#### PRE-OFFERING PUBLIC FLOAT

The Securities and Exchange Commission's Regulation M governs the activities of underwriters, issuers, selling security holders and others in connection with offerings of securities. Regulation M is designed to prohibit activities that could artificially influence the market for the offered security, based on measures such as the dollar value of the average daily trading volume and the company's public float. A company conducting a public offering should complete this section to update its public float, in order to avoid unnecessary trading restrictions being placed on the distribution of its securities.

For purposes of this section, a company should determine its public float by subtracting from the non-diluted total shares outstanding shares owned by officers, directors, and persons or entities with a 5% or greater ownership position ("affiliates"). Shares owned by affiliates do not include any convertible securities such as options, warrants, convertible notes and convertible preferred stock.
