, the Commission does not believe it will be necessary for market participants to introduce alternative identifiers, although Regulation SBSR would not prohibit them from doing so.

C. Policies and Procedures of Registered SDRs Relating to UICs

As proposed and re-proposed, Rule 907(a)(5) would have required a registered SDR to establish and maintain written policies and procedures for assigning: (1) a transaction ID to each security-based swap that is reported to it; and (2) UICs established by or on behalf of an IRSB that imposes fees and usage restrictions that are fair and reasonable and not unreasonably discriminatory (or, if no standards-setting body meets these criteria or a standards-setting body meets these criteria but has not assigned a UIC to a particular person, unit of a person, or product, assigning a UIC using its own methodology).

The Commission received several comments, noted above, that discussed utilization of UICs generally and considered them in connection with Rule 907(a)(5).[658] The Commission also received a comment that generally encouraged the Commission to adopt a convention for

---

657 Id.

658 See supra notes 615 to 618 and accompanying text.

assigning unique IDs and incorporating a pilot or early adopter program for certain products and participants that would allow for end-to-end testing and proof of concept.[659]

As discussed above, the Commission believes that UICs—even if utilized on an SDR-specific basis in the absence of UICs issued by a recognized IRSS—will create a more consistent and transparent system for reporting and analyzing security-based swap transactions. Therefore, the Commission continues to believe that it is important for registered SDRs to have policies and procedures providing for the issuance of such UICs and is adopting a modified version of Rule 907(a)(5) that requires registered SDRs to establish written policies and procedures "[f]or assigning UICs in a manner consistent with [Rule 903]." This is a conforming change to be consistent with the Commission's decision to locate the substantive requirements for the assignment of UICs in Rule 903.[660] With respect to the comment received, the Commission believes that market participants can work with entities that are likely to register with the Commission as SDRs on pilot programs for certain products and conventions for assigning UICs. However, the Commission does not believe it would be appropriate for the Commission itself to adopt such conventions; the Commission believes instead that greater expertise in coding data will reside in the industry and, in particular, at registered SDRs. The Commission further believes that Rule 900(qq), which defines "UIC," and Rule 903, which establishes standards for the use of UICs provide adequate parameters for the development of a UIC system. The Commission believes that allowing the industry to develop conventions for assigning UICs will likely result in a more efficient and flexible UIC regime than if the Commission were to adopt such conventions itself.

---

659 See ISDA/SIFMA I at 8.

660 See supra Section X(B)(1).

XI. Operating Hours of Registered SDRs—Rule 904

Title VII of the Dodd-Frank Act does not explicitly address or prescribe the hours of operation of the reporting and public dissemination regime that it requires. The security-based swap market is global in nature, and security-based swaps are executed throughout the world and at any time of the day. In light of the global nature of the security-based swap market, the Commission believes that the public interest is served by requiring near-continuous reporting and public dissemination of security-based swap transactions, no matter where or when they are executed (subject to the cross-border rules discussed in Section XV, infra). Furthermore, having a near-continuous reporting and public dissemination regime would reduce the incentive for market participants to defer execution of security-based swap transactions until after regular business hours to avoid post-trade transparency. Accordingly, the Commission proposed Rule 904, which would have required a registered SDR to design its systems to allow for near-continuous receipt and dissemination of security-based swap data. A registered SDR would have been permitted to establish "normal closing hours" and to declare, on an ad hoc basis, "special closing hours," subject to certain requirements. Rule 904 was not revised as part of the Cross-Border Proposing Release, and was re-proposed in exactly the same form as initially proposed.

As discussed below, three commenters addressed proposed Rule 904. The Commission has carefully reviewed the comments received and has determined to adopt Rule 904, as proposed and re-proposed, subject to one conforming change, as discussed below.[661]

Rule 904, as adopted, requires a registered SDR to have systems in place to receive and disseminate information regarding security-based swap data on a near-continuous basis, with

661 In addition, the Commission is making a technical conforming change to revise the title of the rule to refer to "registered" SDRs.

certain exceptions. First, under final Rule 904(a), a "registered SDR may establish normal closing hours when, in its estimation, the U.S. market and major foreign markets are inactive." Second, under final Rule 904(b), a registered SDR "may declare, on an ad hoc basis, special closing hours to perform system maintenance that cannot wait until normal closing hours." Rule 904(b) further provides that a registered SDR shall, "to the extent reasonably possible under the circumstances, avoid scheduling special closing hours during [periods] when, in its estimation, the U.S. market and major foreign markets are most active." Rules 904(a) and 904(b) each require the registered SDR to provide participants and the public with reasonable advance notice of its normal closing hours and special closing hours, respectively.

Rule 904(c) specifies requirements for handling and disseminating reported data during a registered SDR's normal and special closing hours. During normal closing hours and, to the extent reasonably practicable during special closing hours, a registered SDR is required to "have the capability to receive and hold in queue" the transaction data that it receives. Pursuant to Rule 904(d), immediately upon system re-opening following normal closing hours or special closing hours (assuming it was able to hold incoming data in queue), the registered SDR is required to publicly disseminate any transaction data required to be reported under Rule 901(c) that it received and held in queue. Finally, pursuant to Rule 904(e), if the registered SDR could not, while it was closed, receive and hold in queue reported information, it would be required, immediately upon resuming normal operations, to send a notice to all participants that it had resumed normal operations but could not, while closed, receive and hold in queue such transaction information. Therefore, any participant that had an obligation to report information—but was unable to do so because of the registered SDR's inability to receive and hold data in queue—would be required upon notification by the registered SDR to promptly report the information to the registered SDR.

As proposed and re-proposed, Rule 904(e) would have provided that if a participant could not fulfil a reporting obligation due to a registered SDR's inability to receive and hold data in queue, the participant would be required to report the information "immediately" upon receiving a notification that the registered SDR has resumed normal operations. The Commission has decided to replace the word "immediately" with the word "promptly" in the final rule because "promptly" emphasizes the need for information to be submitted without unreasonable delay while affording participants a practical degree of flexibility. In general, the Commission believes that submitting a required report "promptly" implies "as soon as practicable."

The three commenters that addressed Rule 904 were generally supportive of the goal of promoting transparency and price discovery though a regime of continuous reporting and public dissemination,[662] although one of these commenters pointed out the need for registered SDRs to close periodically to perform necessary system maintenance.[663] Two of these commenters also suggested alternative operating hours and procedures for registered SDRs.[664] One commenter stated that the requirements that a registered SDR have normal closing hours only when neither U.S. nor international markets are active, and should continue to receive the relevant transaction data and hold them in queue even when the registered SDR is closed for normal or ad hoc special closing hours, exceeded the capabilities of currently existing reporting infrastructures. The

662 See Barnard I at 3; Markit I at 1; DTCC II at 1.

663 See Markit I at 4.

664 See Markit I at 4-5; DTCC II at 19-20; DTCC IV at 4 (recommending that SDRs operate on a 24/6.5 basis to reflect the global nature of the financial markets and process transactions in real time, while also maintaining multiple levels of operational redundancy and data security).

commenter argued that such requirements would increase the risk of infrastructure failure because SDRs would not have adequate time to maintain and update their systems.[665] This commenter suggested that, if systems are required to be available on a 24-hour basis, the Commission should define operating hours to be 24 hours from Monday to Friday, and consider allowing additional closing hours either "when markets are less active" or "when only less active markets are open."[666]

The Commission believes there are compelling reasons to implement a system of reporting and public dissemination that, in general, operates near-continuously. As discussed above, the Commission believes that requiring near-continuous reporting and public dissemination of security-based swaps—except for when, in the estimation of a registered SDR, the U.S. market and major foreign markets are inactive—will serve the public interest and reduce incentives for market participants to trade outside of regular business hours. The Commission, however, recognizes the need for a registered SDR to have closing hours to maintain and update its systems, and Rules 904(a) and 904(b), as adopted, specifically allow registered SDRs to have normal and special closing hours. Further, while Rule 904(b) states that a registered SDR should avoid scheduling special closing hours during a time when, in its estimation, the U.S. and major foreign markets are most active, the Commission notes that a registered SDR is required to do so only "to the extent reasonably possible under the circumstances." As such, the Commission believes that Rules 904(a) and 904(b) provide sufficient flexibility to registered SDRs in determining their closing times to perform the necessary maintenance procedures. The Commission does not believe it would be appropriate to require registered SDRs to operate 24

665 See Markit I at 4.

666 Markit I at 4-5.

hours only from Monday to Friday, as the commenter suggests, as certain major foreign markets may be active during hours that fall within the weekend in the United States.

The Commission recognizes the commenter who asserted that the proposed requirement for a registered SDR to receive and hold in the queue the data required to be reported during its closing hours "exceeds the capabilities of currently-existing reporting infrastructures."[667] The Commission notes that this comment was submitted in January 2011. Since that time, however, provisionally registered CFTC SDRs that are likely also to register as SDRs with the Commission appear to have developed the capability of receiving and holding data in queue during their closing hours.[668] Accordingly, the Commission believes that it is appropriate to require registered SDRs to hold data in queue during their closing hours should help to prevent market disruptions by enabling reporting sides for security-based swaps to report transactions at all times.

XII. Subsequent Revisions to Reported Security-Based Swap Information

A. Reporting Life Cycle Events—Rule 901(e)

1. Description of Proposal and Re-proposal

Rule 901(e), as proposed and re-proposed, would have required the reporting of certain life cycle event information. "Life cycle event" was defined in the proposal and re-proposal to mean "with respect to a security-based swap, any event that would result in a change in the information reported to a registered security-based swap data repository under § 242.901,

---

667 Markit I at 4.

668 See, e.g., DDR Rulebook, Section 7.1 (DDR System Accessibility) ("Data submitted during DDR System down time is stored and processed once the service has resumed"), available at http://www.dtcc.com/~/media/Files/Downloads/legal/rules/DDR_Rulebook.pdf (last visited October 7, 2014).

including a counterparty change resulting from an assignment or novation; a partial or full termination of the security-based swap; a change in the cash flows originally reported; for a security-based swap that is not cleared, any change to the collateral agreement; or a corporate action affecting a security or securities on which the security-based swap is based (e.g., merger, dividend, stock split, or bankruptcy). Notwithstanding the above, a life cycle event shall not include the scheduled expiration of the security-based swap, a previously described and anticipated interest rate adjustment (such as a quarterly rate adjustment), or other event that does not result in any change to the contractual terms of the security-based swap."

Re-proposed Rule 901(e) would have provided that "For any life cycle event, and any adjustment due to a life cycle event, that results in a change to information previously reported pursuant to Rule 901(c), 901(d), or 901(i), the reporting side shall promptly provide updated information reflecting such change to the entity to which it reported the original transaction, using the transaction ID," subject to two exceptions. Under Rule 901(e)(1), as re-proposed, if the reporting side ceased to be a counterparty to the security-based swap due to any assignment or novation and if the new side included a U.S. person, a security-based swap dealer, or a major security-based swap participant, the new side would be the reporting side following the assignment or novation. Under re-proposed Rule 901(e)(2), if the new side did not include a U.S. person, a security-based swap dealer, or a major security-based swap participant, the other side would be the reporting side following the assignment or novation.

In proposing Rule 901(e), the Commission preliminarily believed that the reporting of life cycle event information would provide regulators with access to information about significant changes that occur over the duration of a security-based swap.[669] The Commission also stated that the reporting of life cycle event information would help to assure that regulators have accurate and up-to-date information concerning outstanding security-based swaps and the current obligations and exposures of security-based swap counterparties.[670]

In determining the entity that would be required to report life cycle event information, the Commission's approach in proposing and re-proposing Rule 901(e) was that, generally, the person who originally reported the initial transaction would have the responsibility to report any subsequent life cycle event.[671] However, if the life cycle event were an assignment or novation that removed the original reporting party, either the new counterparty or the remaining original counterparty would have to be the reporting party.[672]

In re-proposing Regulation SBSR, the Commission included the new concept of a "reporting side," which would have included the direct counterparty and any indirect counterparty. The Cross-Border Proposing Release also proposed to impose greater duties to report transactions on non-U.S. person security-based swap dealers or major security-based swap participants. Accordingly, the Commission re-proposed Rule 901(e) to provide that the duty to report would switch to the other side only if the new side did not include a U.S. person (as in the originally proposed rule) or a security-based swap dealer or major security-based swap

669 See Regulation SBSR Proposing Release, 75 FR at 75220.

670 See id. In a separate rulemaking, the Commission is adopting a rule that will require a registered SDR to establish, maintain, and enforce written policies and procedures reasonably designed to calculate positions for all persons with open security-based swaps for which the SDR maintains records. See SDR Adopting Release (adopting Rule 13n-5(b)(2) under the Exchange Act).

671 See Cross-Border Proposing Release, 78 FR at 31068.

672 Rule 901(e), as initially proposed, would have provided that the new counterparty would be the reporting party if it is a U.S. person; the other original counterparty would become the reporting party if the new counterparty is not a U.S. person.

participant. The Commission preliminarily believed that, if the new side included a security-based swap dealer or major security-based swap participant, the new side should retain the duty to report. This approach was designed to align reporting duties with the market participants that the Commission believed would be better suited to carrying them out, because non-U.S. person security-based swap dealers and major security-based swap participants likely would have taken significant steps to establish and maintain the systems, processes and procedures, and staff resources necessary to report security-based swaps.[673]

2. Final Rules Relating to Life Cycle Events and Response to Comments

a. General Comment and Definition of "Life Cycle Event"

One commenter expressed support for the requirement to report life cycle event information, stating that the reporting of life cycle event information was necessary for detailed market regulation and for prudential and central bank regulation.[674] The commenter noted that "[m]any life cycle events are price-forming or significantly change the exposures under a trade...."[675] In subsequent comment letters, this commenter stated that the definition of "life cycle event" was overly broad, and that life cycle events should be limited to those that impact the counterparties to or the pricing of the security-based swap.[676] Specifically, the commenter suggested that the Commission define "life cycle event" to mean "an event that would result in a change in the counterparty or price of a security-based swap reported to the registered [SDR]."[677]

---

673 See Cross-Border Proposing Release, 78 FR at 31068.

674 See DTCC II at 13.

675 See id.

676 See DTCC V at 11; DTCC VI at 9.

677 DTCC VI at 9.

However, another commenter believed that the proposed definition was "clear, sufficient, and complete."[678]

After careful consideration, the Commission is adopting the definition of "life cycle event" in Rule 900(q) substantially as re-proposed, but with certain minor modifications to respond to comments and to clarify the original intent of the rule.[679] First, the Commission is making a technical change to the definition to indicate that a life cycle event refers to any event that would result in a change in the information reported "under § 242.901(c), (d), or (i)," rather than any event that would result in a change in the information reported "under § 242.901" (as re-proposed). This technical change will conform the definition of "life cycle event" to the requirements of Rule 901(e), as re-proposed and as adopted, which requires the reporting of a change to information previously reported pursuant to paragraph (c), (d), or (i) of Rule 901. By defining "life cycle event" in this manner, the Commission aims to ensure that information reported pursuant to Rules 901(c), (d), and (i) is updated as needed, so that the data maintained by registered SDRs remains current for the duration of a security-based swap. This requirement should help to ensure that the data accessible to the Commission through registered SDRs

---

678 Barnard I at 3.

679 Rule 900(q), as adopted, defines "life cycle event" to mean "with respect to a security-based swap, any event that would result in a change in the information reported to a registered security-based swap data repository under § 242.901(c), (d) or (i), including: an assignment or novation of the security-based swap; a partial or full termination of the security-based swap; a change in the cash flows originally reported; for a security-based swap that is not a clearing transaction, any change to the title or date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract; or a corporate action affecting a security or securities on which the security-based swap is based (e.g., a merger, dividend, stock split, or bankruptcy). Notwithstanding the above, a life cycle event shall not include the scheduled expiration of the security-based swap, a previously described and anticipated interest rate adjustment (such as a quarterly interest rate adjustment), or other event that does not result in any change to the contractual terms of the security-based swap."

accurately reflects the current state of the market. Therefore, the Commission does not believe that it is appropriate to limit the definition of "life cycle event" to post-execution events that impact the counterparties to or the pricing of a security-based swap, as suggested by the commenter.[680] Although the final definition of "life cycle event" encompasses these types of events, it also encompasses other information reported pursuant to Rules 901(c), 901(d), or 901(i).

One commenter asked that the Commission remove the reference to "dividends" in the definition of "life cycle event" because dividends "are contract intrinsic events that do not result in a change to the contractual terms of the SBS and therefore, should not be defined as reportable life cycle events."[681] The Commission does not believe that it is necessary to revise the definition of "life cycle event" as the commenter suggests. As indicated above, the definition of "life cycle event" provides, in relevant part, that a life cycle event includes "any event that would result in a change in the information reported to a registered [SDR] . . . including. . . a corporate action affecting a security or securities on which the security-based swap is based (e.g., a merger, dividend, stock split, or bankruptcy)" (emphasis added). Thus, a regular payment of a dividend that does not require a restatement of the terms of the security-based swap would not constitute a life cycle event. However, other actions involving dividends could be life cycle events. For example, the distribution of a stock dividend that required an adjustment to the notional terms of an equity security-based swap—or any other corporate action related to dividends that resulted in

680 See DTCC VI at 9. See also DTCC II at 13 (stating that "[m]any life cycle events are price-forming or significantly change the exposures under a trade. . . . The current definition supports reporting of these events").

681 ISDA IV at 11.

a modification of one or more terms of the security-based swap—would be a life cycle event and therefore would have to be reported pursuant to Rule 901(e).

Second, the Commission is clarifying that a life cycle event includes "an assignment or novation of the security-based swap," instead of "a counterparty change resulting from an assignment or novation." The Commission notes that, while assignments and novations necessarily include a counterparty change, assignments and novations also may involve modifications to other terms of the security-based swap reported pursuant to paragraphs (c), (d), or (i) of Rule 901. These modifications are the type of changes that the Commission believes should be reported to a registered SDR; therefore, the Commission is modifying the definition of "life cycle event" to clarify this view.

Third, the Commission is making a technical change to the definition to indicate that a life cycle event includes, for a security-based swap that is not a clearing transaction, "any change to the title or date of any master agreement, collateral agreement, margin agreement, or any other agreement incorporated by reference into the security-based swap contract." As re-proposed, the definition of "life cycle event" would have included, "for a security-based swap that is not cleared, any change to the collateral agreement." One commenter questioned the need to include a reference to a change in the collateral agreement in the definition of "life cycle event" because "collateral agreement terms are not among the data required to be reported upon execution."[682] The Commission agrees with the commenter that collateral agreement terms are not required to

[682] DTCC VI at 9. Another commenter stated that the parties to a collateral agreement rarely modify their agreement over its life, and that any change to a collateral agreement would require extensive negotiation between the counterparties. Accordingly, the commenter believed that the cost of establishing reporting processes to detect and report changes to a collateral agreement would outweigh the usefulness of reporting them. See ISDA/SIFMA I at 16.

be reported, and the definition of "life cycle event" in final Rule 900(q) no longer refers to changes in the collateral agreement. To assure that Rule 901(e) operates as intended, the Commission has modified the definition of "life cycle event" in final Rule 900(q) to reference, with respect to a security-based swap that is not a clearing transaction, the same terms that must be reported pursuant to Rule 901(d)(4).[683] Thus, if there were a change in the title or date of a master agreement, collateral agreement, margin agreement, or other agreement incorporated by reference into a security-based swap contract, such a change would be a "life cycle event" as defined in final Rule 900(q), and final Rule 901(e) would require reporting of that change.

Finally, two commenters argued that the "Commission's classification of a swap being accepted for clearing as a life cycle event is inconsistent with the operations of a Clearing Agency" because clearing may require the "termination of the pre-existing alpha swap in order to create two new, unique swaps."[684] The Commission agrees that any security-based swap that results from clearing an alpha should not be considered a life cycle event of the alpha, although the termination of the alpha would be such a life cycle event.[685] The Commission believes that

---

683 Final Rule 901(d)(4) requires, for a security-based swap that is not a clearing transaction, reporting of the title and date of any master agreement, collateral agreement, margin agreement, or other agreement incorporated by reference in the security-based swap contract.

684 CME/ICE Letter at 3. As discussed in Section V, supra, in the agency model of clearing, and sometimes in the principal model as well, acceptance of an alpha for clearing terminates the alpha.

685 See Securities Exchange Act Release No. 66703 (March 30, 2012), 77 FR 20536-37 (April 5, 2012) (noting that "when a security-based swap between two counterparties . . . is executed and submitted for clearing, the original contract is extinguished and replaced by two new contracts where the [clearing agency] is the buyer to the seller and the seller to the buyer"). This treatment also would be consistent with CFTC regulations. See 17 CFR 39.12(b)(6) (CFTC rule providing that derivatives clearing organizations that clear swaps must have rules providing that, among other things, "upon acceptance of a swap by the derivatives clearing organization for clearing: (i) The original swap is extinguished; [and] (ii) The original swap is replaced by an equal and opposite swap between the

the new term "clearing transaction" makes clear that security-based swaps that result from clearing (e.g., betas and gammas in the agency model) are independent security-based swaps, not life cycle events of the security-based swap that is submitted to clearing (e.g., alpha security-based swaps).

b. Final Rule 901(e)(1)

As described above, re-proposed Rule 901(e) would have required the reporting side to promptly report any life cycle event, or any adjustment due to a life cycle event, that resulted in a change to information previously reported pursuant to Rule 901(c), (d), or (i) to the entity to which it reported the original transaction, using the transaction ID. Rule 901(e), as proposed and re-proposed, also included provisions for determining which counterparty would report the life cycle event. The Commission is adopting a modified version of Rule 901(e) to address comments received and to implement certain technical changes. The Commission also has changed the title of the rule from "Duty to report any life cycle event of a security-based swap" in the re-proposal to "Reporting of life cycle events" in the final rule. In addition, final Rule 901(e) provides that a life cycle event or adjustment due to a life cycle event must be reported within the timeframe specified in Rule 901(j).

Although the definition of "life cycle event" would encompass the disposition of a security-based swap that has been submitted to clearing (e.g., whether, under the agency model of clearing, the alpha security-based swap has been accepted for clearing or rejected by the clearing agency), the Commission believes that it is appropriate to address the reporting of this specific type of life cycle event in the context of the Regulation SBSR Proposed Amendments

---

derivatives clearing organization and each clearing member acting as principal for a house trade or acting as agent for a customer trade").

Release, which address a number of topics regarding the reporting of security-based swaps that will be submitted to clearing or that have been cleared. Accordingly, final Rule 901(e)(1)(i) indicates that the reporting side shall not have a duty to report whether or not a security-based swap has been accepted for clearing or terminated by a clearing agency, and instead provides that "A life cycle event, and any adjustment due to a life cycle event, that results in a change to information previously reported pursuant to paragraph (c), (d), or (i) of this section shall be reported by the reporting side, except that the reporting side shall not report whether or not a security-based swap has been accepted for clearing."

c. Final Rule 901(e)(2)

Re-proposed Rule 901(e) would have required the reporting side to include the transaction ID in a life cycle event report, and to report life cycle event information to the entity to which it reported the original transaction. Final Rule 901(e)(2) retains both of these requirements.[686] The Commission believes that including the transaction ID in a life cycle event report will help to ensure that it is possible to link the report of a life cycle event to the report of the initial security-based swap of which it is a life cycle event. One commenter supported the requirement to report life cycle events to the same entity that received the original transaction report.[687] The commenter stated that requiring a single registered SDR to receive, store, and report, where appropriate, all relevant information related to a given security-based swap throughout its life cycle would help to prevent fragmentation and ensure that corrections to

[686] Final Rule 901(e)(2) provides that "All reports of life cycle events and adjustments due to life cycle events shall be reported within 24 hours of the time of occurrence of the life cycle event to the entity to which the original security-based swap transaction was reported and shall include the transaction ID of the original transaction."

[687] See MarkitSERV I at 8.

previously reported data could be easily identified by the public.[688] The Commission generally agrees with these views, and final Rule 901(e)(2) retains the requirement to report life cycle events to the same entity to which the original transaction was reported.

d. Reporting Timeframe for Life Cycle Events

Rule 901(e), as proposed and re-proposed, would have required life cycle events to be reported by the reporting side "promptly." Two commenters believed that it was appropriate to require that life cycle events be reported "promptly."[689] One of these commenters also stated that life cycle events could require different processing times based on the nature of the event, and asked the Commission to clarify the meaning of "promptly" with respect to life cycle event reporting.[690] In particular, the commenter stated that "the term 'promptly,'... without further explanation, may be interpreted by reporting parties differently for similar events and processes, particularly in a market where certain processes have historically taken a number of days to effect."[691] This commenter also suggested that the Commission revise Rule 901(e) to allow for the flexibility of reporting life cycle events either event-by-event or through one daily submission that would include multiple events.[692] Another commenter stated that the required

---

688 See id. See also DTCC IX at 2.

689 See Barnard I at 3; DTCC II at 13.

690 See DTCC II at 13. The commenter stated that life cycle events that are price-forming events subject to confirmation could be reported within the same timeframes as initial reports of these events. However, the commenter indicated that life cycle events resulting from other processes, such as corporate actions or credit events, "where many trades will be impacted simultaneously and processing may be manual or automated," would require different amounts of time to report. See id.

691 DTCC II at 13.

692 See DTCC V at 11. See also ISDA III (requesting that "reporting parties be allowed to report lifecycle events either intra-day or as an end-of day [sic] update to the terms of the [security-based swap]"). Further, one commenter noted that the CFTC rules allow a life cycle event to be reported either as event data on the same day as the event occurs or

time for reporting both life cycle events and corrections should be stronger and more specific than the proposed requirement that they be reported "promptly."[693]

After careful consideration, the Commission does not believe that it would be appropriate to require life cycle events or adjustments due to life cycle events to be reported more quickly than the time within which information relating to the original transaction must be reported. As noted in Section VII(B)(3), supra, final Rule 901(j) provides that the transaction information required by Rules 901(c) and 901(d) generally must be reported within 24 hours of the time of execution. Similarly, Rule 901(j) provides that the reporting timeframe for Rule 901(e) shall be 24 hours after the occurrence of the life cycle event or the adjustment due to the life cycle event. The Commission believes that 24 hours should provide sufficient time to report life cycle events even if the processing of some of these events is not yet fully automated.[694] The Commission

---

daily as "state data," and that non-swap dealers or non-major swap participants may report these events either as life cycle event data or as state data no later than the end of the first business day following the event. See ISDA IV at 11. This commenter requested that the Commission confirm in its rules that the same approach and timelines may be applied to meet the requirements of Regulation SBSR. The Commission notes that Rules 901(e) and 901(j), as adopted, provide for reporting of a life cycle event or an adjustment due to a life cycle event within 24 hours after the occurrence of the life cycle event or the adjustment due to the life cycle event. The Commission notes, further, that Rule 901(e)(1) requires the reporting of a life cycle event, and any adjustment due to a life cycle event, that results in a change to information previously reported pursuant to Rule 901(c), 901(d), or 901(i). Thus, Rule 901(e)(1) contemplates the reporting of the specific changes to previously reported information. Reports of life cycle events, therefore, must clearly identify the nature of the life cycle event for each security-based swap. It is not sufficient merely to re-report all of the terms of the security-based swap each day without identifying which data elements have changed. However, Regulation SBSR would not prevent a registered SDR from developing for its members a mechanism or other service that automates or facilitates the production of life cycle events from state data.

693 See Better Markets I at 9.

694 See DTCC II at 13. The Commission also believes that the 24-hour timeframe for reporting life cycle events will allow reporting sides to determine whether to report life cycle events on an intra-day or end-of-day basis. See DTCC V at 11; ISDA III. Reports

believes, further, that specifying a time within which life cycle event information must be reported will address the commenter's concern that reporting sides could adopt different interpretations of the reporting timeframe. The Commission notes that it anticipates soliciting comment on the timeframe for reporting life cycle events, adjustments, and clearing transactions in the future, when it considers block thresholds and time delays.

e. Re-proposed Rule 901(e)(2)

The Commission has determined not to adopt re-proposed Rule 901(e)(2), which would have specified the reporting side following an assignment or novation of the security-based swap.[695] One commenter noted that, under the current market practice for reporting novations, the reporting party is re-determined based on the current status of the parties.[696] This commenter noted that the current practice allows the reporting party logic to be consistent for new as well as novated trades, and recommended that the Commission use a consistent methodology for reporting of new trades and novations. The Commission agrees that using a single methodology for assigning reporting obligations would be administratively easier than using one methodology when a security-based swap is first executed and a different methodology when the counterparties change as a result of an assignment or novation. As the Commission explained

---

of life cycle events, however, must clearly identify the nature of the life cycle event for each security-based swap. It is not sufficient merely to re-report all of the terms of the security-based swap each day without identifying which data elements have changed. See also note 692 supra.

695 Re-proposed Rule 901(e)(2) would have provided that the duty to report life cycle event information following an assignment or novation would switch to the other side only if the new side did not include a U.S. person (as in the originally proposed rule) or a security-based swap dealer or major security-based swap participant. As the Commission explained in the Cross-Border Proposing Release, if the new side included a security-based swap dealer or major security-based swap participant, the new side should retain the duty to report. See 78 FR at 31068.

696 See ISDA III.

above,[697] it has determined that the reporting side following an assignment or novation will be determined using the procedures in Rule 901(a).

f. Additional Comments Regarding Life Cycle Event Reporting

One commenter believed that life cycle events should be reported using standard market forms, such as the trade confirmation for novations and early terminations, and the exercise notice for an exercise.[698] Contrary to the commenter's suggestion, the Commission believes that registered SDRs should be responsible for specifying the precise manner and format for reporting data. Moreover, the Commission understands that standard market forms may exist for some, but not all, of the life cycle events that must be reported under Regulation SBSR. Therefore, the Commission has determined not to prescribe a format for reporting sides to report life cycle event information. Instead, Rule 907(a)(3), as adopted, requires a registered SDR to establish and maintain written policies and procedures that specify how reporting sides are to report life cycle events and corrections to previously submitted information, for making corresponding updates or corrections to transaction records, and for applying an appropriate flag to these transaction reports.[699]

One commenter stated that it was critical for the SEC and the CFTC to adopt consistent regulatory approaches "[i]n the life cycle event model across asset classes."[700] The Commission agrees that would be useful for the Commissions to adopt consistent approaches to the reporting of life cycle event information to the extent possible. The Commission believes that Regulation

---

697 See supra Section V(C)(5).

698 See DTCC II at 13.

699 See infra Section XII(C).

700 ISDA/SIFMA I at 6.

SBSR's approach to life cycle event reporting is broadly consistent with the approach taken by the CFTC. For example, because the agencies have adopted similar definitions, the life cycle event information required to be reported under the rules of both agencies is substantially similar.[701] In addition, both agencies' rules require that life cycle events be reported to the same entity that received the report of the original transaction, and both agencies' rules require the entity that reports the initial transaction to also report life cycle events for the transaction. The Commission notes that a registered SDR that accepts transaction reports for both swaps and security-based swaps could establish policies and procedures for reporting life cycle events of security-based swaps that are comparable to its policies and procedures for reporting life cycle events of swaps, provided that its policies and procedures for reporting life cycle events of security-based swaps comply with the requirements of Regulation SBSR.

Another commenter expressed the view that Regulation SBSR "should clarify what shall be reported as the time of execution for a life cycle event for purposes of public dissemination."[702] The commenter stated that the CFTC requires market participants to report the execution time of the original trade as the execution time for a life cycle event for the trade. The commenter suggested that, under this approach, "the data that is publicly disseminated for lifecycle events may not be that meaningful to the public as it does not include any indication of the point in time the reported price has been traded."[703] The commenter stated, further, that the

---

701 See CFTC Rule 45.1, 17 CFR 45.1. The Commissions' ongoing reporting requirements differ, however, with respect to the reporting of valuation information. The CFTC's rules require reporting of valuation data as well as life cycle event data. As discussed in above in Section II(B)(3)(k), the Commission is not requiring reporting of valuation data for security-based swaps.

702 ISDA IV at 13 (emphasis in original).

703 Id.

time of execution for a life cycle event for purposes of public dissemination "should be the date and time such price-forming event is agreed."[704]

As discussed in Section VII(B)(3), supra, final Rule 901(j) provides that the reporting timeframe for a life cycle event shall be 24 hours after the occurrence of the life cycle event or the adjustment due to the life cycle event. Final Rule 902(a) requires a registered SDR to publicly disseminate a transaction report of a life cycle event, or adjustment due to a life cycle event, immediately upon receipt of the information. Thus, under Regulation SBSR, a life cycle event, or an adjustment due to a life cycle event, must be reported and publicly disseminated within 24 hours after the occurrence of the life cycle event or adjustment due to the life cycle event. The Commission believes that together these requirements will provide market observers with certain information concerning the time when the life cycle event occurred. However, the Commission notes that Regulation SBSR, as proposed and re-proposed, did not require the reporting or public dissemination of the time of execution of a life cycle event, and Regulation SBSR, as adopted, likewise includes no such requirements.

B. Error Corrections—Rule 905

As the Commission noted in the Regulation SBSR Proposing Release, any system for transaction reporting must accommodate the possibility that certain data elements may be incorrectly reported.[705] Therefore, the Commission proposed Rule 905 to establish procedures for correcting errors in reported and disseminated security-based swap information.

In the Cross-Border Proposing Release, the Commission modified proposed Rule 905 slightly to correspond with certain new provisions in re-proposed Rule 908, which contemplated

---

704 Id. at 13-14.

705 See 75 FR at 75236.

that certain types of cross-border security-based swaps would be required to be reported but not publicly disseminated. Rule 905 was re-proposed to clarify that, if a registered SDR receives corrected information relating to a previously submitted transaction report, it would be required to publicly disseminate a corrected transaction report only if the initial security-based swap were subject to the public dissemination requirement.[706] The Commission also made certain other technical and conforming changes,[707] but otherwise re-proposed Rule 905 was substantially similar to proposed Rule 905.

As discussed below, the Commission received several comments on proposed Rule 905. After consideration of the comments, the Commission has determined to adopt Rule 905 with certain minor editorial revisions.[708]

Rule 905(a) applies to any counterparty to a security-based swap that discovers an error in the information reported with respect to that security-based swap. If a non-reporting side discovers the error, the non-reporting side shall promptly notify the reporting side of the error. Once the reporting side receives notification of the error from the non-reporting side, or if the

706 As discussed above in Section VI, Rule 902 requires a registered SDR to immediately publicly disseminate a transaction report of a security-based swap, or a life cycle event or adjustment due to a life cycle event. If a security-based swap falls into the category of regulatory reporting but not public dissemination, there would be no need to publicly disseminate the correction because the initial security-based swap was not publicly disseminated.

707 The Commission modified the language from "counterparty" or "party" to "side" in the re-proposal of Rule 905. Additional minor changes were made for clarification such as inserting "transaction" in Rule 905(a)(1) and changing an "a" to "the" in Rule 905(b)(1). Re-proposed Rule 905 also substitutes the word "counterparties"—which is a defined term in Regulation SBSR—for the word "parties," which was used in the initial proposal but was not a defined term.

708 For example, the title of final Rule 905(a) is "Duty to correct," rather than "Duty of counterparties to correct." In addition, the Commission is deleting a reference to "security-based swap transaction" from Rule 905(a)(2), as well as a reference to "reporting side" in Rule 905(b)(1)."

reporting side discovers the error on its own, the reporting side must promptly submit an amended report—containing corrected data—to the registered SDR that received the erroneous transaction report. The reporting side must submit the report required by Rule 905(a) in a manner consistent with the policies and procedures of the registered SDR that are contemplated by Rule 907(a)(3).[709]

Rule 905(b) details the responsibilities of a registered SDR to correct information and re-disseminate corrected information, where appropriate. If a registered SDR either discovers an error in the security-based swap information or receives notification of an error from a reporting side, the registered SDR is required to verify the accuracy of the terms of the security-based swap and, following such verification, promptly correct the information in its system. If the erroneous information contains any primary trade information enumerated in Rule 901(c) (and the transaction is dissemination-eligible[710]), the registered SDR must publicly disseminate a corrected transaction report of the security-based swap promptly following verification of the trade by the counterparties to the security-based swap, with an indication that the report relates to a previously disseminated transaction.[711]

Three commenters were generally supportive of the proposed error reporting procedures. One commenter believed that publicly disseminating error reports would "increase confidence in

---

709 See infra Section XII(C).

710 See Rule 902(c) (listing certain transactions that a registered SDR may not publicly disseminate).

711 See Rule 905(b)(2). When verifying information pursuant to Rule 905(b), a registered SDR must comply with the standards of Rule 13n-5. In particular, Rule 13n-5(b)(1)(iii) provides that an SDR "shall establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the security-based swap data repository is complete and accurate, and clearly identifies the source for each trade side and the pairing method (if any) for each transaction in order to identify the level of quality of the transaction data."

the integrity of the markets."[712] Another commenter stated that it supported "the objective of prompt correction of errors by the reporting party."[713] A third commenter expressed support for requiring a reporting party to correct previously reported erroneous data, and agreed that it was appropriate for a non-reporting counterparty to have the obligation to notify the reporting party of an error of which it is aware.[714]

The third commenter also sought guidance regarding the application of Rule 905 if a dispute arose between a reporting side and non-reporting side concerning whether a report was, in fact, erroneous.[715] The commenter urged the Commission to provide in its final rule that, if corrected information is not promptly reported to the registered SDR because of a dispute over whether an error exists, the non-reporting party side may itself report the disputed data to the registered SDR; the commenter believed that, in such cases, the Commission should oblige the registered SDR to review promptly the disputed data with the counterparties.[716]

The Commission notes that, in a separate release, it is adopting Rule 13n-5(b)(6) under the Exchange Act, which requires an SDR to establish procedures and provide facilities reasonably designed to effectively resolve disputes over the accuracy of the transaction data and positions that are recorded in the SDR.[717] As the Commission notes in adopting that rule, only the parties to a dispute can resolve it. Thus, the SDR itself is not required to resolve the dispute, although the Commission believes that SDRs must provide processes to facilitate resolution,

---

712 Barnard I at 3.

713 ISDA/SIFMA I at 9.

714 See MFA I at 5.

715 See id.

716 See id.

717 See SDR Adopting Release.

which would improve the quality and accuracy of the security-based swap data that the SDR holds. The Commission is interpreting the term "error" in final Rule 905 as one which both sides to the transaction would reasonably regard as such. If the counterparties dispute whether an error exists, then the counterparties can use an SDR's procedures and facilities established under Rule 13n-5(b)(6) to attempt to resolve the dispute. If the dispute-resolution process under Rule 13n-5(b)(6) yielded agreement that an error exists, then Rule 905 would require the counterparties to correct the error.[718]

The third commenter also asked the Commission, in the context of Rule 905, to clarify that the reporting is for informational purposes and does not affect the terms of the trade; otherwise, "[a]bsent some mechanism to make the report nonbinding pending a dispute, the correction mechanics in the Proposed Rule will result in the reporting party (typically the SBS dealer) prevailing in any dispute."[719] The Commission does not believe that reporting of an error in previously submitted security-based swap transaction information can change the terms of the trade. Reporting is designed to capture the terms of the trade, not to establish such terms. The Commission's expectation, however, is that the report of a security-based swap provided to and held by a registered SDR will reflect, fully and accurately, the terms of the trade agreed to by the counterparties. If a counterparty becomes aware that the record held by the registered SDR does

[718] In the context of trade reporting, one commenter stated: "Confirmation processes are designed to identify when economic terms to trades have changed, distinguishing between expected events under an existing confirmation and amendments of economic terms due to the modification in terms. . . . The trade confirmation is a bilateral process in which both parties agree to the confirmation, thereby ensuring any errors in the original data are corrected." DTCC II at 5. The Commission believes that this comment supports the approach taken above, that counterparties to a transaction do not incur duties under Rule 905 unless an error is detected that both sides would regard as such.

[719] Id. at 5-6.

not accurately reflect the terms of the trade, that counterparty incurs a duty under Rule 905 to take action to have that record corrected.

A fourth commenter argued that the specific root cause of such amendments (for example a booking error or a trade amendment between parties) could be omitted.[720] The Commission notes that Rule 905 does not require the reporting side to include the root cause of the error. This commenter also urged the Commission to clarify that reporting parties are not responsible for data that are inaccurately transcribed or corrupted after submission to the registered SDR. The Commission notes that the obligations under Rule 905 attach to a counterparty to a security-based swap only after that counterparty "discovers" the error or, if the counterparty is the reporting side, after it "receives notification" of the error from the non-reporting side.[721] Thus, a security-based swap counterparty incurs no duty under Rule 905 if its transaction data are inaccurately transcribed or corrupted after submission to the registered SDR unless the counterparty discovers the inaccurate transcription or corruption. Thus, under Rule 905, a counterparty would incur no duty to correct data errors of which it is unaware.[722]

Finally, a fifth commenter believed that Rule 905 should provide an error reporting timeframe that is stronger and more specific than the proposed requirement that such reports be submitted "promptly."[723] The Commission continues to believe that "promptly" is an appropriate standard because it emphasizes the need for corrections to be submitted without

720 See ISDA/SIFMA I at 9.

721 Rule 905(a).

722 The registered SDR, however, must comply with Rule 13n-5(b)(1)(iii) under the Exchange Act, which provides, in relevant part: "Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the security-based swap data repository is complete and accurate."

723 See Better Markets I at 9.

unreasonable delay while affording reporting sides a practical degree of flexibility

C. Policies and Procedures for Reporting Life Cycle Events and Corrections

Rule 907(a)(3), as originally proposed, would have required a registered SDR to establish and maintain written policies and procedures for "specifying how reporting parties are to report corrections to previously submitted information in its records that is subsequently discovered to be erroneous, and applying an appropriate indicator to any transaction report required to be disseminated by [Rule 905(b)(2)] that the report relates to a previously disseminated transaction." Rule 907(a)(3), as re-proposed, would have required a registered SDR to establish and maintain written policies and procedures for "specifying how reporting sides are to report corrections to previously submitted information, making corrections to information in its records that is subsequently discovered to be erroneous, and applying an appropriate indicator to any report required to be disseminated by [Rule 905(b)(2)] that the report relates to a previously disseminated transaction."

The Commission received no adverse comment on Rule 907(a)(3) and is adopting it as re-proposed with a slight modification. Rule 907(a)(3), as adopted, requires a registered SDR to establish and maintain policies and procedures for "specifying procedures for reporting <u>life cycle events</u> and corrections to previously submitted information, making corresponding updates or corrections to transaction records, and applying an appropriate flag to the transaction report to indicate that the report (i) is an error correction required to be disseminated by [Rule 905(b)(2)]; or (ii) <u>is a life cycle event, or any adjustment due to a life cycle event, required to be disseminated by [Rule 902(a)]</u>" (emphasis added). The Commission is adding to final Rule 907(a)(3) the explicit requirement that a registered SDR establish and maintain policies and procedures regarding the reporting and flagging of life cycle events. The Commission believes that these additions will improve the ability of the Commission and other relevant authorities to identify and analyze life cycle events of security-based swaps.

In the case of a life cycle event or error correction, the initial transaction has already been reported to the registered SDR, and the subsequent report involves some type of revision to the previously submitted report. The Commission seeks to have the ability to observe a security-based swap transaction throughout its life, which requires the ability to connect subsequently reported events to the original transaction. The Commission also seeks to avoid mistaking life cycle events or corrections of previously submitted reports for new transactions, which could result in overcounting the gross notional amount of the security-based swap market or subsets thereof. Therefore, the Commission believes that registered SDRs must have appropriate policies and procedures that stipulate how reporting sides must report such follow-on events, and how the registered SDR itself can distinguish them and record them properly.

Just as the Commission believes that a registered SDR should be given reasonable flexibility to enumerate specific data elements to be reported and the method for reporting them, the Commission also believes that a registered SDR should be given reasonable flexibility regarding the handling of corrections to previously submitted information. As discussed above, final Rule 905 does not require the reporting side to report the cause of an error.[724] Nor does Rule 905 set forth a specific procedure for how a registered SDR must accept a report of a life cycle event or error correction. Accordingly, a registered SDR's policies and procedures under Rule 907(a)(3) could require resubmission of the entire record with or without an indication of which elements in that record had been revised. Alternatively, a registered SDR's policies and procedures could require a submission of only the data element or elements that had been

724 See supra note 721 and accompanying text.

revised. The Commission notes, however, that Rule 905(b)(2) requires a registered SDR to publicly disseminate a corrected transaction report of a security-based swap, if erroneously reported information relates to a security-based swap that had been publicly disseminated and falls into any of the categories of information enumerated in Rule 901(c). Therefore, a registered SDR will need to have a means of identifying changes in reported data so that it can identify the changed element or elements in the publicly disseminated correction report.

The Commission notes that Rule 907(a)(3) requires a registered SDR's policies and procedures also to address how the registered SDR will apply an appropriate condition flag to any corrected transaction report that must be re-disseminated. Market observers should be able to understand that a transaction report triggered by Rule 905(b)(2) or Rule 902(a) does not represent a new transaction, but merely a revision to a previous transaction. Without an indication to that effect, market observers could misunderstand the true state of the market.[725] To provide observers with a clear view of the market, public reports of life cycle events should allow observers to identify the security-based swap subject to the life cycle event. The Commission notes, however, that registered SDRs may not use the transaction ID for this function because the transaction ID is not a piece of "information reported pursuant to [Rule 901(c)]" or a condition flag.[726] Moreover, the Commission believes that knowledge of the transaction ID should remain limited to counterparties, infrastructure providers, and their agents,

725 One such condition flag could be for voided trades. There may be scenarios in which a security-based swap is executed (or thought to be executed), subsequently reported to a registered SDR, and publicly disseminated by that SDR—but later voided or canceled for some reason. For example, a transaction might be submitted to clearing but rejected by the clearing agency, and the counterparties could deem their agreement to be void ab initio. In this situation, the Commission believes the registered SDR could satisfy its obligation to publicly disseminate under Regulation SBSR by including a condition flag that the previously disseminated transaction report had been voided or canceled.

726 See Rule 902(a).

and should not be widely known. Knowledge of the transaction ID by additional parties could raise data integrity issues, as such additional parties could accidentally or even intentionally submit "false corrections" to the registered SDR regarding transactions to which they were never a counterparty. This could damage the otherwise accurate record of the original transaction. Screening out improperly submitted "corrections"—or repairing damage to the registered SDR's records that a false correction might cause—could become a significant and unwanted burden on registered SDRs. Therefore, registered SDRs, in their policies and procedures under Rule 907(a)(3), will need to use some means other than the transaction ID to indicate that a publicly disseminated report triggered by Rule 905(b)(2) or Rule 902(a) pertains to a previously disseminated transaction.[727]

XIII. Other Duties of Participants

A. Duties of Non-Reporting Sides to Report Certain Information—Rule 906(a)

The Commission believes that a registered SDR generally should maintain complete information for each security-based swap reported to the registered SDR, including UICs for both sides of a transaction. Although Regulation SBSR generally takes the approach of requiring only one side to report the majority of the transaction information,[728] the Commission recognizes

---

[727] For example, DTCC Data Repository, LLC ("DDR") utilizes an Event Identifier ("EID") to maintain the integrity of a transaction throughout its lifecycle and enable public identification of events, including corrections, which occur with respect to the transaction. See DDR Rulebook, Section 4.1 at http://dtcc.com/~/media/Files/Downloads/legal/rules/DDR_Rulebook.ashx, last visited September 22, 2014. The EID is separate from the Unique Swap Identifiers ("USI"), which is the CFTC-equivalent of the transaction ID. See also ISDA/SIFMA I at 10 (recommending that initial trades should carry a "primary reference number" when disseminated, "and all amendments of that trade would then produce iterations of the original reference number").

[728] Section 13A(a)(3) of the Exchange Act, 15 U.S.C. 78m-1(a)(1), stipulates which counterparty must report a security-based swap that is not accepted by any clearing

that it might not be feasible or desirable for the reporting side to report to a registered SDR all of the UICs of the non-reporting side. To address this issue, the Commission proposed Rule 906(a), which would provide a means for a registered SDR to obtain UICs from the non-reporting side.

Rule 906(a), as initially proposed, would have established procedures designed to ensure that a registered SDR obtains UICs for both direct counterparties to a security-based swap. As initially proposed, Rule 906(a) would have required a registered SDR to identify any security-based swap reported to it for which the registered SDR does not have the participant ID and (if applicable) the broker ID, desk ID, and trader ID of each counterparty. The registered SDR would have been required to send a report once a day to each of its participants identifying, for each security-based swap to which that participant is a counterparty, the security-based swap(s) for which the registered SDR lacks participant IDs and (if applicable) a broker ID, desk ID, or trader ID. The participant would have been required to provide the missing information within 24 hours of receiving this report from the registered SDR.

When the Commission re-proposed Regulation SBSR as part of the Cross-Border Proposing Release, it made conforming changes to Rule 906(a) to reflect the introduction of the "reporting side" concept and to clarify that the participant ID, broker ID, desk ID, and trader ID must be reported only for direct counterparties.[729]

---

agency or derivatives clearing organization. That provision does not contemplate reporting by the other direct counterparty. Title VII does not stipulate who should report cleared security-based swaps. However, Section 13(m)(1)(F) of the Exchange Act, 15 U.S.C. 78m(m)(1)(F), provides that "[p]arties to a security-based swap (including agents of the parties to a security-based swap) shall be responsible for reporting security-based swap transaction information to the appropriate registered entity in a timely manner as may be prescribed by the Commission."

[729] See 78 FR at 31214.

The Commission has decided to adopt Rule 906(a) substantially as re-proposed, with conforming changes related to including branch ID and execution agent ID among the UICs that must be provided to the registered SDR[730] and other minor technical changes.[731]

The Commission received two comment letters from the same commenter addressing proposed Rule 906(a). The first letter, which responded to the initial proposal, stated that regulators must have the UICs of both counterparties to a security-based swap to accurately track

730 As discussed above, see supra Section II(C), the Commission has added "branch ID" and "execution agent ID" to the UICs required to be reported under Regulation SBSR. The Commission believes that reporting the branch ID and the execution agent ID for both counterparties to a security-based swap, if applicable, to a registered SDR will assist the Commission and other relevant authorities in overseeing the security-based swap market. Accordingly, the Commission has included branch ID and execution agent ID as UICs that registered SDRs must obtain pursuant to Rule 906(a).

731 The Commission has determined to use the term "counterparty ID" rather than "participant ID" and to use the term "trading desk ID" rather than "desk ID" throughout Regulation SBSR. See supra Sections II(B)(3)(b) and II(C)(3)(c). In addition, the Commission has inserted the word "direct" immediately before each instance of the word "counterparty." When the Commission re-proposed Rule 906(a), it made conforming changes to reflect the introduction of the "reporting side" concept and to clarify that relevant UICs for the non-reporting side must be reported only for direct counterparties. The word "counterparty" occurs in two places in final Rule 906(a), but the re-proposed rule inserted "direct" before "counterparty" only after the first occurrence. Final Rule 906(a) inserts "direct" before "counterparty" both times that the word "counterparty" is used. Final Rule 906(a) also includes modifications that clarify that the term "participant," as used in Rule 906(a), means a participant in a registered SDR. The Commission has made similar modifications throughout final Rule 906. The Commission also is revising the final sentence of Rule 906(a) to clarify that the participant referred to in that sentence is a participant of a registered SDR, and to clarify that a participant that receives a Rule 906(a) report from a registered SDR is responsible for providing missing UIC information for its side of each security-based swap referenced in the report. The participant is not responsible for providing any missing UIC information pertaining to the other side of the transaction. Accordingly, the last sentence of Rule 906(a) states: "A participant of a registered security-based swap data repository that receives such a report shall provide the missing information with respect to its side of each security-based swap referenced in the report to the registered security-based swap data repository within 24 hours." In addition, the Commission is revising the rule to refer to execution agents to conform to Rule 901(d)(1)(i). Finally, to more accurately reflect the requirements of the rule, the Commission is changing the title of the rule to "Identifying missing UIC information."

exposures.[732] The commenter believed that, ideally, this process would be supported electronically and that the use of third-party services should meet this requirement.[733]

The Commission generally shares the commenter's view that registered SDRs should maintain UICs for both sides of a security-based swap.[734] The Commission notes that Rule 901(d) requires the reporting side to report the branch ID, broker ID, execution agent ID, trader ID, and trading desk ID—as applicable—only for the direct counterparty on its side. Rule 901(d)(1) requires the reporting side to report only the counterparty ID or execution agent ID, as applicable, of a counterparty on the other side. The Commission could have required the reporting side to provide UIC information for both sides of the transaction, but this would obligate a non-reporting side to furnish its UIC information to the reporting side so that the additional UICs could be reported by the reporting side. There are circumstances where a non-reporting side might be unable or unwilling to provide its UIC information to the reporting side. Therefore, the Commission is instead requiring the registered SDR to obtain these UICs from the non-reporting side through the Rule 906(a) process.[735] Obtaining UICs for both sides will

---

732 See DTCC II at 16. This commenter also suggested that desk IDs and trader IDs should not be required to be reported due to the fact that desk structures are changed relatively frequently and traders often rotate to different desks or transfer to different firms. See DTCC II at 11. This suggestion is addressed above in Section II(C)(3)(c).

733 See DTCC II at 16.

734 However, if the non-reporting side for the security-based swap does not meet the definition of "participant" in Rule 900(u), Rule 906(a) would not require the registered SDR to request UIC information from the non-reporting side. This result is consistent with the Regulation SBSR Proposing Release. See 75 FR at 75240 ("Thus, the Commission anticipates that there would be some SBSs reported to and captured by a registered SDR where only one counterparty of the SBS is a participant").

735 Rule 906(a) provides: "A registered security-based swap data repository shall identify any security-based swap reported to it for which the registered security-based swap data repository does not have the counterparty ID and (if applicable) the broker ID, branch ID, execution agent ID, trading desk ID, and trader ID of each direct counterparty. Once a

enhance the Commission's ability to carry out its responsibility to oversee the security-based swap market, because the Commission will be able to identify individual traders and business units that are involved in security-based swap transactions.[736]

In a subsequent comment letter, in response to the re-proposal of Regulation SBSR, the same commenter expressed concern that Rule 906(a) could require a registered SDR to send reports to and obtain information from persons who might not be participants of that registered SDR.[737] More generally, this commenter suggested that registered SDRs should not police security-based swap reports for deficiencies or unpopulated data fields in any manner that requires the registered SDR to take affirmative action to obtain information.[738]

The Commission disagrees with the commenter's suggestion that registered SDRs should have no duty to review the completeness of security-based swap reports or obtain missing

---

day, the registered security-based swap data repository shall send a report to each participant of the registered security-based swap data repository or, if applicable, an execution agent, identifying, for each security-based swap to which that participant is a counterparty, the security-based swap(s) for which the registered security-based swap data repository lacks counterparty ID and (if applicable) broker ID, branch ID, execution agent ID, desk ID, and trader ID. A participant of a registered security-based swap data repository that receives such a report shall provide the missing information with respect to its side of each security-based swap referenced in the report to the registered security-based swap data repository within 24 hours." Rule 900(u) defines "participant," with respect to a registered SDR, as "a counterparty, that meets the criteria of § 242.908(b), of a security-based swap that is reported to that registered security-based swap data repository to satisfy an obligation under § 242.901(a)."

736 Nothing in Regulation SBSR prevents a non-reporting side from voluntarily providing all of its applicable UICs to the reporting side, so that the reporting side could, as agent, report all of the non-reporting side's UICs together with the rest of the data elements required by Rules 901(c) and 901(d). If this were to occur, the registered SDR would not need to send a Rule 906(a) report to the non-reporting side inquiring about the non-reporting side's missing UICs.

737 See DTCC V at 13. As noted above, however, Rule 906(a), as adopted, requires the registered SDR to obtain UIC information only from non-reporting sides that are participants of that registered SDR.

738 See DTCC V at 13.

information from participants. To the contrary, the Commission believes that registered SDRs are best situated to review reported data for completeness because they have a statutory and regulatory duty to accept and maintain security-based swap data, as prescribed by the Commission.[739] Imposing an affirmative duty on registered SDRs to verify the completeness of reported data and to obtain missing data should increase the reliability of data maintained by registered SDRs while decreasing the possibility of registered SDRs providing incomplete reports to relevant authorities. This, in turn, will facilitate oversight of the security-based swap market, which is a primary objective Title VII.

Rule 906(a) requires registered SDRs to communicate with participants that are not reporting sides under Regulation SBSR. As discussed above, these communications are required to ensure that a registered SDR maintains complete UIC information for both sides of each security-based swap transaction that is reported to the registered SDR. The Commission recognizes that some non-reporting sides may not wish to connect directly to a registered SDR because they may not want to incur the costs of establishing a direct connection. Rule 906(a) does not prescribe the means registered SDRs must use to obtain information from non-reporting sides. As a result, registered SDRs have broad discretion to establish a methodology for notifying non-reporting sides of missing UIC information and obtaining UIC reports from the non-reporting side. For example, a registered SDR could send notifications and receive reports via e-mail, in accordance with its policies and procedures.[740] Registered SDRs should consider allowing non-reporting sides to provide the information required by Rule 906(a) in a minimally-burdensome manner.

---

739 See 15 U.S.C. 78m(n)(5).

740 See supra Section IV (discussing Rule 907(a)(2)).

Historical security-based swaps must be reported to a registered SDR pursuant to Rule 901(i). The Commission acknowledges that broker IDs, branch IDs, execution agent IDs, trading desk IDs, and trader IDs do not yet exist and will not exist until assigned by registered SDRs. Therefore, these UICs are not data elements applicable to historical security-based swaps. Accordingly, registered SDRs are not required under Rule 906(a) to identify these UICs as missing or to communicate to non-reporting side participants that they are missing, and non-reporting side participants are not required by Rule 906(a) to provide these UICs to a registered SDR with respect to any historical security-based swaps.

B. Duty to Provide Ultimate Parent and Affiliate Information to Registered SDRs—Rule 906(b)

To assist the Commission and other relevant authorities in monitoring systemic risk, a registered SDR should be able to identify and calculate the security-based swap exposures of its participants on an enterprise-wide basis.[741] Therefore, the Commission proposed Rule 906(b), which would have required each participant of a registered SDR to provide to the registered SDR information sufficient to identify its ultimate parent(s) and any affiliate(s) of the participant that also are participants of the registered SDR. Proposed Rule 906(b) would have required a person to provide parent and affiliate information to a registered SDR immediately upon becoming a participant.[742] Proposed Rule 906(b) also would have required a participant to promptly notify the registered SDR of any changes to reported parent or affiliate information.

---

741 The Commission notes that Rule 13n-5(b)(2) under the Exchange Act provides: "Every security-based swap data repository shall establish, maintain, and enforce written policies and procedures reasonably designed to calculate positions for all persons with open security-based swaps for which the security-based swap data repository maintains records."

742 The policies and procedures of a registered SDR will establish on-boarding procedures for participants.

The Commission also proposed rules to define the relationships that could give rise to reporting obligations under Rule 906(b). Proposed Rule 900 would have defined an "affiliate" as "any person that, directly or indirectly, controls, is controlled by, or is under common control with, a person" and "control" as "the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise."[743] The Commission also proposed definitions of "parent" and "ultimate parent" to identify particular categories of affiliated entities based on a person's ability to control an affiliate. Specifically, proposed Rule 900 would have defined "parent" to mean "a legal person that controls a participant" and "ultimate parent" as "a legal person that controls a participant and that itself has no parent." The Commission also proposed to define "ultimate parent ID" as "the UIC assigned to an ultimate parent of a participant."

The Commission re-proposed the definitions of "affiliate," "control," "parent," "ultimate parent," and "ultimate parent ID," and Rule 906(b) without change in the Cross-Border Proposing Release.[744]

After considering the comments received, which are discussed below, the Commission is adopting Rule 906(b), as proposed and re-proposed, subject to two clarifying changes.[745]

---

743 Proposed Rule 900 further would have provided that a person would be presumed to control another person if the person: "(1) [i]s a director, general partner or officer exercising executive responsibility (or having similar status or functions); (2) [d]irectly or indirectly has the right to vote 25 percent or more of a class of voting securities or has the power to sell or direct the sale of 25 percent or more of a class of voting securities; or (3) [i]n the case of a partnership, has the right to receive, upon dissolution, or has contributed, 25 percent or more of the capital."

744 See 78 FR at 31210-11. The definition of "affiliate" was re-proposed as Rule 900(a). The definitions of "control," "parent," and "ultimate parent" were re-proposed as Rules 900(f), 900(r), and 900(ll), respectively. Re-proposed Rule 900(mm) contained the definition of "ultimate parent ID."

Obtaining ultimate parent and affiliate information will assist the Commission in monitoring enterprise-wide risks related to security-based swaps. If participants are not required to identify which of their affiliates also are participants of a particular registered SDR, the Commission or other relevant authorities might be unable to calculate the security-based swap exposures of that ownership group using data held in the registered SDR. As a result, systemic risk might build undetected within an ownership group, even if all security-based swaps for that enterprise were reported to the same registered SDR. The lack of transparency regarding OTC derivatives exposures within the same ownership group was one of the factors that hampered regulators' ability to respond to the financial crisis of 2007-08.[746]

The Commission believes that a reasonable means of monitoring security-based swap positions on a group-wide basis is by requiring each participant of a registered SDR to provide information sufficient to identify the participant's ultimate parent(s) and any affiliate(s) of the participant that also are participants of the registered SDR, using ultimate parent IDs and counterparty IDs.[747] Rule 906(b), as adopted, imposes an affirmative obligation on participants

---

745 Specifically, the Commission is modifying Rule 906(b) to clarify that the term "participant," means a participant in a registered SDR. The Commission also is replacing the term "participant ID" with "counterparty ID."

746 See Financial Crisis Inquiry Commission, "The Financial Crisis Inquiry Report: Final Report of the National Commission on the Causes of the Financial and Economic Crisis in the United States," January 2011, at xxi, available at: http://www.gpo.gov/fdsys/pkg/GPO-FCIC/pdf/GPO-FCIC.pdf, last visited September 22, 2014 (explaining that relevant authorities "lacked a full understanding of the risks and interconnections in the financial markets" prior to and during the financial crisis, including, among other things, the exposures created by Lehman Brothers' derivatives contracts).

747 Among other things, Rule 906(b) should enable the Commission and other relevant authorities to identify quickly security-based swaps of a corporate group that have been reported to the registered SDR, including security-based swaps held by securitization vehicles that are controlled by financial institutions.

of a registered SDR to provide this ownership and affiliation information to a registered SDR immediately upon becoming a participant of that SDR. The participant also must notify the registered SDR promptly of any changes to that information. To minimize burdens on participants and to align the burdens as closely as possible with the purpose behind the requirement, Rule 906(b) does not require a participant of a registered SDR to provide information to the registered SDR about all of its affiliates, but only those that are also participants of the same registered SDR.

The Commission received three comments addressing proposed Rule 906(b).[748] One commenter supported the proposed rule, stating that parent and affiliate information, along with other information required to be reported by Regulation SBSR, is critical to providing regulators with a comprehensive view of the swaps market and assuring that publicly reported data is accurate and meaningful.[749] This commenter further stated that registered SDRs should have the power to obtain parent and affiliate information from firms, because this information would help to illustrate the full group level exposures of firms and the impact of the failure of any participant.[750] The Commission generally agrees with the commenter's points and continues to believe that identifying security-based swap exposures within an ownership group is critical to monitoring market activity and detecting potential systemic risks. The existence of data vendors that provide parent and affiliate information may reduce any burdens on participants associated

---

748 See DTCC II at 13-14; ICI I at 6; GS1 Proposal at 43-44.

749 See DTCC II at 13-14.

750 See id. at 17. This commenter believed that a registered SDR likely would obtain parent and affiliate information from a data vendor and allow participants to review and approve the data.

with reporting such information to a registered SDR,[751] but the Commission does not view this as an adequate substitute for having the information reported to and readily available from registered SDRs. Title VII's regulatory reporting requirement is designed to allow the Commission and other relevant authorities to have access to comprehensive information about security-based swap activity in registered SDRs. The Commission believes that it would be inimical to that end for relevant authorities to have all the transaction information in registered SDRs but be forced to rely on information from outside of registered SDRs to link positions held by affiliates within the same corporate group.

Two commenters suggested clarifications or modifications to the proposed rule.[752] One commenter expressed concerns about how Rule 906(b) would apply to agents, noting that investment advisers frequently execute a single security-based swap transaction on behalf of multiple accounts and allocate the notional amount of the transaction among these accounts at the end of the day.[753] The commenter stated that advisers often do not know all of the affiliates of their clients and, as a result, might be unable to comply with Rule 906(b).[754] The commenter recommended that "the Commission clarify that an adviser that has implemented reasonable policies and procedures to obtain the required information about affiliates and documented its efforts to obtain the information from its clients be deemed to have satisfied [Rule 906(b) of] Regulation SBSR."[755]

---

751 See id.

752 See ICI I at 6; GS1 Proposal at 43-44.

753 See ICI I at 6, note 9.

754 See id.

755 Id.

The Commission believes that it is unnecessary to modify Rule 906(b) in response to this comment. The Commission notes that Rule 906(b) imposes no obligations on an execution agent, such as an investment adviser that executes a single security-based swap on behalf of multiple accounts and allocates the notional amount of the transaction among those accounts at the end of the day. Rather, it would be the counterparty itself that would have the responsibility under Rule 906(b).

Another commenter expressed the view that the information required to be reported by Rule 906(b) should be placed in prescribed XBRL templates or other such input mechanisms that would capture this information at its source for all downstream processes in the financial supply chain to use.[756] The Commission has determined not to specify the manner or format in which security-based swap counterparties must provide ultimate parent and affiliate information to a registered SDR. The Commission believes that it would be preferable to allow each registered SDR to determine a suitable way to receive and maintain ultimate parent and affiliate information about its participants. The Commission notes that Rule 907(a)(6), as adopted, requires a registered SDR to establish and maintain written policies and procedures for periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any other participant(s) with which the counterparty is affiliated, using ultimate parent IDs and counterparty IDs.[757]

---

[756] See GS1 Proposal at 43.

[757] As originally proposed, Rule 907(a)(6) would have required a registered SDR to establish and maintain written policies and procedures "[f]or periodically obtaining from each participant information that identifies the participant's ultimate parent(s) and any other participant(s) with which the counterparty is affiliated, using ultimate parent IDs and participant IDs" (emphasis added). The Commission re-proposed Rule 907(a)(6) with the word "participant" in place of the word "counterparty."

The Commission received three comments on the definitions of "control" and "affiliate."[758] No commenters specifically addressed the definitions of "parent," "ultimate parent," or "ultimate parent ID." After carefully evaluating these comments, the Commission is adopting the definitions of "affiliate," "control," "parent," "ultimate parent," and "ultimate parent ID" as proposed and re-proposed.[759]

One commenter stated its view that the proposed definition of "control" was improper.[760] This commenter believed that the proposed 25% threshold for presuming control was too low, and that obtaining the information required by Rule 906(b) from entities with which a security-based swap market participant has less than a majority ownership relationship would be overly burdensome, and, in some cases, not practicable.[761] The commenter recommended that the Commission amend the definition to presume control based on no less than majority ownership.[762]

The Commission disagrees that, for purposes of Regulation SBSR, control should be presumed to exist only if there is majority ownership. Rule 906(b) is designed to assist the Commission and other relevant authorities in monitoring group-wide security-based swap exposures by enabling a registered SDR to provide them with the information necessary to calculate positions in security-based swaps held within the same ownership group that are reported to that registered SDR. If the Commission were to adopt definitions of "control" and

---

758 See DTCC II at 17; Multiple Associations Letter at 7-8; SIFMA I at 6.

759 Final Rule 900(a) defines "affiliate," while the definitions of "control," "parent," "ultimate parent" and "ultimate parent ID" are in Rules 900(h), 900(t), 900(oo), and 900(pp), respectively.

760 See SIFMA I at 6.

761 See id.

762 See id.

"affiliate" that were based on majority ownership, participants would be required to identify fewer entities as affiliates, even if certain indicia of affiliation were present. The Commission believes that, to carry out its oversight function for the security-based swap market, it should err on the side of inclusion rather than exclusion when considering which positions are part of the same ownership group for general oversight purposes.

The Commission also notes that the definition of "control" as adopted in Rule 900(h) is consistent with the definition used in other Commission rules and forms,[763] so market participants should be accustomed to applying this definition in the conduct of their business activities. Furthermore, the CFTC's swap data reporting rules employ a materially similar definition of "control" for purposes of determining whether two market participants are affiliated with each other.[764] If the Commission were to adopt a different definition of "control," market participants would need to determine their affiliates under both sets of rules, thereby imposing what the Commission believes would be unnecessary costs on market participants.

One commenter suggested that the Commission and the CFTC use a consistent definition of "affiliate" throughout the Title VII rulemakings[765] and recommended that the Commission and CFTC use the definition of "affiliated group" in the Commissions' proposed joint rulemaking to

763 See, e.g., Rule 300(f) of Regulation ATS under the Exchange Act, 17 CFR 242.300(f); Rule 19g2-1(b)(2) under the Exchange Act, 17 CFR 240.19g2-1(b)(2); Form 1 (Application for, and Amendments to Application for, Registration as a National Securities Exchange or Exemption from Registration Pursuant to Section 5 of the Exchange Act); Form BD (Uniform Application for Broker-Dealer Registration). See also Rule 3a55-4(b)(2) under the Exchange Act, 17 CFR 240.3a55-4(b)(2) (defining control to mean ownership of 20% or more of an issuer's equity, or the ability to direct the voting of 20% or more of the issuer's voting equity).

764 See 17 CFR 45.6(a) (defining "control" in the context of the CFTC's LEI system); 17 CFR 45.6(e)(2).

765 See Multiple Associations Letter at 7-8.

further define the terms swap dealer, security-based swap dealer, major swap participant, major security-based swap participant, and eligible contract participant ("Entity Definitions Proposing Release").[766] The Commission does not believe it is appropriate to adopt, for purposes of Regulation SBSR, the definition of "affiliated group" that was proposed in the Entity Definitions Proposing Release. The final rules defining "swap dealer," "security-based swap dealer," "major swap participant," "major security-based swap participant," and "eligible contract participant" ("Final Entity Definition Rules") did not adopt a definition of "affiliated group."[767] When the Commission and CFTC adopted the Final Entity Definition Rules they specifically rejected the notion that an "affiliated group" should include only those entities that report information or prepare financial statements on a consolidated basis as a prerequisite for being affiliated because they did not believe that whether or not two entities are affiliated should change according to changes in accounting standards.[768] The Commission continues to believe that changes in accounting standards should not determine whether two entities are affiliated and therefore declines to adopt the definition of "affiliated group" that it proposed in the Entity Definitions Proposing Release.

766 Securities Exchange Act Release No. 63452 (December 7, 2010), 75 FR 80174 (December 21, 2010). In the Entity Definitions Proposing Release, "affiliated group" would have been used to describe the range of counterparties that a security-based swap market participant would need to count for purposes of determining whether it qualified for a de minimis exception from the definition of "security-based swap dealer." For purposes of the Entity Definitions Proposing Release, the Commissions stated that an affiliated group would be defined as "any group of entities that is under common control and that reports information or prepares its financial statements on a consolidated basis." See 75 FR at 80180, note 43.

767 Securities Exchange Act Release No. 66868 (April 27, 2012), 77 FR 30596 (May 23, 2012).

768 See id. at 30625.

C. Policies and Procedures of Registered Security-Based Swap Dealers and Registered Major Security-Based Swap Participants to Support Reporting—Rule 906(c)

For the security-based swap reporting requirements established by the Dodd-Frank Act to achieve the objectives of enhancing price transparency and providing regulators with access to data to help carry out their oversight responsibilities, the information that participants provide to registered SDRs must be reliable. Ultimately, the majority of security-based swaps likely will be reported by registered security-based swap dealers and registered major security-based swap participants. The Commission believes that requiring these participants to adopt policies and procedures to address their security-based swap reporting obligations will increase the accuracy and reliability of the transaction reports that they submit to registered SDRs.

Proposed Rule 906(c) would have required a participant that is a security-based swap dealer or major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure that the participant complies with any obligations to report information to a registered SDR in a manner consistent with Regulation SBSR and the policies and procedures of any registered SDR of which it is a participant. The policies and procedures contemplated by proposed Rule 906(c) were intended to promote complete and accurate reporting of security-based swap information by participants that are security-based swap dealers and major security-based swap participants, consistent with their obligations under the Dodd-Frank Act and Regulation SBSR. Proposed Rule 906(c) also would have required a security-based swap dealer or major security-based swap participant to review and update its policies and procedures at least annually. The Commission re-proposed Rule

906(c) without change as part of the Cross-Border Proposing Release.[769] The one commenter who addressed this aspect of Regulation SBSR stated that proposed Rule 906(c) is "a necessary part of risk governance and compliance."[770]

The Commission agrees and is adopting Rule 906(c), largely as proposed and re-proposed, subject to two modifications.[771] As proposed and re-proposed, Rule 906(c) would have required security-based swap dealers and major security-based swap participants to establish, maintain, and enforce written policies and procedures to support security-based swap transaction reporting. As discussed above, Rule 906(c), as adopted, imposes this duty only on registered security-based swap dealers and registered major security-based swap participants.[772] Second, Rule 906(c), as adopted, does not include the phrase "and the policies and procedures of any registered security-based swap data repository of which it is a participant." The Commission believes that it is sufficient to require that the policies and procedures of registered security-based swap dealers and registered major security-based swap participants be reasonably designed to ensure compliance with the reporting obligations under Regulation SBSR.[773] Additionally, the Commission anticipates that SDRs will enter into contractual arrangements with reporting sides

---

769 See 78 FR at 31214.

770 Barnard I at 3.

771 The Commission also revised Rule 906(c), to clarify that the term "participant" means a participant of a registered SDR.

772 See supra Section V(B)(1) (explaining that, during the period before the Commission has adopted rules for the registration of security-based swap dealers and major security-based swap participants, the Commission seeks to avoid imposing costs on market participants who otherwise would have to assess whether they are security-based swap dealers or major security-based swap participants).

773 The Commission notes that a reporting side is also required to electronically transmit information required under Regulation SBSR to a registered SDR in a format required by that SDR. See Rule 901(h); note 268, supra, and accompanying text.

for the reporting of transactions required to be reported under Regulation SBSR, and that such arrangements likely will stipulate the various rights and obligations of the parties when reporting security-based swap transactions.

Rule 906(c) is designed to promote greater accuracy and completeness of reported security-based swap transaction data by requiring the participants that will bear substantial reporting obligations under Regulation SBSR to adopt policies and procedures that are reasonably designed to ensure that their reports are accurate and reliable. If these participants do not have written policies and procedures for carrying out their reporting duties, compliance with Regulation SBSR might depend too heavily on key individuals or ad hoc and unreliable processes. The Commission, therefore, believes that registered security-based swap dealers and registered major security-based swap participants should be required to establish written policies and procedures which, because they are written and can be shared throughout the organization, should be independent of any specific individuals. Requiring such participants to adopt and maintain written policies and procedures relevant to their reporting responsibilities, as required under Rule 906(c), should help to improve the degree and quality of overall compliance with the reporting requirements of Regulation SBSR. Periodic review of the policies and procedures, as required by Rule 906(c), should help ensure that these policies and procedures remain well functioning over time.

The value of requiring policies and procedures in promoting regulatory compliance is well-established. Internal control systems have long been used to strengthen the integrity of financial reporting. For example, Congress recognized the importance of internal control systems in the Foreign Corrupt Practices Act, which requires public companies to maintain a system of internal accounting controls.[774] Broker-dealers also must maintain policies and procedures for various purposes.[775] The Commission believes that requiring each registered security-based swap dealer and registered major security-based swap participant to adopt and maintain written policies and procedures designed to promote compliance with Regulation SBSR is consistent with Congress's goals in adopting the Dodd-Frank Act.

The policies and procedures required by Rule 906(c) could address, among other things: (1) The reporting process and designation of responsibility for reporting security-based swap transactions; (2) the process for systematizing orally negotiated security-based swap transactions; (3) order management system outages or malfunctions, and when and how back-up systems are to be used in connection with required reporting; (4) verification and validation of all information relating to security-based swap transactions reported to a registered SDR; (5) a training program for employees responsible for security-based swap transaction reporting; (6) control procedures relating to security-based swap transaction reporting and designation of personnel responsible for testing and verifying such policies and procedures; and (7) reviewing and assessing the performance and operational capability of any third party that carries out any duty required by Regulation SBSR on behalf of the registered security-based swap dealer or registered major security-based swap participant.[776]

XIV. Other Aspects of Policies and Procedures of Registered SDRs

---

774 See 15 U.S.C. 78m(b)(2)(B).

775 See, e.g., FINRA Conduct Rule 3010(b) (requiring FINRA member broker-dealers to establish and maintain written procedures "that are reasonably designed to achieve compliance with applicable securities laws and regulations, and with the applicable Rules of [the NASD]"); FINRA Conduct Rule 3012 (requiring FINRA member broker-dealers to establish and maintain written supervisory procedures to ensure that internal policies and procedures are followed and achieve their intended objectives).

776 See 75 FR at 75234.

A. Public Availability of Policies and Procedures

Rule 907(c), as proposed and re-proposed, would have required a registered SDR to make its policies and procedures publicly available on its website. The Commission did not receive any comments on Rule 907(c) and is adopting it as proposed and re-proposed. This public availability requirement will allow all interested parties to understand how the registered SDR is utilizing the flexibility it has in operating the transaction reporting and dissemination system. Being able to review the current policies and procedures will provide an opportunity for participants to make suggestions to the registered SDR for altering and improving those policies and procedures, in light of new products or circumstances, consistent with the principles set out in Regulation SBSR.

B. Updating of Policies and Procedures

Proposed Rule 907(d) would have required a registered SDR to "review, and update as necessary, the policies and procedures required by [Regulation SBSR] at least annually." Proposed Rule 907(d) also would have required the registered SDR to indicate the date on which its policies and procedures were last reviewed. The Cross-Border Proposing Release re-proposed Rule 907(d) without revision.

The Commission did not receive any comments on Rule 907(d) and is adopting it as proposed and re-proposed. The Commission continues to believe that a registered SDR should periodically review its policies and procedures to ensure that they remain well-functioning over time. The Commission also continues to believe that requiring registered SDRs to indicate the date on which their policies and procedures were last reviewed will allow regulators and SDR participants to understand which version of the policies and procedures are current. A registered SDR could satisfy this obligation by, for example, noting when individual sections were last updated or by reissuing the entirety of the policies and procedures with an "as of" date. The Commission notes that, regardless of the method chosen and although only the most current version of a registered SDR's policies and procedures must be publicly available pursuant to Rule 907, the registered SDR must retain prior versions of those policies and procedures for regulatory purposes pursuant to Rule 13n-7(b) under the Exchange Act,[777] as adopted by the Commission.[778] These records would help the Commission, if conducting a review of a registered SDR's past actions, to understand what policies and procedures were in force at the time.

C. Provision of Certain Reports to the Commission

Under Title VII, the Commission is responsible for regulating and overseeing the security-based swap market, including the trade reporting obligations imposed by Regulation SBSR.[779] The Commission believes that, to carry out this responsibility, it will be necessary to obtain from each registered SDR information related to the timeliness, accuracy, and completeness of data reported to the registered SDR by the SDR's participants. Required data submissions that are untimely,[780] inaccurate,[781] or incomplete[782] could compromise the

---

777 17 CFR 240.13n-7(b)(1) ("Every security-based swap data repository shall keep and preserve at least one copy of all documents, including all documents and policies and procedures required by the Act and the rules and regulations thereunder").

778 See SDR Adopting Release.

779 Under Title VII, registered SDRs are not self-regulatory organizations and thus lack the enforcement authority that self-regulatory organizations have over their members under the Exchange Act. Any information or reports requested by the Commission under Rule 907(e) would assist the Commission in examining for and enforcing compliance with Regulation SBSR by reporting parties.

780 For example, a registered SDR would be able to determine that a reporting side had reported late if the date and time of submission were more than 24 hours after the date and time of execution reported by the reporting side (or, if 24 hours after the time of

regulatory data that the Commission would utilize to carry out its oversight responsibilities. Furthermore, required data submissions that are untimely, inaccurate, or incomplete could diminish the value of publicly disseminated reports that are meant to promote transparency and price discovery.

Accordingly, the Commission proposed and re-proposed Rule 907(e), which would have required a registered SDR to "have the capacity to provide to the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to it" pursuant to Regulation SBSR and the registered SDR's policies and procedures. The sole commenter on this provision agreed that an SDR should be able to "readily provide the Commission with any relevant information," but noted that an SDR might not be in the best position to confirm the accuracy of the trade information it receives.[783] The commenter believed that ultimate responsibility for the submission of accurate and complete information belongs with the reporting side, and that Rule 907(e) should be revised to reflect that an SDR's information will "only be as timely, accurate, and complete as provided to it by parties to the trade."[784]

The Commission is adopting Rule 907(e) with a minor revision. The final rule provides that a registered SDR "shall provide, upon request, information or reports . . ." rather than, as proposed and re-proposed, that a registered SDR "shall have the capacity to provide . . ." This

---

execution would have fallen on a day that was not a business day, then after that same time on the next business day). See Rule 901(j).

781 Some examples of clearly inaccurate data would include using lettered text in a field that clearly requires a number (or vice versa), or using a UIC that corresponds to no valid LEI or to a UIC issued or endorsed by the registered SDR.

782 An example of an incomplete report would be leaving one or more required reporting fields blank.

783 DTCC V at 14.

784 Id.

language better conveys the Commission's expectation that, not only must a registered SDR have the capacity to provide the relevant information or reports, it must in fact provide such information or reports when the Commission requests. The Commission believes that this revision accords with the commenter who stated that an SDR should be able to "readily provide the Commission with any relevant information."[785]

However, the Commission is not revising Rule 907(e) to reflect that an SDR's information will "only be as timely, accurate, and complete as provided to it by parties to the trade," as requested by the commenter.[786] The Commission appreciates that there could be certain data elements submitted by reporting sides that a registered SDR could not reasonably be expected to know are inaccurate. For example, if the reporting side submits a valid trader ID for trader X when in fact the transaction was carried out by trader Y, the Commission would not expect a Rule 907(e) report provided by a registered SDR to reflect this fact. The Commission notes, however, that Rule 13n-5(b)(1)(iii) under the Exchange Act requires an SDR to "establish, maintain, and enforce written policies and procedures reasonably designed to satisfy itself that the transaction data that has been submitted to the security-based swap data repository is complete and accurate." Thus, the Commission could require a registered SDR to include in a Rule 907(e) report any instances where a reporting side reported a trader ID that fails the SDR's validation rules, because the SDR is in a position to know which trader IDs (and other UICs) are consistent with UICs assigned to traders of its participants.[787]

---

785 See note 783, supra.

786 Id.

787 See also Section 13(n)(5)(B) of the Exchange Act, 15 U.S.C. 78m(n)(5)(B) (requiring an SDR to "confirm with both counterparties to the security-based swap the accuracy of the data that was submitted"); Rule 13n-4(b)(3) under the Exchange Act (implementing that requirement).

XV. Rule 908—Cross-Border Reach of Regulation SBSR

Security-based swap business currently takes place across national borders, with agreements negotiated and executed between counterparties in different jurisdictions (which might then be booked and risk-managed in still other jurisdictions).[788] Given the global nature of the market and to help ensure an effective regime for regulatory reporting and public dissemination of security-based swap transactions under Title VII, it is important that Regulation SBSR identify which transactions in this global market will be subject to these Title VII requirements. Regulation SBSR, as initially proposed in November 2010, included Rule 908, which sought to address the cross-border application of the regulatory reporting and public dissemination requirements. In the Cross-Border Proposing Release, issued in May 2013, the Commission re-proposed Rule 908 with substantial revisions. Commenters' views on re-proposed Rule 908 and the final rule, as adopted by the Commission, are discussed in detail below, following a discussion of the Commission's approach to cross-border application of its authority under Title VII and the Exchange Act generally.

A. General Considerations

As stated in the Cross-Border Adopting Release, the Commission continues to believe that a territorial approach to the application of Title VII—including the requirements relating to regulatory reporting and public dissemination of security-based swap transactions—is

---

788 Security-based swap market data indicates that many security-based swap transactions involve activity in more than one jurisdiction. See infra Section XXII(B)(1)(b) (noting that data in the Trade Information Warehouse reveals that approximately 13% of price-forming transactions in North American single-name CDS transaction from January 2008 to December 2013 were between two U.S.-domiciled counterparties; 48% of such transactions were cross-border transactions between a U.S.-domiciled counterparty and a foreign-domiciled counterparty; and an additional 39% were between two foreign-domiciled counterparties).

appropriate.[789] This approach, properly understood, is grounded in the text of the relevant statutory provisions and is designed to help ensure that the Commission's application of the relevant provisions is consistent with the goals that the statute was intended to achieve.[790] Once the Commission has identified the activity regulated by the statutory provision, it then determines whether a person is engaged in conduct that the statutory provision regulates and whether this conduct occurs within the United States.[791]

Under the foregoing analysis, when a U.S. person enters into a security-based swap, the security-based swap necessarily exists at least in part within the United States. The definition of "U.S. person"—adopted in the Cross-Border Adopting Release and incorporated by reference into Regulation SBSR—is intended, in part, to identify those persons for whom it is reasonable to infer that a significant portion of their financial and legal relationships is likely to exist within the United States, and that it is therefore reasonable to conclude that risk arising from their security-based swap activities could manifest itself within the United States, regardless of the location of their counterparties, given the ongoing nature of the obligations that result from security-based swap transactions.[792] Under its territorial approach, the Commission seeks to

---

789 See 79 FR at 47287.

790 See Morrison v. Nat'l Australia Bank, Ltd., 130 S. Ct. 2869, 2884 (2010) (identifying focus of statutory language to determine what conduct was relevant in determining whether the statute was being applied to domestic conduct).

791 When the statutory text does not describe the relevant activity with specificity or provides for further Commission interpretation of statutory terms or requirements, this analysis may require the Commission to identify through interpretation of the statutory text the specific activity that is relevant under the statute or to incorporate prior interpretations of the relevant statutory text. See Cross-Border Adopting Release, 79 FR at 47287 (explaining the Commission's approach to interpreting Title VII requirements).

792 See 79 FR at 47288-89. As discussed below, the Commission is adopting a definition of "U.S. person" in Regulation SBSR that cross-references the definition adopted as part of the Cross-Border Adopting Release.

apply Title VII's regulatory reporting and public dissemination requirements in a consistent manner to differing organizational structures that serve similar economic purposes, and thereby avoid creating different regulatory outcomes for differing legal arrangements that raise similar policy considerations and pose similar economic risks to the United States.[793] Therefore, as discussed in the Cross-Border Adopting Release, this territorial application of Title VII requirements extends to the activities of U.S. person conducted through a foreign branch or office[794] and to the activities of a non-U.S. person for which the U.S. person provides a recourse guarantee.[795]

The Commission further notes that Section 15F(f)(1)(A) of the Exchange Act[796] provides that each registered security-based swap dealer and major security-based swap participant "shall make such reports as are required by the Commission, by rule or regulation, regarding the transactions and positions and financial condition of the registered security-based swap dealer or major security-based swap participant."[797]

---

793 See id. at 47344.

794 See id. at 47289.

795 See id. at 47289-90.

796 15 U.S.C. 78o-10(f)(1)(A).

797 In addition, Section 30(c) of the Exchange Act, 15 U.S.C. 78dd(c), authorizes the Commission to apply Title VII to persons transacting a business "without the jurisdiction of the United States" if they contravene rules that the Commission has prescribed as "necessary or appropriate to prevent the evasion of any provision" of Title VII. As the Commission stated in the Cross-Border Adopting Release, Section 30(c) does not require a finding that actual evasion has occurred or is occurring to invoke the Commission's authority to reach activity "without the jurisdiction of the United States" or to limit application of Title VII to security-based swap activity "without the jurisdiction of the United States" only to business that is transacted in a way that is purposefully intended to evade Title VII. See 79 FR at 47291. The focus of this provision is not whether such rules impose Title VII requirements only on entities engaged in activity that is consciously evasive, but whether the rules are generally "necessary or appropriate" to prevent potential evasion of Title VII. The Commission therefore disagrees with the

Finally, the Commission seeks to minimize the potential for duplicative or conflicting regulations. The Commission recognizes the potential for market participants who engage in cross-border security-based swap activity to be subject to regulation under Regulation SBSR and parallel rules in foreign jurisdictions in which they operate. To address this possibility, the Commission—as described in detail below—is adopting a "substituted compliance" framework. The Commission may issue a substituted compliance determination if it finds that the corresponding requirements of the foreign regulatory system are comparable to the relevant provisions of Regulation SBSR, and are accompanied by an effective supervisory and enforcement program administered by the relevant foreign authorities.[798] The availability of substituted compliance is designed to reduce the likelihood of cross-border market participants being subject to potentially conflicting or duplicative reporting requirements.

B. Definition of "U.S. Person"

In the Regulation SBSR Proposing Release, the Commission proposed to define "U.S. person" as "a natural person that is a U.S. citizen or U.S. resident or a legal person that is organized under the corporate laws of any part of the United States or has its principal place of business in the United States."[799] In the Cross-Border Proposing Release, the Commission introduced a new definition of "U.S. person" that it proposed to use in all Title VII rulemakings to promote consistency and transparency, which differed from the initially proposed definition in

---

commenter who stated that the Commission "should not adopt an extraterritorial regulatory framework premised on the assumption that activities conducted outside the U.S. will be undertaken abroad for the purpose of evasion." Cleary III at 5.

798 See Rule 908(c). See also infra Section XV(E).

799 Rule 900 as initially proposed. See also Regulation SBSR Proposing Release, 75 FR at 75284.

certain respects. Re-proposed Rule 900(pp) would have defined "U.S. person" by cross-referencing proposed Rule 3a71-3(a)(7), which would have defined "U.S. person" as:

(i) any natural person resident in the United States;

(ii) any partnership, corporation, trust, or other legal person organized or incorporated under the laws of the United States or having its principal place of business in the United States; and

(iii) any account (whether discretionary or non-discretionary) of a U.S. person.[800]

The Commission received extensive comment on this proposed definition of "U.S. person" and responded to those comments in the Cross-Border Adopting Release.[801]

The Commission adopted a definition of "U.S. person" in the Cross-Border Adopting Release as Rule 3a71-3(a)(4) under the Exchange Act, which reflects a territorial approach to the application of Title VII.[802] The Commission believes that using the same definition of "U.S. person" in multiple Title VII rules could benefit market participants by eliminating complexity that might result from the use of different definitions for different Title VII rules. Accordingly, final Rule 900(ss) of Regulation SBSR defines "U.S. person" to have the same meaning as in Rule 3a71-3(a)(4). Rule 3a71-3(a)(4)(i) defines "U.S. person" as: (1) a natural person resident in the United States;[803] (2) a partnership, corporation, trust, investment vehicle, or other legal person organized, incorporated, or established under the laws of the United States or having its

---

800 See Cross-Border Proposing Release, 78 FR at 31207.

801 See 79 FR at 47303-13. These comments focused on the proposed definition generally and did not address the application of the definition to Regulation SBSR.

802 See Cross-Border Adopting Release, 79 FR at 47308, note 255.

803 Rule 3a71-3(a)(5) under the Exchange Act, 17 CFR 240.3a71-3(a)(4), defines "United States" as the United States of America, its territories and possessions, any State of the United States, and the District of Columbia.

principal place of business[804] in the United States; (3) an account (whether discretionary or non-discretionary) of a U.S. person; or (4) any estate of a decedent who was a resident of the United States at the time of death. As discussed in the Cross-Border Adopting Release, the Commission believes that a definition of "U.S. person" that focused solely on whether a legal person is organized, incorporated, or established in the United States could encourage some entities to move their place of incorporation to a non-U.S. jurisdiction to avoid complying with Title VII, while maintaining their principal place of business in the United States.[805]

By incorporating Rule 3a71-3(a)(4) by reference, Regulation SBSR also incorporates subparagraph (iv) of Rule 3a71-3(a)(4), which allows a person to rely on a counterparty's representation that the counterparty is not a U.S. person, unless such person knows or has reason to know that the representation is inaccurate. As explained in the Cross-Border Adopting Release,[806] Rule 3a71-3(a)(4)(iv) reflects a constructive knowledge standard for reliance. Under this standard, a counterparty is permitted to rely on a representation, unless such person knows or has reason to know that it is inaccurate. A person would have reason to know the representation

---

804 Rule 3a71-3(a)(4)(ii) under the Exchange Act, 17 CFR 240.3a71-3(a)(4)(ii), defines "principal place of business" as the location from which the officers, partners, or managers of the legal person primarily direct, control, and coordinate the activities of the legal person. With respect to an externally managed investment vehicle, this location is the office from which the manager of the vehicle primarily directs, controls, and coordinates the investment activities of the vehicle. See also Cross-Border Adopting Release, 79 FR at 47308 (discussing the Commission's rationale for adopting the "principal place of business" test).

805 See id., 79 FR at 47309, note 262 ("The final definition of 'principal place of business' will help ensure that entities do not restructure their business by incorporating under foreign law while continuing to direct, control, and coordinate the operations of the entity from within the United States, which would enable them to maintain a significant portion of their financial and legal relationships within the United States while avoiding application of Title VII requirements to such transactions").

806 See id. at 47313.

is not accurate if a reasonable person should know, under all of the facts of which the person is aware, that it is not accurate.[807] Expressly permitting market participants to rely on such representations in the "U.S. person" definition should help facilitate the determination of which side to a security-based swap is the reporting side and mitigate challenges that could arise in determining a counterparty's U.S.-person status under the final rule.[808] It permits the party best positioned to make this determination to perform an analysis of its own U.S.-person status and convey, in the form of a representation, the results of that analysis to its counterparty. Such representations should help reduce the potential for inconsistent classification and treatment of a person by its counterparties and promote uniform application of Title VII.[809]

Rule 3a71-3(a)(4)(iii)—and thus Regulation SBSR—provides that the term "U.S. person" does not include the International Monetary Fund, the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the United Nations; their agencies and pension plans; and any other similar international organizations and their agencies and pension plans. Therefore, a security-based swap involving any such institution, for that fact alone, will not be subject to regulatory reporting

---

807 To the extent that a person has knowledge of facts that could lead a reasonable person to believe that a counterparty may not be a U.S. person under the definition, it might need to conduct additional diligence before relying on the representation. See id. at 47313, note 302.

808 As discussed below, under Rule 908(a), the U.S.-person status of the counterparties to a security-based swap is one factor in determining whether the security-based swap is subject to Regulation SBSR. If a security-based swap is subject to Regulation SBSR, the U.S.-person status of the counterparties may influence the determination of the reporting side under Rule 901(a)(2)(ii). See supra Section V(B).

809 The final rule permitting reliance on representations with respect to a counterparty's U.S.-person status applies only to the definition of "U.S. person" as used in Regulation SBSR and does not apply to any determination of a person's U.S.-person status under any other provision of the federal securities laws, including Commission rules, regulations, interpretations, or guidance.

or public dissemination under Regulation SBSR.[810] However, as discussed in Section XVI(A), infra, a security-based swap transaction involving such an institution could be subject to regulatory reporting and/or public dissemination, depending on the domicile and registration status of the other side of the transaction.

Finally, similar to the approach taken by the Commission in the Cross-Border Adopting Release for purposes of the de minimis calculation,[811] a change in a counterparty's U.S.-person status after a security-based swap is executed would not affect the original transaction's treatment under Regulation SBSR. However, if that person were to enter into another security-based swap following its change in status, any duties required by Regulation SBSR would be determined according to the new status of that person at the time of the second security-based swap.

C. Scope of Security-Based Swap Transactions Covered by Requirements of Regulation SBSR—Rule 908(a)

1. Transactions Involving a Direct Counterparty That Is a U.S. Person

Under both the proposal and re-proposal, any security-based swap that had a direct counterparty that is a U.S. person would have been subject to both regulatory reporting and public dissemination, regardless of the registration status or domicile of any counterparty on the other side of the transaction. Commenters generally did not object to this aspect of the proposal and the re-proposal.[812]

---

810 See infra Section XV(C) (discussing when a security-based swap is subject to regulatory reporting and public dissemination).

811 See 79 FR at 47313, note 300.

812 Some commenters supported a cross-border jurisdictional regime that would apply security-based swap regulation on the basis of whether a direct counterparty to a security-based swap is a U.S. person. See, e.g., JFMC Letter at 5; JSDA Letter at 3-4; AFR Letter at 4, 13-14. These commenters did not, however, raise this suggestion specifically in the

Final Rule 908(a)(1)(i) provides, in relevant part, that a security-based swap shall be subject to regulatory reporting and public dissemination if "[t]here is a direct . . . counterparty that is a U.S. person on either or both sides of the transaction." Thus, any security-based swap that has a direct counterparty that is a U.S. person is subject to both regulatory reporting and public dissemination, regardless of the registration status or domicile of any counterparty on the other side of the transaction. This determination is consistent with the territorial application of Title VII described above, because any security-based swap that has a U.S.-person direct counterparty exists at least in part within the United States. One purpose of the rule is to allow the Commission and other relevant authorities to access, for regulatory and supervisory purposes, a record of each such transaction. A second purpose of the rule is to carry out the Title VII mandate for public dissemination of security-based swap transactions. The transparency benefits of requiring public dissemination of security-based swaps involving at least one U.S.-person direct counterparty would inure to other U.S. persons and the U.S. market generally, as other participants in the U.S. market are likely to transact in the same or related instruments.

2. Transactions Conducted Through a Foreign Branch or Office

Rule 908(a), as initially proposed, treated foreign branches and offices of U.S. persons as integral parts of the U.S. person itself.[813] Therefore, Rule 908(a), as initially proposed, would not have treated a security-based swap transaction executed by or through a foreign branch or office of a U.S. person any differently than any other transaction executed by the U.S. person.

---

context of Regulation SBSR. See also IIB Letter at 11 (observing that a status-based test for jurisdictional application would be more appropriate than a territorial approach based on the location of conduct). The Cross-Border Adopting Release addressed these comments. See 79 FR at 47302-06.

813 See Regulation SBSR Proposing Release, 75 FR at 75240 ("Because a branch or office has no separate legal existence under corporate law, the branch or office would be an integral part of the U.S. person itself").

In the Cross-Border Proposing Release, the Commission revised its approach to transactions conducted through a foreign branch. Although all transactions conducted through a foreign branch or office would have been subject to regulatory reporting, re-proposed Rule 908(a)(2)(iii) would have provided an exception to public dissemination for transactions conducted through a foreign branch when the other side is a non-U.S. person who is not a security-based swap dealer.[814] In proposing this exception to public dissemination for such transactions conducted through a foreign branch, the Commission stated that it was "concerned that, if it did not take this approach, non-U.S. market participants might avoid entering into security-based swaps with the foreign branches of U.S. banks so as to avoid their security-based swaps being publicly disseminated."[815] However, Rule 908(a)(2) would have subjected a transaction conducted through a foreign branch to public dissemination if there was, on the other side, a U.S. person (including a foreign branch)[816] or a security-based swap dealer.[817]

One commenter expressed the view that foreign branches should be treated the same as non-U.S.-person security-based swap dealers for purposes of public dissemination, and that security-based swaps between two non-U.S. persons, between a non-U.S. person and a foreign

814 In the Cross-Border Proposing Release, the term "transaction conducted through a foreign branch" was defined in re-proposed Rule 900(hh) to cross-reference the definition of that term in proposed Rule 3a71-3(a)(4) under the Exchange Act, and the term "foreign branch" was defined in re-proposed Rule 900(n) to cross-reference the definition of foreign branch in proposed Rule 3a71-3(a)(1). In the Cross-Border Adopting Release, the Commission adopted the term "foreign branch" as proposed and adopted the term "transaction conducted through a foreign branch" with certain modifications. See 79 FR at 47322.

815 Cross-Border Proposing Release, 78 FR at 31063.

816 See re-proposed Rule 908(a)(2)(ii).

817 See re-proposed Rule 908(a)(2)(iv).

branch, and between two foreign branches should not be subject to public dissemination.[818] Another commenter, however, stated that "it should be expected that most jurisdictions would seek to apply their rules to transactions between two of their own domiciled persons, despite some of the activity being conducted abroad."[819] A third commenter recommended that the exception to public dissemination for foreign branches be eliminated, so that security-based swaps between a foreign branch and any non-U.S. person would be subject to public dissemination.[820]

As noted above, the Commission is adopting the requirement that any security-based swap transaction having a direct counterparty that is a U.S. person, including a security-based swap conducted through a foreign branch, shall be subject to regulatory reporting. The Commission has determined not to adopt the proposed exception from public dissemination for certain transactions conducted through a foreign branch. Thus, under Rule 908(a)(1)(i), as adopted, any security-based swap transaction conducted through a foreign branch is subject to both regulatory reporting and public dissemination. Under the territorial approach to the application of Title VII requirements discussed above, a foreign branch has no separate existence from the U.S. person itself. Therefore, any security-based swap transaction conducted through a foreign branch is a security-based swap executed by the U.S. person itself, and any security-

818 See SIFMA/FIA/Roundtable Letter at A-43.

819 IIB Letter at 9. The commenter also noted that "EMIR [the European Markets Infrastructure Regulation] would apply to transactions between the U.S. branches of two entities established in the EU," id., and thus appeared to suggest that U.S. regulation should apply to transactions between two foreign branches of U.S. persons.

820 See Better Markets IV at 23.

based swap executed by a U.S. person exists at least in part within the United States.[821] The Title VII requirements for regulatory reporting and public dissemination apply to all security-based swap transactions that exist in whole or in part within the United States, unless an exception applies.

Upon further consideration, the Commission believes that the exception from public dissemination for foreign branches in Rule 908(a), as re-proposed, is not warranted. Granting an exception to public dissemination for certain transactions conducted through a foreign branch could have created incentives for some U.S. persons to utilize foreign branches to evade Title VII's public dissemination requirements.[822] This could be the case particularly in a foreign jurisdiction that does not apply rules for public dissemination to all or some transactions conducted through foreign branches operating within that jurisdiction. Thus, the Commission disagrees with the commenter who expressed the view that foreign branches should be treated the same as non-U.S. person security-based swap dealers for purposes of public dissemination,[823]

---

821 See Cross-Border Adopting Release, 79 FR at 47289 (describing the application of the security-based swap dealer de minimis threshold with respect to foreign branches or offices of U.S. persons). The Commission notes that a transaction conducted by a U.S. person through any other office that does not have a separate legal identity from the U.S. person, even if such office does not meet the definition of "foreign branch" in Rule 3a71-3(a)(2) of the Exchange Act, also is a transaction conducted by the U.S. person directly, and thus is subject to regulatory reporting and public dissemination under Rule 908(a)(1)(i), as adopted.

822 Under Rule 908(a)(2)(iii), as re-proposed, public dissemination would have applied to a security-based swap between a U.S. person direct counterparty and a non-U.S. person (other than a security-based swap dealer) unless the U.S. person conducted the transaction through a foreign branch. Thus, the U.S. person could have directed a non-U.S.-person counterparty to interact only with its foreign branch staff, which would have made the transaction eligible for the exception provided by re-proposed Rule 908(a)(2)(iii).

823 As discussed in Section XV(C)(6), infra, if a transaction involving a registered security-based swap dealer or registered major security-based swap participant does not fall within

and that security-based swaps between two non-U.S. persons, between a non-U.S. person and a foreign branch, and between two foreign branches should not be subject to public dissemination.[824]

3. Transactions Guaranteed by a U.S. Person

Regulation SBSR, as initially proposed, did not impose reporting requirements based on whether a U.S. person acts as a guarantor of a security-based swap. As re-proposed, however, Rule 908(a)(1)(ii) would have required regulatory reporting of any security-based swap that had a U.S.-person guarantor, even when no direct counterparty was a U.S. person.[825] In addition, Rule 908(a)(2), as re-proposed, would have required public dissemination of some, but not all, transactions having a U.S.-person indirect counterparty. Re-proposed Rule 908(a)(2)(ii) would have provided, in relevant part, that a security-based swap is subject to public dissemination if there is an indirect counterparty that is a U.S. person on each side of the transaction.[826] Re-proposed Rule 908(a)(2)(iv) would have provided, in relevant part, that a transaction where one side includes a U.S.-person (including an indirect counterparty that is a U.S. person) and the other side includes a non-U.S. person that is a security-based swap dealer would be subject to public dissemination. However, a transaction would have been excepted from public

---

Rule 908(a)(1), Rule 908(a)(2), as adopted, subjects that transaction to regulatory reporting but not public dissemination.

824 See SIFMA/FIA/Roundtable Letter at A-43.

825 Also in the Cross-Border Proposing Release, the Commission proposed new terms "direct counterparty" and "indirect counterparty" to distinguish the primary obligor on the security-based swap from the person who guarantees the primary obligor's performance, respectively. The Commission also proposed the term "side" to refer to the direct counterparty and any guarantor of the direct counterparty. See 78 FR at 31211.

826 The Commission noted in the Cross-Border Proposing Release that, where U.S. persons have an interest on both sides of a transaction, even if indirectly, the transaction generally should be subject to Title VII's public dissemination requirement. See 78 FR at 31062.

dissemination if one side consisted of a non-U.S.-person direct counterparty and a U.S.-person guarantor, where neither is a security-based swap dealer or major security-based swap participant, and the other side includes no counterparty that is a U.S. person, security-based swap dealer, or major security-based swap participant (a "covered cross-border transaction").[827]

Commenters generally did not object to the Commission's proposal to subject transactions between direct counterparties who are U.S. persons to regulatory reporting or public dissemination. However, commenters expressed mixed views about extending regulatory reporting and public dissemination requirements to transactions involving U.S.-person guarantors.[828] One of these commenters stated that a guarantee of a security-based swap transaction by a U.S. person should not affect whether the transaction is subject to regulatory reporting or public dissemination, because there is too tenuous a nexus to justify applying Regulation SBSR on the basis of the guarantee alone.[829] Another commenter recommended that a security-based swap between two non-U.S. persons be subject to Commission regulation only where the transaction is "guaranteed by a U.S. person for a significant value."[830] A third commenter, however, recommended that the Commission apply Title VII rules to transactions in which the risk flows back to a U.S. entity, including transactions involving guaranteed foreign subsidiaries and branches of U.S. entities.[831]

---

827 As used in this release, a "covered cross-border transaction" refers to a transaction that meets the description above and will not be submitted to clearing at a registered clearing agency having its principal place of business in the United States.

828 See SIFMA/FIA/Roundtable Letter at A-41; ESMA Letter at 3; AFR Letter at 4, 13-14.

829 See SIFMA/FIA/Roundtable Letter at A-41.

830 ESMA Letter at 3.

831 See AFR Letter at 4, 13-14 (noting that the geographic location of the entities ultimately responsible for security-based swap liabilities should determine the application of the Commission's rules implementing the Dodd-Frank Act). Another commenter stated that

The Commission is adopting, as re-proposed, in Rule 908(a)(1)(ii) the requirement that any transaction involving a U.S.-person guarantor is subject to regulatory reporting. The Commission has determined to continue to consider whether to carve out covered cross-border transactions from public dissemination. Thus, Rule 908(a)(1)(i), as adopted, requires public dissemination of all security-based swap transactions having a U.S.-person guarantor.[832] This approach is consistent with the territorial approach to applying Title VII requirements, described above. A security-based swap with a U.S.-person indirect counterparty is economically equivalent to a security-based swap with a U.S.-person direct counterparty, and both kinds of security-based swaps exist, at least in part, within the United States. As the Commission observed in the Cross-Border Adopting Release, the presence of a U.S. guarantor facilitates the activity of the non-U.S. person who is guaranteed and, as a result, the security-based swap activity of the non-U.S. person cannot reasonably be isolated from the U.S. person's activity in providing the guarantee.[833] The financial resources of the U.S.-person guarantor could be called upon to satisfy the contract if the non-U.S. person fails to meet its obligations. Thus, the

---

the proposed definition of "indirect counterparty" in Regulation SBSR implies that an indirect counterparty can cause a trade to be subject to reporting even in cases where the direct counterparties to the trade would not lead to the conclusion that the trade is reportable. The commenter recommended that the Commission amend the definition of "indirect counterparty" to make it clear that its scope is limited to U.S.-person guarantors and not all guarantors, to be consistent with the intent demonstrated by the Commission in the preamble where reference is made to U.S.-person guarantors. See ISDA IV at 4. Although the Commission has not amended the definition of "indirect counterparty" in this manner, such an amendment is not necessary because Rule 908(a)(i), as adopted, effectively reaches the same result. Rule 908(a)(i) provides that a security-based swap will be subject to regulatory reporting and public dissemination if there is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction.

832 As discussed below, compliance with Rule 908(a)(1)(i) is not required until the Commission establishes a compliance date for this provision.

833 See 79 FR at 47289 (discussing dealing transactions of non-U.S. persons that are subject to recourse guarantees by their U.S. affiliates).

extension of a guarantee is economically equivalent to a transaction entered into directly by the U.S.-person guarantor. Accordingly, Rule 908(a)(1)(i), as adopted, provides that a security-based swap shall be subject to regulatory reporting and public dissemination if "[t]here is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction" (emphasis added).The Commission disagrees with the commenter who stated that a guarantee of a security-based swap transaction by a U.S. person should not affect whether the transaction is subject to regulatory reporting or public dissemination, because there is too tenuous a nexus to justify applying Regulation SBSR on the basis of the guarantee alone.[834] Under the territorial approach described above, any security-based swap guaranteed by a U.S. person exists at least in part within the United States, which triggers the application of Title VII requirements. The Commission believes that this is true regardless of whether a particular guarantee is "for a significant value."[835] Furthermore, if the Commission does not require regulatory reporting of security-based swaps that are guaranteed by U.S. persons—in addition to security-based swaps having a U.S.-person direct counterparty—the Commission and other relevant authorities could be less likely to detect potential market abuse or the build-up of potentially significant risks within individual firms or groups or more widespread systemic risks to the U.S. financial system.

The Commission anticipates seeking additional comment on whether or not to except covered cross-border transactions from public dissemination in the future. Furthermore, as discussed in the proposed compliance schedule for Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR set forth in the Regulation SBSR Proposed Amendments Release, the Commission is proposing to defer the compliance date for Rule 908(a)(1)(i) with respect to the

---

834 See SIFMA/FIA/Roundtable Letter at A-41.

835 See ESMA Letter at 3.

public dissemination of covered cross-border transactions until such time as the Commission has received and considered comment on such an exception. Thus, although covered cross-border transactions are subject to public dissemination under Rule 908(a)(1)(i), as adopted, there would be no public dissemination of any such transaction until the Commission considers whether these transactions should be excepted from public dissemination.

4. Transactions Accepted for Clearing by a U.S. Clearing Agency

Re-proposed Rules 908(a)(1)(iv) and 908(a)(2)(v) would have required regulatory reporting and public dissemination, respectively, of security-based swaps that are "cleared through a clearing agency having its principal place of business in the United States." One commenter agreed that "Dodd-Frank's reporting requirements should apply to any transaction that . . . was cleared through a registered clearing organization having its principal place of business in the U.S."[836] Two other commenters objected.[837] One of these commenters observed that Regulation SBSR could require regulatory reporting and public dissemination of transaction information before the transaction is submitted for clearing; as a result, circumstances could arise where the sides would not know whether a particular security-based swap is subject to regulatory reporting and public dissemination until after reporting deadlines have passed.[838] The other commenter argued that the proposed requirement might discourage market participants from clearing transactions in the United States, which would be contrary to the objective of reducing systemic risk.[839] Another commenter argued that a transaction between two non-U.S. persons that is cleared through a clearing agency having its principal place of business in the United

836 Id. at 4.

837 See CME II at 5; SIFMA/FIA/Roundtable Letter at A-42.

838 See CME II at 5.

839 See SIFMA/FIA/Roundtable Letter at A-42.

States should not be subject to public dissemination, "although the clearing agency can provide information for regulatory purposes."[840]

The Commission is adopting Rule 908(a)(1)(ii) with two modifications. The rule, as adopted, provides that a security-based swap shall be subject to regulatory reporting and public dissemination if "[t]he security-based swap is accepted for clearing by a clearing agency having its principal place of business in the United States." Rule 908(a)(1)(ii), as adopted, is consistent with the territorial approach discussed above. Just as a security-based swap to which a U.S. person is a direct or indirect counterparty exists, at least in part, within the United States, a security-based swap that is accepted for clearing by a clearing agency having its principal place of business in the United States also exists, at least in part, within the United States. Such acceptance creates ongoing obligations that are borne by a U.S. person and thus are properly viewed as existing within the United States.[841]

The Commission acknowledges the concerns of the commenter who observed that Regulation SBSR, as re-proposed, could have required regulatory reporting and public dissemination of transaction information before the transaction is submitted for clearing.[842] Currently, clearing in the security-based swap market is voluntary. Therefore, counterparties—if they decide to clear a transaction at all—might not submit the transaction to a clearing agency until some time after it is executed. The final rule reflects the Commission's view that, if a

---

840 ISDA/SIFMA I at 19. The Regulation SBSR Proposed Amendments Release addresses the issue of whether registered clearing agencies should be required to report security-based swap transaction information to a registered SDR.

841 See Cross-Border Adopting Release, 79 FR at 47302-03, note 186 (explaining that security-based swap activity that "results in a transaction involving a U.S. counterparty creates ongoing obligations that are borne by a U.S. person, and thus is properly viewed as occurring within the United States").

842 See CME II at 5.

security-based swap is subject to regulatory reporting and public dissemination solely because of Rule 908(a)(1)(ii),[843] the duty to report the trade is not triggered by the execution of the security-based swap but rather by the registered clearing agency's acceptance of the transaction for clearing.[844] The Commission believes that it would not be appropriate to link the reporting requirement to the time of execution, because the registered clearing agency's acceptance of the transaction for clearing might not take place until several days after the time of execution.

The Commission disagrees with the commenter who argued that a transaction between two non-U.S. persons that is cleared through a clearing agency having its principal place of business in the United States should not be subject to public dissemination, "although the clearing agency can provide information for regulatory purposes."[845] The Commission believes that such transactions—subject to the modifications to the rule text noted above—should be subject to both regulatory reporting and public dissemination and therefore is not adopting the this commenter's recommendation. For the reasons described above, the Commission believes that such transactions exist at least in part within the United States; therefore, Title VII's requirements for both regulatory reporting and public dissemination properly apply to such transactions. This approach will permit the Commission and other relevant authorities the ability to observe in a registered SDR all of the alpha transactions that have been accepted by a

---

843 A transaction also could be subject to regulatory reporting and public dissemination because it meets the first prong of Rule 908(a)(1): it could have a U.S. person on either or both sides of the transaction. Such a transaction must be reported within 24 hours after the time of execution, regardless of whether the transaction is accepted for clearing. See Rule 901(j).

844 See supra Sections II(A)(2)(a) and II(B)(2) (explaining that Rule 901(j) provides that the reporting timeframes applicable to Rules 901(c) and 901(d) are triggered by acceptance for clearing, not the time of execution, if a security-based swap is subject to regulatory reporting and public dissemination solely by operation of Rule 908(a)(1)(ii)).

845 ISDA/SIFMA I at 19.

registered clearing agency having its principal place of business in the United States and to carry out oversight of security-based swaps that exist at least in part within the United States. Furthermore, the Commission believes that public dissemination of such transactions will have value to participants in the U.S. security-based swap market, who are likely to trade the same or similar products, as these products have been made eligible for clearing by a registered clearing agency having its principal place of business in the United States.[846]

Furthermore, the Commission disagrees with the commenter who argued that requiring regulatory reporting and public dissemination of transactions cleared through a U.S. clearing agency is likely to discourage market participants from clearing transactions in the United States.[847] The Commission questions whether the commenters' assertion would in fact come to pass. Market participants are likely to consider multiple factors when deciding whether and where to clear a security-based swap. These factors could include the cost of clearing, the types of products that can be cleared, the safeguards that clearing agencies put in place for customer funds, and clearing agency policies on netting and margin. Commenters offered no support for the assertion that the application of regulatory reporting and public dissemination requirements

---

846 Another commenter argued that, if the Commission applied Regulation SBSR to security-based swaps involving non-U.S. counterparties that nevertheless are cleared through a clearing agency having its principal place of business in the United States, the Commission could require reporting of such transactions to a registered SDR "without exercising further jurisdiction over" the transaction. Société Générale Letter at 12. The commenter believed that "[t]his solution would provide the Commission and U.S. market participants with information about swaps cleared in the United States without conflicting with foreign regulatory schemes." Id. The Commission's decision to require such transactions to be reported and publicly disseminated pursuant to Regulation SBSR does not necessarily indicate that they will be subjected to other requirements of Title VII. The Commission intends to address the scope of each of those requirements, including their applicability to the types of transactions identified by this commenter, in subsequent rulemakings.

847 See SIFMA/FIA/Roundtable Letter at A-42.

to transactions that are accepted for clearing by a U.S. clearing agency would be a deciding or even a significant factor in whether to clear or the choice of clearing agency. Even if this assertion were true, however, the Commission believes that it is appropriate, for the reasons discussed above, to subject these transactions to regulatory reporting and public dissemination.

Finally, the Commission recognizes that the reporting hierarchy in Rule 901(a)(2)(ii), as adopted, does not assign reporting obligations for two kinds of cross-border transaction: (1) a transaction where there is no U.S. person, registered security-based swap dealer, or registered major security-based swap participant on either side; and (2) a transaction where there is no registered security-based swap dealer or registered major security-based swap participant on either side and there is a U.S. person on only one side. If such a transaction is accepted for clearing by a registered clearing agency having its principal place of business in the United States, neither side—under Regulation SBSR as adopted by the Commission—is required to report the transaction to a registered SDR. However, as described in Section V(B), supra, the Commission anticipates soliciting further comment on how Regulation SBSR should be applied to transactions involving unregistered non-U.S. persons, including how reporting duties should be assigned for the two kinds of transaction noted above.

5. Transactions Involving a Registered Security-Based Swap Dealer or Registered Major Security-Based Swap Participant That Is Not a U.S. Person

Under re-proposed Rule 908(a)(1)(iii), a security-based swap would have been subject to regulatory reporting if there is a direct or indirect counterparty that is a security-based swap dealer or major security-based swap participant on either side of the transaction, regardless of the counterparties' place of domicile and regardless of the place of execution of the transaction. Under Rule 908(a), as initially proposed, a counterparty's status as a security-based swap dealer or major security-based swap participant would not by itself have triggered reporting obligations for a particular security-based swap.[848]

One commenter recommended expanding the public dissemination requirement to include security-based swaps that occur outside the United States between a non-U.S. person security-based swap dealer and a non-U.S. person that is not guaranteed by a U.S. person,[849] and between two non-U.S. person security-based swap dealers.[850]

Rule 908(a)(2), as adopted, provides: "A security-based swap that is not included within paragraph (a)(1) of this section shall be subject to regulatory reporting but not public dissemination if there is a direct or indirect counterparty on either or both sides of the transaction that is a registered security-based swap dealer or a registered major security-based swap participant."[851] Thus, a security-based swap between a non-U.S. person registered security-based swap dealer or registered major security-based swap participant and another non-U.S. person (which could include another non-U.S. person registered security-based swap dealer or registered major security-based swap participant), and where neither direct counterparty is guaranteed by a U.S. person, would be subject to regulatory reporting but not public dissemination. This treatment of security-based swaps involving non-U.S. person registered security-based swap dealers and non-U.S. person registered major security-based swap

---

848 See proposed Rule 908(a); Regulation SBSR Proposing Release, 75 FR at 75239-40.

849 See Better Markets IV at 23.

850 See id. at 24.

851 A security-based swap involving a U.S.-person that is registered as a security-based swap dealer or major security-based swap participant is included in Rule 908(a)(1) and is thus subject to both regulatory reporting and public dissemination. A security-based swap between a non-U.S. person that is registered as a security-based swap dealer or major security-based swap participant and a U.S. person (including a foreign branch or office) also is included in Rule 908(a)(1).

participants is generally consistent with re-proposed Rule 908(a); the language of final Rule 908(a)(2) is designed to clarify that outcome.[852]

The Commission is not at this time taking the view that a security-based swap involving a registered security-based swap dealer or registered major security-based swap participant, for that reason alone, exists within the United States. Therefore, the Commission is not subjecting any transactions involving a non-U.S.-person registered security-based swap dealer or registered major security-based swap participant, for its registration status alone, to any requirement under Regulation SBSR based on a territorial application of Title VII. However, the Commission is requiring non-U.S.-person registered security-based swap dealers and registered major security-based swap participants to report their security-based swap transactions pursuant to Rule 908(a)(2).[853] Requiring reporting to a registered SDR of all transactions entered into by registered security-based swap dealers and registered major security-based swap participants will provide the Commission and other relevant authorities with important information to help with the assessment of their positions and financial condition.[854] Such information could in turn assist the Commission and other relevant authorities in assessing and addressing potential systemic

---

852 Rule 908(a)(1)(iii), as re-proposed, would have required regulatory reporting of a security-based swap having a direct or indirect counterparty that is a registered security-based swap dealer or registered major security-based swap participant on either side of the transaction. However, Rule 908(a)(2), as re-proposed, did not list the existence of a registered security-based swap dealer or registered major security-based swap participant on either side of the transaction, for that reason alone, as triggering public dissemination.

853 See Section 15F(f)(1)(A) of the Exchange Act, 15 U.S.C. 78o-10(f)(1)(A) (providing that each registered security-based swap dealer and major security-based swap participant "shall make such reports as are required by the Commission, by rule or regulation, regarding the transactions and positions and financial condition of the registered security-based swap dealer or major security-based swap participant").

854 In the Cross-Border Proposing Release, the Commission noted its longstanding view that an entity that has registered with the Commission subjects itself to the entire regulatory system governing such regulated entities. See 78 FR at 30986.

risks caused by these security-based swap positions, or in detecting insider trading or other market abuse.

The Commission notes that a non-U.S. person that is registered as a security-based swap dealer or major security-based swap participant, when reporting a transaction that falls within Rule 908(a)(2), must comply with the policies and procedures of the registered SDR regarding how to flag the transaction as not subject to public dissemination. The Commission would not view a registered SDR as acting inconsistent with Rule 902 for publicly disseminating a security-based swap that falls within Rule 908(a)(2) if the reporting side had failed to appropriately flag the transaction.

6. No Final Rule Regarding Transactions Conducted Within the United States

Under re-proposed Rule 908(a)(1)(i), a security-based swap would have been subject to regulatory reporting if it was a transaction conducted within the United States.[855] Re-proposed Rule 908(a)(1)(i) preserved the principle—but not the specific language—from the initial proposal that a security-based swap would be subject to regulatory reporting if it is executed in the United States.[856] When the Commission re-proposed Rule 908(a)(1)(i) in the Cross-Border Proposing Release, the Commission expressed concern that the language in the Regulation SBSR

855 A security-based swap would be a "transaction conducted within the United States" if it is solicited, negotiated, executed, or booked within the United States, by or on behalf of either counterparty to the transaction, regardless of the location, domicile, or residence status of either counterparty to the transaction. See proposed Rule 240.3a71-3(a)(5) under the Exchange Act; Cross-Border Proposing Release, 78 FR at 31297; re-proposed Rule 900(ii). The word "counterparty" as used within this term would have the same meaning as "direct counterparty" in re-proposed Rule 900(j) of Regulation SBSR. See Cross-Border Proposing Release, 78 FR at 31061.

856 Rule 908(a), as initially proposed, would have required regulatory reporting of any security-based swap that is "executed in the United States or through any means of interstate commerce." See Regulation SBSR Proposing Release, 75 FR at 75287.

Proposing Release could have required a security-based swap to be reported if it had only the slightest connection with the United States.[857]

Re-proposed Rules 908(a)(1)(i) and 908(a)(2)(i) would have subjected a security-based swap transaction to Regulation SBSR's regulatory reporting and public dissemination requirements, respectively, if the security-based swap was a "transaction conducted within the United States." Commenters expressed divergent views regarding this provision[858] and, after careful consideration, the Commission has decided not to adopt re-proposed Rule 908(a)(1)(i) or 908(a)(2)(i) at this time. As discussed above, the Commission anticipates seeking additional public comment on whether and, if so, how regulatory reporting and public dissemination requirements should be applied to transactions involving non-U.S. persons when they engage in conduct within the United States.[859]

D. Limitations on Counterparty Reporting Obligations—Rule 908(b)

As-proposed, Rule 908(b) would have provided that, notwithstanding any other provision of Regulation SBSR, a direct or indirect counterparty to a security-based swap would not incur any obligation under Regulation SBSR unless the counterparty is:

(1) a U.S. person;

---

857 See 78 FR at 31061.

858 See ABA Letter at 3; Citadel Letter at 1-2; Cleary III at 28; IAA Letter at 6; IIB Letter at 9; SIFMA/FIA/Roundtable Letter at A-42; Pearson Letter at 2; FOA Letter at 7-8; JFMC Letter at 4-5; ISDA IV at 18.

859 In addition, the Commission has authority to promulgate rules, including additional regulatory requirements, applicable to persons transacting a business in security-based swaps "without the jurisdiction of the United States" when "necessary or appropriate" to prevent evasion of the provisions of Title VII of the Dodd-Frank Act. The Commission is not necessarily exercising the full extent of its authorities today but will be monitoring for gaps in reporting of swaps outside the United States that could be an evasion of the Commission's rules and regulations. See Section 30(c) of the Exchange Act, 15 U.S.C. 78dd(c).

(2) a security-based swap dealer or major security-based swap participant; or

(3) a counterparty to a transaction conducted within the United States.

The Commission received no comments that specifically addressed re-proposed Rule 908(b).[860]

At this time, the Commission is adopting only the first two prongs of Rule 908(b). Thus, Rule 908(b), as adopted, provides that, notwithstanding any other provision of Regulation SBSR, a person shall not incur any obligation under Regulation SBSR unless it is a U.S. person, a registered security-based swap dealer, or a registered major security-based swap participant. As discussed above, U.S. persons can be subjected to requirements under Title VII because their transactions, whether undertaken directly or indirectly, exist at least in part within the United States. Furthermore, registered security-based swap dealers and registered major security-based swap participants are required to report their security-based swap transactions.[861]

Rule 908(b) is designed to specify the types of persons that will incur duties under Regulation SBSR. If a person does not come within any of the categories enumerated by Rule 908(b), it would not incur any duties under Regulation SBSR. Under Rule 908(b), as adopted, a non-U.S. person incurs no duties under Regulation SBSR unless it is a registered security-based swap dealer or registered major security-based swap participant. The Commission believes that this modification will reduce assessment costs and provide greater legal certainty to counterparties engaging in cross-border security-based swaps. The Commission anticipates soliciting additional public comment on whether regulatory reporting and/or public dissemination requirements should be extended to transactions occurring within the United

[860] However, several commenters argued that specific requirements under Regulation SBSR should not apply to certain kinds of counterparties in certain circumstances. All of these comments are discussed in relation to Rule 908(a) in the section immediately above.

[861] See supra Section XV(C)(5), note 853 and accompanying text.

States between non-U.S. persons and, if so, which non-U.S. persons should incur reporting duties under Regulation SBSR.

E. Substituted Compliance—Rule 908(c)

1. General Considerations

The security-based swap market is global in scope, and relevant authorities around the globe are in the process of adopting security-based swap reporting and public dissemination requirements within their jurisdictions. Once these new requirements are finalized and take effect, market participants that engage in security-based swap transactions involving more than one jurisdiction could be subject to conflicting or duplicative reporting or public dissemination obligations. As initially proposed, Regulation SBSR did not contemplate that the reporting and public dissemination requirements associated with cross-border security-based swaps could be satisfied by complying with the rules of a foreign jurisdiction instead of U.S. rules. Thus, in many cases, counterparties to a security-based swap would have been required to comply with proposed Regulation SBSR even if reporting of a security-based swap also was required under the rules of a foreign jurisdiction.

As discussed in the Cross-Border Proposing Release,[862] a number of commenters urged the Commission to allow compliance with comparable home country requirements to substitute for compliance with the parallel U.S. requirements.[863] In response to those comments and recognizing that other jurisdictions may implement regulatory reporting and public dissemination regimes for security-based swaps that are comparable to the requirements set forth in Title VII

---

862 See 78 FR at 31092.

863 See, e.g., Cleary III at 15-16; Davis Polk I at 7, 11; Davis Polk II at 21-22; Société Générale Letter at 11; CCMR II at 2. See also Cross-Border Adopting Release, 79 FR at 47357-58 (discussing several comments relating to substituted compliance issues generally).

and Regulation SBSR, the Commission re-proposed Rule 908 in the Cross-Border Proposing Release to include a new paragraph (c). Rule 908(c), as re-proposed, would have permitted, under certain conditions, substituted compliance for regulatory reporting and public dissemination requirements relating to security-based swaps. The Commission preliminarily believed that the availability of substituted compliance would reduce the likelihood that market participants would be subject to potentially conflicting or duplicative sets of rules while still meeting the statutory and policy objectives of Title VII. Re-proposed Rule 908(c) would have specified the security-based swaps that would be eligible for substituted compliance and would have established procedures for market participants to request, and for the Commission to issue, substituted compliance orders.

As discussed in detail below, the Commission is adopting Rule 908(c) substantially as re-proposed, with minor modifications also described below. The Commission believes in general that, if a foreign jurisdiction applies a comparable system for the regulatory reporting and public dissemination of security-based swaps, it would be appropriate to consider permitting affected market participants to comply with the foreign requirements to satisfy the comparable requirements of Regulation SBSR. Where the Commission finds that a foreign jurisdiction's reporting and public dissemination requirements are comparable to those implemented by the Commission, Rule 908(c) provides that the Commission may make a substituted compliance determination with respect to such jurisdiction for these requirements. The Commission believes that permitting substituted compliance could reduce the likelihood that market participants would be subject to conflicting or duplicative regulation with respect to a security-based swap transaction.

In adopting Rule 908(c), the Commission is not making any assessment at this time regarding whether any foreign jurisdiction's requirements for regulatory reporting and public dissemination of security-based swaps are comparable to Regulation SBSR. Furthermore, because the analysis of any particular foreign jurisdiction would be very fact specific, it is impractical for the Commission to opine at this time on whether specific aspects of a foreign system would or would not allow the Commission to make a comparability determination. In view of the many technical differences that could exist between the Commission's Title VII rules and parallel requirements in other jurisdictions, the Commission stated in the Cross-Border Proposing Release that "the Commission would endeavor to take a holistic approach in making substituted compliance determinations—that is, we would ultimately focus on regulatory outcomes as a whole with respect to the requirements within the same category rather than a rule-by-rule comparison."[864] The Commission continues to believe that this approach to comparability is appropriate, and intends to focus on regulatory outcomes as a whole when considering whether to make a comparability determination.

2. Substituted Compliance Procedure—Rule 908(c)(2)(i)

Rule 908(c)(2)(i), as re-proposed, would have allowed the Commission, conditionally or unconditionally, by order, to make a substituted compliance determination regarding regulatory reporting and public dissemination with respect to a foreign jurisdiction "if that foreign jurisdiction's requirements for regulatory reporting and public dissemination of security-based swaps are comparable to otherwise applicable requirements" under Regulation SBSR.

A number of commenters endorsed the Commission's proposal to permit substituted

[864] 78 FR at 31085-86.

compliance with Regulation SBSR.[865] One of these commenters noted, for example, that substituted compliance would reduce burdens on businesses in the United States and elsewhere without weakening oversight, thus allowing firms to use funds more efficiently.[866] However, two commenters recommended that the Commission narrow the proposed availability of substituted compliance. One of these commenters stated that the Commission's proposed controls on substituted compliance would be inadequate.[867] The commenter further stated that, although substituted compliance potentially has a legitimate role to play in a cross-border regulatory regime, the greater the scope for substituted compliance, the stricter the controls should be on the ability to substitute foreign rules for U.S. rules.[868] The other commenter stated that the Cross-Border Proposing Release failed to provide an adequate legal or policy justification for allowing substituted compliance.[869] This commenter believed that, rather than using substituted compliance, the Commission should exercise its exemptive authority sparingly and only upon finding an actual conflict exists with a particular foreign regulation.[870]

The Commission has carefully considered these comments and determined to adopt Rule 908(c)(2)(i) as re-proposed, with one modification, as described in Section XV(E)(3), infra. Permitting substituted compliance should reduce the likelihood that market participants face duplicative or contradictory reporting or public dissemination requirements, and thereby

870 See id. at 26.

decrease costs and administrative burdens on market participants without compromising the regulatory goals of Title VII. The requirements for substituted compliance are designed to ensure that the Title VII requirements for regulatory reporting and public dissemination of security-based swaps are being satisfied, albeit through compliance with the rules of a foreign jurisdiction rather than the specific provisions of Regulation SBSR.

3. Security-Based Swaps Eligible for Substituted Compliance—Rule 908(c)(1)

Rule 908(c)(1), as re-proposed, would have provided that compliance with the regulatory reporting and public dissemination requirements in Sections 13(m) and 13A of the Exchange Act, and the rules and regulations thereunder, may be satisfied by compliance with the rules of a foreign jurisdiction that is the subject of a substituted compliance order issued by the Commission, provided that at least one of the direct counterparties to the security-based swap is either a non-U.S. person or a foreign branch, and the transaction is not solicited, negotiated, or executed within the United States. Thus, under re-proposed Rule 908(c)(1), certain kinds of security-based swaps would not have been eligible for substituted compliance even if they were subject to reporting and public dissemination requirements in a foreign jurisdiction.[871] Specifically, a security-based swap between two U.S. persons would not have been eligible for substituted compliance with respect to regulatory reporting and public dissemination, even if the security-based swap was solicited, negotiated, and executed outside the United States.[872]

---

871 If the rules of a foreign jurisdiction did not apply to the security-based swap, there would be no need to consider the possibility of substituted compliance, because there would be no foreign rules that could substitute for the applicable U.S. rules.

872 As noted in the Cross-Border Proposing Release, this assumed that neither U.S. person is acting through a foreign branch. If either or both U.S. persons is acting through a foreign branch, the security-based swap between those U.S. persons would have been eligible for

Furthermore, re-proposed Rule 908(c)(1) would not have allowed for the possibility of substituted compliance with respect to regulatory reporting and public dissemination if the relevant direct counterparty that was either a non-U.S. person or foreign branch (or its agent)—regardless of place of domicile—solicited, negotiated, or executed a security-based swap from within the United States.

The Commission received two comment letters in response to re-proposed Rule 908(c)(1), both of which addressed the proposal to limit substituted compliance availability to security-based swaps that are not solicited, negotiated, or executed in the United States.[873] One of these commenters recommended that the Commission remove this requirement altogether.[874] The other commenter noted that, as a general matter, it is virtually impossible to determine on a trade-by-trade basis whether each specific contact with a counterparty or potential counterparty has some nexus to the United States, and urged the Commission to subject security-based swaps to Title VII regulation solely according to whether counterparties are U.S. persons.[875]

In response to these comments, the Commission has decided to adopt a modified version of Rule 908(c)(1) that does not condition substituted compliance eligibility on the location of execution, negotiation, or solicitation of a particular transaction.[876] Under Rule 908(c)(1), as

---

substituted compliance under Rule 908(c)(1), as re-proposed. See 78 FR at 31093-94, note 1149.

873 See ISDA II at 5; SIFMA/FIA/Roundtable Letter at 3-4. A third commenter expressed the view that any swap involving a U.S. person and a non-U.S. person should be eligible for substituted compliance. See CCMR II at 2-3.

874 See ISDA II at 5.

875 See SIFMA/FIA/Roundtable Letter at 3-4. This commenter did not raise this comment expressly in the context of Rule 908(c)(1), however.

876 Rule 908(c)(1), as adopted, provides: "Compliance with the regulatory reporting and public dissemination requirements in sections 13(m) and 13A of the Act (15 U.S.C. 78m(m) and 78m-1), and the rules and regulations thereunder, may be satisfied by

adopted, a security-based swap is eligible for substituted compliance with respect to regulatory reporting and public dissemination if at least one of the direct counterparties to the security-based swap is either a non-U.S. person or a foreign branch. Thus, Rule 908(c)(1) permits a security-based swap between a U.S. person and the New York branch of a foreign bank (i.e., a non-U.S. person with operations inside the United States) to be eligible for substituted compliance, provided that a substituted compliance order is in effect with respect to the home country of the foreign bank that operates the U.S. branch. The standard in Rule 908(c)(1), as adopted, is consistent with the Commission's decision not to impose, at this time, reporting or public dissemination requirements based solely on whether a transaction is conducted within the United States.

Regarding which security-based swaps are eligible for the possibility of substituted compliance, the Commission believes that, if at least one direct counterparty to a security-based swap is a foreign branch or a non-U.S. person (even if the non-U.S. person is a registered security-based swap dealer or registered major security-based swap participant, or is guaranteed by a U.S. person), the security-based swap should be eligible for consideration for a substituted compliance determination under Regulation SBSR. This approach recognizes that a transaction involving a foreign branch or a non-U.S. person faces the possibility of being subject to reporting requirements in multiple jurisdictions (the United States and another jurisdiction whose rules may govern the transaction). The approach adopted by the Commission of allowing any transaction involving a foreign branch or non-U.S. person to be eligible to be considered for substituted compliance is designed to limit disincentives for non-U.S. persons to transact

---

compliance with the rules of a foreign jurisdiction that is the subject of a Commission order described in paragraph (c)(2) of this section, provided that at least one of the direct counterparties to the security-based swap is either a non-U.S. person or a foreign branch."

security-based swaps with U.S. persons by allowing for the possibility that compliance with the rules of a foreign jurisdiction could be substituted for compliance with the specific provisions of Regulation SBSR when the non-U.S. person transacts with a U.S. person. This approach also would allow for a reasonable minimization of reporting burdens on foreign branches and non-U.S. persons in situations where the local jurisdiction in which they operate does not offer the possibility of substituted compliance.

4. Requests for Substituted Compliance—Rule 908(c)(2)(ii)

Rule 908(c)(2)(ii), as re-proposed, would have established the process for market participants to follow when applying for a substituted compliance determination: "Any person that executes security-based swaps that would, in the absence of a substituted compliance order, be required to be reported pursuant to [Regulation SBSR] may file an application, pursuant to the procedures set forth in § 240.0-13 of this chapter, requesting that the Commission make a substituted compliance determination regarding regulatory reporting and public dissemination with respect to a foreign jurisdiction the rules of which also would require reporting and public dissemination of those security-based swaps. Such application shall include the reasons therefor and such other information as the Commission may request."

A number of commenters recommended that the Commission permit foreign regulators, as well as market participants, to file an application for a substituted compliance determination.[877] Some of these commenters noted that foreign regulatory authorities would be well-positioned to describe their regulatory frameworks and manner of supervision, and, in any

[877] See ABA Letter at 5; ICI II at 11; IIB Letter at 27; IIF Letter at 4; ISDA II at 4; JFMC Letter at 7-8; FOA Letter at 4 (noting that the Commission should begin discussions with the European Commission to establish an agreed approach for the coordinated oversight of the transatlantic security-based swap markets); SIFMA/FIA/Roundtable Letter at A-36.

event, their involvement would be needed to negotiate the memorandum of understanding that the Commission proposed to require as a precondition of granting a substituted compliance order.[878] One commenter also stated that the CFTC's Cross-Border Guidance[879] contemplates accepting applications for substituted compliance from non-U.S. regulators.[880] Two commenters suggested that substituted compliance applications should be submitted by foreign regulatory authorities, rather than individual firms.[881]

The Commission is adopting Rule 908(c)(2)(ii) largely as re-proposed, with a few minor revisions. First, consistent with the adoption of Rule 0-13 in the Cross-Border Adopting Release, the Commission has revised Rule 908(c)(2)(ii) to permit foreign financial regulatory authorities to submit applications for substituted compliance determinations on behalf of market participants subject to their jurisdictions.[882]

---

878 See ICI II at 11; ISDA II at 4. Re-proposed Rule 908(c)(2)(iv), described below, would have required the Commission to enter into a supervisory and enforcement memorandum of understanding or other agreement with the relevant foreign regulator(s) prior to issuing a substituted compliance order covering a foreign jurisdiction.

879 Interpretive Guidance and Policy Statement Regarding Compliance with Certain Swap Regulations, 78 FR at 45292 (July 26, 2013).

880 See ISDA II at 4.

881 See ESMA Letter at 3 (recommending that comparability determinations should be requested at the European Union-level, rather than by individual firms); JSDA Letter at 2. See also Pearson Letter at 3 (recommending that the review of a foreign regime be conducted in cooperation solely with the relevant foreign regulators or legislators, not firms).

882 See 79 FR at 47358 ("We are persuaded that allowing foreign regulators to submit such requests would promote the completeness of requests and promote efficiency in the process for considering such requests, in light of foreign regulators' expertise regarding their domestic regulatory system, including the effectiveness of their compliance and enforcement mechanisms, and to allow for a single point of contact to facilitate the consideration of substituted compliance requests associated with the jurisdiction").

Second, Rule 908(c)(2)(ii), as re-proposed, would have permitted filing by any "person that executes security-based swaps." Read literally, this language in the re-proposed rule could have permitted persons who are not subject to Regulation SBSR to seek a substituted compliance determination. The Commission seeks to limit the scope of persons who can apply for substituted compliance determinations to foreign financial regulators and parties that would be subject to Regulation SBSR, because these persons have the greatest knowledge about the foreign jurisdiction in question. Moreover, in the case of market participants active in that jurisdiction, they will be directly impacted by potentially overlapping rules and thus have the greatest interest in making the strongest case for substituted compliance. Accordingly, Rule 908(c)(2)(ii), as adopted, permits a "party that potentially would comply with requirements under [Regulation SBSR] pursuant to a substituted compliance order,"[883] or the relevant foreign financial regulatory authority or authorities in that jurisdiction,[884] to file an application requesting a substituted compliance determination.[885]

---

883 This could be either a U.S. person or a non-U.S. person that engages in activity in that jurisdiction.

884 This formulation of final Rule 908(c)(2)(ii) closely follows the language of Rule 0-13(a) under the Exchange Act, 17 CFR 240.0-13(a), which provides in relevant part that an application for substituted compliance must be submitted to the Commission "by a party that potentially would comply with requirements under the Exchange Act pursuant to a substituted compliance order, or by the relevant foreign financial regulatory authority or authorities."

885 Thus, the Commission disagrees with the commenters who argued that substituted compliance applications should be submitted only by foreign regulatory authorities, rather than individual firms. See ESMA Letter at 3; JSDA Letter at 2. Although obtaining information from foreign regulatory authorities could be an important aspect of the substituted compliance review, the Commission sees no basis for denying individual firms that might comply with requirements of Regulation SBSR pursuant to a substituted compliance order the ability to request substituted compliance and thereby initiate that review. See Cross-Border Adopting Release, 79 FR at 47358 ("We are not . . . foreclosing the ability of a market participant itself to submit a request that it be able to comply with Exchange Act requirements pursuant to a substituted compliance order").

Third, the Commission has determined not to include the final sentence of re-proposed Rule 908(c)(2)(ii)—"[s]uch application shall include the reasons therefor and such other information as the Commission may request"—in final Rule 908(c)(2)(ii). Rule 0-13(e) under the Exchange Act, as adopted in the Cross-Border Adopting Release, provides detailed requirements regarding the information required to be submitted (e.g., supporting documentation, including information regarding applicable regulatory requirements, compliance monitoring by foreign regulators, and applicable precedent).[886] In light of the cross-reference to Rule 0-13 in final Rule 908(c)(2)(ii), the last sentence of re-proposed Rule 908(c)(2)(ii) is unnecessary and therefore is not included in final Rule 908(c)(2)(ii).

5. Findings Necessary for Substituted Compliance—Rule 908(c)(2)(iii)

Rule 908(c)(2)(iii), as re-proposed, would have provided that, in making a substituted compliance determination with respect to a foreign jurisdiction, the Commission shall take into account such factors as it determines are appropriate, such as the scope and objectives of the relevant foreign regulatory requirements, as well as the effectiveness of the supervisory compliance program administered, and the enforcement authority exercised, by the foreign financial regulatory authority to support oversight of its regulatory reporting and public dissemination system for security-based swaps. Furthermore, Rule 908(c)(2)(iii), as re-proposed, would have provided that the Commission would not make a substituted compliance determination with respect to regulatory reporting and public dissemination unless the Commission found that the relevant foreign regulatory regime provided for the reporting and public dissemination of comparable data elements in a manner and timeframe comparable to

[886] See id. In addition, Rule 0-13(h) requires the Commission to publish in the Federal Register a notice that a complete application has been submitted.

those required by Regulation SBSR.[887] As a prerequisite to any substituted compliance determination, re-proposed Rule 908(c)(2)(iii) also would have required that the Commission have direct electronic access to the security-based swap data held by the trade repository or foreign regulatory authority.[888] Lastly, re-proposed Rule 908(c)(2)(iii) would have required the Commission to find that any trade repository or foreign regulatory authority in the foreign jurisdiction is subject to requirements regarding data collection and maintenance; systems capacity, resiliency, and security; and recordkeeping that are comparable to the requirements imposed on registered SDRs.[889]

The Commission has determined to adopt Rule 908(c)(2)(iii) as re-proposed, subject to two minor changes, one in each of Rules 908(c)(2)(iii)(B) and 908(c)(2)(iii)(D), which are discussed below. Final Rule 908(c)(2)(iii) provides that, in making a substituted compliance determination, the Commission shall take into account such factors that it determines are appropriate, which include but are not limited to the scope and objectives of the relevant foreign regulatory requirements, as well as the effectiveness of the supervisory compliance program administered, and the enforcement authority exercised, by the foreign financial regulatory authority to support oversight of its regulatory reporting and public dissemination system for security-based swaps. The rule further provides that the Commission shall not make such a substituted compliance determination unless it finds that:

(A) The data elements that are required to be reported pursuant to the rules of the foreign jurisdiction are comparable to those required to be reported pursuant to Rule 901;

---

[887] See Cross-Border Proposing Release, 78 FR at 31215.

[888] See id.

[889] See id.

(B) The rules of the foreign jurisdiction require the security-based swap to be reported and publicly disseminated in a manner and a timeframe comparable to those required by Regulation SBSR (or, in the case of transactions that are subject to regulatory reporting but not public dissemination, the rules of the foreign jurisdiction require the security-based swaps to be reported in a manner and timeframe comparable to those required by Regulation SBSR);

(C) The Commission has direct electronic access to the security-based swap data held by a trade repository or foreign regulatory authority to which security-based swaps are reported pursuant to the rules of that foreign jurisdiction; and

(D) Any trade repository or foreign regulatory authority in the foreign jurisdiction that receives and maintains required transaction reports of security-based swaps pursuant to the laws of that foreign jurisdiction is subject to requirements regarding data collection and maintenance; systems capacity, integrity, resiliency, availability, and security; and recordkeeping that are comparable to the requirements imposed on security-based swap data repositories by the Commission's rules and regulations.[890]

Although no commenters discussed the appropriateness of considering the examination and enforcement practices of foreign regulators in making a substituted compliance determination for Regulation SBSR specifically, a number of commenters addressed the general concept of considering actual practices in the foreign jurisdiction as part of the substituted compliance determination. Certain commenters generally supported the retention by the Commission of the authority to decline to make a comparability finding based on the substantive enforcement of foreign regulatory regimes.[891] Two of these commenters noted, however, that

---

[890] See Rule 908(c)(2)(iii)(A)-(D), as adopted, and infra note 910.

[891] See ABA Letter at 5; AFR Letter at 12; Better Markets IV at 3, 29-32; ISDA II at 6.

supervisory practices differ significantly among jurisdictions.[892] One of these commenters stated: "This lack of commonality should not be assumed to be a defect in supervisory standards; common objectives may be reached through differing means."[893] This commenter expressed the general view, however, that "a general, high-level inquiry into the existence of an examination and enforcement process and institutions to support it arguably should inform views about the comparability of outcomes."[894]

The Commission agrees that the examination and enforcement practices of each foreign jurisdiction will need to be evaluated on a case-by-case basis, and anticipates that it will consider whether the regulatory protections provided in that jurisdiction's security-based swap markets are substantially realized through sufficiently vigorous supervision and enforcement. While the Commission believes that common objectives may be reached through differing means, the Commission also believes that compliance with a foreign jurisdiction's rules for reporting and public dissemination of security-based swaps should be a substitute for compliance with the U.S. rules only when the foreign jurisdiction has a reporting and public dissemination regime comparable to that of the United States. This determination must consider actual practices and implementation as well as written laws and regulations of the foreign jurisdiction.

a. Data Element Comparability—Rule 908(c)(2)(iii)(A)

The Commission received several comments regarding the data element comparability determination required by what is now final Rule 908(c)(2)(iii)(A). Two commenters recommended that the Commission determine whether a foreign jurisdiction has comparable

---

892 See FOA Letter at 6; ISDA II at 6.

893 ISDA II at 6.

894 Id.

security-based swap reporting requirements based on a holistic review of that jurisdiction's regulations and the local market environment.[895] Some commenters suggested that the Commission should determine whether the security-based swap reporting framework of a foreign jurisdiction is designed to achieve the G-20 goals of transparency in the derivatives markets.[896]

The Commission is adopting re-proposed Rule 908(c)(2)(iii)(A) without revision. Under the final rule, the foreign jurisdiction must require reporting of data elements comparable to those required under Rule 901 of Regulation SBSR for the Commission to make a comparability determination. If the data elements required by the foreign jurisdiction are not comparable, important information about a security-based swap might not be captured by the foreign trade repository or foreign regulatory authority. This could create gaps or inconsistencies in the information available to the Commission and impair the Commission's ability to monitor the security-based swap market. As noted in Section XV(E)(1), supra, the Commission generally agrees with the commenters who expressed the view that the Commission should take a "holistic" or "outcomes-based" view of another jurisdiction's rules when making a substituted compliance determination, rather than conduct a "line-by-line" or "rule-by-rule" analysis. At

---

895 See JFMC Letter at 7; ISDA II at 8. Other commenters expressed a general preference for a holistic review of a relevant jurisdiction's security-based swap regulatory regime but did not expressly reference Regulation SBSR in this context. See, e.g., SIFMA/FIA/Roundtable Letter at A-37-A-38; Pearson Letter at 3; IIF Letter at 5; ICI II at 11; JFMC Letter at 1; MFA/AIMA Letter at 5 (observing that a line-by-line or rule-by-rule analysis would place a significant burden on the Commission, and potentially result in disjointed regulation); ABA Letter at 5.

896 See ICI II at 12; ISDA II at 8 (noting also that jurisdictions may choose to establish goals and requirements that are ancillary to the G-20 regulatory goals, but these ancillary requirements should not become a barrier to an effective cross-border compliance regime that furthers the G-20 goals). With respect to security-based swap reporting, the "G-20 goals" referenced by these commenters were articulated in the Leaders' Statement at the Pittsburgh Summit (September 24-25, 2009), available at: https://www.g20.org/sites/default/files/g20_resources/library/Pittsburgh_Declaration.pdf, last visited September 22, 2014.

this time, the Commission does not believe that it is sufficient to consider only whether the data elements required by the foreign regulatory regime are designed to achieve the objectives of the G-20 with respect to reporting. The G-20 objectives are a high-level set of principles designed to guide jurisdictions in adopting reforms for the OTC derivatives markets. Therefore, the Commission believes that it is necessary and appropriate to consider whether the data elements reported under that jurisdiction's rules are comparable to those required under Rule 901 of Regulation SBSR—not whether they are comparable to the G-20 standards—in deciding whether to grant a substituted compliance determination. If the Commission took the opposite view, it would be difficult to conclude that the oversight and transparency goals of Title VII were being satisfied through compliance with the rules of the foreign jurisdiction in lieu of Regulation SBSR.[897]

b. Timeframe of Reporting and Public Dissemination—Rule 908(c)(2)(iii)(B)

The Commission also is adopting Rule 908(c)(2)(iii)(B) as re-proposed, subject to certain conforming changes.[898] Rule 908(c)(2)(iii)(B), as adopted, provides that the Commission shall

---

897 One commenter urged the Commission to "replace the apparently subjective 'outcomes-based' standard for comparison with a more rigorous and objective standard based on the underlying rules." AFR Letter at 9. For the reasons noted above, the Commission is adopting a "comparable" standard, rather than the type of review suggested by the commenter. This commenter further stated: "Another reason that 'outcomes-based' assessment may not be adequate is that the inter-operability of different rule sets may be critical to the effectiveness of the overall international regime. . . . this is the case for standardization of data formats in reporting, and may also be true for various risk management elements that must be standardized across a global financial institution." Id. at 10. The Commission intends to work with foreign regulatory authorities to develop more uniform data standards to allow maximum aggregability while minimizing market participant costs and burdens that would result from having to report in different jurisdictions using different data standards and formats.

898 As re-proposed, this rule would have provided that the Commission shall not make a substituted compliance determination unless it finds that the "rules of the foreign

not issue a substituted compliance determination unless the relevant foreign jurisdiction requires security-based swaps to be reported and publicly disseminated "in a manner and a timeframe comparable to those required by [Regulation SBSR]." Given the Title VII requirements that all security-based swaps be reported to a registered SDR and that security-based swaps be publicly disseminated in real time, the Commission believes that allowing substituted compliance with the rules of a foreign jurisdiction that has reporting timeframes and dissemination outcomes not comparable to those in the United States would run counter to the objectives and requirements of Title VII. If the Commission allowed substituted compliance for such a jurisdiction, the Commission might have access to less regulatory data about the security-based swap market, or price discovery could be less efficient, than would have been the case if Regulation SBSR applied in its entirety. Thus, for example, the Commission generally does not anticipate permitting substituted compliance with respect to regulatory reporting and public dissemination under Rule 908(c) if a foreign jurisdiction does not (among other things) impose public dissemination requirements for all security-based swaps on a trade-by-trade basis.[899] Thus, the Commission disagrees with the commenter who suggested that a non-U.S. public dissemination

jurisdiction require the security-based swap to be reported and publicly disseminated in a manner and a timeframe comparable to those required by §§ 242.900 through 242.911." As discussed previously, Regulation SBSR, as adopted, consists of Rules 900 through 909 under the Exchange Act. Therefore, the reference in re-proposed Rule 908(c)(2)(iii)(B) to "§§ 242.900 through 242.911" is being revised to read: "§§ 242.900 through 242.909."

899 Although the Commission is requiring reporting and public dissemination of security-based swaps within 24 hours of the time of execution during the first initial phase of Regulation SBSR, see Rule 901(j), the Commission anticipates considering provisions to implement the Title VII requirement for real-time public dissemination. Therefore, the Commission would view a foreign jurisdiction's regime for public dissemination of security-based swaps as comparable only if it (1) had rules providing for real-time public dissemination of all security-based swaps currently, or (2) was following a comparable process of moving to real-time public dissemination for all security-based swaps in phases.

regime that disseminates data on an aggregate basis should be deemed comparable to Regulation SBSR.[900]

One commenter stated that "[c]omparability should be addressed flexibly with respect to public dissemination, recognizing that in certain jurisdictions' [sic] transparency obligations are linked to use of a trading venue and fall on the venue."[901] Another commenter recommended that the Commission should not determine that a foreign jurisdiction lacks comparable security-based swap reporting rules based on technical differences in the timeframes for, or manner of, reporting.[902] Whether the Commission grants a substituted compliance determination will depend on the facts and circumstances pertaining to a particular request. Thus, it is difficult to address concerns such as those raised by these two commenters in the abstract. As the Commission noted in Section XV(E)(1), supra, it will assess comparability in a holistic manner rather than on a rule-by-rule basis.

c. Direct Electronic Access—Rule 908(c)(2)(iii)(C)

The Commission also is adopting Rule 908(c)(2)(iii)(C) as re-proposed. Rule 908(c)(2)(iii)(C) provides that the Commission may not issue a substituted compliance order with respect to regulatory reporting and public dissemination in a foreign jurisdiction unless "[t]he Commission has direct electronic access to the security-based swap data held by a trade

---

900 See JSDA Letter at 2. Another commenter requested that the Commission determine that Japan has comparable security-based swap reporting standards. See JFMC Letter at 8. This comment is beyond the scope of this rulemaking. However, after Regulation SBSR becomes effective, market participants in this jurisdiction that would rely on a substituted compliance determination, or their regulators, may submit a request for substituted compliance with respect to regulatory reporting and public dissemination if they believe that the rules in that jurisdiction satisfy the criteria for substituted compliance described in Rule 908(c).

901 ISDA II at 9.

902 See ICI II at 12.

repository or foreign regulatory authority to which security-based swaps are reported pursuant to the rules of that foreign jurisdiction."[903] Commenters expressed differing views regarding the direct electronic access requirement in re-proposed Rule 908(c)(2)(iii)(C). One commenter expressed support for the proposed requirement, believing that direct electronic access is a critical element for adequate monitoring of risks to U.S. financial stability.[904] However, two commenters objected to the proposed direct electronic access requirement.[905] One of these commenters suggested that the Commission should not require direct electronic access at this time, but should instead wait for the "FSB" to develop plans "to produce and share globally aggregated trade repository data that authorities need for monitoring systemic risks."[906] Another commenter "urge[d] the Commission to take into account the issue of foreign jurisdictions' privacy laws before imposing a blanket requirement that [the Commission] have direct electronic access."[907]

---

903 Under Rule 900(l), as adopted, "direct electronic access" has the same meaning as in Rule 13n-4(a)(5) under the Exchange Act, discussed in the SDR Adopting Release. Rule 13n-4(a)(5) defines "direct electronic access" to mean access, which shall be in a form and manner acceptable to the Commission, to data stored by an SDR in an electronic format and updated at the same time as the SDR's data is updated so as to provide the Commission or any of its designees with the ability to query or analyze the data in the same manner that the SDR can query or analyze the data.

904 See AFR Letter at 9 (noting that the Commission should seek to analyze data from foreign repositories in conjunction with U.S.-sourced data to determine the swap exposure of an entity on a global basis).

905 See IIF Letter at 7; ISDA II at 8.

906 Id. at 8. The second commenter did not offer a rationale for its opposition to the proposed direct electronic access requirement. See IIF Letter at 7.

907 SIFMA/FIA/Roundtable Letter at A-46 (stating that over a dozen jurisdictions have been identified where local law prohibits the disclosure of client names to non-local regulators that do not have an information-sharing treaty or agreement in place with the local regulator, some of which cannot be satisfied by counterparty consent).

After carefully considering the comments received, the Commission continues to believe that requiring direct electronic access to security-based swap data held by a trade repository or foreign regulatory authority is a necessary part of any substituted compliance determination. Thus, the Commission does not believe that it should rely instead on the FSB or other international bodies developing arrangements for trade repositories and relevant authorities to share information across jurisdictions. While these cross-border information-sharing arrangements are important, and the Commission will continue to participate in such efforts, granting substituted compliance without direct electronic access would not be consistent with the underlying premise of substituted compliance: that a comparable regulatory result is reached through compliance with foreign rules rather than with the corresponding U.S. rules. If the Commission were to grant substituted compliance for a foreign jurisdiction where the Commission did not have direct electronic access to the facility to which security-based swap transactions of that jurisdiction are reported, the Commission might not have access to transaction information for portions of the security-based swap market that it otherwise would have the ability to surveil.[908] If the Commission were to rely solely on international information-sharing agreements, it could face substantial delays before a foreign trade repository or foreign regulatory authority, even acting expeditiously, could compile and make available to the Commission data relating to a substantial volume of transactions. Delays in obtaining such data could compromise the ability of the Commission to supervise security-based swap market participants, or to share information with other relevant U.S. authorities in a timely fashion. Thus, the Commission believes that direct electronic access to security-based swap data held by

---

908 See supra note 788 (providing statistics regarding the amount of cross-border trading in the security-based swap market).

the foreign trade repository or foreign regulatory authority to which security-based swap transactions are reported in the foreign jurisdiction must be a prerequisite to issuing a substituted compliance order with respect to Regulation SBSR applying to that jurisdiction.

The Commission has taken into consideration the comment that certain jurisdictions have privacy laws or blocking statutes that could, in certain cases, render a foreign trade repository or foreign regulatory authority unable to provide the Commission with direct electronic access to transaction information that would include the identity of the counterparties. The Commission is not persuaded that this consideration should remove direct electronic access as a requirement for substituted compliance under Regulation SBSR. Indeed, if foreign privacy laws result in the Commission having less than comparable access to the security-based swap transaction data held at a foreign trade repository or foreign regulatory authority than the Commission otherwise would have if no substituted compliance order were in effect, then the premise of substituted compliance would not be met. Although foreign regulatory authorities would likely have access to information about security-based swap transactions that exist at least in part in their jurisdictions, these authorities might lack the ability to share this information with the Commission. As a result, it could be difficult if not impossible for the Commission or any other relevant authority, foreign or domestic, to observe the build-up of systemic risks created by the global security-based swap activity of U.S. persons. In sum, the Commission believes that, if it does not have direct electronic access to the transaction information reported to the foreign trade repository or foreign regulatory authority, substituted compliance would not yield a comparable outcome and the requirements of Rule 908(c)(2) would not be met.[909] The Commission believes

909 See also infra Section XVI(A) (addressing the impact of foreign privacy laws on Regulation SBSR).

that, in this situation, the specific requirements of Regulation SBSR should continue to apply; if necessary supervisory information cannot be obtained via direct electronic access to the security-based swap data held by a foreign trade repository or foreign regulatory authority, then such transactions must continue to be reported to a registered SDR, from which the Commission can obtain such information.

d. Trade Repository Capabilities—Rule 908(c)(2)(iii)(D)

The Commission received no comments on Rule 908(c)(2)(iii)(D) and is adopting that rule as re-proposed, with certain minor changes. Final Rule 908(c)(2)(iii)(D) provides that the Commission shall not make a substituted compliance determination with respect to regulatory reporting and public dissemination unless it finds that "[a]ny trade repository or foreign regulatory authority in the foreign jurisdiction that receives and maintains required transaction reports of security-based swaps pursuant to the laws of that foreign jurisdiction is subject to requirements regarding data collection and maintenance; systems capacity, integrity, resiliency, availability, and security; and recordkeeping that are comparable to the requirements imposed on security-based swap data repositories by the Commission's rules and regulations" (emphasis added). In the re-proposed rule, the highlighted language would have read ". . . by §§ 240.13n-5 through 240.13n-7 of this chapter." Because requirements imposed on registered SDRs relating to data collection and maintenance; systems capacity, integrity, resiliency, availability, and security; and recordkeeping could be imposed by Commission rules and regulations other than or in addition to Rules 13n-5 through 13n-7 under the Exchange Act, the Commission believes that it would be more appropriate to use the broader language in the text of final Rule 908(c)(2)(iii)(D). The Commission continues to believe that, to allow substituted compliance for regulatory reporting and public dissemination with respect to a foreign jurisdiction, any entity in that foreign jurisdiction that is required to receive and maintain security-based swap transaction data must have protections and operability standards comparable to those imposed on SEC-registered SDRs.

In addition, the re-proposed rule would have required, in relevant part, that—in connection with a substituted compliance determination—the foreign trade repository or foreign regulatory authority must be subject to requirements for "systems capacity, resiliency, and security" that are comparable to parallel U.S. requirements. That provision in final Rule 908(c)(2)(iii)(D) now states, "systems capacity, integrity, resiliency, availability, and security." The addition of "integrity" and "availability" to characterize the expected operational capability of the foreign trade repository or foreign regulatory authority is derived from a parallel change that the Commission made in adopting final Rule 13n-6 under the Exchange Act that applies to SEC-registered SDRs.[910] Because these standards apply to SEC-registered SDRs, the Commission believes that it is appropriate for Rule 908(c)(2)(iii)(D) to include them as elements necessary for a finding that a foreign trade repository or foreign regulatory authority is subject to comparable regulatory duties.

e. Memoranda of Understanding—Rule 908(c)(2)(iv)

Rule 908(c)(2)(iv), as re-proposed, would have required that, before issuing a substituted compliance order relating to regulatory reporting and public dissemination with respect to a foreign jurisdiction, the Commission shall have entered into a supervisory and enforcement memorandum of understanding ("MOU") or other arrangement with the relevant foreign financial regulatory authority or authorities under such foreign financial regulatory system

910 See SDR Adopting Release, note 831.

addressing oversight and supervision of the applicable security-based swap market. No commenters addressed this proposed requirement.

The Commission is adopting Rule 908(c)(2)(iv) with certain minor revisions. First, the Commission is modifying the rule to indicate that a substituted compliance determination may require the Commission to enter into more than one MOU or other arrangement with a foreign authority. Second, the Commission has modified the rule to provide that such MOUs or other arrangements would "address[] supervisory and enforcement cooperation and other matters arising under the substituted compliance determination."[911] These clarifications are designed to facilitate discussions between the Commission and relevant foreign regulators.

The Commission expects that any grant of substituted compliance would be predicated on the presence of enforcement MOUs or other arrangements that provide formal mechanisms by which the Commission can request assistance and obtain documents and information from foreign authorities regarding enforcement matters involving securities. Substituted compliance also may be expected to be predicated on the presence of supervisory MOUs or other arrangements that provide formal mechanisms by which the Commission can request assistance and obtain non-public information from foreign authorities related to the oversight of dually regulated entities. As a result, such MOUs or other arrangements should help the Commission ensure compliance with Title VII requirements for regulatory reporting and public dissemination.

In addition, any grant of substituted compliance may be conditioned upon the Commission entering into other MOUs or arrangements that address additional matters specific to the substituted compliance determination. Such MOUs or other arrangements, among other respects, may be expected to help promote the effectiveness of substituted compliance by

---

911 Rule 908(c)(2)(iv).

providing mechanisms by which the Commission may request information and/or monitor for circumstances where the foreign regime may no longer be comparable to the counterpart Title VII requirements (due, for example, to changes in the substantive legal framework of the foreign regime that are inconsistent with the understandings that underpinned the Commission's initial grant of substituted compliance). In addition, such MOUs or other arrangements may provide mechanisms by which the Commission could request information and monitor the effectiveness of the enforcement and supervision capabilities of the appropriate foreign regulator(s). More generally, such MOUs or other arrangements can provide mechanisms by which the Commission could obtain information relevant to the assessment of comparability.

f. Modification or Withdrawal of Substituted Compliance Order

Rule 908(c)(2)(v), as re-proposed, would have provided that the Commission may, on its own initiative, modify or withdraw a substituted compliance order with respect to regulatory reporting and public dissemination in a foreign jurisdiction, at any time, after appropriate notice and opportunity for comment. The Commission is adopting Rule 908(c)(2)(v) as re-proposed, without revision.

Situations can arise where it would be necessary or appropriate to modify or withdraw a substituted compliance order. A modification or withdrawal could be necessary if, after the Commission issues a substituted compliance order, the facts or understandings on which the Commission relied when issuing that order are no longer true. The Commission believes, therefore, that it is appropriate to establish a mechanism whereby it could, at any time and on its own initiative, modify or withdraw a previously issued substituted compliance order with respect to regulatory reporting and public dissemination, after appropriate notice and opportunity for comment. Having made a comparability determination, the Commission should have the ability to periodically review the determination and decide whether the substituted compliance determination should continue to apply.[912] The Commission could determine to condition a substituted compliance order on an ongoing duty to disclose relevant information. Thus, the Commission generally agrees with the commenter who argued that persons making use of substituted compliance should be responsible for informing the Commission if factors on which the Commission relied in making the determination change in any material way.[913]

Two commenters generally supported the re-proposed Rule 908(c)(2)(v) requirement for the Commission to publish for comment proposed withdrawals or modifications.[914] Several commenters also recommended that any final decision by the Commission to modify or withdraw a comparability determination should include a phase-in period to provide market participants adequate opportunity to make necessary adjustments to their compliance systems and processes.[915] The Commission generally agrees with these comments, and believes that all affected persons should have appropriate notice of the introduction, withdrawal, or modification of a substituted compliance order so as to minimize undue disruptions in the market. The Commission will address phase-in issues and timeframes on a case-by-case basis—in the relevant order that introduces, modifies, or withdraws substituted compliance—depending on the facts and circumstances of the particular situation.

6. Consideration of Regulatory Reporting and Public Dissemination in the Commission's Analysis of Substituted Compliance

912 The Commission made a similar statement in the Cross-Border Proposing Release. See 78 FR at 31089. Three commenters agreed with the statement. See AFR Letter at 12; Better Markets IV at 30; IIF Letter at 4, 7.

913 See Better Markets IV at 29, 32.

914 See ABA Letter at 6; ISDA II at 9.

915 See FOA Letter at 5; IIF Letter at 7; SIFMA/FIA/Roundtable Letter at A-37.

When the Commission re-proposed Rule 908(c) in the Cross-Border Proposing Release, it expressed a preliminary view that regulatory reporting and public dissemination should be considered together in the Commission's analysis of whether to permit substituted compliance.[916] If the Commission were to adopt that approach, security-based swap transactions would not be eligible for substituted compliance if there were comparable foreign rules in one area but not the other. In other words, a foreign jurisdiction that has comparable rules for regulatory reporting of security-based swap transactions but not comparable rules for public dissemination of such transactions would not have been eligible for substituted compliance under Regulation SBSR.

Three commenters suggested that the Commission consider making separate substituted compliance determinations for regulatory reporting and public dissemination.[917] One of these commenters expressed the view that making separate determinations is appropriate because regulatory reporting and public dissemination serve distinct goals.[918] This commenter also argued that, due to the significant costs associated with documentation, procedures, and technological systems necessary to comply with reporting regimes, the possibility of separate substituted compliance determinations for regulatory reporting and public dissemination could substantially reduce costs for non-U.S. market participants while still achieving the Commission's important market surveillance and transparency goals.[919] One of the other commenters argued that "[d]ifferences among jurisdictions in the timing of reporting . . . should be evaluated in light of systemic risk and market supervisory objectives, rather than policies of

916 See 78 FR at 31096.

917 See IIB Letter at 25; ISDA II at 9; SIFMA/FIA/Roundtable Letter at A-45.

918 See IIB Letter at 25 ("regulatory reporting provides the Commission with the tools for market surveillance and oversight of its regulated markets, while public dissemination is designed to provide the market, rather than regulators, real-time price transparency").

919 See id.

facilitating price discovery."[920] The commenter concluded, therefore, that "[s]uch flexibility should include the potential for separate determinations regarding regulatory reporting and public dissemination requirements."[921]

Notwithstanding these comments, the Commission continues to believe that—subject to one exception described below—regulatory reporting and public dissemination should be considered together for purposes of substituted compliance under Rule 908(c). Even if regulatory reporting and public dissemination serve different policy goals, the Commission believes that treating regulatory reporting and public dissemination separately would not further those goals as effectively as considering these requirements together. The Commission agrees with the commenters who argued that regulatory reporting serves important market oversight goals.[922] However, the Commission disagrees that these objectives should be pursued "rather than policies of facilitating price discovery."[923] Title VII requires the Commission to pursue both sets of policy goals. If the Commission were to permit substituted compliance for regulatory reporting but not for public dissemination, certain transactions could be reported to a foreign trade repository or a foreign regulatory authority in lieu of a registered SDR but would (in theory) still be subject to the Regulation SBSR's public dissemination requirements in Rule 902. Under Regulation SBSR, registered SDRs are charged with publicly disseminating information about security-based swap transactions. To carry out its public dissemination function, a registered SDR must obtain data about security-based swap transactions that Regulation SBSR requires it to publicly disseminate. If this data were reported to a foreign trade

920 ISDA II at 9.

921 Id.

922 Id.; IIB Letter at 25.

923 ISDA II at 9.

repository or foreign regulatory authority under the terms of a substituted compliance order, it would be impractical, if not impossible, for a registered SDR to disseminate that transaction data, as required under Rule 902. In other words, because the registered SDR needs a report of the transaction from the reporting side in order to carry out public dissemination, no purpose would be served—and indeed public dissemination could be compromised—by removing the duty to report the transaction to a registered SDR in lieu of the duty to report it to the foreign trade repository or foreign regulatory authority.[924] The Commission continues to believe that it is impractical and unnecessary to devise an alternate method of public dissemination for security-based swaps that are reported in a foreign jurisdiction pursuant to a substituted compliance order. The Commission concludes, therefore, that a foreign jurisdiction's regulatory reporting and public dissemination requirements—subject to one exception described immediately below—shall be considered together for purposes of evaluating comparability for purposes of a substituted compliance determination under Rule 908(c).

One commenter argued that the Commission should be able to issue a substituted compliance order solely in respect of regulatory reporting that would apply to cross-border security-based swaps that are subject to regulatory reporting but not public dissemination under Regulation SBSR.[925] Under Rule 908(a), as adopted, there is one kind of security-based swap that is subject to regulatory reporting but not public dissemination: a transaction with a non-U.S. person that is registered as a security-based swap dealer or major security-based swap participant

924 The Commission specifically raised this issue in the Cross-Border Proposing Release and asked how public dissemination could be carried out if substituted compliance were in effect for regulatory reporting but not for public dissemination. See 78 FR at 31096.

925 See IIB Letter at 25 ("the separate possibility of substituted compliance for either regulatory reporting or public dissemination could substantially reduce costs for non-U.S. market participants while still achieving the Commission's important market surveillance and transparency goals").

on one side and no U.S. person on the other side. Upon further consideration, the Commission agrees with the commenter and is adopting Rule 908(c) with certain revisions that will allow the Commission to issue a substituted compliance order with respect to regulatory reporting but not public dissemination with respect to this subset of cross-border transactions. The Commission has added a second sentence to the language in re-proposed Rule 908(c)(2)(i) to carry out this aim.[926] The Commission also revised one prong of re-proposed Rule 908(c)(iii) to exclude consideration of the reporting timeframes for public dissemination in cases where the Commission is considering a substituted compliance request with respect to cross-border transactions that are, under Regulation SBSR, subject to regulatory reporting but not public dissemination. The Commission believes that offering the possibility of substituted compliance for these kinds of cross-border transactions could reduce compliance burdens for affected persons without reducing the capability of the Commission and other relevant authorities to oversee the security-based swap market.

XVI. Other Cross-Border Issues

A. Foreign Public Sector Financial Institutions

In response to the Regulation SBSR Proposing Release, six commenters expressed concern about applying the requirements of Title VII to the activities of foreign public sector financial institutions ("FPSFIs"), such as foreign central banks and multilateral development banks.[927] One commenter, the European Central Bank ("ECB"), noted that security-based swaps entered into by the Federal Reserve Banks are excluded from the definition of "swap" in the

---

926 Rule 908(c)(2)(i).

927 See BIS Letter passim; CEB at 2, 4; ECB Letter passim; ECB Letter II passim; EIB Letter passim; Nordic Investment Bank Letter at 1; World Bank Letter I passim.

Commodity Exchange Act ("CEA")[928] and that the functions of foreign central banks and the Federal Reserve are broadly comparable. The ECB argued, therefore, that security-based swaps entered into by foreign central banks should likewise be excluded from the definition of "swap."[929] A second commenter, the World Bank (representing the International Bank for Reconstruction and Development, the International Finance Corporation, and other multilateral development institutions of which the United States is a member) also argued generally that the term "swap" should be defined to exclude any transaction involving a multilateral development bank.[930] The World Bank further noted that EMIR—the E.U. counterpart to Title VII of the Dodd-Frank Act—would expressly exclude multilateral development banks from its coverage.[931]

The ECB and BIS stated that foreign central banks enter into security-based swaps solely in connection with their public mandates, which require them to act confidentially in certain circumstances.[932] The ECB argued in particular that public disclosure of its market activities could compromise its ability to take necessary actions and "could cause signaling effects to other

---

928 Section 1a(47)(B)(ix) of the CEA, 7 U.S.C. 1a(47)(B)(ix), excludes from the definition of "swap" any agreement, contract, or transaction a counterparty of which is a Federal Reserve Bank, the federal government, or a federal agency that is expressly backed by the full faith and credit of the United States. A security-based swap includes any swap, as defined in the CEA, that is based on, among other things, a narrow-based index or a single security or loan. See Section 3(a)(68) of the Exchange Act, 15 U.S.C. 78c3(a)(68).

929 See ECB Letter I at 2; ECB Letter II at 2. See also EIB Letter at 1; Nordic Development Bank at 1.

930 See World Bank Letter I at 6-7.

931 See id. at 4. See also EIB Letter at 7 ("As a matter of comity, actions by U.S. financial regulators should be consistent with the laws of other jurisdictions that provide exemption from national regulation for government-owned multinational developments such as the [EIB]").

932 See BIS Letter at 4-5; ECB Letter I at 3.

market players and finally hinder the policy objectives of such actions."[933] Another commenter, the Council of Europe Development Banks ("CEB"), while opposing application of Title VII requirements to multilateral development banks generally, did not object to the CFTC and SEC preserving their authority over certain aspects of their transactions, such as by imposing reporting requirements.[934] Similarly, the World Bank believed that the definition of "swap" could be qualified by a requirement that counterparties would treat such transactions as swaps solely for reporting purposes.[935]

In the Cross-Border Proposing Release, the Commission sought additional information to assist with analysis of this issue and asked a number of questions, including questions relating to how active FPSFIs are in the security-based swap market generally; the extent to which FPSFIs engage in security-based swap activity with U.S. persons; whether there are any characteristics of FPSFI activity in the security-based swap market that could make it easier for market observers to detect an FPSFI as a counterparty or that could make it easier to detect an FPSFI's business transactions or market positions; and whether there are steps that the Commission could take to minimize such information leakage short of suppressing all FPSFI trades from public dissemination.[936] The Commission specifically requested that commenters on this issue focus on the security-based swap market, not the market for other swaps. In addition, commenters were requested to answer only with respect to security-based swap activity that would be subject to Regulation SBSR, and not with respect to activity that, because of other factors, would not be

---

933 ECB Letter I at 3. See also ECB Letter II at 2.

934 See CEB Letter at 4. However, the CEB did not state a view as to whether FPSFI trades should be subject to post-trade transparency.

935 See World Bank Letter I at 7.

936 See 78 FR at 31074.

subject to Regulation SBSR in any case.[937]

Only a few commenters on the Cross-Border Proposing Release responded to any of these questions or offered additional comments on FPSFI issues related to Regulation SBSR. One commenter, FMS-Wertmanagement ("FMS"), an instrumentality of the government of the Federal Republic of Germany that manages certain legacy financial portfolios, stated that security-based swaps form only a small portion of its overall derivatives portfolio, and that it does not enter into any new security-based swaps "except with the purpose of restructuring existing security-based swaps within the limits of its winding-up strategy."[938] This commenter, however, did not provide an opinion regarding how any provisions of Regulation SBSR would affect its operations; instead, the primary opinion expressed in the comment was that FPSFIs such as FMS should not be required to register as security-based swap dealers or major security-based swap participants and be subject to the attendant requirements.[939] Another commenter, KfW Bankengruppe ("KfW"), is also an instrumentality of the Federal Republic of Germany and engages in "promotional lending opportunities."[940] KfW indicated that it has in the past engaged in a small number of security-based swap transactions but none recently.[941] Like FMS, KfW argued that FPSFIs should not be subject to regulation as security-based swap dealers or major

---

937 See id.

938 FMS Letter at 8. See also IDB Letter at 1 (noting that IDB does not currently enter into security-based swaps but that it may do so in the future, and expressing concern about applying the requirements of Title VII to the activities of FPSFIs).

939 See id. at 8-11.

940 KfW Letter at 1.

941 KfW indicated, for example, that between 2009 and 2012 it engaged in only four new trades to acquire credit protection, all in 2011; that the last time it had sold credit protection was in 2009; and that as of 2012 the outstanding notional amount of the credit protection it had purchased was zero. See id. at Annex A.

security-based swap participants and did not otherwise comment on any issues specific to Regulation SBSR.[942] A third commenter, the World Bank, stated that, "We do not object to reporting of our transactions by U.S. counterparties or non-U.S. counterparties that are independently required to be registered with the Commission. Our concern is limited to ensuring that non-U.S. counterparties that are otherwise not subject to regulation could become subject to certain requirements solely because a transaction with us could be deemed to be a 'Transaction conducted within the United States.' We are amenable to any solution that fixes this problem."[943] A fourth commenter agreed with the World Bank, arguing that the term "transaction conducted within the United States," which as proposed in the Cross-Border Proposing Release would trigger the regulatory reporting requirement, should be modified to exclude transactions with FPSPIs.[944]

The Commission believes that a security-based swap to which an FPSFI is a counterparty ("FPSFI trade") should not, on that basis alone, be exempt from regulatory reporting. By the same token, however, the Commission also believes that a security-based swap to which an FPSFI is a counterparty—even if headquartered in the United States—should not, on that basis alone, be subject to regulatory reporting. All FPSFIs, even FPSFIs that are based in the United States, are deemed non-U.S. persons under the Commission's Title VII rules.[945] As with any

942 See id. at 1-6.

943 World Bank Letter at 6, note 11.

944 See Sullivan Letter at 18-19.

945 See Rule 3a71-3(a)(4)(iii) under the Exchange Act (specifically excluding from the term "U.S. person" the International Monetary Fund, the International Bank for Reconstruction and Development, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank, the United Nations, and their agencies, affiliates, and pension plans, and any other similar international organizations, their agencies, affiliates, and pension plans).

other security-based swap transaction having a direct counterparty that is a non-U.S. person, a transaction involving an FPSFI as a direct counterparty would be subject to Regulation SBSR's regulatory reporting requirements only if it met one of the conditions in Rule 908(a)(1). Thus, a transaction between an FPSFI and a U.S. person would be subject to regulatory reporting,[946] and the U.S. person would be the reporting side.[947] However, a transaction between an FPSFI and a non-U.S. person would be subject to regulatory reporting only if the non-U.S. person is a registered security-based swap dealer or a registered major security-based swap participant or is guaranteed by a U.S. person, a registered security-based swap dealer or a registered major security-based swap participant.[948] As noted above,[949] the Commission has declined to adopt the term "transaction conducted within the United States," which was proposed in the Cross-Border Proposing Release. In the Conduct Re-Proposal, the Commission anticipates soliciting additional comment on such transactions as they relate to regulatory reporting and public dissemination under Regulation SBSR.

Regulatory reporting of FPSFI trades involving, on the other side, a U.S. person, a registered security-based swap dealer, or a registered major security-based swap participant will facilitate the Commission's ability to carry out our regulatory oversight responsibilities with respect to registered entities, U.S. persons, and the U.S. security-based swap market more generally. The Commission notes that this approach was endorsed by the World Bank and

---

946 See Rule 908(a)(a)(1) (requiring regulatory reporting of a security-based swap where there is a direct or indirect counterparty that is a U.S. person on either side of the transaction).

948 See Rule 901(a)(1)(i) and (ii).

949 See supra Section XV(C)(3)(iv).

another commenter in response to the original Regulation SBSR Proposing Release.[950]

Finally, the Commission does not believe that a sufficient basis exists to support an exemption from public dissemination for FPSFI trades. The Commission is aware of no characteristics of security-based swap transactions executed by FPSFIs that indicate that an exemption from the public dissemination requirements of Regulation SBSR would be appropriate. No commenters suggested that FPSFIs use security-based swaps differently from other market participants or that publicly disseminating FPSFI trades would provide an inaccurate view of the market. Moreover, based on the comments received, it appears that that FPSFI participation in the security-based swap market—rather than the swap market generally—is extremely limited.[951] Thus, if security-based swap activity consists of such a small portion of FPSFI activities, it is less apparent that an exemption is warranted; the harm that would result from disseminating security-based swap transactions—assuming such harm exists—would, all other things being equal, be less the fewer such transactions there are. The Commission notes, in any event, that Regulation SBSR contains provisions relating to public dissemination that are designed to protect the identity of security-based swap counterparties[952] and prohibit a registered SDR (with respect to uncleared security-based swaps) from disclosing the business transactions and market positions of any person.[953] The Commission also notes that, during the interim phase

950 See CEB Letter at 4; World Bank Letter I at 7 (stating that, although swaps involving FPSFIs as counterparties generally should be exempt from the definition of "swap," they should be treated as swaps solely for reporting purposes).

951 See BIS Letter at 3 (stating that the BIS generally does not transact security-based swaps such as credit default swaps or equity derivatives); KfW Letter at Annex A; FMS Letter at 8.

952 See Rule 902(c)(1) (requiring a registered SDR not to disseminate the identity of any counterparty to a security-based swap).

953 See Rule 902(c)(2).

of Regulation SBSR, no transaction must be reported before 24 hours after execution. This approach is designed to minimize any adverse market impact of publicly disseminating any security-based swap transactions, when the Commission has not yet proposed and adopted block trades thresholds and the associated dissemination delays for the benefit of all counterparties, including FPSFIs. Given these potential protections for all security-based swap counterparties, not just FPSFIs, the Commission does not at this time see a basis to exempt FPSFI trades from public dissemination.

B. Foreign Privacy Laws Versus Duty to Report Counterparty IDs

Rule 901(d), as adopted, sets forth the data elements that must be reported to a registered SDR for regulatory purposes. One such element is the "counterparty ID" of each counterparty, which will enable the Commission to determine every person who is a counterparty, direct or indirect, to a security-based swap. The Commission believes that it could be necessary to assess the positions and trading activity of any counterparty in order to carry out its regulatory duties for market oversight.[954] Since only one side of the transaction is required to report, the reporting

954 The Commission and other relevant authorities have a strong interest in being able to monitor the risk exposures of U.S. persons, particularly those involved in the security-based swap market, as the failure or financial distress of a U.S. person could impact other U.S. persons and the U.S. economy as a whole. The Commission and other relevant authorities also have an interest in obtaining information about non-U.S. counterparties that enter into security-based swaps with U.S. persons, because the ability of such non-U.S. counterparties to perform their obligations under those security-based swaps could impact the financial soundness of U.S. persons. See, e.g., S. Comm. on Banking, Hous., & Urban Affairs, The Restoring American Financial Stability Act of 2010, S. Rep. No. 111-176, at 32 ("As a key element of reducing systemic risk and protecting taxpayers in the future, protections must include comprehensive regulation and rules for how the OTC derivatives market operates. Increasing the use of central clearinghouses, exchanges, appropriate margining, capital requirements, and reporting will provide safeguards for American taxpayers and the financial system as a whole") (emphasis added).

side is required to provide the counterparty ID of any counterparty on the other side.[955] Without this requirement, the registered SDR would not have a record of the identity of the other side.

Some commenters cautioned that U.S. persons might be restricted from complying with such a requirement in cases where a security-based swap is executed outside the United States.[956] One of these commenters stated, for example, that the London branch of a U.S. person would need its counterparty's consent to identify that party under U.K. law.[957] The commenter noted that, in this case, the reporting party is located in a jurisdiction where applicable local law restricts the reporting party from reporting the identity of a counterparty. The same commenter added that, in a similar transaction executed by a Paris branch of a U.S. firm, French law requires the branch to obtain the consent of the counterparty every time that it wants to report that counterparty's identity.[958] Another of these commenters urged the Commission to "consider

---

955 However, as described above in Section II(C)(3)(b), the reporting side might not know the counterparty ID of a counterparty by the time it must report the transaction (e.g., if the trade is to be allocated to a series of funds, and the fund manager has not yet determined the allocation). In such case, the reporting side would know the identity of the execution agent acting for the funds and thus would be required to report the execution agent ID instead of the counterparty ID with the initial transaction report.

956 See DTCC Letter II at 21; ISDA/SIFMA Letter I at 20. In addition, two comments on the Commission's interim final temporary rule on the reporting of security-based swaps entered into before July 21, 2010, Securities Exchange Act Release No. 63094 (October 13, 2010), 75 FR 64643 (October 20, 2010), made similar points. See Deutsche Bank Letter at 5 ("In some cases, dissemination or disclosure of [counterparty] information could lead to severe civil or criminal penalties for those required to submit information to an SDR pursuant to the Interim Final Rules. These concerns are particularly pronounced because of the expectation that Reportable Swap data will be reported, on a counterparty identifying basis, to SDRs, which will be non-governmental entities, and not directly to the Commissions"); ISDA I at 6 ("In many cases, counterparties to cross-border security-based swap transactions will face significant legal and reputational obstacles to the reporting of such information. Indeed, disclosure of such information may lead to civil penalties in some jurisdictions and even criminal sanctions in other jurisdictions").

957 See DTCC Letter II at 21.

958 See id.

carefully and provide for consistency with, foreign privacy laws, some of which carry criminal penalties for wrongful disclosure of information,"[959] but did not provide further detail. A third commenter argued, without further explanation, that allowing substituted compliance when both parties are not domiciled in the United States could avoid problems with foreign privacy laws conflicting with U.S. reporting requirements.[960]

In the Cross-Border Proposing Release, the Commission stated that it sought to understand more precisely if—and, if so, how—requiring a party to report the transaction pursuant to Regulation SBSR (including disclosure of the other side's identity to a registered SDR) might cause it to violate local law in a foreign jurisdiction where it operates. Before determining whether any exception to reporting the counterparty's counterparty ID might be necessary or appropriate, the Commission sought additional information about any such foreign privacy laws and asked a number of questions about this issue.[961]

In response to the questions, one commenter listed specific provisions in foreign laws that would prevent the reporting side from identifying its foreign counterparty.[962] Another commenter noted that reporting parties could face issues with identifying the counterparty if "either (i) consent is required for disclosing trade data to the Commission and such consent has not or cannot be obtained or (ii) a counterparty consent is not sufficient to overcome the data privacy restrictions."[963] This commenter requested that the Commission "recognize in [Regulation SBSR] the necessity for reporting parties to redact/mask counterparty-identifying

information" if they reasonably believe that disclosure of such information may violate the laws of another jurisdiction.[964] Commenters did not suggest any rule text for a possible exemption from proposed Rule 901(d)(1)(i) or discuss the effects of granting substituted compliance on avoiding foreign legal barriers to reporting.

Based on the comment received as well as other sources consulted,[965] the Commission understands that some laws and regulations exist in foreign jurisdictions that may limit or prevent reporting of counterparty ID to an SEC-registered SDR pursuant to Regulation SBSR. These types of restrictions may include privacy laws, which generally restrict disclosure of certain identifying information about a natural person or entity,[966] and so-called "blocking statutes" (including secrecy laws) which typically prevent the disclosure of information relating to third parties and/or foreign governments.[967] Several jurisdictions with possible legal and

---

964 Id.

965 See letter from Robert Pickel, Chief Executive Officer, ISDA, to David A. Stawick, Secretary, CFTC, dated August 27, 2012 ("ISDA CFTC Letter"), passim, available at www2.isda.org/attachment/NjY2NQ==/Comment%20Letter%20-%20CFTC%20Reporting%20Obligations%20Cross%20Border%20FINAL%20082712.pdf (last visited January 13, 2015) (discussing a survey of privacy laws in a number of foreign jurisdictions); FSB OTC Derivatives Working Group (ODWG), OTC Derivatives Market Reforms: Fifth Progress Report on Implementation (April 15, 2013); Seventh Progress Report on Implementation (April 8, 2014); OTC Derivatives Regulators Group (ODRG), Report on Agreed Understandings to Resolving Cross-Border Conflicts, Inconsistencies, Gaps And Duplicative Requirements (August 2013); ODRG, Report on Cross-Border Implementation Issues (September 2013).

966 The Commission understands that the privacy law limitations on disclosure of certain identifying information related to natural persons or entities can usually (but not always) be overcome by counterparty consent to such disclosure. Even where express consent resolves any outstanding privacy law issues, obtaining consent from the necessary counterparties may require market education and additional time to implement. See ISDA CFTC Letter at 8.

967 The Commission understands that blocking statue barriers to reporting normally cannot be waived by the person or entity that is the subject of the information, though the person

regulatory barriers also have reported that they are in the process of modifying their legislation and regulations to remove such barriers.[968] Therefore, it is difficult for the Commission to assess the extent to which legal and regulatory barriers will continue to exist that would hinder the ability of parties to meet the reporting requirement of Regulation SBSR.

The Commission recognizes that security-based swap counterparties that will incur the duty to report pre-enactment and transactional security-based swaps pursuant to Rule 901(i) may have entered into some of those transactions with counterparties in jurisdictions that have privacy laws or blocking statutes that may prohibit these reporting sides from disclosing the identities of these foreign counterparties. At the time that these transactions were executed, there was no regulatory requirement to report the identity of the counterparty under the United States securities laws. Therefore, the Commission believes that it would be inappropriate to compel a reporting side to disclose the identity of a counterparty to a historical security-based swap now, if such disclosure would violate applicable foreign law and the reporting side could not reasonably have foreseen a future conflict with applicable U.S. law. The Commission will consider requests from reporting sides for exemptions, pursuant to Section 36 of the Exchange Act,[969] from the requirement to report counterparty IDs of historical security-based swaps executed up to the last day before the effective date of these final rules. Any such request should be filed pursuant to Rule 0-12 under the Exchange Act[970] and include: (1) the name of the jurisdiction or jurisdictions which the requester believes prohibit it from being able to carry out the duty under

---

or entity may, in some circumstances, apply for an exemption to report certain information. See id.

968 See ODWG Seventh Progress Report, supra note 965, at 10.

969 15 U.S.C. 78mm.

970 17 CFR 240.0-12.

Rule 901(i) of reporting the identity of a counterparty; and (2) a discussion of the laws of the jurisdiction or jurisdictions that prohibit such reporting, and why compliance with the duty to report the counterparty ID under Rule 901(i) is limited or prohibited.[971] Upon the effective date of these final rules, every security-based swap counterparty that is the reporting side for one or more security-based swaps will eventually have to report, among other things, the identity of each of its counterparties.[972]

C. Antifraud Authority

The provisions of Regulation SBSR and the interpretive guidance discussed above relate solely to the applicability of the security-based swap regulatory reporting and public dissemination requirements under Title VII. Regulation SBSR does not limit the cross-border reach of the antifraud provisions or other provisions of the federal securities laws that are not addressed by this release.[973]

---

[971] For example, to support an exemption request, the requester should consider discussing whether obtaining waivers from its counterparties is an acceptable practice under the law of the foreign jurisdiction.

[972] The rules adopted in this release will be effective 60 days after publication in the Federal Register. For Rules 900, 907, and 909, the compliance date is the same as the effective date. The Commission is proposing a new compliance schedule for Rules 901, 902, 903, 904, 905, 906, and 908 of Regulation SBSR. See Regulation SBSR Proposed Amendments Release, Section VII. Market participants will not have to comply with the requirements in those rules—such as the requirement in Rule 901(i) to report historical security-based swaps—until certain dates that will be specified when the Commission takes final action on the proposed compliance schedule.

[973] For example, security-based swaps, as securities, are subject to the provisions of the Securities Act and the rules and regulations thereunder applicable to securities. The Securities Act requires that any offer and sale of a security must either be registered under the Securities Act, see Section 5 of the Securities Act, 15 U.S.C. 77e, or made pursuant to an exemption from registration, see, e.g., Sections 3 and 4 of the Securities Act, 15 U.S.C. 77c and 77d. In addition, the Securities Act requires that any offer to sell, offer to buy or purchase, or sale of a security-based swap to any person who is not an eligible contract participant must be registered under the Securities Act. See Section 5(e) of the Securities Act, 15 U.S.C. 77e(e). Because of the statutory language of Section

In Section 929P(b) of the Dodd-Frank Act,[974] Congress added provisions to the federal securities laws confirming the Commission's broad cross-border antifraud authority.

In the Cross-Border Adopting Release, the Commission adopted Rule 250.1 under the Exchange Act,[975] which sets forth the Commission's interpretation of its cross-border authority.[976] Rule 250.1(a) provides that the antifraud provisions of the securities laws apply to: "(1) Conduct within the United States that constitutes significant steps in furtherance of the violation; or (2) Conduct occurring outside the United States that has a foreseeable substantial effect within the United States." Nothing in this Regulation SBSR limits the broad cross-border application of the anti-fraud provisions as set forth in Rule 250.1.

D. International Coordination Generally

Several commenters urged the Commission to coordinate their efforts to implement Title VII requirements with those of foreign regulators who also are imposing new requirements on the OTC derivatives markets.[977] For example, one commenter urged the SEC and CFTC "to

---

5(e), exemptions from this requirement in Sections 3 and 4 of the Securities Act are not available.

974 The antifraud provisions of the securities laws include Section 17(a) of the Securities Act, 15 U.S.C. 77q(a); Sections 9, 10(b), 14(e), and 15(c)(1)-(2) and (7) of the Exchange Act, 15 U.S.C. 78i, 78j, 78n, 78o(c)(1)-(2); Section 206 of the Investment Advisers Act of 1940, 15 U.S.C. 80b-6; and any rule or regulation of the Commission promulgated under these statutory provisions.

975 17 CFR 250.1.

976 See Cross-Border Adopting Release, 79 FR at 47360.

977 See, e.g., Cleary III at 36; Markit III at 2; SIFMA I at 5-6; WMBAA III at 3 ("U.S. regulations also need to be in harmony with regulations of foreign jurisdictions"); NGFP Letter at 1-2; AFGI Letter at 1 (urging the Commission to ensure the consistent regulation of financial guaranty insurers); CDEU Letter at 2; PensionsEurope Letter at 1-2 (urging the Commission to avoid conflicts with European regulatory requirements); Barnard II at 1-2; Six Associations Letter at 1-2 (expressing general support for coordination among regulators with respect to the regulation of swaps and security-based swaps); CCMR II, passim.

harmonize their real-time reporting regimes with each other and with those of comparable international regulators."[978] Similarly, a second commenter stated that the SEC and CFTC "should work with foreign regulators that plan to create their own real-time reporting regimes to harmonize their requirements regarding the timing of dissemination and the data to be disseminated."[979] The same commenter urged the SEC and CFTC "to continue their efforts in establishing a globally harmonized approach to creating [LEIs]."[980] Other commenters believed generally that global coordination is necessary to develop LEIs and other identification codes.[981]

The Commission agrees broadly with these commenters that international coordination will be helpful in developing robust and efficient regimes for regulating cross-border security-based swap activity and overseeing the security-based swap market. The Commission is cognizant of its duty under Section 752(a) of the Dodd-Frank Act[982] and remains committed to engaging in bilateral and multilateral discussions with foreign regulatory authorities to carry out this goal. The Commission staff has consulted and coordinated with the CFTC, prudential regulators,[983] and foreign regulatory authorities consistent with the consultation provisions of the

978 SIFMA I at 5-6.

979 Markit III at 2.

980 Id. at 4-5.

981 See Benchmark at 1; Bloomberg Letter at 1; DTCC V at 14.

982 15 U.S.C. 8325 ("In order to promote effective and consistent global regulation of swaps and security-based swaps, the Commodity Futures Trading Commission, the Securities and Exchange Commission, and the prudential regulators . . . as appropriate, shall consult and coordinate with foreign regulatory authorities on the establishment of consistent international standards with respect to the regulation (including fees) of swaps").

983 The term "prudential regulator" is defined in Section 1a(39) of the CEA, 7 U.S.C. 1a(39), and that definition is incorporated by reference in Section 3(a)(74) of the Exchange Act, 15 U.S.C. 78c(a)(74).

Dodd-Frank Act,[984] and more generally as part of its domestic and international coordination efforts. The Commission staff has participated in numerous bilateral and multilateral discussions with foreign regulatory authorities addressing the regulation of OTC derivatives.[985] Through these discussions and the Commission's participation in various international task forces and working groups, it has gathered information about foreign regulatory reform efforts and discussed the possibility of conflicts and gaps, as well as inconsistencies and duplications, between U.S. and foreign regulatory regimes. The Commission has taken and will continue to take these discussions into consideration in developing rules, forms, and interpretations for implementing Title VII of the Dodd-Frank Act.

XVII. Rule 909—SIP Registration

---

984 Section 712(a)(2) of the Dodd-Frank Act provides in part that the Commission shall "consult and coordinate to the extent possible with the Commodity Futures Trading Commission and the prudential regulators for the purposes of assuring regulatory consistency and comparability, to the extent possible."

985 Senior representatives of OTC derivatives market regulators from G20 jurisdictions have met on a number of occasions to discuss international coordination of OTC derivatives regulations, including as part of the OTC Derivatives Regulators Group. See, e.g., Report of the OTC Derivatives Regulators Group on Cross-Border Implementation Issues (March 2014), available at https://www.g20.org/sites/default/files/g20_resources/library/Report%20of%20the%20OTC%20Derivatives%20Regulators%20Group%20on%20Cross-Border%20Implementation%20Issues.pdf; Joint Press Statement of Leaders on Operating Principles and Areas of Exploration in the Regulation of the Cross-Border OTC Derivatives Market (December 4, 2012), available at http://www.sec.gov/news/press/2012/2012-251.htm; Joint Statement on Regulation of OTC Derivatives Markets (May 7, 2012), available at: http://www.sec.gov/news/press/2012/2012-85.htm; Joint Statement on Regulation of OTC Derivatives Markets (December 9, 2011), available at: http://www.sec.gov/news/press/2011/2011-260.htm, each last visited September 22, 2014. The Commission participates in the FSB's Working Group on OTC Derivatives Regulation ("ODWG"), both on its own behalf and as the representative of the International Organization of Securities Commissions ("IOSCO"), which is co-chair of the ODWG. The Commission also serves as one of the co-chairs of the IOSCO Task Force on OTC Derivatives Regulation.

Section 3(a)(22)(A) of the Exchange Act[986] defines a SIP as "any person engaged in the business of (i) collecting, processing, or preparing for distribution or publication, or assisting, participating in, or coordinating the distribution or publication of, information with respect to transactions in or quotations for any security (other than an exempted security) or (ii) distributing or publishing (whether by means of a ticker tape, a communications network, a terminal display device, or otherwise) on a current and continuing basis, information with respect to such transactions or quotations." Security-based swaps are securities under the Exchange Act.[987] Because Regulation SBSR requires registered SDRs to collect security-based swap transaction reports from participants and to distribute data from such reports, registered SDRs will be SIPs for purposes of the Exchange Act.

Section 11A(c)(1) of the Exchange Act[988] provides that the Commission may prescribe rules requiring SIPs to, among other things, assure "the fairness and usefulness of the form and content"[989] of the information that they disseminate, and to assure that "all other persons may obtain on terms which are not unreasonably discriminatory" the transaction information published or distributed by SIPs.[990] Section 11A(c)(1) applies regardless of whether a SIP is registered with the Commission as such.

The provisions of Section 11A(b)(5) and11A(b)(6) of the Exchange Act, however, apply only to registered SIPs. Requiring a registered SDR to register with the Commission as a SIP

990 15 U.S.C. 78k-1(c)(1)(D).

would subject that entity to Section 11A(b)(5) of the Exchange Act,[991] which requires a registered SIP to notify the Commission whenever it prohibits or limits any person's access to its services. Upon its own motion or upon application by any aggrieved person, the Commission could review the registered SIP's action.[992] If the Commission finds that the person has been discriminated against unfairly, it could require the SIP to provide access to that person.[993] Section 11A(b)(6) of the Exchange Act also authorizes the Commission to take certain regulatory action as may be necessary or appropriate against a registered SIP.[994]

Section 11A(b)(1) of the Exchange Act[995] provides that a SIP not acting as the "exclusive processor"[996] of any information with respect to quotations for or transactions in securities is exempt from the requirement to register with the Commission as a SIP unless the Commission, by rule or order, determines that the registration of such SIP "is necessary or appropriate in the

---

991 15 U.S.C. 78k-1(b)(5).

992 See 15 U.S.C. 78k-1(b)(5)(A)

993 See 15 U.S.C. 78k-1(b)(5)(B).

994 See 15 U.S.C. 78k-1(b)(6) (providing that the Commission, by order, may censure or place limitations upon the activities, functions, or operations of any registered SIP or suspend for a period not exceeding 12 months or revoke the registration of the SIP, if the Commission finds, on the record after notice and opportunity for hearing, that such censure, placing of limitations, suspension, or revocation is in the public interest, necessary or appropriate for the protection of investors or to assure the prompt, accurate, or reliable performance of the functions of such SIP, and that such SIP has violated or is unable to comply with any provision of this title or the rules or regulations thereunder).

995 15 U.S.C. 78k-1(b)(1).

996 15 U.S.C. 78c(a)(22)(B) (defining "exclusive processor" as any securities information processor or self-regulatory organization which, directly or indirectly, engages on an exclusive basis on behalf of any national securities exchange or registered securities association, or any national securities exchange or registered securities association which engages on an exclusive basis on its own behalf, in collecting, processing, or preparing for distribution or publication any information with respect to (1) transactions or quotations on or effected or made by means of any facility of such exchange or (2) quotations distributed or published by means of any electronic system operated or controlled by such association).

public interest, for the protection of investors, or for the achievement of the purposes of [Section 11A]." An SDR does not engage on an exclusive basis on behalf of any national securities exchange or registered securities association in collecting, processing, or preparing for distribution or publication any information with respect to transactions or quotations in securities; therefore, an SDR does not fall under the statutory definition of "exclusive processor."

To subject an SDR to the requirements of Sections 11A(b)(5) and 11A(b)(6), the Commission would need, by rule or order, to make the determination under Section 11A(b)(1) noted above. Accordingly, the Commission proposed Rule 909 to require a registered SDR also to register with the Commission as a SIP on existing Form SIP. The Commission requested comment on this proposed requirement, and whether it should combine Form SIP and Form SDR to create a joint registration form. In the Cross-Border Proposing Release, the Commission re-proposed Rule 909 without revision.

The Commission believes that requiring registered SDRs to register as SIPs will help to ensure fair access to important security-based swap transaction data reported to and publicly disseminated by them. The Commission believes that the additional authority over a registered SDR/SIP provided by Sections 11A(b)(5) and 11A(b)(6) of the Exchange Act will ensure that these entities offer security-based swap market data on terms that are fair and reasonable and not unreasonably discriminatory. Therefore, the Commission believes that registering SDRs as SIPs is necessary or appropriate in the public interest, for the protection of investors, or for the achievement of the purposes of Section 11A of the Exchange Act. Section 11A of the Exchange Act establishes broad goals for the development of the securities markets and charges the Commission with establishing rules and policies that are designed to further these objectives. Section 11A(a) states, among other things, that it is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure economically efficient execution of securities transactions; the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities; and an opportunity for investors' orders to be executed without the participation of a dealer. Requiring registered SDRs also to register with the Commission as SIPs is designed to help achieve these objectives in the still-developing security-based swap market.

One commenter stated that, because of the duplicative nature of the information required by Form SDR and Form SIP, the Commission should combine the two forms so that an SDR could register as both an SDR and a SIP using only one form.[997] As an alternative, the commenter suggested that an SDR be permitted to use either Form SDR or Form SIP to register as both an SDR and a SIP.[998]

Rule 909, as re-proposed, stated that "[a] registered security-based swap data repository shall also register with the Commission as a securities information processor on Form SIP." For reasons discussed in the SDR Adopting Release, the Commission agrees that Form SDR should be revised to accommodate SIP registration.[999] Accordingly, Rule 909, as adopted, eliminates the reference to Form SIP and states instead that "[a] registered security-based swap data repository shall also register with the Commission as a securities information processor on Form

997 See DTCC III at 9.

998 See id.

999 See SDR Adopting Release, Section VI(A)(1)(c). Form SDR is being adopted by the Commission as part of the SDR Adopting Release. Form SDR will be used by SIPs that also register as SDRs. Form SIP will continue to be used by applicants for registration as SIPs not seeking to become dually registered as an SDR and a SIP, and for amendments by registered SIPs that are not dually registered as an SDR and a SIP.

SDR." There are no filing requirements in addition to the Form SDR for a person to register as both a SIP and an SDR.

XVIII. Constitutional Questions About Reporting and Public Dissemination

One commenter argued that the reporting and dissemination requirements of Regulation SBSR could violate the First and Fifth Amendments to the Constitution by compelling "non-commercial speech" without satisfying a strict scrutiny standard and by "taking" transaction and/or holding data without just compensation.[1000]

As a preliminary matter, the Commission presumes "that Congress acted constitutionally when it passed the statute."[1001] Furthermore, the Commission has carefully considered the commenter's arguments and pertinent judicial precedent, and believes that the commenter does not raise any issue that would preclude the Commission's adoption of Regulation SBSR's regulatory reporting and public dissemination requirements substantially as proposed and re-proposed. The Commission does not believe that the public dissemination requirements of Regulation SBSR violate the First Amendment. Under the federal securities laws, the Commission imposes a number of requirements that compel the provision of information to the Commission itself or to the public. The Supreme Court has suggested that only limited scrutiny under the First Amendment applies to securities regulation, and that the government permissibly

---

1000 See Viola Letter at 3-4.

1001 See Nebraska v. EPA, 331 F.3d 995, 997 (DC Cir. 2003) ("Agencies do not ordinarily have jurisdiction to pass on the constitutionality of federal statutes.") (citing Thunder Basin Coal Co. v. Reich, 510 U.S. 200, 215 (1994)); Todd v. SEC, 137 F.2d 475, 478 (6th Cir. 1943) (same); William J. Haberman, 53 SE.C. 1024, 1029 note14 (1998) ("[W]e have no power to invalidate the very statutes that Congress has directed us to enforce.") (citing Milton J. Wallace, 45 SE.C. 694, 697 (1975); Walston & Co., 5 SE.C. 112, 113 (1939)).

regulates "public expression by issuers of and dealers in securities."[1002] And in other contexts, the required disclosure of purely factual and uncontroversial information has also been subjected to only limited First Amendment scrutiny.[1003]

Nor does the Commission believe that public dissemination requirements of Regulation SBSR violate the Fifth Amendment. To constitute a regulatory taking, the government action must (1) affect a property interest, and (2) go "too far" in so doing.[1004] The Supreme Court has identified several factors to be considered in determining whether the government action goes too far, such as "the character of the governmental action, its economic impact, and its interference with reasonable investment-backed expectations."[1005] The requirements at issue here directly advance the government's legitimate interest in enhancing price discovery by, among other things, reducing information asymmetries, enhancing transparency, and improving confidence in the market. The character of the government action, therefore, weighs against Rule 902(a) being a taking. The Commission further believes that the regulatory reporting and public dissemination requirements of Regulation SBSR do not impose an unconstitutional

---

1002 See, e.g., Paris Adult Theatre I v. Slaton, 413 U.S. 49, 64 (1973) (stating also that the First Amendment does not "preclude[] States from having 'blue sky' laws to regulate what sellers of securities may write or publish..."). See also S.E.C. v. Wall St. Pub. Inst., Inc., 851 F.2d 365, 373 (D.C. Cir. 1988) ("Speech relating to the purchase and sale of securities…forms a distinct category of communications" in which "the government's power to regulate [speech about securities] is at least as broad as with respect to the general rubric of commercial speech").

1003 See, e.g., Rumsfeld v. Forum for Academic and Institutional Rights, Inc., 547 U.S. 47, 61-62 (2006); Am. Meat Inst. v. U.S. Dep't of Agric., 760 F.3d 18, 21-22 (D.C. Cir. 2014); N.Y. State Rest. Ass'n v. N.Y. City Bd. of Health, 556 F.3d 114, 132 (2d Cir. 2009) (citing Nat'l Elec. Mfrs. Ass'n v. Sorrell, 272 F.3d 104, 113-115 (2d Cir. 2001)).

economic impact[1006] or interfere with reasonable investment-backed expectations. Regulation SBSR does not interfere with market participants' reasonable investment-backed expectations because the financial markets are an industry with a long tradition of regulation focused on promoting disclosure of information to investors. Businesses that operate in an industry with a history of regulation have no reasonable expectation that regulation will not be strengthened to achieve established legislative ends.[1007] Although security-based swaps did not become securities and thus did not become fully subject to the regulatory regime for securities regulation until after passage of the Dodd-Frank Act, the Commission believes that the economic similarity of markets in securities and security-based swaps strongly suggests that market participants could have anticipated regulation at a future date. Furthermore, the Commission believes that the commenter has provided no argument to support the proposition that the mere fact that security-based swaps were not fully subject to the Exchange Act until passage of the Dodd-Frank Act necessarily implies that it was unconstitutional for Congress to amend the Exchange Act to cover these securities.

XIX. What Happens If There Are Multiple SDRs?

1006 See District Intown Properties Ltd. P'ship v. District of Columbia, 198 F.3d 874, 883 (D.C. Cir. 1999) (requiring a Fifth Amendment claim to "put forth striking evidence of economic effects").

1007 District Intown Properties Ltd. P'ship v. District of Columbia, 198 F.3d 874, 884 (D.C. Cir. 1999); see also Ruckelshaus v. Monsanto Co., 467 U.S. 986, 1008-09 (1984) (finding no reasonable investment-backed expectations because "the possibility was substantial" in an industry long "the focus of great public concern and significant government regulation" that Congress "would find disclosure to be in the public interest"); Maine Educ. Ass'n Benefits Trust v. Cioppa, 695 F.3d 154-156 (1st Cir. 2012) (finding no reasonable investment-backed expectations because the Maine legislature's "continued expansion of this right of access" to information about insurance plans to a type of plan not covered by previous statutes providing a right of access was "reasonably foreseeable" in light of "the historically heavy and continuous regulation of insurance in Maine").

The provisions of Title VII that amended the Exchange Act to require the registration of security-based swap data repositories do not require that there be only a single SDR; in fact, these provisions contemplate that there could be multiple SDRs registered with the Commission.[1008] Therefore, no provision of Regulation SBSR, as adopted, is designed to require or promote the use of only a single SDR. The Commission believes, however, that it must consider how the Title VII goals of monitoring and reducing systemic risk and promoting transparency in the security-based swap market will be achieved if there are multiple registered SDRs.

One commenter believed that a diverse range of options for reporting security-based swap data would benefit the market and market participants.[1009] However, other commenters raised various concerns with having multiple registered SDRs. Two commenters recommended that the Commission designate a single registered SDR per asset class.[1010] Similarly, a third commenter stated that "the Commission should consider designating one [registered SDR] per SBS asset class to act as the industry consolidator of SBS data for the Commission and for the purpose of public reporting."[1011] This commenter also recommended that all life cycle events be

1008 See Section 13(n) of the Exchange Act, 15 U.S.C. 78m.

1009 See MFA Letter at 6.

1010 See ISDA I at 4; ISDA/SIFMA I at 9, note 12 (noting that, with a single SDR, there would be no redundancy of platforms, no need for additional levels of data aggregation for each asset class, reduced risk of errors, and greater transparency).

1011 MarkitSERV I at 8. The commenter also urged the Commission to "ensure that there is consistency between the fields that different SBS SDRs in the same asset class would collect and report in order to lay the foundation for the data to be consolidatable." Id. See also DTCC IX at 3. See supra Section II(B)(2) for discussion of the Commission's approach to ensure consistency. Another commenter also noted that "if there is more than one registered SDR for an asset class, it may prove difficult for the Commission to ensure that all registered SDRs calculate the same block thresholds for the same SBS reported to the same registered SDR that received the original transaction report and that registered SDRs be required to accept all security-based swaps in an asset class to further reduce fragmentation of data across multiple SDRs.

Another commenter warned of the risks of security-based swaps being reported to multiple SDRs, stating that, "[u]nless data fragmentation can be avoided, the primary lessons of the 2008 financial crisis, as related to OTC derivatives trading, will not have been realistically or adequately taken into account."[1012] This commenter noted the "large one-way trades put on by AIG in mortgage related credit derivatives" and stated that "if AIG had chosen to try to hide [its] trades by reporting to multiple repositories, these systemically risky positions would not have been discovered absent a 'super repository' that aggregated the trade level data of the various reporting repositories in a manner as to detect the large one-way aggregate positions."[1013] The same commenter stated in a subsequent comment letter that, if there are multiple registered SDRs, the "Commission should take such action as is necessary to eliminate any overstatements of open interest or other inaccuracies that may result from having broader market data published from separate SDRs."[1014] One option suggested by this commenter was utilizing Section 13(n)(5)(D)(i) of the Exchange Act,[1015] which requires an SDR to "provide direct electronic access to the Commission (or any designee of the Commission, including another registered entity)." The commenter explained that, using this authority, "the Commission could designate

---

instruments." WMBAA II at 4. As discussed in more detail above in Section VII, the Commission is not yet adopting or proposing block trade rules.

1012 See DTCC II at 15.

1014 DTCC IV at 5.

1015 15 U.S.C. 78m(n)(5)(D)(i).

one [SDR] as the recipient of information from other [SDRs] in order to have consolidation and direct electronic access for the Commission."[1016]

Four commenters urged the Commission to mandate the consolidation of publicly disseminated security-based swap data.[1017] One of these commenters stated that "in order to most effectively increase transparency in the swaps markets, it will be important for the real-time swaps data to be available on a consolidated basis."[1018] The second commenter believed that a central consolidator or the Commission must have the authority to compel all participants, including registered SDRs, to submit data to assure that there is a single, comprehensive, and accurate source for security-based swap data.[1019] A third commenter, citing the regime for producing consolidated public information in the U.S. equity markets, stated that "there is no obvious reason why a similar regime could not succeed for security-based swaps."[1020] In addition, this commenter believed that "the ideal approach would be collaboration by the SEC and the CFTC to create (or facilitate the direct creation of) a single, central system that performs these data dissemination functions."[1021] The fourth commenter cautioned that the failure to make real-time data available on a consolidated basis would especially disadvantage less frequent and

1016 DTCC I at 7.

1017 See Barnard I at 3; Better Markets II at 6; FINRA Letter at 5; MarkitSERV I at 7.

1018 MarkitSERV I at 7.

1019 See FINRA Letter at 5 (also noting that mandating the consolidation of security-based swap transaction data would help to assure uniformity, thereby promoting market integrity and investor protection).

1020 Better Markets II at 6. However, the commenter cautioned that the security-based swap data dissemination regime must avoid the direct data feeds that have developed in the equity markets because these data feeds allow "high-frequency traders to bypass the aggregation and dissemination procedure, at the expense of retail and other investors." Id.

1021 Id. at 4.

smaller users of the transaction data, who would not be able to obtain an accurate view of market activity because of the cost and complexity of accessing multiple data sources.[1022]

The Commission shares the concerns of these commenters. The regulatory goals underpinning the Title VII requirements for regulatory reporting and public dissemination of security-based swap transaction information could be frustrated if the information cannot be easily aggregated and normalized. The Commission notes, however, that the statutory provisions allow for the possibility of multiple SDRs.[1023] The Commission therefore seeks to develop a regulatory framework that would accommodate multiple SDRs, but mitigates the undesirable fragmentation of regulatory data that would come from incompatible data standards.

At the same time, the Commission generally agrees with the commenter who stated that the "Commission should take such action as is necessary to eliminate any overstatements of open interest or other inaccuracies that may result from having broader market data published from separate SDRs."[1024] The requirement that all life cycle events must be reported to the same registered SDR that received the report of the initial transaction is designed to minimize some potential problems of having multiple registered SDRs, such as overstating open interest. Although the reporting side can choose the registered SDR to which to report the initial transaction, all subsequent life cycle events must then be reported to that registered SDR. The

---

[1022] See MarkitSERV I at 7-8.

[1023] In the Regulation SBSR Proposing Release, the Commission stated that requiring registered SDRs to be the registered entities with the duty to disseminate security-based swap transaction information—rather than, for example, SB SEFs, clearing agencies, or the counterparties themselves—would produce some degree of mandated consolidation of that information and help to provide consistency in the form of the reported information. See 75 FR at 75227. However, the Commission acknowledges that this approach cannot guarantee consolidation of the published data because of the possibility of multiple registered SDRs.

[1024] DTCC IV at 5.

Commission believes that this requirement will facilitate its ability to track security-based swaps over their duration and minimize instances of double counting the same economic activity, which could occur if the records of life cycle event reports did not indicate their relationship to earlier occurring transactions.[1025]

Similarly, the Commission is adopting Rules 902(c)(4) and 907(a)(4) to address potential issues arising from non-mandatory reports (which could include duplicate reports of transactions reported to a second SDR when a mandatory report has already been provided to a first SDR). Rule 902(c)(4) prohibits a registered SDR from publicly disseminating a report of a non-mandatory transaction; this requirement is designed to prevent market observers from over-estimating the true amount of market activity, which could occur if the same transaction was disseminated by two SDRs. Rule 907(a)(4) requires registered SDRs to establish and maintain policies and procedures, among other things, for how participants must identify non-mandatory reports to the SDR, so that the SDR will be able to avoid publicly disseminating them.

The Commission believes that problems associated with the existence of multiple registered SDRs can be minimized to the extent that such SDRs refer to the same persons or things in the same manner. Thus, final Rule 903 provides that, if an IRSS that meets certain criteria is recognized by the Commission and has assigned a UIC to a person, unit of a person, or product, all registered SDRs must use that UIC in carrying out their responsibilities under Regulation SBSR. As discussed in Section X(B)(2), supra, the Commission has recognized the GLEIS—through which LEIs can be obtained—as an IRSS that meets the criteria of Rule 903. Therefore, if an entity has an LEI issued by or through the GLEIS, that LEI must be used for all

[1025] Thus, the Commission concurs with the commenter who recommended that all life cycle events be reported to the same registered SDR that received the original transaction report. See MarkitSERV I at 8.

purposes under Regulation SBSR. Furthermore, Rule 903(a)—in connection with the Commission's recognition of the GLEIS—requires all persons who are participants of at least one registered SDR to obtain an LEI from or through the GLEIS for use under Regulation SBSR, and each participant that acts as a guarantor of a direct counterparty's performance of any obligation under a security-based swap that is subject to Rule 908(a) shall, if the direct counterparty has not already done so, obtain a UIC for identifying the direct counterparty from or through that system, if that system permits third-party registration without a requirement to obtain prior permission of the direct counterparty.

The Commission is particularly hopeful that a robust system for product IDs could greatly improve the usability of security-based swap data, both for regulators and for market observers that obtain publicly disseminated transaction information. The product ID could minimize administrative burdens by rendering unnecessary the separate reporting of several data elements. Product IDs also should more easily distinguish standardized from non-standardized products and, thus, should facilitate aggregation of the public feeds issued from different registered SDRs.

The Commission did not propose to take any specific actions towards consolidation of the security-based swap data disseminated by different registered SDRs. As the Commission stated in the Regulation SBSR Proposing Release, it considered mandating one consolidated reporting entity to disseminate all security-based swap transaction data for each asset class by requiring each registered SDR in an asset class to provide all of its security-based swap data to a "central processor" that would also be a registered SDR.[1026] The Commission noted that there is substantial precedent for this approach in the equity markets, where market participants may

---

[1026] See 75 FR at 75227.

access a consolidated quote for national markets system securities and a consolidated tape reporting executed transactions. The Commission stated, however, that such approach "may not be warranted given the present [security-based swap] market structure."[1027]

The Commission continues to believe there is no need at this time to require consolidation of the publicly disseminated security-based swap data.[1028] Although it is likely that there will be multiple registered SDRs, it is unclear at present the extent to which each will be publicly disseminating a significant number of transactions.[1029] Furthermore, the Commission currently believes that, to the extent that there are different SDR data feeds that warrant consolidation and that such feeds cannot readily be aggregated by market observers themselves, certain market data vendors may be able to do so for commercially reasonable fees. As different SDRs register with the Commission and these SDRs implement Regulation SBSR, the Commission will monitor the situation and consider taking such action as it deems necessary in order to better carry about the Title VII policy of promoting greater transparency in the security-based swap market.

The Commission also acknowledges the recommendation made by one commenter to use Section 13(n)(5)(D)(i) of the Exchange Act to direct all regulatory reports received by multiple

---

1027 Id.

1028 In response to the commenter who recommended requiring registered SDRs to accept all security-based swaps in an asset class to reduce fragmentation of data, the Commission notes that Rule 13n-5(b)(1)(ii) under the Exchange Act, adopted as part of the SDR Adopting Release, requires an SDR that accepts reports for any security-based swap in a particular asset class to accept reports for all security-based swaps in that asset class that are reported to the SDR in accordance with that SDR's policies and procedures.

1029 The Commission notes that, under Rule 902(c)(6), most clearing transactions will not be publicly disseminated. Therefore, to the extent that a registered SDR receives only clearing transactions, it would likely be required to publicly disseminate few if any security-based swap transactions.

registered SDRs into a single "aggregator" SDR.[1030] The Commission believes that Rule 13n-4(b)(5), as adopted,[1031] helps to address these concerns. Rule 13n-4(b)(5) requires an SDR to provide the Commission with direct electronic access to the data stored by the SDR. As stated in the SDR Adopting Release:

> data [provided by an SDR to the Commission] must be in a form and manner acceptable to the Commission ...[T]he form and manner with which an SDR provides the data to the Commission should not only permit the Commission to accurately analyze the data maintained by a single SDR, but also allow the Commission to aggregate and analyze data received from multiple SDRs.[1032]

Thus, the Commission does not believe that it is necessary or appropriate at this time to direct registered SDRs to provide their transaction data to a single "aggregator" SDR, because the SDR rules are designed to facilitate the Commission's ability to aggregate information directly. As registered SDRs and their participants develop experience with the Regulation SBSR reporting regime and the Commission develops experience with overseeing that regime, the Commission may consider re-evaluating the need for or the desirability of an aggregator SDR in the future.

1030 See DTCC I at 7 ("Under Section 13 of the Exchange Act . . . security-based swap data repositories shall 'provide direct electronic access to the Commission (or any designee of the Commission, including another registered entity.' Under this authority, the Commission could designate one security-based swap data repository as the recipient of information from other security based-swap data repositories in order to have consolidation and direct access for the Commission") (citation omitted).

1031 See SDR Adopting Release, Section VI(D)(2)(c)(ii).

1032 See id. The SDR Adopting Release states, further, that "[t]he Commission recognizes that as the [security-based swap] market develops, new or different data fields may be needed to accurately represent new types of [security-based swap data], in which case the Commission may provide updated specifications of formats and taxonomies to reflect these new developments. Therefore, the Commission intends to publish guidance, as appropriate, on the form and manner that will be acceptable to it for the purposes of direct electronic access" (internal citations omitted).

XX. Section 31 Fees

In the Regulation SBSR Proposing Release,[1033] the Commission also proposed certain amendments to Rule 31 under the Exchange Act,[1034] which governs the calculation and collection of fees and assessments owed by self-regulatory organizations to the Commission pursuant to Section 31 of the Exchange Act.[1035]

Section 991 of the Dodd-Frank Act amended Section 31(e)(2) of the Exchange Act to provide that certain fees and assessments required under Section 31 will be required to be paid by September 25, rather than September 30.[1036] Therefore, the Commission proposed to make a corresponding change to the definition of "due date" in Rule 31(a)(10)(ii) under the Exchange Act[1037] by replacing a reference to "September 30" with a reference to "September 25."

The Commission also proposed to exempt security-based swap transactions from the application of Section 31 transaction fees. Section 31(c) of the Exchange Act[1038] requires a national securities association to pay fees based on the "aggregate dollar amount of sales transacted by or through any member of such association otherwise than on a national securities exchange of securities . . . registered on a national securities exchange or subject to prompt last sale reporting pursuant to the rules of the Commission or a registered national securities

1034 17 CFR 240.31.

1035 15 U.S.C. 78ee.

1036 Section 991 of the Dodd Frank Act provides, in relevant part: "(1) AMENDMENTS.—Section 31 of the Securities Exchange Act of 1934 (15 U.S.C. 78ee) is amended . . . in subsection (e)(2), by striking 'September 30' and inserting 'September 25'."

1037 17 CFR 240.31(a)(10)(ii).

1038 15 U.S.C. 78ee(c).

association." Pursuant to Section 761(a) of the Dodd-Frank Act,[1039] security-based swaps are securities.[1040] Accordingly, when security-based swap transactions become subject to prompt last-sale reporting pursuant to the rules of the Commission, the members of a national securities association that effect sales of security-based swaps other than on an exchange would become liable for Section 31 fees for any such sales.[1041] Because of certain potential difficulties in fairly and evenly applying Section 31 fees for sales of security-based swaps,[1042] the Commission proposed to exercise its authority under Section 31(f) of the Exchange Act[1043] to exempt all such sales from the application of Section 31 fees. To carry out that objective, the Commission proposed to add a new subparagraph (ix) to Rule 31(a)(11), which defines the term "exempt sale," to include as an exempt sale "[a]ny sale of a security-based swap." The Commission also proposed to add a new paragraph (19) to Rule 31(a) to provide a definition for the term "security-based swap."

One commenter submitted two comment letters on this aspect of the proposal relating to Rule 31.[1044]

1039 15 U.S.C. 78c(a)

1040 See 15 U.S.C. 78c(a)(10).

1041 A national securities exchange also would be liable for fees in connection with any transactions in security-based swaps executed on its market. See 15 U.S.C. 78ee(b).

1042 See Regulation SBSR Proposing Release, 75 FR at 75245-46.

1043 15 U.S.C. 78ee(f) ("The Commission, by rule, may exempt any sale of securities or any class of sales of securities from any fee or assessment imposed by this section, if the Commission finds that such exemption is consistent with the public interest, the equal regulation of markets and brokers and dealers, and the development of a national market system.").

1044 See OneChicago I at 2-3 (arguing that, because "exchange for physical" ("EFP") transactions conducted on OneChicago are economically similar to security-based swap transactions, EFP transactions also should be exempt from Section 31 fees or, The Commission is not adopting these proposed revisions to Rule 31(a). As discussed above, the Commission is not yet requiring that security-based swap transactions be publicly disseminated in real time. Because security-based swaps are not yet subject to prompt last-sale reporting pursuant to the rules of the Commission or a national securities association,[1045] sales of security-based swaps are not yet subject to Section 31 fees. In the future, the Commission anticipates soliciting public comment on block thresholds and the timeframe in which non-block security-based swap transactions must be publicly disseminated. At such time, when implementation of prompt last-sale public dissemination of security-based swap transactions would subject them to Section 31 fees, the Commission can revisit whether to adopt the proposed exemption for security-based swaps from Section 31 fees.

XXI. Paperwork Reduction Act

Certain provisions of Regulation SBSR contain "collection of information requirements" within the meaning of the Paperwork Reduction Act of 1995 ("PRA").[1046] The Commission published notices requesting comment on the collection of information requirements relating to Regulation SBSR, as originally proposed, in the Regulation SBSR Proposing Release[1047] and, as re-proposed, in the Cross-Border Proposing Release[1048] and submitted relevant information to the

---

alternatively, that security-based swaps should be subject to Section 31 fees); OneChicago II (same).

1045 See supra Section VII (discussing phased approach to public dissemination and block trades, which will permit security-based swap transactions to be reported any time up to 24 hours after the time of execution (or, if 24 hours after the time of execution would fall on a day that is not a business day, by the same time on the next day that is a business day) during the first phase).

1046 44 U.S.C. 3501 et seq.

1047 See Regulation SBSR Proposing Release, 75 FR at 75251-61.

1048 See Cross-Border Proposing Release, 78 FR at 31115-18.

Office of Management and Budget ("OMB") for review in accordance with the PRA.[1049] The titles for the collections are: (1) Rule 901—Reporting Obligations—For Reporting Sides; (2) Rule 901—Reporting Obligations—For Registered SDRs; (3) Rule 902—Public Dissemination of Transaction Reports; (4) Rule 904—Operating Hours of Registered Security-Based Swap Data Repositories; (5) Rule 905—Correction of Errors in Security-Based Swap Information—For Reporting Sides; (6) Rule 905—Correction of Errors in Security-Based Swap Information—Non-Reporting Sides; (7) Rule 906(a)—Other Duties of All Participants—For Registered SDRs; (8) Rule 906(a)—Other Duties of All Participants—For Non-Reporting Sides; (9) Rule 906(b)—Other Duties of All Participants—For All Participants; (10) Rule 906(c)—Other Duties of All Participants—For Covered Participants; (11) Rule 907—Policies and Procedures of Registered Security-Based Swap Data Repositories; and (12) Rule 908(c)—Substituted Compliance (OMB Control No. 3235-0718). Compliance with these collections of information requirements is mandatory. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the agency displays a currently valid control number.

The Commission is adopting Regulation SBSR, which contains these 12 collections of information, largely as re-proposed, with certain revisions suggested by commenters or designed to clarify the rules.[1050] The rules, as adopted, establish a "reporting hierarchy" that specifies the side that has the duty to report a security-based swap that is a covered transaction[1051] and provides for public dissemination of security-based swap transaction information (except as provided in Rule 902(c)). Registered SDRs are required to establish and maintain certain

---

[1049] 44 U.S.C. 3507; 5 CFR 1320.11.

[1050] In addition, the Commission, in separate releases, is adopting rules relating to SDR registration, duties, and core principles and proposing amendments to Regulation SBSR.

[1051] See supra notes 11-12 and accompanying text.

policies and procedures regarding how transaction data are reported and disseminated, and participants of registered SDRs that are registered security-based swap dealers or registered major security-based swap participants are required to establish and maintain policies and procedures that are reasonably designed to ensure that they comply with applicable reporting obligations. Regulation SBSR also requires a person that registers with the Commission as an SDR also to register with the Commission as a SIP.

The hours and costs associated with complying with Regulation SBSR constitute reporting and cost burdens imposed by each collection of information. Certain estimates (e.g., the number of reporting sides, the number of non-reporting sides, the number of participants, and the number of reportable events[1052] pertaining to a security-based swap transaction) contained in the Commission's earlier PRA assessments have been updated to reflect the rule text of Regulation SBSR, as adopted, as well as additional information and data now available to the Commission, as discussed in further detail below. The Commission believes that the methodology used for calculating the re-proposed paperwork burdens set forth in the Cross-Border Proposing Release is appropriate and has received no comments to the contrary. The revised paperwork burdens estimated by the Commission herein are consistent with those made in connection with the re-proposal of Regulation SBSR, which was included in the Cross-Border Proposing Release. However, as described in more detail below, certain estimates have been modified, as necessary, to conform to the adopted rules and to reflect the most recent data available to the Commission.

[1052] A reportable event includes both an initial security-based swap transaction, required to be reported pursuant to Rule 901(a), as well as a life cycle event, the reporting of which is governed by Rule 901(e).

The Commission requested comment on the collection of information requirements included in both the Regulation SBSR Proposing Release and the Cross-Border Proposing Release. As noted above, the Commission received 86 comment letters on the Regulation SBSR Proposing Release and six comment letters on the Cross-Border Proposing Release that specifically referenced Regulation SBSR. Although the comment letters did not specifically address the Commission's estimates for the proposed collection of information requirements, views of commenters relevant to the Commission's analysis of burdens, costs, and benefits of Regulation SBSR are discussed below.

The rules containing these specific collections of information are discussed further below.

A. Definitions—Rule 900

Rule 900 sets forth definitions of various terms used in Regulation SBSR. In the Regulation SBSR Proposing Release, the Commission stated its belief that Rule 900, since it contains only definitions of relevant terms, would not be a "collection of information" within the meaning of the PRA.[1053] Although Rule 900, as adopted, contains revisions to re-proposed Rule 900, including additions and deletions of certain defined terms and modification of others, the Commission continues to believe that Rule 900 does not constitute a "collection of information" within the meaning of the PRA.

B. Reporting Obligations—Rule 901

Rule 901, as adopted, sets forth various requirements relating to the reporting of covered transactions. Rule 901 of Regulation SBSR, as adopted, contains "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 901—Reporting Obligations."

[1053] See Regulation SBSR Proposing Release, 75 FR at 75246.

1. Summary of Collection of Information

Title VII of the Dodd-Frank Act amended the Exchange Act to require the reporting of security-based swap transactions. Accordingly, the Commission is adopting Rule 901 under the Exchange Act to implement this requirement. Rule 901 specifies, with respect to each reportable event pertaining to covered transactions, who is required to report, what data must be reported, when it must be reported, where it must be reported, and how it must be reported. Rule 901(a), as adopted, establishes a "reporting hierarchy" that specifies the side that has the duty to report a security-based swap that is a covered transaction.[1054] The reporting side, as determined by the reporting hierarchy, is required to submit the information required by Regulation SBSR to a registered SDR. The reporting side may select the registered SDR to which it makes the required report.

Pursuant to Rule 901(b), as adopted, if there is no registered SDR that will accept the report required by Rule 901(a), the person required to make the report must report the transaction to the Commission. Rule 901(c) sets forth the primary trade information and Rule 901(d) sets forth the secondary trade information that must be reported. Under the final rules, covered transactions—regardless of their notional amount—must be reported to a registered SDR at any point up to 24 hours after the time of execution, or, in the case of a security-based swap that is subject to regulatory reporting and public dissemination solely by operation of Rule 908(a)(1)(ii), within 24 hours after the time of acceptance for clearing.[1055] Except as required by

---

[1054] See supra notes 11-12 and accompanying text.

[1055] See supra Section VII(B)(1) (discussing Rule 901(j) and the rationale for 24-hour reporting timeframe). In addition, as discussed in more detail in Section VII(B), supra, if 24 hours after the time of execution would fall on a non-business day (i.e., a Saturday, Sunday, or U.S. federal holiday), reporting would be required by the same time on the next business day. As discussed in Section XV(C)(4), supra, Rule 908(a)(1)(ii), as

Rule 902(c), the information reported pursuant to Rule 901(c) must be publicly disseminated. Information reported pursuant to Rule 901(d) is for regulatory purposes only and will not be publicly disseminated.

Rule 901(e) requires the reporting of life cycle events, and adjustments due to life cycle events, within 24 hours of the time of occurrence, to the entity to which the original transaction was reported. The report must contain the transaction ID of the original transaction.

In addition to the reporting duties that reporting sides incur under Rule 901, Rule 901 also imposes certain duties on a registered SDR that receives security-based swap transaction data. Rule 901(f) requires a registered SDR to timestamp, to the second, any information submitted to it pursuant to Rule 901, and Rule 901(g) requires a registered SDR to assign a transaction ID to each security-based swap, or establish or endorse a methodology for transaction IDs to be assigned by third parties. Rule 901(h) requires reporting sides to electronically transmit the information required by Rule 901 in a format required by the registered SDR.

Rule 901(i) requires reporting of pre-enactment security-based swaps and transitional security-based swaps to the extent that information about such transactions is available.

As detailed in Sections II to V, supra, in adopting Rule 901, the Commission has made certain changes to Rule 901, both as originally proposed and as re-proposed in the Cross-Border Proposing Release, in response to comments or in order to clarify various provisions. The Commission believes that these changes do not substantially alter the underlying method of computing the paperwork burdens, but do result in changes to the number of impacted entities

---

adopted, provides that a security-based swap that is subject to regulatory reporting and public dissemination solely by operation of Rule 908(a)(1)(ii)—i.e., because the security-based swap has been accepted for clearing by a clearing agency having its principal place of business in the United States—must be reported within 24 hours of acceptance for clearing.

and the number to transactions covered by the rules, thus impacting the paperwork burden totals that were previously estimated for Rule 901.

2. Use of Information

The security-based swap transaction information required to be reported pursuant to Rule 901 will be used by registered SDRs, market participants, the Commission, and other relevant authorities. The information reported by reporting sides pursuant to Rule 901 will be used by registered SDRs to publicly disseminate reports of security-based swap transactions, as well as to offer a resource for the Commission and other relevant authorities to obtain detailed information about the security-based swap market. Market participants will use the public market data feed, among other things, to assess the current market for security-based swaps and to assist in the valuation of their own positions. The Commission and other relevant authorities will use information about security-based swap transactions reported to and held by registered SDRs to monitor and assess systemic risks, as well as for market surveillance purposes.

3. Respondents

Rule 901(a) assigns reporting duties for covered transactions. In the Cross-Border Proposing Release, the Commission revised its preliminary estimate to 300 respondents.[1056] The Commission continues to believe that it is reasonable to use 300 as an estimate of "reporting sides" (as that term was used in the Cross-Border Proposing Release).

The Commission notes that, since issuing the Regulation SBSR Proposing Release, the Commission has obtained additional and more granular data regarding participation in the security-based swap market from DTCC-TIW. These historical data suggest that, among the 300

[1056] See Cross-Border Proposing Release, 78 FR at 31113 (lowering the estimate of reporting sides from 1,000 to 300).

reporting sides, approximately 50 are likely to be required to register with the Commission as security-based swap dealers and approximately five are likely to register as major security-based swap participants.[1057] These data further suggest that these 55 reporting sides likely will account for the vast majority of recent security-based swap transactions and reports and that there are only a limited number of security-based swap transactions that do not include at least one of these larger counterparties on either side.[1058]

Rule 901 imposes certain duties on registered SDRs. In the Regulation SBSR Proposing Release, the Commission preliminarily estimated that the number of registered SDRs would not exceed ten, an estimate that was affirmed in the Cross-Border Proposing Release.[1059] The Commission continues to believe that it is reasonable to estimate ten registered SDR respondents for the purpose of estimating collection of information burdens for Regulation SBSR.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

Pursuant to Rule 901, covered transactions must be reported to a registered SDR or to the Commission. Together, sections (a), (b), (c), (d), (e), (h), and (j) of Rule 901 set forth the parameters that govern how reporting sides report covered transactions. Rule 901(i) addresses the reporting of pre-enactment and transitional security-based swaps. These reporting requirements impose initial and ongoing burdens on reporting sides. The Commission believes

[1057] See id. at 31103.

[1058] As a result, the Commission generally will continue to use 300 as an estimate of the number of reporting sides. In cases where a rule is more limited in its application, for example Rule 906(c), the Commission may use a different number that reflects some subset of the estimated 300 reporting sides. See also Cross-Border Adopting Release, 79 FR at 47300 (stating that 55 firms might register as security-based swap dealers or major security-based swap participants).

[1059] See Regulation SBSR Proposing Release, 75 FR at 75247; See also Cross-Border Proposing Release, 78 FR at 31113.

that these burdens will be a function of, among other things, the number of reportable events and the data elements required to be reported for each such event. Rule 901(f) requires a registered SDR to the time stamp, to the second, all reported information, and Rule 901(g) requires a registered SDR to assign a transaction ID to each security-based swap, or establish or endorse a methodology for transaction IDs to be assigned by third parties. These requirements impose initial and ongoing burdens on registered SDRs.

a. Baseline Burdens

In the Regulation SBSR Proposing Release, the Commission estimated that respondents would face three categories of burdens to comply with Rule 901.[1060] First, each entity that would incur a duty to report security-based swap transactions pursuant to Regulation SBSR (a "reporting party"[1061]) would likely have to develop an internal order and trade management system ("OMS") capable of capturing the relevant transaction information.[1062] Second, each such entity would have to implement a reporting mechanism.[1063] Third, each such entity would have to establish an appropriate compliance program and support for the operation of any OMS and reporting mechanism.[1064] In the Regulation SBSR Proposing Release, the Commission preliminarily estimated that the initial, aggregate annualized burden associated with Rule 901 would be 1,438 hours per reporting party—for a total of 1,438,300 hours for all reporting

1060 See Regulation SBSR Proposing Release, 75 FR at 75248.

1061 In the Regulation SBSR Proposing Release, the Commission proposed the term "reporting party" to describe the entity with the duty to report a particular security-based swap transaction. See 75 FR at 75211. In the Cross-Border Proposing Release, the Commission revised the term "reporting party" to "reporting side" as part of the re-proposal of Regulation SBSR. See 78 FR at 31059.

1062 See Regulation SBSR Proposing Release, 75 FR at 75248.

1063 See id.

1064 See id.

parties—in order to develop an OMS, implement a reporting mechanism, and establish an appropriate compliance program and support system.[1065] The Commission preliminarily estimated that the ongoing aggregate annualized burden associated with Rule 901 would be 731 hours per reporting party, for a total of 731,300 hours for all reporting parties.[1066] The Commission further estimated that the initial aggregate annualized dollar cost burden on reporting parties associated with Rule 901 would be $201,000 per reporting party, for a total of $201,000,000 for all reporting parties.[1067]

b. Burdens of Final Rule 901

For Reporting Sides. The reporting hierarchy is designed to place the duty to report covered transactions on counterparties who are most likely to have the resources and who are best able to support the reporting function.

Reporting sides that fall under the reporting hierarchy in Rule 901(a)(2)(ii) incur certain burdens as a result thereof with respect to their reporting of covered transactions. As stated above, the Commission believes that an estimate of 300 reporting sides that would incur the duty to report under Regulation SBSR is reasonable for estimating collection of information burdens under the PRA. This estimate includes all of those persons that incur a reporting duty under Regulation SBSR, as adopted, including registered security-based swap dealers and registered major security-based swap participants. This estimate also includes some smaller counterparties

---

[1065] See id. at 75250.

[1066] See id.

[1067] See id. In the Cross-Border Proposing Release, the Commission noted that the Regulation SBSR Proposing Release incorrectly stated this total as $301,000 per reporting party. The correct number is $201,000 per reporting party ($200,000 + $1,000). See 78 FR at 31113, note 1259.

to security-based swaps that could incur a reporting duty, but many fewer than estimated in the PRA of the Regulation SBSR Proposing Release.

As discussed in more detail in Section V, supra, Rule 901(a)(2)(ii) adopts the reporting hierarchy set forth in the Cross-Border Proposing Release, but limits its application to uncleared transactions. The Commission believes, however, that this limitation will not materially change the number of reporting sides for PRA purposes, as there likely would be a significant overlap between the approximately 300 reporting sides reporting uncleared transactions and those reporting other security-based swaps.

In the Regulation SBSR Proposing Release, the Commission preliminarily estimated that there would be 15.5 million reportable events associated with security-based swap transactions per year.[1068] In the Cross-Border Proposing Release, in addition to lowering its estimate of the number of reporting sides from 1,000 to 300, the Commission also revised its estimate of the number of reportable events to approximately 5 million.[1069] Since issuing the Cross-Border Proposing Release, however, the Commission has obtained additional and more granular data regarding participation in the security-based swap market from DTCC-TIW. As a result, the Commission is now further revising its estimate of the number of reportable events. Accordingly, the Commission now estimates that there will be approximately 3 million reportable events per year under Rule 901, as adopted.[1070] The Commission further estimates

1068 See Regulation SBSR Proposing Release, 75 FR at 75248.

1069 See Cross-Border Proposing Release, 78 FR at 31114.

1070 According to data published by the Bank for International Settlements, the global notional amount outstanding in equity forwards and swaps as of December 2013 was \$2.28 trillion. The notional amount outstanding in single-name CDS was approximately \$11.32 trillion, in multi-name index CDS was approximately \$8.75 trillion, and in multi-name, non-index CDS was approximately \$950 billion. See Semi-annual OTC derivatives statistics at end-December 2013 (June 2014), Table 19, available at that approximately 2 million of these reportable events will consist of uncleared transactions (i.e., those transactions that will be reported to a registered SDR by the reporting sides). The Commission noted in the Cross-Border Proposing Release, and continues to believe, that the reduction in the estimate of the number of reportable events per year is likely a result of several factors.[1071]

The Commission believes that, once a respondent's reporting infrastructure and compliance systems are in place, the burden of reporting each individual reportable event will be small when compared to the burdens of establishing the reporting infrastructure and compliance systems.[1072] As stated above, the Commission estimates that 2 million of the 3 million total

---

http://www.bis.org/statistics/dt1920a.pdf (last visited September 22, 2014). For the purposes of this analysis, the Commission assumes that multi-name index CDS are not narrow-based index CDS and, therefore, are not security-based swaps. The Commission also assumes that all instruments reported as equity forwards and swaps are security-based swaps, potentially resulting in underestimation of the proportion of the security-based swap market represented by single-name CDS. Based on those assumptions, single-name CDS appear to constitute roughly 82% of the security-based swap market. Although the BIS data reflect the global OTC derivatives market, and not just the U.S. market, the Commission believes that it is reasonable to assume these ratios would be similar in the U.S. market. The Commission now estimates that there were approximately 2.26 million single-name CDS transactions in 2013. Because single-name CDS appear to constitute roughly 78% of the security-based swap market, the Commission now estimates that there are approximately 3 million security-based swap transactions (i.e., 2,260,000/0.78 = 2,898,329 reportable events).

1071 See 78 FR at 31115.

1072 In the Regulation SBSR Proposing Release, the Commission preliminarily estimated that reporting specific security-based swap transactions to a registered SDR—separate from the establishing of infrastructure and compliance systems that support reporting—would impose an annual aggregate cost of approximately $5,400,000. See 75 FR 75265. The Commission further estimated that Rule 901 would impose an aggregate total first-year cost of approximately $1,039,000,000 and an ongoing annualized aggregate cost of approximately $703,000,000. See id. at 75280. See also Cross-Border Proposing Release, 78 FR at 31115 (stating the Commission's preliminary belief that the reporting of a single reportable event would be de minimis when compared to the burdens of establishing the reporting infrastructure and compliance systems).

reportable events would consist of the initial reporting of security-based swaps as well as the reporting of any life cycle events. The Commission estimates that of the 2 million reportable events, approximately 900,000 would involve the reporting of new security-based swap transactions, and approximately 1,100,000 would involve the reporting of life cycle events under Rule 901(e). The Commission estimates that Rule 901(a) would result in reporting sides having a total burden of 4,500 hours attributable to the initial reporting of security-based swaps by reporting sides to registered SDRs under Rules 901(c) and 901(d) over the course of a year.[1073] The Commission further estimates that reporting sides would have a total burden of 5,500 hours attributable to the reporting of life cycle events under Rule 901(e) over the course of a year.[1074] Therefore, the Commission believes that Rule 901, as adopted, would result in a total reporting burden for reporting sides under Rules 901(c) and (d) along with the reporting of life cycle events under Rule 901(e) of 10,000 burden hours per year. The Commission continues to believe that many reportable events will be reported through electronic means and that the ratio of electronic reporting to manual reporting is likely to increase over time. The Commission continues to believe that the bulk of the burden hours estimated above will be attributable to manually reported transactions. Thus, reporting sides that capture and report transactions

---

1073 In the Regulation SBSR Proposing Release, the Commission estimated that it would take approximately 0.005 hours for each security-based swap transaction to be reported. See 75 FR at 75249, note 195. The Commission calculates the following: ((900,000 x 0.005) / (300 reporting sides)) = 15 burden hours per reporting side or 4,500 total burden hours attributable to the initial reporting of security-based swaps.

1074 In the Regulation SBSR Proposing Release, the Commission estimated that it would take approximately 0.005 hours for each security-based swap transaction to be reported. See 75 FR at 75249, note 195. The Commission calculates the following: ((1,100,000 x 0.005) / (300 reporting sides)) = 18.33 burden hours per reporting side or 5,500 total burden hours attributable to the reporting of life cycle events under Rule 901(e).

electronically will likely incur bear fewer burden hours than those reporting sides that capture and report transactions manually.

Based on the foregoing, the Commission estimates that Rule 901, as adopted, will impose an estimated total first-year burden of approximately 1,394 hours[1075] per reporting side for a total first-year burden of 418,200 hours for all reporting sides.[1076] The Commission estimates that Rule 901, as adopted, will impose ongoing annualized aggregate burdens of approximately 687 hours[1077] per reporting side for a total aggregate annualized cost of 206,100 hours for all reporting sides.[1078] The Commission further estimates that Rule 901, as adopted, will impose initial and ongoing annualized dollar cost burdens of $201,000 per reporting side, for total aggregate initial and ongoing annualized dollar cost burdens of $60,300,000.[1079]

1075 The Commission derived its estimate from the following: (355 hours (one-time hourly burden for establishing and OMS) + 172 hours (one-time hourly burden for establishing security-based swap reporting mechanisms) + 180 hours (one-time hourly burden for compliance and ongoing support) = 707 hours (one-time total hourly burden). See Regulation SBSR Proposing Release, 75 FR at 75248-50, notes 186, 194, and 201. (436 hours (annual-ongoing hourly burden for internal order management) + 33.3 hours (revised annual-ongoing hourly burden for security-based swap reporting mechanisms) + 218 hours (annual-ongoing hourly burden for compliance and ongoing support) = 687.3 hours (one-time total hourly burden. See id. at 75248-50, notes 187 and 201 (707 one-time hourly burden + 687 revised annual-ongoing hourly burden = 1,394 total first-year hourly burden).

1076 The Commission derived its estimate from the following: (1,394 hours per reporting side x 300 reporting sides) = 418,200 hours.

1077 See Cross-Border Proposing Release, 78 FR at 31112-15.

1078 The Commission derived its estimate from the following: (687 hours per reporting side x 300 reporting sides) = 206,100 hours.

1079 The Commission derived its estimate from the following: ($201,000 per reporting side x 300 reporting sides) = $60,300,000. See Cross-Border Proposing Release, 78 FR at 31113-15. The Commission originally estimated this burden based on discussions with various market participants. See Regulation SBSR Proposing Release, 75 FR at 75247-50.

For Registered SDRs. In the Regulation SBSR Proposing Release, the Commission set forth estimated burdens on registered SDRs related to Rule 901.[1080] The Commission continues to believe that these estimated burdens are reasonable.

Rule 901(f) requires a registered SDR to time-stamp, to the second, information that it receives. Rule 901(g) requires a registered SDR to assign a unique transaction ID to each security-based swap it receives or establish or endorse a methodology for transaction IDs to be assigned by third parties. The Commission continues to believe that such design elements will pose some additional burdens to incorporate in the context of designing and building the technological framework that will be required of an SDR to become registered.[1081] Therefore, the Commission estimates that Rules 901(f) and 901(g) will impose an initial one-time aggregate burden of 1,200 burden hours, which corresponds to 120 burden hours per registered SDR.[1082] This figure is based on an estimate of ten registered SDRs, which the Commission continues to believe is reasonable.

Once operational, these elements of each registered SDR's system will have to be supported and maintained. Accordingly, the Commission estimates that Rule 901(f) and 901(g) will impose an annual aggregate burden of 1,520 burden hours, which corresponds to 152 burden

[1080] See 75 FR at 75250-51.

[1081] The Commission has adopted additional rules under the Exchange Act relating to the duties, data collection and maintenance requirements, and automated systems requirements of SDRs. See SDR Adopting Release.

[1082] See Regulation SBSR Proposing Release, 75 FR at 75250. This figure is based on discussions with various market participants and is calculated as follows: [((Sr. Programmer at 80 hours) + (Sr. Systems Analyst at 20 hours) + (Compliance Manager at 8 hours) + (Director of Compliance at 4 hours) + (Compliance Attorney at 8 hours)) x (10 registered SDRs)] = 1,200 burden hours, which is 120 hours per registered SDR.

hours per registered SDR.[1083] This figure represents an estimate of the burden for a registered SDR for support and maintenance costs for the registered SDR's systems to time stamp incoming submissions and assign transaction IDs.

Thus, the Commission estimates that the first-year aggregate annualized burden on registered SDRs associated with Rules 901(f) and 901(g) will be 2,720 burden hours, which corresponds to 272 burden hours per registered SDR.[1084] Correspondingly, the Commission estimates that the ongoing aggregate annualized burden associated with Rules 901(f) and 901(g) will be 1,520 burden hours, which corresponds to 152 burden hours per registered SDR.[1085] The above burden estimates pertaining to Rules 901(f) and 901(g) are identical to those set forth in the Regulation SBSR Proposing Release.[1086]

Since Regulation SBSR, as adopted, requires reporting for only covered transactions, registered SDRs will be required to receive, process, and potentially disseminate a smaller number of security-based swaps than originally envisioned. Because the bulk of an SDR's burdens and costs under Regulation SBSR are not transaction-based, however, the Commission has determined that the burden and cost estimates set forth in the Cross-Border Proposing Release remain valid for the purposes of the PRA.

1083 See Regulation SBSR Proposing Release, 75 FR at 75250. This figure is based on discussions with various market participants as follows: [((Sr. Programmer at 60 hours) + (Sr. Systems Analyst at 48 hours) + (Compliance Manager at 24 hours) + (Director of Compliance at 12 hours) + (Compliance Attorney at 8 hours)) x (10 SDRs)] = 1,520 burden hours, which is 152 hours per registered SDR.

1084 See Regulation SBSR Proposing Release, 75 FR at 75250. This figure is based on the following: [(1,200) + (1,520)] = 2,720 burden hours, which corresponds to 272 burden hours per registered SDR.

1085 See supra note 1083.

1086 See Regulation SBSR Proposing Release, 75 FR at 75250.

In addition, the Commission recognizes that, since the publication of the Regulation SBSR Proposing Release, many entities already have spent considerable time and resources building the infrastructure that will support reporting of security-based swaps. Indeed, some reporting is already occurring voluntarily.[1087] As a result, the Commission notes that the burdens and costs calculated herein could be greater than those actually incurred by affected parties as a result of the adoption of Regulation SBSR. Nonetheless, the Commission believes that its estimates represent a reasonable upper bound of the actual burdens and costs required to comply with Regulation SBSR.

5. Recordkeeping Requirements

Rule 13n-5(b)(4) under the Exchange Act requires an SDR to maintain the transaction data and related identifying information that it collects for not less than five years after the applicable security-based swap expires, and historical positions for not less than five years.[1088] Accordingly, security-based swap transaction reports received by a registered SDR pursuant to Rule 901 will be required to be retained by the registered SDR for not less than five years.

6. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

7. Confidentiality of Responses to Collection of Information

For the majority of security-based swap transactions, all of the information collected pursuant to Rule 901(c) will be widely available to the public because these transactions will be publicly disseminated by a registered SDR pursuant to Rule 902. However, certain security-

---

1087 DTCC currently compiles information on the credit default swap market. See http://www.dtcc.com/about/businesses-and-subsidiaries/ddr-us.aspx (last visited September 22, 2014).

1088 See SDR Adopting Release, Section VI(E)(4).

based swaps are not subject to Rule 902's public dissemination requirement;[1089] therefore, information about these transactions will not be publicly available. In addition, reporting sides must provide certain information about security-based swap transactions pursuant to Rule 901(d). Rule 901(d) information is for regulatory purposes and will not be publicly disseminated.

An SDR, pursuant to Section 13(n)(5) of the Exchange Act and Rules 13n-4(b)(8) and 13n-9 thereunder, must maintain the privacy of security-based swap information,[1090] including information reported pursuant to Rule 901(d) of Regulation SBSR, as well as information about a security-based swap transaction reported pursuant to Rule 901(c) where the transaction falls into a category enumerated in Rule 902(c). To the extent that the Commission receives these kinds of information under Regulation SBSR, such information will be kept confidential, subject to the provisions of applicable law.

C. Public Dissemination of Transaction Reports—Rule 902

Rule 902(a), as adopted, requires a registered SDR to publicly disseminate a transaction report immediately upon receipt of information about a security-based swap, or a life cycle event or adjustment due to a life cycle event (or upon re-opening following a period when the registered SDR was closed), except in certain limited circumstances described in Rule 902(c). A published transaction report must consist of all the information reported pursuant to Rule 901(c), plus any condition flags required by the policies and procedures of the registered SDR to which the transaction is reported. Certain provisions of Rule 902 of Regulation SBSR contain

---

1089 See supra Section VI(D).

1090 See SDR Adopting Release, Sections VI(D)(2) and VI(I)(1).

"collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 902—Public Dissemination of Transaction Reports."

1. Summary of Collection of Information

As adopted, Rule 902(a) generally requires that a registered SDR publicly disseminate a transaction report for each security-based swap transaction, or a life cycle event or adjustment due to a life cycle, immediately upon receipt of information about the security-based swap submitted by a reporting side pursuant to Rule 901(c). The transaction report must contain all of the information reported pursuant to Rule 901(c) along with any condition flags required by the policies and procedures of the registered SDR to which the transaction is reported.[1091] If its systems are unavailable to publicly disseminate these transaction data immediately upon receipt, the registered SDR is required to disseminate the transaction data immediately upon re-opening. Rule 902(a), as adopted, provides registered SDRs with the authority and discretion to establish the content, format, and mode of dissemination through its policies and procedures, as long as it does so in compliance with the information required to be disseminated by Rule 901(c).

Rule 902(b), as proposed and re-proposed, addressed how a registered SDR would be required to publicly disseminate transaction reports of block trades. As discussed in more detail above, the Commission is not adopting Rule 902(b).

Rule 902(c), as adopted, prohibits a registered SDR from disseminating: (1) the identity of any counterparty to a security-based swap; (2) with respect to a security-based swap that is not cleared at a registered clearing agency and that is reported to a registered SDR, any information disclosing the business transactions and market positions of any person; (3) any information regarding a security-based swap reported pursuant to Rule 901(i); (4) any non-mandatory report;

[1091] See Rule 907(a)(4).

(5) any information regarding a security-based swap that is required to be reported pursuant to Rule 901 and Rule 908(a)(1) but is not required to be publicly disseminated pursuant to Rule 908(a)(2); (6) any information regarding certain clearing transactions; and (7) any information regarding the allocation of a security-based swap.

Rule 902(d) provides that no person shall make available to one or more persons (other than a counterparty or a post-trade processor) transaction information relating to a security-based swap before the reporting side transmits the primary trade information about the security-based swap to a registered SDR.

2. Use of Information

The public dissemination requirements contained in Rule 902 are designed to promote post-trade transparency of security-based swap transactions.

3. Respondents

The collection of information associated with the Rule 902 will apply to registered SDRs. As noted above, the Commission believes that an estimate of ten registered SDRs is reasonable for purposes of its analysis of burdens under the PRA.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

Rule 13n-5(b) sets forth requirements for collecting and maintaining transaction data that each SDR will be required to follow.[1092] The SDR Adopting Release describes the relevant burdens and costs that complying with Rule 13n-5(b) will entail.[1093]

In the Regulation SBSR Proposing Release, the Commission stated its preliminary belief that a registered SDR would be able to integrate the capability to publicly disseminate security-

1092 See SDR Adopting Release, Section VI(E)(1).

1093 See SDR Adopting Release, Section VII(D)(2).

based swap transaction reports required under Rule 902 as part of its overall system development for transaction data.[1094] Based on discussions with industry participants, the Commission estimates that, to implement and comply with the public dissemination requirement of Rule 902, each registered SDR will incur a burden equal to an additional 20% of the first-year and ongoing burdens discussed in the SDR Registration Proposing Release.[1095] This estimate was first proposed in the Regulation SBSR Proposing Release and reiterated in the Cross-Border Proposing Release, and the Commission believes that it remains valid.[1096]

Based on the above, the Commission estimates that the initial one-time aggregate burden imposed by Rule 902 for development and implementation of the systems needed to disseminate the required transaction information, including the necessary software and hardware, will be approximately 8,400 hours and a dollar cost of $2 million for each registered SDR, which aggregates to 84,000 hours and a dollar cost of $20 million for all SDR respondents.[1097] In addition, the Commission estimates that annual aggregate burden (initial and ongoing) imposed by the Rule 902 will constitute approximately 5,040 hours and a dollar cost of $1.2 million for each registered SDR, which aggregates to 50,400 hours and a dollar cost of $12 million for all

---

1094 See Regulation SBSR Proposing Release, 75 FR at 75252.

1095 See Regulation SBSR Proposing Release, 75 FR at 75252. See also SDR Adopting Release, Section VII(D)(2). This estimate was based on discussions with industry members and market participants, including entities that may register as SDRs under Title VII, and includes time necessary to design and program a registered SDR's system to calculate and disseminate initial and subsequent trade reports.

1096 See Regulation SBSR Proposing Release, 75 FR at 75252. See also Cross-Border Proposing Release, 78 FR at 31198.

1097 See SDR Adopting Release, Section VII(D)(2) for the total burden associated with establishing SDR technology systems. The Commission derived this estimated burden from the following: [((Attorney at 1,400 hours) + (Compliance Manager at 1,600 hours) + (Programmer Analyst at 4,000 hours) + (Senior Business Analyst at 1,400 hours)) x (10 registered SDRs)] = 84,000 burden hours, which corresponds to 8,400 hours per registered SDR.

SDR respondents.[1098] Thus, the Commission estimates that the total first-year (initial) aggregate annualized burden on registered SDRs associated with public dissemination requirement under Rule 902 will be approximately 134,400 hours and a dollar cost of $32 million, which corresponds to a burden of 13,440 hours and a dollar cost of $3.2 million for each registered SDR.[1099]

5. Recordkeeping Requirements

Pursuant to Rule 13n-7(b) under the Exchange Act, a registered SDR is required to keep and preserve at least one copy of all documents, including all documents and policies and procedures required by the Exchange Act and the rules or regulations thereunder, for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination.[1100] This requirement encompasses all security-based swap transaction reports disseminated by a registered SDR pursuant to Rule 902 and are required to be retained for not less than five years.

6. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

7. Confidentiality of Responses to Collection of Information

1098 See SDR Adopting Release, Section VII(D)(2) for the total ongoing annual burdens associated with operating and maintaining SDR technology systems. The Commission derived this estimated burden from the following: [((Attorney at 840 hours) + (Compliance Manager at 960 hours) + (Programmer Analyst at 2,400 hours) + (Senior Business Analyst at 840 hours)) x (10 registered SDRs)] = 50,400 burden hours, which corresponds to 5,040 hours per registered SDR.

1099 These estimates are based on the following: [(84,000 one-time burden hours) + (50,400 annual burden hours)] = 134,400 burden hours, which corresponds to 13,440 hours per registered SDR; [($20 million one-time dollar cost burden) + ($12 million annual dollar cost burden)] = $32 million cost burden, which corresponds to $3.2 million per registered SDR.

1100 See SDR Adopting Release, Section VI(G)(2).

Most of the information required under Rule 902 will be widely available to the public to the extent it is incorporated into security-based swap transaction reports that are publicly disseminated by a registered SDR pursuant to Rule 902. However, Rule 902(c) prohibits public dissemination of certain kinds of transactions and certain kinds of transaction information. An SDR, pursuant to Sections 13(n)(5) of the Exchange Act and Rules 13n-4(b)(8) and 13n-9 thereunder will be under an obligation to maintain the privacy of this security-based swap information.[1101] To the extent that the Commission receives confidential information pursuant to this collection of information, such information must be kept confidential, subject to the provisions of applicable law.

D. Coded Information—Rule 903

Regulation SBSR, as adopted, permits or, in some instances, requires security-based swap counterparties to report coded information to registered SDRs using UICs. These UICs will be used to identify products, transactions, and persons, as well as certain business units and employees of legal persons.[1102] Rule 903 establishes standards for assigning and using coded information in security-based swap reporting and dissemination to help ensure that codes are assigned in an orderly manner and that relevant authorities, market participants, and the public are able to interpret coded information stored and disseminated by registered SDRs.

In the Regulation SBSR Proposing Release, the Commission stated its belief that Rule 903 would not be a "collection of information" within the meaning of the PRA because the rule would merely permit reporting parties and registered SDRs to use codes in place of certain data

---

1101 See SDR Adopting Release, Sections VI(D)(2) and VI(I)(1).

1102 See supra Section II (describing UICs that must be reported to registered SDRs pursuant to Regulation SBSR).

elements, subject to certain conditions.[1103] In re-proposing Rule 903 in the Cross-Border Proposing Release, the Commission made only technical and conforming changes to Rule 903 to incorporate the use of the term "side."[1104] Rule 903, as adopted, includes a requirement that, if the Commission has recognized an IRSS that assigns UICs to persons, each participant of a registered SDR shall obtain a UIC from or through that IRSS.[1105] Because the Commission also is recognizing the GLEIS—which issues LEIs—as an IRSS, any person who is a participant of one or more registered SDRs will have to obtain an LEI from or through the GLEIS. Therefore, the Commission now believes that Rule 903 constitutes a "collection of information" within the meaning of the PRA. The title of this collection is "Rule 903—Coded Information."

1. Summary of Collection of Information

Rule 903(a) provides that, if an IRSS that meets certain criteria is recognized by the Commission and has assigned a UIC to a person, unit of a person, or product (or has endorsed a methodology for assigning transaction IDs), all registered SDRs must use that UIC in carrying out their responsibilities under Regulation SBSR. If no such system has been recognized by the Commission, or if such a system has not assigned a UIC to a particular person, unit of a person, or product (or has not endorsed a methodology for assigning transaction IDs), the registered SDR must assign a UIC to that person, unit of a person, or product using its own methodology (or endorse a methodology for assigning transaction IDs). The following UICs are contemplated by Regulation SBSR: branch ID, broker ID, counterparty ID execution agent ID, platform ID, product ID, trader ID, trading desk ID, transaction ID, and ultimate parent ID. UICs are intended

1103 See Regulation SBSR Proposing Release, 75 FR at 75252-53.

1104 See Cross-Border Proposing Release, 78 FR at 31117.

1105 See supra Section X(B)(2).

to allow registered SDRs and the Commission and other relevant authorities to aggregate transaction information across a variety of vectors. For example, the trader ID will allow the Commission and other relevant authorities to identify all trades carried out by an individual trader. The product ID will allow the Commission and other relevant authorities to identify all transactions in a particular security-based swap product. The transaction ID will allow counterparties and the registered SDR to link a series of life cycle events to each other and to the original transaction. As discussed in Section X(B)(2), supra, the Commission has recognized the GLEIS as an IRSS that meets the criteria of Rule 903. Therefore, if an entity has an LEI issued by or through the GLEIS, that LEI must be used for all purposes under Regulation SBSR. Furthermore, each participant that acts as a guarantor of a direct counterparty's performance of any obligation under a security-based swap that is subject to § 242.908(a) shall, if the direct counterparty has not already done so, obtain a UIC for identifying the direct counterparty from or through that system, if that system permits third-party registration without a requirement to obtain prior permission of the direct counterparty.

2. Use of Information

The information provided pursuant to Rule 903 is necessary to for any person who is a participant of at least one registered SDR to be identified by an LEI for reporting purposes under Regulation SBSR.

3. Respondents

Rule 903 applies to any person who is a participant of at least one registered SDR. The Commission estimates that there may be up to 4,800 security-based swap counterparties that are participants of one or more registered SDRs.[1106] The Commission recognizes that, since the publication of the Regulation SBSR Proposing Release, many persons who are likely to become participants of one or more registered SDRs already have LEIs issued by or through the GLEIS. As a result, the burdens and costs actually incurred by participants as a result of the adoption of Regulation SBSR are likely to be less than the burdens and costs calculated herein. Specifically, as discussed in further detail in Section XXII(C)(4)(b), infra, based on transaction data from DTCC-TIW, the Commission believes that no fewer than 3,500 of approximately 4,800 accounts that participated in the market for single-name CDS in 2013 currently have LEIs.[1107] The Commission assumes that no market participants that currently have LEIs would continue to maintain their LEIs in the absence of Rule 903(a) in order to arrive at an upper bound on the ongoing costs associated with Rule 903(a). The Commission believes that this is a conservative approach, since regulators in certain other jurisdictions mandate the use of an LEI.[1108] Consequently, the Commission estimates, for purposes of the PRA, that there may be as many as

1106 As noted in Section XXII(B)(1), infra, the available data do not include transactions between two foreign security-based swap market participants on foreign underlying reference entities. As a result, this estimate may not include certain foreign counterparties to security-based swaps.

1107 Some counterparties reported in the transaction data may be guarantors of other non-U.S.-person-direct counterparties and, if so, may be responsible for obtaining and maintaining more than one LEI. As such, precisely quantifying the number of LEIs required by Rule 903(a) is not possible at this time. However, because many of these direct non-U.S.-person counterparties are likely from jurisdictions where regulators mandate the use of LEIs, the Commission believes that these counterparties will already have registered LEIs and will continue to maintain them.

1108 The European Market Infrastructure Regulation requires use of codes to identify counterparties. See "Trade Reporting" (available at: http://www.esma.europa.eu/page/Trade-reporting) (last visited January 10, 2015).

1,300 participant respondents who will need to obtain and LEI and as many as 4,800 participants who will need to maintain an LEI.[1109]

4. Total Initial and Annual Reporting and Recordkeeping Burdens

The Commission estimates that first-year aggregate burden imposed by Rule 903 will be 1,300 hours, which corresponds to 1 hour per participant, to account for the initial burdens of obtaining an LEI.[1110] The Commission estimates that the ongoing burden imposed by Rule 903 will be 4,800 hours, which corresponds to 1 hour per participant, to account for ongoing administration of the LEI.[1111] In addition, for these participants, the assignment of an LEI will entail both one-time and ongoing costs assessed by local operation units ("LOUs") of the GLEIS. The current cost for registering a new LEI is approximately \$220, with an additional cost of \$120 per year for maintaining an LEI.[1112] For those participants that do not already have an LEI, the

---

1109 In the Regulation SBSR Proposing Release, the Commission used an estimate of 5,000 participant respondents that might incur reporting duties under Regulation SBSR. This estimate included an estimated 1,000 entities regularly engaged in the CDS marketplace as well as 4,000 potential security-based swap counterparties that were expected to transact security-based swaps less frequently but that nonetheless would be considered "participants." See Regulation SBSR Proposing Release, 75 FR at 75254. Based on more recent data, the Commission has revised the estimated number of participant respondents to 4,800. The Commission notes that registered security-based swap dealers and major security-based swap participants will, for some transactions, be the non-reporting side and are therefore included in this estimate.

1110 This figure is based on the following: [Compliance Attorney at 1 hour/year) x (1,300 participants)] = 1,300 burden hours.

1111 This figure is based on the following: [(Compliance Attorney at 1 hour/year) x (4,800 participants)] = 4,800 burden hours.

1112 See "GMEI Utility: Frequently Asked Questions" (available at: https://www.gmeiutility.org/frequentlyAskedQuestions.jsp, detailing registration and maintenance costs for LEIs issued by GMEI, an endorsed pre-LOU of the interim GLEIS) (last visited January 4, 2015).

initial one-time cost would be $286,000, or $220 per participant.[1113] All participants would be required to maintain their LEI resulting in an annual cost of $576,000, or $120 per participant.[1114]

5. Recordkeeping Requirements

The applications that participants must complete in order to obtain an LEI issued by or through the GLEIS are not subject to any specific recordkeeping requirements for participants, to the extent that these participants are non-registered persons.[1115] The Commission expects, however, that in the normal course of their business a participant of a registered SDR would keep records of the information entered in connection with its LEI application, such as the participant's legal name, registered address, headquarters address, and the entity's legal form.

6. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

7. Confidentiality of Responses to Collection of Information

The Commission believes that information submitted by participants in order to obtain an LEI issued by or through the GLEIS generally will be public.

E. Operating Hours of Registered SDRs—Rule 904

1113 This figure is based on the following: [($220 registration cost) x (1,300 participants not currently registered)] = $286,000.

1114 This figure is based on the following: [($120 annual maintenance cost) x (4,800 participants not currently registered)] = $576,000. The Commission notes that, for those participants obtaining an LEI in the first year, the annual maintenance cost will be incurred beginning in the year following registration.

1115 See Securities Exchange Act Release No. 71958 (April 17, 2014), 79 FR 25193 (May 2, 2014) ("SD/MSP Recordkeeping Proposing Release") (proposing recordkeeping and reporting requirements for security-based swap dealers, major security-based swap participants, and broker-dealers).

Rule 904, as adopted, requires a registered SDR to have systems in place to continuously receive and disseminate information regarding security-based swap data with certain exceptions. Certain provisions of Rule 904 contain "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 904—Operating Hours of Registered SDRs."

1. Summary of Collection of Information

Rule 904 requires a registered SDR to operate continuously, subject to two exceptions. First, under Rule 904(a) a registered SDR may establish normal closing hours during periods when, in its estimation, the U.S. market and major foreign markets are inactive. A registered SDR is required to provide reasonable advance notice to participants and to the public of its normal closing hours. Second, under Rule 904(b) a registered SDR may declare, on an ad hoc basis, special closing hours to perform system maintenance that cannot wait until normal closing hours. A registered SDR is required, to the extent reasonably possible under the circumstances, to avoid scheduling special closing hours during when, in its estimation, the U.S. market and major foreign markets are most active; and provide reasonable advance notice of its special closing hours to participants and to the public.

Rule 904(c) specifies requirements for handling and disseminating reported data during a registered SDR's normal and special closing hours. During normal closing hours and, to the extent reasonably practicable, during special closing hours, a registered SDR is required to have the capability to receive and hold in queue transaction data it receives.[1116] Pursuant to Rule 904(d), immediately upon system re-opening, the registered SDR is required to publicly disseminate any transaction data required to be reported under Rule 901(c) that it received and

1116 See Rule 904(c).

held in queue, in accordance with the requirements of Rule 902. Pursuant to Rule 904(e), if a registered SDR cannot hold in queue transaction data to be reported, immediately upon re-opening the SDR is required to send a message to all participants that it has resumed normal operations. Thereafter, any participant that had an obligation to report transaction information to the registered SDR, but could not due to the registered SDR's inability to receive and hold in queue such transaction information, must promptly report the information to the registered SDR.[1117]

The Commission originally stated its belief that there were not any costs or burdens applicable to participants as a result of Rule 904(e).[1118] The Commission continues to believe that this conclusion is appropriate. Specifically, the Commission believes that the process by which the registered SDR will notify participants that it has resumed operations would be automated. As a result, the Commission believes that the costs associated with building out the systems necessary for such notifications have already been accounted for in the costs of developing the registered SDRs systems associated with the receipt of security-based swap information under Rule 901.[1119] As a result, the Commission continues to believe that Rule 904(e) is not a collection of information for participants.

2. Use of Information

The information provided pursuant to Rule 904 is necessary to allow participants and the public to know the normal and special closing hours of the registered SDR, and to allow

---

1117 See Rule 904(e).

1118 See Regulation SBSR Proposing Release, 75 FR at 75253.

1119 See id.

participants to take appropriate action in the event that the registered SDR cannot accept security-based swap transaction reports from participants.[1120]

3. Respondents

Rule 904 applies to all registered SDRs. As noted above, the Commission estimates that there will be ten registered SDRs.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

The Commission continues to estimate that that the one-time, initial burden, as well as ongoing annualized burden for each registered SDR associated with Rule 904 will be only minor additional burden beyond that necessary to ensure its basic operating capability under both Regulation SBSR and the SDR Registration Rules. The Commission estimates that the annual aggregate burden (first-year and ongoing) imposed by Rule 904 will be 360 hours, which corresponds to 36 hours per registered SDR.[1121]

One commenter asserted that the proposed requirement for a registered SDR to receive and hold in the queue the data required to be reported during its closing hours "exceeds the capabilities of currently-existing reporting infrastructures."[1122] However, the Commission notes that this comment was submitted in January 2011; since the receipt of this comment, provisionally registered CFTC SDRs that are likely also to register as SDRs with the Commission appear to have developed the capability of receiving and holding data in queue

---

1120 The Commission does not believe that Rule 904(c) will result in any burden within the meaning of the PRA. Rule 904(c) does not create new or additional duties to report security-based swap transactions.

1121 See Regulation SBSR Proposing Release, 75 FR at 75253. This figure is based on the following: [(Operations Specialist at 3 hours/month) x (12 months/year) x (10 registered SDRs)] = 360 burden hours.

1122 Markit I at 4.

during their closing hours.[1123] Thus, the Commission continues to believe that requiring registered SDRs to hold data in queue during their closing hours would not create a significant burden for registered SDRs.

The Commission does not believe Rule 904 imposes any separate collection of information on participants of registered SDRs not already accounted for under Rule 901.[1124] Any respondent unable to report to a registered SDR, because such registered SDR was unable to receive the transaction report, would have to delay the submission of the transaction report. The Commission does not believe that the number of transaction reports impacted by this requirement would impact the burdens contained in this PRA.

5. Recordkeeping Requirements

Rule 13n-7(b) under the Exchange Act requires an SDR to keep and preserve at least one copy of all documents, including all documents and policies and procedures required by the Exchange Act and the rules or regulations thereunder, for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination.[1125] This requirement encompasses notices issued by a registered SDR to its participants under Rule 904.

6. Collection of Information is Mandatory

1123 See, e.g., DDR Rulebook, Section 7.1 (DDR System Accessibility) ("Data submitted during DDR System down time is stored and processed once the service has resumed"), available at http://www.dtcc.com/~/media/Files/Downloads/legal/rules/DDR_Rulebook.pdf (last visited October 7, 2014).

1124 The requirement in Rule 904(e) for participants to report information to the registered SDR upon receiving a notice that the registered SDR resumed its normal operations is already considered as part of the participant's reporting obligations under Rule 901 and thus is already included in the burden estimate for Rule 901.

1125 See SDR Adopting Release, Section VI(G)(2)

Each collection of information discussed above is mandatory.

7. Confidentiality of Responses to Collection of Information

Any notices issued by a registered SDR to its participants, such as the notices required under Rule 904, would be publicly available.

F. Correction of Errors in Security-Based Swap Information—Rule 905

Rule 905, as adopted, establishes procedures for correcting errors in reported and disseminated security-based swap information.

Certain provisions of Rule 905 of Regulation SBSR contain "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 905—Correction of Errors in Security-Based Swap Information."

1. Summary of Collection of Information

Rule 905 establishes duties for security-based swap counterparties and registered SDRs to correct errors in information that previously has been reported.

Counterparty Reporting Error. Under Rule 905(a)(1), where a side that was not the reporting side for a security-based swap transaction discovers an error in the information reported with respect to such security-based swap, the counterparty must promptly notify the reporting side of the error. Under Rule 905(a)(2), where a reporting side for a security-based swap transaction discovers an error in the information reported with respect to a security-based swap, or receives notification from its counterparty of an error, the reporting side must promptly submit to the entity to which the security-based swap was originally reported an amended report pertaining to the original transaction. The amended report must be submitted to the registered SDR in a manner consistent with the policies and procedures of the registered SDR required pursuant to Rule 907(a)(3).

Duty of Registered SDR to Correct. Rule 905(b) sets forth the duties of a registered SDR relating to corrections. If the registered SDR either discovers an error in a transaction on its system or receives notice of an error from a reporting side, Rule 905(b)(1) requires the registered SDR to verify the accuracy of the terms of the security-based swap and, following such verification, promptly correct the erroneous information contained in its system. Rule 905(b)(2) further requires that, if such erroneous information relates to a security-based swap that the registered SDR previously disseminated and falls into any of the categories of information enumerated in Rule 901(c), the registered SDR must publicly disseminate a corrected transaction report of the security-based swap promptly following verification of the trade by the counterparties to the security-based swap, with an indication that the report relates to a previously disseminated transaction.

2. Use of Information

The security-based swap transaction information required to be reported pursuant to Rule 905 will be used by registered SDRs, participants, the Commission, and other relevant authorities. Participants will be able to use such information to evaluate and manage their own risk positions and satisfy their duties to report corrected information to a registered SDR. A registered SDR will need the required information to correct security-based swap transaction records, in order to maintain an accurate record of a participant's positions as well as to disseminate corrected information. The Commission and other relevant authorities will need the corrected information to have an accurate understanding of the market for surveillance and oversight purposes.

3. Respondents

Rule 905 applies to all participants of registered SDRs. As noted above, the Commission estimates that there will be approximately 300 reporting sides that incur the duty to report security-based swap transactions pursuant to Rule 901. In addition, the Commission estimates that there may be up to 4,800 security-based swap counterparties that are participants of one or more registered SDRs. Because any of these counterparties who are participants could become aware of errors in their reported transaction data, the Commission estimates that there may be as many as 4,800 respondents for purposes of the PRA.

Rule 905 also applies to registered SDRs. As noted above, the Commission estimates there will be ten registered SDRs.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

The duty to promptly submit amended transaction reports to the appropriate registered SDR after discovery of an error, as required under Rule 905(a)(2), will impose burdens on reporting sides. The duty to promptly notify the relevant reporting side after discovery of an error, as required under Rule 905(a)(1), will impose burdens on non-reporting-side participants.

With respect to reporting sides, the Commission believes that Rule 905(a) will impose an initial, one-time burden associated with designing and building the reporting side's reporting system to be capable of submitting amended security-based swap transactions to a registered SDR. The Commission believes that designing and building appropriate reporting system functionality to comply with Rule 905(a)(2) will be a component of, and represent an incremental "add-on" to, the cost to build a reporting system and develop a compliance function as required under Rule 901. Based on discussions with industry participants, the Commission estimates this incremental burden to be equal to 5% of the one-time and annual burdens associated with designing and building a reporting system that is in compliance with Rule 901, plus 10% of the corresponding one-time and annual burdens associated with developing the reporting side's overall compliance program required under Rule 901. This estimate is based on similar calculations contained in the Regulation SBSR Proposing Release,[1126] updated to reflect new estimates relating to the number of reportable events and the number of reporting sides. Thus, for reporting sides, the Commission estimates that Rule 905(a) will impose an initial (first-year) aggregate burden of 15,015 hours, which is 50.0 burden hours per reporting side,[1127] and an ongoing aggregate annualized burden of 7,035 hours, which is 23.5 burden hours per reporting side.[1128]

The Commission believes that the actual submission of amended transaction reports required under Rule 905(a)(2) will not result in a material burden because this will be done electronically though the reporting system that the reporting side must develop and maintain to comply with Rule 901. The overall burdens associated with such a reporting system are addressed in the Commission's analysis of Rule 901.

1126 See Regulation SBSR Proposing Release, 75 FR at 75254.

1127 See Regulation SBSR Proposing Release, 75 FR at 75254-55. This figure is calculated as follows: [((((172 burden hours for one-time development of reporting system) x (0.05)) + ((33 burden hours annual maintenance of reporting system) x (0.05)) + ((180 burden hours one-time compliance program development) x (0.1)) + ((218 burden hours annual support of compliance program) x (0.1))) x (300 reporting sides)] = 15,015 burden hours, which is 50 burden hours per reporting side. The burden hours for annual maintenance of the reporting system has been updated to reflect new information on the number of reportable events. See supra note 1075.

1128 See Regulation SBSR Proposing Release, 75 FR at 75254-55. This figure is calculated as follows: [(((33 burden hours annual maintenance of reporting system) x (0.05)) + ((218 burden hours annual support of compliance program) x (0.1))) x (300 reporting sides)] = 7,035 burden hours, which is 23.5 burden hours per reporting side. The burden hours for annual maintenance of the reporting system has been updated to reflect new information on the number of reportable events. See supra note 1075.

With regard to non-reporting-side participants, the Commission believes that Rule 905(a) will impose an initial and ongoing burden associated with promptly notifying the relevant reporting party after discovery of an error as required under Rule 905(a)(1). The Commission estimates that the annual burden will be 998,640 hours, which corresponds to 208.05 burden hours per non-reporting-side participant.[1129] This figure is based on the Commission's estimate of (1) 4,800 participants; and (2) 1 transaction per day per non-reporting-side participant.[1130] The burdens of Rule 905 on reporting sides and non-reporting-side participants will be reduced to the extent that complete and accurate information is reported to registered SDRs in the first instance pursuant to Rule 901.

Rule 905(b) requires a registered SDR to develop protocols regarding the reporting and correction of erroneous information. The Commission believes, however, that this duty would represent only a minor extension of other duties for which the Commission is estimating burdens, and consequently, will not impose substantial additional burdens on a registered SDR. A registered SDR will be required to have the ability to collect and maintain security-based swap transaction reports and update relevant records under the rules adopted in the SDR Adopting Release. Likewise, a registered SDR must have the capacity to disseminate additional, corrected security-based swap transaction reports under Rule 902. The burdens associated with Rule

---

1129 This burden was calculated using the same methodology as was used in the Regulation SBSR Proposing Release, updated to account for new estimates of the number of error notifications resulting from updates in the number of reportable events. See Regulation SBSR Proposing Release, 75 FR at 75255. This figure is based on the following: [(1.14 error notifications per non-reporting-side participant per day) x (365 days/year) x (Compliance Clerk at 0.5 hours/report) x (4,800 participants)] = 998,640 burden hours, which corresponds to 208.05 burden hours per non-reporting-side participant.

1130 This figure is based on the following: [((2,000,000 estimated annual security-based swap transactions) / (4,800 participants)) / (365 days/year)] = 1.14 transactions per day, on average.

905—including systems development, support, and maintenance—are addressed in the Commission's analysis of those other rules. Thus, the Commission believes that Rule 905(b) will impose only an incremental additional burden on registered SDRs. The Commission estimates that developing and publicly providing the necessary procedures will impose on each registered SDR an initial one-time burden on each registered SDR of approximately 730 burden hours.[1131] The Commission estimates that to review and update such procedures on an ongoing basis will impose an annual burden on each SDR of approximately 1,460 burden hours.[1132]

Accordingly, the Commission estimates that the initial (first-year) aggregate annualized burden on registered SDRs under Rule 905 will be 21,900 burden hours, which corresponds to 2,190 burden hours for each registered SDR.[1133] The Commission further estimates that the ongoing aggregate annualized burden on registered SDRs under Rule 905 will be 14,600 burden hours, which corresponds to 1,460 burden hours for each registered SDR.[1134] This estimated burden is consistent with what the Commission proposed in the Regulation SBSR Proposing Release.

5. Recordkeeping Requirements

1131 See Regulation SBSR Proposing Release, 75 FR at 75255. This figure is based on the following: [(Sr. Programmer at 80 hours) + (Compliance Manager at 160 hours) + (Compliance Attorney at 250 hours) + (Compliance Clerk at 120 hours) + (Sr. System Analyst at 80 hours) + (Director of Compliance at 40 hours)] = 730 burden hours.

1132 See Regulation SBSR Proposing Release, 75 FR at 75255. This figure is based on the following: [(Sr. Programmer at 160 hours) + (Compliance Manager at 320 hours) + (Compliance Attorney at 500 hours) + (Compliance Clerk at 240 hours) + (Sr. System Analyst at 160 hours) + (Director of Compliance at 80 hours)] = 1,460 burden hours.

1133 This figure is based on the following: [(730 burden hours to develop protocols) + (1,460 burden hours annual support)) x (10 registered SDRs)] = 21,900 burden hours, which corresponds to 2,190 burden hours per registered SDR.

1134 This figure is based on the following: [(1,460 burden hours annual support) x (10 registered SDRs)] = 14,600 burden hours, which corresponds to 1,460 burden hours per registered SDR.

Security-based swap transaction reports received pursuant to Rule 905 are subject to Rule 13n-5(b)(4) under the Exchange Act. This rule requires an SDR to maintain the transaction data and related identifying information for not less than five years after the applicable security-based swap expires and historical positions for not less than five years.[1135]

With respect to information disseminated by a registered SDR in compliance with Rule 905(b)(2), Rule 13n-7(b) under the Exchange Act requires an SDR to keep and preserve at least one copy of all documents, including all policies and procedures required by the Exchange Act and the rules or regulations thereunder, for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination.[1136] This requirement encompasses amended security-based swap transaction reports disseminated by the registered SDR.

6. Collection of Information is Mandatory

Each collection of information discussed above is mandatory.

7. Confidentiality of Responses to Collection of Information

Information collected pursuant to Rule 905 will be widely available to the extent that it corrects information previously reported pursuant to Rule 901(c) and incorporated into security-based swap transaction reports that are publicly disseminated by a registered SDR pursuant to Rule 902. Most of the information required under Rule 902 will be widely available to the public to the extent it is incorporated into security-based swap transaction reports that are publicly disseminated by a registered SDR pursuant to Rule 902. However, Rule 902(c) prohibits public dissemination of certain kinds of transactions and certain kinds of transaction

---

1135 See SDR Adopting Release, Section VI(E)(4).

1136 See SDR Adopting Release, Section VI(G)(2).

information. An SDR, pursuant to Sections 13(n)(5) of the Exchange Act and Rules 13n-4(b)(8) and 13n-9 thereunder is required to maintain the privacy of this security-based swap information. To the extent that the Commission receives confidential information pursuant to this collection of information, such information will be kept confidential, subject to the provisions of applicable law.

G. Other Duties of Participants—Rule 906

Rule 906(a), as adopted, establishes procedures designed to ensure that a registered SDR obtains UICs for both counterparties to a security-based swap. Rule 906(b) requires each participant of a registered SDR to provide to the registered SDR information sufficient to identify its ultimate parent(s) and any affiliate(s) of the participant that also are participants of the registered SDR. Rule 906(c) requires each participant that is a registered security-based swap dealer or registered major security-based swap participant to establish, maintain, and enforce written policies and procedures (updated at least annually) that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation SBSR.

Certain provisions of Rule 906 of Regulation SBSR contain "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 906—Duties of All Participants."

Although the Commission is adopting Rule 906 with certain minor changes from the version re-proposed in the Cross-Border Proposing Release, these changes do not increase the number of respondents to Rule 906 or affect the estimated burdens on respondents to Rule 906. Therefore, the Commission is not revising its estimate of the burdens associated with Rule 906.

1. Summary of Collection of Information

Rule 906(a) sets forth a procedure designed to ensure that a registered SDR obtains relevant UICs for both sides of a security-based swap, not just of the reporting side. Rule 906(a) requires a registered SDR to identify any security-based swap reported to it for which the registered SDR does not have a counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID of each counterparty. Rule 906(a) further requires the registered SDR, once a day, to send a report to each participant identifying, for each security-based swap to which that participant is a counterparty, the security-based swap(s) for which the registered SDR lacks counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID. A participant that receives such a report must provide the missing ID information to the registered SDR within 24 hours.

Rule 906(b) requires each participant of a registered SDR to provide the registered SDR with information sufficient to identify the participant's ultimate parent(s) and any affiliate(s) of the participant that are also participants of the registered SDR.

Rule 906(c) requires each participant that is a registered security-based swap dealer or registered major security-based swap participant to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation SBSR. In addition, Rule 906(c) requires each such participant to review and update its policies and procedures at least annually.

2. Use of Information

The information required to be provided by participants pursuant to Rule 906(a) will complete missing elements of security-based swap transaction reports so that the registered SDR has, and can make available to the Commission and other relevant authorities, accurate and complete records for reported security-based swaps.

Rule 906(b) will be used to ensure that the registered SDR has, and can make available to the Commission and other relevant authorities, group-wide security-based swap position information. This information will assist the Commission and other relevant authorities with monitoring systemic risks in the security-based swap market.

The policies and procedures required under Rule 906(c) will be used by participants to aid in their compliance with Regulation SBSR, and also used by the Commission as part of its ongoing efforts to monitor and enforce compliance with the federal securities laws, including Regulation SBSR.

3. Respondents

Rules 906(a) and 906(b) apply to all participants of registered SDRs. Based on the information currently available to the Commission, the Commission now believes that there may be up to 4,800 participants.[1137] Rule 906(c) applies to participants that are registered security-based swap dealers or registered major security-based swap participants. The Commission estimates that there will be 55 registered security-based swap dealers and registered major security-based swap dealers.

Rule 906 also imposes certain duties on registered SDRs. As noted above, the Commission estimates that there will be ten registered SDRs.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

---

1137 The Commission originally estimated that there would be up to 5,000 participants. As discussed above, based on more updated and granular information available to the Commission, this estimate has been revised. See Regulation SBSR Proposing Release, 75 FR at 75256.

a. For Registered SDRs

Rule 906(a) requires a registered SDR, once a day, to send a report to each participant identifying, for each security-based swap to which that participant is a counterparty, any security-based swap(s) for which the registered SDR lacks counterparty ID and (if applicable) broker ID, trading desk ID, and trader ID. The Commission estimates that there will be a one-time, initial burden of 112 burden hours for a registered SDR to create a report template and develop the necessary systems and processes to produce a daily report required by Rule 906(a).[1138] Further, the Commission estimates that there will be an ongoing annualized burden of 308 burden hours for a registered SDR to generate and issue the daily reports, and to enter into its systems the ID information supplied by participants in response to the daily reports.[1139]

Accordingly, the Commission estimates that the initial aggregate annualized burden for registered SDRs under Rule 906(a) will be 4,200 burden hours for all SDR respondents, which corresponds to 420 burden hours per registered SDR.[1140] The Commission estimates that the

1138 See Regulation SBSR Proposing Release, 75 FR at 75256. The Commission has derived the total estimated burdens based on the following estimates, which are based on the information provided to the Commission: (Senior Systems Analyst at 40 hours) + (Sr. Programmer at 40 hours) + (Compliance Manager at 16 hours) + (Director of Compliance at 8 hours) + (Compliance Attorney at 8 hours) = 112 burden hours.

1139 See Regulation SBSR Proposing Release, 75 FR at 75256-57. The Commission has derived the total estimated burdens based on the following estimates, which are based on the information provided to the Commission: (Senior Systems Analyst at 24 hours) + (Sr. Programmer at 24 hours) + (Compliance Clerk at 260 hours) = 308 burden hours.

1140 See Regulation SBSR Proposing Release, 75 FR at 75256-57. The Commission derived its estimate from the following: [(112 + 308 burden hours) x (10 registered SDRs)] = 4,200 burden hours, which corresponds to 420 burden hours per registered SDR.

ongoing aggregate annualized burden for registered SDRs under Rule 906(a) will be 3,080 burden hours, which corresponds to 308 burden hours per registered SDR.[1141]

b. For Participants

i. Rule 906(a)

Rule 906(a) requires any participant of a registered SDR that receives a report from that registered SDR to provide the missing UICs to the registered SDR within 24 hours. Because all SDR participants will likely be the non-reporting side for at least some transactions to which they are a counterparty, the Commission believes that all participants will be impacted by Rule 906(a). The Commission estimates that the initial and ongoing annualized burden under Rule 906(a) for all participants will be 199,728 burden hours, which corresponds to 41.6 burden hours per participant.[1142] This figure is based on the Commission's estimates of (1) 4,800 participants; and (2) approximately 1.14 transactions per day per participant.[1143]

ii. Rule 906(b)

Rule 906(b) requires every participant to provide the registered SDR an initial parent/affiliate report and subsequent reports, as needed. The Commission estimates that there

---

1141 See Regulation SBSR Proposing Release, 75 FR at 75256-57. The Commission derived its estimate from the following: [(308 burden hours) x (10 registered SDRs)] = 3,080 burden hours, which corresponds to 308 burden hours per registered SDR.

1142 This burden was calculated using the same methodology as was used in the Regulation SBSR Proposing Release, updated to account for new estimates of the number of missing information reports resulting from updates in the number of reportable events. See Regulation SBSR Proposing Release, 75 FR at 75256-57. This figure is based on the following: [(1.14 missing information reports per participant per day) x (365 days/year) x (Compliance Clerk at 0.1 hours/report) x (4,800 participants) = 199,728 burden hours, which corresponds to 41.6 burden hours per participant.

1143 This figure is based on the following: [((2,000,000 estimated annual security-based swap transactions) / 4,800 participants)) / (365 days/year)] = 1.14 transactions per day, or approximately 1 transaction per day.

will be 4,800 participants, that each participant will connect to two registered SDRs on average, and that each participant will submit two reports each year.[1144] Accordingly, the Commission estimates that the initial and ongoing aggregate annualized burden associated with Rule 906(b) will be 9,600 burden hours, which corresponds to 2 burden hours per participant.[1145] The aggregate burden represents an upper estimate for all participants; the actual burden will likely decrease because certain larger participants are likely to have multiple affiliates, and one member of the group could report ultimate parent and affiliate information on behalf of all of its affiliates at the same time.

b. For Covered Participants

Rule 906(c) requires each participant that is a registered security-based swap dealer or registered major security-based swap participant (each, a "covered participant") to establish, maintain, and enforce written policies and procedures that are reasonably designed to ensure compliance with any security-based swap transaction reporting obligations in a manner consistent with Regulation. Rule 906(c) also requires the review and updating of such policies and procedures at least annually. The Commission estimates that the one-time, initial burden for each covered participant to adopt written policies and procedures as required under Rule 906(c) will be approximately 216 burden hours.[1146] As discussed in the Regulation SBSR Proposing

---

1144 The Commission estimates that, during the first year, each participant will submit an initial report and one update report and, in subsequent years, will submit two update reports.

1145 See Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Compliance Clerk at 0.5 hours per report) x (2 reports/year/SDR connection) x (2 SDR connections/participant) x (4,800 participants)] = 9,600 burden hours, which corresponds to 2 burden hours per participant.

1146 See Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Sr. Programmer at 40 hours) + (Compliance Manager at 40 hours) + (Compliance Attorney at 40 hours) + (Compliance Clerk at 40 hours) + (Sr. Systems

Release,[1147] this figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary testing. In addition, the Commission estimates the burden of maintaining such policies and procedures, including a full review at least annually, as required by Rule 906(c), will be approximately 120 burden hours for each covered participant.[1148] This figure includes an estimate of hours related to reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining internal controls systems, and performing necessary testing. Accordingly, the Commission estimates that the initial aggregate annualized burden associated with Rule 906(c) will be 18,480 burden hours, which corresponds to 336 burden hours per covered participant.[1149] The Commission estimates that the ongoing aggregate annualized burden associated with Rule 906(c) will be 6,600 burden hours, which corresponds to 120 burden hours per covered participant.[1150]

Analyst at 32 hours) + (Director of Compliance at 24 hours)] = 216 burden hours per covered participant.

1147 See Regulation SBSR Proposing Release, 75 FR at 75257.

1148 See Regulation SBSR Proposing Release, 75 FR at 75257. This figure is based on the following: [(Sr. Programmer at 8 hours) + (Compliance Manager at 24 hours) + (Compliance Attorney at 24 hours) + (Compliance Clerk at 24 hours) + (Sr. Systems Analyst at 16 hours) + (Director of Compliance at 24 hours)] = 120 burden hours per covered participant.

1149 This figure is based on the following: [(216 + 120 burden hours) x (55 covered participants)] = 18,480 burden hours.

1150 This figure is based on the following: [(120 burden hours) x (55 covered participants)] = 6,600 burden hours.

Therefore, the Commission estimates that the total initial aggregate annualized burden associated with Rule 906 will be 232,008 burden hours,[1151] and the total ongoing aggregate annualized burden will be 219,008 burden hours for all participants.[1152]

5. Recordkeeping Requirements

The daily reports that participants complete in order to provide missing UICs to a registered SDR pursuant to Rule 906(a) and the initial parent/affiliate reports and subsequent reports required by Rule 906(b) are not subject to any specific recordkeeping requirements for participants to the extent that these participants are non-registered persons.[1153] With regard to these reports, as well as any other information that a registered SDR may receive from participants pursuant to Rule 906, Rule 13n-5(b)(4) requires an SDR to maintain this information for not less than five years after the applicable security-based swap expires.[1154]

The Commission has proposed but not yet adopted recordkeeping requirements for registered security-based swap dealers and registered major security-based swap participants.[1155]

6. Collection of Information is Mandatory

1151 This figure is based on the following: [(4,200 burden hours for registered SDRs under Rule 906(a)) + (199,728 burden hours for participants under Rule 906(a)) + (9,600 burden hours for participants under Rule 906(b)) + (18,480 burden hours for covered participants under Rule 906(c))] = 232,008 burden hours.

1152 This figure is based on the following: [(3,080 burden hours for registered SDRs under proposed Rule 906(a)) + (199,728 burden hours for participants under proposed Rule 906(a)) + (9,600 burden hours for participants under proposed Rule 906(b)) + (6,600 burden hours for covered participants under proposed Rule 906(c))] = 219,008 burden hours.

1153 See Securities Exchange Act Release No. 71958 (April 17, 2014), 79 FR 25193 (May 2, 2014) ("SD/MSP Recordkeeping Proposing Release") (proposing recordkeeping and reporting requirements for security-based swap dealers, major security-based swap participants, and broker-dealers).

1154 See SDR Adopting Release, Section VI(E)(4).

1155 See SD/MSP Recordkeeping Proposing Release, 79 FR 25193.

Each collection of information discussed above is mandatory.

7. Confidentiality of Responses to Collection of Information

The collection of information required by Rule 906 will not be widely available. To the extent that the Commission receives confidential information pursuant this collection of information, such information will be kept confidential, subject to applicable law.

H. Policies and Procedures of Registered SDRs—Rule 907

Rule 907, as adopted, requires each registered SDR to establish and maintain policies and procedures addressing various aspects of Regulation SBSR compliance. Certain provisions of Rule 907 of Regulation SBSR contain "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 907—Policies and Procedures of Registered SDRs."

1. Summary of Collection of Information

Rule 907(a) requires a registered SDR to establish and maintain written policies and procedures that detail how it will receive and publicly disseminate security-based swap transaction information. Rule 907(a)(4) requires policies and procedures for assigning "special circumstances" flags to the necessary transaction reports.

Rule 907(c) requires a registered SDR to make its policies and procedures available on its website. Rule 907(d) requires a registered SDR to review, and update as necessary, the policies and procedures that it is required to have by Regulation SBSR at least annually. Rule 907(e) requires a registered SDR to provide to the Commission, upon request, information or reports related to the timeliness, accuracy, and completeness of data reported to it pursuant to Regulation SBSR and the registered SDR's policies and procedures established thereunder.

2. Use of Information

The policies and procedures required under Rules 907(a) and 907(b) will be used by reporting sides to understand the specific data elements of security-based swap transactions that they must report and the specific data formats and other reporting protocols that they will be required to use. These policies and procedures will be used generally by registered SDRs to aid in their compliance with Regulation SBSR, and also by the Commission as part of its ongoing efforts to monitor and enforce compliance with the federal securities laws, including Regulation SBSR. Finally, any information or reports provided to the Commission pursuant to Rule 907(e) will be used by the Commission to assess the timeliness, accuracy, and completeness of reported transaction data and assist the Commission's efforts to enforce applicable security-based swap reporting rules.

3. Respondents

Rule 907 applies to registered SDRs. As noted above, the Commission estimates that there will be ten registered SDRs.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

The Commission estimates that the one-time, initial burden for a registered SDR to adopt written policies and procedures as required under Rule 907 will be approximately 15,000 hours.[1156] As discussed in the Regulation SBSR Proposing Release, this figure is based on the estimated number of hours to develop a set of written policies and procedures, program systems, implement internal controls and oversight, train relevant employees, and perform necessary

---

1156 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure is based on the following: [(Sr. Programmer at 1,667 hours) + (Compliance Manager at 3,333 hours) + (Compliance Attorney at 5,000 hours) + (Compliance Clerk at 2,500 hours) + (Sr. System Analyst at 1,667 hours) + (Director of Compliance at 833 hours)] = 15,000 burden hours per registered SDR. These burdens are the result of Rule 907 only and do not account for any burdens that result from the SDR Rules. Such burdens are addressed in a separate release. See SDR Adopting Release, Section VII.

testing.[1157] In addition, the Commission estimates the annual burden of maintaining such policies and procedures, including a full review at least annually, making available its policies and procedures on the registered SDR's website, and information or reports on non-compliance, as required under Rule 907(e), will be approximately 30,000 hours for each registered SDR.[1158] As discussed in the Regulation SBSR Proposing Release, this figure includes an estimate of hours related to reviewing existing policies and procedures, making necessary updates, conducting ongoing training, maintaining relevant systems and internal controls systems, performing necessary testing, monitoring participants, and compiling data.

The Commission estimates that the initial annualized burden associated with Rule 907 will be approximately 45,000 hours per registered SDR, which corresponds to an initial annualized aggregate burden of approximately 450,000 hours.[1159] The Commission estimates that the ongoing annualized burden associated with Rule 907 will be approximately 30,000 hours per registered SDR,[1160] which corresponds to an ongoing annualized aggregate burden of approximately 300,000 hours.[1161]

1157 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure also includes time necessary to design and program systems and implement policies and procedures to assign certain UICs, as required by Rule 907(a)(5).

1158 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure is based on the following: [(Sr. Programmer at 3,333 hours) + (Compliance Manager at 6,667 hours) + (Compliance Attorney at 10,000 hours) + (Compliance Clerk at 5,000 hours) + (Sr. System Analyst at 3,333 hours) + (Director of Compliance at 1,667 hours)] = 30,000 burden hours per registered SDR.

1159 This figure is based on the following: [((15,000 burden hours per registered SDR) + (30,000 burden hours per registered SDR)) x (10 registered SDRs)] = 450,000 initial annualized aggregate burden hours during the first year.

1160 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure is based on the following: [(Sr. Programmer at 3,333 hours) + (Compliance Manager at 6,667 hours) + (Compliance Attorney at 10,000 hours) + (Compliance Clerk at 5,000 hours) + (Sr.

5. Recordkeeping Requirements

Rule 13n-7(b) under the Exchange Act requires an SDR to keep and preserve at least one copy of all documents, including all documents and policies and procedures required by the Exchange Act and the rules or regulations thereunder, for a period of not less than five years, the first two years in a place that is immediately available to representatives of the Commission for inspection and examination. This requirement will encompass policies and procedures established by a registered SDR pursuant to Rule 907, and any information or reports provided to the Commission pursuant to Rule 907(e).

6. Collection of Information is Mandatory

Each collection of information discussed is mandatory.

7. Confidentiality of Responses to Collection of Information

All of the policies and procedures required by Rule 907 will have to be made available by a registered SDR on its website and will not, therefore, be confidential. Any information obtained by the Commission from a registered SDR pursuant to Rule 907(e) relating to the timeliness, accuracy, and completeness of data reported to the registered SDR will be kept confidential subject to the provisions of applicable law.

I. Cross-Border Matters—Rule 908

Rule 908(a), as adopted, defines when a security-based swap transaction will be subject to regulatory reporting and/or public dissemination. Specifically, Rule 908(a)(1)(i), as adopted, provides that a security-based swap shall be subject to regulatory reporting and public

---

System Analyst at 3,333 hours) + (Director of Compliance at 1,667 hours)] = 30,000 burden hours per registered SDR.

1161 See Regulation SBSR Proposing Release, 75 FR at 75259. This figure is based on the following: [(30,000 burden hours per registered SDR) x (10 registered SDRs)] = 300,000 ongoing, annualized aggregate burden hours.

dissemination if "[t]here is a direct or indirect counterparty that is a U.S. person on either or both sides of the transaction." Rule 908(a)(1)(ii), as adopted, provides that a security-based swap shall be subject to regulatory reporting and public dissemination if "[t]he security-based swap is submitted to a clearing agency having its principal place of business in the United States." Rule 908(a)(2), as adopted, provides that a security-based swap not included within the above provisions would be subject to regulatory reporting but not public dissemination "if there is a direct or indirect counterparty on either or both sides of the transaction that is a registered security-based swap dealer or a registered major security-based swap participant."

Regulation 908(b), as adopted, defines when a person might incur obligations under Regulation SBSR. Specifically, Rule 908(b) provides that, notwithstanding any other provision of Regulation SBSR, a person shall not incur any obligation under Regulation SBSR unless it is a U.S. person, a registered security-based swap dealer or registered major security-based swap participant.

Rules 908(a) and 908(b) do not impose any collection of information requirements. To the extent that a security-based swap transaction or counterparty is subject to Rule 908(a) or 908(b), respectively, the collection of information burdens are calculated as part of the underlying rule (e.g., Rule 901, which imposes the basic duty to report security-based swap transaction information).

Rule 908(c), as adopted, sets forth the requirements surrounding requests for substituted compliance. As adopted, Rule 908(c)(1) sets forth the general rule that compliance with the regulatory reporting and public dissemination requirements in sections 13(m) and 13A of the Act (15 U.S.C. 78m(m) and 78m-1), and the rules and regulations thereunder, may be satisfied by compliance with the rules of a foreign jurisdiction that is the subject of a Commission order described in Rule 908(c)(2), provided that at least one of the direct counterparties is either a non-U.S. person or a foreign branch.

Rule 908(c) contains "collection of information requirements" within the meaning of the PRA. The title of this collection is "Rule 908(c)—Substituted Compliance."

1. Summary of Collection of Information

A party that potentially would comply with requirements under Regulation SBSR pursuant to a substituted compliance order or any foreign financial regulatory authority or authorities supervising such a person's security-based swap activities, may file an application requesting that the Commission make a substituted compliance determination pursuant to Rule 0-13 under the Exchange Act.[1162] Such entity will be required to provide the Commission with any supporting documentation as the Commission may request, in addition to information that the entity believes is necessary for the Commission to make a determination, such as information demonstrating that the requirements applied in the foreign jurisdiction are comparable to the Commission's and describing the methods used by relevant foreign financial regulatory authorities to monitor compliance with those requirements.

2. Use of Information

The Commission will use the information collected pursuant to Rule 908(c)(2)(ii) to evaluate requests for substituted compliance with regard to regulatory reporting and public dissemination of security-based swaps.

3. Respondents

In the Cross-Border Proposing Release, the Commission preliminarily estimated that requests for substituted compliance determinations might arise in connection with security-based

[1162] See 17 CFR 200.0-13; Cross-Border Adopting Release, 79 FR 47357-60.

swap market participants and transactions in up to 30 discrete jurisdictions.[1163] Because only a small number of jurisdictions have substantial OTC derivatives markets and are implementing OTC derivatives reforms, the Commission preliminarily estimated that it would receive approximately ten requests in the first year for substituted compliance determinations with respect to regulatory reporting and public dissemination pursuant to Rule 908(c)(2)(ii), and two requests each subsequent year.[1164] Although the range of entities that are allowed to submit applications for substituted compliance has increased, the Commission does not believe that this warrants a change in its estimate of the number of requests that the Commission will receive. The Commission continues to believe that other considerations will determine the number of applications that it will receive, such as which jurisdictions have regulatory structures similar enough to the Commission's as to merit a request and the number of entities potentially impacted by Regulation SBSR.

4. Total Initial and Annual Reporting and Recordkeeping Burdens

Rule 908(c)(2)(ii), as adopted, applies to any person that requests a substituted compliance determination with respect to regulatory reporting and public dissemination of security-based swaps. In connection with each request, the requesting party must provide the Commission with any supporting documentation that the entity believes is necessary for the Commission to make a determination, including information demonstrating that the requirements applied in the foreign jurisdiction are comparable to the Commission's and describing the methods used by relevant foreign financial regulatory authorities to monitor compliance with

1163 See Cross-Border Proposing Release, 78 FR at 31109-10.

1164 See id. at 31110. Rule 908(c)(2)(ii), as adopted, allows "[a] party that potentially would comply with requirements under [Regulation SBSR]...or any foreign financial regulatory authority or authorities supervising such a person's security-based swap activities may file an application."

those requirements. The Commission initially estimated, in the Cross-Border Proposing Release, that the total paperwork burden associated with submitting a request for a substituted compliance determination with respect to regulatory reporting and public dissemination will be approximately 1,120 hours, plus $1,120,000 for 14 requests.[1165] This estimate includes all collection burdens associated with the request, including burdens associated with analyzing whether the regulatory requirements of the foreign jurisdiction impose a comparable, comprehensive system for the regulatory reporting and public dissemination of all security-based swaps. Furthermore, this estimate assumes that each request will be prepared de novo, without any benefit of prior work on related subjects. The Commission notes, however, that as such requests are developed with respect to certain jurisdictions, the cost of preparing such requests with respect to other foreign jurisdictions could decrease.[1166]

Assuming ten requests in the first year, the Commission staff estimated an aggregated burden for the first year will be 800 hours, plus $800,000 for the services of outside professionals.[1167] The Commission preliminarily estimated that it would receive 2 requests for substituted compliance determinations pursuant to Rule 908(c)(2)(ii) in each subsequent year.

1165 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 908(c)(2)(ii) will be approximately 80 of in-house counsel time, plus $80,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400). See id., Cross-Border Proposing Release, 78 FR at 31110

1166 If and when the Commission grants a request for substituted compliance, subsequent applications might be able to leverage work done on the initial application. However, the Commission is unable to estimate the amount by which the cost could decrease without knowing the extent to which different jurisdictions have similar regulatory structures.

1167 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 242.908(c)(2)(ii) will be up to approximately 800 hours (80 hours of in-house counsel time x 10 respondents), plus $800,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400 x 10 respondents). See Cross-Border Proposing Release, 78 FR at 31110.

Assuming the same approximate time and costs, the aggregate burden for each year following the first year will be up to 160 hours of company time and $160,000 for the services of outside professionals.[1168]

5. Recordkeeping Requirements

Rule 908(c)(2)(ii) does not impose any recordkeeping requirements on entities that submit requests for a substituted compliance determination. The Commission has proposed but not yet adopted recordkeeping requirements for registered security-based swap dealers.

6. Collection of Information is Mandatory

The collection of information discussed above is mandatory for any entity seeking a substituted compliance determination from the Commission regarding regulatory reporting and public dissemination of security-based swaps.

7. Confidentiality of Responses to Collection of Information

The Commission generally intends to make public the information submitted to it pursuant to any request for a substituted compliance determination under Rule 908(c)(2)(ii), including supporting documentation provided by the requesting party. However, a requesting party may submit a confidential treatment request pursuant to Rule 24b-2 under the Exchange Act to object to public disclosure.

J. Registration of SDRs as Securities Information Processors—Rule 909

Rule 909 requires a registered SDR also to register with the Commission as a SIP on Form SDR. Previously, in the Regulation SBSR Proposing Release, the Commission had

---

1168 The Commission staff estimates that the paperwork burden associated with making a substituted compliance request pursuant to Rule 242.908(c)(2)(ii) would be up to approximately 160 hours (80 hours of in-house counsel time x 2 respondents) + plus $160,000 for the services of outside professionals (based on 200 hours of outside counsel time x $400 x 2 respondents). See Cross-Border Proposing Release, 78 FR at 31110.

proposed the use of a separate form, Form SIP. Based on the use of that form, the Commission stated in the Regulation SBSR Proposing Release that Rule 909 contained "collection of information requirements" within the meaning of the PRA and thus, the Commission preliminarily estimated certain burdens on registered SDRs that would result from Rule 909.[1169] As a result of the consolidation of SDR and SIP registration on a single form, the Commission now believes that Rule 909 does not constitute a separate "collection of information" within the meaning of the PRA.[1170]

XXII. Economic Analysis

The Commission is sensitive to the economic consequences and effects, including costs and benefits, of its rules. Some of these costs and benefits stem from statutory mandates, while others are affected by the discretion exercised in implementing the mandates. The following economic analysis identifies and considers the costs and benefits—including the effects on efficiency, competition, and capital formation—that may result from the rules, as adopted . These costs and benefits are discussed below and have informed the policy choices described throughout this release.

The Dodd-Frank Act amended the Exchange Act to require the regulatory reporting and public dissemination of all security-based swaps. To implement these requirements, Regulation SBSR requires that all security-based swaps to be reported to a registered SDR, and requires the registered SDR immediately to disseminate a subset of that information to the public. Regulation SBSR specifies the security-based swap information that must be reported, who has the duty to report, and the timeframes for reporting and disseminating information. Regulation

---

1169 See Regulation SBSR Proposing Release, 75 FR at 75261.

1170 See SDR Adopting Release, Section VI(A)(1)(c).

SBSR also requires registered SDRs to establish policies and procedures governing the reporting and dissemination process, including procedures for utilizing unique identification codes for legal entities, units of legal entities (such as branches, trading desks, and individual traders), products, and transactions. In the Regulation SBSR Proposing Release, the Commission highlighted certain overarching benefits to the security-based swap markets that it preliminarily believed would result from the adoption of Regulation SBSR. These potential benefits include, generally, improved market quality, improved risk management, greater efficiency, and improved Commission oversight.[1171]

In the Cross-Border Proposing Release, the Commission re-proposed Regulation SBSR in its entirety and considered the changes to the initial assessments of costs and benefits associated with the re-proposed rules. In doing so, the Commission explained that Regulation SBSR is intended to further the goals highlighted in the Regulation SBSR Proposing Release, while further limiting, to the extent practicable, the overall costs to the security-based swap market associated with regulatory reporting and public dissemination in cross-border situations.[1172] The adopted rules are designed to limit overall costs by imposing reporting duties and the associated costs on those parties who are most likely to have the necessary infrastructure in place to carry out the reporting function.[1173] As the Commission noted, many of the revisions

---

1171 See Regulation SBSR Proposing Release, 75 FR at 75261-62.

1172 See Cross-Border Proposing Release, 78 FR at 31196-97.

1173 While certain parties that generally will have the heaviest duties to report transactions (e.g., registered security-based swap dealers and registered major security-based swap participants) will incur costs, the costs of those parties generally will be lower than they would be for other parties (e.g., non-dealers) because those parties may already have the necessary infrastructure in place to report transactions and they will benefit from economies of scale due to the high volume of transactions that flows through them compared to other parties. Although security-based swap dealers and major security-based swap participants might pass on these costs, at least in part, to their non-reporting set forth in the re-proposal were suggested by commenters to the initial proposal and were designed, among other things, to better align reporting duties with larger entities that have greater resources and capability to report and to reduce the potential for duplicative reporting. The Commission stated that the revisions should help to limit, to the extent practicable, the overall costs to the security-based swap market associated with reporting in cross-border situations.[1174]

The Commission is now adopting Regulation SBSR, with certain revisions discussed in Sections I through XVII, supra.

In assessing the economic impact of the rules, the Commission refers to the broader costs and benefits associated with the application of the adopted rules as "programmatic" costs and benefits. These include the costs and benefits of applying the substantive Title VII requirements to the reporting of transactions by market participants, as well as to the functions performed by infrastructure participants (such as SDRs) in the security-based swap market. In several places the Commission also considers how the programmatic costs and benefits might change when comparing the adopted approach to other alternatives suggested by comment letters. The Commission's analysis also considers "assessment" costs—those that arise from current and future market participants expending resources to determine whether they are subject to Regulation SBSR, and could incur expenses in making this determination even if they ultimately are not subject to rules for which they made an assessment.

---

counterparties, the costs that are passed on to non-reporting parties are likely to be lower than the costs that the non-reporting parties would face if they had direct responsibility to report these transactions.

1174 See Cross-Border Proposing Release, 78 FR at 31192.

The Commission's analysis also recognizes that certain market participants are subject to Regulation SBSR while potentially also being subject to requirements imposed by other regulators. Concurrent, and potentially duplicative or conflicting, regulatory requirements could be imposed on persons because of their resident or domicile status or because of the place their security-based swap transactions are conducted. Rule 908(c) establishes a mechanism whereby market participants who would be subject to both Regulation SBSR and a foreign regulatory regime could, subject to certain conditions, "substitute compliance" with the foreign regulatory regime for compliance with Regulation SBSR.

A. Broad Economic Considerations

Among the primary economic considerations for promulgating the rules on the regulatory reporting and public dissemination of security-based swap information are the risks to financial stability posed by security-based swap activity and exposures and the effect that the level of transparency in the security-based swap market may have on market participants' ability to efficiently execute trades. For example, on one hand, an increased level of transparency may make trading more efficient since market participants have additional information on which to base their trading decisions. On the other hand, if post-trade transparency makes hedging of large trades or trades in illiquid securities more difficult, it may make execution of these trades less efficient.[1175]

As the Commission has noted previously,[1176] the security-based swap market allows participants opportunities for efficient risk sharing. By transacting in security-based swaps, firms can lay off financial and commercial risks that they are unwilling to bear to counterparties

---

1175 See Analysis of Post-Trade Transparency, in which Commission staff describes the effects of post-trade transparency on relatively illiquid swaps.

1176 See Cross-Border Adopting Release, 79 FR at 47283-85.

who may be better-equipped to bear them. Risk transfer is accomplished through contractual obligations to exchange cash flows with different risk characteristics. These opportunities for risk sharing, however, also represent opportunities for risk transmission through a variety of channels. For instance, a credit event that triggers a large payout to one counterparty by a seller of credit protection, may render that protection seller unable to meet other payment obligations, placing its other counterparties under financial strain. In addition to the risk of sequential counterparty default, security-based swap relationships can transmit risks across asset classes and jurisdictional boundaries through liquidity and asset price channels.

Unlike most other securities transactions, security-based swaps entail ongoing financial obligations between counterparties during the life of a transaction that could span several years. As a result of these ongoing obligations, market participants are exposed not only to the market risk of assets that underlie a security-based swap contract, but also to the credit risk of their counterparties until the transaction is terminated. These exposures create a web of financial relationships in which the failure of a single large firm active in the security-based swap market can have consequences beyond the firm itself. A default by such a firm, or even the perceived lack of creditworthiness of that firm, could produce contagion through sequential counterparty default or reductions in liquidity, willingness to extend credit, and valuations for financial instruments.[1177]

Currently, the security-based swap market is an OTC market without standardized

---

1177 See, e.g., Markus K. Brunnermeier and Lasse Heje Pedersen, "Market Liquidity and Funding Liquidity," Review of Financial Studies (2009); Denis Gromb and Dimitri Vayanos, "A Model of Financial Market Liquidity," Journal of the European Economic Association (2010).

reporting or public dissemination requirements.[1178] Market participants observe only the details of transactions for which they are a counterparty, and there is no comprehensive and widely available source of information about transactions after they occur (post-trade transparency). As a result, the ability of a market participant to evaluate a potential transaction depends on its own transaction history and indicative (non-binding) quotes that it may obtain through fee-based services, and OTC market participants with the largest order flow have an informational advantage over other market participants. The value of private information to large dealers may, in part, explain why security-based swap market participants do not have sufficient incentive to voluntarily implement post-trade transparency.[1179] Additionally, unless all market participants are subject to reporting rules, market participants who may prefer a more transparent market structure may not believe that the benefits of disseminating data about their own limited order flow justifies the costs associated with building and paying for the necessary infrastructure to support public dissemination of transaction information.

The discussion below presents an overview of the OTC derivatives markets, a consideration of the general costs and benefits of the regulatory reporting and public dissemination requirements, and a discussion of the costs and benefits of each rule within Regulation SBSR. The economic analysis concludes with a discussion of the potential effects of Regulation SBSR, as adopted, on efficiency, competition, and capital formation.

1178 There is voluntary reporting as well as voluntary clearing, as discussed in Section XXII(B). However, transaction level information is not made public through these channels. Only limited information (e.g., trading volume and notional outstanding) is available publicly on an aggregate basis, and often with a delay.

1179 Throughout Section XXII, the term "dealers" refers to security-based swap market participant that engage in dealing activities while the term "registered dealers" are those required to register with the Commission. See Intermediary Definitions Adopting Release, 77 FR at 30596; Cross-Border Adopting Release, 79 FR at 47277.

B. Baseline

To assess the economic impact of the final rules described in this release, the Commission is using as a baseline the security-based swap market as it exists at the time of this release, including applicable rules adopted by the Commission but excluding rules that have been proposed but not yet finalized. The analysis includes the statutory and regulatory provisions that currently govern the security-based swap market pursuant to the Dodd-Frank Act. The Commission also has considered, where appropriate, the impacts on market practice of other regulatory regimes.

1. Current Security-Based Swap Market

The Commission's analysis of the state of the current security-based swap market is based on data obtained from DTCC-TIW, particularly data regarding the activity of market participants in the single-name credit default swap (CDS) market during the period from 2008 to 2013. Some of the Commission staff's analysis regarding the impact of CFTC trade reporting rules entails the use of open positions and transaction activity data for index credit default swap (index CDS) and single-name CDS during the period from July 1, 2011 to June 30, 2013, obtained from the DTCC-TIW and through the DTCC public website of weekly stock and volume reports.[1180] The data for index CDS encompasses CDS on both broad-based security indices and narrow-based security indices, and "security-based swap" in relevant part encompasses swaps based on single securities or on narrow-based security indices.[1181]

1180 The DTCC public website can be found at http://www.dtcc.com/repository-otc-data.aspx, last visited September 22, 2014. See also Analysis of Post-Trade Transparency.

1181 See Section 3(a)(68) of the Exchange Act. See also Product Definitions Adopting Release, 77 FR at 48208.

While other trade repositories may collect data on transactions in total return swaps on equity and debt, the Commission does not currently have access to such data for these products (or other products that are security-based swaps). As such, the Commission is unable to analyze security-based swaps other than those described above. However, the Commission believes that the single-name CDS data are representative of the market and therefore can directly inform the analysis of the state of the current security-based swap market.[1182]

The Commission believes that the data underlying its analysis provides reasonably comprehensive information regarding the single-name CDS transactions and composition of the single-name CDS market participants. The Commission notes that the data available from DTCC-TIW do not encompass those CDS transactions that both: (1) do not involve U.S. counterparties[1183]; and (2) are based on reference entities domiciled outside the United States (non-U.S. reference entities). Notwithstanding this limitation, the Commission believes that the DTCC-TIW data provide information that is sufficient for the purpose of identifying the types of market participants active in the security-based swap market and the general characteristics of transactions within that market.[1184]

a. Security-Based Swap Market Participants

The available data supports the characterization of the security-based swap market as one that relies on intermediation by a small number of entities that engage in dealing activities. In addition to this small number of dealing entities, thousands of other participants appear as

1182 See Cross-Border Proposing Release, 78 FR at 31120.

1183 The Commission notes that DTCC-TIW's entity domicile determinations may not reflect the definition of "U.S. person" in Rule 900(ss).

1184 Commission staff estimates, using data from 2013, that the transaction data include 77% of all single-name CDS transactions reported to DTCC-TIW.

counterparties to security-based swap contracts in the sample, and include, but are not limited to, investment companies, pension funds, private (hedge) funds, sovereign entities, and industrial companies. Most non-dealer users of security-based swaps do not directly engage in the trading of swaps with other non-dealers, but use dealers, banks, or investment advisers as intermediaries or agents to establish their positions. Based on an analysis of the counterparties to trades reported to the DTCC-TIW, there are 1,800 entities that engaged directly in trading between November 2006 and December 2013.

Table 1, below, highlights that close to three-quarters of these entities (DTCC-defined "firms" shown in DTCC-TIW, which are referred to here as "transacting agents") were identified as investment advisers, of which approximately 40% (about 30% of all transacting agents) were registered investment advisers under the Investment Advisers Act of 1940.[1185] Although investment advisers comprise the vast majority of transacting agents, the transactions that they executed account for only 9.7% of all single-name CDS trading activity reported to the DTCC-TIW, measured by number of transaction-sides.[1186] The vast majority of transactions (84.1%) measured by number of transaction-sides were executed by ISDA-recognized dealers.[1187]

1185 See 15 U.S.C. 80b1-80b21. Transacting agents engage in the security-based swap market, without relying on an intermediary, on behalf of principals. For example, a university endowment may hold a position in a security-based swap that is built up by an investment adviser that transacts on the endowment's behalf. In this case, the university endowment is a principal that uses the investment adviser as a transacting agent.

1186 Each transaction has two transaction sides, i.e., two transaction counterparties.

1187 The 1,800 entities included all DTCC-defined "firms" shown in DTCC-TIW as transaction counterparties that report at least one transaction to DTCC-TIW as of December 2013. The staff in the Division of Economic and Risk Analysis classified these firms, which are shown as transaction counterparties, by machine matching names to known third-party databases and by manual classification. This is consistent with the methodology used in the re-proposal. See Cross-Border Proposing Release, 78 FR at 31120 note 1304. Manual classification was based in part on searches of the EDGAR and Bloomberg databases, the Commission's Investment Adviser Public Disclosure

Table 1. The number of transacting agents by counterparty type and the fraction of total trading activity, from November 2006 through December 2013, represented by each counterparty type.

Transacting Agents	Number	Percent	Transaction share
Investment Advisers	1,347	74.8%	9.7%
- SEC registered	*529*	*29.4%*	*5.9%*
Banks	256	14.2%	5.0%
Pension Funds	29	1.6%	0.1%
Insurance Companies	36	2.0%	0.2%
ISDA-Recognized Dealers[1188]	17	0.9%	84.1%
Other	115	6.4%	1.0%
Total	1,800	100%	100%

Principal holders of CDS risk exposure are represented by "accounts" in the DTCC-TIW.[1189] The staff's analysis of these accounts in DTCC-TIW shows that the 1,800 transacting agents classified in Table 1 represent over 10,054 principal risk holders. Table 2, below, classifies these principal risk holders by their counterparty type and whether they are represented

database, and a firm's public website or the public website of the account represented by a firm. The staff also referred to ISDA protocol adherence letters available on the ISDA website.

1188 For the purpose of this analysis, the ISDA-recognized dealers are those identified by ISDA as belonging to the G14 or G16 dealer group during the period: JP Morgan Chase NA (and Bear Stearns), Morgan Stanley, Bank of America NA (and Merrill Lynch), Goldman Sachs, Deutsche Bank AG, Barclays Capital, Citigroup, UBS, Credit Suisse AG, RBS Group, BNP Paribas, HSBC Bank, Lehman Brothers, Société Générale, Credit Agricole, Wells Fargo, and Nomura. See, e.g., http://www.isda.org/c_and_a/pdf/ISDA-Operations-Survey-2010.pdf (last visited September 22, 2014).

1189 "Accounts" as defined in the DTCC-TIW context are not equivalent to "accounts" in the definition of "U.S. person" provided by Rule 3a71-3(a)(4)(i)(C) under the Exchange Act. They also do not necessarily represent separate legal persons. One entity or legal person may have multiple accounts. For example, a bank may have one DTCC account for its U.S. headquarters and one DTCC account for one of its foreign branches.

by a registered or unregistered investment adviser.[1190] For instance, 256 banks in Table 1 allocated transactions across 369 accounts, of which 30 were represented by investment advisers. In the remaining 339 instances, banks traded for their own accounts. Meanwhile, 17 ISDA-recognized dealers in Table 1 allocated transactions across 69 accounts.

Among the accounts, there are 1,086 special entities[1191] and 636 investment companies registered under the Investment Company Act.[1192] Private funds comprise the largest type of account holders that the Commission was able to classify, and although not verified through a recognized database, most of the funds that could not be classified appear to be private funds.[1193]

[1190] Unregistered investment advisers include all investment advisers not registered under the Investment Advisers Act and may include investment advisers registered with a state or a foreign authority.

[1191] See Section 15F(h)(2)(C) of the Exchange Act, 15 U.S.C. 78o-10(h)(2)(C) (defining "special entity" to include a federal agency; a state, state agency, city, county, municipality, or other political subdivision of a state; any employee benefit plan; any governmental plan; or any endowment).

[1192] There remain over 4,000 DTCC "accounts" unclassified by type. Although unclassified, each was manually reviewed to verify that it was not likely to be a special entity and instead was likely to be an entity such as a corporation, an insurance company, or a bank.

[1193] Private funds for the purpose of this analysis encompass various unregistered pooled investment vehicles, including hedge funds, private equity funds, and venture capital funds.

Table 2. The number and percentage of account holders—by type—who participate in the security-based swap market through a registered investment adviser, an unregistered investment adviser, or directly as a transacting agent, from November 2006 through December 2013.

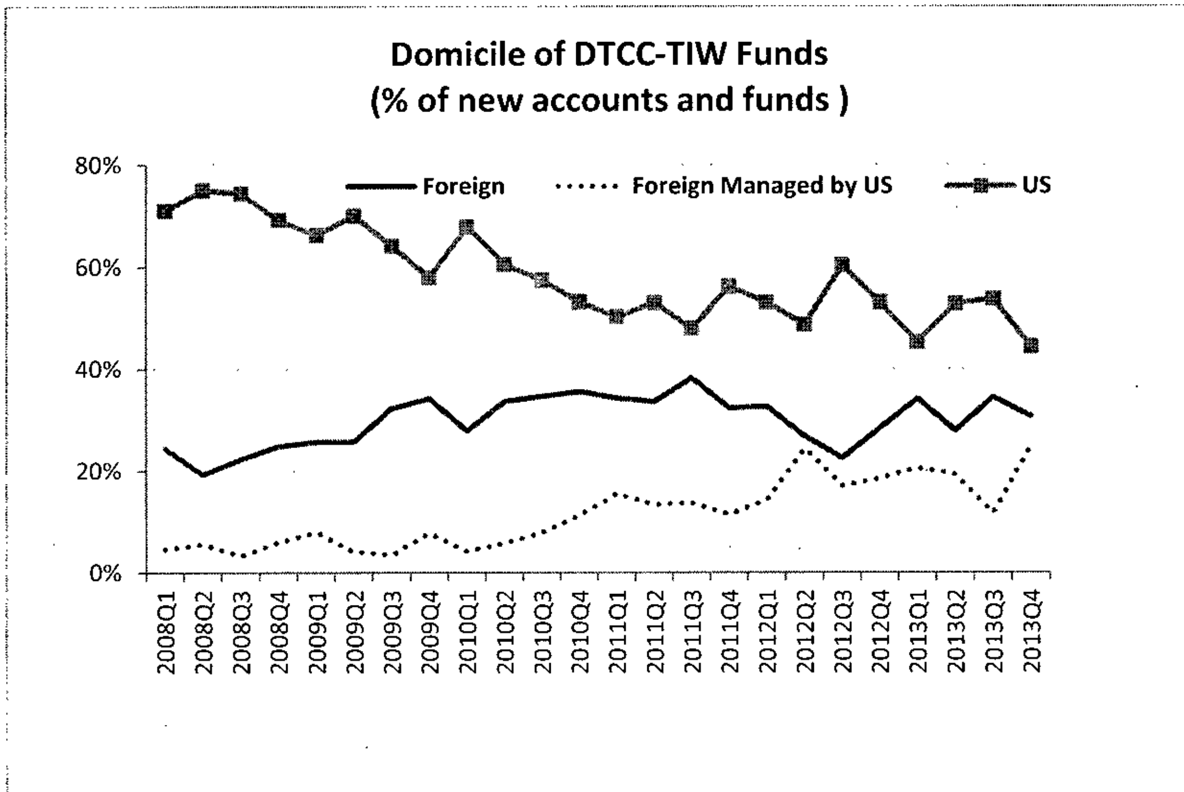
Account Holders by Type	Number	Represented by a registered investment adviser		Represented by an unregistered investment adviser		Participant is transacting agent[1194]	
Private Funds	2,914	1,395	48%	1,496	51%	23	1%
DFA Special Entities	1,086	1,050	97%	12	1%	24	2%
Registered Investment Companies	636	620	97%	14	2%	2	0%
Banks (non-ISDA-recognized dealers)	369	25	7%	5	1%	339	92%
Insurance Companies	224	144	64%	21	9%	59	26%
ISDA-Recognized Dealers	69	0	0%	0	0%	69	100%
Foreign Sovereigns	63	45	71%	2	3%	16	25%
Non-Financial Corporations	57	39	68%	3	5%	15	26%
Finance Companies	10	5	50%	0	0%	5	50%
Other/Unclassified	4,626	3,130	68%	1,294	28%	200	4%
All	10,054	6,453	64%	2,847	28%	752	7%

i. Participant Domiciles

The security-based swap market is global in scope, with counterparties located across multiple jurisdictions. A U.S.-based holding company may conduct dealing activity through a foreign subsidiary that faces both U.S. and foreign counterparties, and the foreign subsidiary may be guaranteed by its parent, making the parent responsible for performance under these security-based swaps.

1194 This column reflects the number of participants who are also trading for their own accounts.

Figure 1: The percentage of (1) new accounts with a domicile in the United States (referred to as "US"), (2) new accounts with domicile outside the United States (referred to below as "Foreign"), and (3) new accounts outside the United States but managed by a U.S. person, account of a foreign branch of a U.S. person, and account of a foreign subsidiary of a U.S. person (collectively referred to below as "Foreign Managed by US").[1195] Unique, new accounts are aggregated each quarter and shares are computed on a quarterly basis, from January 2008 through December 2013.



As depicted in Figure 1, over time a greater share of accounts entering the market either have a foreign domicile, or have a foreign domicile while being managed by a U.S. person. The increase in foreign accounts may reflect an increase in participation by foreign accountholders

1195 Following publication of the Warehouse Trust Guidance on CDS data access, DTCC-TIW surveyed market participants, asking for the physical address associated with each of their accounts (i.e., where the account is organized as a legal entity). This is designated the registered office location by the DTCC-TIW. When an account does not report a registered office location, the Commission has assumed that the settlement country reported by the investment adviser or parent entity to the fund or account is the place of domicile. This treatment assumes that the registered office location reflects the place of domicile for the fund or account.

while the increase in foreign accounts managed by U.S. persons may reflect the flexibility with which market participants can restructure their market participation in response to regulatory intervention, competitive pressures, and other stimuli. There are, however, alternative explanations for the shifts in new account domicile that can be observed in Figure 1. Changes in the domicile of new accounts through time may reflect improvements in reporting by market participants to DTCC-TIW.[1196] Additionally, because the data include only accounts that are domiciled in the United States, transact with U.S.-domiciled counterparties, or transact in single-name CDS with U.S. reference entities, changes in the domicile of new accounts may reflect increased transaction activity between U.S. and non-U.S. counterparties.

ii. Current Estimates of Dealers and Major Participants

In its economic analysis of rules defining "security-based swap dealer" and "major security-based swap participant," the Commission noted, using DTCC-TIW data for the year ending in December 2012, that it expected 202 entities to engage in dealer de minimis analysis.[1197] Further, the Commission's analysis of single-name CDS transactions data suggested that only a subset of these entities engage in dealing activity and estimated 50 registered dealers as an upper bound based on the threshold for the de minimis exception adopted in that release.[1198] The Commission also undertook an analysis of the number of security-based swap market participants likely to register as major security-based swap participants, and

1196 See supra note 3.

1197 See Cross-Border Adopting Release, 79 FR at 47331.

1198 Id. at 47296, note 150 (describing the methodology employed by the Commission to estimate the number of potential security-based swap dealers).

estimated a range of between zero and five such participants.[1199] Based on data for the year ending in December 2013, the Commission continues to believe that 50 represents an upper bound on the number of dealers expected to register and between zero and five major participants will register. As a result of further experience with the DTCC-TIW data, the Commission now estimates, based on data for the year ending in December 2013, that the number of participants likely to engage in dealer de minimis analysis is approximately 170. Forty-eight of these participants are domiciled outside of the United States and have $2 billion in transactions with U.S. counterparties or that otherwise may have to be counted for purposes of the de minimis analysis.

iii. Security-Based Swap Data Repositories

There are currently no SDRs registered with the Commission. However, the CFTC has provisionally registered four swap data repositories to accept credit derivatives. The Commission believes that these entities may register with the Commission as SDRs. Because most participants in the security-based swap market also participate in the swap market,[1200] other persons might, in the future, seek to register with both the CFTC and the Commission as SDRs. In addition, once a swap data repository has established infrastructure sufficient to allow it to register with the CFTC, the costs for it to also register with the Commission as an SDR and adapt its business for security-based swap activity will likely be low relative to the costs for a wholly new entrant.

1199 Id. at 47297, note 153 (describing the methodology employed by the Commission to estimate the number of potential major security-based swap participants).

1200 See infra Section XXII(B)(3).

b. Security-Based Swap Transaction Activity

Single-name CDS contracts make up the vast majority of security-based swap products and most are written on corporate issuers, corporate debt securities, sovereign countries, or sovereign debt securities (reference entities and reference securities). Figure 2, below, describes the percentage of global, notional transaction volume in U.S. single-name CDS reported to the DTCC-TIW between January 2008 and December 2013, separated by whether transactions are between two ISDA-recognized dealers (interdealer transactions) or whether a transaction has at least one non-dealer counterparty.

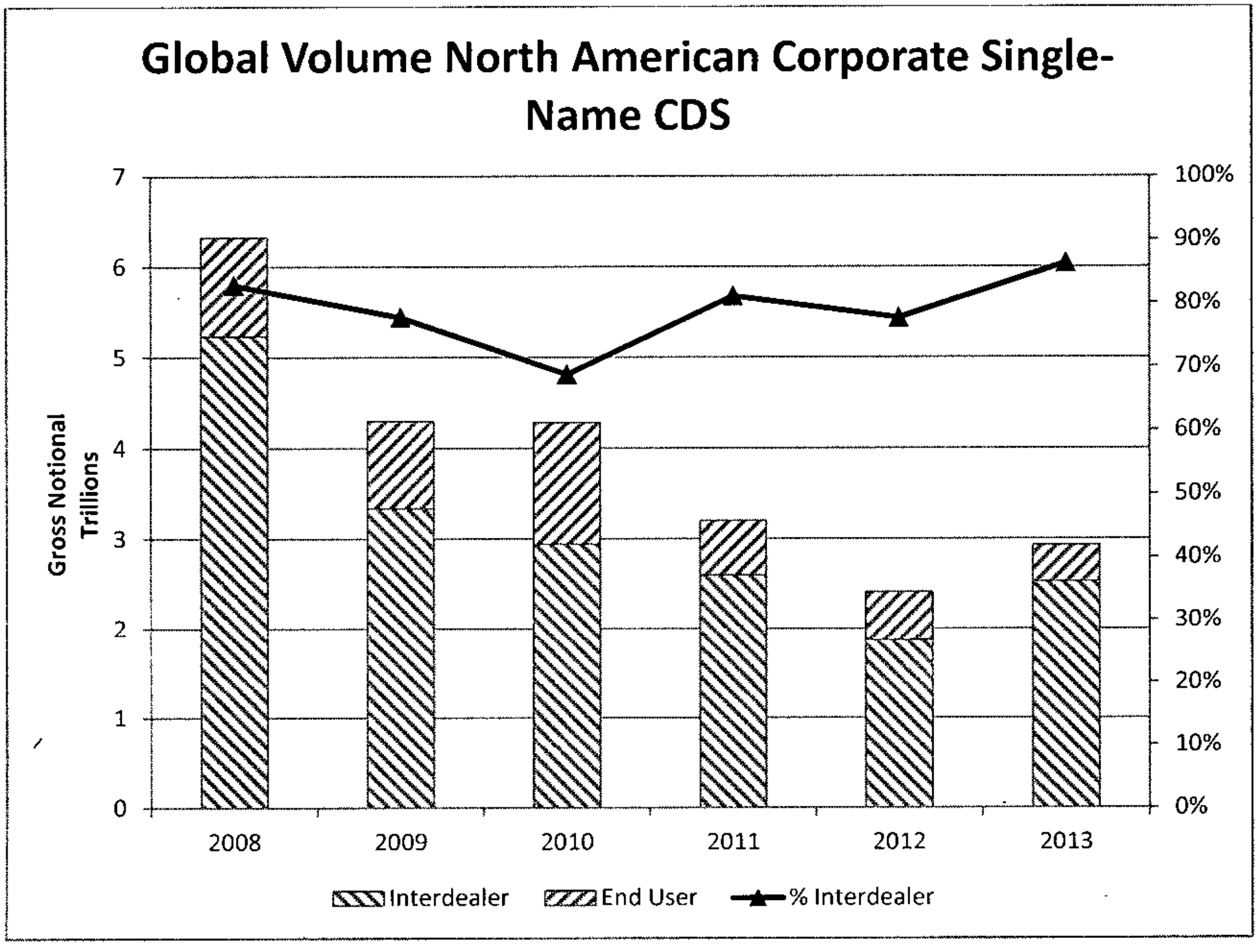
The level of trading activity with respect to U.S. single-name CDS in terms of notional volume has declined from more than $6 trillion in 2008 to less than $3 trillion in 2013.[1201] While notional volume has declined over the past six years, the share of interdealer transactions has remained fairly constant and interdealer transactions continue to represent the bulk of trading activity, whether measured in terms of notional value or number of transactions (see Figure 2).

The high level of interdealer trading activity reflects the central position of a small number of dealers who each intermediate trades among many hundreds of counterparties. While

1201 The start of this decline predates the enactment of the Dodd-Frank Act and the proposal of rules thereunder. For the purpose of establishing an economic baseline, this seems to indicate that CDS market demand shrank prior to the enactment of the Dodd-Frank Act, and therefore the causes of trading volume declines may be independent of those related to the development of security-based swap market regulation. If the security-based swap market experiences further declines in trading activity, it would be difficult to identify the effects of the newly-developed security-based swap market regulation apart from changes in trading activity that may be due to natural market forces or the anticipation of (or reaction to) proposed (or adopted) Title VII requirements. These estimates differ from previous estimates as a result of staff experience with transaction-level data provided by DTCC-TIW. First, the aggregate level of transaction activity presented in Figure 2 more accurately reflects the notional amounts associated with partial assignments and terminations of existing security-based swap contracts. Second, the treatment of assignments in Figure 2 includes the counterparty type (dealer or non-dealer) of counterparties vacating trades in assignments as well as those entering.

the Commission is unable to quantify the current level of trading costs for single-name CDS, it appears that the market power enjoyed by dealers as a result of their small number and the large proportion of order flow they privately observe is a key determinant of trading costs in this market.

Figure 2: Global, notional trading volume in North American corporate single-name CDS by calendar year and the fraction of volume that is interdealer.



Against this backdrop of declining North American corporate single-name CDS activity, about half of the trading activity in North American corporate single-name CDS reflected in the set of data that the Commission analyzed was between counterparties domiciled in the United States and counterparties domiciled abroad. Basing counterparty domicile on the self-reported registered office location of the DTCC-TIW accounts, the Commission estimates that only 13%

of the global transaction volume by notional volume between 2008 and 2013 was between two U.S.-domiciled counterparties, compared to 48% entered into between one U.S.-domiciled counterparty and a foreign-domiciled counterparty and 39% entered into between two foreign-domiciled counterparties (see Figure 3).[1202]

When the domicile of DTCC-TIW accounts are instead defined according to the domicile of their ultimate parents, headquarters, or home offices (e.g., classifying a foreign branch or foreign subsidiary of a U.S. entity as domiciled in the United States), the fraction of transactions entered into between two U.S.-domiciled counterparties increases to 29%, and to 53% for transactions entered into between a U.S.-domiciled counterparty and a foreign-domiciled counterparty.

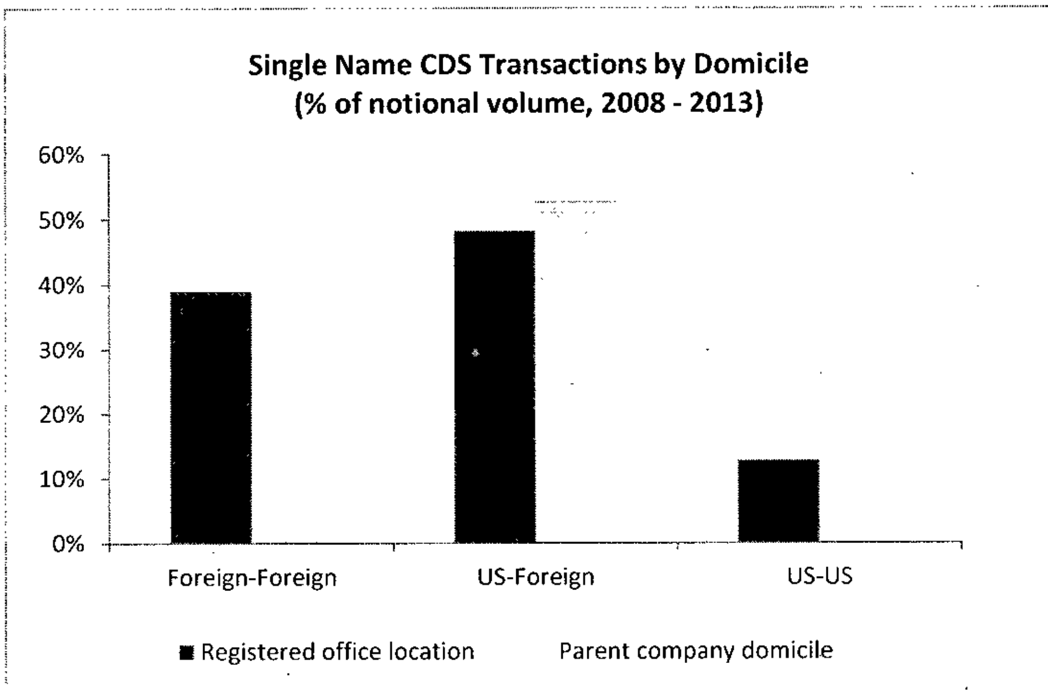
Differences in classifications across different definitions of domicile illustrate the effect of participant structures that operate across jurisdictions. Notably, the proportion of activity between two foreign-domiciled counterparties drops from 39% to 18% when domicile is defined as the ultimate parent's domicile. As noted earlier, foreign subsidiaries of U.S. persons, foreign branches of U.S. persons, and U.S. subsidiaries of foreign persons, and U.S. branches of foreign persons may transact with U.S. and foreign counterparties. However, this decrease in share suggests that the activity of foreign subsidiaries of U.S. persons and foreign branches of U.S. persons is generally higher than the activity of U.S. subsidiaries of foreign persons and U.S. branches of foreign persons.

By either of those definitions of domicile, the data indicate that a large fraction of North American corporate single-name CDS transaction volume is entered into between counterparties domiciled in two different jurisdictions or between counterparties domiciled outside the United

1202 See supra notes 788 and 1183.

States. For the purpose of establishing an economic baseline, this observation indicates that a large fraction of security-based swap activity would be affected by the scope of any cross-border approach we take in applying the Title VII requirements. Further, the large fraction of North American corporate single-name CDS transactions between U.S.-domiciled and foreign-domiciled counterparties also highlights the extent to which security-based swap activity transfers risk across geographical boundaries, both facilitating risk sharing among market participants and allowing for risk transmission between jurisdictions.

Figure 3: The fraction of notional volume in North American corporate single-name CDS between (1) two U.S.-domiciled accounts, (2) one U.S.-domiciled account and one non-U.S.-domiciled account, and (3) two non-U.S.-domiciled accounts, computed from January 2008 through December 2013.



Figures 4 and 5 present the frequency distribution of trades by size for two subsamples of transactions observed in 2013. A salient feature of the trade size distribution is that trades tend to be clustered at "round" numbers: $1 million, $5 million, $10 million, etc. While large and very large trades do occur, less than 1% of the transactions in our sample were for notional amounts greater than $100 million.

Figure 4: Distribution of notional trading volumes in North American corporate single-name CDS for transactions in 2013 with notional value of at most $30 million.[1203]

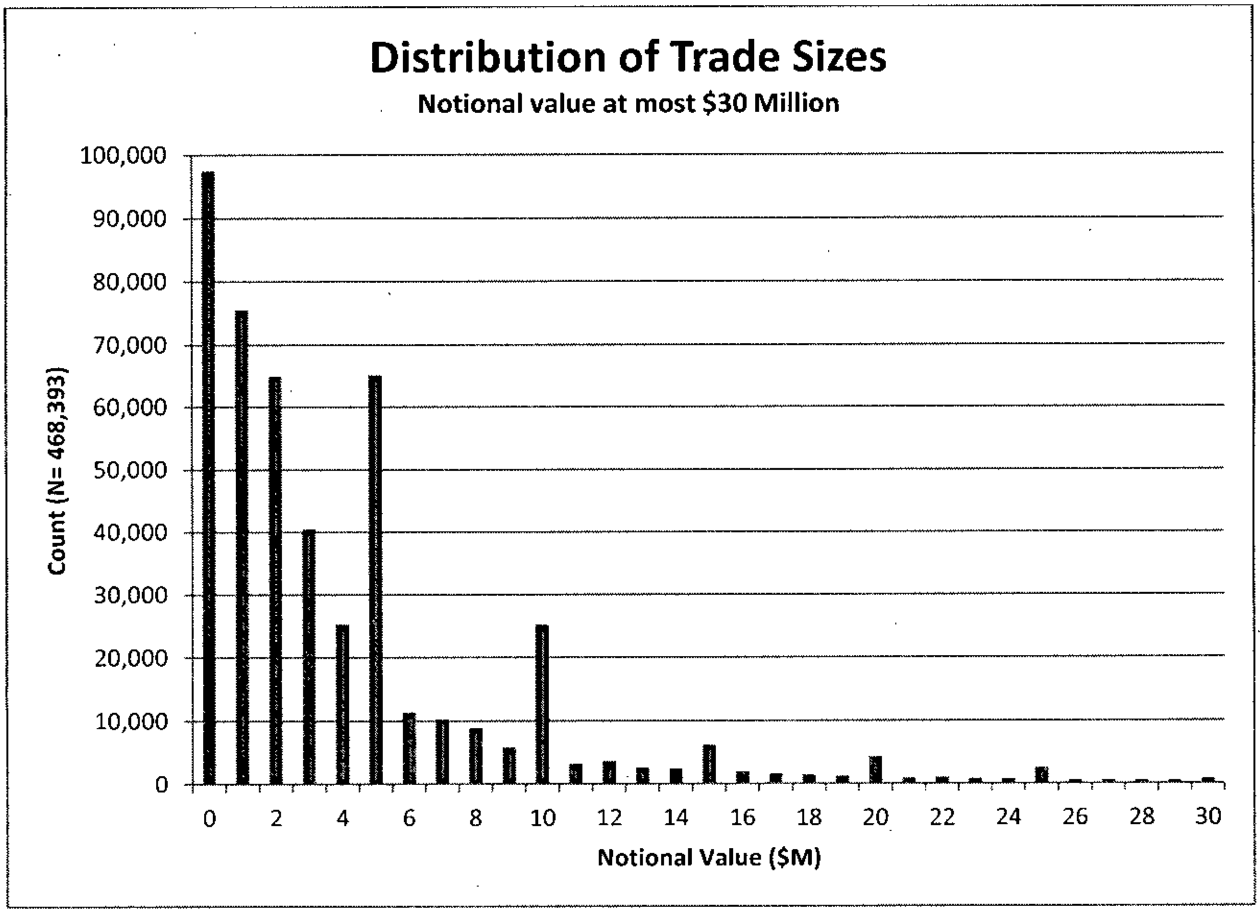


Figure 5: Distribution of notional trading volumes in North American corporate single-name CDS for transactions in 2013 with notional value of more than $30 million.[1204]

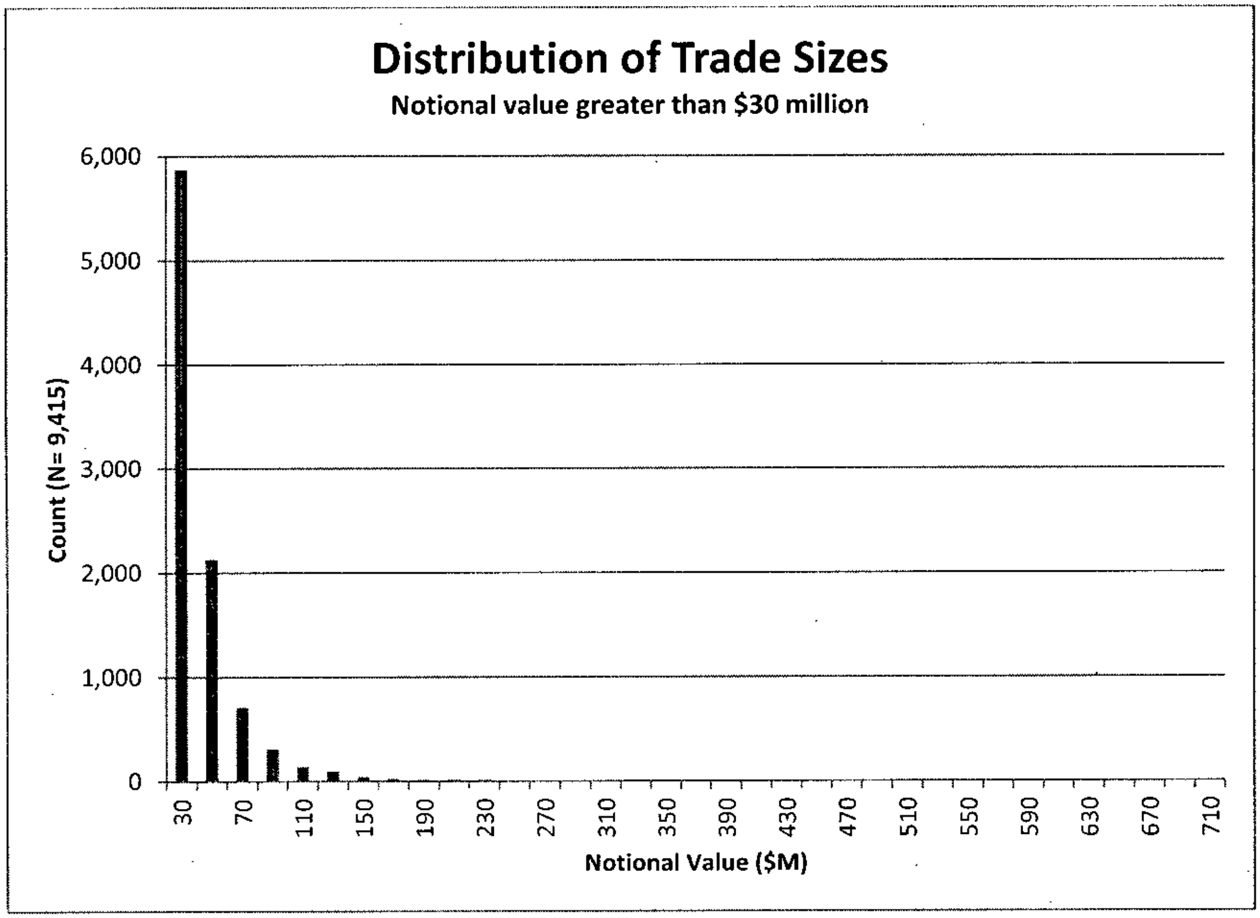
1203 The left-most bar, labeled "0", represents the number of trades with notional values greater than $0 and less than $1 million, while the next bar represents the number of trades with notional values greater than or equal to $1 million and less than $2 million, and so on. The right-most bar, labeled "30", represents the number of trades with notional values of exactly $30 million.



c. Counterparty Reporting

While there is no mandatory reporting requirement for the single-name CDS market yet, virtually all market participants voluntarily report their trades to DTCC-TIW, in some cases with

---

1204 The left-most bar, labeled "30", represents the number of trades with notional values greater than $30 and less than $50 million, while the next bar represents the number of trades with notional values greater than or equal to $50 million and less than $70 million, and so on. The right-most bar, labeled "710", represents the number of trades with notional value greater than $710 million.

the assistance of post-trade processors, which maintains a legal record of transactions.[1205] Among other things, this centralized record-keeping facilitates settlement of obligations between counterparties when a default event occurs as well as bulk transfers of positions between accounts at a single firm or between firms. In addition, while there is not yet a mandatory clearing requirement in the single-name CDS market, market participants may choose to clear transactions voluntarily. However, neither voluntary reporting nor voluntary clearing results in data that are available to the public on a trade-by-trade basis.

In the Regulation SBSR Proposing Release, the Commission preliminarily estimated that there would be 1,000 reporting parties[1206] and 15.5 million reportable events per year.[1207] In the Cross-Border Proposing Release, the Commission revised its estimate of the number of reporting sides from 1,000 to 300 and revised its estimate of the number of reportable events from 15.5 million to approximately 5 million.[1208] These revised estimates were a result of the Commission obtaining additional and more granular data regarding participation in the security-based swap market from DTCC-TIW. As discussed above, since issuing the Cross-Border Proposing Release, the Commission has obtained additional and even more granular data regarding participation in the security-based swap market from DTCC-TIW. As a result, the Commission is now further revising its estimate of the number of reportable events. Accordingly, the

1208 See 78 FR at 31114.

Commission now estimates that 300 reporting sides will be required to report an aggregate total of approximately 3 million reportable events per year under Rule 901, as adopted.[1209]

Table 3: Trade reports by transaction type, 2013.

	Count
Interdealer	1,231,796
Dealer - Non-Dealer	482,860
Clearinghouse	546,041
Total	2,260,577

d. Sources of Security-Based Swap Information

There currently is no robust, widely accessible source of information about individual security-based swap transactions. Nevertheless, market participants can gather certain limited information for the single-name CDS[1210] market from a variety of sources. First, indicative quotes can be obtained through market data vendors such as Bloomberg or Markit. These quotes typically do not represent firm commitments to buy or sell protection on particular reference entities. Since there is no commitment to buy or sell associated with indicative quotes, there are fewer incentives for market participants that post indicative quotes to quote prices that accurately reflect the fundamental value of the asset to be traded. However, market participants can glean information from indicative quotes that may inform their trading.

Second, there is limited, publicly-disseminated information about security-based swap market activity presented at an aggregate level. As mentioned above, market participants

1209 See supra note 1070.

1210 Regulation SBSR would also cover equity swaps (other than broad-based equity index swaps). However, the Commission has access to limited information concerning the equity swap market. As a result, the Commission's analysis is largely focused on the single-name CDS market, for which the Commission has information.

sometimes voluntarily clear their transactions, e.g., through ICE Clear Credit.[1211] To support their risk management activities, clearing agencies compute and disseminate information such as end-of-day prices and aggregated volume to their clearing members. ICE Clear Credit also provides aggregated volume data.[1212] Additionally, some large multilateral organizations periodically report measures of market activity. For example, the Bank for International Settlements ("BIS") reports gross notional outstanding for single-name CDS and equity forwards and swaps semiannually.[1213]

Finally, market intermediaries may draw inferences about security-based swap market activity from observing their customers' order flow or through inquiries made by other market participants who seek liquidity. This source of information is most useful for market participants with a large market share. As noted above, the ability to observe a larger amount of order flow allows for more precise estimates of demand.

The paucity of publicly-available security-based swap data suggests a number of frictions that likely characterize the current state of efficiency, competition, and capital formation in the security-based swap market. As noted in Section XXII(A), without public dissemination of transaction information, security-based swap market participants with the largest order flow have an informational advantage over smaller competitors and counterparties. Moreover, as suggested by Table 1, there is a great deal of heterogeneity in the level of order flow observed by market

[1211] Based on the transaction data from the DTCC-TIW, Commission staff has estimated that, during the three-year period from January 2011 until December 2013, approximately 21% of all transactions in CDS with North American single-name corporate reference entities and approximately 21% of all transactions in CDS with European single-name corporate reference entities were cleared.

[1212] Available at https://www.theice.com/marketdata/reports/98 (last visited October 20, 2014).

[1213] Available at http://www.bis.org/statistics/derstats.htm (last visited October 20, 2014).

participants, with a small group of large dealers participating in most transactions. These large market participants can use this advantage to consolidate their own market power by strategically filling orders when it is to their advantage and leaving less profitable trades to competitors.

Asymmetric information and dealer market power can result in financial market inefficiencies. With only a small number of liquidity suppliers competing for order flow, bid-ask spreads in the market may be wider than they would be under perfect competition between a larger number of liquidity suppliers. If this is the case, then it is possible that certain non-dealers who might otherwise benefit from risk-sharing afforded by security-based swap positions may avoid participating in the market because it is too costly for them to do so. For instance, if wide bid-ask spreads in the CDS market reduced the level of credit risk hedging by market participants, the result could be an inefficient allocation of credit risk in the economy as a whole. Additionally, financial market participants may avoid risk-sharing opportunities in the security-based swap market if they determine that lack of oversight by relevant authorities leaves the market prone to disruption. For example, if the threat of sequential counterparty default reduces security-based swap dealers' liquidity, then market participants may reduce their participation if they perceive a high risk that they will be unable to receive the contractual cash flows associated with their security-based swap positions. These sources of inefficiency can adversely affect capital formation if an inability for lenders and investors to efficiently hedge their economic exposures diminishes their willingness to fund certain borrowers and issuers with risky but profitable investing opportunities.

Lack of publicly-available transaction information could affect capital formation in other ways. Information about security-based swap transactions can be used as input into valuation models. For example, the price of a single-name CDS contract can be used to produce estimates of default risk for a particular firm and these estimates can, in turn, be used by managers and investors to value the firm's projects. In the absence of last-sale information in the CDS market, market participants may build models of default risk using price data from other markets. They may, for instance, look to the firm's bond and equity prices, the prices of swaps that may have similar default risk exposure, or to the prices of comparable assets more generally.

2. Global Regulatory Efforts

a. Dealer and Major Swap Participant Definitions for Cross-Border Security-Based Swaps

The Commission adopted final rules governing the application of the "security-based swap dealer" and "major security-based swap participant" definitions with respect to cross-border security-based swap activity and exposures.[1214] The final rules generally require, among other things, that non-U.S. persons assess whether their dealing activities with and exposures against U.S. persons or with recourse guarantees against U.S. persons rise above de minimis levels.[1215] In the Cross-Border Adopting Release, the Commission discussed the costs that non-U.S. persons would incur in order to perform this assessment and the likely number of participants whose activity and exposures would likely be large enough to make such an assessment prudent.[1216] These costs included amounts related to collecting, analyzing, and monitoring representations about the U.S.-person status of counterparties, and whether particular transactions had recourse guarantees against U.S. persons.[1217]

1214 See Cross-Border Adopting Release, 79 FR at 47278.

1215 See id. at 47301.

1216 See id. at 47315.

1217 See id. at 47332.

b. International Regulatory Developments

International efforts to coordinate the regulation of the OTC derivatives markets are underway, and suggest that many foreign participants will face substantive regulation of their security-based swap activities that resemble rules the Commission is implementing. In 2009, leaders of the Group of 20 ("G20")—whose membership includes the United States, the European Union, and 18 other countries—called for global improvements in the functioning, transparency, and regulatory oversight of OTC derivatives markets.[1218] In subsequent summits, the G20 leaders have reiterated their commitment to OTC derivatives regulatory reform and encouraged international consultation in developing standards for these markets.[1219] The FSB is a forum for international coordination of OTC derivatives reform and provides progress reports to the G20.[1220]

Jurisdictions with major OTC derivatives markets have taken steps toward substantive regulation of these markets, though the pace of regulation varies. Rulemaking and legislation has focused on four general areas: post-trade reporting and public dissemination of transaction

---

1220 The FSB has published seven progress reports on OTC derivatives markets reform implementation that are available at http://www.financialstabilityboard.org/list/fsb_publications/index.htm.

data, moving OTC derivatives onto centralized trading platforms, clearing of OTC derivatives, and margin requirements for OTC derivatives transactions.

Transaction reporting requirements have entered into force in Europe, Australia, Singapore, and Japan, with other jurisdictions in the process of proposing legislation and rules to implement these requirements. For example, in Canada, Ontario, Quebec, and Manitoba have transaction reporting requirements in force, while other provinces have proposed rules in that area. The European Union is currently considering updated rules for markets in financial instruments that will address derivatives market transparency and trading derivatives on regulated trading platforms.

3. Cross-Market Participation

A single-name CDS contract covers default events for a single reference entity or reference security. These entities and securities are often part of broad-based indices on which market participants write index CDS. Index CDS contracts make payouts that are contingent on the default of one or more index components and allow participants to gain exposure to the credit risk of the basket of reference entities that comprise the index, which is a function of the credit risk of the index components. As a result of this construction, a default event for a reference entity that is an index component will result in payoffs on both single-name CDS written on the reference entity and index CDS written on indices that contain the reference entity. Because of this relationship between the payoffs of single-name and index CDS, prices of these products depend upon one another.

Because payoffs associated with these single-name CDS and index CDS are dependent, hedging opportunities exist across these markets. Participants who sell protection on reference entities through a series of single-name CDS transactions can lay off some of the credit risk of their resulting positions by buying protection on an index that includes those reference entities. Entities that are active in one market are likely to be active in the other. Commission staff analysis of approximately 4,200 DTCC-TIW accounts that participated in the market for single-name CDS in 2013 revealed that approximately 2,200 of those accounts, or 52%, also participated in the market for index CDS. Of the accounts that participated in both markets, data regarding transactions in 2013 suggest that, conditional on an account transacting in notional volume of index CDS in the top third of accounts, the probability of the same account landing in the top third of accounts in terms of single-name CDS notional volume is approximately 62%; by contrast, the probability of the same account landing in the bottom third of accounts in terms of single-name CDS notional volume is only 15%.

The CFTC's cross-border guidance and swap reporting rules have likely influenced the information that market participants collect and maintain about the swap transactions they enter into and the counterparties that they face.[1221] Compliance with the CFTC's cross-border guidance and swap reporting rules would require swap counterparties to collect and maintain data items required by the CFTC regulation if they had not done so before. To the extent that the same or similar information is needed to comply with Regulation SBSR, market participants can use infrastructure already in place as a result of CFTC regulation to comply with Regulation SBSR and the costs to these market participants would be reduced.

[1221] See "Interpretive Guidance and Policy Statement Regarding Compliance With Certain Swap Regulations" (July 17, 2013), 78 FR 45292 (July 26, 2013) ("CFTC Cross-Border Guidance"). See also Sec. Indus. & Fin. Mkts. Ass'n v. CFTC, Civil Action No. 13-1916 (PLF), slip op. at 89 (D.D.C. September 16, 2014).

Commenters generally expressed concern about potential differences between CFTC rules and rules promulgated by the Commission.[1222] In adopting Regulation SBSR, the Commission has been cognizant of the parallel rules imposed by the CFTC and the costs that would be imposed on market participants that must comply with both agencies' rules.

C. Programmatic Costs and Benefits of Regulation SBSR

The Commission preliminarily identified certain benefits of Regulation SBSR in both the Regulation SBSR Proposing Release and the Cross-Border Proposing Release. After careful consideration of all the issues raised by commenters, the Commission continues to believe that Regulation SBSR will result in certain benefits. These include promoting price discovery and lowering trading costs by improving the level of information to all market participants and by providing a means for the Commission and relevant authorities to gain a better understanding of the trading behaviors of participants in the security-based swap market and to identify large counterparty exposures.[1223] Additionally, the Commission believes that Regulation SBSR will improve risk management by those market participants that choose to supplement their existing risk management programs with publicly disseminated data. Risk management relies on accurate pricing, and valuation models generally yield better estimates with last-sale information being available as input.

1222 See, e.g., SIFMA/FIA/Roundtable Letter at 3.

1223 See Sections XXII(B)(1)(b), XXII(C)(2), and XXII(D)(2)(b). See also Amy K. Edwards, Lawrence Harris, & Michael S. Piwowar, Corporate Bond Market Transparency and Transaction Costs, J. of Fin., Vol. 62, at 1421-1451 (2007). It should be noted that Michael Piwowar, one of the co-authors of the first article cited, is currently an SEC Commissioner, and Amy Edwards, another of that article's co-authors, currently serves as an Assistant Director in the Commission's Division of Economic and Risk Analysis.

1. Regulatory Reporting

a. Programmatic Benefits

Rule 901, as adopted, requires all security-based swaps that are covered transactions[1224] to be reported to a registered SDR, establishes a "reporting hierarchy" that determines which side must report the transaction, and sets out the data elements that must be reported. The Commission believes that requiring regulatory reporting of covered transactions will yield a number of benefits. First, Rule 901 will provide a means for the Commission and other relevant authorities to gain a better understanding of the security-based swap market,[1225] including the size and scope of that market, as the Commission would have access to transaction data held by any registered SDR. The Commission and other relevant authorities can analyze the security-based swap market and potentially identify exposure to risks undertaken by individual market participants or at various levels of aggregation, as well as credit exposures that arise between counterparties. Additionally, regulatory reporting will help the Commission and other relevant authorities in the valuation of security-based swaps. For example, an improved ability of relevant authorities to value security-based swap exposures may assist these authorities in assessing compliance with rules related to capital requirements by entities that maintain such exposures on their balance sheets. Taken together, regulatory data will enable the Commission and other relevant authorities to conduct robust monitoring of the security-based swap market for potential risks to financial markets and financial market participants.

Second, data reported pursuant to Rule 901 should improve relevant authorities' ability to oversee the security-based swap market to detect, deter, and punish market abuse. The

---

1224 See supra notes 11-12 and accompanying text.

1225 Such relevant authorities are enumerated in Section 13(n)(5)(G) of the Exchange Act, 15 U.S.C. 78m(n)(5)(G). See supra note 64.

Commission and other relevant authorities will be able, for example, to observe trading activity at the level of both trading desk and individual trader, using trading desk IDs and trader IDs, respectively. While the Commission acknowledges commenters' concerns regarding the costs associated with establishing and maintaining UICs, it has considered these costs in light of its belief that aggregation of the information contained in registered SDRs using appropriate UICs—such as broker ID, trader ID, and trading desk ID—will facilitate the ability of the Commission and other relevant authorities to examine for noncompliance and pursue enforcement actions, as appropriate.[1226]

Rule 901 could result in benefits by encouraging the creation and widespread use of generally accepted standards for reference information by security-based swap market participants and infrastructure providers (such as SDRs and clearing agencies). For example, Rule 901(c)(1) requires the reporting of a product ID, for security-based swaps that can be categorized as belonging to a product group. The development and wider usage of product IDs could result in greater efficiencies for market participants, infrastructure providers, and regulators, as identifying information about security-based swap products can be conveyed with a single ID code in place of several, perhaps dozens, of separate data elements. The development and wider usage of UICs generally will provide market participants with a more reliable means of identifying to each other the same products, persons, units of persons, and transactions. The costs associated with misidentifying these aspects of a transaction include additional time and resources spent to reconcile differing data elements across transaction records. Misidentification could also result in the cancellation of a transaction if, for example, it

[1226] See supra notes 160 and 162.

reveals disagreement between counterparties about the economic attributes of the transaction, such as the reference obligation underlying a CDS contract.

UICs also could lead to greater regulatory efficiencies, as the Commission and other relevant authorities would have greater ability to aggregate transactions along a number of different vectors. Relevant authorities will have greater ability to observe patterns and connections in trading activity, such as whether a trader had engaged in questionable trading activity across different security-based swap products. The reporting of this information will facilitate more effective oversight, enforcement, and surveillance of the security-based swap market by the Commission and other relevant authorities. These identifiers also will facilitate aggregation and monitoring of the positions of security-based swap counterparties, which could be of significant benefit to the Commission and other relevant authorities.

The time stamp and transaction ID requirements under Rules 901(f) and 901(g), respectively, should facilitate data management by the registered SDR, as well as market supervision and oversight by the Commission and other regulatory authorities. The transaction ID required by Rule 901(g) also will provide an important benefit by facilitating the linking of subsequent, related security-based swap transactions that may be submitted to a registered SDR (e.g., a transaction report regarding a security-based swap life cycle event, or report to correct an error in a previously submitted report). Counterparties, the registered SDR, the Commission, and other relevant authorities also will benefit by having the ability to track changes to a security-based swap over the life of the contract, as each change can be linked to the initially reported transaction using the transaction ID.

By requiring reporting of pre-enactment and transitional security-based swap transactions to the extent the information is available, Rule 901(i) will provide the Commission and other relevant authorities with insight as to outstanding notional size, number of transactions, and number and type of participants in the security-based swap market. To the extent pre-enactment and transitional security-based swap transaction information is available and reported, Rule 901(i) may contribute to the development of a well regulated market for security-based swaps by providing a benchmark against which to assess the development of the security-based swap market over time. The data reported pursuant to Rule 901(i) also could help the Commission prepare the reports that it is required to provide to Congress. At the same time, Rule 901(i) limits the scope of the transactions, and the information pertaining to those transactions, that must be reported in a manner designed to minimize undue burdens on security-based swap counterparties. First, Rule 901(i) requires reporting only of those security-based swaps that were open as of the date of enactment (July 21, 2010) or opened thereafter. As discussed in Section II(C)(2), supra, Rule 901(i) requires reporting of the information required by Rules 901(c) and 901(d) only to the extent such information is available. Finally, the duty to report historical security-based swaps in a particular asset class is triggered only when there exists a registered SDR that can accept security-based swaps in that asset class.

b. Programmatic Costs

i. Reporting Security-Based Swap Transactions to a Registered SDR—Rule 901

The security-based swap reporting requirements contained in Rule 901 will impose initial and ongoing costs on reporting sides.[1227] The Commission continues to believe that certain of

[1227] Certain estimates used throughout this Section XXII (e.g., the number of impacted entities, the number of reportable events, and the hourly cost rates used for each job category) have been updated from those estimated in the Cross-Border Proposing Release to reflect the rule text of Regulation SBSR, as adopted, as well as additional information and data now available to the Commission.

these costs would be a function of the number of reportable events and the data elements required to be submitted for each reportable event. The Commission continues to believe that security-based swap market participants will face three categories of costs to comply with Rule 901. First, each reporting side will likely have to establish and maintain an internal OMS capable of capturing relevant security-based swap transaction information so that it could be reported. Second, each reporting side will have to implement a reporting mechanism. Third, each reporting side will have to establish an appropriate compliance program and support for operating any OMS and reporting mechanism.[1228] Such systems and mechanisms would likely be necessary to report data within the timeframe set forth in Rule 901(j), as it is unlikely that manual processes could capture and report the numerous required data elements relating to a security-based swaps. Many market participants may already have OMSs in place to facilitate voluntary reporting of security-based swap transactions or clearing activity. As a result, any additional costs related to systems and infrastructure will be limited to those reporting sides that either invest in new systems or must upgrade existing systems to meet minimum requirements for reporting. To the extent that the cost estimates discussed below do not take this cost limiting fact into account, they are an upper bound for the estimated costs.

Although the Commission initially estimated that there would be 1,000 reporting sides,[1229] in the Cross-Border Proposing Release the Commission revised that estimate to 300.[1230] No comments were received on the number of entities that would be reporting sides under Regulation SBSR. The Commission notes that, since issuing the Regulation SBSR Proposing

1228 See also Regulation SBSR Proposing Release, 75 FR at 75264.

1229 See id. at 75247.

1230 See Cross-Border Proposing Release, 78 FR at 31113.

Release, the Commission has obtained additional and more granular data regarding its estimate of the number of reporting sides. These historical data suggest that, among these 300 reporting sides, approximately 50 are likely to be required to register with the Commission as security-based swap dealers and up to five are likely to register as major security-based swap participants.[1231] These data further suggest that these 55 potential registrants likely will account for the vast majority of recent security-based swap transactions and transaction reports that will need to be reported by reporting sides, and that there are only a limited number of security-based swap transactions that do not include at least one of these potential registrants on either side.[1232]

The Commission estimates that internal order management costs related to Rule 901 will result in initial one-time aggregate costs of approximately $30,600,000, which corresponds to approximately $102,000 for each reporting side.[1233] The Commission continues to estimate that the cost to establish and maintain connectivity to a registered SDR to facilitate the reporting required by Rule 901 would impose an annual (first-year and ongoing) aggregate cost of

---

1231 See id. at 31103.

1232 As a result, the Commission generally will use 300 as an estimate of the number of reporting sides for §§ 900-909 of Regulation SBSR. In cases where a rule is more limited in its application, for example Rule 906(c), the Commission may use a different number that reflects some subset of the estimated 300 reporting sides.

1233 This estimate is based on the following: [((Sr. Programmer (160 hours) at $303 per hour) + (Sr. Systems Analyst (160 hours) at $260 per hour) + (Compliance Manager (10 hours) at $283 per hour) + (Director of Compliance (5 hours) at $446 per hour) + (Compliance Attorney (20 hours) at $334 per hour)) x 300 reporting sides)] = $30,546,000, or approximately $30,600,000, or approximately $102,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75264. These estimates have been adjusted to reflect the Commission's new estimate of the number of reporting sides. All hourly cost figures are based upon data from SIFMA's Management & Professional Earnings in the Securities Industry 2013 (modified by the SEC staff to account for an 1800-hour-work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead).

approximately $60,000,000, which corresponds to $200,000 for each reporting side.[1234] The Commission continues to estimate, as a result of having to establishing a reporting mechanism for security-based swap transactions, reporting sides will experience certain development, testing and support costs. Such costs would amount to an initial one-time aggregate cost of approximately $14,700,000, which corresponds to an initial one-time cost of approximately $49,000 for each reporting side.[1235] The Commission estimates that internal order management costs related to Rule 901 will impose ongoing annual aggregate costs of approximately $23,100,000, which corresponds to approximately $77,000 per reporting side.[1236] In addition,

1234 This estimate is based on discussions of Commission staff with various market participants, as well as the Commission's experience regarding connectivity between securities market participants for data reporting purposes. The Commission derived the total estimated expense from the following: ($100,000 hardware- and software-related expenses, including necessary backup and redundancy, per SDR connection) x (2 SDR connections per reporting side) x (300 reporting sides) = $60,000,000, or $200,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75265. These estimates have been adjusted to reflect the Commission's new estimate of the number of reporting sides.

1235 This figure is based on discussions with various market participants and is calculated as follows: [((Sr. Programmer (80 hours) at $303 per hour) + (Sr. Systems Analyst (80 hours) at $260 per hour) + (Compliance Manager (5 hours) at $283 per hour) + (Director of Compliance (2 hours) at $446 per hour) + (Compliance Attorney (5 hours) at $334 per hour) x (300 reporting sides)] = $14,705,100, or approximately $14,700,000, or approximately $49,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75265, adjusted to reflect the Commission's new estimate of the number of reporting sides.

1236 This estimate is based on the following: [((Sr. Programmer (32 hours) at $303 per hour) + (Sr. Systems Analyst (32 hours) at $260 per hour) + (Compliance Manager (60 hours) at $283 per hour) + (Compliance Clerk (240 hours) at $64 per hour) + (Director of Compliance (24 hours) at $446 per hour) + (Compliance Attorney (48 hours) at $334 per hour)) x 300 reporting sides)] = $23,127,600, or approximately $23,100,000, or approximately $77,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75264-5, adjusted to reflect the Commission's new estimate of the number of reporting sides.

the Commission estimates that all reporting sides will incur an initial and ongoing aggregate annual cost of $300,000, which corresponds to $1,000 for each reporting side.[1237]

The Commission, in the Regulation SBSR Proposing Release, estimated that reporting specific security-based swap transactions to a registered SDR as required by Rule 901 will impose an annual aggregate cost (first-year and ongoing) of approximately $5,400 for each reporting party.[1238] This estimate was revised in the Cross-Border Proposing Release and this adopting release to reflect improved information relating to the number of transactions and reporting sides. The Commission believes that the cost of reporting initial security-based swap transactions under Rule 901(c) will be approximately $340,000, or approximately $1,100 per reporting side.[1239] The Commission further believes that the cost of reporting life cycle events under Rule 901(e) will be approximately $415,000, or approximately $1,400 per reporting side.[1240] As a result, the Commission believes that the total cost (first-year and ongoing) of

---

1237 This estimate is based on discussion of Commission staff with various market participants and is calculated as follows: [$250/gigabyte of storage capacity x (4 gigabytes of storage) x (300 reporting sides)] = $300,000, or $1,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75265, adjusted to reflect the Commission's new estimate of the number of reporting sides.

1238 See Regulation SBSR Proposing Release, 75 FR 75208, notes 195 and 299.

1239 The Commission believes that 900,000 of the 2 million reportable events will be the result of reporting the initial security-based swap transaction under Rule 901(c). As a result, the Commission estimates: ((900,000 x 0.005 hours per transaction) / (300 reporting sides)) = 15 burden hours per reporting side, or 4,500 total burden hours. The resulting cost of such reporting would be: [((Compliance Clerk (7.5 hours) at $64 per hour) + (Sr. Computer Operator (7.5 hours) at $87 per hour)) x (300 reporting sides)] = approximately $340,000, or $1,133 per reporting side.

1240 The Commission believes that 1,100,000 of the 2 million reportable events will be the result of reporting life cycle events under Rule 901(e). As a result, the Commission estimates: ((1,100,000 x 0.005 hours per transaction) / (300 reporting sides)) = 18.33 burden hours per reporting side, or 5,500 total burden hours. The resulting cost of such reporting would be: [((Compliance Clerk (9.17 hours) at $64 per hour) + (Sr. Computer reporting security-based swap transactions under Rule 901, as adopted, will be approximately $750,000, or $2,500 per reporting side.[1241]

The Commission estimates that designing and implementing an appropriate compliance and support program will impose an initial one-time aggregate cost of approximately $16,200,000, which corresponds to a cost of approximately $54,000 for each reporting side.[1242]

The Commission estimates that maintaining its compliance and support program would impose an ongoing annual aggregate cost of approximately $11,550,000, which corresponds to a cost of approximately $38,500 for each reporting side.[1243]

Operator (9.17 hours) at $87 per hour)) x (300 reporting sides)] = approximately $415,000, or $1,383 per reporting side.

1241 The Commission believes that the per reportable event transaction cost will not change and that only approximately 2 million of these events will be reported by the reporting sides. As a result, the Commission now estimates: ((2 million x 0.005 hours per transaction) / (300 reporting sides)) = 33.3 burden hours per reporting side, or 10,000 total burden hours. The Commission therefore estimates the total cost to be: [((Compliance Clerk (16.7 hours) at $64 per hour) + (Sr. Computer Operator (16.7 hours) at $87 per hour)) x (300 reporting sides)] = approximately $750,000, or $2,500 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75208, notes 195 and 299. These estimates have been adjusted to reflect the Commission's new estimates of the number of reporting sides and number of reportable events.

1242 This figure is based on discussions with various market participants and is calculated as follows: [((Sr. Programmer (100 hours) at $303 per hour) + (Sr. Systems Analyst (40 hours) at $260 per hour) + (Compliance Manager (20 hours) at $283 per hour) + (Director of Compliance (10 hours) at $446 per hour) + (Compliance Attorney (10 hours) at $334 per hour) x (300 reporting sides)] = approximately $16,200,000, or $54,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75266. These estimates have been adjusted to reflect the Commission's new estimate of the number of reporting sides.

1243 This figure is based on discussions with various market participants and is calculated as follows: [((Sr. Programmer (16 hours) at $303 per hour) + (Sr. Systems Analyst (16 hours) at $260 per hour) + (Compliance Manager (30 hours) at $283 per hour) + (Compliance Clerk (120 hours) at $64 per hour) + (Director of Compliance (12 hours) at $446 per hour) + (Compliance Attorney (24 hours) at $334 per hour) x (300 reporting sides)] = $11,563,800, or approximately $11,550,000, or approximately $38,500 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75266. These

Summing these costs, the Commission estimates that the initial, aggregate annual costs associated with Rule 901 would be approximately $157,200,000, which corresponds to approximately $524,000 per reporting side.[1244] The Commission estimates that the ongoing aggregate annual costs associated with Rule 901 will be approximately $95,700,000, which corresponds to approximately $319,000 per reporting side.[1245]

The Commission continues to believe that the costs associated with required reporting pursuant to Regulation SBSR could represent a barrier to entry for new, smaller firms that might not have the ability to comply with the proposed reporting requirements or for whom the expected benefits of compliance might not justify the costs of compliance. To the extent that Regulation SBSR might deter new firms from entering the security-based swap market, this would be a cost of the regulation and could negatively impact competition. Nevertheless, the Commission continues to believe that the reporting requirements will not impose insurmountable barriers to entry, as firms that are reluctant to acquire and build reporting infrastructure could engage with third-party service providers to carry out any reporting duties incurred under Regulation SBSR.[1246]

---

estimates have been adjusted to reflect the Commission's new estimate of the number of reporting sides.

1244 This estimate is based on the following: (($102,000 + $200,000 + $49,000 + $2,500 +$54,000 +$77,000 + $1,000 + $38,500) x (300 reporting sides)) = $157,200,000, which corresponds to approximately $524,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75264-6. These estimates have been adjusted to reflect the Commission's new estimate of the number of reporting sides.

1245 This estimate is based on the following: (($200,000 +$2,500 + $77,000 + $1,000 + $38,500) x (300 reporting sides)) = $95,700,000, or approximately $319,000 per reporting side. See Regulation SBSR Proposing Release, 75 FR at 75264-66. These estimates have been adjusted to reflect the Commission's new estimate of the number of reporting sides.

1246 See also Regulation SBSR Proposing Release, 75 FR at 75266.

In the Cross-Border Proposing Release, the Commission stated its preliminary belief that the infrastructure-related costs identified in the Regulation SBSR Proposing Release associated with Rule 901, on a per-entity basis, would remain largely unchanged as a result of the re-proposal. The Commission preliminarily estimated and continues to believe that the marginal burden of reporting additional transactions once a respondent's reporting infrastructure and compliance systems are in place would be de minimis when compared to the costs of putting those systems in place and maintaining them over time. This is because the only additional costs of reporting an individual transaction would be entering the required data elements into the firm's OMS, which could subsequently deliver the required transaction information to a registered SDR. In many cases, particularly with increased standardization of instruments and use of electronic trading, transaction information could more frequently be generated and maintained in electronic form, which could then be provided to a registered SDR through wholly automated processes. The Commission does not believe that the additional changes made to Rule 901 in this adopting release will have any measureable impact on the costs previously discussed in both the Regulation SBSR Proposing Release and the Cross-Border Proposing Release. As a result, the Commission believes that these previous estimates remain applicable.

In the Cross-Border Proposing Release, the Commission noted that each reporting side would be required to report, on average, more security-based swap transactions than envisioned under the original proposal. The Commission further noted that smaller unregistered counterparties, that would have been required to report a small number of security-based swap transactions under the original proposal would, under re-proposed Rule 901(a), be less likely to have to incur reporting duties under Regulation SBSR, and thus less likely to have to incur the initial infrastructure-related costs of reporting.[1247] The Commission noted its preliminary agreement with certain commenters[1248] that basing the reporting duty primarily on status as a security-based swap dealer or major security-based swap participant rather than on whether or not the entity is a U.S. person would, in the aggregate, reduce costs to the security-based swap market.

In the Cross-Border Proposing Release, the Commission noted two additional factors that could serve to limit the average per-transaction costs across all affected entities. First, to the extent that security-based swap instruments become more standardized and trade more frequently on electronic platforms (rather than manually), the act of reporting transactions to a registered SDR should become less costly. These trends are likely to reduce the number of transactions that would necessitate the manual capture of bespoke data elements, which is likely to take more time and be more expensive than electronic capture. Second, the larger entities that would incur additional reporting duties under re-proposed Rules 901(a) and 908(a)(1)(iii)—i.e., non-U.S. person security-based swap dealers and major security-based swap participants—can benefit from certain economies of scale in carrying out reporting duties that might elude smaller, unregistered counterparties. The Commission continues to believe that these factors could limit the average per-transaction costs across all affected entities. However, the extent of these effects

---

1247 The Commission notes, however, that non-reporting sides would be required to provide certain information about a reportable transaction. See Rule 906(a), as originally proposed (requiring reporting, if applicable, of participant ID, broker ID, trading desk ID, and trader ID). See also Regulation SBSR Proposing Release, 75 FR at 75221 (discussing rationale for proposed Rule 906(a)).

1248 See, e.g., DTCC II at 8; ICI Letter at 5; Cleary III at 31. See also Vanguard Letter at 6; Cleary III at 28 (stating that requiring U.S. end users to report security-based swaps entered into with non-U.S. person security-based swap dealers would be unduly burdensome for end users and could negatively impact the competitiveness of affected U.S. markets).

is difficult to quantify. It is difficult to predict how many transactions each reporting side will report under manual versus electronic capture. Furthermore, the Commission currently does not have information about the exact reporting systems and the associated cost structures of reporting sides. Therefore, while the Commission has considered the likely effects of electronic trade capture and more concentrated reporting obligations qualitatively, as above, the Commission is not able to quantify these effects.

After reviewing comment letters received in response to the Regulation SBSR Proposing Release and the Cross-Border Proposing Release, as well as evaluating the most recent data available to the Commission, the Commission believes that these cost estimates, as adjusted to account for more recent data on the number of reporting sides, remain valid. The Commission has received no comments to the contrary.

ii. Registered SDRs—Receipt and Processing of Security-Based Swap Transactions—Rule 901

Rule 901, as adopted, requires all security-based swaps that are covered transactions[1249] to be reported to a registered SDR, establishes a "reporting hierarchy" that determines which side must report the transaction, and sets out the data elements that must be reported. Together, sections (a), (b), (c), (d), (e), and (h) of Rule 901 set forth the parameters that govern how reporting sides must report security-based swap transactions. Rule 901(i) addresses the reporting of pre-enactment and transitional security-based swaps.

In both the Regulation SBSR Proposing Release and the Cross-Border Proposing Release, the Commission discussed the potential costs to registered SDRs resulting from Rule 901. The Commission preliminarily estimated that the number of registered SDRs would not

[1249] See supra notes 11-12 and accompanying text.

exceed ten in both releases. No comments discussed the potential number of entities that might register with the Commission as SDRs and incur duties under Regulation SBSR. The Commission continues to believe that it is reasonable to estimate ten registered SDRs for purposes of evaluating the costs and benefits of Regulation SBSR.

As discussed above, Rule 901 imposes certain minor, additional requirements on registered SDRs, in addition to the major duties imposed on SDRs by Rules 902 and 907 of Regulation SBSR and the rules adopted as part of the SDR Adopting Release. Rule 901(f) requires a registered SDR to time stamp, to the lowest second increment practicable but in any event no greater than a second, its receipt of any information submitted to it pursuant to Rules 901(c), (d), or (e). Rule 901(g) requires a registered SDR to assign a transaction ID to each security-based swap reported or establish or endorse a methodology for transaction IDs to be assigned by third parties. Consequently, the Commission estimates that Rules 901(f) and 901(g) will impose an initial aggregate one-time cost of approximately $360,000, which corresponds to $36,000 per registered SDR.[1250] With regard to ongoing costs, the Commission estimates that Rules 901(f) and 901(g) would impose an ongoing aggregate annual cost of $455,000, which corresponds to $45,500 per registered SDR.[1251] This figure represents an estimate of the support

1250 This figure is calculated follows: [((Sr. Programmer (80 hours) at $303 per hour) + (Sr. Systems Analyst (20 hours) at $260 per hour) + (Compliance Manager (8 hours) at $283 per hour) + (Director of Compliance (4 hours) at $446 per hour) + (Compliance Attorney (8 hours) at $334 per hour) x (10 registered SDRs)] = $361,600, or approximately $360,000. All hourly cost figures are based upon data from SIFMA's Management & Professional Earnings in the Securities Industry 2013 (modified by the SEC staff to account for an 1,800-hour-work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead). See also Regulation SBSR Proposing Release, 75 FR at 75266, note 309.

1251 This figure is calculated as follows: [((Sr. Programmer (60 hours) at $303 per hour) + (Sr. Systems Analyst (48 hours) at $260 per hour) + (Compliance Manager (24 hours) at $283 per hour) + (Director of Compliance (12 hours) at $446 per hour) + (Compliance and maintenance costs for the time stamp and transaction ID assignment elements of a registered SDR's systems.

The Commission estimates that the initial aggregate annual cost associated with Rules 901(f) and 901(g) will be approximately $815,000, which corresponds to $81,500 per registered SDR.[1252] The above costs per registered SDR are generally consistent with those set forth in the Cross-Border Proposing Release. It is possible, however, that the costs may be lower than previously estimated, as the Commission is now estimating fewer reportable events per year (5 million in the Cross-Border Proposing Release versus 2 million events to be reported by the reporting sides).[1253] In addition, to the extent that those persons planning on registering as SDRs have already expended resources in anticipation of the adoption of Regulation SBSR and as a result of CFTC regulations that are already in place, the costs to become a registered SDR could be significantly lower. As a result, the Commission's estimates should be viewed as an upper bound of the potential costs of Regulation SBSR.

After reviewing comment letters received in response to the Regulation SBSR Proposing Release and Cross-Border Proposing Release, as well as evaluating the most recent data available to the Commission, the Commission continues to believe that its overall approach to

---

Attorney (8 hours) at $334 per hour) x (10 registered SDRs)] = $454,760, or approximately $455,000. See also Regulation SBSR Proposing Release, 75 FR at 75266, note 310.

1252 This figure is based on the following: (($36,160 + $45,476) x (10 registered SDRs) = $816,360, or approximately $815,000, which corresponds to $81,636, or approximately $81,500 per registered SDR. See also Regulation SBSR Proposing Release, 75 FR at 75266, note 311.

1253 See supra Section XXII (PRA discussion revising the Commission's estimate of the number of reportable events).

the estimate of costs imposed on registered SDRs remain valid. The Commission received no comments to the contrary.

2. Public Dissemination

Rule 902 requires the public dissemination of security-based swap transaction information. Rule 902(a), as adopted, sets out the core requirement that a registered SDR, immediately upon receipt of a transaction report of a security-based swap or life cycle event, must publicly disseminate information about the security-based swap or life cycle event, plus any condition flags contemplated by the registered SDR's policies and procedures that are required by Rule 907.

a. Programmatic Benefits

There are benefits to public dissemination of security-based swap information, as is required by Rule 902. Among other things, by reducing information asymmetries, post-trade transparency has the potential to facilitate price discovery and price competition,[1254] lower implicit transaction costs,[1255] improve valuation of security-based swap products, and increase liquidity in the security-based swap market.[1256]

1254 See Edwards, et al., supra note 1223 supra.

1255 As noted in Section XXII(B)(1)(b), dealing activity in the single-name CDS market is concentrated among a small number of firms that each enjoy informational advantages as a result of the large quantity of order flow they privately observe. Implicit transaction costs are the difference between the transaction price and the fundamental value, which could reflect adverse selection or could reflect compensation for inventory risk. In addition to these implicit transaction costs, security-based swap market participants may face explicit transaction costs such as commissions and other fees that dealers might charge non-dealers for access to the market.

1256 See infra Section XXII(D)(2)(b). See also Regulation SBSR Proposing Release, 75 FR at 75267.

Requiring public dissemination of security-based swap transactions will provide all market participants and market observers with more extensive and more accurate information upon which to make trading and valuation determinations. In the absence of post-trade transparency, larger dealers possess private information in the form of transactions prices and volumes, and larger dealers enjoy a greater informational advantage than smaller dealers. As noted above in Section XXII(B), the bulk of security-based swap activity is dealer-intermediated. Non-dealers and small dealers who perceive the informational advantage of their counterparties may be less willing to trade. By reducing the information advantage of large dealers, the public dissemination of security-based swap data may improve the negotiating position of smaller market participants such as non-dealers and small dealers, allowing them to access liquidity and risk sharing opportunities in the security-based swap market at lower implicit transaction costs.

While the Commission has not yet adopted rules governing trading of security-based swaps on centralized venues such as exchanges and SB SEFs, post-trade transparency may have particular benefits for exchange or SB SEF trading.[1257] In particular, providers of liquidity can use publicly disseminated transaction data as a key input into their orders and quotations, thereby increasing the efficiency of price formation. Market participants seeking liquidity can use recent last-sale prices in the same or similar products as a basis for initiating negotiations with liquidity providers. Liquidity seekers also can use public dissemination of other market participants' recent transactions in the same or similar products to evaluate the quality of quotes being offered or the quality of an execution given by a liquidity provider. Furthermore, public dissemination

---

1257 The size of benefits arising from the use of publicly disseminated transaction data for SB SEF trading depend on the trading models that SB SEFs support pursuant to rules ultimately adopted by the Commission. See SB SEF Proposing Release, 76 FR at 10948.

of all transactions may suggest to all market participants profitable opportunities to offer or take liquidity, based on the prices at which recent transactions were effected.

Moreover, the Commission believes that post-trade pricing and volume information could allow valuation models to be adjusted to reflect how security-based swap counterparties have valued a security-based swap product at a specific moment in time. Post-trade transparency of security-based swap transactions also could improve market participants' and market observers' ability to value security-based swaps, especially in opaque markets or markets with low liquidity where recent quotations or last-sale prices may not exist or, if they do exist, may not be widely available. For example, a single-name CDS contract that expires in five years may yield information relevant for pricing other five-year CDS on the same firm, and will also provide information on default probabilities that may help price other CDS on the same firm with different maturities, or on other firms in the same industry.

By improving valuations, post-trade transparency of security-based swap transactions could contribute to more efficient capital allocation. In particular, under the post-trade transparency regime of Regulation SBSR, market observers, whether or not they engage in the security-based swap transactions, could use information produced and aggregated by the security-based swap market as an input to both real investment decisions as well as financial investments in related markets for equity and debt.[1258] Improved valuation, together with more efficient prices, that may arise as a result of publicly disseminated transaction information, could

[1258] See Philip Bond, Alex Edmans, and Itay Goldstein, "The Real Effects of Financial Markets," Annual Review of Financial Economics, Vol. 4 (October 2012) (reviewing the theoretical literature on the feedback between financial market price and the real economy). See also Sugato Chakravarty, Huseyin Gulen, and Stewart Mayhew, "Informed Trading in Stock and Option Markets," Journal of Finance, Vol. 59, No. 3 (2004) (estimating that the proportion of information about underlying stocks revealed first in option markets ranges from 10% to 20%).

directly contribute to efficiency of capital allocation by firms whose obligations are referenced by security-based swaps.

A number of studies of the corporate bond market have found that post-trade transparency, resulting from the introduction of TRACE, has reduced implicit transaction costs.[1259] Post-trade transparency could have the same effect in the security-based swap market. The Commission acknowledges that the differences between the security-based swap market and other securities markets might be sufficiently great that post-trade transparency might not have the same effects in the security-based swap market.[1260] Nevertheless, similarities in the way the security-based swap market and corporate bond market are structured—both markets evolved as dealer-centric OTC markets with limited pre- or post-trade transparency—suggest that some of the benefits that result from post-trade transparency in the corporate bond market also would arise in the security-based swap market as well.

Public dissemination of security-based swap transactions is also designed to promote better valuation of security-based swaps themselves, as well as of underlying and related assets. In transparent markets with sufficient liquidity, valuations generally can be derived from recent quotations and/or last-sale information. However, in opaque markets or markets with low liquidity—such as the current market for security-based swaps—recent quotations or last-sale

---

1259 See, e.g., Edwards, et al., supra note 1223; Hendrik Bessembinder, William F. Maxwell, & Kumar Venkataraman, Market Transparency, Liquidity Externalities, and Institutional Trading Costs in Corporate Bonds, J. of Fin. Econ., Vol. 82, at 251-288 (2006).

1260 In the Regulation SBSR Proposing Release, the Commission requested comment on whether post-trade transparency would have a similar effect on the security-based swap market as it has in other securities markets—and if not, why not. No commenters responded to the Commission's request.

information may not exist for many products or, if they do exist, may not be widely available.[1261] Therefore, market participants holding assets that trade in opaque markets or markets with low liquidity frequently rely instead on pricing models to value their positions. These models could be imprecise or be based on assumptions subject to the evaluator's discretion. Thus, market participants holding the same or similar assets but using different valuation models might arrive at significantly different valuations.

All other things being equal, valuation models—particularly for assets in illiquid markets, such as corporate bonds or security-based swaps—that include last-sale information in the valuation models generally will be more informative than models that do not or cannot include such inputs. Models without such inputs could be imprecise or be based on assumptions subject to the evaluator's discretion without having last-sale information to help identify or correct flawed assumptions. As discussed in Section XXII(B)(1)(d), valuation models typically have many inputs even in the absence of last-sale information. However, in general, models improve if the information set is broadened to include additional data related to fundamental value, and last-sale information is of particular relevance for pricing models. Research suggests that post-trade transparency helps reduce the range of valuations of assets that trade infrequently,[1262] and it is likely that the security-based swap market participants and market observers will devise means to incorporate last-sale reports of the asset to be valued, reports of related assets, or reports of benchmark products that include the asset to be valued or closely related assets into their valuation models. This should result in more accurate valuations of security-based swaps

1261 See supra Section XXII(B)(1)(b) (describing current level of trading activity and liquidity in the security-based swap market).

1262 See Gjergji Cici, Scott Gibson, and John J. Merrick, Jr., "Missing the Marks? Dispersion in Corporate Bond Valuations Across Mutual Funds," Journal of Financial Economics, Volume 101, Issue 1 (July 2011), at 206-26.

generally, as all market participants and market observers would have the benefit of knowing how counterparties to a security-based swap valued the security-based swap at a specific moment in the recent past.

In addition, post-trade transparency of security-based swaps that are CDS should promote better valuation of debt instruments and better understanding of the creditworthiness of debt issuers generally. CDS are contracts that offer protection against events of default by a debt issuer, such as a bankruptcy, debt restructuring, or a failure to pay. All other things being equal, CDS protection on a more creditworthy issuer costs less than CDS protection on a less creditworthy issuer. Furthermore, the cost of CDS protection on a single issuer may change over time: If the issuer's financial position strengthens, it is less likely to default on its debt and the cost of CDS protection on the issuer generally will decrease; if the issuer's financial condition weakens, the cost of CDS protection on the issuer generally will increase. Mandatory post-trade transparency of CDS transactions will offer market participants and market observers the ability to assess the market's view of the creditworthiness of entities underlying CDS contracts, which often are large and systemically significant debt issuers. Currently, last-sale information of CDS transactions generally is known only to the participants involved in a transaction (such as dealers who execute with clients and brokers who may be involved in negotiating transactions). Public dissemination of security-based swap transactions—both CDS and equity-based swaps—as required by Regulation SBSR, will reduce the information asymmetry between insiders who are involved in particular transactions and all others, and is thus designed to promote greater price efficiency in security-based swap markets, the related index swap markets, and the markets for the underlying securities.[1263]

Public dissemination of transactions in CDS that are based on reference entities that issue TRACE-eligible debt securities should reinforce the pricing signals derived from individual transactions in debt securities generated by TRACE. Since prices in debt securities of an issuer and prices of CDS with that debt security as reference entity are related, any pricing signal received as a result of a trade in one asset market may inform prices in the other. In addition, if prices of debt securities in TRACE and last-sale information of related CDS are not consistent with each other, market participants may avail themselves of arbitrage opportunities across these two markets, thereby aligning the respective prices and enhancing price efficiency in both markets. Similarly, public dissemination of transactions in single-name security-based swaps should reinforce the pricing signals derived from public dissemination of transactions in index swaps, where the index includes those individual securities. In addition, post-trade transparency of security-based swap CDS under Regulation SBSR should indirectly bring greater transparency into the market for debt instruments (such as sovereign debt securities) that are not subject to mandatory public dissemination through TRACE or any other means by providing indirect pricing information. For example, last-sale information for CDS referencing sovereign debt may inform prices of the underlying sovereign debt.

b. Programmatic Costs

Market participants may experience costs as a result of revealing the true size of their trades if public dissemination of this information makes it more difficult to hedge their positions.

1263 See, e.g., Chakravarty, et al., note 1258, supra (estimating that the proportion of information about underlying stocks revealed first in option markets ranges from 10 to 20%).

Further, public dissemination of true transaction sizes could result in higher costs if it allows market participants to infer the identities of particular counterparties. Thus, some commenters have argued for dissemination of the notional amount of block trades through a "masking" or "size plus" convention comparable to that used by TRACE, in which transactions larger than a specified size would be reported as "size plus."[1264] The Commission considered this alternative, but has elected to require a registered SDR to publicly disseminate (for all dissemination-eligible transactions[1265]), immediately upon receipt of the transaction report, all of the elements required by Rule 901(c), including the true notional amount of the transaction. The Commission notes, first of all, that a dissemination cap could deprive the market of important information about overall exposure. With a cap in place, market participants would not have information about the true size of very large trades, thereby reducing the precision with which they could estimate the level of risk arising from those large trades. Furthermore, as noted above in Section VII(B)(4), the Commission believes that a 24-hour timeframe for reporting of transaction information during the interim phase of Regulation SBSR should address any concerns about disseminating the true notional amount of any transaction and give market participants who choose to hedge adequate time to accomplish a majority of their hedging activity[1266] before transaction data are publicly disseminated. During the interim phase, the Commission will be able to collect and

1265 See Rule 902(c) (requiring that certain types of security-based swaps not be publicly disseminated).

1266 Market participants typically hedge only a small fraction of large trades and, if they hedge, they tend to do so within one day. See Hedging Analysis.

analyze transaction information to develop an understanding of how market participants are reacting to the introduction of mandated post-trade transparency.

Under Rule 902(a), a registered SDR will be required to publicly disseminate a condition flag indicating whether two counterparties to a security-based swap are registered security-based swap dealers. The Commission received one comment expressing concern that disseminating such information would reduce the anonymity of counterparties, ultimately resulting in "worse pricing and reduced liquidity for end-users."[1267] Public dissemination of this information will indicate that a transaction involved two counterparties that are dealers. Although flagging transactions between two registered security-based swap dealers does indeed provide information to the public that the transaction involved two dealers, thus restricting the set of possible counterparties, the Commission believes that, since the majority of transactions in the security-based swap market are between dealers, market observers are unlikely to be able to identify particular counterparties using this information.

Another potential cost of post-trade transparency is that it may increase inventory risks. Dealers often enter trades with their customers as a liquidity supplier. Dealers trying to hedge inventory following a trade might be put in a weaker bargaining position relative to subsequent counterparties if transactions prices and volumes are publicly-disseminated. With mandated post-trade transparency, the market will see when a large transaction or a transaction in an illiquid security occurs and is aware that the dealer who took the other side may attempt to hedge the resulting position. As a result, other market participants may change their pricing unfavorably for the dealer, making it more expensive for the dealer to hedge its position. Dealers could respond either by raising the liquidity premium charged to their clients or refusing to

1267 ISDA IV at 16.

accommodate such trades. Such behavior could lead to lower trading volume or reduce the ability of certain market participants to manage risk, either of which could adversely affect all market participants. An increase in post-trade transparency could also drive trades to other markets or instruments that offer the opacity desired by traders, which could increase fragmentation, since trading would occur at more trading centers, or potentially reduce liquidity. This possibility is consistent with the argument that large, informed traders may prefer a less transparent trading environment that allows them to minimize the price impact of their trades. Public dissemination of security-based swap transaction information, therefore, could cause certain market participants to trade less frequently or to exit the market completely. A reduction in market activity by these participants, especially if they are large, informed traders, could have an adverse effect on market liquidity.

We are currently unable to quantify the costs associated with market exit or reduced liquidity that might result from post-trade transparency. This is due to two factors: (1) lack of robust data; and (2) lack of experimental conditions necessary for identifying the impact of post-trade transparency on the costs of hedging. As noted above, Commission staff has undertaken a study that attempts to identify instances of hedging behavior by dealers in the single-name CDS market. Subject to the data limitations described in the study, the low levels of such behavior suggest that, in aggregate, post-trade transparency is unlikely to drive down liquidity or increase the liquidity premium charged by dealers to non-dealers as a result of increasing the cost of hedging.[1268] Commission staff has also undertaken a study of the effects of the introduction of mandatory post-trade transparency in the index CDS market pursuant to CFTC rules. Subject to the data limitations in the study, and the fact that the security-based swap and the swap markets

[1268] See Hedging Analysis.

are related but not identical, staff found little empirical evidence that the introduction of mandatory post-trade transparency in the index CDS market resulted in reduced trading activity, liquidity, or risk exposure in the index CDS market.[1269] Moreover, studies of the corporate bond market, another largely OTC market, do not find evidence of market exit or reduced liquidity associated with post-transparency.[1270]

Another potential cost of post-trade transparency as required under Rule 902 is that market observers could misinterpret or place undue importance on particular last-sale information that might not accurately reflect the market. For example, if a large market participant failed, it could be required to liquidate its portfolio at "fire sale" prices. If market observers were not aware of any unusual conditions surrounding particular transaction prints, they might interpret fire sale prices to indicate changes to the economic fundamentals of security-based swap positions that they hold. If some of these market participants mark down the value of their portfolios, the result could be additional margin calls and further market stress. In these circumstances, use of valuation models that include last-sale data, but do not condition those data on the information about unusual conditions could lead to market de-stabilization.[1271]

Rule 902(a) requires a registered SDR to publicly disseminate a transaction report of any security-based swap immediately upon receipt of transaction information about the security-based swap, except in in certain limited circumstances.[1272] The published transaction report must

---

1269 See Analysis of Post-Trade Transparency.

1270 See supra note 1259.

1271 See, e.g., Brunnermeier and Pedersen; Gromb and Vayanos, note 1177, supra.

1272 See supra Section VI(D). In addition, registered SDRs shall not publicly disseminate reports of pre-enactment or transitional security-based swaps.

consist of all the information reported pursuant to Rule 901(c), plus the execution time stamp and any necessary flags required by the registered SDR to which the transaction is reported.

Implementing and complying with the public dissemination requirement of Rule 902 will add 20% to the start-up and ongoing operational expenses that would otherwise be required of a registered SDR.[1273] In particular, the Commission continues to estimate that the initial one-time aggregate costs for development and implementation of the systems needed to disseminate the required transaction information would be $20,000,000, which corresponds to $2,000,000 per registered SDR. Further, the Commission continues to estimate that aggregate annual costs for systems and connectivity upgrades associated with public dissemination would be approximately $12,000,000, which corresponds to $1,200,000 per registered SDR. Thus the initial aggregate costs associated with Rule 902 are estimated to be $32,000,000, which corresponds to $3,200,000 per registered SDR. To the extent that those market participants planning on registering as SDRs have already expended resources if they voluntarily report their transactions or because they are registered SDRs with the CFTC, the costs to become a registered SDR could be significantly lower. As a result, the Commission's estimates should be viewed as an upper bound of the potential costs of Regulation SBSR.

c. Alternative Approaches to Public Dissemination

The Commission considered alternative approaches to the public dissemination of transactions information. First, the Commission has considered, but is not adopting, an exemption from Regulation SBSR's regulatory reporting or public dissemination requirements for inter-affiliate security-based swaps, although the Commission generally believes that a

[1273] See SDR Adopting Release, Section VIII(D)(2). See also Regulation SBSR Proposing Release, 75 FR at 75269.

registered SDR should consider establishing a flag for inter-affiliate security-based swaps to help market observers better understand the information that is publicly disseminated.[1274]

Commenters had raised concerns about the public dissemination of inter-affiliate transactions, comments that the Commission carefully considered in its adoption of Rule 902.[1275] As an example, one commenter argued that "public reporting of inter-affiliate transactions could seriously interfere with the internal risk management practices of a corporate group" and that "[p]ublic disclosure of a transaction between affiliates could prompt other market participants to act in a way that would prevent the corporate group from following through with its risk management strategy by, for instance, causing adverse price movements in the market that the risk-carrying affiliate would use to hedge."[1276] As stated above, the Commission agrees generally that corporate groups should engage in appropriate risk management practices. However, the Commission does not agree that Regulation SBSR, as adopted, is inimical to effective risk management. The Commission notes that, during the interim phase of Regulation SBSR, all security-based swaps—regardless of size—must be reported within 24 hours from the time of execution and—except with regard to transactions falling within Rule 908(a)(2)—immediately publicly disseminated. As discussed in Section VII above, this reporting timeframe is designed, in part, to minimize any potential for market disruption resulting from public dissemination of any security-based swap transaction during the interim phase of Regulation SBSR. The Commission anticipates that, during the interim period, it will collect and analyze data concerning the sizes of transactions that potentially affect liquidity in the market. The

---

1274 See supra Sections VI(D) and VI(G).

1275 See supra Section XI(B).

1276 Cleary II at 17.

Commission sees no basis for concluding, at this time, that inter-affiliate security-based swaps are more difficult to hedge than other types of security-based swaps, or that the hedging of these transactions presents unique concerns that would not also arise in connection with the hedging of a security-based swap that was not an inter-affiliate transaction. Therefore, the Commission does not agree with the commenters' concern that public dissemination of inter-affiliate security-based swaps will impede the ability of corporate groups to hedge.

Second, the Commission considered other mechanisms for public dissemination, but has determined not to adopt any of them.[1277] In the Regulation SBSR Proposing Release, the Commission discussed a "first touch" approach to public dissemination, whereby a security-based swap dealer or major security-based swap participant that is a counterparty to a security-based swap would be responsible for dissemination. Under a "modified first touch" approach, a platform on which a transaction was effected would be required to publicly disseminate a transaction occurring on its market. However, under either of these alternate approaches, market observers would be required to obtain and consolidate information from potentially dozens of different sources. As the Commission stated in the Regulation SBSR Proposing Release: "Requiring registered SDRs to be the registered entities with the duty to disseminate information would produce some degree of mandated consolidation of [security-based swap] transaction data and help to provide consistency in the form of the reported information. This approach is designed to limit the costs and difficulty to market participants of obtaining and assembling data feeds from multiple venues that might disseminate information using different formats."[1278]

Moreover, even though the alternative approaches noted above would allow market

---

1277 See Regulation SBSR Proposing Release, 75 FR at 75227-28.

1278 Id.

participants to circumvent registered SDRs while fulfilling the public dissemination requirement, neither alternative would reduce costs to market participants, since reporting sides would be required to report transactions to an SDR to fulfil the regulatory reporting requirement. The Commission received no comments that disagreed with the proposed approach imposing the duty to disseminate security-based swap transaction information on registered SDRs, and has adopted it as proposed.

3. Interim Phase for Reporting and Public Dissemination

As discussed in more detail above, the rules, as adopted, establish an interim phase of Regulation SBSR. During this interim phase, all covered transactions—regardless of their notional size—must be reported to a registered SDR no later than 24 hours after the time of execution.[1279] The registered SDR will be required to publicly disseminate a report of the transaction immediately upon receipt of the information, except for the information described in Rule 902(c).

Commission staff has undertaken an analysis of the inventory management of dealers in the market for single-name CDS based on transaction data from DTCC-TIW.[1280] The analysis shows that, when large trades in single-name CDS are hedged using offsetting trades in the single-name CDS with the same reference entity, the majority of hedging activity takes places within one day.[1281] The Commission acknowledges the concerns of a commenter that this

1279 If reporting would take place on a non-business day (i.e., a Saturday, Sunday, or U.S. federal holiday), then reporting would be required by the same time on the next day that is a business day.

1280 See Hedging Analysis.

1281 The Commission staff analysis represents an update and extension of earlier work by staff of the Federal Reserve Bank of New York (Chen et al.), which identified same-day and next-day same-instrument dealer hedging activity within a three-month (May 1, 2010—July 31, 2010) sample of DTCC-TIW transaction data. Similar to the analysis does not consider hedging activity that might occur between markets.[1282] For example, dealers may use index CDS contracts to hedge exposures in single-name CDS. However, the Commission notes that the presence of hedging opportunities in other markets – particularly more liquid markets such as the market for index CDS – may increase the speed with which dealers are able to hedge security-based swap exposures, and may limit the extent to which public dissemination of transaction data with 24 hours of execution impairs their ability to hedge large exposures.[1283]

The same commenter further argued that, if single-name CDS on a reference entity trade infrequently, dealers may not have opportunities to hedge using the same instrument in a short

---

Commission staff analysis, these authors' results suggest that "large customer CDS trades are not typically hedged via offsetting trades in the same instrument soon after they have been transacted." The authors conclude by saying that "requiring same day reporting of CDS trading activity may not significantly disrupt same day hedging activity, since little such activity occurs in the same instrument." See Chen et al., supra note 510, at 17.

1282 See ISDA IV at 15 (stating that "participants may enter into risk mitigating transactions using other products that are more readily available at the time of the initial trade (for example CD index product [sic], CDS in related reference entities, bonds or loans issued by the reference entity or a related entity, equities or equity options))." The commenter further "interprets the data in the study to imply that such temporary hedges in other asset classes (rather than offsetting transactions in the precise reference entity originally traded) are the norm for an illiquid market." Id.

1283 The Commission notes that the impact of cross-market hedging may depend on the market characteristics for hedging assets. If dealers use corporate bonds to hedge large single-name CDS exposures, then the relative illiquidity of the corporate bond market may make dealers' ability to hedge sensitive to public dissemination of single-name CDS transaction information. However, the commenter did not provide support for the proposition that dealers rely on the corporate bond or equity markets to hedge single-name CDS exposure. Appropriate data are not currently available to the Commission. By contrast, if dealers use more liquid assets to hedge—such as index CDS—then the relative liquidity of the market for hedging assets may make it less likely that dealers' orders are identified as hedging demand. This, in turn, reduces the likelihood that dealers will face higher costs of hedging as a result of public dissemination of the original security-based swap transaction.

period of time.[1284] The Commission acknowledges that some market participants may take more than 24 hours to hedge exposures that result from large transactions in security-based swaps. As noted below, if a liquidity provider engages in a large trade in an illiquid security but cannot hedge its inventory risk within 24 hours, the result could be higher costs for liquidity provision. However, based on supplemental staff analysis of single-name CDS transaction data, the vast majority of large CDS transactions in the Hedging Analysis were written on reference entities with transaction activity occurring more than once per day, on average.[1285] Hence, based on the available data, the Commission does not conclude that the liquidity of the single-name CDS included in the Hedging Analysis was insufficient to allow dealers ample opportunities to hedge exposures within five days. Taking into consideration staff analysis and comments on this analysis, the Commission continues to believe that a 24-hour time frame for reporting of transaction information should allow market participants who choose to hedge adequate time to accomplish a majority of their hedging activity before transaction data is publicly disseminated.

1284 See id. (stating that "If a reference entity trades less frequently than once per day, and a particular reference entity/maturity combination trades less frequently than that, it is unlikely that a dealer could hedge a large transaction using CDS in the same reference entity even over a period of five days").

1285 In response to this comment, Commission staff examined the average trading frequency and volume of the reference entities represented in the sample of large transactions relative to reference entities in the overall sample. According to this supplemental analysis, for over 90% of the reference entities in the sample of "seed transactions" (as defined in the Hedging Analysis,) transaction activity took place, on average, one or more times per day between April 2013 and March 2014. Commission staff also examined transaction activity in the six-month period prior to the sample used in the Hedging Analysis to avoid confounding its measures of trading activity with the large transactions and subsequent hedging activity it identified within the original study period. In the six months prior to April 2013, approximately 85% of reference entities in the sample of seed transactions were involved in transaction activity an average of one or more times per day.

Although any reporting side could take a full 24 hours to report a given trade under the interim phase, the final rules may provide incentives for reporting sides to submit trade reports in substantially less than 24 hours. In particular, as discussed above in Section VII(B)(1), because Rule 902(d) embargos transaction information until the information is transmitted to a registered SDR, any SB SEF that wants to continue the use of work-ups must ensure that transactions are reported to a registered SDR no later than the time at which a completed transaction is broadcast to the users of the SB SEF. Reporting sides may choose to report trades in less than 24 hours because their gains from work-ups exceed costs stemming from public dissemination.

a. Programmatic Benefits

The Commission notes that the interim phase of Regulation SBSR will result in increased transparency in the security-based swap market, as compared to the current market. Several commenters expressed concern that a public dissemination regime with improper block trade thresholds could harm market liquidity.[1286] A phased approach seeks to create some measure of post-trade transparency in the security-based swap market while avoiding the creation of inappropriate block standards.

This interim phase will afford the Commission the opportunity to use data made available by registered SDRs to consider the potential impact, across different security-based swap asset classes, of various public dissemination times on transaction costs, hedging activity, and price efficiency for trades involving a range of notional amounts in instruments of varying liquidity.[1287] Analysis of additional data is important for two key reasons. First, while the

---

1286 See supra note 486.

1287 See ISDA IV at 15 (noting that liquidity of CDS contracts on a reference entity may be a determinant of the risk management strategies of dealers attempting to hedge exposures generated when they engage in single-name CDS transactions).

Commission has used available data to inform its current approach to regulatory reporting, the Commission expects the market to evolve in response to substantive regulation pursuant to Regulation SBSR and other Title VII rulemaking. In particular, additional post-trade transparency afforded by the interim phase may alter market participants' trading strategies in ways that will likely affect what constitutes an appropriate block trade threshold in an environment with post-trade transparency. Such changes to the regulatory environment for security-based swap transactions make additional data analysis critical to robust determination of block thresholds and associated dissemination delays.

Second, the Commission believes that data elements such as reporting and execution time stamps required under Rule 901 will make data collected from registered SDRs more suitable than currently available data for examining relationships between reporting delays, notional amounts and other variables of economic interest. For example, as noted by Commission staff in its analysis of inventory risk management in the security-based swap market, although the CDS transaction data currently available to the Commission includes both the date and time at which DTCC received and recorded the transaction, only the date of the execution is reported to DTCC, and not the actual time of the execution.[1288] Under Regulation SBSR, Commission staff will be able to identify not only the execution time, to the second, but also the length of time between when a transaction is executed and when a registered SDR receives the associated transaction report.

Accordingly, the Commission is directing its staff to issue a report, for each asset class, regarding block thresholds and dissemination delays for large notional security-based swap transactions in each asset class. The reports are intended to inform the Commission's

---

[1288] See Hedging Analysis.

specification of criteria for determining what constitutes a block trade and the appropriate time delay for reporting block trades. The Commission will take into account the reports, along with public comment on the reports, in determining block thresholds and associated reporting delays.

Each report will be linked to the availability of data from registered SDRs in that each report must be complete no later than two years following the initiation of public dissemination from the first registered SDR in that asset class. The Commission believes that this timeframe is necessary for a thorough analysis of the transaction data. First, a two-year timeframe will help ensure that Commission staff's econometric analysis will have statistical power sufficient to draw clear conclusions about the effects of notional amount and reporting delay on price impact, hedging activity, and price efficiency. Second, the Commission believes that this timeframe is sufficiently large to capture seasonal effects, such as periodic "rolls", that may affect trading behavior in the security-based swap market. Finally, a sufficiently long timeframe increases the likelihood that Commission staff can separate potential market impacts resulting from the introduction of mandated post-trade transparency from short-term macroeconomic trends and shocks that also could affect market behavior.

While allowing time for data gathering and analysis by Commission staff that will inform the Commission about appropriate block thresholds and reporting delays, the interim approach to reporting and public dissemination may moderate the economic effects flowing from public dissemination of transaction data. By providing reporting sides up to 24 hours during the interim phase of Regulation SBSR in which to report their transactions, market observers will experience delays in obtaining information about market activity compared to an alternative policy of implementing a requirement for real-time reporting and public dissemination at the present time. For example, if there is a spike in activity or a significant price movement in a particular security-based swap product, market observers might not become aware of this until 24 hours afterwards. Larger dealers that observe more order flow and execute more transactions than other market participants would, during the interim phase, continue to enjoy an informational advantage over others who are not yet aware of recently executed transactions.

b. Programmatic Costs

While the Commission has considered whether there could be a reduction in the programmatic benefits of public dissemination associated with providing too much time before a security-based swap transaction must be reported and publicly disseminated, the Commission also has considered that 24 hours might be too little time for liquidity providers to manage inventory risk. If a liquidity provider who engages in a large trade, or in a trade in an illiquid security, cannot offset the risk within 24 hours, the costs for providing liquidity could rise, resulting in less liquidity provision (i.e., less size provided at the desired price, or the same size provided at worse prices). This result might be avoided in a regulatory environment offering a longer delay between the time of execution of a security-based swap and the time that it must be reported and publicly disseminated.

4. Use of UICs

Rule 903(a) provides that, if an IRSS meeting certain criteria is recognized by the Commission and issues a UIC, that UIC must be used by all registered SDRs and their participants in carrying out duties under Regulation SBSR. Under Rule 903(a), if the Commission has recognized such an IRSS that assigns UICs to persons, each participant of a registered SDR shall obtain a UIC from or through that system. If no IRSS that can issue particular types of UICs has been recognized, the registered SDR is required to assign such UICs using its own methodology.

The following UICs are specifically required by Regulation SBSR: counterparty ID, product ID, transaction ID, broker ID, branch ID, trading desk ID, trader ID, execution agent ID, platform ID, and ultimate parent ID. The security-based swap market data typically include fee-based codes, and all market participants and market observers must pay license fees and agree to various usage restrictions to obtain the information necessary to interpret the codes. Under Rule 903(b), a registered SDR may permit information to be reported pursuant to Rule 901, and may publicly disseminate that information pursuant to Rule 902, using codes in place of certain data elements only if the information necessary to interpret those codes is widely available to users of the information on a non-fee basis.

a. Programmatic Benefits

UICs will provide market participants that use a common registered SDR with a uniform way to refer to their counterparties and other persons or business units that might be involved in a transaction (such as brokers, trading desks, and individual traders). UICs are designed to allow registered SDRs, relevant authorities, and other users of data to quickly and reliably aggregate security-based swap transaction information by UIC along several dimensions (e.g., by product, by individual trader, or by corporate group (i.e., entities having the same ultimate parent)). The requirement for a registered SDR to refer to each person, unit of a person, product, or transaction with a single identifying code is designed to facilitate the performance of market analysis studies, surveillance activities, and systemic risk monitoring by relevant authorities through the streamlined presentation of security-based swap transaction data. These benefits apply on an SDR level, as each registered SDR is required to assign UICs using its own methodology if a relevant UIC is not available from an IRSS.

To the extent that multiple SDRs use the same UICs, these benefits would apply across SDRs. In particular, because the Commission has recognized the GLEIS—through which LEIs can be obtained—as an IRSS that meets the criteria of Rule 903, if an entity has an LEI issued by or through the GLEIS, then that LEI must be used for all purposes under Regulation SBSR. The Commission believes that this will facilitate aggregation by relevant authorities for surveillance and monitoring purposes. Nevertheless, the Commission acknowledges potential impediments to uniformity of UICs across registered SDRs. While registered SDRs are required to use an LEI issued by the GLEIS to identify a counterparty to a reported transaction, this requirement extends to only those counterparties that have been assigned an LEI by the GLEIS. Under Rule 903(a), these counterparties will include all SDR participants that are U.S. persons, including special entities and investment advisers, as well as all SDR participants that are registered security-based swap dealers and registered major security-based swap participants. Additionally, these counterparties will include non-U.S. subsidiaries of U.S. persons, when their performance under security-based swaps is guaranteed by a U.S. affiliate. For a person who is a counterparty to a security-based swap reported on a mandatory basis to a registered SDR, who does not meet these conditions, and who has not obtained an LEI from the GLEIS, a registered SDR will be required to assign a UIC to that market participant using its own methodology. For such counterparties, this could result in the proliferation of multiple UIC assignments for the same entity to the extent that they are counterparties to security-based swaps that are reported across several SDRs that each assign a unique UIC.

This could pose challenges to the relevant authorities and other users of data to quickly and reliably aggregate security-based swap transaction information, and potentially impede the performance of market analysis studies and surveillance activities. In particular, mapping the unique identifiers across SDRs would entail a manual process of connecting like entities initially, and maintaining such a mapping over time to the extent that an entity's organizational structure changes in way that requires a change to the UIC. This manual process could slow or introduce errors into the analysis of transaction activity or economic exposures of such counterparties. Requiring all participants and the entities to which they provide guarantees to utilize LEIs under Regulation SBSR should minimize these potential difficulties. Using the same LEI for these counterparties across all registered SDRs eliminates the need for such mapping.

Even absent uniformity of UICs, the use of such codes by a registered SDR and its participants could give rise to other significant potential benefits. The use of codes could improve the accuracy of the trade reporting system by streamlining the provision of data to the registered SDR. The product ID, for example, replaces several data elements that otherwise would have to be reported separately, thus enforcing the internal consistency of those data elements and reducing the likelihood of reporting errors.

In adopting Rule 903, the Commission has considered not only the benefits of using unique identification codes generally, but also the benefits of ensuring that such codes can be readily understood. Rule 903(b), as adopted, provides that a registered SDR may permit the use of codes in place of certain data elements for use in regulatory reporting and public dissemination of security-base swap transaction information only if the information necessary to interpret such codes is widely available to users of the information on a non-fee basis. This provision is intended to prevent any person who develops identification codes that might be used for the reporting or public dissemination of security-based swap transactions to charge fees or require other compensation from market participants, registered SDRs, other market infrastructure providers, and users of security-based swap data. Open access to UICs will promote the usage of public information about the security-based swap market, thereby furthering the statutory goals of Title VII. Rule 903(b) eliminates the possibility that market participants could be compelled to include fee-based codes in the transaction information that they are required to provide to a registered SDR, or that registered SDRs could be compelled to pay fees to code creators to be able to interpret the transaction information that is reported to them, or that market observers are compelled to pay fees to code creators to be able to interpret the security-based swap transaction information that is publicly disseminated. Rule 903(b) is designed to reduce barriers to entry into the security-based swap market[1289] by counterparties as well as service providers, because it minimizes the need for them to pay fees to code creators as a cost of entry.

b. Programmatic Costs

Rule 903 could also impose certain costs on current security-based swap market participants. Currently, private coding systems exist in the security-based swap market.[1290] To the extent that owners of these private coding systems do not make information to understand these codes widely available on a non-fee basis, Rule 903 would prohibit the use of such codes in the reporting or public dissemination of security-based swap transaction information carried out pursuant to Regulation SBSR. As a result of Rule 903, owners of these coding systems that otherwise might be used to report security-based swap transaction information will be restricted

1289 The fees that a new entrant would have to pay for the use of fee-based codes are a cost that may deter a potential market participant from entering the security-based swap market. Currently, there is no mandated post-trade transparency and the security-based swap market is an OTC market and opaque, which is a barrier to enter for the market, as new entrants are at an informational disadvantage compared to established market participants, especially large dealers with significant order flow.

1290 The Commission is aware of one such product identification system that involves six-digit reference entity identifiers and three-digit reference obligations identifiers as well as a standard three-digit maturity identifier.

in their ability to profit from utilization of their codes for reporting under Regulation SBSR, although such codes could still be used for other purposes. To the extent that these owners currently generate revenue through fees charged to users of security-based swap data, Rule 903 could lower their revenues and cause them to increase revenues from other sources, including from those entities that wish to have identifiers assigned to them. Thus, Rule 903 may result in a reallocation of the costs associated with developing and maintaining UICs from users of data to producers of data.

Further, to the extent that market participants who currently utilized fee-based codes must reconfigure their systems and internal processes to use other codes (such as those issued by a registered SDR) that are compliant with Rule 903(b), the costs of such reconfiguration can be attributed to Rule 903(b). One commenter believed that reporting these UICs would require "great cost and effort" from firms, including the costs associated with establishing and maintaining UICs in the absence of a global standard.[1291] The Commission also acknowledges commenter concerns that there could be a certain degree of cost and effort associated with incorporating new UICs into firms' internal processes and record-keeping systems.[1292] However, the Commission believes that these costs are justified in the context of the programmatic benefits discussed in Section XXII(C)(4)(a), supra, such as the ability of relevant authorities to easily aggregate transaction reports on a variety of dimensions. The costs of developing such UICs are included in the discussion of the implementation of Rules 901 (detailing the data elements that

1292 See supra Section XXII(C)(1)(c); Section XXII(E)(1)(a) (detailing the data elements that must be reported); Section XXII(C)(6)(d) (detailing the requirement that SDRs develop policies and procedures for the reporting of the required data elements). See also note 160, supra.

must be reported[1293]) and 907 (detailing the requirement that SDRs develop policies and procedures for the reporting of the required data elements[1294]).

Any person who is a participant of a registered SDR must obtain an LEI from or through the GLEIS. Based on transaction data from DTCC-TIW, the Commission believes that no fewer than 3,500 of approximately 4,800 accounts that participated in the market for single-name CDS in 2013 currently have LEIs and are likely to maintain these LEIs in the absence of Regulation SBSR.[1295] Therefore, the Commission believes that no more than approximately 1,300 DTCC-TIW accounts will have to obtain LEIs in order to comply with Rule 903(a). For these participants, the assignment of an LEI will result in one-time costs assessed by local operation units ("LOUs") of the GLEIS associated with registering a new LEI. In addition to registration costs, LOUs assess an annual fee for LEI maintenance. The Commission assumes that no market participants that currently have LEIs would continue to maintain their LEIs in the absence of Rule 903(a) in order to arrive at an upper bound on the ongoing costs associated with Rule 903(a).

The prices for registering a new LEI and maintaining an existing LEI vary by LOU. Commission staff collected registration and maintenance charges for nearly all of the pre-LOUs currently endorsed by the interim GLEIS.[1296] Based on these charges, the Commission

1293 See supra Section XXII(C)(1).

1294 See supra Section XXII(C)(6)(d).

1295 See supra note 1109. Commission staff used counterparty information provided by Avox to match account numbers in the DTCC-TIW 2013 transactions data to their LEIs. Of 4,760 participating accounts, 3,533 had LEI information in their Avox counterparty record.

1296 See "Endorsed Pre-LOUs of the Interim Global Legal Entity Identifier System (GLEIS)", January 2, 2015 (available at http://www.leiroc.org/publications/gls/lou_20131003_2.pdf).

estimates a per-entity registration cost of between $84 and $220 and a per-entity maintenance cost of between $48 and $156.[1297]

The Commission is aware of two factors that may reduce these costs over time. First, the GLEIS operates on a cost-recovery model. If the marginal cost of an LEI is low, then an increase in the volume of LEIs will reduce the average cost of obtaining an LEI. These cost savings will be passed through to market participants in the form of lower prices. Second, the ability of market participants to port LEIs to the LOU of their choice will result in competitive pressure that may limit the prices that LOUs are able to charge for services. The governance system of the GLEIS is in place to help ensure that these economic factors will be operative.

The Commission expects that, in addition to the costs of obtaining an LEI from an LOU, each entity that registers a new LEI as a result of Rule 903(a) will incur start-up and ongoing administrative costs of no more than $334 per year.[1298] The Commission believes, therefore, that the upper bound on aggregate costs to market participants arising from the obligation to obtain an LEI lies between $500,000 and $700,000 in the first year and between $1,600,000 and $2,100,000 in subsequent years.[1299]

1297 Commission staff converted all foreign currency amounts to U.S. dollars and added taxes and surcharges where these amounts were available.

1298 This estimate is based on one hour of a compliance attorney at $334 per hour and is based upon data from SIFMA's Management & Professional Earnings in the Securities Industry 2013 (modified by the SEC staff to account for an 1,800-hour-work-year and multiplied by 5.35 to account for bonuses, firm size, employee benefits, and overhead).

1299 The lower end of the range for costs in the first year is calculated as: [(LEI Registration) $84 + (Administration) $334] x 1,300 participants = $543,400. The upper end of the range for costs in the first year is calculated as: [(LEI Registration) $220 + (Administration) $334] x 1,300 participants = $720,200. The lower end of the range for costs in subsequent years is calculated as: [(LEI Maintenance) $48 + (Administration) $334] x 4,800 participants = $1,833,600. The upper end of the range for costs in subsequent years is calculated as: [(LEI Maintenance) $156 + (Administration) $334] x 4,800 participants = $2,352,000.

5. Cross-Border Aspects of Regulation SBSR

Rule 908(a)(1), as adopted, identifies the security-based swaps that will be subject to regulatory reporting and public dissemination. Rule 908(a)(2), as adopted, identifies the security-based swaps that will be subject to regulatory reporting but will not be publicly disseminated. Rule 908(b) provides that non-U.S. persons (except for non-U.S. persons that are registered security-based swap dealers or registered major security-based swap participants) have no duties under Regulation SBSR. Rule 908(c) provides that the Title VII requirements relating to regulatory reporting and public dissemination of security-based swaps may be satisfied by compliance with the rules of a foreign jurisdiction if the Commission determines that the jurisdiction has requirements that are comparable to those of Regulation SBSR.

As discussed further in Section XXII(D), the security-based swap market is a global market characterized by a high level of interconnectedness and significant information asymmetries. Because U.S. market participants and transactions regulated under Title VII are a subset of the overall global security-based swap market and the swap markets more generally, concerns surrounding risk and liquidity spillovers are part of the framework in which the Commission analyzes the effects of these rules. Additionally, relevant authorities in other jurisdictions are currently engaged in implementing their own regulatory reforms of the OTC derivatives markets. Because a large portion of security-based swap activity involves both U.S.-person and non-U.S. person counterparties, a key consideration in the Commission's analysis of the economic effects of these rules is the extent to which their application complements or conflicts with rules promulgated by foreign regulators.

a. Programmatic Benefits

Rule 908 provides that a transaction will be subject to regulatory reporting if there is a direct or indirect counterparty on either or both sides that is a U.S. person, a registered security-based swap dealer, or a registered major security-based swap participant, or if the transaction is submitted to a clearing agency having its principal place of business in the United States.

The Commission anticipates that regulatory data that it receives from registered SDRs will aid in its understanding of counterparty relationships in the global security-based swap market that are most likely to affect the U.S. financial markets. Such market data will allow the Commission to view, for example, large security-based swap exposures of U.S. persons, registered security-based swap dealers, registered major security-based swap participants, and U.S. clearing agencies that could have the potential to destabilize U.S. financial markets. Moreover, because registered security-based swap dealers and members of U.S. clearing agencies are likely to participate in other asset markets, regulatory reporting could help the Commission estimate the risk that a corporate event could impair the ability of these market participants to trade in other asset markets. An improved ability to measure such risks could help the Commission evaluate the ability of the Title VII regulatory regime to limit the risk of contagion between the security-based swap market and other asset markets.
